## CERTIFICATION

I, Robert Kovacs, P.G., LSRP, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation and DER-31 Green Remediation.

**DRAFT**

_____

Robert Kovacs, P.G., LSRP

DRAFT

## 1.0 INTRODUCTION

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of Claudius Development LLC (the Requestor) for the property at 13 Culver Street and 372 Riverdale Avenue in Yonkers, New York (the site). The Requestor is submitting this RIWP concurrently with a Brownfield Cleanup Program (BCP) Application as a Volunteer under the BCP and will implement this RIWP one approved by the New York State Department of Environmental Conservation (NYSDEC).

The objective of the Remedial Investigation (RI) is to further investigate and characterize the nature and extent of environmental impacts at the site, to provide sufficient information to evaluate potential impacts to human health, and to provide sufficient information to evaluate remedial alternatives, as required. This RIWP was developed in accordance with the process and requirements identified in the NYSDEC Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation (May 2010), Title 6 of the New York Codes, Rules, and Regulations (NYCRR) Part 375, Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS) Under NYSDEC's Part 375 Remedial Programs (April 2023), and the New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, with subsequent updates).

DRAFT

# 2.0 SITE BACKGROUND

## 2.1 Site Description

The Site has a combined area of about 1.02 acres and includes 372 Riverdale Avenue (Yonkers Tax ID 1.-129-30) and Culver Street (Yonkers Tax ID 1.-129-26) within an urban block setting in Yonkers, New York. The site is bound by residential properties, some with detached garages, to the north, Culver Park to the east, Culver Street followed by a gasoline filling station and residences to the south, and Riverdale Avenue followed by a New York State owned arterial and Nathaniel Hawthorne School to the west.

The site is currently vacant. 372 Riverdale Avenue/Lot 30 is improved by a 1-story vacant auto repair building with asphalt paved parking areas. 13 Culver Street/Lot 26 is vacant.

A site location map is provided as Figure 1, and a site plan is provided as Figure 2.

According to the City of Yonkers zoning map, 372 Riverdale Avenue/Lot30 is located within a General Business and Apartment Housing zone (BA). The City of Yonkers Department of Planning and Development indicates that the BA zone is generally intended to support mixed-use development, including retail, offices, commercial services, apartments, or residential units. 13 Culver Street is located within an Apartment House, Medium Density zone (M). The M zone is primarily intended for multi-family apartment buildings.

## 2.2 Proposed Redevelopment Plan

Development plans are in progress but are expected to include construction of a 12-story residential building with one level of sub-grade parking, one level of street-grade parking, and outdoor recreation space. A portion of the residential building will be designated as affordable housing.

## 2.3 Surrounding Property Land Use

According to the City of Yonkers Zoning Map, the site is located within an area occupied with commercial, institutional, residential, light industrial buildings and public parks. The following is a summary of surrounding property usage:

| Direction | Adjoining Properties | Surrounding Properties |
|---|---|---|
| **North** | Residential properties | Residential, commercial, and institutional properties |
| **East** | Culver Park | Residential properties |
| **South** | Culver Street followed by a gasoline filling station (380 Riverdale Avenue) and residential properties | Residential and commercial properties |
| **West** | Riverdale Avenue/NYS Arterial followed by Nathaniel Hawthorne School | Residential properties |

DRAFT

Land use within a half-mile radius is urban and includes commercial, institutional, utility/transportation, residential, light industrial buildings, and public parks. The nearest ecological receptor is the Hudson River, located approximately 0.51 miles west of the site.

No schools or day care facilities are located on the site. Sensitive receptors, as defined in DER-10, within a half mile of the site include those listed below:

| Number | Name (Approximate distance from site) | Address |
|---|---|---|
| 1 | Culver Street Playground (Culver Park)<br>(about 0.05-miles east of the site) | Culver St. & Livingston Ave.<br>Yonkers, NY 10705 |
| 2 | PEARLS Hawthorne School<br>(about 0.1-miles west of the site) | 350 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 3 | Apple Heart Day Care<br>(about 0.1-miles northwest of the site) | 326 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 4 | Arisers Christ Tabernacle<br>(about 0.1-miles south of the site) | 350 Riverdale Ave.<br>Yonkers, NY 10705 |
| 5 | Yonkers Office for the Aging<br>(about 0.1-miles south of the site) | 435 Riverdale Ave.<br>Yonkers, NY 10705 |
| 6 | St. Peter's Child Care Center Inc.<br>(about 0.15-miles northwest of the site) | 204 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 7 | Erika's Group Daycare<br>(about 0.15 northeast of the site) | 57 Radford St.<br>Yonkers, NY 10705 |
| 8 | DC Family Daycare Inc<br>(about 0.15-miles northwest of the site) | 440 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 9 | Grandmas Daycare LLC<br>(about 0.15-miles north of the site) | 140 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 10 | South Presbyterian Church<br>(about 0.2-miles northeast of the site) | 112 Radford St.<br>Yonkers, NY 10705 |
| 11 | Iglesia Episcopal San Andres<br>(about 0.2-miles east of the site) | 22 Post St.<br>Yonkers, NY 10705 |
| 12 | Sunnyside Daycare<br>(about 0.2-miles northwest of the site) | 472 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 13 | Rising Ground<br>(about 0.2-miles northwest of the site) | 463 Hawthorne Ave.<br>Yonkers, NY 10705 |
| 14 | Unity Park<br>(about 0.25-miles east of the site) | 104 Elliott Ave.<br>Yonkers, NY 10705 |
| 15 | Saint Thomas Mar Thoma Church<br>(about 0.25-miles east of the site) | 34 Morris Crescent<br>Yonkers, NY 10705 |
| 16 | Congregation Sons of Israel Senior Nutrition Site<br>(about 0.25-miles northeast of the site) | 155 Elliot Ave.<br>Yonkers, NY 10705 |
| 17 | St. John's Riverside Hospital<br>(about 0.5-miles north of the site) | 127 S Broadway<br>Yonkers, NY 10701 |

## 2.4 Site Physical Conditions

### 2.4.1 Topography

The 2023 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Yonkers depicts the site at an elevation of about 50 feet above mean sea level (amsl) and as generally flat with a gentle slope downward toward the west. The regional topography slopes downward toward the west and the Hudson River, which is located approximately 2,500 feet west of the site.

DRAFT

2.4.2 Site Geology

According to the August 15, 2017 Phase II Limited Subsurface Investigation, the site is underlain by mostly brown and tan silt with trace fine sand to about 8 feet below grade surface (bgs) and brown and tan fine to medium sands between approximately 8 feet bgs and 20 feet bgs; however, fill containing brick, concrete, and gravel was observed at several borings. Bedrock at the site is expected to consist of Metamorphic Rocks of Sedimentary and Volcanic Origin of the Fordham Gneiss, based on 1970 The Geologic Map of New York – Lower Hudson Sheet, by Donald W. Fisher, Yngnar W. Isachsen, and Lawrence V. Rickard.

2.4.3 Hydrogeology

Surface water bodies are not present within the boundary of the site. The nearest surface water body is the Hudson River located approximately 2,500 feet west of the site. Groundwater flow can be influenced by several factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. Based on the August 15, 2017 Phase II Limited Subsurface Investigation, groundwater in the southwest part of the site was encountered at about 8 feet bgs. Groundwater is expected to flow west, based on topographic gradient and proximity to the Hudson River.

2.4.4 Wetlands

Wetlands were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands map. There are no designated wetlands mapped on the site.

## 2.5 Environmental History and Previous Investigations

The following previous environmental reports were prepared for the site (copies are provided in Appendix A).

Phase I and II Environmental Site Assessments/Investigations

- *Phase I Environmental Site Assessment (ESA) - Proposed CVS Pharmacy/Store No. 10386, 13 Culver Street and 372 Riverdale Avenue, prepared by T.M. Crowley & Associates, Inc., dated June 7, 2017*
- *Phase II Limited Subsurface Investigation (SSI) – Proposed CVS Pharmacy/Store No. 10386, 13 Culver Street and 372 Riverdale Avenue, prepared by Ransom Consulting, Inc., dated August 15, 2017*
- *Phase I ESA – 13 Culver Street and 372 Riverdale Avenue, prepared by Langan, dated April 24, 2026*

Environmental conditions discussed in the above reports are summarized below.

General Site History

Historical topographic maps and Sanborn maps indicate the site was developed with several residential dwellings with detached garages or stables as early as 1897. By 1917, several store

DRAFT

fronts were located along Riverdale Avenue, and a Cast Stone Products building was located at the east half of 13 Culver Street/Lot 26. The Cast Stone products business was no longer present by the 1951 Sanborn map, but that portion of the lot was noted as multiple auto garages.

According to aerial photos and Sanborn maps, most of the residential structures at 372 Riverdale Avenue/Lot 30 were demolished between 1966 and 1974, and the current auto repair building was constructed by 1974. According to city directories, the building was occupied by Goodyear Tire/Auto Service. Two 3-strory residential buildings remained in the northwest part of the lot. One residential building remained in the western part of 13 Culver Street/Lot 26, but the auto garages were no longer present.

The two residential buildings in the northwest part of 372 Riverdale Avenue/Lot 30 were demolished by 1984, and the area was paved and used for parking. Goodyear continued to occupy the lot and building. One residential building remained in the west part of 13 Culver Street/Lot 26.

372 Riverdale Avenue was occupied by Goodyear until 2015 and then by West Coast Auto beginning in 2016. According to sales info on Yonkers.gov, the lot was sold from Mary Louise Romano to Dutchman Realty LLC in April 2026. The residence at 13 Culver Street/Lot 26 was demolished between 2017 and 2021. According to sales info on Yonkers.gov, the lot was sold from 15 Culver St Realty Corp to Dutchman Realty LLC in 2017 and then to Dutchmen Realty II LLC in 2024.

Petroleum Bulk Storage Registration ID 3-802158 at 372 Riverdale Avenue

A UST in relation to Petroleum Bulk Storage (PBS) Registration ID 3-802158 is listed at 372 Riverdale Avenue for a 3,500-gallon No. 2 fuel oil UST (Tank No. 1). The database included contradictory/incorrect info about Tank No. 1 (e.g. installation in 1950 and permanent closure in 1900 while also noting the tank as temporarily out-of-service). PBS Registration No. 3-802158 was still noted as "active."

Closed NYSDEC Spill No. 1710340 – Turbo Auto Sales

Spill No. 1710340 was reported on February 15, 2018, at Turbo Auto Sales when petroleum-impacted soil was encountered during removal of a 3,500-gallon No. 2 heating oil UST (Tank No. 1 discussed above) east of the garage building at 372 Riverdale Avenue. About 220 tons of impacted soil was over-excavated and disposed of offsite. Post-excavation soil samples confirmed concentrations were below NYSDEC CP-51 soil cleanup levels of fuel oil impacted soil and the spill was closed by the NYSDEC on April 16, 2018. This spill is considered a historic REC (HREC).

Open NYSDEC Spill No. 2506149 – "Mechanic Shop"

Spill No. 2506149 was reported at "Mechanic Shop" on July 31, 2025, when motor oil from auto repair operations was reportedly flowing into street drains. Case notes also stated auto repair

DRAFT

was being done on streets with associated oil staining noted. The spill remains open, there is additional evidence of poor housekeeping by the former tenant and is a REC as the leaks may have infiltrated cracks in the pavement and impacted soil, groundwater, and soil vapor at the site.

Resource Conservation and Recovery Act (RCRA) Generator, Facility Index System (FINDS), and Enforcement and Compliance History Online (ECHO) databases - Small Quantity Generator (SWG) in 1986 and a very small quantity generator (VSQG) in1993, 2006, and 2007.

Waste types included ignitable waste and spent non-halogenated solvents, including xylene, acetone, ethyl acetate, ethyl benzene, methyl isobutyl ketone, N-butyl alcohol, cyclohexanone, and methanol. Violations were not reported. Undocumented releases of hazardous substances and ignitable waste may have impacted soil groundwater, and soil vapor at the site.

DRAFT

RECs Identified in the Langan Phase I ESA dated April 24, 2026

The following RECs were identified by Langan:

- *Former Auto Repair Operations, Open Spill, and Evidence of Poor Housekeeping at 372 Riverdale Avenue/Lot 30:* The building has been used for auto repair by multiple tenants since 1974. Evidence of poor housekeeping (staining, standing fluids, trash, and debris) was observed at various locations throughout 372 Riverdale Avenue/Lot 30. NYSDEC Spill No. 2506149 was reported on October 7, 2025, when motor oil was reportedly flowing from the site into to street drains. Case notes also indicated that auto repair work was conducted on the streets with oil leaks noted. The spill case remains open. Documented and undocumented releases of petroleum products or hazardous substances related to auto repair may have impacted soil, groundwater, and soil vapor.
- *Hazardous Waste Generation – Auto Service Center at 372 Riverdale Avenue/Lot 30:* Lot 30 was identified as a SQG in 1986 and a conditionally exempt small quantity generator (CESQG) in 1993, 2006, and 2007 of hazardous waste containing ignitable waste and spent nonhalogenated solvents including xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol. Manifests indicate hazardous waste shipments continued through 2012. No violations or non-compliance issues were reported and the listing was not reclassified as a non-generator. Undocumented releases of hazardous substances or hazardous waste may have impacted regional environmental conditions in the vicinity of the site.
- *Documented Contamination at Site:* An August 15, 2017 Phase II Limited Subsurface Investigation identified groundwater impacted with petroleum related volatile organic compounds (VOCs) at concentrations above NYSDEC Technical Operational and Guidance Series Ambient Water Quality Standards and Guidance Values (SGVs) and fill with metal and semivolatile organic compounds (SVOCs) at concentrations above NYSDEC Restricted Use Restricted Residential Soil Cleanup Objectives (RURR SCOs).
- *Current and Historical Use of Adjoining and Nearby Upgradient Properties and Related Open Spills:* Adjoining and/or nearby upgradient properties have been occupied by gasoline filling stations (1951- present) and a plastics manufacturer identified as a potential handler of PFAS. Two open petroleum spills are associated with the gasoline filling station at the south adjoining property at 380 Riverdale Avenue with "significant" impacts to groundwater, according to the NYSDEC case notes. Documented and undocumented releases at these sites may have impacted regional environmental conditions in the vicinity of the site.

Previous Environmental Sampling

A summary of environmental features and documented soil and groundwater contamination from the Phase II Limited SSI conducted by Ransom Consulting, Inc is provided below.

*Geophysical Survey*

DRAFT

A geophysical survey was conducted in June 2017. Anomalous findings, as interpreted by the geophysical surveyors, are summarized below:

- A backfilled excavation in the southeast part of 372 Riverdale Avenue/Lot 30, which was assumed to be the location of the former 550-gallon waste oil UST.
- A UST-like anomaly east of the main garage (confirmed in 2018 to be a 3,500-gallon fuel oil UST removed during remediation of Spill No. 1710340).
- The geophysical survey attempted camera mapping of the drainage system but was unable to do so because of built-up sediment at clean outs.

*Soil*

25 soil borings were installed (24 at 372 Riverdale Avenue/Lot 30 and 1 at 13 Culver Street/Lot 26) and 30 soil samples were collected as part of the Phase II Limited SSI. Petroleum-like odors and photoionization detector (PID) readings of up to 6.8 parts per million (ppm) were noted in soil boring SB-23 in the southwest corner of the parking lot at 372 Riverdale Avenue/Lot 30; however, staining was not observed. VOCs were either not detected or reported at concentrations below the Soil Cleanup Objectives (SCOs). Several metals and SVOCs were reported at concentrations above NYSDEC Part 375 Unrestricted Use (UU) and Restricted Use Restricted Residential (RURR) SCOs. Polychlorinated biphenyls (PCBs) and pesticides each exceeded UU SCO in one sample, but not RURR SCOs.

NYSDEC revised Part 375 SCOs in December 2025. Langan compared the data against the new SCOs, and the following SCO exceedances were documented:

- The VOC acetone in one soil sample in the northwest parking lot of 372 Riverdale Avenue/Lot 30;
- Several SVOCs above UU and/or RURR SCOs at various locations throughout the site between 0 and 1-foot bgs;
- Several metals above UU and/or RURR SCOs at various locations throughout the site at varying intervals to a max depth of 7.5 feet bgs; and
- PCBs and pesticides are each in one sample above UU SCOs, but below RURR SCOs.

Previous soil sample locations and analytical results are presented in Figure 3.

*Groundwater*

Two temporary monitoring wells were installed in the southwest corner of 372 Riverdale Avenue/Lot 30, and one groundwater sample was collected from each well as part of the Phase II Limited SSI. Analytical results identified several petroleum-related VOCs above SGVs. Reported VOC concentrations were 2 to 3 orders of magnitude above the SGVs. The wells were noted by Ransom as "upgradient" to assess potential impacts from off-site; however, the west

DRAFT

side of the site is at lower elevation than the east. The wells were located cross gradient from the south adjoining gasoline filling station across Culver Steet from the site.

Previous Groundwater Sample Location and Analytical Results are presented in Figure 4.

### 2.6 Areas of Concern

Based on the site history and the findings of previous studies, the areas of concern (AOCs) to be further investigated by this RI are shown in Figure 5 and are described below.

**AOC 1: Historical Site Operations, Open NYSDEC Spill No. 2506149, and Evidence of Poor Housekeeping**

The building at 372 Riverdale Avenue/Lot 30 has been used for auto repair by multiple tenants since 1974. The most recent tenant vacated in April 2026 and evidence of poor housekeeping (staining, standing fluids, trash, and debris) was observed at various locations throughout 372 Riverdale Avenue/Lot 30. New York State Department of Environmental Conservation (NYSDEC) Spill No. 2506149 was reported on October 7, 2025, when motor oil was reportedly flowing from the site into to street drains. Case notes also indicated that auto repair work was conducted on the streets with oil leaks noted. The spill case remains open. Documented and undocumented releases of petroleum products or hazardous substances related to auto repair may have impacted soil, groundwater, and soil vapor.

**AOC 2: Hazardous Waste Generation**

Lot 30 was identified as a SQG in 1986 and a CESQG in 1993, 2006, and 2007 of hazardous waste containing ignitable waste and spent nonhalogenated solvents including xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol. Manifests indicate hazardous waste shipments continued through 2012. No violations or non-compliance issues were reported. Undocumented releases of hazardous substances or hazardous waste may have impacted soil groundwater, and/or soil vapor at the site.

**AOC 3: Documented Soil and Groundwater Contamination**

An August 15, 2017 Phase II Limited Subsurface Investigation identified groundwater impacted with petroleum related VOCs at concentrations above NYSDEC SGVs and fill with metals and SVOCs at concentrations above NYSEC RURR SCOs.

**AOC 4: Current and Historical Use of Adjoining and Nearby Upgradient Properties and Related Open Spills**

Adjoining and/or nearby upgradient properties have been occupied by gasoline filling stations (1951- present) and a plastics manufacturer identified as a potential handler of per- and polyfluoroalkyl substances (PFAS). Two open petroleum spills are associated with the gasoline filling station at the south adjoining property at 380 Riverdale Avenue with "significant" impacts

DRAFT

to groundwater, according to the NYSDEC case notes. Documented and undocumented releases at these properties may have migrated and impacted groundwater and/or soil vapor at the site.

DRAFT

## 3.0 SCOPE OF WORK

The objective of this RIWP is to supplement existing data to investigate and characterize "the nature and extent of the contamination at and/or emanating from a brownfield site," as required to satisfy New York Environmental Conservation Law 27-1411.1.

The field investigation will include the tasks summarized below, which are discussed in more detail in the following sections. The rationale for each sampling location, in relation to the AOCs and analytical parameters for each proposed sample, is provided in Table 1.

*Geophysical Survey*

- Perform a geophysical survey to locate USTs, underground structures, geophysical anomalies, and utilities across accessible areas of the site, including in the vicinity of proposed sampling locations and in previously inaccessible areas of the site.

*Soil Borings and Sampling*

- Advance at least 14 soil borings (RISB-01 to RISB-14) to 20 feet bgs, the groundwater interface, or the termination of observed contamination (whichever is deeper). Note, borings will not be advanced into bedrock, and will be terminated at bedrock refusal. If petroleum-related impacts are observed, the vertical and horizontal extent of these impacts in overburden will be delineated by advancement of additional soil borings.
- Collect of up to three soil samples from each boring (plus quality assurance/quality control [QA/QC] samples) for laboratory analysis to further characterize and delineate the nature and extent of soil contamination at the site.

*Monitoring Well Installation and Sampling*

- Install and develop at least 11 permanent monitoring wells (MW-01, MW-02, MW-06, MW-07, MW-08, MW-09, MW-10, MW-11, MW-12, MW-13, and MW-14).
- Collect one groundwater sample from each monitoring well (plus QA/QC samples) for laboratory analysis to further evaluate groundwater quality across the site and delineate known impacted areas.
- Survey and gauge monitoring wells to evaluate groundwater elevations and flow direction and the potential presence of non-aqueous phase liquids (NAPL).

*Soil Vapor/Sub-slab Soil Vapor/Indoor Air Sampling*

- Install seven sub-surface soil vapor sampling points (SV-01, SV-02, SV-04, SV-06, SV-07, SV-12, and SV-14) to five feet bgs or two feet above the observed groundwater table; whichever is shallower.
- Install two sub-slab soil vapor sampling points (SSV-08, SSV-10) immediately below the existing building slab, each coupled with a co-located indoor air sample.
- One outdoor, ambient air sample (AA01)

DRAFT

Modifications to this scope of work may be required: 1) due to site operations, equipment, or restrictions; 2) if unexpected contamination is detected and additional analytical data is needed to characterize the site; and 3) to confirm that impacts are adequately characterized and delineated in compliance with the Brownfield Law, regulations, and applicable investigation guidance documents (e.g., DER-10). NYSDEC and NYSDOH will be contacted to obtain approval for these modifications, and all modifications will be reflected in the Remedial Investigation Report (RIR).

The field investigation will be completed in accordance with the procedures specified in Langan's Health and Safety Plan (HASP) and Quality Assurance Project Plan (QAPP) provided in Appendices B and C, respectively. A Community Air Monitoring Plan (CAMP) will be implemented during this investigation (see Section 3.8.2 and Appendix D).

The names, contact information and roles of the principal personnel who will participate in the investigation are listed below. Résumés for Langan employees involved in the project are included in the QAPP (Appendix C).

| Personnel | Investigation Role | Contact Information |
|---|---|---|

## 3.1 Geophysical Survey

A geophysical contractor will perform a geophysical survey to locate potential USTs, underground structures, geophysical anomalies, identify utilities across previously inaccessible areas of the site, and clear subsurface testing locations of potential subsurface obstructions. The geophysical survey will be completed using a collection of geophysical instruments, including electromagnetic and utility line locator instruments and ground-penetrating radar (GPR). The results of the survey may require relocating subsurface testing locations.

DRAFT

## 3.2 Soil Investigation

3.2.1 Soil Boring Installation

The drilling subcontractor will advance at least 14 soil borings to further investigate the AOCs identified in Section 2.6. Borings will be advanced to 20 feet bgs, the groundwater interface, or to the termination of observed contamination (whichever is deeper). Borings will not be advanced into bedrock, and will be terminated at bedrock refusal. A plan showing the proposed sample locations is included as Figure 5, and a summary of the proposed laboratory analyses for each sample is included as Table 1. The following table associates borings and/or monitoring wells with AOCs and describes the rationale for each.

| AOC | Associated Soil Boring(s), Probes, and Monitoring Wells | Rationale |
|---|---|---|
| AOC 1 | RISB/MW/SV-01, RISB/MW/SV-02, RSB-03, RSB/SV-04, RISB/MW/SV-07, RISB/MW/SV/IA-08, RISB/MW-09, RISB/MW/SV/IA-10, RISB/MW-11, RISB/MW/SV-12, RISB/MW-13, RISB/MW/SV-14 | Investigate areas of historical operations |
| AOC 2 | RISB/MW/SV-01, RISB/MW/SV-02, RSB-03, RSB/SV-04, RISB/MW/SV-07, RISB/MW/SV/IA-08, RISB/MW-09, RISB/MW/SV/IA-10, RISB/MW-11, RISB/MW/SV-12, RISB/MW-13, RISB/MW/SV-14 | Investigate areas of waste storage |

| AOC 4 | All borings and monitoring wells | Investigate current and historical use of adjoining and nearby upgradient properties and related open spills |

Soil borings will be advanced using direct-push drilling technology. The direct-push drill rig will be equipped with a closed-point Macro-Core sampler to prevent the collapse of sidewall material

DRAFT

as borings are advanced. Langan personnel will document the work, screen soil samples for environmental impacts, and collect representative environmental soil samples for laboratory analyses. Soil will be screened continuously to the boring termination depth for organic vapors with a PID equipped with a 10.6 electron volt (eV) bulb and for visual and olfactory evidence of environmental impacts (e.g., NAPL, staining, odor). Soil will be visually classified for color, grain size, texture, and moisture content, and will be recorded in a field log. Site operations will comply with the safety guidelines outlined in the HASP in Appendix B. Non-disposable, down-hole drilling equipment and sampling apparatus will be decontaminated between locations with Alconox and water. Water used for decontamination and rinsate will be containerized into United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drums, labeled, and staged for off-site disposal.

### 3.2.2 Soil Sampling and Analysis

A minimum of three soil samples will be collected for laboratory analysis from each soil boring. The following intervals will be targeted:

1. Shallow soil samples from within the top two feet of recovery, and a sample will be collected from the terminus of soil with apparent anthropogenic impacts (e.g., anthropogenic materials, construction and demolition debris), if observed above the groundwater interface;
2. The interval exhibiting the greatest degree of impacts, if encountered, or the groundwater interface; and
3. The one-foot interval below the vertical extents of impacts, if encountered.

Depending on the site conditions (e.g., fill depth, presence/absence of impacts) and recovery, the number of samples collected at each boring may vary.

If petroleum-related impacts are observed in any boring, additional overburden soil samples supporting a horizontal and vertical delineation will be collected.

Soil samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in a chilled cooler (to attempt to maintain a temperature of <4°C) for delivery to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples will be analyzed for the following using the latest USEPA methods as specified below:

- 6 NYCRR Part 375 VOCs by USEPA Methods 8260;
- 6 NYCRR Part 375 SVOCs by USEPA Method 8270, including 1,4-dioxane;
- PCB by USEPA Method 8082;
- 6 NYCRR Part 375 metals (including cyanide and hexavalent and trivalent chromium) by USEPA Methods 6010/7471/9010/7196;
- 6 NYCRR Part 375 Pesticides and herbicides by USEPA Methods 8081 and 8151, respectively; and

DRAFT

- PFAS (40-compound list) by USEPA Method 1633.

The proposed RI soil samples are summarized in Table 1. QA/QC procedures to be followed and sampling frequency are described in the QAPP in Appendix C.

## 3.3 Groundwater Investigation

### 3.3.1 Monitoring Well Installation

Eleven permanent groundwater monitoring wells (MW-01, MW-02, and MW-06 through MW-14) will be installed using direct-push drilling technology. A plan showing the proposed well locations is included as Figure 5. As indicated in Table 1, groundwater samples from the eleven monitoring wells will be used to investigate and characterize the nature and extent of contamination associated with the AOCs.

Well installation methods for monitoring wells are presented herein:

- Monitoring wells will be constructed using 2-inch-diameter, threaded, flush-joint, polyvinyl chloride casing, and 10-foot-long, pre-packed well screens that will terminate about 5 feet below the observed groundwater table. Clean sand (e.g., Morie No. 2) will be used to fill the minimum 2-inch-thick annulus around the screen up to about 2 feet above the top of the screened interval, including to 6 inches below the screen. A 2-foot-thick bentonite seal will be installed above the sand, and the remaining borehole annulus will be backfilled with drill cuttings with no evidence of chemical or petroleum impacts (i.e., staining, odors, or PID readings above background conditions) to within 12 inches of the surface and/or grouted to the surface with a bentonite and cement slurry. Monitoring wells will be finished at the surface with flush-mounted access covers.

After installation, the wells will be developed by surging using either a weighted bailer or surge block across the well screen and casing to agitate and remove fines. After surging, the well will be purged via pumping until the water becomes clear (having turbidity less than 50 Nephelometric Turbidity Units). The wells will then be allowed to equilibrate for a minimum of one week before collecting groundwater samples.

### 3.3.2 Groundwater Sampling and Analysis

Before sampling, the headspace of each well will be measured with a PID. Because groundwater samples will be analyzed for PFAS, wells will be gauged with an interface probe to determine the depth to groundwater and thickness of any NAPL after groundwater samples are collected and the water table elevation stabilizes to avoid potential cross contamination. If NAPL is encountered, representative samples of the product will be collected for laboratory fingerprint analysis. If NAPL is observed on purged groundwater prior to sampling, groundwater samples will not be collected from monitoring wells that contain NAPL.

One groundwater sample will be collected from each of the 11 monitoring wells as summarized in Table 1. Prior to sampling, one round of synoptic gauging for static water levels will be

DRAFT

performed and the monitoring wells will be purged. Purging will consist of pumping, at a minimum, the stabilized drawdown volume plus the pump's tubing volume, and waiting until the physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity) stabilize within the ranges specified in the USEPA's Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells (dated 30 July 1996, and 4th revision 19 September 2017). If physical and chemical parameters do not stabilize within one hour of purging, sample collection will proceed. Samples will be collected with a submersible pump and dedicated polyethylene tubing (or similar pump apparatus). Non-disposal components of the pump will be decontaminated with Alconox and water between each sample location. Development and purge water will be containerized for off-site disposal.

Groundwater samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of approximately 4°C) for delivery to the laboratory. Groundwater samples from both newly installed and existing well locations will be analyzed using the latest USEPA methods as follows:

- TCL VOCs by USEPA Method 8260;
- TCL SVOCs by USEPA Method 8270;
- PCBs by USEPA Method 8082;
- Metals (total and dissolved) by USEPA Method 6010/7470;
- Pesticides by USEPA Method 8081;
- Herbicides by USEPA Method 8151;
- NYSDEC-List PFAS by EPA Method 1633; and
- 1,4-dioxane by EPA Method 8270 with selected ion monitoring (SIM).

QA/QC procedures to be followed are described in the QAPP in Appendix C.

### 3.3.3 Monitoring Well Survey and Synoptic Gauging

Langan will survey the vertical location of the monitoring wells, including ground surface elevation and the top of well casing to the nearest 0.01 foot. Vertical control will be established by surveying performed relative to NAVD88 by a New York State-licensed land surveyor. The horizontal well locations will be established using field measurements. A synoptic gauging event will be performed after the wells are installed to document static water levels across the site. Survey data will be used to prepare a groundwater contour map depicting the elevation of the water table across the site.

DRAFT

## 3.4 Soil Vapor Investigation

3.4.1 Soil Vapor and Sub-Slab Soil Vapor Point Installation

Seven temporary soil vapor points (SV-01, SV-02, SV-04, SV-06, SV-07, SV-12, and SV-14) and two temporary sub-slab soil vapor points (SSV08 and SSV10) will be installed using direct-push technology in accordance with the NYSDOH's Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006). A plan showing the proposed soil vapor and sub-slab soil vapor point locations is included as Figure 5. As indicated in Table 1, soil vapor and sub-slab soil vapor samples from each sampling location will be used to investigate and characterize the nature and extent of contamination associated with the AOCs.

Sub-surface soil vapor points will be installed by advancing a probe implant to five feet bgs or two feet above the groundwater table, whichever is shallower, and the sub-slab soil vapor points will be installed immediately below the existing building slab. Sub-surface soil vapor collection points will consist of a 1.875-inch polyethylene implant with inert sample tubing (e.g., Teflon or Teflon-lined polyethylene), and sub-slab soil vapor points will consist of inert sample tubing. The annulus (i.e., the sampling zone) around the soil vapor and sub-slab soil vapor implant and tubing will be filled with a clean, coarse sand pack followed by a hydrated bentonite seal to surface grade. Hydrated bentonite will also be used to create a seal around the tubing at the surface of the soil vapor and sub-slab soil vapor points.

Sub-slab soil vapor samples will be co-located with indoor air samples. Soil vapor and indoor air samples will be collected in accordance with the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, with updates).

3.4.2 Soil Vapor and Sub-slab Soil Vapor Sampling and Analysis

Samples will be collected in general accordance with the NYSDOH's Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (October 2006, with updates). Before collecting vapor samples, a minimum of three vapor point volumes (i.e., the volume of the sample implant and tubing) will be purged from each sample location at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE meter set at a low flow setting. The purged vapor will be monitored for VOCs with the MultiRAE during purging.

A helium tracer gas will be used to serve as a QA/QC technique to document the integrity of each vapor point seal before and after sampling. The tracer gas will be introduced into a container, which will shroud the vapor point and seal. Helium will be measured from the sampling tube and inside the container. If the sample tubing contains more than 10% of the tracer gas concentration that was introduced into the container, then the seal will be considered compromised and will be enhanced or reconstructed to prevent outdoor air infiltration.

A log sheet for each vapor sample will be completed to record sample identification; date and time of sample collection; sampling depth; name of the field engineer, geologist or scientist

DRAFT

responsible for sampling; sampling methods and equipment; vapor purge volumes; volume of vapor extracted; flow rate; and vacuum of canisters before and after sample collection.

After the integrity of each seal is confirmed, vapor samples will be collected into laboratory-supplied batch-certified clean 2.7- or 6-liter Summa canisters with calibrated flow controllers. Soil vapor samples will be collected over a 2-hour sampling period, and sub-slab soil vapor and indoor air samples will be collected over a 24-hour sampling period and analyzed for VOCs by USEPA Method TO-15.

The proposed vapor samples are summarized in Table 1. QA/QC sample collection procedures and sampling frequency are described in the QAPP in Appendix C.

3.4.3 Indoor Air Sampling

Two indoor air samples (IA08 and IA10) will be collected about 3 to 5 feet above grade concurrently with co-located sub-slab vapor samples. Prior to sample collection, an NYSDOH Indoor Air Quality Questionnaire and Building Survey will be completed to document the potential presence of equipment or chemicals that could interfere with the laboratory analytical results. The buildings will be screened with a PID that can detect organic vapors at concentrations of parts per billion during the indoor air survey.

One outdoor, ambient air sample will be concurrently collected from the breathing zone (about 3 to 5 feet above grade) to provide information regarding background air conditions. The ambient air sample will be collected into laboratory-supplied, batch-certified clean 2.7- or 6-liter Summa canisters with a calibrated flow controller over an 8-hour sampling period, concurrent with the soil vapor samples. The samples will be submitted to an NYSDOH Environmental Laboratory Approval Program-certified laboratory for analysis of VOCs via USEPA Method TO-15.

QA/QC procedures to be followed are described in the QAPP in Appendix C.

## 3.5 Sampling Contingency

Additional soil, groundwater, or vapor sampling locations may be completed, as needed, to evaluate unanticipated contamination and to horizontally and vertically delineate identified contamination (e.g., NAPL, VOCs, SVOCs, metals, or other analytes) in the overburden based on field observations and analytical results. The objective of a sampling contingency is to provide adequate delineation of AOCs during a single mobilization event, if possible. The decision to complete additional sampling and delineation (including step-out distances and target-depth intervals) based on field observations and/or preliminary (non-validated) laboratory data will be made by Langan, potentially in consultation with NYSDEC and/or NYSDOH Project Managers. The location of any step-out soil borings and additional monitoring wells will be based on field observations and analytical data from adjacent borings and wells, site access, and drilling considerations. Sampling depths and analyses will be contingent on observations/findings.

DRAFT

## 3.6 Data Management and Validation

York, a NYSDOH ELAP-approved laboratory, will analyze soil, groundwater, and soil vapor samples. Laboratory analyses will be conducted in accordance with USEPA SW-846 methods and NYSDEC Analytical Services Protocol (ASP) B deliverable format. Environmental data will be reported electronically using the database software application EQuIS as part of NYSDEC's Environmental Information Management System.

Table 1 summarizes the anticipated samples and analytical methodology. QA/QC procedures required by the NYSDEC ASP and SW-846 methods, including initial and continuing instrument calibrations, surrogate compound spikes, and analysis of other samples (blanks, laboratory control samples, and matrix spikes/matrix spike duplicates) will be followed in accordance with the QAPP (Appendix C). The laboratory will provide pre-cleaned and preserved sample bottles in accordance with the SW-846 methods. Where there are differences in the SW-846 and NYSDEC ASP requirements, the NYSDEC ASP shall take precedence.

Data validation will be performed in accordance with the USEPA Region 2 Standard Operating Procedures (SOP) for data validation and USEPA's National Functional Guidelines for Organic and Inorganic Data Review, Technical and Administrative Guidance Memorandum (TAGM) Solid Waste Guidance (SW-96-09) Development and Review of Site Analytical Plans, and DER-10 Appendix 2B Section 2.0. Tier 1 data validation (the equivalent of USEPA's Stage 2A validation) will be performed to evaluate data quality. Tier 1 data validation is based on completeness and compliance checks of sample-related quality control results including:

- Holding times
- Sample preservation
- Blank results (method, trip, and field blanks)
- Surrogate recovery compounds and extracted internal standards (as applicable)
- Laboratory control samples and laboratory control sample duplicates recoveries and relative percent difference (RPD)
- Matrix spike and matrix spike duplicate recoveries and RPDs
- Laboratory duplicate RPDs
- Field duplicate RPDs

The Data Usability Summary Reports (DUSR) will be prepared and then reviewed by the Program Quality Assurance Monitor before issuance. The DUSRs will provide a detailed assessment of each sample delivery group (SDG) and present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and Chain of Custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. Additional details on the DUSRs are provided in the QAPP in Appendix C.

DRAFT

## 3.7 Management of Investigation-Derived Waste

Grossly contaminated or excess soil cuttings and purge water will be containerized and staged on site, pending proper disposal at an off-site waste management facility. Soil cuttings with no apparent staining, odors, or PID readings above background conditions will be used to backfill boreholes. Soil to be disposed of off-site will be placed in 55-gallon, UN/DOT-approved drums. Decontamination fluids, if necessary, will be placed in UN/DOT-approved fluid drums with closed tops. Drums will be properly labeled, sealed, and characterized, as necessary. Drums will be labeled as nonhazardous waste pending analysis and stored in a manner to prevent contents from discharging to the environment. Investigative derived waste will be disposed of off-site at one or more selected disposal facilities within 90 days of generation. If RI analytical data is insufficient to gain disposal facility acceptance, additional waste characterization samples will be collected. Additional sampling and analyses may be required based on the selected disposal facility. Waste characterization samples will be submitted to by a NYSDOH ELAP-approved laboratory for analysis in accordance with the QAPP provided in Appendix C. Management of investigation-derived waste (IDW) will comply with NYSDEC DER-10 3.3(e) and DER-31 (Section 3.11).

## 3.8 Air Monitoring

Air monitoring will be conducted for site personnel (HASP) and the community (CAMP) (Appendix D). Fugitive particulate (dust) generation that could affect site personnel or the public is not expected because intrusive work is limited to boring, monitoring well, and vapor point installation, which does not disturb large volumes of soil.

Dust emissions will be monitored using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10). Organic vapors will be monitored with a PID. Odors will be periodically monitored by site personnel at and beyond the site perimeter. Dust and odor suppression measures (e.g., water misting, odor suppressant) will be implemented as needed. All PIDs used will be equipped with a 10.6 eV bulb.

### 3.8.1 Personnel Air Monitoring

Langan will conduct air monitoring of the breathing zone periodically during drilling and sampling activities to evaluate health and safety protection for the Langan field personnel. Initially, ambient air monitoring will be performed within the work area. Langan will monitor VOCs with a PID (MultiRAE 3000 or similar) in accordance with the HASP (Appendix B). If air monitoring during intrusive operations identifies the presence of VOCs, on-site personnel will follow the guidelines outlined in the HASP regarding action levels, permissible exposure, engineering controls, and personal protective equipment. If the VOC action level is exceeded, work will cease and the work location will be evacuated. Monitoring will continue until the levels drop to safe limits. At that time, work can resume with continued monitoring. If high levels persist, field activities will be halted and the work relocated to another area. If dust emissions are observed, work will stop and dust suppression measures will be used.

DRAFT

3.8.2 Community Air Monitoring Plan

In addition to air monitoring in the worker breathing zone, Langan will conduct community air monitoring in compliance with the NYSDOH Generic CAMP. CAMP deployment will comply with NYSDEC DER-10 Appendix 1A and Appendix 1B. The CAMP is included as Appendix D of this RIWP.

Langan will conduct periodic monitoring for VOCs during non-intrusive work such as the collection of groundwater samples. Periodic monitoring may include obtaining measurements upon arrival at a location, when opening a monitoring well cap, when bailing/purging a well, and upon departure from a location.

Langan will also conduct continuous monitoring of VOCs and dust during ground-intrusive work (i.e., soil boring advancement and monitoring well installation). During ground-intrusive work, Langan will measure upwind concentrations at the start of each workday to establish background concentrations. Langan will monitor VOCs and dust at the downwind perimeter of the work zone, which will be established at a point on the site where the general public or site employees may be present. Monitoring for VOCs will be conducted with a PID. Dust emissions will be monitored using real-time monitoring equipment capable of measuring PM-10 (e.g., DustTrak). If dust emissions are observed, work will stop and dust suppression measures will be used. Odors will be periodically monitored by site personnel at and beyond the site perimeter.

If work activities occur within 20 feet of occupied structures and total VOC concentrations exceed 1 ppm or particulate concentrations exceed 150 µg/m$^3$ at building walls or air intakes, monitoring within the occupied structures and implementation of appropriate engineering controls will be performed as required.

## 3.9 Fish and Wildlife Resources Impact Analysis

A Fish and Wildlife Resources Impact Analysis (FWRIA) screening-level review will be conducted in accordance with Section 3.10 and Appendix 3C of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. If necessary, based on the results of the screening-level review, a full FWRIA will be performed. The assessment will be included in the RIR.

## 3.10 Green and Sustainable Remediation

The NYSDEC DER-31 Green and Sustainable Remediation Initiative requires that green remediation concepts and techniques be considered during all stages of the remedial program, including investigation, with the goal of improving the sustainability of the cleanup and summarizing the net environmental benefit of any implemented green technology. The following measures will be implemented during the RI:

1. Limit use of generators, drilling equipment, and vehicles to reduce emissions to the atmosphere;
2. Minimize IDW generated by reusing soil/fill that does not exhibit visual, olfactory, or PID evidence of contamination to backfill boreholes after sampling;

DRAFT

3. Minimize truck travel for disposal of IDW by selecting local disposal facilities for IDW;
4. Request that the environmental drillers use clean diesel equipment to reduce emissions to the atmosphere; and
5. Utilize public transportation to access the site during implementation of the RI, to the extent practicable.

### 3.11 Qualitative Human Health Exposure Assessment

A Qualitative Human Health Exposure Assessment (QHHEA) will be conducted in accordance with Appendix 3B of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. The assessment will be submitted in the RIR.

DRAFT

## 4.0 REMEDIAL INVESTIGATION REPORT

Following completion of the RI and receipt of analytical data, an RIR will be prepared in accordance with the applicable requirements of DER-10 Section 3.14. The report will include:

(1) A summary of the site history and previous investigations;

(2) A description of site conditions and the remedial investigation;

(3) Sampling methodology and field observations;

(4) Evaluation of the results and findings;

(5) Conclusions; and

(6) Recommendations for any further assessment, if warranted.

The report will summarize the nature and extent of contamination for each AOC and identify complete and potentially complete exposure pathways (as determined through the QHHEA). DUSRs will be included in the RIR, and electronic data deliverables will be submitted to the NYSDEC EQuIS database prior to submission of the draft RIR.

The report will include soil boring and well construction logs, sampling logs, tabulated analytical results, figures, and laboratory data packages. The analytical results will be organized in table format and include sample location; media sampled; sample depth; field/laboratory identification numbers; analytical results; and applicable Standards, Criteria, and Guidance (SCG) pertaining to the site and contaminants of concern for comparison. The report will include scaled figures showing the locations of soil borings, monitoring wells, and vapor points; sample concentrations above SCGs for each media; groundwater elevation contours and flow direction; and, if appropriate, groundwater contaminant concentration contours.

Soil analytical results will be compared to the UU, PGW, and RURR SCOs and the guidance values set forth in the NYSDEC Part 375 Remedial Programs guidance for Sampling, Analysis, and Assessment of PFAS (April 2023). Groundwater analytical results will be compared to the NYSDEC SGVs for Class GA water. Soil vapor results will be tabulated. Co-located sub-slab and indoor air samples will be compared against Decision Matrices in the 2006 NYSDOH Guidance (updated in 2024). The RIR will be provided in an electronic format to the NYSDEC.

DRAFT

## 5.0 SCHEDULE

The table below presents an anticipated schedule for the proposed RI and reporting following the approval of the RIWP. If the schedules changes, it will be updated and submitted to the NYSDEC.

| Milestone | Weeks from NYSDEC Approval of RIWP | Estimated Duration (weeks) |
|---|---|---|
| RI Mobilization | 4 to 8 | 1 Day |
| RI Field Investigation | 4 to 8 | 3 |
| Laboratory Analysis | 6 to 10 | 2 |
| Remedial Investigation Report Preparation and Submission to the NYSDEC | 12 to 16 | 6 |

| **Indoor and Ambient Air** | | | | | | |
| 1 | IA08_date | Grab | IA08 | AOC-1, AOC-2, AOC-3, AOC-4 | Co-located with sub-slab vapor points | VOCs by USEPA Method TO-15 |
| 2 | IA10_date | | IA10 | | | |
| 6 | AA01_date | | AA01 | QA/QC | 3 to 5 feet above grade surface | |

**Areas of Concern (AOCs):**
Investigate AOC 1 - Investigate areas of historical site operations
Investigate AOC 2 - Investigate areas of waste storage
Investigate AOC 3 - Investigate areas of petroleum-related impacts observed during previous investigations
Investigate AOC-4 - Investigate current and historical use of adjoining and nearby upgradient properties and related open spills

**Notes:**
1. Soil sample depth intervals will be determined in the field.
2. Soil samples to be analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes,
3. TBD = to be determined (in the field)
4. VOC = volatile organic compound
5. SVOC = semivolatile organic compound
6. PCB = polychlorinated biphenyl
7. TCL = Target Compound List
8. TAL = Target Analyte List
9. QA/QC = quality assurance/quality control
10. NA = not applicable
11. PFAS = per-fluorinated chemicals as limited to the list of compounds designated by NYSDEC
12. PBS = Petroleum Bulk Storage
13. bgs = below grade surface

Ransom Project No. 111.02013

June 7, 2017

## EXECUTIVE SUMMARY

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Ransom Consulting, Inc. (Ransom) for the properties located at 13 Culver Street and 372 Riverdale Avenue in the City of Yonkers, New York (the "Site"), which includes Section 1, Block 129, Lots 26 and 30, respectively. This Phase I ESA was conducted in accordance with the scope and limitations of ASTM International E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and Ransom's Corporate Services Agreement with CVS Pharmacy, Inc. (CVS) dated April 1, 2015 (the "Corporate Services Agreement"). The purpose of this Phase I ESA was to evaluate the environmental condition of the Site for evidence of a release or threat of release of hazardous substances or petroleum products (HSP) and to provide our professional opinion regarding evidence of recognized environmental conditions (RECs) in connection with the Site.

The Site consists of one 8,695 square-foot commercial structure (the "Lot 30 Site Building"), constructed sometime in 1974 on the 372 Riverdale Avenue (Lot 30) portion of the Site, a 1,320 square-foot residential structure with a basement (the "Residential Building") on the 13 Culver Street (Lot 26) portion of the Site (collectively, the Site Buildings), asphalt paved parking surfaces, and areas of limited landscaping. The Site is located in a mixed commercial and residential area of the City of Yonkers.

The Lot 30 Site Building recently operated as a Goodyear-branded automotive repair shop and tire sales center from 1974 until sometime in 2015. The Lot 30 Site Building is currently occupied by the West Coast Auto Sales company, who have utilized the Site for the sale of used cars since sometime in 2016. The Residential Building on-Site was constructed sometime prior to 1897 and has been vacant since sometime in 2009.

Prior to development of the Lot 30 Site Building in 1974, the entire Site consisted of ten residential structures, one of which was removed by 1951, and six of which were removed circa 1973. Commercial improvements (i.e., an additionally parking area) to the Lot 30 portion of the Site were completed in June of 1980, at which time two more residential structures located to the north of the Lot 30 Site Building were removed from the Site and a paved parking area was installed. The Residential Building located on the Lot 26 portion of the Site is the only remaining residential structure on-Site.

The Site is bordered by residential properties to the north and Culver Park to the east. The PEARLS Hawthorne School is located to the west of the Site, across Riverdale Avenue. To the south of the Site, across Culver Street, is a Citgo-branded gasoline filling station and residential properties. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body & Repair Center.

A total of 15 current, sealed, or former floor drains, one former/inactive 4-inch cast iron drainage pipe, one 6-inch cast iron drainage pipe, and one grease/sand interceptor were either observed within the Lot 30 Site Building or depicted on historical building plans.

The Lot 30 Site Building was observed with eight service bays, which historically had (or currently have) seven underground hydraulic lifts and one hydraulic alignment rack. The former hydraulic lift system utilized approximately five underground hydraulic oil reservoirs, two air compressors with an associated air filter, and three floor-mounted control boxes. The current underground hydraulic lift system, including seven underground hydraulic lifts and one hydraulic alignment rack, was observed with five wall-mounted hydraulic fluid reservoirs/control boxes, three floor-mounted control boxes (where the control box between Bays 3 and 4 was presumably disconnected) and two electric air compressors. It was

presumed that the system was upgraded sometime around 2006; however, the status of the formerly used underground reservoirs is unknown.

Used vehicle storage was observed within the northeastern most storage area of the Lot 30 Site Building, as well as throughout the paved parking areas surrounding the Lot 30 Site Building. At the Residential Building, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, further barring access into a room where a suspect boiler was located.

One inactive fuel-oil fired boiler was observed within the Lot 30 Site Building as well. Ransom observed waste ash within the base of the boiler and potential asbestos containing materials (ACMs) along piping associated with the boiler.

The Lot 30 Site Building historically operated with two underground storage tanks (USTs), including: one 3,000-gallon fuel oil (No. 2) underground storage tank (UST) with an associated pump and appurtenant piping that connected to the fuel-oil fired boiler, which was located on the eastern side of the Lot 30 Site Building; and one 550-gallon waste oil UST located on the southeastern corner of the Lot 30 Site Building. Both USTs were installed sometime in or around 1974 and were related to the automotive repair shop and tire sales center activities. Permitting documentation reviewed at the City of Yonkers Housing and Building Department indicated that removal activities for two USTs were completed by September 1995; however, documents reviewed did not reference UST content or capacities. Based on known information, the USTs referenced within the permitting documentation are presumed to be the former 3,000-gallon fuel oil UST and former 550-gallon waste oil UST; however, detailed UST removal documentation was not identified by Ransom.

The 1898 Sanborn Map indicted one of the former residential properties on the Site with "Low Ground," indicating potential historic filling on-Site.

Ransom observed three 55-gallon steel drums containing waste oil within the service garage area of the Lot 30 Site Building, presumably generated during former automobile repair operations. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. Additionally, evidence of six circular stains, indicative of former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining.

Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, 5-gallon buckets with cooking oil, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property.

As part of our assessment of the Site, Ransom contracted Environmental Data Resources, Inc. (EDR) to perform an environmental database search. The Site was listed in the EDR environmental database report on the Resource Conservation and Recovery Act list of Conditionally Exempt Small Quantity Generators (RCRA-CESQ) database as the Goodyear Auto Service Center and was listed as a small quantity generator and handler of hazardous waste; however, no violations were identified in association with this database listing. Additionally, the Site was listed on the EDR database of Historical Auto Stations, which identifies potential automotive facilities based on operator names, as the Goodyear Auto Service Center for the years 1999, 2000, 2002, 2009, 2010, and 2012.

Additionally, gasoline service stations were identified in the EDR report with NY Spill cases on adjoining properties to the south of the Site. The environmental database provided by EDR revealed two active spill numbers (Spill No. 0608110 and Spill No. 0202712) and a spill number of unknown status (Spill No. 110501) related to the active Citgo-branded gasoline filling station located at 380 Riverdale Avenue, adjoining the Site to the south. This property was additionally identified as NY UST Facility ID No. 3-800744, an active facility with two 6,000-gallon gasoline USTs and one 6,000-gallon diesel UST. Based on the identified active spill numbers and close proximity to the Site, Ransom concludes that this facility has the potential to have impacted the Site.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 for the Site, which consists of an approximate 1.02-acre parcel of land, identified by the City Assessor's Office as Block 129, Lots 26 and 30, and corresponds to 13 Culver Street and 372 Riverdale Avenue, City of Yonkers, Westchester County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. Based on the information identified during this Phase I ESA, Ransom has identified the following RECs in connection with the Site.

- **REC 1 – Automotive Repair Drainage System**: A total of 11 sealed/inactive/former floor drains, four active floor drains, one former/inactive 4-inch cast iron drainage pipe, and one active 6-inch drainage pipe were either observed or identified throughout the Lot 30 Site Building. The former/inactive 4-inch cast iron drainage pipe was depicted as leading to a grease and sand interceptor. The Lot 30 Site Building's drainage system reportedly discharged and/or currently discharges to the municipal sanitary sewer system. The identified floor and appurtenant drainage pipes, and former grease and sand interceptor, represent RECs as follows (details are presented within Section 4.9.1 of this Report):
    - REC 1A – Service Garage Sealed Floor Drain;
    - REC 1B – Boiler Room Sealed Floor Drain;
    - REC 1C – Parts Room Sealed Floor Drain;
    - REC 1D – Bathroom Floor Drains;
    - REC 1E – Employee Locker Room Sealed Floor Drain;
    - REC 1F – Tire Wash Area Floor Drain;
    - REC 1G – Former Hydraulic Lift Floor Drains; and
    - REC 1H – Former Grease and Sand Interceptor.

  Due to the close proximity of the sealed/inactive/former floor drains and former underground grease and sand interceptor to the former automobile repair activities, there is a potential for soil and/or groundwater impacts within this area. Further investigation is warranted.

- **REC 2 – Automotive Repair Hydraulic Lift Systems**: A total of seven of the eight automobile repair bays housed underground hydraulic lifts, and one bay housed an air/hydraulic alignment rack. It is believed that at least five of the seven hydraulic lifts historically had underground hydraulic oil reservoirs, which were upgraded to wall-mounted hydraulic underground lifts. Two former air compressors and associated air filter were located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. The identified current and former system components represent RECs as follows (details are presented within Section 4.4 of this Report):

- REC 2A – Hydraulic Lifts and Alignment Rack;
- REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes;
- REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs;
- REC 2D – Hydraulic Lift Control Boxes; and
- REC 2E – Former Air Compressors.

Based on the former operations and unknown condition of the subsurface in the vicinity of the current/former hydraulic lifts/alignment rack, wall-mounted hydraulic fluid reservoirs, underground hydraulic oil reservoirs, hydraulic lift control boxes, and former air compressors, there is a potential for soil impacts within these areas. Further investigation is warranted

- **REC 3 – Vehicle Storage**: Used vehicle storage was observed within the northeastern most storage area of the Lot 30 Site Building, as well as throughout the paved parking areas surrounding the Lot 30 Site Building. The areas beneath the parked vehicle was inaccessible during Site reconnaissance activities; therefore, Ransom was unable to ascertain the integrity of the surface materials in these areas. Further investigation is warranted in all vehicle storage areas throughout the Site.

- **REC 4 – Inactive Oil-Fired Boiler System**: One inactive oil-fired burner was observed in the boiler room of the Lot 30 Site Building. The oil-fired burner was observed to be in poor condition with heavy rusting and staining visible on the exterior of the boiler. Due to the presence of dust and dim lighting, the condition of the floor below the boiler could not be fully assessed. Additionally, waste ash, which may contain heavy metals, was observed within the base of the boiler. Due to the poor condition of the oil-fired burner, close proximity to a former floor drain, inability to access the area beneath the oil-fired burner, and presence of waste ash, there is a potential for residual soil impacts in this area. Further investigation into the soil conditions in this area is warranted.

- **REC 5 – Former 3,000-gallon Fuel Oil UST**: One former 3,000-gallon fuel oil UST was identified on historic construction plans on the eastern exterior side of the Lot 30 Site Building. An associated pump was identified on the eastern most portion of the storage area within the Lot 30 Site Building as well. The fuel oil UST depicted on the historical plan was connected to a pump and subsequently to the oil-fired boiler (REC 4) via underground piping. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 3,000-gallon fuel oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 6 – Former 550-gallon Waste Oil UST**: One former 550-gallon waste oil UST was identified on historic construction plans on the southeastern exterior or of the Lot 30 Site Building. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 550-gallon waste oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 7 – 55-Gallon Waste Oil Drum Storage**: Approximately six circular stains, indicative of former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining. The presence of this staining represents evidence of historical drum storage and waste generation, which presumably was how waste oil was stored after the waste oil UST was removed in 1995 until 2015, when automobile repair operations ceased. Due to the observed crack in the concrete and the evidence of staining in this area, further investigation of the soil conditions in this area is warranted.

  Additionally, Ransom observed three 55-gallon steel drums containing waste oil within the service garage area of the Lot 30 Site Building, presumably generated by former automobile repair operations. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. No further investigation is recommended in connection with the existing 55-gallon waste oil drums; however, proper removal and off-site disposal is required prior to Site redevelopment.

- **REC 8 – Current/Former Residential Use**: Ransom identified one current and eight former residential buildings associated with the Site. The existing Residential Building is known to use fuel oil for heating. The historical heating source(s) for the former residential structures are unknown. Lastly, private septic systems are also associated with residential use. Therefore, there is a potential for one or more heating oil (No. 2) USTs and/or one or more septic systems to be present on-Site as follows:

  - **REC 8A – Known Fuel Oil Use at the Residential Building**: Property records were identified by Ransom for the Residential Building located on the Lot 26 portion of the Site, which indicated the usage of fuel oil at this property. Ransom was unable to confirm the presence of a fuel oil tank or boiler at the Residential Building; however, a sealed fill pipe was observed on the eastern side of the structure, along the foundation of the Lot 30 Site Building, indicating the potential presence of a fuel oil AST in the basement. Further, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, barring access into a room where a suspect boiler was located.

  - **REC 8B –Former Residential Use**: Historic records and construction plans identified the presence of eight residential structures (not including the current Residential Building) at the Site prior to redevelopment activities in 1974 and 1980. Specific documentation regarding these structures was not identified by, or provide to, Ransom.

  Due to the potential for historic fuel oil usage on the Lot 26 portion of the Site and based on the absence of a known heating source, UST, and/or septic system information for the former residential houses, further investigation is warranted regarding this REC.

- **REC 9 – Potential Fill**: The 1898 Sanborn Map indicted one of the former residential properties with "Low Ground," which indicates that the property had a potential to have been historically filled. The location of this "Low Ground" indication is mostly beneath the present-day Lot 30 Site Building. Based on the unknown source and characteristics of this potential fill material, Ransom believes that the potential exists for off-site fill material to have been brought on-Site; therefore, Ransom recommends that a subsurface investigation be conducted to assess whether historical fill is present on-Site and if it has impacted the environmental conditions at the Site.

- **REC 10 – Potential Off-site Sources**: Ransom identified two current off-site uses where known or potential past discharges of hazardous chemicals from facilities, including a gasoline filling station and an automotive repair facility, have or may have occurred upgradient of the Site and one off-site use where potential past discharges of hazardous chemicals from facilities, including a former gasoline filling may have occurred sidegradient of the Site. The following potential off-site sources were identified in close proximity to the Site, and represent RECs.

    - **REC 10A – Off-Site Citgo Service Station**: The southerly adjacent Citgo-gasoline filling station was identified as an active service station with multiple active NY Spills incident numbers associated with this property.

    - **REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center**: A property located approximately 390 feet to the south of the Site was identified as an active auto body and repair center that has a NY Spills incident with a "Closed" status.

    - **REC 10C – Former Riverdale Auto Service Inc.**: The property located 377 Riverdale Avenue, located adjacent (across Riverdale Avenue) to the west and sidegradient of the Site, was identified as a potential off-Site source due to its use as a former gasoline service station from at least 1940 through at least 1978; however, no further information was identified.

  Due to the close proximity, NY Spill incident(s) and/or former/current use, Ransom recognizes the potential for off-Site impact to the Site from the current filling station, active auto body and repair center, and former off-site service station operations; therefore, further investigation is warranted.

In addition to the RECs identified above, Ransom identified the following condition of potential environmental concern, which is being documented as a *de minimis* condition as follows:

- **Site-Wide Solid Waste**: Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, 5-gallon buckets with cooking oil, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property.

Some additional environmental concerns were identified which are considered non-scope under ASTM, but were recognized as areas of potential business environmental risk. Specifically, based on the construction date of the Lot 30 Site Building (1974) and the Residential Building (pre-1897), hazardous building materials may be present in the Site Buildings, including asbestos-containing materials (ACM), polychlorinated biphenyls (PCBs) in fluorescent light ballasts, lead-based paint (LBP), and mercury-containing fluorescent lights and/or other equipment. Prior to demolition of the current Site Buildings, identified hazardous building materials should be removed and disposed of in accordance with local, state, and federal regulations.

Based on the findings and conclusions presented above, Ransom makes the following recommendations:

- Based upon the construction date of the Site Building (1974) and Residential Building (pre-1897), hazardous building materials may be present within the Site buildings. Ransom recommends the performance of a comprehensive Hazardous Material Inventory (HMI) survey prior to demolition of the Site Buildings.

- Ransom recommends that sub-slab soil samples be collected along the drainage pipes and on-Site sanitary sewer lines associated with the automotive repair floor drains (REC 1). In an effort to target potential heavily impacted areas, video inspection of the pipes for evidence of cracks or breaches could be conducted as part of the geophysical survey recommended below. Based on the findings of the video inspection, soil sampling could be biased towards those areas of pipe cracks/breaches.

- Ransom recommends the completion of a geophysical survey across the Site in an effort to: (1) confirm the removal of the 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6) presumably removed from the Site in 1995, and (2) assess if one or more historic USTs, former product piping, and/or septic tanks are present from the current/former residential use (REC 8). If anomalies are identified, further subsurface investigation may be warranted.

- A subsurface soil and groundwater investigation is recommended prior to the initiation of construction activities. Ransom recommends the following soil and groundwater monitoring program be completed prior to redevelopment activities:

    - Ransom recommends the collection of sub-slab soil and groundwater samples from beneath the current/former hydraulic lifts and one hydraulic alignment rack (RECs 2A and REC 2C) within the Lot 30 Site Building.

    - Ransom recommends the collection of sub-slab soil samples from beneath the five identified wall-mounted hydraulic fluid reservoirs (REC 2B) within the Lot 30 Site Building immediately adjacent to the exposed subsurface piping.

    - Ransom recommends the collection of sub-slab soil samples immediately adjacent to the three floor-mounted control boxes (REC 2D) within the Lot 30 Site Building.

    - Ransom recommends the collection of subsurface soil and groundwater samples in the locations of the former 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6).

    - Ransom recommends the collection of subsurface soil samples at the location of the crack observed near the former waste oil drum storage/staining (REC 7).

    - Ransom recommends the collection of subsurface soil samples at the location of the potential historical fill area (REC 9).

    - Ransom recommends the installation of temporary groundwater monitoring points and/or soil borings along the southern boundary of the Site to evaluate potential off-Site impacts to the Site (REC 10).

- Since there were physical obstructions (e.g., stored vehicles, dirt, welded doors, etc.), which represent a significant data gap, and based on historical operations, Ransom recommends the physical obstructions be removed and further inspection completed of the ground surface areas beneath the former air compressor (REC 2E), the stored vehicles (REC 3), the inactive oil-fired burner (REC 4) and potential residential fuel-oil fired boiler (REC 8). Further investigation activities may be warranted based on the findings.

- Ransom recommends the proper disposal of the fuel oil-fired burner and its contents (e.g., waste ash) (REC 8) identified within the Lot 30 Site Building. After removal, Ransom recommends further inspection of the surface areas beneath the fuel oil-fired burner. Further investigation activities may be warranted based on the findings.

- 55-Gallon drums present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.

- On-Site drainage structures, including potential septic system components and/or storm water drainage structures (catch basins, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned according to local, state, and federal requirements. If evidence of contamination is identified during decommissioning of these structures, Ransom should be contacted to evaluate whether additional investigation or cleanup is warranted.

- Ransom recommends that miscellaneous chemicals, hazardous materials and/or stored appliances observed at the Site should be recovered/removed from the Site and properly disposed/recycled (by a certified technician where applicable) prior to proposed redevelopment activities.

## 1.0 INTRODUCTION

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Ransom Consulting, Inc. (Ransom) for the adjoined properties located at 13 Culver Street and 372 Riverdale Avenue in the City of Yonkers, Westchester County, New York (i.e., the Site), which includes Section 1, Block 129, Lots 26 and 30. A Site Location Map and Site Plan are included as Figures 1 and 2, respectively.

### 1.1 Purpose and Scope of Work

The purpose of this Phase I ESA was to document the environmental history of the Site, to evaluate the likelihood that a release of hazardous substances or petroleum products (HSP) has occurred or has the potential to impact the Site, and to provide our professional opinion regarding evidence of recognized environmental conditions (RECs) in connection with the Site. The term recognized environmental conditions means:

> *The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*

The term REC also includes controlled RECs (CRECs) and historical RECs (HRECs), as defined below:

> The term CRECs means:
>
> *A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*
>
> The term HRECs means:
>
> *A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.*

This Phase I ESA was performed in accordance with the requirements of the ASTM International E 1527-13. This project was also conducted in accordance with the Ransom's Corporate Services Agreement with CVS Pharmacy, Inc. (CVS) dated April 1, 2015 (the "Corporate Services Agreement"). The general purpose of this Phase I ESA was to evaluate the environmental condition of the Site for evidence of RECs in connection with the Site.

The scope of work for this Phase I ESA included the completion of the following tasks:

1. Review of municipal records and a search of state and federal environmental databases to identify sites of potential environmental concern for the Site and vicinity.

2. Review of reasonably ascertainable historical land use records for the Site and adjoining properties.

3. A site reconnaissance to observe current conditions.

4. Interviews with persons knowledgeable about the Site.

1.2 Limitations

This Phase I ESA was prepared exclusively for the use of T.M. Crowley & Associates, Inc. (TMC) and CVS Pharmacy, Inc., its parent, affiliates and subsidiaries and their successors, assigns, and grantees, collectively "the Users," and in accordance with the Corporate Services Agreement.

Along with the limitations set forth in various sections of the ASTM International E 1527-13 protocol, the accuracy and completeness of this report is limited by the following:

1. Access Limitations: Access limitations were encountered during site reconnaissance activities. Access to the Residential Building was limited to the eastern portion of the basement, as access to the upper floors was restricted due to safety concerns.

2. Physical Obstructions to Observations: The paved parking areas in the vicinity of the Lot 30 Site Building was observed with numerous parked vehicles; therefore, much of the paved areas surrounding the Lot 30 Site Building could not be observed. Additionally, three vehicles were parked over the hydraulic lifts within the service garage of the Lot 30 Site Building, specifically in Bay 2, Bay3, and Bay 6; therefore, these areas could not be observed. Numerous vehicles were also parked throughout the existing storage area in the northeastern most portion of the Lot 30 Site Building; therefore, concrete slab/floor conditions could not be observed. Additionally, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, further barring access to this building. Lastly, the area around the inactive fuel-oil fired boiler was cover in dirt and located in a dimly lit room; thereof conditions of the concrete surface could not be fully assessed.

3. Outstanding Information Requests:

   The United States Army Corps of Engineers (USACE) have not provided information in response to Ransom's information requests regarding wetlands permits and violations. On May 9, 2017, the USACE responded and stated that files were available for review, and that a file search was underway. At the time this report was prepared; however, Ransom was awaiting further response regarding the duplication of the files. Upon receipt and review, pertinent information will be provided in an addendum to this report.

   The City of Yonkers Fire Department have not provided information in response to Ransom's information requests regarding incident records. On May 11, 2017, the City of Yonkers Fire Department was contacted by Ransom and the request was re-initiated. At the time this report was prepared; however, Ransom was awaiting further response regarding the duplication of files. Upon receipt and review, pertinent information will be provided in an addendum to this report.

Freedom of Information Law requests were submitted to the New York State Department of Environmental Conservation (NYSDEC) regarding spill incidents for the Citgo service station located at 380 Riverdale Avenue, Yonkers NY on May 12, 2017. At the time this report was prepared, Ransom had not received a response from the NYSDEC. Upon receipt and review, pertinent information will be provided in an addendum to this report.

4. Historical Data Source Failure: The Site's first developed use could not be determined. Topographic maps, aerial photographs, and Sanborn maps suggest that the Site was developed as residential properties as early as 1897; however, prior use cannot be confirmed. This represents historical data source failure according to ASTM E 1527-13; however, based on the known prior use of the Site for residential purposes, this data source failure does not represent a significant concern warranting additional investigation.

5. Significant Assumptions: Based on Ransom's Site observations and review of United States Geological Survey (USGS) maps, Ransom assumes groundwater follows topographic gradient and flows to the north/northwest toward the Hudson River, located approximately 0.46-miles to the west of the Site. Also, based on known information, the USTs referenced within the City's permitting documentation indicated that removal activities for two USTs were completed by September 1995; however, documents reviewed did not reference UST contents or capacities; Ransom assumed this documentation to be the removal of one 3,000-gallon fuel oil UST and one 550-gallon waste oil UST; however, detailed UST removal documentation was not identified by Ransom.

6. Exceptions: None.

7. Deviations: Per the Corporate Services Agreement with CVS, Ransom performed a limited visual assessment and/or research related to suspect asbestos, lead-based paint, polychlorinated biphenyl (PCB) containing equipment, mercury-containing fluorescent lamps and other equipment, radon, and wetlands.

8. Other: None.

### 1.3 User Provided Information

An ASTM User Questionnaire was completed by Ms. Kristen Walker of TMC on April 28, 2017. On May 9, 2017 Ransom also interviewed Mr. Daniel Romano, the property owner. A copy of the User Questionnaire is included in Appendix H, as Supplemental Documentation.

#### 1.3.1 Title Records

Title records in connection with the Site were provided by the Office of the Westchester County Clerk Online Records Review system available at https://wro.westchesterclerk.com. No environmental liens or activity/use restrictions regarding the Site were included within the property deeds. A review of the available title records is summarized in Section 3.2 of this report.

#### 1.3.2 Environmental Liens or Activity and Use Limitations

No activity and use limitations (AULs) were identified by the User for the Site, nor were AULs identified in the current property deeds.

### 1.3.3 Specialized Knowledge

No specialized knowledge in connection with the Site or facility operations was provided by the User.

### 1.3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or reasonably ascertainable information about the Site that is material to RECs in connection with the Site was provided by the User.

### 1.3.5 Valuation Reduction for Environmental Issues

The User did not identify a reduction in the purchase price of the Site, compared to the fair market value.

### 1.3.6 Owner, Property Manager, and Occupant Information

No information pertinent to RECs in connection with the Site was provided by the owners, property managers, or occupants with the exception of that information presented in the remainder of this document.

### 1.3.7 Reason for Performing Phase I ESA

This Phase I ESA was performed as part of environmental due diligence to support a property transaction involving the Site.

### 1.3.8 Previous Environmental Reports

At the time this report was prepared, no knowledge or documentation regarding previous environmental investigations, assessments, and/or remedial activities performed at the Site were identified by Ransom.

## 2.0 PROJECT LOCATION/DESCRIPTION

### 2.1 Site Location and Description

The Site is located at the northeast corner of the intersection of Culver Street and Riverdale Avenue in the City of Yonkers, Westchester County, New York. For the purpose of this Phase I ESA, the Site consists of two parcels of land encompassing a total of approximately 1.02-acres and is identified by the City of Yonkers Assessor's Office as 13 Culver Street and 372 Riverdale Avenue, Section 1, Block 129, Lots 26 and 30, respectively.

The Lot 26 portion of the Site is currently developed with a two and a half-story, 1,320-square foot Residential Building with a full basement, constructed sometime prior to 1897. The Lot 30 portion of the Site is currently developed with one 8,695-square foot commercial structure, constructed sometime in 1974, which is currently occupied by West Coast Autos Sales, an automotive sales company. The Lot 30 Site Building previously operated as a Goodyear branded automotive repair shop and tire sales center from 1974 until 2015. The Lot 30 Site Building consists of eight automotive garage bays within the service garage, two restrooms, a former employee locker room, boiler room, storage areas, two offices, and showroom. The remainder of the property consists of concrete walkways and asphalt paved parking surfaces, with an area of limited landscaping consisting of several trees and bushes between the Lot 26 and Lot 30 portions of the Site.

The Site is located in a mixed commercial and residential area of the City of Yonkers. Properties to the north of the Site are primarily residential. Properties to the south of the Site, across Culver Street, are primarily residential, with the exception of a Citgo-branded gasoline filling station. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body & Repair Center. The PEARLS Hawthorne Elementary School is located to the west of the Site, across Riverdale Avenue. The property to the east of the Site is a City of Yonkers operated park, known as Culver Park.

The Site is located on the City of Yonkers, New York, U.S. Geological Survey (USGS) 7.5-minute series Quadrangle and is located at the approximate Universal Transverse Mercator (UTM) coordinates of 4,530,414 meters north and 592,563 meters east. The latitude and longitude of the Site are 40° 55' 10.5636" and -73° 54' 1.908", respectively. A Site Location Map is provided as Figure 1 (Appendix A). A Site Plan and photograph log are included as Appendices B and D, respectively.

### 2.2 Site Utilities

Based on information provided by Mr. Daniel Romano, the property owner, the Lot 30 Site Building is currently connected to water and sanitary sewer service provided by the City of Yonkers. Historical Site plans indicate that the Lot 30 Site Building has bene connected to the municipal water and sanitary sewer system since the building was erected, sometime in 1974. A total of 15 current, closed, or former floor drains were observed within the Lot 30 Site Building, which reportedly discharge to the sanitary sewer system. Electric and natural gas (for heat) service to the Lot 30 Site Building is provided by the Consolidated Edison Company of NY, Inc. (ConEdison), where a roof-mounted heating, ventilation, and air conditioning (HVAC) system was utilized. Solid waste removal is the responsibility of the tenant. Overhead heaters were observed during site reconnaissance activities within the service garage of the Lot 30 Site Building. Based on records provided by the City of Yonkers Building and Housing Department, one 3,000-gallon fuel oil UST was removed from the eastern side of the Lot 30 Site Building in sometime in or around August 1995, indicating the use of the oil-fired burner and fuel oil prior to this time.

Additionally, according to Mr. Daniel Romano, all utility services to the Residential Building has been discontinued. Records identified through the City of Yonkers City Clerk's Office indicate that the fuel oil was historically utilized at the Residential Building. No additional information regarding utilities at the Residential Building was identified by Ransom, including the presence or absence of a septic system.

## 2.3 Environmental Setting

### 2.3.1 Topography

Based on field observations, topography at the Site generally slopes downward to the north-northwest. According to the Yonkers, New York-New Jersey, 7.5-Minute USGS Quadrangle, dated 2013, the topography in the immediate vicinity of the Site declines to the north-northwest; however, the topography in the greater area of the Site declines to the west, toward the Hudson River, located approximately 0.46-miles to the west of the Site. The elevation of the Site is approximately 50-feet above mean sea level on the North American Vertical Datum (NAVD) of 1988.

### 2.3.2 Soils/Geology

Based on a review of the U.S. Department of Agriculture's (USDA) Web Soil Survey, the Site is underlain by Urban land-Woodbridge complex soils, with 3 to 8 percent slopes (UwB). Urban land soils consist of natural and disturbed soil material overlain by man-made structures, including buildings and asphalt. Woodbridge soils consist of fine sandy loams from 0 to 7-inches below grade, fine sandy loams from 7 to 30-inches below grade, and gravelly fine sandy loams from 30 to 65-inches below grade. Woodbridge soils are derived from coarse-loamy lodgment till derived from gneiss, granite, and/or schist.

### 2.3.3 Hydrogeology

Based on Ransom's observations of Site topography, groundwater at the Site is anticipated to generally flow to the north-northwest, toward the Hudson River. The Hudson River is located approximately 0.46 miles to the west of the Site.

### 2.3.4 Surface Water Bodies

Surface water bodies were not observed at or adjacent to the Site. The nearest body of water is the Hudson River located approximately 0.46-miles to the west of the Site.

### 2.3.5 Wetlands

According to the U.S. Fish and Wildlife Service National Wetlands Inventory website and delineated wetlands are not located at the Site or adjacent properties.

On May 8, 2017, Ransom submitted a Freedom of Information Act (FOIA) request to the United States Army Corps of Engineers (USACE) regarding wetlands or wetlands violates at the Site. On May 9, 2017, the USACE responded and stated that files were available for review, and that a file search was underway. At the time this report was prepared, however, Ransom was awaiting further response regarding transmittal of the files. Upon receipt and review, pertinent information will be provided in an addendum to this report.

### 2.3.6 Flood Plains

The Site is located on the Federal Emergency Management Agency (FEMA) Flood Insurance Map (Parcel 36119C0317F). Based on the FEMA map, the Site is not located within a designated Flood Zone.

### 2.3.7 Potential for Radon Gas

According to the EDR Report, the U.S. Environmental Protection Agency (U.S. EPA) Radon Zone Classification for Westchester County, NY is 3, which is defined by U.S.EPA as an indoor average level less than 2 picoCuries/Liter (pCi/L). The average radon concentrations of the 650 sites tested in the same zip code as the Site were 1.730 pCi/L for basement areas and 0.930 pCi/L for living areas, which are below the U.S. EPA residential action level of 4.0 pCi/L. Based on the radon concentration information provided in the EDR Report and the proposed slab on grade construction and commercial use of the Site, radon abatement activities should not be necessary. A copy of the EDR report is provided in Appendix E.

## 3.0 HISTORICAL/RECORDS REVIEW

### 3.1 Summary

Ransom determined the Site history based on an interview with the property owner, historical topographic maps, historical aerial photographs, historical Sanborn maps, and historical city directories.

The Site was developed as multiple separate residential properties as early as 1897. The Site originally was comprised of nine separate lots with ten residential structures, identified on historical maps as 366, 370, 372, 374, 376 and 378 Riverdale Avenue and 15, 17, 21, and 21R Culver Street. Historically, the Residential Building located on the Site has been identified as both 13 Culver Street and 15 Culver Street. By as early as 1973, the residential structures previously located at 17, 21, and 21R Culver Street, and 372, 374, 376, and 378 had been cleared from the Site. Construction of the Lot 30 Site Building was completed by as early as May 1974, at which time the Goodyear Tire & Rubber Co. took up occupancy. Commercial improvements to the Lot 30 portion of the Site were completed in June of 1980, at which time two remaining residential structures, located to the north of the Lot 30 Site Building, were removed from the Site and a paved parking area was installed. The Residential Building located at 13 Culver Street is the only remaining residential structure on-Site. The Goodyear Tire & Rubber Co. operated as an automotive repair and tire sales center from 1974 until 2015. The West Coast Custom Auto Sales company, an automotive sales company, took up occupancy of the Lot 30 Site Building sometime June 2016 and is the current occupant.

Occupancy of the Residential Building has been strictly residential from as early as 1897 through sometime in 2009, at which time the Residential Building was vacated, as it remains currently. The northern portion of the Lot 26 portion of the Site is currently utilized for vehicle storage by a neighboring property owner, no further information was identified regarding current property usage of the Residential Building and surrounding property.

### 3.2 Title Records

The Site is identified on the City of Yonkers Assessor's Tax Map Section 1, Block 129, Lots 26 and 30. The following property ownership records were identified from information provided through the Office of the Westchester County Clerk – Westchester Records Online portal https://wro.westchesterclerk.com:

| **13 Culver Street, Yonkers NY** | | | | |
|---|---|---|---|---|
| **Parcel** | **Address** | **Grantor** | **Grantee** | **Date** |
| Block: 151, Lot 8 | 401 Riverdale Avenue, Yonkers NY | New York State Department of Transportation – Real Property Division | Newross Realty Corp. c/o Jack Toal, Andrew Sunull, Lilly McNeil, and Joseph Bera | September 17, 1980 |
| Block: 129, Lot 26 | 15 Culver Street, Yonkers NY | Floyd Freeman, as Administrator of the Estate of Lillie Mae McNeil | Floyd Freeman | January 19, 1995 |
| Block: 129, Lot 26 | 15 Culver Street, Yonkers NY | Floyd Freeman | Floyd Freeman and Lucy Freeman | January 19, 1995 |
| Block: 129, Lot: 26 | 15 Culver Street, Yonkers NY | Lucy Ruth Freeman, as Executor of the | Lucy Ruth Freeman | April 12, 2004 |

| | | | | |
|---|---|---|---|---|
| | | Estate of Floyd Freeman | | |
| Block: 129, Lot 26 | 15 Culver Street, Yonkers NY | Freeman, Lucy R | 15 Culver St Realty Corp | December 24, 2014 |
| Block: 129, Lot: 26 | 15 Culver Street, Yonkers NY | 15 Culver Street Realty Corp. | Dutchman Realty LLC | February 3, 2017 |

| **372 Riverdale Avenue, Yonkers NY** | | | | |
|---|---|---|---|---|
| **Parcel** | **Address** | **Grantor** | **Grantee** | **Date** |
| Block: 129, Lot: 37, 38, and 39 | 366 Riverdale Avenue, Yonkers, NY | Joseph Meechan and Elizabeth K. Meechan | Luma Realty Inc. | July 31, 1969 |
| Block: 129, Lot: 32 | 378 Riverdale Avenue, Yonkers, NY | Georgianna Mann | Luma Realty Inc. | September 10, 1970 |
| Block: 129, Lot: 33 | 376 Riverdale Avenue, Yonkers, NY | Rachel Coleman | Luma Realty Inc. | June 19, 1971 |
| Block: 129, Lot: 34 | 374 Riverdale Avenue, Yonkers, NY | Max Fabel and Pauline Fabel | Luma Realty Inc. | October 1, 1972 |
| Block: 129, Lot: 36 | 370 Riverdale Avenue, Yonkers, NY | Laurette Walsh | Luma Realty Inc. | December 22, 1972 |
| Block: 129, Lot: 30 | 372-8 Riverdale Avenue, Yonkers, NY | Luma Realty, Inc. | Mary Louise Romano | December 28, 1988 |
| Block: 129, Lot: 30 | 372-8 Riverdale Avenue, Yonkers, NY | Mary Louise Romano | Mary Louise Romano and John N. Romano | June 1, 2000 |
| Block: 129, Lot: 30 | 372 Riverdale Avenue, Yonkers NY | John N. Romano | Mary Louise Romano | November 1, 2003 |
| Block: 129, Lot: 30 | 372 Riverdale Avenue, Yonkers NY | Mary L. Romano | Mary Louise Romano Irrevocable Income Only Trust Fund / Andrew Romano | February 14, 2012 |
| Block: 129, Lot: 30 | 372 Riverdale Avenue, Yonkers NY | Mary L. Romano Irrevocable Income Only Trust Fund | Andrew M. Romano and Daniel P. Romano | May 28, 2013 |

### 3.3 Prior Use Interviews

Ransom interviewed Mr. Daniel Romano, the property owner, on May 9, 2017 regarding prior Site use. Mr. Romano informed Ransom that the Goodyear Tire & Rubber Co. operated as an automotive repair facility and tire sales center from 1974, at which time the Lot 30 Site Building was constructed, through sometime in 2015. Mr. Romano indicated that the Lot 30 Site Building was currently occupied by a used car dealership identified as the West Coast Custom Auto Sales company. Mr. Romano indicated that a heating oil tank was utilized for the Lot 30 Site Building, but was unaware of removal activities. Mr. Romano informed Ransom that the Residential Building had been vacant since sometime in 2009, and was heated by natural gas provided by ConEdison. Mr. Romano also indicated that the northern portion of the Lot 26 portion of the Site was currently being utilized as a vehicle storage area by a neighboring property owner; however, further information was not provided.

## 3.4 Local, State, and Federal Government Agency Record Review

### 3.4.1 City of Yonkers Assessor's Office

Information provided by the City of Yonkers Assessor's Office included current property cards and tax maps for the Site properties. Copies of the property cards and tax maps are included in Appendix H. Information provided by the Assessor's Office regarding the Site history coincided with information discussed in Section 3.1 of this report. Information pertaining to potential underground or aboveground storage tanks, hazardous waste storage, and/or adverse environmental conditions at the properties was not provided on the property cards. No additional information was provided by the City of Yonkers Assessor's Office.

### 3.4.2 City of Yonkers Building and Housing Department

Information provided by the City of Yonkers Building and Housing Department included various building permits for alterations and improvements of the Site Buildings. On May 9, 2017, Ransom reviewed available files provided by the City of Yonkers, which included the following pertinent permitting/inspection documents reviewed for the Lot 30 Site Building/property located at 372 Riverdale Avenue:

- Construction Plan: Proposed construction plans dated sometime in 1973 detailed the proposed Lot 30 Site Building engineering plans. Specifically, the plans indicated that a 550-gallon waste oil UST was to be installed on the southeast exterior corner of the Lot 30 Site Building. This waste oil UST was associated with historic automotive repair activities at the Site. This construction plan additionally illustrated that location for the 3,000-gallon fuel oil UST on the eastern exterior of the Lot 30 Site Building with an associated pump and appurtenant piping that connected to fuel-oil fired boiler inside the eastern portion of the Lot 30 Site Building. The plans also indicated seven hydraulic lifts and one hydraulic alignment rack were to be installed with the service bays of the Lot 30 Site Building with associated control boxes. The plans detailed a cross-section of the proposed underground lift housing and hydraulic oil reservoirs plans. They also depicted a floor drainage plan, where on-Site floor and roof drain (where roof venting operations were detailed) drain to the sanitary sewer system.

- Certificate of Occupancy: A Certificate of Occupancy dated June 12, 1973 listed Luma Realty as the property owner for the Lot 30 portion of the Site and the Goodyear Tire & Rubber Co. as the tenant.

- Construction Plan: Construction plans dated October 12, 1979 detail plans to demolish the remaining residential structures on the northwest portion of the Site.

- Permit Application: A permit application was submitted on July 7, 1980 for the construction of an open air paved parking area in the vicinity of the Lot 30 Site Building, in the location of the former residential structures on-Site.

- Permit Application: A permit application was submitted on June 26, 1995 by Mr. John Romano requesting permission for the removal of underground storage tanks.

- Certificate of Completion: A certificate of completion was issued on August 14, 1995 to Ms. Mary Romano for the removal of underground oil tanks for the property located at 372 Riverdale Avenue, Yonkers NY.

- Permit Application: A permit application was submitted on June 16, 2016 by Mr. Andrew Romano to complete Site improvement activities to the Lot 30 Site Building. The application was listed as denied by the City of Yonkers Building and Housing Department.

- Permit Application: A permit application was submitted on April 7, 2017 to complete improvement activities to the Lot 30 Site Building, which was subsequently denied by the City of Yonkers Housing and Building Department. Plans included within this application indicated that a flue pipe connected to the hot water heater was not properly vented and was venting carbon monoxide to the interior of the Lot 30 Site Building. Plans also indicated that the overhead gas radiant heaters within the service garage were damaged.

The following pertinent permitting/inspection documents reviewed for the Residential Building/property located at 13 Culver Street were identified:

- Permit Application: A permit application was submitted on July 10, 1956 to complete improvements/alterations to the basement of the Residential Building.

- Permit Amendment: A permit amendment was submitted on September 10, 1957 for alterations/additions to the porch of the Residential Building.

- Permit Approval: A permit approval dated September 18, 1958 granted additions and alterations to the Residential Building to the property owner, Mr. William McNeill.

- Permit Application: A permit application dated sometime in 1975 was submitted for the addition of two restrooms to the first floor of the Residential building.

Copies of the permitting documentation reviewed above are included in Appendix H, as Supplemental Documentation.

Information provided by the Building Department regarding Site history coincided with information discussed in Section 3.1 of this report. The files reviewed at the Building Department did not include information pertaining to adverse environmental conditions at the Site.

### 3.4.3 City of Yonkers Fire Department

A request for information was submitted to The City of Yonkers Fire Department on May 1, 2017; however, at the time this report was prepared, Ransom was awaiting further response regarding the request. Upon receipt and review, pertinent information will be provided in an addendum to this report.

### 3.4.4 City of Yonkers Public Works Department

No pertinent information regarding current and/or former water use or sewage disposal was provided by the City of Yonkers Public Works Department.

### 3.4.5 Westchester County Department of Health

A request for information was submitted to the Westchester County Department of Health of May 1, 2017. On May 10, 2017, the Westchester County DOH responded that Ransom's request for information had been received and that documents will be received by June 9, 2017. On June 7, 2017, a verbal response was received from Ms. Caren Halbfinger, the Public Affairs Director, of the Westchester County Department of Health that no records were available for review for the Site and documentation confirming this will be received by June 9, 2017.

### 3.4.6 New York State Department of Environmental Conservation

Freedom of Information Law requests were submitted to the NYSDEC regarding spill incidents for the Citgo service station located at 380 Riverdale Avenue, Yonkers NY on May 12, 2017. At the time this report was prepared, Ransom had not received a response from the NYSDEC. Upon receipt and review, pertinent information will be provided in an addendum to this report.

## 3.5 Historical Maps

Sanborn Maps

Sanborn Fire Insurance Maps dated 1898, 1917, 1942, 1951, 1956, 1957, 1971, 1973, 1978, 1989, 1991, and 2004 were provided by EDR. The following is a description of the Site and the surrounding properties. The Certified Sanborn Map Report is included in Appendix F.

**1898 Sanborn Map:** The Site consisted of ten residential dwellings. The property located at present-day 13 Culver Street was depicted with a two-and a half story residential dwelling and one two-story stable/outbuilding. The remainder of the Site consisted of nine residential dwellings, historically identified as 366, 370, 372, 374, 376, and 378 Riverdale Avenue and B, C, D, and H Culver Street. The C Culver Street property was identified as "Low Ground." The adjacent property to the north of the Site consisted of one residential dwelling, identified as 362 Riverdale Avenue. The adjacent property to the east of the Site consisted of vacant land. The adjacent property to the south of the Site, across Culver Street, consisted of the Yonkers Railway Co. Car Barn. The adjacent properties to the west of the Site, across Riverdale Avenue, consisted of three residential dwellings, identified as 369, 371, and 373 Riverdale Avenue. Properties located further north of the Site have been improved with residential dwellings.

**1917 Sanborn Map:** The Site consisted of a total of ten residential dwellings, including the Residential Building identified as present day 13 Culver Street. Two residential properties located on the Site, 374 and 376 Riverdale Avenue, consisted of commercial storefronts along Riverdale Avenue. The residential properties identified as B, C, D, and H Culver Street are now depicted as 15, 17, 21, and 21R Culver Street, respectively. Three stables/outbuildings were identified on the northeast portion of the Site and one automotive use outbuilding was identified on the north-central portion of the Site. No significant changes were observed to the adjacent properties to the north or west of the Site. The adjacent properties to the south of the Site have been improved with residential dwellings identified as 14, 16, 18, 20, 22, and 24 Culver Street and 380, 382, 384, and 386 Riverdale Avenue, and the car barn is no longer depicted. The property to the east of the Site has been occupied by the Cast Stone Products Inc. company and improved with a cement storage area and office building.

**1942 Sanborn Map:** No major changes were noted to the Site or adjacent properties to the north when compared to the 1917 Sanborn map. The adjacent property to the east of the Site has been improved with four structures, of which the southwestern most structure was identified as an automobile garage. Adjacent properties to the south of the Site have been improved with residential dwellings identified as 6, 8, 10, and 12 Culver Street. Further south the property located at 390 Riverdale Avenue has been improved with a large rectangular commercial structure identified as the Ludlow Garage. The adjacent property to the west of the Site, identified as 373 Riverdale Avenue, has been cleared of residential dwellings. Additional residential dwellings were noted to the southwest of the Site across the intersection of Riverdale Avenue and Culver Street. The Hawthorne High School (present-day PEARLS Hawthorne School) was noted further west of the Site.

**1951 Sanborn Map:** The Site consisted of nine residential structures, including the Residential Building on the southeast portion of the Site. The three outbuildings located to the north of the Residential Building are no longer visible. Three automotive garage/outbuildings are identified on north-central portion of the Site. Two adjacent properties to the north, identified as 74 and 76 Post Street, have been improved with automobile garages/outbuildings. The adjacent property to the west, across Riverdale Avenue (373 Riverdale Avenue), has been improved with one commercial structure identified as a gasoline filling station with a canopy and six gasoline storage tanks. No major changes were noted on adjacent properties to the north, east, or south of the Site when compared to the 1942 Sanborn map.

**1956 Sanborn Map:** No major changes were noted to the Site or adjacent properties when compared to the 1951 Sanborn map.

**1957 Sanborn Maps:** No major changes were noted to the Site or adjacent properties when compared to the 1956 Sanborn map with the exception of the filling station property to the west of the Site, which no longer depicted the canopy or the six gasoline storage tanks.

**1971 Sanborn Map:** No major changes were noted to the Site or adjacent properties to the north or west of the Site. The adjacent property to the east has been cleared of all structures and was converted to a park/playground consistent with the location of present day Culver Park identified on historic aerial maps. The adjacent property to the south of the Site identified as 380 to 382 Riverdale Avenue was cleared of the previously identified residential dwellings and converted to vacant land.

**1973 Sanborn Map:** The residential dwellings previously identified as 372, 374, 376, and 378 Riverdale Avenue and 17, 21 and 21R Culver Street have been cleared from the Site. On the 1973 Sanborn map, the Site consisted of three residential dwellings, identified as 15 Culver Street (present-day Residential Building), 360 Riverdale Avenue, and 370 Riverdale Avenue. The Site additionally consisted of three automotive storage garage structures with the remainder of the Site consisting of vacant land. No major changes were noted on adjacent properties to the north, east, or west of the Site when compared to the 1973 Sanborn map. The adjacent property to the, previously identified as 386 Riverdale Avenue, was cleared of the residential dwelling.

**1978 Sanborn Map:** The Site has been improved with one irregular shaped commercial structure, consistent with the present-day construction of the Lot 30 Site Building, and paved parking areas. Three residential structures are identified on the Site. The adjacent property to the south, across Culver Street, identified as 38 Culver Street, has been improved with a commercial structure and potential UST field identified as a gasoline filling station at the location of the present day Citgo-branded service station. No significant changes were noted to adjacent properties to the west, southeast, or north of the Site when compared to the 1973 Sanborn map.

**1989 Sanborn Map:** Two residential dwellings, previously identified as 366 and 370 Riverdale Avenue, are no longer depicted the northwest portion of the Site. No significant changes were noted to the Lot 30 Site Building or adjacent properties to the north, east, or south of the Site when compared to the 1978 Sanborn Map. The gasoline filling station located on the adjacent property to the west of the Site, across Riverdale Avenue, is no longer depicted and the property was acquired by the Nathanial Hawthorne Junior High School. Residential dwellings previously located on the southwest corner of intersection of Culver Street and Riverdale Avenue are no longer identifiable on the 1989 Sanborn map and the property has been converted to vacant land. No significant changes to adjacent properties to the north, east, or south of the Site were noted when compared to the 1978 Sanborn map.

**1991 Sanborn Map:** No significant changes were noted to the Site or adjacent properties to the north, south, east, or west of the Site when compared to the 1989 Sanborn map.

**2004 Sanborn Map:** No significant changes were noted to the Site or adjacent properties to the north, south, east, or west of the Site when compared to the 1991 Sanborn map.

Historical Topographic Maps

Historical topographic maps dated 1897, 1898, 1900, 1947, 1956, 1966, 1979, 1995, 1998, and 2013 were provided by EDR. The following is a description of the Site and the surrounding properties. The EDR Historical Topographic Map Report is included in Appendix F.

**1897 Topographic Map:** The Site appears to be developed with a row of structures presumably the identified residential structures depicted on the 1898 Sanborn map. The surrounding area appears to be moderately developed, with structures denoted by black squares on adjacent properties to the north, south, and west of the Site. The Site and surrounding properties are depicted on yellow shaded land. Three separate railroad lines, each a line of the Hudson River Railroad, are depicted as running parallel to the Hudson River to the east and west of the Site. A roadway corresponding with the location of Riverdale Avenue is present on the map as well as a roadway corresponding with Culver Street.

**1898 Topographic Map:** Increased development was observed in the general vicinity of the Site. No discernable changes were observed on the Site or on adjacent properties when compared to the 1897 topographic map.

**1900 Topographic Map:** No significant changes were observed when compared to the 1898 topographic map.

**1947 Topographic Map:** The Site is depicted as mostly white developed (presumably residential) land, with the a larger structure on the eastern portion of the Site, originating at the corner of present day Livingston Avenue and Culver Street. The adjacent property to the south appears developed by the presence of a black square (typically denoting a structure). The adjacent property to the east appears developed and the presence of a roadway corresponding to the present-day Cliff Avenue was observed as well. An increased amount of development was observed in the surrounding area when compared to the 1900 topographic map, most notably to the north of the Site. Areas marked as green representing vegetated areas are depicted further south, southwest, east, and northeast of the Site.

**1956 Topographic Map:** The Site and surrounding area are depicted on red shaded, indicating an area of increased development and/or paving. No structures are denoted on the Site or adjacent properties. The Hawthorne High School Building is depicted at the intersection of Culver Street and Hawthorne Avenue,

to the west of the Site. Areas marked as green representing vegetated areas are depicted further southwest, east, and northeast of the Site.

**1966 Topographic Map:** The Site and surrounding area are depicted on red shaded land, indicating an area of increased development. No structures are denoted on the Site or adjacent properties. No significant changes were observed when compared to the 1956 topographic map.

**1979 Topographic Map:** No significant changes to the Site or surrounding properties was depicted on the 1979 topographic map. A slight increase in the amount of developed properties can be observed as purple marked squares, which represent newly built structures when compared to the most recent previous topographic map.

**1995, 1998 Topographic Maps:** No significant changes were observed to the Site or surrounding properties when compared to the 1979 topographic map.

**2013 Topographic Map:** The Site and surrounding area are depicted as white shaded land. No discernable structures are observed on the Site or surrounding properties.

### 3.6 Aerial Photography

Aerial photographs of the Site and surrounding properties dated 1940, 1951, 1954, 1962, 1974, 1976, 1984, 1989, 1991, 1994, 1995, 2006, 2008, 2009, 2010, 2011 were provided by EDR. The following is a description of the Site and the surrounding properties. The EDR Aerial Photo Decade Package is included in Appendix C.

**1940 Aerial Photograph:** The Site consisted of presumably residentially developed land, with individual residential structures identifiable on the aerial photograph; however, the number of structures was unable to be determined due to the quality of the photograph. South of the Site, across Culver Street, consisted of several presumably residential structures. West of the Site, across Riverdale Avenue, a larger structure is identifiable on the northwest corner of the intersection of Riverdale Avenue and Culver Street (identified as a filling station on the Sanborn Maps). Additionally, a structure corresponding to the present-day location for the PEARLS Hawthorne School is identifiable further west of the Site, at the northeast corner of the intersection of Culver Street and Hawthorne Avenue. The property to the east of the Site was appears partially developed with at several identifiable structures. North of the Site consisted of potentially residential dwellings.

**1951 Aerial Photograph:** The Site consisted of at nine residential structures. No major changes were noted at the adjacent properties in comparison to the 1940 aerial photograph.

**1954 Aerial Photograph:** No major changes were noted to the Site or adjacent properties when compared to the 1951 aerial photograph.

**1962 Aerial Photograph:** No major changes were noted to the Site or adjacent properties to the north or south of the Site in comparison to the 1954 aerial photograph. The adjacent property to east of the Site has been cleared and no visible structures remain on this property, consistent with the present-day location for Culver Park. The property to the west of the Site, across Riverdale Avenue, appears to be a smaller building for filling station operations, consistent with the 1957 and 1971 Sanborn Maps. The property further to the west of the Site, appears to have been improved with a larger rectangular structure, which is consistent with the present-day building configuration of the PEARLS Hawthorne School.

**1974 Aerial Photograph:** Six of the residential structures previously identified on the Site have been removed and the Site has been improved with one large commercial structure, consistent with the present-day building construction for the Lot 30 Site Building and paved surface areas surrounding the Lot 30 Site Building. Two residential structures remained on the Site to the northwest of the Lot 30 Site Building. One residential structure, identified as the present-day on-Site Residential Building (13 Culver Street), is visible to the east of the Lot 30 Site Building. No major changes were noted to the adjacent properties to the north, west, and east of the Site. The adjacent property to the south of the Site, located at the southeast corner of the intersection of Riverdale Avenue and Culver Street, was cleared of three residential structures and improved with one small structure and one square-shaped canopy, indicative of a gasoline fueling station. This property coincides with the present-day location for the Citgo-branded gasoline fueling station.

**1976 Aerial Photograph:** Due to the poor image quality, the Site and adjacent properties are not clearly discernable on the 1976 aerial photograph.

**1984 Aerial Photograph:** The two residential structures to the northwest of the Lot 30 Site Building are no longer visible and presumed to have been cleared from the Site and turned into a commercial parking lot area. The Site appears to have been improved with additional paved areas in the location of the former residential structures. No major changes were noted at the adjacent properties in comparison to the 1976 aerial photograph with the exception of the filling station to the west no longer being present.

**1989 Aerial Photograph:** Due to the poor image quality, the Site and adjacent properties are not clearly discernable on the 1989 aerial photograph.

**1991 Aerial Photograph:** No major changes were noted at the Site or adjacent properties to the north, west, or south when compared to the 1984 aerial photograph. The property to the east of the Site was improved with paved basketball courts, consistent with the current location of Culver Park.

**1994, 1995, 2006 Aerial Photographs:** No major changes were noted at the Site or adjacent properties in comparison to the 1991 aerial photograph.

**2008 Aerial Photograph:** No major changes were noted at the Site or adjacent properties to the north or west when compared to the 2006 aerial photograph. The property to the east of the Site, identified as Culver Park, has been improved with a reconfiguration of the basketball courts and an area of disturbed paving/surface material was noted on the northern portion of this property. The property to the south of the Site, across Culver Street, identified as a Citgo-branded gasoline fueling station, appears to have been improved with a larger, rectangular shaped, canopy.

**2009 Aerial Photograph:** No major changes were noted at the Site or adjacent properties to the north, west, or south when compared to the 2008 aerial photograph. The adjacent property to the east of the Site, identified as Culver Park, has been improved with the construction of two play areas/equipment on the northern portion of the property, consistent with the present-day configuration of this property.

**2010, 2011 Aerial Photographs:** No major changes were noted at the Site or adjacent properties to the north, west, south, or east when compared to the 2009 aerial photograph.

## 3.7 Historical City Directories

To assist in identifying land use at the Property, Ransom identified historical city directories from EDR. Directories dated 1972 through 2013 were provided by EDR. The Property is located at 13 Culver Street and 372 Riverdale Avenue, Yonkers, NY. The following listings were provided regarding the Property address:

| Year | Address | Name | Operation |
|---|---|---|---|
| 1982, 1987 | 15 Culver Street | John H. McNeil and L M McNeill | Residence |
| 1992 | 15 Culver Street | Lillie M. McNeill | Residence |
| 1999 | 13 Culver Street | Occupant Unknown | Residence |
| 1999 | 15 Culver Street | Elvis Derios<br>Maribel Rios | Residence |
| 2003 | 15 Culver Street | Elvis Derios<br>Floyd Freeman | Residence |
| 2008, 2013 | 13 Culver Street | Floyd Freeman | Residence |
| 1972 | 372 Riverdale Avenue | Thomas J Scollan | Unknown |
| 1977, 1982, 1987 | 372 Culver Street | Goodyear Tire | Automotive repair shop and tire sales. |
| 1992 | 372 Riverdale Avenue | Goodyear Tire & Rubber Co. / The Auto Service Center of Yonkers | Automotive repair shop and tire sales. |
| 2003 | 372 Riverdale Avenue | Occupant Unknown | Unknown |
| 1999, 2008, 2013 | 372 Riverdale Avenue | Goodyear Auto Service Center | Automotive repair shop and tire sales. |

A copy of the City Directory Abstract is included in Appendix G.

## 3.8 Previous Investigations/Assessments

At the time this report was prepared, no knowledge or documentation regarding previous environmental investigations, assessments, and/or remedial activities performed at the Site were identified by Ransom.

## 4.0 SITE RECONNAISSANCE

On May 9, 2017, Erin R. Pente, Senior Environmental Scientist of Ransom, and Lauren Rojewski, Environmental Scientist of Ransom, conducted a general site reconnaissance. The Site visit included a visual reconnaissance of the property grounds and interior portions of the Lot 30 Site Building for the identification of HSP, evidence of releases, and/or potential releases of HSP. Mr. Daniel Romano, the property owner, provided Ransom with access to the Lot 30 Site Building. Access to the Residential Building on-Site was limited to the basement due to safety concerns. Additionally, entry through the north side of the Residential Building was restricted due to the welding shut of two doors. A photographic log is included in Appendix D.

### 4.1 Current Uses and Activities

The Lot 30 Site Building is currently occupied by a retail car sales company identified as West Coast Auto Sales, which has occupied the Lot 30 portion of the Site since the summer of 2016. The service garage and adjoining storage area within the Lot 30 Site Building, as well as the surrounding paved areas, are currently utilized for the storage of vehicles. Goodyear vacated the Site and discontinued automotive service operations and tire sales sometime in 2015. The Residential Building located on the Lot 26 portion of the Site is unoccupied, and according to Mr. Daniel Romano, not suitable for occupancy and has been vacant since sometime in 2009. The remainder of the Lot 26 portion of the Site is currently being utilized as vehicle storage by a neighboring property owner.

### 4.2 Hazardous Materials/Petroleum Storage and Handling

No automotive service operations are currently conducted at the Site. Ransom observed three 55-gallon steel drums containing waste oil within the service garage of the Lot 30 Site Building. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. Various cleaning solvents and motor oil storage containers were observed throughout the Lot 30 Site Building; however, no leaks from these stored materials were observed.

Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property. Most of the solid waste item were in good to poor condition; however no visible staining or leaks was observed on or around the materials or storage containers.

### 4.3 Waste Generation, Treatment, Storage, and Disposal

No waste is currently generated at the Site, with the exception of municipal solid wastes and recyclable materials, which are stored with separate dumpsters on the Lot 30 portion of the Site. The dumpsters were observed in good condition and no visible staining or leaks was observed on or around the dumpsters. The removal and proper disposal of these materials are the current responsibility of the tenant, West Coast Autos.

Former automotive repair operations on-Site utilized one 550-gallon waste oil UST, historically located on the southeastern exterior of the Lot 30 Site Building. The waste oil UST was presumptively removed from the Site sometime in 1995, at which time it is presumed that 55-gallon drums were utilized for the storage of waste oil until sometime in 2015. Three 55-gallon drums containing waste oil are still present within the service garage area of the Lot 30 Site Building that require proper disposal. The drums were

observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids.

Approximately six circular stains, indicative of staining related to former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining. The presence of this staining represents evidence of historical drum storage and waste generation, which presumably was how waste oil was stored after the waste oil UST was removed in 1995 until 2015, when automobile repair operations ceased.

Two five-gallon buckets, with no lids and partially filled with what appeared to be used cooking oil, were observed on the residential portion of the property. The area around the buckets was overgrown, so observation below the buckets was not feasible.

### 4.4 Polychlorinated Biphenyls

A total of seven of the eight automotive repair bays housed underground hydraulic lifts, and one bay housed an air/hydraulic alignment rack. Two single-piston underground hydraulic lifts were observed within Bay 2 and Bay 5 of the service garage area of the Lot 30 Site Building. Additionally, five double-piston underground hydraulic lifts were observed in Bay 1, Bay 3, Bay 4, Bay 6, and Bay 8 of the service garage and one hydraulic alignment rack was observed within Bay 7 of the service garage. A total of seven underground hydraulic lifts were observed within the service garage area of the Lot 30 Site Building. Five hydraulic reservoirs were observed mounted along the walls within the service garage area as well. Three floor-mounted hydraulic lift control boxes were observed within the service garage area of the Lot 30 Site Building. The concrete around the lifts appears to not be original and it was observed that the date "2006" was carved into the concrete, indicating that the hydraulic lift system upgrades may have taken place circa 2006. Several fluorescent light fixtures were observed throughout the interior of the Lot 30 Site Building as well.

Although not observed within the Site Building, the historic construction plans reviewed at the City of Yonkers Housing and Building Department identified that five of the seven hydraulic lifts potentially had historical underground hydraulic oil reservoirs, which were upgraded to wall-mounted hydraulic underground lifts as noted above. Two former air compressors and associated air filter were depicted as being located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. Details on each component if the identified current and former systems components that represent RECs are as follows:

- **Hydraulic Lifts and Alignment Rack**: The current underground hydraulic lift system, presumably an upgrade to the former hydraulic lift system circa 2006, and that was apparently not being utilized by the current property owner, includes a total of seven underground hydraulic lifts, five wall-mounted hydraulic fluid reservoirs/control boxes, three floor-mounted control boxes (where the control box between Bays 3 and 4 was presumably disconnected) and two electric air compressors that were observed during site reconnaissance activities within the service garage area of the Lot 30 Site Building. One hydraulic alignment rack was also observed within Bay 7; however, its age is unknown. Two single-piston hydraulic lifts were observed within Bay 2 and Bay 5, and five double-piston underground hydraulic lifts were observed within Bay 1, Bay 3, Bay 4, Bay 6, and Bay 8 of the service garage area of the Lot 30 Site Building during Site reconnaissance activities. Based on historical plans, the single-piston lifts were installed to approximately 8.5 feet below floor grade and the double-piston lifts were installed to

approximately 8 feet below floor grade. The hydraulic lift areas were observed to be in good condition; however, three vehicles were parked directly over the lifts within Bay 2, Bay 3, and Bay 6. Based on the former operations and unknown condition of the subsurface in the vicinity of the hydraulic lifts, there is a potential for residual soil impacts from in these areas. Further investigation is warranted.

- **Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes**: A total of five wall-mounted hydraulic fluid reservoirs were observed along the perimeter of the service garage area. The hydraulic fluid reservoirs were observed to be in good condition with minimal staining on the concrete surface beneath them. These reservoirs were presumably installed sometime in or around 2006, following the removal of the former underground hydraulic lift tanks. Residual hydraulic fluid was observed within the reservoirs. Piping emanating from the reservoirs to below the building slab was unobservable during Site reconnaissance activities; therefore, the condition of these areas is unknown. Based on the former operations and unknown condition of the subsurface in the vicinity of the hydraulic fluid reservoirs, there is a potential for residual soil impacts in these areas. Further investigation is warranted.

- **Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs**: According to the original construction plans of the Lot 30 Site Building provided by the City of Yonkers Housing and Building Department, the Lot 30 Site Building had seven underground hydraulic lifts and one air/hydraulic alignment rack. The former lift system utilized approximately five underground hydraulic oil reservoirs, two air compressors with an associated air filter, and three floor-mounted control boxes; however, the status of the formerly used underground reservoirs is unknown. These hydraulic lifts and associated reservoirs were installed circa 1974 when the Lot 30 Site Building was erected, and were taken out of use circa 2006, when the current hydraulic lifts and wall-mounted hydraulic oil reservoirs were installed. The specific details of the upgrades to the system are unknown; however, it is presumed that the number of pistons, underground housing, and location of the lifts were the same as present day. Based on historical plans, the single-piston lifts were installed to approximately 8.5 feet below floor grade and the double-piston lifts were installed to approximately 8 feet below floor grade. The underground hydraulic oil reservoirs were unobservable during Site reconnaissance activities. Further, information regarding their removal was not identified by, or provided to, Ransom, and the condition of these underground areas is unknown.

- **Hydraulic Lift Control Boxes**: A total of three floor-mounted control boxes were observed throughout the service garage area; one between Bay 1 and 2, one between Bay 3 and 4, and one between Bay 5 and 6. The control box between Bays 3 and 4 was presumably disconnected since both associated lifts had wall-mounted hydraulic fluid reservoirs/control boxes. The control boxes were observed to be in good condition with visible staining on the concrete surface beneath them. These control boxes were presumably installed circa 1974, when the Lot 30 Site Building was erected. The presence of the boxes restricted observation to conditions below the box itself; therefore, the subsurface conditions below the control boxes are unknown.

- **Former Air Compressors**: Two former air compressors and one associated air filter were identified on construction plans identified from the City of Yonkers Housing and Building Department. The former air compressors and filter were located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. These compressors were installed circa

1974 when the Lot 30 Site Building was erected, and were taken out of use circa 2006, when presumably the two electric air compressors were installed. The out-of-use air filter was observed during the Site reconnaissance. No evidence of former discharge locations were observed during Site reconnaissance activities, and the floor where these air compressor were formerly stored was unobservable due to the presence of parked vehicles.

### 4.5 Asbestos-Containing Building Materials

Based upon the construction date of the Lot 30 Site Building and Residential Building, 1974 and 1900, respectively, asbestos-containing building materials (ACM) may be present within the Lot 30 Site Building and Residential Building. Additionally, a substance indicative of asbestos joint compound was observed along piping within the boiler room of the Site Lot 30 Building.

### 4.6 Lead Paint

Lead based paint was banned for residential use in the United States in 1978, by the U.S. Consumer Product Safety Commission (16 CFR 1303). Based on the construction date of the Lot 30 Site Building (1974) and the Residential Building (1900), it is possible that lead-based paints (LBPs) are present in the Lot 30 Site Building and/or the Residential Building.

### 4.7 Mercury

During Ransom's interior reconnaissance of the Lot 30 Site Building and interior reconnaissance of the basement of the Residential Building, fluorescent bulbs were observed that may contain mercury vapor.

### 4.8 Storage Tanks (above or below ground) and Piping

#### 4.8.1 Aboveground Storage Tanks

No aboveground storage tanks (ASTs) were observed during Site reconnaissance activities.

#### 4.8.2 Underground Storage Tanks

Ransom did not observe any evidence of the presence of current/active USTs during Site reconnaissance activities. However, based on a review of records identified at the City of Yonkers Housing and Building Department, the following former USTs were identified:

- **Former 3,000-gallon Fuel Oil UST**: One 3,000-gallon fuel oil UST was presumably removed from the Site in August 1995 according to permitting documentation identified at the City of Yonkers Housing and Building Department. The former fuel oil UST was located on the eastern exterior of the Lot 30 Site Building. This UST was presumably installed during the initial construction activities sometime in 1974. Permitting documentation indicated that UST removal activities were completed by September 1995; however, documents reviewed did not reference UST content or capacities. Based on known information, the UST referenced within the permitting documentation is presumed to be the former 3,000-gallon fuel oil UST; however, detailed UST removal documentation was not identified by Ransom.

- **Former 550-gallon Waste Oil UST**: One 550-gallon waste oil UST, historically utilized in relation to former automotive service activities, was presumably removed from the Site in August

1995 according to permitting documentation identified at the City of Yonkers Housing and Building Department. This UST was presumably installed during the initial construction activities sometime in 1974. Permitting documentation indicated that UST removal activities were completed by September 1995; however, documents reviewed did not reference UST content or capacities. Based on known information, the UST referenced within the permitting documentation is presumed to be the former 550-gallon waste oil UST; however, detailed UST removal documentation was not identified by Ransom.

## 4.9 Surface Conditions

### 4.9.1 Drains

A total of four sealed floor drains and four active floor drains were observed in the Lot 30 Site Building during reconnaissance activities. Sealed floor drains were observed in the following locations throughout the Lot 30 Site Building; southwest portion of the service garage, parts storage room within the service garage, southwest portion of the boiler room, and within the former employee locker room. Active floor drains were observed in the following locations throughout the Lot 30 Site Building; the western most restroom, the eastern most restroom, the utility sink within the service garage, and within the existing storage area. Additionally, one clean out pipe was observed in the southwest portion of the service garage of the Lot 30 Site Building. Although not observed within the Site Building, the historic construction plans identified at the City of Yonkers Housing and Building Department reviewed during the site reconnaissance also depicted seven former floor drains, one near each hydraulic lift, one former/inactive 4-inch cast iron drainage pipe for the former hydraulic lift floor drains, and one active 6-inch drainage pipe for the drains along the northern portion of the Lot 30 Site Building. The former/inactive 4-inch cast iron drainage pipe was depicted as leading to a grease and sand interceptor. The Lot 30 Site Building's drainage system reportedly discharged and/or currently discharges to the municipal sanitary sewer system. No staining or evidence of a release was observed at the drains. Due to the inaccessibility of the Residential Building, floor drain locations were not noted during Site reconnaissance activities. Details on the Lot 30 Site Building floor drains and interceptor are as follows:

- **Service Garage Sealed Floor Drain**: One sealed floor drain was identified in the vicinity of the Bay 8 hydraulic lift and the eastern most hydraulic fluid reservoir, which reportedly connected to the former/inactive 4-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities surrounding the floor drain; however, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown. Due to the close proximity of the floor drain to the former automotive repair activities, there is a potential for residual soil and/or groundwater impacts from this area. Further investigation is warranted.

- **Boiler Room Sealed Floor Drain**: One sealed/debris filled floor drain was identified within the boiler room of the Lot 30 Site Building, which reportedly connected to the 6-inch cast iron drainage pipe. Although this floor drain is currently sealed, historic use of the fuel oil fired boiler and observed staining on the exterior of the boiler (REC 4), and since the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown, there is a potential for residual soil and/or groundwater impacts in this area. Further investigation is warranted.

- **Parts Room Sealed Floor Drain**: One sealed floor drain was identified within the parts room of the Lot 30 Site Building, which reportedly connected to the 6-inch cast iron drainage pipe. No

staining or evidence of impact was observed in the vicinity of this drain; however, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown.

- **Bathroom Floor Drains**: Two active floor drains were identified in each bathroom area just north of the eight service bays, which reportedly connect to the 6-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities; however, the condition of the underground drainage system that leads to the municipal sanitary sewer line is unknown.

- **Employee Locker Room Sealed Floor Drain**: One sealed floor drain was identified in the former employee locker room just north of the eight service bays, which reportedly connected to the 6-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities; however, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown.

- **Tire Wash Area Floor Drain**: One floor drain was identified in the curb utility sink just north of the eight service bays that was previously utilized as a former tire wash area, and which reportedly connects to the 6-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities; however, the condition of the underground drainage system that leads to the municipal sanitary sewer line is unknown.

- **Former Hydraulic Lift Floor Drains**: Seven former floor drains, which reportedly connected to a former/inactive 4-inch cast iron drainage pipe were identified on historic construction plans identified at the City of Yonkers Housing and Building Department. Former floor drains were located beneath the original hydraulic lifts within Bay 1, Bay 2, Bay 3, Bay 4, Bay 5, Bay 6, and Bay 8 of the service garage. The former/inactive 4-inch cast iron drainage pipe was identified leading from the former hydraulic lift floor drains to a former/inactive grease and sand interceptor (REC 1G). Site redevelopment activities were presumably completed sometime in or around 2006; however, Ransom did not obtain information that confirms the floor drains, drainage pipe, and grease and sand interceptor were removed or properly abandoned in-place. Further, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown.

- **Former Grease and Sand Interceptor**: A former underground grease and sand interceptor was identified on historic construction plans identified from the City of Yonkers Housing and Building Department. The former underground grease and sand interceptor was located in the western portion of the service garage area of the Lot 30 Site Building that received overflow/waste from the Lot 30 Site Building's hydraulic lift areas. As the former grease and sand interceptor was not observed during the Site reconnaissance, Ransom was unable to inspect this area.

## 4.10 Other Conditions of Concern

### 4.10.1 Inactive Boiler

One inactive oil fired boiler was observed within the boiler room of the Lot 30 Site Building. The oil-fired burner, which was situated on a concrete slab, was observed to be in poor condition with heavy rusting visible on the exterior of the boiler. Ransom was unable to inspect the area beneath the oil-fired

burner during Site reconnaissance activities. Waste ash, which may contain heavy metals, was observed within the base of the boiler.

### 4.10.2 Air Compressors

Two stationary electric air compressors were observed within the Lot 30 Site Building during site reconnaissance activities mounted and staged on a wood platform. The air compressors were 80-gallon capacity with a one-piece cast iron crankcase for lubrication oil and an oil-lubricated pump with three cast iron cylinders. The compressors were observed to be in good condition with no evidence of staining on or around the units and the concrete floor below the units was observed intact with no cracks or staining.

## 5.0 REGULATORY FILE SEARCH

As part of Ransom's assessment of the Site, EDR conducted an environmental database search. The search included reviews of federal and state database records and was conducted in general accordance with the specific requirements of ASTM International E 1527-13. A listing of the search radii for each environmental database searched is included in the EDR Report. A copy of the EDR Report is provided in Appendix E. The table below summarizes the regulatory database findings within ¼-mile of the Site, where sites between ¼-mile and 1-mile are not anticipated to impact the Site. Based on local topography, groundwater at the Site is anticipated to flow to the north-northwest, toward the Hudson River. Therefore, properties located to the south-southeast are anticipated to be hydrologically upgradient from the Site.

| EDR Site ID(s) | Property Location | Direction/ Distance from Site | Database | Site Impact | Rationale |
|---|---|---|---|---|---|
| A1, A2 | Goodyear Auto Service Center<br>372 Riverdale Avenue, Yonkers NY | Target Property | RCRA-CESQ, FINDS, ECHO, NY MANIFEST, RI Manifest, EDR Hist Auto | Not Anticipated | No violations or Spill Numbers were identified in association with the Site. See below. |
| A3, A7, A8 | Citgo Service Station / 380 Riverdale Avenue Inc.<br>380 Riverdale Avenue, Yonkers NY | Southwest 48-feet | NY Spills, NY UST, EDR Historic Auto | Potential | Identified on list of NY Spills. See below. |
| A4, A5 | ConEdison Trench 1111<br>Intersection of Riverdale Avenue and Culver Street, Yonkers NY | West-southwest 63-feet | RCRA-LQG, NJ Manifest, NY Manifest | Not Anticipated | No violates were identified in association with this listing. See below. |
| A6 | Lewis Property<br>10 Culver Street, Yonkers NY | South-southeast 91-feet | NY Spills | Not Anticipated | NY Spills No. is listed as closed/inactive. See below. |
| B9 | 377 Riverdale Avenue, Yonkers NY | West 47-feet | EDR Hist Auto | Potential | No violations or Spill Numbers were identified in association with the Site. See below. |
| D14, D15, D16, D17, D18 | Devonshire 2010 Inc. / Devonshire Tire / Devonshire Lane Service<br>390 Riverdale Avenue, Yonkers NY | South 244-feet | NY UST, NY AST EDR Hist Auto, NY Spills, RCRA NonGen/NLR, FINDS, ECHO | Potential | Identified on list of NY Spills. See below. |
| E23 | Rosario Residence<br>15 Cliff Avenue, Yonkers NY | East 98-feet | NY Spills | Not Anticipated | NYSDEC determined that no further action was required. See below. |

5.1 Goodyear Auto Service Center (A1, A2)

The Site was listed on several databases identified during the EDR search. The Site was listed on the RCRA-CESQ database as the Goodyear Auto Service Center and was listed as a conditionally exempt small quantity generator/handler of hazardous waste. No violations were associated with this database listing. Additionally, the Site was listed on the EDR database of Historical Auto Stations as the Goodyear Auto Service Center for the years 1999, 2000, 2002, 2009, 2010, and 2012.

5.2 Citgo Service Station (A3, A7, A8)

The property located at 380 Riverdale Avenue was identified as a Citgo-branded gasoline filling station was identified on the NYSDEC database of documented spills (NY Spills) as Site ID No. 371999 and listed as active. Listings for the Citgo Service station included the following:

- Spill No. 0608110 was issued on October 16, 2006 for a known release of petroleum products, initially identified during soil sampling activities. This spill incident is listed as active on the NYSDEC Spill Incidents Database.

- Spill No. 0202712 was issued on June 13, 2002 for a release of gasoline identified during tank testing activities. This spill incident is listed as active on the NYSDEC Spill Incidents Database.

- Spill No. 110501 was issued on February 1, 2002 for a release of transmission fluid to a drain located on the property. No records were available through the NYSDEC Spill Incidents database for this incident.

- NY UST Facility ID No. 3-800744 is an active facility with two 6,000-gallon gasoline USTs (Tank 001 and 002) and one 6,000-gallon diesel UST (Tank 0003), installed on July 1, 2003. Historically, this property operated with two 6,000-gallon gasoline USTs (Tank 1 and Tank 2) and one 6,000-gallon diesel UST (Tank 3), originally installed on July 1, 1973.

- EDR Historical Auto Stations identify potential automotive facilities based on historical operator names. The Citgo service station was identified at this address in 2011 and 2012.

Based on the identified spill numbers and close proximity to the Site, Ransom concludes that this facility has the potential to have impacted the Site.

5.3 ConEdison Trench 1111 (A4, A5)

A property located at the intersection of Riverdale Avenue and Culver Street was identified on the EDR list of RCRA-LQG and NJ Manifest sites, this property was identified as a large quantity generator of hazardous wastes. This property is currently maintained by ConEdison and no violations were reported in connection with this property.

5.4 Lewis Property (A6)

The Lewis Property, located at 10 Culver Street, Yonkers NY, was identified on the NY Spills database. Spill No. 193717 was reported for the release of approximately 2-gallons of fuel oil (No. 2), originating from a leak in the fill pipe, on May 15, 1991. This Spill No. is listed as inactive and due to the *de minimis*

nature of the release, this case is not expected to impact the environmental conditions of the Site and no further investigation is recommended.

5.5 377 Riverdale Avenue (B9)

The property located at 377 Riverdale Avenue (presently known as 373 Riverdale Avenue) was identified on the EDR list of Historic Auto Stations as the Riverdale Auto Service Center Inc. for the years 2011 and 2012. No further information was provided. Due to the sidegradient location of this property, its former proximity to the Site, and its depicted service station use from at least 1940 to 1978, further investigation is warranted.

5.6 Devonshire 2010 Inc. (D14, D15, D16, D17, D18)

This property located at 390 Riverdale Avenue, identified as Devonshire 2010 Inc., and the present-day location for the Devonshire Discount Tire, Auto Body & Repair Center, was identified on several EDR listings. Based on the statuses of the EDR listings for this facility and its sidegradient location relative to the Site, no further investigation is recommended. Listings for the Devonshire facility included the following:

- NY UST Facility ID No. 3-138045 is an inactive UST facility. Three 6,000-gallon gasoline USTs and one 1,000-gallon UST of unknown contents are listed as closed and abandoned in-place.

- New York AST Facility ID No. 3-138045 is an active facility which currently utilizes one 1,000-gallon #2 fuel oil AST, two 275-gallon waste oil AST. Two 275-gallon ASTs of unknown contents were removed from this property on January 1, 2006.

- EDR Historical Auto Stations identify potential automotive facilities based on historical operator names. One Transmission Parts Inc. was identified at this address in 2007. The Firestone Tire & Auto Service Center was listed at this address in 2008. The Riverdale Transmission Parts Inc. was listed at this address for 2009. The Firestone Devonshire Tire Company was listed at this address in 2010 and the Devonshire Tire Co. for the year 2011.

- NY Spills No. 1007244 was issued for the discovery of a release of fuel oil (No. 2) to soils during the removal of one 1,000-gallon UST in January of 2011. A total of 715.89 tons of petroleum impacted soils were removed from this property at this time. A closure status was issued in relation to this spill incident on January 26, 2011.

- This property was identified on the RCRA NonGen/NLR, FINDS, and ECHO databases as a non-generator, handler of hazardous waste. No violations were identified in relation to the handling of hazardous materials on the aforementioned databases.

Based on the identified spill numbers and close proximity to the Site, Ransom concludes that this facility has the potential to have impacted the Site.

5.7 Rosario Residence – 15 Cliff Avenue (E23)

The property located at 15 Cliff Avenue was identified on the NY Spills Database as Facility ID No. 509913. NY Spills No. 1503602 dated August 17, 2015 was issued to this property in response to a known release of #2 fuel oil originating from a 1,000-gallon heating oil AST during removal activities.

The NYSDEC concluded that due to the limited nature of the release and subsequent clean-up activities, that no further action was warranted.

## 5.8 Orphan Sites

An Orphan Site is a listed site in the same zip code as the subject Site which cannot be mapped because of inadequate address information. Ransom reviewed the four Orphan Sites and determined that they are located in positions considered to be cross-gradient, downgradient, or hydrologically isolated from the Site, or are beyond the applicable ASTM search parameters. Therefore, it is unlikely that these Orphan Sites will adversely impact environmental conditions at the Site.

## 6.0 ADJACENT PROPERTIES

The Site is adjoined by the following properties:

- To the north, the Site is bordered by residential properties, including the 362 Riverdale Avenue, 76 Post Road, 80 Post Road, 82 Post Road, and 84 Post Road. Further to the north are more residential properties and mixed use commercial-residential areas.

- To the south of the Site, across Culver Street, is the Citgo-branded gasoline filling station located at 380 Riverdale Avenue. Additionally, residential properties are located to the south of the Site, across Culver Street, and are located at 10, 12, 14, 16, 18, 20, and 22 Culver Street. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body & Repair Center.

- To the east of the Site is the Culver Park, a City of Yonkers operated park and playground area. Culver Park is located at the intersection of Culver Street and Livingston Avenue.

- To the west of the Site, across Riverdale Avenue, is the PEARLS Hawthorne School, located at 350 Hawthorne Avenue.

The southern adjacent Citgo-branded gasoline filling station and Devonshire Discount Tire, Auto Body & Repair Center represent potential environmental concerns due to their proximity to the Site and their historical release cases.

## 7.0 VAPOR INTRUSION ASSESSMENT

Ransom has identified potential releases of volatile contaminants on the Site. Ransom has also identified historic potential or known releases of volatile contaminants from off-site properties immediately adjacent and upgradient of the Site. Therefore, Ransom recommends performance of a Vapor Intrusion Evaluation and Assessment as part of a Phase II limited subsurface investigation. If the results of that assessment indicate that a potential vapor intrusion risk exists, Ransom will perform a Vapor Intrusion Risk Analysis, which will present alternatives for mitigation of the risk, if warranted.

## 8.0 DATA GAPS

At the time this report was prepared, several information requests remain outstanding, including the City of Yonkers Fire Department, the United States Army Corp of Engineers and NYSDEC requests. However, upon receipt and review, pertinent information provided by the above-mentioned agencies will be forwarded in an addendum to this report. This data gap represents an environmental concern warranting additional investigation to assess RECs in connection with the Site.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

### 9.1 Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM International E 1527-13 and the Corporate Services Agreement, for the Site identified by the City of Yonkers Assessor's Tax Map Section 1, Block 129, Lots 26 and 30. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. Based on the information identified during this ESA, Ransom has identified the following RECs in connection with the Site:

- **REC 1 – Automotive Repair Drainage System**: A total of 11 sealed/inactive/former floor drains, four active floor drains, one former/inactive 4-inch cast iron drainage pipe, and one active 6-inch drainage pipe were either observed or identified throughout the Lot 30 Site Building. The former/inactive 4-inch cast iron drainage pipe was depicted as leading to a grease and sand interceptor. The Lot 30 Site Building's drainage system reportedly discharged and/or currently discharges to the municipal sanitary sewer system. The identified floor and appurtenant drainage pipes, and former grease and sand interceptor, represent RECs as follows (details are presented within Section 4.9.1 of this Report):
    - REC 1A – Service Garage Sealed Floor Drain;
    - REC 1B – Boiler Room Sealed Floor Drain;
    - REC 1C – Parts Room Sealed Floor Drain;
    - REC 1D – Bathroom Floor Drains;
    - REC 1E – Employee Locker Room Sealed Floor Drain;
    - REC 1F – Tire Wash Area Floor Drain;
    - REC 1G – Former Hydraulic Lift Floor Drains; and
    - REC 1H – Former Grease and Sand Interceptor.

  Due to the close proximity of the sealed/inactive/former floor drains and former underground grease and sand interceptor to the former automobile repair activities, there is a potential for soil and/or groundwater impacts within this area. Further investigation is warranted.

- **REC 2 – Automotive Repair Hydraulic Lift Systems**: A total of seven of the eight automobile repair bays housed underground hydraulic lifts, and one bay housed an air/hydraulic alignment rack. It is believed that at least five of the seven hydraulic lifts historically had underground hydraulic oil reservoirs, which were upgraded to wall-mounted hydraulic underground lifts. Two former air compressors and associated air filter were located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. The identified current and former system components represent RECs as follows (details are presented within Section 4.4 of this Report):
    - REC 2A – Hydraulic Lifts and Alignment Rack;
    - REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes;
    - REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs;

- REC 2D – Hydraulic Lift Control Boxes; and
- REC 2E – Former Air Compressors.

Based on the former operations and unknown condition of the subsurface in the vicinity of the current/former hydraulic lifts/alignment rack, wall-mounted hydraulic fluid reservoirs, underground hydraulic oil reservoirs, hydraulic lift control boxes, and former air compressors, there is a potential for soil impacts within these areas. Further investigation is warranted

- **REC 3 – Vehicle Storage**: Used vehicle storage was observed within the northeastern most storage area of the Lot 30 Site Building, as well as throughout the paved parking areas surrounding the Lot 30 Site Building. The areas beneath the parked vehicle was inaccessible during Site reconnaissance activities; therefore, Ransom was unable to ascertain the integrity of the surface materials in these areas. Further investigation is warranted in all vehicle storage areas throughout the Site.

- **REC 4 – Inactive Oil-Fired Boiler System**: One inactive oil-fired burner was observed in the boiler room of the Lot 30 Site Building. The oil-fired burner was observed to be in poor condition with heavy rusting and staining visible on the exterior of the boiler. Due to the presence of dust and dim lighting, the condition of the floor below the boiler could not be fully assessed. Additionally, waste ash, which may contain heavy metals, was observed within the base of the boiler. Due to the poor condition of the oil-fired burner, close proximity to a former floor drain, inability to access the area beneath the oil-fired burner, and presence of waste ash, there is a potential for residual soil impacts in this area. Further investigation into the soil conditions in this area is warranted.

- **REC 5 – Former 3,000-gallon Fuel Oil UST**: One former 3,000-gallon fuel oil UST was identified on historic construction plans on the eastern exterior side of the Lot 30 Site Building. An associated pump was identified on the eastern most portion of the storage area within the Lot 30 Site Building as well. The fuel oil UST depicted on the historical plan was connected to a pump and subsequently to the oil-fired boiler (REC 4) via underground piping. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 3,000-gallon fuel oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 6 – Former 550-gallon Waste Oil UST**: One former 550-gallon waste oil UST was identified on historic construction plans on the southeastern exterior or of the Lot 30 Site Building. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 550-gallon waste oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 7 – 55-Gallon Waste Oil Drum Storage**: Approximately six circular stains, indicative of former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining. The

presence of this staining represents evidence of historical drum storage and waste generation, which presumably was how waste oil was stored after the waste oil UST was removed in 1995 until 2015, when automobile repair operations ceased. Due to the observed crack in the concrete and the evidence of staining in this area, further investigation of the soil conditions in this area is warranted.

Additionally, Ransom observed three 55-gallon steel drums containing waste oil within the service garage area of the Lot 30 Site Building, presumably generated by former automobile repair operations. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. No further investigation is recommended in connection with the existing 55-gallon waste oil drums; however, proper removal and off-site disposal is required prior to Site redevelopment.

- **REC 8 – Current/Former Residential Use**: Ransom identified one current and eight former residential buildings associated with the Site. The existing Residential Building is known to use fuel oil for heating. The historical heating source(s) for the former residential structures are unknown. Lastly, private septic systems are also associated with residential use. Therefore, there is a potential for one or more heating oil (No. 2) USTs and/or one or more septic systems to be present on-Site as follows:

    - **REC 8A – Known Fuel Oil Use at the Residential Building**: Property records were identified by Ransom for the Residential Building located on the Lot 26 portion of the Site, which indicated the usage of fuel oil at this property. Ransom was unable to confirm the presence of a fuel oil tank or boiler at the Residential Building; however, a sealed fill pipe was observed on the eastern side of the structure, along the foundation of the Lot 30 Site Building, indicating the potential presence of a fuel oil AST in the basement. Further, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, barring access into a room where a suspect boiler was located.

    - **REC 8B –Former Residential Use**: Historic records and construction plans identified the presence of eight residential structures (not including the current Residential Building) at the Site prior to redevelopment activities in 1974 and 1980. Specific documentation regarding these structures was not identified by, or provide to, Ransom.

  Due to the potential for historic fuel oil usage on the Lot 26 portion of the Site and based on the absence of a known heating source, UST, and/or septic system information for the former residential houses, further investigation is warranted regarding this REC.

- **REC 9 – Potential Fill**: The 1898 Sanborn Map indicted one of the former residential properties with "Low Ground," which indicates that the property had a potential to have been historically filled. The location of this "Low Ground" indication is mostly beneath the present-day Lot 30 Site Building. Based on the unknown source and characteristics of this potential fill material, Ransom believes that the potential exists for off-site fill material to have been brought on-Site; therefore, Ransom recommends that a subsurface investigation be conducted to assess whether historical fill is present on-Site and if it has impacted the environmental conditions at the Site.

- **REC 10 – Potential Off-site Sources**: Ransom identified two current off-site uses where known or potential past discharges of hazardous chemicals from facilities, including a gasoline filling

station and an automotive repair facility, have or may have occurred upgradient of the Site and one off-site use where potential past discharges of hazardous chemicals from facilities, including a former gasoline filling may have occurred sidegradient of the Site. The following potential off-site sources were identified in close proximity to the Site, and represent RECs.

- **REC 10A – Off-Site Citgo Service Station**: The southerly adjacent Citgo-gasoline filling station was identified as an active service station with multiple active NY Spills incident numbers associated with this property.

- **REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center**: A property located approximately 390 feet to the south of the Site was identified as an active auto body and repair center that has a NY Spills incident with a "Closed" status.

- **REC 10C – Former Riverdale Auto Service Inc.**: The property located 377 Riverdale Avenue, located adjacent (across Riverdale Avenue) to the west and sidegradient of the Site, was identified as a potential off-Site source due to its use as a former gasoline service station from at least 1940 through at least 1978; however, no further information was identified.

Due to the close proximity, NY Spill incident(s) and/or former/current use, Ransom recognizes the potential for off-Site impact to the Site from the current filling station, active auto body and repair center, and former off-site service station operations; therefore, further investigation is warranted.

In addition to the RECs identified above, Ransom identified the following condition of potential environmental concern, which is being documented as a *de minimis* condition as follows:

- **Site-Wide Solid Waste**: Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, 5-gallon buckets with cooking oil, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property.

Some additional environmental concerns were identified which are considered non-scope under ASTM, but were recognized as areas of potential business environmental risk. Specifically, based on the construction date of the Lot 30 Site Building (1974) and the Residential Building (pre-1897), hazardous building materials may be present in the Site Buildings, including asbestos-containing materials (ACM), polychlorinated biphenyls (PCBs) in fluorescent light ballasts, lead-based paint (LBP), and mercury-containing fluorescent lights and/or other equipment. Prior to demolition of the current Site Buildings, identified hazardous building materials should be removed and disposed of in accordance with local, state, and federal regulations.

Based on the information identified during this Phase I ESA, Ransom did not identify any CRECs or HRECs in connection with the Site.

## 9.2 Recommendations

Based on the information identified during this assessment, Ransom concludes that additional investigation is warranted. Ransom makes the following recommendations:

- Based upon the construction date of the Site Building (1974) and Residential Building (pre-1897), hazardous building materials may be present within the Site buildings. Ransom recommends the performance of a comprehensive Hazardous Material Inventory (HMI) survey prior to demolition of the Site Buildings.

- Ransom recommends that sub-slab soil samples be collected along the drainage pipes and on-Site sanitary sewer lines associated with the automotive repair floor drains (REC 1). In an effort to target potential heavily impacted areas, video inspection of the pipes for evidence of cracks or breaches could be conducted as part of the geophysical survey recommended below. Based on the findings of the video inspection, soil sampling could be biased towards those areas of pipe cracks/breaches.

- Ransom recommends the completion of a geophysical survey across the Site in an effort to: (1) confirm the removal of the 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6) presumably removed from the Site in 1995, and (2) assess if one or more historic USTs, former product piping, and/or septic tanks are present from the current/former residential use (REC 8). If anomalies are identified, further subsurface investigation may be warranted.

- A subsurface soil and groundwater investigation is recommended prior to the initiation of construction activities. Ransom recommends the following soil and groundwater monitoring program be completed prior to redevelopment activities:

    - Ransom recommends the collection of sub-slab soil and groundwater samples from beneath the current/former hydraulic lifts and one hydraulic alignment rack (RECs 2A and REC 2C) within the Lot 30 Site Building.

    - Ransom recommends the collection of sub-slab soil samples from beneath the five identified wall-mounted hydraulic fluid reservoirs (REC 2B) within the Lot 30 Site Building immediately adjacent to the exposed subsurface piping.

    - Ransom recommends the collection of sub-slab soil samples immediately adjacent to the three floor-mounted control boxes (REC 2D) within the Lot 30 Site Building.

    - Ransom recommends the collection of subsurface soil and groundwater samples in the locations of the former 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6).

    - Ransom recommends the collection of subsurface soil samples at the location of the crack observed near the former waste oil drum storage/staining (REC 7).

    - Ransom recommends the collection of subsurface soil samples at the location of the potential historical fill area (REC 9).

    - Ransom recommends the installation of temporary groundwater monitoring points and/or soil borings along the southern boundary of the Site to evaluate potential off-Site impacts to the Site (REC 10).

- Since there were physical obstructions (e.g., stored vehicles, dirt, welded doors, etc.), which represent a significant data gap, and based on historical operations, Ransom recommends the

physical obstructions be removed and further inspection completed of the ground surface areas beneath the former air compressor (REC 2E), the stored vehicles (REC 3), the inactive oil-fired burner (REC 4) and potential residential fuel-oil fired boiler (REC 8). Further investigation activities may be warranted based on the findings.

- Ransom recommends the proper disposal of the fuel oil-fired burner and its contents (e.g., waste ash) (REC 8) identified within the Lot 30 Site Building. After removal, Ransom recommends further inspection of the surface areas beneath the fuel oil-fired burner. Further investigation activities may be warranted based on the findings.

- 55-Gallon drums present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.

- On-Site drainage structures, including potential septic system components and/or storm water drainage structures (catch basins, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned according to local, state, and federal requirements. If evidence of contamination is identified during decommissioning of these structures, Ransom should be contacted to evaluate whether additional investigation or cleanup is warranted.

- Ransom recommends that miscellaneous chemicals, hazardous materials and/or stored appliances observed at the Site should be recovered/removed from the Site and properly disposed/recycled (by a certified technician where applicable) prior to proposed redevelopment activities.

## 10.0 DECLARATION OF ENVIRONMENTAL PROFESSIONAL

Primary Assessor and Report Author

This Phase I Environmental Site Assessment was conducted in general accordance with the requirements of ASTM International E 1527-13 by the undersigned. Any work completed on this Phase I Environmental Site Assessment by an individual who is not considered an environmental professional was completed under the supervision or responsible charge of the environmental professional(s) listed below.

Lauren Rojewski
Environmental Scientist/Primary Author

Environmental Professionals

We declare that, to the best of our professional knowledge and belief, we meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Kimberly A. Skibo
Project Manager/Primary Reviewer

Brian R. Pettingill, P.G.
Senior Project Manager/CVS Program Manager

RE: Phase II Limited Subsurface Investigation
Proposed CVS Pharmacy/Store No. 10386
13 Culver Street and 372 Riverdale Avenue
Section 1, Block 129, Lots 26 and 30
City of Yonkers, Westchester County, New York

Dear Ms. Parker:

Ransom Consulting, Inc. (Ransom) is providing this letter to summarize the activities and results of a Phase II Limited Subsurface Investigation (LSI) conducted at the proposed CVS Pharmacy/Store site located at 13 Culver Street and 372 Riverdale Avenue, City of Yonkers, Westchester County, New York (i.e., the "Site"). A Site Location Map and a Site Plan are included as Figures 1 and 2, respectively.

Ransom conducted this Phase II LSI on behalf of T.M. Crowley & Associates Inc. (TMC) and CVS Pharmacy, Inc. (CVS), its parent, affiliates and subsidiaries and their successors, assigns, and grantees, and in accordance with Addendum 1 of an approved CVS Corporate Services Agreement, effective date April 1, 2017. The purpose of this Phase II LSI was to evaluate Recognized Environmental Conditions (RECs) identified in Ransom's Phase I Environmental Site Assessment (ESA) Report, dated June 7, 2017. The objectives of the Phase II LSI were to:

1. Perform a geophysical survey in an attempt to locate evidence of subsurface structures, including possible underground storage tanks (USTs), former UST excavation/backfill areas, product piping, possible septic tank systems, cesspools and/or drywells, and other potential subsurface structures associated with RECs around the current and former Site Buildings;

2. Assess current soil and groundwater conditions at the Site relative to documented or suspected releases of hazardous substances or petroleum products (HSP) at the Site, and in the immediate vicinity of the Site, which were identified as RECs in our June 7, 2017 Phase I ESA; and

3. Evaluate potential impacts to the proposed redevelopment by CVS, including potential risks to Site occupants, construction workers and to the indoor air quality of the proposed CVS building, and increased costs related to managing contaminated soil and/or

groundwater, or potentially implementing vapor mitigation measures during the proposed redevelopment activities, if necessary.

## SITE DESCRIPTION AND BACKGROUND

The Site is located in the northeast corner of the intersection of Riverdale Avenue and Culver Street in the City of Yonkers, Westchester County, New York (i.e., the "Site"), which includes Section 1, Block 129, Lots 26 and 30,. The Site, which totals approximately 1.01 acres, is improved with an approximately 8,695 square-foot commercial structure (the "Lot 30 Site Building") used for automotive repair and sales operations and an approximately 1,320 square-foot residential structure (the "Lot 26 Residential Building") (collectively, the "Site Buildings"). The Site is located in a mixed commercial and residential area of the City of Yonkers.

The Lot 30 portion of the Site operated as a Goodyear-branded automotive repair shop and tire sales center from 1974 until sometime in 2015. The Lot 30 Site Building and surrounding paved parking areas are currently occupied by the West Coast Auto Sales company, who have utilized the Site for the sale of used cars since sometime in 2016. The Lot 30 Site Building is also currently being utilized by individual tenants for automotive repair and service operations, and vehicle painting operations as well. The Lot 26 Residential Building was constructed sometime prior to 1897 and has been vacant since sometime in 2009. Prior to the development of the Lot 30 Site Building in 1974, the entire Site consisted of ten residential structures, one of which was removed by 1951, and six of which were removed circa 1973. Commercial improvements (i.e., an additional parking area) to the Lot 30 portion of the Site were completed in June 1980, at which time two more residential structures were removed from the Site.

Properties to the north of the Site currently consist of residential properties. The property to the east of the Site consists of Culver Park. The PEARLS Hawthorne School is located to the west of the Site, across Riverdale Avenue. To the south of the Site, across Culver Street, is a Citgo-branded gasoline filling station and residential properties. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body, and Repair Center.

Ransom's Phase I ESA report, dated June 7, 2017, identified the following Recognized Environmental Conditions (RECs) for which further investigation was recommended:

- REC 1 – Automotive Repair Drainage System:
    - REC 1A – Service Garage Sealed Floor Drain;
    - REC 1B – Boiler Room Sealed Floor Drain;
    - REC 1C – Parts Room Sealed Floor Drain;
    - REC 1D – Bathroom Floor Drains;
    - REC 1E – Employee Locker Room Sealed Floor Drain;
    - REC 1F – Tire Wash Area Floor Drain;
    - REC 1G – Former Hydraulic Lift Floor Drains; and
    - REC 1H – Former Grease and Sand Interceptor.
- REC 2 – Automotive Repair Hydraulic Lift Systems:

  - REC 2A – Hydraulic Lifts and Alignment Rack;
  - REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes;
  - REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs;
  - REC 2D – Hydraulic Lift Control Boxes; and
  - REC 2E – Former Air Compressors.
- REC 3 – Vehicle Storage;
- REC 4 – Inactive Oil-Fired Boiler System;
- REC 5 – Former 3,000-gallon Fuel Oil UST;
- REC 6 – Former 550-gallon Waste Oil UST;
- REC 7 – 55-Gallon Waste Oil Drum Storage;
- REC 8 – Current/Former Residential Use:
  - REC 8A – Known Fuel Oil Use at Residential Building; and
  - REC 8B – Former Residential Use.
- REC 9 – Potential Fill; and
- REC 10 – Potential Off-Site Sources:
  - REC 10A – Off-Site Citgo Service Station;
  - REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center; and
  - REC 10C – Former Riverdale Auto Service Inc.

Based on the findings and conclusions presented above, Ransom made the following recommendations in our Phase I ESA to address the above RECs:

- Ransom recommended that sub-slab soil samples be collected along the drainage pipes and on-Site sanitary sewer lines associated with the automotive repair floor drains (REC 1). In an effort to target potential heavily impacted areas, video inspection of the pipes for evidence of cracks or breaches was recommended as part of the geophysical survey recommended below. Based on the findings of the video inspection, soil sampling would be biased towards those areas of pipe cracks/breaches.
- Ransom recommended the completion of a geophysical survey across the Site in an effort to: (1) confirm the removal of the 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6) presumably removed from the Site in 1995; and (2) assess if historic USTs, former product piping, and/or septic tanks are present from the current/former residential use (REC 8). If anomalies are identified, further subsurface investigation may be warranted.
- A subsurface soil and groundwater investigation was recommended prior to the initiation of construction activities. Ransom recommended the following soil and groundwater monitoring program be completed prior to redevelopment activities:

  - Ransom recommended the collection of sub-slab soil and groundwater samples from beneath the current/former hydraulic lifts and one hydraulic alignment rack (RECs 2A and REC 2C) within the Lot 30 Site Building.
  - Ransom recommended the collection of sub-slab soil samples from beneath the five-identified wall-mounted hydraulic fluid reservoirs (REC 2B) within the Lot 30 Site Building immediately adjacent to the exposed subsurface piping.
  - Ransom recommended the collection of sub-slab soil samples immediately adjacent to the three floor-mounted control boxes (REC 2D) within the Lot 30 Site Building.
  - Ransom recommended the collection of subsurface soil and groundwater samples in the locations of the former 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6).
  - Ransom recommended the collection of subsurface soil samples at the location of the crack observed near the former waste oil drum storage/staining (REC 7).
  - Ransom recommended the collection of subsurface soil samples at the location of the potential historical fill area (REC 9).
  - Ransom recommended the installation of temporary groundwater monitoring points and/or soil borings along the southern boundary of the Site to evaluate potential off-Site impacts to the Site (REC 10).

- Since there were physical obstructions (e.g., stored vehicles, dirt, welded doors, etc.), which represented a significant data gap, and based on historical operations, Ransom recommended the physical obstructions be removed and further inspection completed of the ground surface areas beneath the former air compressor (REC 2E), the stored vehicles (REC 3), the inactive oil-fired burner (REC 4) and potential residential fuel-oil fired boiler (REC 8). Further investigative activities may be warranted based on the findings.
- Ransom recommended the proper disposal of the fuel oil-fired burner and its contents (e.g., waste ash) (REC 8) identified within the Lot 30 Site Building. After removal, Ransom recommended further inspection of the surface areas beneath the fuel oil-fired burner. Further investigative activities may be warranted based on the findings.
- The 55-gallon drums present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.
- On-Site drainage structures, including potential septic system components and/or storm water drainage structures (catch basins, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned according to local, state, and federal requirements. If evidence of contamination is identified during decommissioning of these structures, Ransom should be contacted to evaluate whether additional investigation or cleanup is warranted.
- Ransom recommended that miscellaneous chemicals, hazardous materials and/or stored appliances observed at the Site should be recovered/removed from the Site and properly disposed/recycled (by a certified technician where applicable) prior to proposed redevelopment activities.

A copy of the REC plan is included as Figure 3.

## PHASE II LIMITED SUBSURFACE INVESTIGATION

Geophysical Investigation and Subsurface Floor Drain Imaging

Between June 27 and June 29, 2017, Advanced Geological Services (AGS) of Malvern, Pennsylvania performed a geophysical survey at the Site. The purpose of the geophysical survey was to identify and locate evidence of subsurface structures, including, but not limited to, current on-Site USTs, former on-Site USTs, and/or former UST excavation/backfill area(s), product piping, septic tank systems, cesspools and/or drywells, former and/or current drain systems, and foundations or former foundation areas associated with the former Site structure(s). Proposed drilling locations on both the Lot 26 and Lot 30 portions of the Site were cleared of identifiable drilling hazards (i.e., subsurface utilities, etc.) at this time as well. The proposed drilling locations were adjusted to avoid any identified hazards, where necessary, with the approval of Ransom. Additionally, an effort was made to complete imaging and evaluation of piping associated with the two identified floor drains within the former Goodyear Automotive Service Center building to evaluate for breaches within the piping.

The geophysical survey was conducted using a combination of ground penetrating radar (GPR), radio frequency (RF), hand-held electromagnetic (HHEM), and/or multi-frequency electromagnetic meter (EM). The geophysical investigation area consisted of the asphalt parking lot surrounding the Lot 30 Site Building, the interior of the Lot 30 Site Building, and exterior surface areas on the Lot 26 portion of the Site. The following anomalies/features were identified during the geophysical investigation activities:

- A backfilled excavation (presumably from the former 500-gallon UST) was identified near the southeast corner of the Lot 30 Site Building. An associated vent pipe (visible at the southeast corner of the building) was identified as extending to the edge of the excavation; and

- A suspect UST was located on the east side of the Lot 30 Site Building, near the northeast corner. This feature produced an EM response with the hand-held EM metal detection instrument and also an ambiguous GPR response. A vent pipe located on the building wall and a potential supply/return line were also identified leading from the building to the suspect UST location. The geophysical results at this location were not conclusive; therefore, AGS recommended that additional direct investigation of this location, such as excavation, be considered to determine the presence of a UST at this location.

Geophysical survey activities conducted identified evidence of one suspect UST on Lot 30. The identified metallic anomaly measured approximately 6 feet in width by 16 feet in length, corresponding to an UST with an approximate volume between 3,000 and 4,000 gallons. The top of the UST was estimated to be approximately 4 to 5 feet bgs. Based on the size and location of this suspect UST, it is presumably associated with the closed (i.e., abandoned-in-place) 3,000-gallon heating oil UST (REC 5) associated with the Lot 30 Site Building. Geophysical survey activities conducted did not identify evidence of a current or former UST associated with the Lot 26 Residential Building. GPR results also suggested that fill or building rubble may be present throughout the Site.

The geophysical survey activities encountered several limitations, including the presence of parked/immovable vehicles within the interior vehicle storage area of the Lot 30 Site Building, the presence of parked/immovable vehicles along the southwestern, northern, and eastern boundaries of the Lot 30 portion of the Site, and the presence of steel reinforcing bar embedded within the concrete slab foundation of the Lot 30 Site Building. Based on the EM results and visual observations at the Site,

Ransom believes that these limitations do not warrant further investigation; however, due to these geophysical survey limitations, further response actions may be warranted during Site redevelopment if subsurface structures are identified.

Also during the geophysical event, attempts were made to access the floor drain system located inside of the south side of the Lot 30 Site Building. The camera was inserted into the clean-out located inside of the southeast corner of the building. However, there was a wire trap approximately 5-feet beyond the clean-out opening that prevented access. Attempts were made to access the drain system through three other clean-outs located along the length of the floor drain inside the south side of the building, but they were all filled with sediments preventing access. Due to Site conditions, it was not possible to inspect the floor drain system that extends from east to west inside the south side of the auto shop area.

The geophysical summary report is included as Appendix A, where Figure 1 of Appendix A shows the color contoured EM results from accessible areas of the Site. The report also shows the areas of the Site where limitations to the geophysical existed, including where cars were parked, and where portions of the Site were covered with reinforced concrete.

Subsurface Investigation

This section summarizes the investigation activities completed by Ransom, including soil boring installation and sampling and the installation of temporary monitoring well points to evaluate the potential environmental impacts to the Site from the identified RECs.

**Soil Boring and Temporary Monitoring Well Sampling Program**

Ransom conducted a soil boring investigation at the Site on June 27, 28, and 29, 2017. A total of 25 borings (SB-1 through SB-25) were advanced at the Site. Ransom advanced these borings concurrently with our Geotechnical Engineering Evaluation conducted at the Site (borings B101 through B108). The Geotechnical report has been provided separately. Soil boring locations are depicted on Figure 4. Soil borings were advanced by Environmental Probing Investigations, Inc. (EPI) of Cream Ridge, NJ utilizing direct push Geoprobe® technology with acetate-lined macro-core samplers. The soil boring depths ranged from 3.0 to 30 feet below grade surface (bgs). Subsurface explorations generally encountered brown and tan silt with trace fine sand to approximately 8 feet bgs and brown and tan fine to medium sands between approximately 8 feet bgs and 20 feet bgs. Fill material, including brick and coarse gravel, was encountered within four soil borings (SB-14, SB-21, SB-22, and SB-24) at depths ranging between 0.5 and 4.0 feet bgs. Also, during geotechnical drilling, refusal (i.e., the depth below which the hollow-stem auger was not able to penetrate the deeper geologic formations) was encountered in two of the Site borings at depths of approximately 7 and 17 feet below existing grades (B105 and B103, respectively, see Figure 4). Rock coring was not conducted to confirm the drilling refusal surfaces. It is our opinion that the shallow refusal in B103 was on a large boulder or buried foundation stone, and not on bedrock. The deeper drilling refusal in B105 was likely at the top of competent bedrock.

A total of 30 soil samples were collected from corresponding soil borings (SB-1 through SB-25) at six-inch intervals ranging from 0.5 to 9.0 feet bgs. Soil samples were not collected from soil borings SB-4 and SB-5 due to encountering drilling refusal and/or underground utilities at these locations. Soils within each boring were observed for visual and olfactory evidence of impacts. Petroleum odors were observed within one soil boring (SB-23) at an approximate depth range of 3.5 to 4.0 feet bgs; however, no staining was observed within the soil borings advanced at the Site. Additionally, a photoionization detector (PID)

was utilized to screen the soil for the presence of volatile organic vapors. Field screening of the soil borings identified elevated PID readings within one soil boring, SB-23, ranging from 3.2 to 6.8 parts per million (ppm) at an approximate depth of 3.0 to 6.5 feet bgs. Soil boring logs are provided as Appendix B.

Additionally, eight test borings (B101 through B108) were advanced at the Site as part of the geotechnical evaluation activities. The geotechnical borings were advanced using hollow-stem auger drilling techniques with slit-barrel sampling and standard penetration testing (SPT, ASTM D 1586). Representative soil samples (B101 through B108) were placed in sealed containers and returned to Ransom's office for further evaluation and laboratory testing. Soil samples were classified in general accordance with visual-manual procedures (ASTM D 2488). Geotechnical sampling results and associated geotechnical logs will be presented within a project geotechnical report under a separate cover that will contain recommendations and design parameters.

Soil samples were collected and sent to Hampton Clarke Laboratories (Hampton-Clarke) of Fairfield, New Jersey to be analyzed for a Targeted Compound List of Volatile Organic Compounds (TCL/CP-51 VOCs) in accordance with the New York State Department of Environmental Conservation (NYSDEC) CP-51 Soil Cleanup Guidance via United States Environmental Protection Agency (USEPA) Method 8260, a Targeted Compound List of Semi-Volatile Organic Compounds (TLC/CP-51 SVOCs) in accordance with the NYSDEC CP-51 Soil Cleanup Guidance, Polychlorinated Biphenyls (PCBs) via USEPA Method 8082, Polycyclic Aromatic Hydrocarbons (PAHs) via USEPA Method 8270, the Target Analyte List of Metals (TAL Metals) via USEPA Methods 6010/6020, and/or a Targeted Compound List of Pesticides (TCL Pesticides) via USEPA Method 8081. Additionally, one composite sample was collected from soil boring SB-24 for preliminary waste characterization purposes and was analyzed for VOCs with a forward library search for up to fifteen additional compounds (VOCs+15) via USEPA Method 8260, SVOCs with a forward library search for up to fifteen compounds (SVOCs+15) via USEPA Method 8270, PCBs via USEPA Method 8082, Organochlorine Pesticides via USEPA Method 8081, TAL Metals via USEPA Method 6010/6020, and Cyanide via USEPA Method 9012B. Soil sampling analytical results are summarized on Table 1, and soil analytical results exceeding applicable NYSDEC Soil Cleanup Objectives (SCOs) are illustrated on Figure 5A and Figure 5B. The following soil sampling analytical program was followed for the Phase II LSI activities and previously identified RECs:

| Sample ID | Date | REC(s) | Analysis |
|---|---|---|---|
| SB-1 | 6/27/2017 | REC 1H | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-2 | 6/29/2017 | REC 1 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-3 | 6/27/2017 | REC 1 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-6A | 6/29/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-6B | 6/29/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-7 | 6/27/2017 | REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-8A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-8B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-9A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |

| Sample ID | Date | REC(s) | Analysis |
|---|---|---|---|
| SB-9B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-10 | 6/27/2017 | REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-11A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PAHs, and PCBs |
| SB-11B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PAHs, and PCBs |
| SB-12 | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-13A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-13B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-14A | 6/29/2017 | REC 2D | TCL/CP-51 VOCs and PAHs[1] |
| SB-14B | 6/29/2017 | REC 2D/REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs |
| SB-15 | 6/27/2017 | REC 2D | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-16 | 6/27/2017 | REC 2D | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-17 | 6/28/2017 | REC 5 | TCL/CP-51 VOCs and PAHs |
| SB-18 | 6/28/2017 | REC 6 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs |
| SB-19 | 6/27/2017 | REC 7 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-20 | 6/28/2017 | REC 8A | TCL/CP-51 VOCs and PAHs |
| SB-21 | 6/28/2017 | REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, PCBs, and TCL Pesticides |
| SB-22 | 6/27/2017 | REC 10 and REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, and TAL Metals |
| SB-23 | 6/28/2017 | REC 10 | TCL/CP-51 VOCs, PAHs, and TAL Metals |
| SB-24 | 6/29/2017 | REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, TAL Metals, and TCL Pesticides |
| SB-24C | 6/29/2017 | Preliminary Waste Characterization | TCL/CP-51 VOCs,+15 TCL/CP-51 SVOCs+15, TCL Pesticides, PCBs, TAL Metals, and Cyanide |
| SB-25 | 6/29/2017 | REC 2E and REC 11* | TCL/CP-51 VOCs, PCBs, PAHs, and TAL Metals |

*During Phase II LSI drilling activities, it was observed that the backroom was being utilized as a Vehicle Paint Shop (REC 11); therefore, this activity was added to the Site's REC list as REC 11, and one sample was collected concurrently with the REC 2E (former air compressors) soil sample.

Following soil boring and sampling activities, two soil borings (SB-23 and SB-22) were converted into temporary well points (TWPs) (TWP-1 and TWP-2, respectively). The TWPs were constructed with 1-inch diameter PVC 0.010-inch slotted screen and solid riser to depths ranging from 18.50 to 19.75 feet bgs. The two TWP locations are depicted on Figure 4, groundwater sampling analytical results are

[1] The PAH analysis was run out of hold time due to a recording error at one soil sample (SB-14A). Since this analytical parameter was only four of days out of hold time, this analysis may not represent worst-case scenario results, but can indicate if there is a potential for PAH-impacted soil; therefore, it can be utilized for the purposes of this Phase II LSI.

summarized on Table 2, and groundwater analytical results exceeding NYSDEC Ambient Water Quality Standards (AWQS) are depicted on Figure 6. Temporary well point TWP-1 was gauged and sampled on June 28, 2017, and TWP-2 was gauged and sampled on June 29, 2017. Groundwater was encountered in the temporary well points at an approximate depth of 8.0 feet bgs. Temporary well point logs are included as Appendix B. Groundwater samples were collected and submitted to Hampton-Clarke of Fairfield, New Jersey for analysis of TCL/CP-51 VOCs via USEPA Method 8260, TCL/CP-51 SVOCs via USEPA Method 8270, and Lead via USEPA Method 6020.

Following sampling, the borings were backfilled with the soil cuttings and bentonite hole plug to grade.

**Applicable Soil and Groundwater Regulatory Standards**

The applicable NYSDEC remediation standards for the soil and groundwater analytical results at the Site are as follows:

Soil: 6 NYCRR Part 375 (Tables 375-6.8(a) and (b), Effective December 14, 2006):
Unrestricted Use Soil Cleanup Objectives (SCOs)
Residential Use SCOs
Restricted-Residential SCOs
Commercial Use SCOs
Industrial Use SCOs
Protection of Ecological Resources SCOs
Protection of Groundwater SCOs

Groundwater: 6 NYCRR Part 703 (Table 1, reissued June 1998) and Draft Ambient Water Quality Standards, Guidance Values and Groundwater Effluent Limitations (Table 1, drafted November 1999):
Ambient Water Quality Standards (AWQS)

An account of the soil sampling activities is discussed below, and the laboratory data reports are included in Appendix C. Soil sampling analytical results are summarized on Table 1, and groundwater sampling analytical results are summarized on Table 2.

**REC 1 – Automotive Repair Drainage System**

*REC 1A – Service Garage Sealed Floor Drain // REC 1G – Former Hydraulic Lift Floor Drains // REC 1H – Former Grease and Sand Interceptor – Soil Sampling and Analytical Results*

A total of three soil borings (SB-1, SB-2, and SB-3) were advanced to a maximum depth of five feet bgs in the vicinity of the service garage sealed floor drains, former hydraulic lift floor/trench drains, and the former grease and sand interceptor identified within the Lot 30 Site Building for assessment of the former automotive repair drainage system. Field screening of the soil borings did not identify elevated PID readings. In the absence of field evidence of impacts, one soil sample was collected between 3.0 to 3.5 feet bgs, the presumed invert of the former grease and sand interceptor, from soil boring SB-1; and one soil sample was collected from both SB-2 and SB-3 between 0.5 to 1.0 feet bgs, the presumed invert of the former drainage systems. Soil samples SB-1 through SB-3 were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-1

- Barium, at a concentration of 360 milligrams per kilogram (mg/kg), exceeded the Unrestricted Use SCO (350 mg/kg) and the Residential Use SCO (350 mg/kg);
- Total chromium, at a concentration of 78 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), Residential Use SCO for trivalent chromium (36 mg/kg) and hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for trivalent chromium (41 mg/kg) and hexavalent chromium (1 mg/kg), and the Protection of Groundwater Use SCO for hexavalent chromium (19 mg/kg);
- Copper, at a concentration of 69 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 620 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg), the Residential Use SCO (400 mg/kg), the Restricted Residential Use SCO (400 mg/kg), the Protection of Ecological Resources SCO (63 mg/kg), and the Protection of Groundwater SCO (450 mg/kg);
- Total mercury, at a concentration of 0.8 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 410 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-2

- Copper, at a concentration of 61 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 520 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg), the Residential Use SCO (400 mg/kg), the Restricted Residential Use SCO (400 mg/kg), the Protection of Ecological Resources SCO (63 mg/kg), and the Protection of Groundwater SCO (450 mg/kg);
- Total chromium, at a concentration of 23 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 1.9 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 300 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-3

- Total chromium, at a concentration of 17 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg) and the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory reporting limits (RLs) or were detected at concentrations below the most stringent NYSDEC SCOs.

## REC 2 – Automotive Repair Hydraulic Lift Systems

*REC 2A – Hydraulic Lifts and Alignment Rack // REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes // REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs – Soil Sampling and Analytical Results*

A total of eight soil borings (SB-6 through SB-13) were advanced to a maximum depth of 10 feet bgs in the vicinity of the existing hydraulic lifts and alignment rack, the wall-mounted hydraulic fluid reservoirs/control boxes, the former hydraulic lift system locations, and underground hydraulic oil reservoirs for assessment of the current and former hydraulic lift systems. Field screening of the soil borings did not identify elevated PID readings. In the absence of field evidence of impacts, one soil sample was collected from soil borings SB-7, SB-10, and SB-12 between 8.0 to 9.0 feet bgs, the presumed invert of the former hydraulic lift fluid reservoirs/alignment rack housing. Additionally, two samples were collected per boring location for soil borings SB-6, SB-8, SB-9, SB-11, and SB-13 between 0.5 to 1.0 feet bgs and 8.0 to 8.5 feet bgs to evaluate for impacts related to the wall mounted hydraulic fluid reservoirs as well as the current and former hydraulic lifts and underground fluid reservoirs, respectively. Soil samples were chemically analyzed for TCL/CP-51 VOCs, PAHs, and PCBs. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-9A[2]

- Benzo(a)pyrene, at a concentration of 1.2 mg/kg, exceeded the Industrial Use SCO (1.1 mg/kg); however, the concentration of 1.2 mg/kg was rounded to the number of significant digits (i.e., one) for Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), and the Commercial Use SCO (1 mg/kg); therefore, the analytical result of 1.2 mg/kg was rounded to 1 mg/kg, which meets these NYSDEC SCOs;
- Benzo(b)fluoranthene, at a concentration of 1.7 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), and the Restricted Residential Use SCO (1 mg/kg); and
- Indeno(1,2,3-cd)pyrene, at a concentration of 0.74 mg/kg, exceeded the Unrestricted Use SCO (0.5 mg/kg), the Residential Use SCO (0.5 mg/kg), and the Restricted Residential Use SCO (0.5 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

*REC 2D – Hydraulic Lift Control Boxes – Soil Sampling and Analytical Results*

A total of three soil borings (SB-14, SB-15, and SB-16) were advanced to a maximum depth of five feet bgs in the vicinity of the hydraulic lift control boxes identified within the Lot 30 Site Building for assessment of potential impacts related to the identified hydraulic lift control boxes. SB-14 was completed within a heavily stained area of concrete, where potential breaching around the control box

[2] Benzo(a)anthracene and chrysene were detected with a concentration of 1.3 mg/kg and 1.2 mg/kg, respectively; therefore, the analytical results of 1.3 mg/kg and 1.2 mg/kg were rounded to the number of significant digits (i.e., one) of the applicable standard for benzo(a)anthracene and chrysene (i.e., the NYSDEC's Unrestricted Use SCO of 1 mg/kg); therefore, the analytical results of 1.3 mg/kg and 1.2 mg/kg were rounded to 1 mg/kg, which meets the applicable the NYSDEC's Unrestricted Use SCO.

was evident. Field screening of the soil borings did not identify elevated PID readings. In the absence of field evidence of impacts one soil sample was collected at each boring location between 0.5 to 1.0 feet bgs, the presumed invert of the hydraulic lift control box piping infrastructure, with the exception of soil sample SB-14B, which was collected between 1.5 to 2.0 feet bgs. Soil samples were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs for this REC. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-14B

- Total aroclor, at a concentration of 0.16 mg/kg, exceeded the Unrestricted Use SCO (0.1 mg/kg);
- Cadmium, at a concentration of 3.7 mg/kg, exceeded the Unrestricted Use SCO (2.5 mg/kg) and the Residential Use SCO (2.5 mg/kg);
- Total chromium, at a concentration of 36 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Copper, at a total concentration of 4,900 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg), the Residential Use SCO (270 mg/kg), the Restricted Residential Use SCO (270 mg/kg), the Commercial Use SCO (270 mg/kg), the Protection of Ecological Resources SCO (50 mg/kg), and the Protection of Groundwater Use SCO (450 mg/kg);
- Total mercury, at a concentration of 3 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81 mg/kg), the Commercial Use SCO (2.8 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater Use SCO (0.73 mg/kg); and
- Zinc, at a total concentration of 580 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources Use SCO (109 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

*REC 2E – Former Air Compressors and REC 11 – Vehicle Painting Operations – Soil Sampling and Analytical Results*

One soil boring (SB-25) was advanced to a maximum depth of five feet bgs in the vicinity of the former air compressor locations identified within the Lot 30 Site Building where moderate staining on the flooring beneath the former air compressor was observed to evaluate for potential impacts related to former service station operations. Since vehicle painting operations were also conducted within the vicinity of this area, SB-25 was also used to evaluate these ongoing activities as well. Field screening of the soil boring did not identify elevated PID readings. In the absence of field evidence of impacts, one soil sample was collected from boring location SB-25 between 0.5 to 1.0 feet bgs, just below the concrete slab of the Lot 30 Site Building. Soil sample SB-25 was analyzed for TCL/CP-51 VOCs, PCBs, PAHs, and TAL Metals. Analytical results identified the following exceedances of the NYSDEC SCOs:

Soil Sample SB-25

- Total chromium, at a concentration of 32 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO

for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);

- Lead, at a concentration of 260 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total mercury, at a concentration of 0.25 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg) and the Protection of Ecological Resources SCO (0.18 mg/kg); and
- Zinc, at a concentration of 120 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 3 – Vehicle Storage – Investigation Results**

Ransom identified several areas utilized for the storage of used vehicles in relation to the automotive sales and repair operations at the Site during the June 2017 Phase I ESA activities. Vehicle storage areas were identified within the northeastern most portion of the Lot 30 Site Building as well as along the paved parking areas of the Lot 30 portion of the Site. Ransom conducted a visual inspection of the surface areas beneath the parked vehicles during the Phase II LSI activities conducted between July 27, 2017 through July 29, 2017. No evidence of cracks, breaches, or apparent impacts were identified during investigation activities; therefore, no soil samples were collected and vehicle storage is no longer considered a REC.

**REC 4 – Inactive Oil-Fired Burner – Investigation Results**

Ransom was unable to complete subsurface soil investigation activities in the vicinity of the in-active oil-fired burner during the Phases II LSI activities due to the presence of underground utilities in this area; therefore, a soil sample could not be collected representative of potential impacts at REC 4. Visual inspection of the surface conditions in the vicinity of the inactive oil-fired burner did not identify breaches within the concrete slab; however, a significant layer of dust/potential waste ash was noted.

**REC 5 – Former 3,000-gallon Fuel Oil UST – Soil Sampling and Analytical Results**

Geophysical survey activities conducted on June 28, 2017 identified one subsurface metallic anomaly indicative of an UST in the presumed location of the former 3,000-gallon fuel oil UST, located on the northeast side of the Lot 30 Site Building. One soil boring, SB-17, was advanced down-gradient (i.e., to the northwest) of the identified metallic anomaly/presumed 3,000-gallon fuel oil UST to evaluate potential impacts associated with this UST. Field screening of the soil boring did not identify elevated PID readings; additionally, no odors and/or staining were observed in the soil boring. Soil sample SB-17 was collected between 8.0 to 8.5 feet bgs, the presumed invert of the former 3,000-gallon fuel oil UST, and analyzed for TCL/CP-51 VOCs and PAHs. All analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the NYSDEC's most stringent SCOs.

**REC 6 – Former 550-gallon Waste Oil UST – Soil Sampling and Analytical Results**

Geophysical survey activities conducted on June 28, 2017 did not identify a subsurface anomaly indicative of an UST in the presumed location of the former 550-gallon waste oil UST, located on the southeast exterior corner of the Lot 30 Site Building.

One soil boring, SB-18, was advanced in the location of the former 550-gallon waste oil UST to evaluate potential impacts associated with this former UST. Field screening of the soil boring did not identify elevated PID readings; additionally, no odors and/or staining were observed in the soil boring. In the absence of field evidence of impacts, soil sample SB-18 was collected between 7.0 to 7.5 feet bgs, the approximate depth of the invert of the former UST, and was analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-18

- Total chromium, at a concentration of 31 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg); and
- Manganese, at a concentration of 1,800 mg/kg, exceeded the Unrestricted Use SCO (1,600 mg/kg) and the Protection of Ecological Resources SCO (1,600 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 7 – 55-gallon Waste Oil Drum Storage – Soil Sampling and Analytical Results**

One soil boring, SB-19, was advanced to a maximum depth of five feet bgs in the vicinity of the identified staining and a breach in the concrete floor within the service garage area of the Lot 30 Site Building, associated with the former storage of 55-gallon drums, to evaluate for potential impacts related to the presumed storage/disposal of waste oil. Field screening of the soil boring did not identify elevated PID readings; in addition, no evidence of odors and/or staining were observed in the soil boring. In the absence of field evidence of impacts, one soil sample was collected between 0.5 to 1.0 feet bgs, directly beneath the concrete slab foundation breach of the Lot 30 Site Building. Soil sample SB-19 was analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-19

- Lead, at a concentration of 130 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 13 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg) and the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg); and
- Total mercury, at a concentration of 0.33 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg) and the Protection of Ecological Resources SCO (0.18 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 8 – Current/Former Residential Use**

*REC 8A – Current Residential Use – Geophysical Survey Results*

Property records obtained by Ransom during the June 2017 Phase I ESA activities indicated the usage of fuel oil on the Lot 26 portion of the Site. Geophysical survey activities were conducted on June 28, 2017, in the vicinity of the Lot 26 Residential Building, to evaluate for the potential presence of a fuel oil UST; however, no evidence of an UST or associated piping was identified associated with REC 8A.

*REC 8B – Former Residential Use – Geophysical Survey Results*

Historic records obtained by Ransom during the June 2017 Phase I ESA activities identified the presence of eight residential structures (not including the current Lot 26 Residential Building) at the Site prior to redevelopment activities in 1974 and 1980. Ransom conducted Site-wide geophysical survey activities between June 27 and June 29, 2017 to evaluate subsurface conditions for the presence of anomalies indicative of former structures, foundations, and/or previously unknown USTs. Geophysical survey activities did not identify subsurface anomalies related to the former residential use on-Site; however, several limitations were encountered during surveying activities, resulting in a partial survey of the Site (See section "Geophysical Investigation" Section above). Based on the geophysical findings and general Phase II results, Ransom believes that these limitations do not warrant further investigation; however, due to these geophysical survey limitations, further response actions may be warranted during Site redevelopment if subsurface structures are identified.

*REC 8A – Former Fuel Oil Use at Current Residential Building – Soil Sampling and Analytical Results*

One soil boring, SB-20, was advanced in the vicinity of a sealed fill pipe, identified during the June 2017 Phase I ESA activities on the eastern side of the Lot 26 Residential Building, to evaluate for potential impacts related to the known fuel oil use. Soil boring SB-20 was advanced to a total depth of 8 feet bgs. Field screening of the soil boring did not identify elevated PID readings; in addition, no odors and/or staining were observed in the soil boring. In the absence of field evidence of impacts, one sample was collected from the first six inches of native soils between approximately 0.0 to 0.5 feet bgs and analyzed for TCL/CP-51 VOCs and PAHs. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-20:

- Benzo(a)anthracene, at a concentration of 1.7 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), and the Protection of Groundwater SCO (1 mg/kg);
- Benzo(a)pyrene, at a concentration of 1.5 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), the Commercial Use SCO (1 mg/kg), and the Industrial Use SCO (1.1 mg/kg);
- Benzo(b)fluoranthene, at a concentration of 1.9 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), and the Protection of Groundwater SCO (1.7 mg/kg);

- Chrysene, at a concentration of 1.6 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), and the Protection of Groundwater SCO (1 mg/kg); and
- Indeno(1,2,3-cd)pyrene, at a concentration of 0.98 mg/kg, exceeded the Unrestricted Use SCO (0.5 mg/kg), the Residential Use SCO (0.5 mg/kg), and the Restricted Residential Use SCO (0.5 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 9 – Potential Fill**

*Soil Sampling and Analytical Results*

One soil boring, SB-21, was advanced to a maximum depth of 10 feet bgs to evaluate for potential fill material on the eastern boundary of the Lot 30 portion of the Site. Material indicative of historic fill (i.e., red brick) was identified at depths ranging from 0.5 to 3.0 feet bgs within soil borings SB-14, SB-21, SB-22, and SB-24 during the Phase II LSI activities. Field screening of the soil boring did not identify elevated PID readings. In addition, no evidence of odors and/or staining was observed in the boring. In the absence of field evidence of impacts, one soil sample was collected at the six-interval exhibiting evidence of fill material (i.e. red brick). Soil samples SB-14B, SB-21, SB-22, and SB-23 were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, TAL Metals, and/or TCL Pesticides for this REC. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-14B

- Total aroclor (specifically Aroclor-1260), at a concentration of 0.16 mg/kg, exceeded the Unrestricted Use SCO (0.1 mg/kg);
- Cadmium, at a concentration of 3.7 mg/kg, exceeded the Unrestricted Use SCO (2.5 mg/kg) and the Residential Use SCO (2.5 mg/kg);
- Total chromium, at a concentration of 36 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Copper, at a total concentration of 4,900 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg), the Residential Use SCO (270 mg/kg), the Restricted Residential Use SCO (270 mg/kg), the Commercial Use SCO (270 mg/kg), the Protection of Ecological Resources SCO (50 mg/kg), and the Protection of Groundwater Use SCO (450 mg/kg);
- Total mercury, at a concentration of 3 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81 mg/kg), the Commercial Use SCO (2.8 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater Use SCO (0.73 mg/kg); and
- Zinc, at a total concentration of 580 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources Use SCO (109 mg/kg).

Soil Sample SB-21

- Arsenic, at a concentration of 27 mg/kg, exceeded the Unrestricted Use SCO (13 mg/kg), the Residential Use SCO (16 mg/kg), the Restricted Residential Use SCO (16 mg/kg), the

Commercial Use SCO (16 mg/kg), the Industrial Use SCO (16 mg/kg), the Protection of Ecological Resources SCO (13 mg/kg), and the Protection of Groundwater SCO (16 mg/kg);
- Copper, at a concentration of 87 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 100 mg/kg, exceeded the Unrestricted use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 30 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 28 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81 mg/kg), the Commercial Use SCO (2.8 mg/kg), the Industrial Use SCO (5.7 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 110 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-22

- Lead, at a concentration of 280 mg/kg, exceeded the Unrestricted use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 29 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 0.54 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg) and the Protection of Ecological Resources SCO (0.18 mg/kg); and
- Zinc, at a concentration of 180 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-24

- Acetone[3], at a concentration of 0.25 mg/kg, exceeded the Unrestricted Use SCO (0.05 mg/kg) and the Protection of Groundwater SCO (0.05 mg/kg);
- Barium, at a concentration of 750 mg/kg, exceeded the Unrestricted Use SCO (350 mg/kg), the Residential Use SCO (350 mg/kg), the Restricted Residential Use SCO (400 mg/kg), the Commercial Use SCO (400 mg/kg), and the Protection of Ecological Resources SCO (433 mg/kg);
- Cadmium, at a concentration of 4.2 mg/kg, exceeded the Unrestricted Use SCO (2.5 mg/kg), and the Residential Use SCO (2.5 mg/kg). The concentration of 4.2 mg/kg was rounded to the number of significant digits (i.e., one) for the Protection of Ecological Resources SCO (4 mg/kg); therefore, the analytical result of 4.2 mg/kg was rounded to 4 mg/kg, which meets the Protection of Ecological Resources SCO;
- Total chromium, at a concentration of 45 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and for hexavalent chromium (1 mg/kg), the Residential Use

[3] It is known that acetone is a common laboratory or glassware contaminant. Since the acetone concentration was low and since there was only one exceedance of it, Ransom believes this concertation to be attributable to the lab.

SCO for trivalent chromium (36 mg/kg) and for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for trivalent chromium (41 mg/kg) and for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);

- Copper, at a concentration of 140 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 4,300 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg), the Residential Use SCO (400 mg/kg), the Restricted Residential Use SCO (400 mg/kg), Commercial Use SCO (1,000 mg/kg), the Industrial Use SCO (3,900 mg/kg) the Protection of Ecological Resources SCO (63 mg/kg), and the Protection of Groundwater SCO (450 mg/kg);
- Total mercury, at a concentration of 0.89 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg);
- Nickel, at a concentration of 36 mg/kg, exceeded the Unrestricted Use SCO (30 mg/kg) and the Protection of Ecological Resources SCO (30 mg/kg);
- Zinc, at a concentration of 1,500 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg);
- The pesticide p,p'-DDD, at a concentration of 0.028 mg/kg, exceeded the Unrestricted use SCO (0.0033 mg/kg) and the Protection of Ecological Resources SCO (0.0033 mg/kg); and
- The pesticide p,p'-DDE, with a concentration of 0.011 mg/kg, exceeded the Unrestricted use SCO (0.0033 mg/kg) and the Protection of Ecological Resources SCO (0.0033 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 10 – Potential Off-Site Sources**

*REC 10A – Off-Site Citgo Service Station // REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center // REC 10C – Former Riverdale Auto Service Inc. - Soil and Groundwater Sampling and Analytical Results*

Soil boring SB-22 was advanced along the southwestern Lot 30 Site boundary, along Culver Street, and soil boring SB-23 was advanced along the southwestern Lot 30 Site boundary, along Riverdale Avenue, to evaluate potential impacts associated with possible off-Site sources identified adjacent to the Site. Soil borings SB-22 and SB-23 were advanced to a total depth of 18.50 feet bgs and 19.75 feet bgs, respectively. Field screening of soil borings identified elevated PID readings within one soil boring, SB-23, ranging from 3.2 to 6.8 ppm at an approximate depth of 3.0 to 6.5 feet bgs. Soil sample SB-23 was collected at the interval exhibiting the highest PID readings, between 3.5 to 4.0 feet bgs. In the absence of field evidence of impacts within soil boring SB-22, no soil sample was collected. Soil sample SB-23 was analyzed for TCL/CP-51 VOCs, PAHs, and TAL Metals. Analytical results of soil sample SB-23 were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

Soil borings SB-22 and SB-23 were converted to temporary well points (TWP-2 and TWP-1, respectively) to evaluate potential impacts associated with possible off-Site sources identified adjacent to the Site. Temporary well point TWP-1 was installed within soil boring SB-23, which was further

advanced to a total depth of 19.75 feet bgs, and temporary well point TWP-2 was installed within soil boring SB-22, which was further advanced to a total depth of 18.50 feet bgs. Temporary well point TWP-1 was gauged and sampled on June 29, 2017, at which time depth to water was measured at approximately 8.0 feet bgs, while TWP-2 was gauged and sampled on June 28, 2017, at which time depth to water was measured at approximately 8.0 feet bgs. Temporary well point groundwater samples were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, and lead. Groundwater sampling analytical results identified the following exceedances of the AWQS:

Groundwater Sample TWP-1

- 1,2,4-Trimethylbenzene, at a concentration of 2,500 micrograms per liter (µg/L), exceeded the AWQS (5 µg/L);
- 1,3,5-Trimethylbenzene, at a concentration of 890 µg/L, exceeded the AWQS (5 µg/L).
- Acetone, at a concentration of 140 µg/L, exceeded the AWQS (50 µg/L);
- Benzene, at a concentration of 94 µg/L, exceeded the AWQS (1 µg/L);
- Ethylbenzene, at a concentration of 1,700 µg/L, exceeded the AWQS (5 µg/L);
- Isopropyl-benzene, at a concentration of 250 µg/L, exceeded the AWQS (5 µg/L);
- m&p-Xylenes, at a concentration of 4,600 µg/L, exceeded the AWQS (5 µg/L);
- n-Butylbenzene, at a concentration of 30 µg/L, exceeded the AWQS (5 µg/L);
- n-Propylbenzene, at a concentration of 560 µg/L, exceeded the AWQS (5 µg/L);
- o-Xylene, at a concentration of 410 µg/L, exceeded the AWQS (5 µg/L);
- sec-Butylbenzene, at a concentration of 25 µg/L, exceeded the AWQS (5 µg/L);
- Toluene, at a concentration of 150 µg/L, exceeded the AWQS (5 µg/L);
- Xylenes (total), at a concentration of 5,000 µg/L, exceeded the AWQS (5 µg/L);
- 2,4-Dimethylphenol, at a concentration of 10 µg/L, exceeded the AWQS (1 µg/L);
- Naphthalene, at a concentration of 160 µg/L, exceeded the AWQS (10 µg/L); and
- Lead (unfiltered), at a concentration of 27 µg/L, exceeded the AWQS (25 µg/L).

Groundwater Sample TWP-2

- 1,2,4-Trimethylbenzene, at a concentration of 740, exceeded the AWQS (5 µg/L);
- 1,3,5-Trimethylbenzene, at a concentration of 87 µg/L, exceeded the AWQS (5 µg/L);
- Acetone, at a concentration of 63 µg/L, exceeded the AWQS (50 µg/L);
- Benzene, at a concentration of 560 µg/L, exceeded the AWQS (1 µg/L);
- Ethylbenzene, at a concentration of 660 µg/L, exceeded the AWQS (5 µg/L);
- Isopropyl-benzene, at a concentration of 100 µg/L, exceeded the AWQS (5 µg/L);
- m&p-xylenes, at a concentration of 960 µg/L, exceeded the AWQS (5 µg/L);
- Methyl-t-butyl ether (MTBE), at a concentration of 140 µg/L, exceeded the AWQS (10 µg/L);
- n-Propylbenzene, at a concentration of 200 µg/L, exceeded the AWQS (5 µg/L);
- o-Xylene, at a concentration of 130 µg/L, exceeded the AWQS (5 µg/L);
- sec-Butylbenzene, at a concentration of 11 µg/L, exceeded the AWQS (5 µg/L);
- Toluene, at a concentration of 67 µg/L, exceeded the AWQS (5 µg/L);
- Xylenes (total), at a concentration of 1,100, exceeded the AWQS (5 µg/L);
- 2,4-Dimethylphenol, at a concentration of 3.7 µg/L, exceeded the AWQS (1 µg/L);
- Naphthalene, at a concentration of 87 µg/L, exceeded the AWQS (10 µg/L);
- Phenol, at a concentration of 4.6 µg/L, exceeded the AWQS (1 µg/L); and
- Lead (unfiltered), at a concentration of 33 µg/L, exceeded the AWQS (25 µg/L).

Additionally, due to the high concentrations of VOC and SVOC concentrations within groundwater samples TWP-1 and TWP-2, the laboratory RLs for several remaining analyzed constituents of concern exceeded the NYSDEC AWQS; please refer to Table 1 for a review of RL exceedances. All other analyzed constituents were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC AWQS.

**Preliminary Waste Characterization**

One composite soil sample, SB-24C, was collected from soil boring SB-24 for preliminary waste classification purposes. Soil sample SB-24 was a five-point composite sample collected at varying intervals between approximately 0.5 to 10.0 feet bgs. Field screening of the soils within soil boring SB-24 did not identify elevated PID readings; however fill material, including brick and coarse gravel, was encountered at a depth ranging from 0.5 and 4.0 feet bgs. In addition, no evidence of odors and/or staining were observed within the boring. Soil sample SB-24C was analyzed for VOCs+15, SVOCs+15, PCBs, TCL Pesticides, TAL Metals, and Cyanide. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-24C

- Lead, at a concentration of 290 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 26 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 1.4 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 200 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**SUMMARY AND RECOMMENDATIONS**

Summary

Ransom performed a Phase II LSI at the Site to assess soil and groundwater quality relative to the RECs identified during Ransom's Phase I ESA. Soil samples were collected from around the Site to evaluate the potential environmental impacts to the Site from the identified RECs. Groundwater samples were collected from two temporary well points installed at upgradient locations on Site to evaluate the potential environmental impacts to the Site from potential off-Site sources of contamination.

**REC 1 – Automotive Repair Drainage System**

Soil sampling analysis identified metals concentrations, including barium, total chromium, copper, lead, total mercury, and zinc, that exceeded the NYSDEC's most stringent SCOs, including the Unrestricted Use SCO, the Protection of Groundwater Use SCO, the Residential Use SCO, and/or the Restricted

Residential Use SCO within soil borings collected in the vicinity of the former grease and sand interceptor, former hydraulic lift floor drains, and service garage sealed floor drains. Ransom's review of the data shows that the identified metals concentrations are comparable to the soil sampling results associated with the identified historic fill impacts on-Site (REC 9); therefore, it is more likely that fill materials below the building are the source of the metals concentrations. Further, although the identified concentrations exceed various SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release of metals was identified and the concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time, provided the Site remains in Commercial Use.

However, soil displaced during construction activities potentially containing elevated metals concentrations, and which will be disposed off-site, will require proper waste characterization testing and disposal at an appropriately licensed receiving facility.

**REC 2 – Automotive Repair Hydraulic Lift Systems and REC 11 – Vehicle Painting Operations**

*REC 2A – Hydraulic Lifts and Alignment Rack // REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack, and Underground Hydraulic Oil Reservoirs*

Field screening and subsequent soil analytical results did not exceed the most stringent NYSDEC SCOs; therefore, Ransom concludes that potential environmental concerns originating from the current or former hydraulic lift system have not significantly impacted the subsurface soils at the Site. Based on the soil sampling analytical results completed as part of the subsurface investigation to evaluate potential impacts, Ransom concludes that gross impacts in connection with the lifts are not present. However, it is possible that limited/residual impacts to the soil beneath and immediately surrounding the lifts are possible. Prior to, or concurrent with, Site redevelopment activities, Ransom recommends the proper decommissioning and removal of the hydraulic lifts. Since impacts were not identified, further investigation is not recommended at this time; however, if impacts are identified during Site reconstruction activities, further investigation and/or response actions may be warranted.

*REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes*

Soil sampling analysis identified concentrations of PAHs (specifically benzo[a]pyrene, benzo[b]fluoranthene, and indeno[1,2,3-cd]pyrene) that exceeded the NYSDEC Unrestricted Use SCO, Residential Use SCO, the Restricted Residential Use SCO, and/or the Industrial Use SCO within one soil sample (SB-9A), collected at the presumed invert of the wall-mounted hydraulic fluid reservoir piping associated with the hydraulic lift system within Bay 4 of the Lot 30 Site Building. These identified impacts are presumed to either be related to the current hydraulic fluid reservoir piping leading to the lift system or the historical fill across the Site. Based on these findings, Ransom concludes that further investigation of the identified PAH (i.e., benzo[a]pyrene) that exceeded the Industrial Use SCO is warranted. Prior to, or concurrent with, Site redevelopment activities, Ransom recommends a background investigation and/or delineation event to determine the source, followed by remediation of the identified benzo(a)pyrene impact, if applicable. Ransom recommends that the NYSDEC be notified of the discharge, in accordance with State law, if soil is determined to have been impacted by a petroleum discharge. If related to a petroleum release, Ransom recommends that soils identified above the Industrial Use SCO be excavated, documented and disposed off-site, at an appropriately licensed receiving facility. If related to the historic fil materials, Ransom recommends proper soil management during construction activities (see recommendations below).

*REC 2D – Hydraulic Lift Control Boxes*

Soil analysis identified concentrations of PCBs, specifically aroclor 1260, and metals that exceeded the Unrestricted Use SCO at one soil sample (SB-14B) in the vicinity of the western-most hydraulic lift control box located within the Lot 30 Site Building. Ransom concludes that the identified concentrations of PCBs are most likely attributable to the hydraulic lift control box utilized during automotive repair/hydraulic lift operations; however, the metals impacts (i.e., copper and total mercury) are presumably related to the observed historic fill. Although the soil analytical results did not exceed the standards for the current and proposed land use (Commercial), Ransom recommends additional investigation due to the identified impacts within the proposed detention basin area. Specifically, Ransom recommends that if displaced during Site redevelopment activities, any displaced PCB impacts in soil be disposed of off-Site at an appropriately licensed receiving facility. Ransom also recommends the proper disposal of the three-identified hydraulic lift control box units in accordance with local, state, and federal regulations.

*REC 2E – Former Air Compressors and REC 11 – Vehicle Painting Operations*

Analytical sampling results identified concentrations of metals (specifically lead, total mercury, and zinc) that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO, and total chromium that exceeded the Unrestricted Use SCO for trivalent chromium and hexavalent chromium, the Residential Use SCO for hexavalent chromium, the Protection of Ecological Resources SCO for hexavalent chromium, and the Protection of Groundwater SCO for hexavalent chromium. Ransom's review of the data shows that the identified metals concentrations are comparable to the soil sampling results associated with the identified historic fill impacts on-Site (REC 9); therefore, it is more likely that fill materials below the building are the source of the metals concentrations. Further, although the identified metals concentrations exceed several NYSDEC SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release related to elevated metals concentrations was identified and concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time provided the Site remains in Commercial use.

However, soil displaced during construction activities potentially containing elevated metals concentrations, and which will be disposed off-site, will require proper waste characterization testing and disposal at an appropriately licensed receiving facility.

**REC 3 – Vehicle Storage Operations**

Ransom did not identify areas of significant staining and/or evidence of impact associated with the vehicle storage operations; therefore, soil sampling was not completed at REC 3. Based on the lack of evidence of impact, Ransom does not recommend further investigation into the vehicle storage operations on-Site.

**REC 4 – Inactive Oil-Fired Burner**

Ransom was unable to complete subsurface soil investigation activities in the vicinity of the in-active oil-fired burner during the Phases II LSI activities due to the presence of underground utilities in this area. Although visual inspection of the surface conditions in the vicinity of the inactive oil-fired burner did not

identify breaches within the concrete slab, a significant layer of dust/potential waste ash was noted. Due to the likely presence of waste ash, which may contain heavy metals, Ransom recommends the proper removal and disposal of the inactive oil-fired burner in accordance with local, state, and federal regulations and cleaning of the dust/waste ash. Due to the inability to obtain analytical data and/or observe breaches to the floor slab beneath the inactive oil-fired burner, Ransom recommends the visual inspection of the floor slab after the slab is cleaned off and proper removal and disposal of the inactive oil-fired burner is completed. If a potential pathway to subsurface soils is identified, further investigation and/or action may be required.

**REC 5 – Former 3,000-gallon Fuel Oil UST**

Geophysical survey activities conducted on June 28, 2017 identified one subsurface metallic anomaly indicative of an UST in the presumed location of the former 3,000-gallon fuel oil UST, located on the northeast side of the Lot 30 Site Building, and appurtenant vent and product piping.

Subsequent soil sampling analysis did not identify concentrations of contaminants associated with fuel oil operations that exceeded the NYSDEC's most stringent SCOs. Based on the geophysical survey results and soil sampling analytical results completed as part of the subsurface investigation to evaluate potential impacts, Ransom concludes that gross impacts in connection with the UST are not present. However, it is possible that limited/residual impacts to the soil beneath and immediately surrounding the UST are possible. Prior to or concurrent with redevelopment, since the UST is within the footprint of the proposed CVS Pharmacy/Store, it should be properly removed and the immediately surrounding soil be assessed for evidence of a release (see Recommendations below).

**REC 6 – Former 550-gallon Waste Oil UST**

Geophysical survey activities conducted on June 28, 2017 did not identify a subsurface anomaly indicative of an UST in the presumed location of the former 550-gallon waste oil UST, located on the southeast exterior corner of the Lot 30 Site Building. Soil sampling analysis of soils collected at the presumed invert of the former 550-gallon waste oil UST identified concentrations of total chromium that exceeded the Unrestricted Use SCO for trivalent chromium and hexavalent chromium, the Residential Use SCO for hexavalent chromium, the Protection of Ecological Resources SCO for hexavalent chromium, and the Protection of Groundwater SCO for hexavalent chromium, and manganese that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO. Ransom's review of the data shows that the identified metals concentrations are not common constituents of concern for waste oil; therefore, it is more likely that fill materials used to backfill the UST grave are the source of these metals concentrations. Although the identified concentrations exceed various SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release of metals was identified and the concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time provided the Site remains in Commercial use.

**REC 7 – 55-gallon Waste Oil Drum Storage**

Soil sampling analysis of subsurface soils collected beneath the former 55-gallon waste oil drum storage area identified metals concentrations (specifically lead and total mercury) that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO, and total chromium that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO for hexavalent chromium.

Ransom's review of the analytical data shows that the identified metals concentrations are comparable to the soil sampling results associated with the identified historic fill impacts on-Site (REC 9); therefore, it is more likely that fill materials below the building are the source of the metals concentrations and not the storage of 55-gallon waste oil drums. Although the identified concentrations exceed various SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release of metals was identified and the concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time, provided the Site remains in Commercial Use.

**REC 8A – Known Fuel Oil Use at Residential Building**

Geophysical survey activities were conducted on June 28, 2017 on the Lot 30 portion of the Site; however, no evidence of an UST was identified. Soil analytical results identified concentrations of PAHs that exceeded the Unrestricted Use SCO, the Residential Use SCO, the Restricted Residential Use SCO, the Commercial Use SCO, and the Industrial Use SCO in the vicinity of the sealed fill pipe, presumably related to former fuel oil usage or possibly historic fill. Based on these findings, Ransom recommends further investigation with regard to the identified impacts. If related to a petroleum release, Ransom recommends the delineation and subsequent excavation/disposal of soils with concentrations that exceed the Commercial Use and Industrial Use SCO. If related to the historic fil materials, Ransom recommends proper soil management during construction activities (see recommendations below).

**REC 8B – Former Residential Use**

Between June 27, 2017 and June 29, 2017, Ransom conducted Site-wide geophysical survey activities to evaluate subsurface conditions for the presence of anomalies indicative of former structures, foundations, and/or previously unknown USTs. Geophysical survey results did not identify evidence of previously unknown USTs or septic systems at the Site; however, due to the limited nature of the geophysical survey, Ransom recognizes that they may be discovered during Site redevelopment activities. Therefore, Ransom recommends that in the case an underground heating oil tank and/or septic system is identified, they should be properly removed and disposed of in accordance with applicable local, state, and federal regulations. Ransom should be contacted immediately if evidence of impacts is identified in connection with a previously unidentified subsurface UST or septic system.

**REC 9 – Potential Fill**

During the course of the subsurface soil investigation activities, material indicative of historic fill, particularly the presence of red brick, was identified at depths ranging from 0.5 to 3.0 feet bgs within soil borings SB-14, SB-21, SB-22, and SB-24. Analysis of the soils in the vicinity of the historic fill identified concentrations of VOCs, metals, and pesticides that exceeded the most stringent NYSDEC SCOs, including four metals (arsenic, barium, copper, and lead) that exceeded the Commercial Use SCOs and/or the Industrial Use SCOs. Based on these findings, Ransom recommends further response actions with regards to the identified historic fill on-Site (i.e., engineering controls and a long-term Soil Management Plan for implementation during future subsurface work at the Site). Ransom understands that exceedances of the Commercial Use SCOs and/or the Industrial Use SCOs related to historic fill exist within the proposed building footprint and proposed detention basin area. Ransom notes that the fill material can be reused on-Site provided that it is being reused within other areas containing the identified historic fill. If off-site disposal is required, Ransom recommends that the fill material be characterized

and disposed of in accordance with applicable local, state, and federal regulations as well as accepting facility policies.

**REC 10 – Potential Off-Site Sources**

Groundwater sampling analytical results identified concentrations of VOCs, SVOCs, and lead that exceeded the NYSDEC AWQS for groundwater collected from temporary well points TWP-1 and TWP-2. Elevated concentrations indicative of gasoline impacts were identified within groundwater from both temporary well points. Based on these findings, Ransom concludes that off-Site sources of contamination have impacted/are impacting the groundwater conditions on-Site.

New York State does not have Vapor Intrusion (VI) groundwater screening levels developed for groundwater to evaluate for potential vapor concerns within structures. In the absence of these screening levels, Ransom compared the groundwater results to the New Jersey Department of Environmental Protection (NJDEP) VI Groundwater Screening Levels (GWSL) for those compounds that exceeded the NYSDEC AWQS in an effort to evaluate potential vapor intrusion into the proposed CVS building. The results of the comparison identified several compounds with concentrations identified in groundwater from TWP-1 and TWP-2 that exceeded the applicable NJDEP VI GWSLs. The locations of these two temporary well points are proximate to the proposed CVS building and represent a potential vapor intrusion concern. Ransom recommends the installation of a passive sub-slab mitigation system concurrent with future Site redevelopment activities.

However, groundwater displaced during construction activities, potentially containing elevated VOCs, SVOCs, and lead concentrations, will require proper management (e.g. treatment and discharge permit, or containment and disposal at an appropriately licensed receiving facility).

**Preliminary Waste Characterization**

Soil sampling analysis identified metals concentrations, including total chromium, lead, total mercury, and zinc, that exceeded the NYSDEC's most stringent SCOs, including the Unrestricted Use SCO, the Protection of Ecological Resources SCO, the Protection of Groundwater Use SCO, the Residential Use SCO, and/or the Restricted Residential Use SCO within the composite soil sample collected within the footprint of the proposed detention basin. Ransom's review of the data shows that the identified metals concentrations are likely associated with the identified historic fill impacts on-Site (REC 9), see above. For soil management purposes, any soil displaced during construction activities potentially containing elevated metals concentrations, and which will be disposed off-site, will require proper waste characterization testing and disposal at an appropriately licensed receiving facility.

<u>Recommendations</u>

Based on the findings and conclusions presented above, Ransom makes the following recommendations:

- Based on the investigative results, Ransom does not recommend further investigation of REC 1, REC 2C, REC 2E, REC 3, REC 5, REC 6 or REC 11.
- Ransom recommends the proper removal and disposal of the three-identified hydraulic lift control box units, hydraulically operated lifts, and associated hydraulic oil containment

systems within the Lot 30 Site Building according to local, state and federal regulations prior to or concurrent with Site redevelopment activities.

- Due to the identified PCB impacts within the proposed detention basin (REC 2D), Ransom recommends that, if displaced during Site redevelopment activities, any displaced PCB impacts in soil be disposed of off-Site, at an appropriately licensed receiving facility.
- Due to the likely presence of waste ash, which may contain heavy metals, Ransom recommends the proper removal and disposal of the inactive oil-fired burner (REC 4) in accordance with local, state, and federal regulations.
- Ransom recommends the visual inspection of the floor slab in the vicinity of the inactive oil-fired burner (REC 4) after cleaning and removal of the burner to evaluate potential impacts in this area.
- Ransom recommends that the suspect UST (REC 5) identified during the June 28, 2017 geophysical survey activities be properly removed and disposed off-site prior to, or concurrent with, redevelopment activities in accordance with applicable federal, state and local regulations. Although soil samples surrounding the UST did not exhibit impacts, the area beneath the UST could not be sampled due to the presence of the UST itself. If soils are observed as being impacted and/or soil analytical results indicate a release to Site soils, appropriate remedial action(s) should be taken, including but not limited to, notification to the NYSDEC, soil excavation, post-remediation soil sampling, groundwater investigation, and required reporting activities. If impacts above the NYSDEC's SCOs are further identified, further remedial action (e.g., soil removal, disposal, reporting, etc.) may be warranted.
- The 55-gallon drums (REC 7) present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.
- Soil analytical results identified elevated concentrations of PAHs in the vicinity of a sealed fill pipe on the eastern exterior of the Lot 26 Site Building (REC 8A) and the wall-mounted hydraulic fluid reservoir piping associated with the hydraulic lift system within Bay 4 of the Lot 30 Site Building (REC 2B). Ransom recommends further investigation of REC 2B and REC 8A prior to notification to the NYSDEC for these identified impacts in an effort to determine if they are related to a petroleum discharge, or historic fill. If determined to be the result of a petroleum discharge, Ransom recommends the delineation, excavation and disposal of soils with concentrations that exceed the Commercial Use and/or Industrial Use SCOs prior to or concurrent with the Site redevelopment activities that were identified in conjunction with the known fuel oil use at the Lot 26 Site Building (REC 8A) and hydraulic oil at the Lot 30 Site Building (REC 2B). However, if related to historic fill, Ransom recommends proper soil management activities. Specifically, if displaced during construction, reuse on-Site at other historic fill areas is appropriate, as historic fill was observed across the Site from grade to at least three feet below grade; however, if the material is geotechnically unsuitable or it is determined to be excess, the impacted soils should be properly characterized and disposed of at an appropriately licensed facility.
- It is Ransom's opinion that the identified metals exceedances of the Commercial Use SCOs and/or the Industrial Use SCOs (i.e., arsenic, barium, copper, and lead) are related to historic fill materials. Based on these findings and since fill materials were identified across the Site,

Ransom recommends further response actions. Although not necessarily a reportable condition to the NYSDEC, Ransom recommends implementing engineering controls and a long-term Soil Management Plan, where the engineering controls will include construction of the proposed Site building, parking lot/drives and other construction features that will serve as a cap for the contaminated fill (i.e., asphalt paving, landscaping, concrete sidewalk, and building slab). The contaminated fill may remain on-Site or be reused on-Site provided that they are geotechnically suitable and the engineering controls are carried out.

- Ransom recommends that fill material displaced during Site redevelopment activities, which cannot be reused on-Site, be properly tested and managed for off-site beneficial reuse and/or tested for waste characterization parameters and disposed of in accordance with applicable local, state, and federal regulations, as well as accepting facility policies.

- It is Ransom's opinion that the identified VOCs, SVOCs, and lead impacts in groundwater (REC 10) are likely a result of off-Site sources of contamination, and likely not attributable to current and/or former on-Site automotive service operations. Groundwater was encountered during Phase II LSI activities at approximately 8 feet bgs. Based on the identified groundwater impacts, Ransom recommends the implementation of a Groundwater Management Plan (GMP) in the event that Site redevelopment activities extend beyond approximately 7 feet bgs.

- Based on the identified VOC groundwater impacts, likely attributable to off-Site groundwater impacts (REC 10), Ransom recommends the installation of a passive sub-slab vapor mitigation system concurrent with future Site redevelopment activities.

- Due to the identified PAHs and metals on-Site, Ransom recommends that a Soil Management Plan (SMP) be developed to properly manage soils displaced during remediation activities, demolition, and/or Site redevelopment activities that will be exported from the Site.

- Although no indication of a septic system(s) or other suspect UST(s) was identified, they may be discovered during Site redevelopment due to the geophysical survey limitations. Therefore, Ransom recommends that, in the case an underground tank and/or a septic tank is identified, they should be properly removed and disposed of in accordance with applicable federal, state and local regulations.

- Based on the identified exceedances of the Unrestricted and Residential Use SCOs, soils planned for export will require additional waste characterization testing, depending on the requirements of the receiving site or facility. The limited nature of our Phase II LSI, and the associated analytical testing, does not authorize exported soils being used for unrestricted reuse; therefore, exported soils are not considered to be certified clean fill material at this time.

- All on-Site drainage structures, including septic system components and storm water drainage structures (catch basins, dry wells, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned in accordance with applicable regulations.

If you have any questions regarding this letter report, please do not hesitate to call.

Sincerely,
RANSOM CONSULTING, INC.

| **Additional Analysis** | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Cyanide | - | - | - | - | - | - | - | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | |

**Notes:**

Q = Data Qualifier
U = Not Detected
NA = Not Analyzed
J = Estimated Value
RL = Reporting Limit
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

| **Additional Analysis** | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Cyanide | - | - | - | - | - | - | - | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | |

**Notes:**

Q = Data Qualifier
J = Estimated Value
U = Not Detected
RL = Reporting Limit
NA = Not Analyzed
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

**Notes:**

Q = Data Qualifier
U = Not Detected
NA = Not Analyzed
J = Estimated Value
RL = Reporting Limit
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

**Notes:**

Q = Data Qualifier
U = Not Detected
NA = Not Analyzed
J = Estimated Value
RL = Reporting Limit
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

**Notes:**

Q = Data Qualifier
U = Not Detected
NA = Not Analyzed
All concentrations are in micrograms per liter (µg/L)
**140** = concentration exceeds NYSDEC Ambient Water Quality Standards (AWQS)
**10** = reporting limit exceeds most stringent NYSDEC Ambient Water Quality Standards
J = Estimated Value
RL = Reporting Limit

## Legend & Notes

- Parcel Boundary
- Overhead Garage Door
- Stormwater Catch Basin
- Stormwater Line
- Hydraulic Oil Line
- Active Floor Drain
- Former Floor Drain
- Sealed Floor Drain
- Air Filter
- Hydraulic Lift Control Box
- Hydraulic Fluid Reservoir
- Compressor
- 55-Gallon Waste Oil Storage Drum
- Former 55-Gallon Waste Oil Drum Storage Area
- Hydraulic Lift (Single Post)
- Hydraulic Lift (Double Post)
- Geophysical Metallic Anomaly
- Former Residential Structure
- Proposed CVS Pharmacy Store
- Proposed CVS Pharmacy Site Features

## Scale and Orientation

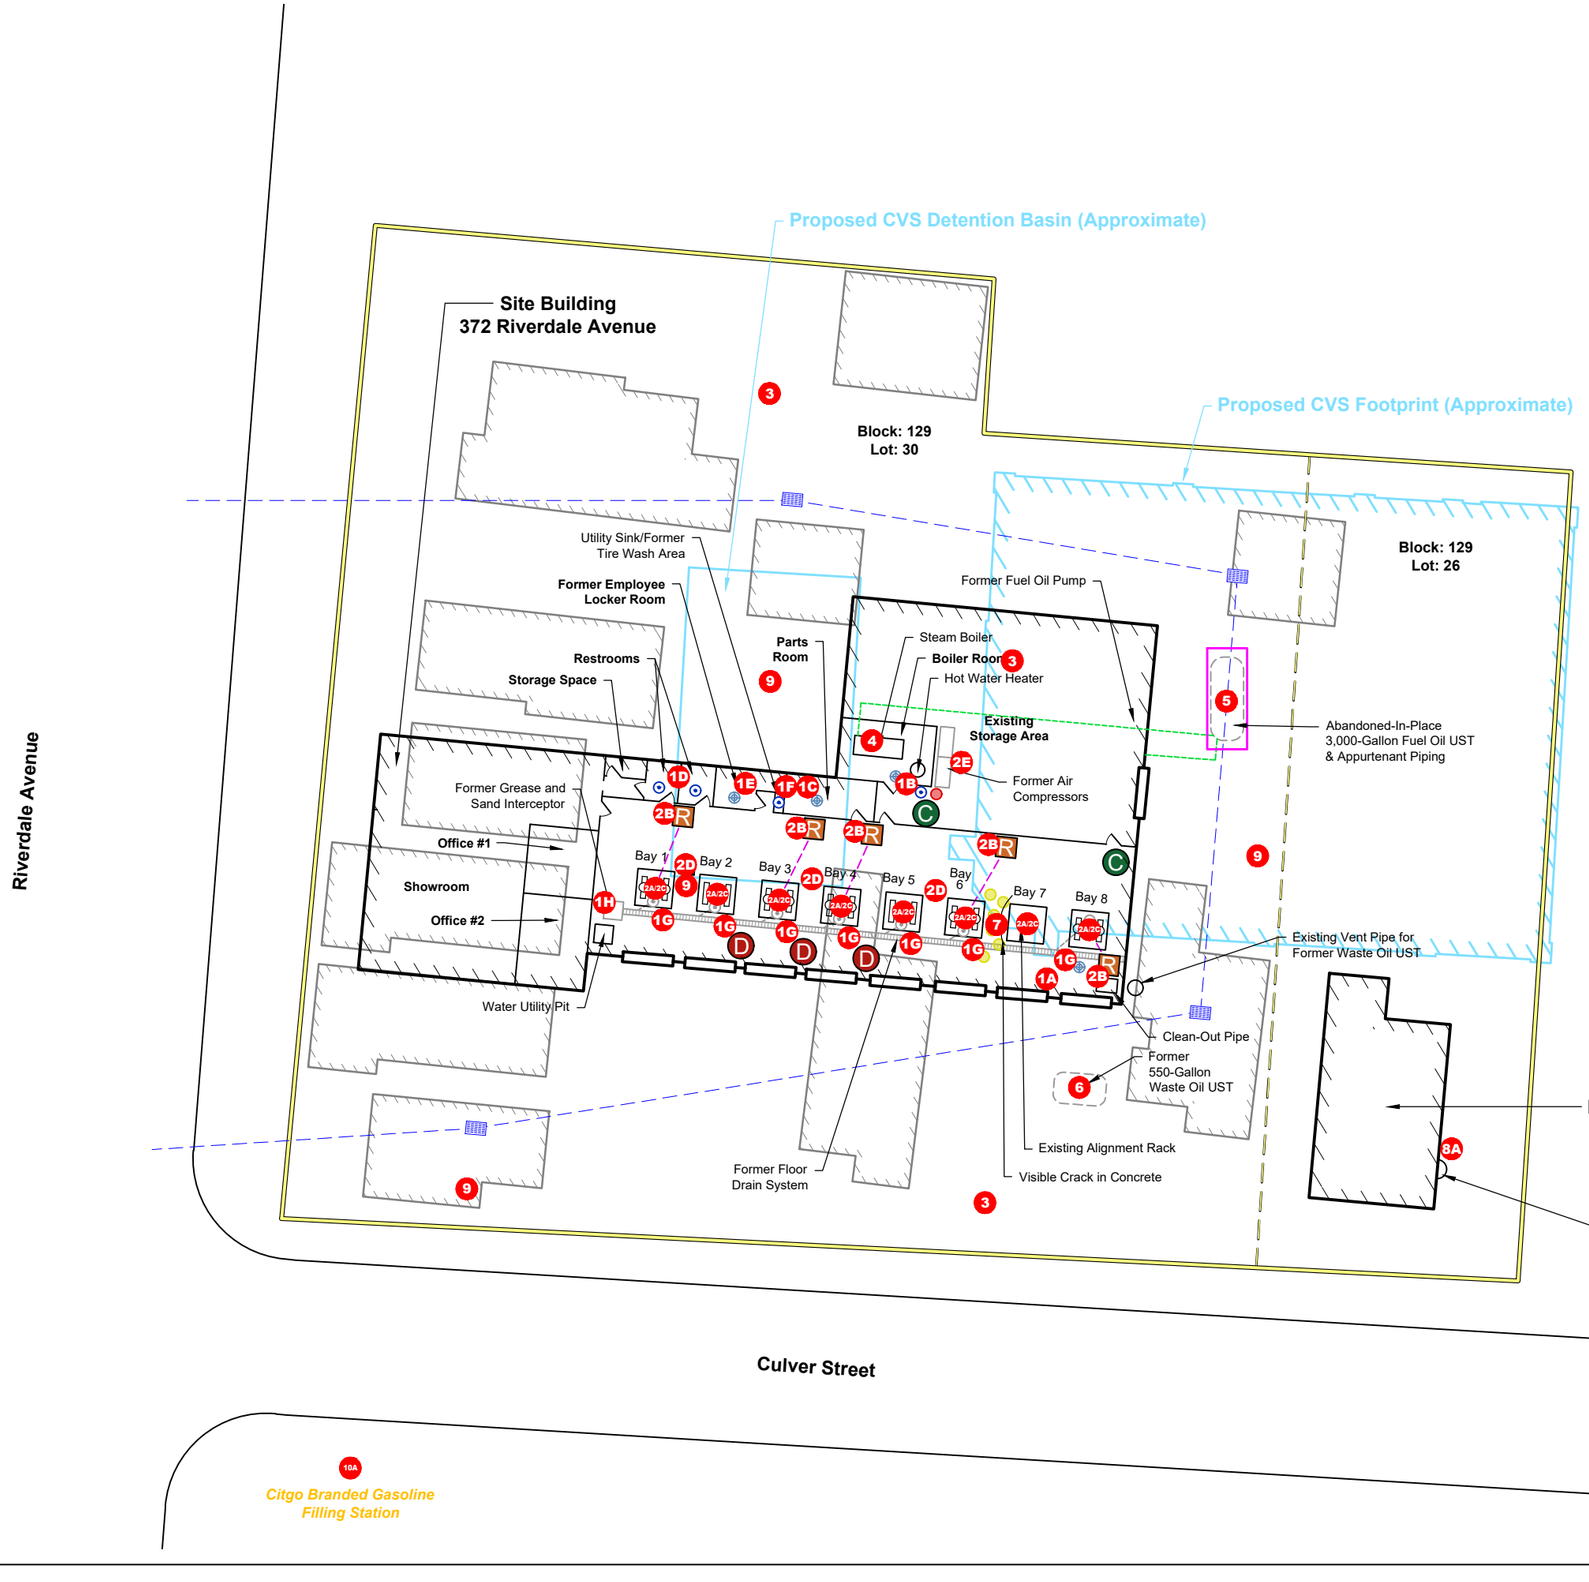
Figure 2

Site Plan

File: CVS_YONKERS_NY_REPORT.dwg Date: 07/20/2017



***REC 1 – Automotive Repair Drainage Systems***

- 1A Service Garage Sealed Floor Drain
- 1B Boiler Room Sealed Floor Drain
- 1C Parts Room Sealed Floor Drain
- 1D Bathroom Floor Drains
- 1E Employee Locker Room Sealed Floor Drain
- 1F Tire Wash Area Floor Drain
- 1G Former Hydraulic Lift Floor Drains
- 1H Former Grease and Sand Interceptor

***REC 2 – Automotive Repair Hydraulic Lift Systems***

- 2A Hydraulic Lifts and Alignment Rack
- 2B Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes
- 2C Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs
- 2D Hydraulic Lift Control Boxes
- 2E Former Air Compressors
- 3 Vehicle Storage
- 4 Inactive Oil-Fired Boiler System
- 5 Former 3,000-gallon Fuel Oil UST
- 6 Former 550-gallon Waste Oil UST
- 7 55-Gallon Waste Oil Drum Storage

***REC 8 – Current/Former Residential Use***

- 8A Known Fuel Oil Use at Residential Building
- 8B Former Residential Use. (Not Depicted on Map)
- 9 Observed Historic Fill

***REC 10 – Potential Off-Site Sources***

- 10A Off-Site Citgo Service Station
- 10B Off-Site Devonshire Discount Tire, Auto Body & Repair Center (Not Depicted on Map)
- 10C Former Riverdale Auto Service Inc. (Not Depicted on Map)

Yonkers, New York

Dear Ms. Skibo:

Advanced Geological Services (AGS) presents this letter to Ransom Consulting, Inc. (Ransom) summarizing the geophysical investigation completed by AGS on June 27 through 29, 2017 at the properties located at 372 Riverdale Avenue and 13 Culver Street in Yonkers, New York.

At the time of the investigation the property at 372 Riverdale Avenue was being actively used by an automobile repair business. Parked cars were tightly parked throughout large portions of the property. Also, the 13 Culver Street property was being used for parking and staging of several Taco Trucks, thereby limiting access of the entire site.

The objectives of the geophysical investigation were to utilize geophysical methods to:

1) Identify potential underground storage tanks (USTs), buried structures, areas of fill, and other potential features of environmental concern at the subject property.

2) Clear numerous proposed drilling location of identifiable utilities or potential drilling hazards.

3) Attempt to video image a floor drain system on the southern side of the 372 Riverdale building where the automobile repair lifts exist.

To achieve the project objectives, AGS utilized a combination of the terrain conductivity electromagnetic (EM) method, the ground penetrating radar (GPR) method, the radio frequency utility locating method, the hand-held (EM) metal detection method, and a pipe video imaging system.

## ***Methods***

### *Terrain Conductivity Electromagnetic (EM) Method*

Terrain conductivity EM data were collected across accessible portions of the geophysical investigation area to identify anomalous features that could indicate the presence of USTs, buried structures such as foundations or building slabs, or other anomalous subsurface features. The EM method uses the principle of electromagnetic induction to measure the variability of terrain conductivity of subsurface materials. The terrain conductivity EM method is capable of detecting variations in soil conductivity that can be caused by changes in soil

composition, soil compaction, or moisture content that are often associated with previously excavated or disturbed soils. The EM method also reacts very strongly to the presence of buried metal objects such as USTs, pipelines, or buried drums, as well a metallic features on the ground surface, such as parked cars, or building structures.

A Geonics EM31 terrain conductivity EM instrument was used to collect EM data in accessible portions of the 372 Riverdale Avenue property. The EM31 operates in accordance with the theory of operation at low induction numbers. An alternating current is passed through the transmitter coil to induce eddy currents into the ground. These eddy currents generate a secondary magnetic field. A component of the induced magnetic field is detected by a receiver coil and measured by the instrument. The receiver measures the field strength of both the quadrature and the in-phase components. The quadrature response is displayed as terrain conductivity in units of milliSeimens per meter (mS/m). The in-phase response is displayed in units of parts per thousand (ppt) of the transmitted signal. The estimated maximum depth of investigation of the EM31 instrument is up to approximately 18 feet below the ground surface.

Terrain conductivity EM data were collected along parallel traverses spaced 5 feet apart. Two EM measurements were recorded every second to provide a reading approximately every 1.5 feet along each traverse. The geographical coordinates of each reading was determined using a Trimble XH-3000 global positioning system (GPS) capable of sub-meter accuracy and was recorded along with the EM reading. Real-time navigation was also achieved using the GPS instrument.

Data were reviewed during data collection to identify potential targets of interest that would require additional investigation and characterization using GPR methods. Locations of anomalous features identified in the field were marked on site with spray paint. The EM data were downloaded upon return to the AGS office, contoured, and provided final review to identify any subtle features that may not have been recognized in the field.

*Ground Penetrating Radar (GPR) Method*

The ground penetrating radar (GPR) method was used to further characterize anomalies identified in the EM results, to search for USTs and other targets of interest, as well as to clear the area surrounding proposed drilling locations of buried utilities.

The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of the down-going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR response. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are

then converted to depth using known soil velocity functions.

A GSSI SIR-3000 GPR system and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide depth of penetration of up to approximately 10 feet under ideal field conditions. High conductivity soil, some conductive ballast gravels, and de-icing salt can strongly attenuate GPR signals, thereby decreasing the effective depth of investigation of the GPR system.

GPR data were collected select portions of the site to further characterize EM anomalies and to search for features of potential environmental concern. GPR traverses were also collected in an approximate grid pattern surrounding each proposed drilling location to identify potential utilities. Locations of identified features were marked on the ground surface with spray paint.

*Hand-Held Electromagnetic (EM) Metal Detection Method*

The hand-held EM metal detection method was used to search for metallic utilities, and other buried metal objects in the areas surrounding proposed drilling locations that could pose a drilling hazard. This instrument was also used to scan areas that could not be accessed with the larger EM31 instrument. Areas scanned included the 13 Culver Street property and several accessible portions of the 372 Riverdale Avenue property.

This EM method uses the principle of electromagnetic induction to detect shallow buried metal objects. This is done by carrying a unit consisting of hand-held radio frequency transmitter and receiver above the ground and continuously scanning the surface. A primary coil broadcasts a radio frequency signal from a transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents in turn produce a magnetic field which is detected by the receiver.

The EM instrument used for this investigation was a Fisher TW-6 pipe and cable locator. This instrument is expressly designed to detect metallic pipes, cables, USTs, manhole covers, and other buried metallic objects. The instrument produces an audible response and significant meter deflections when near a metal object. The peak instrument response occurs when the unit is directly over the object. The EM instrument is ineffective in areas covered with reinforced concrete because the metal reinforcing material saturates the instrument response.

The TW-6 is operated in scanning mode, and does not allow for recording of the instrument response. For the present investigation, the accessible survey areas were scanned in a grid pattern to identify potential utilities, USTs, or other buried metal objects. Locations of potential utilities were marked on site with spray paint and/or pin flags.

*Radio Frequency (RF) Utility Locating Methods*

The areas surrounding proposed drilling locations were inspected using a RF utility locating system (also known as a precision utility locator (PUL)) to identify and trace potential electrical, telecommunication, water, and other potential identifiable utilities.

AGS utilized a Radiodetection RD4000 RF utility locating instrument. This instrument consists

of a receiver/tracer and a remote transmitter which operates at multiple radio-frequencies (RF) ranging from 8 kHz to 65 kHz. The receiver unit detects the transmitted RF signals as well as standard 60 Hz electrical power lines and broad-band RF signals when operated in passive detection modes. This utility tracing instrument is an analog device which provides visual and audible feedback to the operator when a utility coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hook-up. The receiver output varies an audible pitch and visual feedback depending upon how far the utility is from the receiver. By carefully adjusting the gain of the receiver it is possible to determine the location of the utility and to separate it from adjacent utilities.

The investigation areas were scanned using passive 60 Hz and the broad-band RF detection modes to identify potential utilities that may be present. Inductive and direct hook-up methods were used to trace specific utilities when possible. Identified utilities were marked on the ground surface with spray paint and/or pin flags.

*Pipe Video Imaging*

A pipe video inspection system was used to attempt to image the floor drain system located on the south side of the 372 Riverdale building interior. A Pearpoint Flexiprobe P340 system was used to image the floor drain system. A high-resolution camera is mounted on a fiberglass 300-foot long push-rod that is capable of negotiating most clean-outs and traps encountered. This system has the capability of recording the video on a SD card for easy transfer to a computer and review of the pipe images.

## ***Results and Discussion***

*Site-wide Investigation to Identify USTs and Potential Areas of Concern*

The property located at 372 Riverdale Avenue was being actively used by a busy automobile repair business at the time of the geophysical investigation. Cars were parked very tightly throughout large portions of the property making it impossible to access those areas. Terrain conductivity EM data were collected across an accessible portions on the western side of the property located to the north and south of the building. Figure 1 shows the color contoured EM results from those areas as well as areas where cars were parked and portions of the site covered that were with reinforced concrete.

The terrain conductivity results on the north side of the 372 Riverdale building indicate that no anomalous features are present within that area. The EM results on the south side of the building showed a strong EM response in the area where the sanitary sewer and water services extend between Culver Street and the south side of the 372 Riverdale building (Figure 1).

The areas where terrain conductivity EM data were collected were also investigated using GPR methods. The GPR results suggested that fill or building rubble may be present throughout most of these areas.

The remaining accessible portions of the 372 Riverdale property were scanned using a combination of the GPR method and hand-held EM metal detection method. Features identified during this portion of the investigation included:

- A backfilled excavation from a former 500-gallon UST located near the southeast corner of the building. A vent pipe visible at the southeast corner of the building extends to the edge of the excavation (Figure1).
- A potential former heating oil UST that may have been abandoned in place located on the east side of the building, near the northeast building corner (Figure 1). This feature produced an EM response with the hand-held EM metal detection instrument and also an ambiguous GPR response. A vent pipe located on the building wall and a potential supply/return line were also identified leading from the building to the possible abandoned UST location. The geophysical results at this locations were not conclusive. Therefore, it is recommended that additional direct investigation of this location, such as excavation, be considered to better determine if a UST is present at this location.

In additional to the UST related features described above, utilities that were identified during the investigation were marked on site and are shown on Figure 1.

Several Taco Trucks and other vehicles were present at the 13 Culver Street property at the time of the geophysical investigation that kept it from being possible to complete an EM investigation using the terrain conductivity EM instrument. Instead the accessible portions of the property were scanned using the hand-held EM metal detection method and the GPR methods. A previous site investigation inspection noted a sealed pipe protruding from the east side of the residence at 13 Culver (Figure 1). Geophysical investigation surrounding that area did not indicate the presence of any USTs. However, tracing the natural gas service for the property did extend from Culver Street to the approximate location where the sealed pipe was situated, suggesting that it may have been related to the previous gas service for the property. No USTs or other anomalies of concern were noted within the accessible portions of the property at 13 Culver Street.

*Utility Clearance of Drilling Locations*

A number of environmental boring and geotechnical borings were cleared of identifiable utilites. Utilities surrounding the borings located inside the 372 Riverdale Avenue building and those situated on reinforced concrete were identified using a combination of RF utility locating methods and GPR methods. All other boring locations were also scanned using RF and GPR methods, and additionally the hand-held EM metal detection method. Identified utilities inside the building were marked on site using chalk, and those identified outside of the building were marked using spray paint. If a utility was too close to the proposed drilling location, the proposed drilling location was adjust to an area clear of identified utilities with the approval of the Ransom representative.

*Pipe Inspection of the Floor Drain System*

A attempt was made to access the floor drain system located inside of the south side of the auto shop at the 372 Riverdale property. The camera was inserted into the clean-out located inside of the southeast corner of the building. However, there was a wire trap approximately 5 feet beyond the clean-out opening that prevented access (see photo). Attempts were made to access the drain system through three other clean-outs located along the length of the floor drain inside the south side of the building, but they were all filled with sediments preventing access. Because of the site conditions, it was not possible to inspect the floor drain system that extends from east to west inside the south side of the auto shop area.

*Illustration 1: Photo showing wire trap inside floor drain clean-out.*

***Summary and Closing***

In summary, the geophysical investigation of the 372 Riverdale Avenue and 13 Culver Street properties was limited to the accessible areas. A large number of cars parked closely together was present at the 372 Riverdale propsert at the time of the investigation, and several trucks and cars were also present at the 13 Culver Street property limiting access in portions of the properties.

At the 372 Riverdale property one backfilled UST excavation was identified near the southeast corner of the site building, and a potential abandoned in place UST was identified on the east side of the building near the northeast corner of the building. Excavation or another appropriate methods will be required to better determine if there is actually an abandoned UST present at that location.

A natural gas service line leading from Culver Street to the east side of the residence at 13 Culver Street was identified that appears to end in the approximate location where a sealed pipe was noted protruding through the foundation wall during a previous site inspection. No USTs were identified in the area where that sealed pipe was noted.

Aside from those feature noted and described above, and shown on Figure 1, no other underground features were identified during this investigation.

All geophysical data and field notes collected as a part of this investigation will be archived at the AGS office. The data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses with probable subsurface features is based on the past results of similar surveys although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees can be made or implied regarding the presence or absence of additional objects or targets beyond those identified.

If you have any questions regarding the results of this field investigation, please contact me at 610-722-5500. It was a pleasure working with you on this project and we look forward to being able to provide you with sub-surface imaging services in the future.

Sincerely,

Donald Jagel, P.G.

NOTES:

1) Terrain conductivity EM data were collected using a Geonics EM31 instrument. A GSSI SIR3000 GPR instrument was used to collect data close to buildings and parked vehicles. Utilities at the site were identified using a of a radio frequency utility locating, system (RD-4000) and a hand-held EM metal detection instrument (TW-6 m-scope). Accessible areas that could not be investigated using the terrain conductivity EM methods were also scanned using the TW-6 m-scope and GPR methods. All identified features were marked on site with spray paint.
2) Identified site features are based on the geophysical responses from several geophysical instruments. See report text for additional detail.
3) Base aerial orthophotograph downloaded from https://orthos.dhses.ny.gov/, and included file e_06570760_06_07400_4bd_2016.zip. All base orthophotographs have an acquisition date of 2016. This work was not completed by a licensed surveyor, as such should be considered approximate, and is for illustrative purposes only.
4) The items shown on this figure may not be all inclusive. AGS does not warrant the fact that additional buried features/utilities may be present which could not be identified by AGS personnel during this investigation.

# EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) of the properties at 372 Riverdale Avenue and 13 Culver Street in Yonkers, New York (the "subject property") under the written authorization of Claudius Development LLC (the "Client" and the "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence related to a potential transaction involving the subject property.

## ***Subject Property Layout***

The subject property has a combined area of about 1.02 acres and includes 372 Riverdale Avenue (Yonkers Tax ID 1.-129-30) and 13 Culver Street (Yonkers Tax ID 1.-129-26) within an urban block setting. 372 Riverdale Avenue/Lot 30 is improved with a 1-story vacant auto repair building with asphalt paved parking areas. 13 Culver Street/Lot 26 is vacant following demolition of a residential building in or about December 2021. Access is to 372 Riverdale Avenue/Lot 30 is provided from Riverdale Avenue and Culver Street and access to 13 Culver Street/Lot 26 is provided via a gate on Culver Street. The subject property sits at an elevation of about 50 feet above mean sea level and is generally flat with a gentle slope downward toward the west, in a region that slopes toward the Hudson River, located approximately 2,500 feet west.

## ***Subject Property Current Use***

The subject property is vacant. The most recent auto repair tenant vacated 372 Riverdale Avenue/Lot 30 in April 2026. At the time of the site reconnaissance, the local Fire Marshall was executing an eviction and locking up the building/lot. Evidence of poor housekeeping by the most recent tenant compared to conditions in the 2017 Phase I ESA was observed, including standing fluids, debris, trash, auto parts, and toppled containers of motor oil products at various locations throughout the building and lot.

## ***Subject Property History***

The subject property was developed with several residential dwellings with detached garages or stables as early as 1897. By 1917, several store fronts were located along Riverdale Avenue, and a Cast Stone Products building was located at the east half of 13 Culver Street/Lot 26. The stone products business was no longer preset in 1951. Most of the residential structures at 372 Riverdale Avenue/Lot 30 were demolished between 1966 and 1974 and the current auto repair building was constructed by 1974 with only two remaining residences in the northwest part of the Lot. The two remaining residences on Lot 30 were demolished by 1984 and that portion of

the lot was paved with asphalt for additional parking. The auto repair facility was used by Goodyear from 1974 to 2015, West Coast Auto beginning in 2016, followed by Turbo Auto Sales First Corp., who vacated in April 2026. Auto garages on the east half of 13 Culver Street/Lot 26 were demolished by the 1970s and the remaining residence in the western part of the lot was demolished between in or about December 2021.

### ***Adjoining Properties and Surrounding Area***

The surrounding area was mostly developed with mixed uses as early as the late 1800s and is currently occupied by mainly residential, commercial, institutional, parks properties. The subject property is adjoined to the north by residential properties, some with detached garages, to the east by Culver Park, to the south by Culver Street, followed by a gasoline filling station and residences, and to the west by Riverdale Avenue, followed by a New York State owned arterial and Nathanial Hawthorne School.

### ***Conclusions***

Langan completed a Phase I ESA of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

**Table ES-1 Conclusions, Findings and Opinions**

| **ASTM E1527-21 Scope Items** |
|---|
| **Recognized Environmental Conditions (RECs)** |
| *Former Auto Repair Operations, Open Spill, and Evidence of Poor Housekeeping at 372 Riverdale Avenue/Lot 30:* The building has been used for auto repair by multiple tenants since 1974. The most recent tenant vacated in April 2026 and evidence of poor housekeeping (staining, standing fluids, trash, and debris) was observed at various locations throughout 372 Riverdale Avenue/Lot 30. New York State Department of Environmental Conservation (NYSDEC) Spill No. 2506149 was reported on October 7, 2025 when motor oil was reportedly flowing from the site into to street drains. Case notes also indicated that auto repair work was conducted on the streets with oil leaks noted. The spill case remains open. Documented and undocumented releases of petroleum products or hazardous substances related to auto repair may have impacted soil, groundwater, and soil vapor. |
| *Hazardous Waste Generation - Auto Service Center at 372 Riverdale Avenue/Lot 30:* Lot 30 was identified as a Small Quantity Generator (SQG) in 1986 and a conditionally exempt small quantity generator (CESQG) in 1993, 2006, and 2007 of hazardous waste containing ignitable waste and spent nonhalogenated solvents including xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol. Manifests indicate hazardous waste shipments continued through 2012. No violations or non-compliance issues were reported and the listing was not reclassified as a non-generator. Undocumented releases |

| **ASTM E1527-21 Scope Items** |
|---|
| of hazardous substances or hazardous waste may have impacted soil groundwater, and/or soil vapor at the subject property. |
| *Documented Contamination at Subject Property:* An August 15, 2017 Phase II Limited Subsurface Investigation identified groundwater impacted with petroleum related volatile organic compounds (VOCs) at concentrations above NYSDEC Technical Operational and Guidance Series Ambient Water Quality Standards and Guidance Values (SGVs) and fill with metal and semivolatile organic compounds (SVOCs) at concentrations above NYSEC Restricted Use Restricted Residential Soil Cleanup Objectives. |
| *Current and Historical Use of Adjoining and Nearby Upgradient Properties and Related Open Spills:* Adjoining and/or nearby upgradient properties have been occupied by gasoline filling stations (1951- present) and a plastics manufacturer identified as a potential handler of per- and polyfluoroalkyl substances (PFAS). Two open petroleum spills are associated with the gasoline filling station at the south adjoining property at 380 Riverdale Avenue with "significant" impacts to groundwater, according to the NYSDEC case notes. Documented and undocumented releases at these sites may have impacted regional environmental conditions in the vicinity of the subject property. |
| **Controlled Recognized Environmental Conditions (CRECs)** |
| Langan did not identify CRECs. |
| **Historical Recognized Environmental Conditions (HRECs)** |
| *On-Site Closed Spill:* Spill No. 1710340 was reported on February 15, 2018 at Turbo Auto Sales when petroleum-impacted soil was encountered during removal of a 3,500-gallon No 2 heating Oil UST east of the garage building at 372 Riverdale Avenue. About 220 tons of impacted soil was over-excavated and disposed offsite. Post-excavation soil samples confirmed concentrations were below NYSDEC CP-51 soil cleanup levels for fuel oil impacted soil and the spill was closed on April 16, 2018. |
| **Significant Data Gaps** |
| Significant data gaps were not encountered. |

# 1. INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology D.P.C. (Langan) completed a Phase I Environmental Site Assessment (ESA) of the properties at 372 Riverdale Avenue and 13 Culver Street in Yonkers, New York (the "subject property") under the written authorization of Claudius Development LLC (the "Client" and the "User"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. The user requested this ESA as part of their environmental due diligence related to a potential transaction involving the subject property.

## 1.1 Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

## 1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

CERCLA hazardous substances and petroleum products have been detected in background environmental samples across the globe, including in areas removed from specific recognized sources. This Phase I ESA was not intended to evaluate background concentrations of CERCLA hazardous substances or petroleum products, regardless of whether the source is naturally occurring or anthropogenic. The objective of Langan's scope of services was to identify the presence, likely presence, and/or material threat of a release of CERCLA hazardous substances and petroleum products related to specific property uses that are generally recognized as known or potential sources of such substances and products.

### *1.2.1 Records Review and Local Government Interviews*

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to: New York State Department

of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH), Westchester County Department of Health, and City of Yonkers. Agency FOIA-requested information, where received, is discussed in relevant sections of this report, referenced in Section 7. Pertinent documents are provided in Appendix B.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro and NETR Online.

#### *1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews*

Langan completed the site reconnaissance on April 16, 2026. John Saraceno, Vice President of the User, accompanied Jennifer Armstrong of Langan during the site reconnaissance.

Langan walked the periphery of the subject property, observed the subject property from adjoining public thoroughfares, and walked the accessible interiors of structures at the subject property. Langan observed the adjoining properties and the surrounding area from the periphery of the subject property and from public thoroughfares adjoining to or traveled on to access the subject property. The weather at the time of the site reconnaissance was approximately 80 Degrees Fahrenheit and sunny. Photographs from the site reconnaissance are provided in Appendix C.

Site-specific questions were sent for owner response via email on April 22, 2026. Their responses are incorporated into the relevant sections of this report. The subject property is vacant so occupants were not interviewed.

#### *1.2.3 Evaluation, Report and Parts Used in Concert*

Langan evaluated the pieces of information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 1.4.

#### *1.2.4 Non-ASTM Scope Services*

The scope of services for the Phase I ESA did not include non-scope ASTM considerations.

### 1.3 User Responsibilities

Langan requested that the User provide the results of tasks the User is responsible for completing to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AULs) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the User regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the User state the reason the

Phase I ESA was requested. A summary of the user's responses is provided in Appendix D and relevant information provided by the User is discussed in applicable sections of this report.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the User. If the User requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

### 1.4 Limiting Conditions/Deviations

Debris, car parts, and trash were observed at various locations limiting ground and floor visibility at the subject property. Electricity was not on in the building at 372 Riverdale Avenue and lack of lighting reduced visibility. This limiting condition is not expected to impact the overall conclusions of this Phase I ESA and is not considered a significant data gap.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

### 1.5 Data Gaps

Data gaps, if encountered, are discussed throughout the report. Significant data gaps, if any, are summarized in Section 5.0.

# 2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the subject property location, ownership, physical setting, and current layout and operations.

## 2.1 Location, Legal Description, and Ownership

The subject property has a combined area of about 1.02 acres and includes 372 Riverdale Avenue (Yonkers Tax ID 1.-129-30) and 13 Culver Street (Yonkers Tax ID 1.-129-26) at the northeast corner of Riverdale Avenue and Culver Street within an urban block setting in Yonkers, New York.

372 Riverdale Avenue (Yonkers Tax ID 1.-129-30) has an area of 0.85 acres and is owned by Dutchman Realty LLC. 13 Culver Street (Yonkers Tax ID 1.-129-26) has an area of 0.17 acres and is owned by Dutchman Realty II LLC. City of Yonkers property cards are included in Appendix B.

## 2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area are discussed below.

### *2.2.1 Topography*

The 2023 United States Geological Survey (USGS) 7.5-minute quadrangle topographic map for Yonkers depicts the subject property at an elevation of about 50 feet above mean sea level (amsl) and as generally flat with a gentle slope downward toward the west. The regional topography slopes downward toward the west and the Hudson River, which is located approximately 2,500 feet west of the subject property.

### *2.2.2 Geology*

According to the August 15, 2017 Phase II Limited Subsurface Investigation, the subject property is underlain by mostly brown and tan silt with trace fine sand to about 8 feet below grade surface (bgs) and brown and tan fine to medium sands between approximately 8 feet bgs and 20 feet bgs; however, fill containing brick, concrete, and gravel was observed at several borings. Bedrock at the subject property is expected to consist of Metamorphic Rocks of Sedimentary and Volcanic Origin of the Fordham Gneiss, based on 1970 The Geologic Map of New York – Lower Hudson Sheet, by Donald W. Fisher, Yngnar W. Isachsen, and Lawrence V. Rickard.

### *2.2.3 Hydrogeology*

Surface water bodies are not present within the boundary of the subject property. The nearest surface water body is the Hudson River located approximately 2,500 feet west of the subject property. Groundwater flow can be influenced by several factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. Based on the August 15, 2017 Phase II Limited Subsurface Investigation, groundwater in the southwest part of the subject property was encountered at about 8 feet bgs. Groundwater is expected to flow west, based on topographic gradient and proximity to the Hudson River.

### 2.3 Subject Property Description

372 Riverdale Avenue/Lot 30 consists of vacant auto repair building with asphalt paved parking areas. The building consists of office space, main garage, restrooms, parts/tire wash, out-of-service boiler room, storage room. The most recent tenant vacated in April 2026. At the time of the site reconnaissance, the local Fire Marshall was executing an eviction and locking up the building/lot. Evidence of poor housekeeping by the most recent tenant, compared to conditions in the 2017 Phase I ESA was observed, including standing fluids, debris, trash, auto parts, and toppled containers of motor oil products at various locations throughout the building and lot.

13 Culver Street (Lot 26) is a vacant, vegetated lot. The residential building present for the 2017 Phase I ESA was demolished in or about December 2021. A pile of debris (wood, pipes, and plastic bags with unknown contents) was observed in the southern part of the lot.

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix C.

### 2.4 Current Subject Property Use

The subject property is unoccupied.

The following table summarizes subject property utility providers.

**Table 2-1**

| Utility | Providers |
|---|---|
| Electricity | Con Edison |
| Natural gas | Con Edison |
| Water | City of Yonkers |
| Sewer | City of Yonkers |

### 2.5 Hazardous Substances and Petroleum Products

The subject property is unoccupied, but based on observations, the prior tenant of 372 Riverdale Avenue/Lot 30 used various petroleum products for auto repair.

#### *2.5.1 Underground Storage Tanks (USTs)*

Langan did not observe or identify evidence of current USTs at the subject property. Information on historic or abandoned USTs is included in Sections 3.2 and 3.3.

#### *2.5.2 Aboveground Storage Tanks (ASTs)*

Langan observed a 275-gallon waste oil tank in the center of the main garage. Although standing fluids were observed on the floor, it did not appear related to the AST, which appeared in good condition.

#### *2.5.3 Drums, Totes, and Intermediate Bulk Containers*

Langan did not observe drums, totes, or intermediate bulk containers at the subject property, except for 55-gallon plastic drums used for general trash.

#### *2.5.4 Other Chemical Storage, Containers, or Equipment*

About 100 containers of motor oil, other automobile products, and paints (varying size of 1 quart to 5-gallon) were observed in throughout the building (mainly main garage and storage room north of the main garage) and parking lots at 372 Riverdale Avenue/Lot 30. Several containers were toppled next to puddles/stains on pavement or budling slabs. The building slab appeared to be in generally good condition (free of cracks/spalls), but cracks and depressions were noted in asphalt pavement. Petroleum-like odors were observed the storage area north of the main garage and east of the out-of-service boiler room.

### 2.6 Air Emissions

Air emission sources were not observed.

### 2.7 Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the subject property.

#### *2.7.1 Hazardous Waste*

Langan did not observe hazardous waste generation at the subject property.

#### *2.7.2 Non-Hazardous Waste*

The subject property is not occupied, but general non-hazardous waste (debris, trash, car parts), a dumpster, and drums used as trash receptacles were observed throughout 372 Riverdale Avenue/Lot 30.

#### *2.7.3 Fill Areas or Solid Waste*

Langan did not observe areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of garbage, construction debris, demolition debris, or other solid waste disposal, or mounds or depressions suggesting solid waste disposal.

### 2.8 Wastewater

Sanitary wastewater is discharged to the municipal sanitary sewer system.

### 2.9 Storm Water

Storm water at the subject property percolates vegetated areas, sheet flows onto adjacent roadways, or is collected in catch basins that discharge to the municipal storm sewer system.

# 3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the subject property, and available information regarding documented environmental conditions associated with the historical uses.

## 3.1 Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix E.

The following summary of the subject property history was compiled based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in the Appendix.

Table 3-1 Subject Property History

| Time Period | Historical Discussion |
|---|---|
| Late 1800s – Mid 1900s | Topographic maps and Sanborn maps indicate the subject property was developed with several residential dwellings with detached garages or stables as early as 1897. By 1917, several store fronts were located along Riverdale Avenue, and a Cast Stone Products building was located at the east half of 13 Culver Street/Lot 26 (Sanborn maps). The Cast Stone products business was no longer present by the 1951 Sanborn map, but that portion of the lot was noted as multiple auto garages. |
| 1970s | According to aerial photos and Sanborn maps, most of the residential structures at 372 Riverdale Avenue/Lot 30 were demolished between 1966 and 1974, and the current auto repair building was constructed by 1974 (Sanborns and City of Yonkers Property Info). According to city directories, the building was occupied by Goodyear Tire/Auto Service. Two 3-strory residential buildings remained in the Norwest part of the lot.<br><br>One residential building remained in the western part of 13 Culver Street/Lot 26, but the auto garages were no longer present (aerial photos and Sanborn maps). |
| 1980s – 2000s | The two residential buildings in the northwest part of 372 Riverdale Avenue/Lot 30 were demolished by 1984, and the area was paved and used for parking (aerial photo). Goodyear continued to occupy the lot and building (city directories).<br><br>One residential budling remained in the west part of 13 Culver Street/Lot 26 (aerial photos/Sanborn). |
| 2010s – Present | 372 Riverdale Avenue was occupied by Goodyear until 2015 and then by West Coast Auto beginning in 2016 (June 7, 2017 Phase I ESA), followed by Turbo |

| | |
|---|---|
| | Auto Sales First Corp, who vacated in April 2026 (according to the property owner). According to sales info on Yonkers.gov, the lot was sold from Mary Louise Romano to Dutchman Realty LLC in April 2026.<br><br>The residence at 13 Culver Street/Lot 26 was demolished in or about December 2021 (according to the property owner). According to sales info on Yonkers.gov, the lot was sold from 15 Culver St Realty Corp to Dutchman Realty LLC in 2017 and then to Dutchmen Realty II LLC in 2024. |

Operation of an auto repair facility at the subject property from the mid 1970s to 2020s is a REC as documented and undocumented releases of petroleum products or hazardous substances may have impacted soil. groundwater, and soil vapor; additional information on releases at the subject property are in Section 3.2 and 3.3.

### 3.2 Regulatory Database Review

The subject property was listed in the following databases:

- UST in relation to Petroleum Bulk Storage Registration ID 3-802158 at 372 Riverdale Avue for a 3,500-gallon No. 2 fuel oil UST (Tank No. 1). The database included contradictory/incorrect info about Tank No 1 (e.g. installation in 1950 and permanent closure in 1900 while also noting the tank as temporarily out-of-service). PBS Registration No. 3-802158 was still noted as "active."
- NYSDEC Spills for the following incidents:
    - Spill No. 1710340 was reported on February 15, 2018 at Turbo Auto Sales when petroleum-impacted soil was encountered during removal of a 3,500-gallon No 2 heating Oil UST (Tank No 1 discussed above) east of the garage building at 372 Riverdale Avenue. About 220 tons of impacted soil was over-excavated and disposed of offsite. Post-excavation soil samples confirmed concentrations were below NYSDEC CP-51 soil cleanup levels of fuel oil impacted soil and the spill was closed by the NYSDEC on April 16, 2018. This spill is considered a historic REC (HREC).
    - Spill No Spill No. 2506149 was reported at "Mechanic Shop" on July 31, 2025 when motor oil from auto repair operations was reportedly flowing into street drains. Case notes also stated auto repair was being done on streets with associated oil staining noted. The spill remains open, is additional evidence of poor housekeeping by the former tenant, and is a REC as the leaks may have infiltrated cracks in the pavement and impacted sol, groundwater, and soil vapor at the subject property.
- Resource Conservation and Recovery Act (RCRA) Generator, Facility Index System (FINDS), and Enforcement and Compliance History Online (ECHO) databases as a Small Quantity Generator (SWG) in 1986 and a very small quantity generator (VSQG) in1993, 2006, and 2007 under Goodyear Auto Services. Waste types included ignitable waste and spent non-halogenated solvents, including xylene, acetone, ethyl acetate, ethyl

benzene, methyl isobutyl ketone, N-butyl alcohol, cyclohexanone, and methanol. Violations were not reported and the listing was not reclassified as a non-generator. Undocumented releases of hazardous substances and ignitable waste may have impacted soil groundwater, and soil vapor at the subject property. This REC was evaluated in the August 15, 2017 Phase II Limited Subsurface Investigation discussed in the following section.

The environmental database report is attached as Appendix F.

### 3.3 Prior Report Review

The following two previous reports were provided for review:

- June 7, 2017 Phase I Environmental Site Assessment Proposed CVS Pharmacy/Store No. 10386, 13 Culver Street and 372 Riverdale Avenue, prepared by T.M. Crowley & Associates, Inc.
- August 15, 2017 Phase II Limited Subsurface Investigation (SSI) Proposed CVS Pharmacy/Store No. 10386 13 Culver Street and 372 Riverdale Avenue, prepared by Ransom Consulting, Inc.

The Phase I identified several RECs related to the following:

- On-site automotive repair and associated drainage system, hydraulic lifts, vehicle storage, inactive oil-fired boiler, a 3,000-gallon fuel oil UST believed to have been removed at the time of the Phase I (but later confirmed to be the 3,500-gallon UST removed in 2018 discuss in Section 3.2), a former 550-gallon waste oil UST, and drum storage
- Residential fuel use at 13 Culver Street
- Potential fill from unknown sources
- Off-site gasoline service stations/auto repair facilities

The Phase II Limited SSI included the following:

- A geophysical survey that identified:
    - Backfilled excavation in southeast part of 372 Riverdale Avenue/Lot 30, which was assumed to be the location of the former 550-gallon waste oil UST.
    - UST-like anomaly east of the main garage (confirmed in 2018 to be a 3,500-gallon fuel oil UST removed during remediation of Spill No. 1710340)

  The geophysical survey attempted camera mapping of the drainage system, but was unable to do so because of built-up sediment at clean outs.
- 25 soil borings (24 at 372 Riverdale Avenue/Lot 30 and 1 at 13 Culver Street/Lot 26) and collection of 30 soil samples. Petroleum-like odors and photoionization detector (PID) readings of up to 6.8 parts per million (ppm) were noted in boring SB-23 in the southwest corner of the parking lot at 372 Riverdale Avenue/Lot 30; however, staining was not observed. Volatile organic compounds (VOCs) were either not detected or reported at concentrations below the SCOs. Several metals and semi volatile organic compounds (SVOCs) were reported at concentrations above NYSDEC Part 375 Unrestricted Use (UU)

and Restricted Use Restricted Residential (RURR) Soil Cleanup Objectives (SCOs). Polychlorinated biphenyls (PCBs) and pesticides each exceeded UU SCO in one sample, but not RURR SCOs. The noted concentrations in soil were attributed to fill quality. NYSDEC revised Part 375 SCOs in December 2025. Langan compared the data against the new SCOs and the following SCO exceedances were documented:

  - The VOC acetone in one soil sample in the northwest parking lot of 372 Riverdale Avenue/Lot 30
  - Several SVOCs above UU and/or RURR SCOs at various locations throughout the subject property between 0 and 1-foot bgs
  - Several metals above UU and/or RURR SCOs at various locations throughout the subject property at varying intervals to a max depth of 7.5 feet bgs
  - PCBs and pesticides each in one sample above UU SCOs, but below RURR SCOs

- Two temporary monitoring wells in the southwest corner of 372 Riverdale Avenue/Lot 30 and collection of two groundwater samples that identified several petroleum-related VOCs above NYSDEC Technical Operational and Guidance Series Ambient Water Quality Standards and Guidance Values (SGVs). Reported VOC concentrations were 2 to 3 orders of magnitude above the SGVs. The wells were noted by Ransom as "upgradient" to assess potential impacts from off-site; however, the west side of the site is at lower elevation than the east. The wells were located cross gradient from the south adjoining gasoline filling station across Culver Steet from the subject property.

The reports are included in Appendix B.

Based on the review of prior reports, Langan concludes that documented groundwater and soil contamination at the subject property is a REC. Soil vapor may also be impacted by VOCs, but was not sampled.

# 4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

## 4.1 Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1

**Table 4-1 Current Use of Adjoining Properties and Surrounding Area**

| Direction | Adjoining Properties | Surrounding Area |
|---|---|---|
| **North** | Residential Properties | Residential, commercial, and institutional properties |
| **East** | Culver Park | Residential properties |
| **South** | Culver Street followed by a gasoline filling station (380 Riverdale Avenue) and residential properties | Residential and commercial properties |
| **West** | Riverdale Avenue/NYS Arterial followed by Nathaniel Hawthorne School | Residential properties |

Use of a south adjoining property at 380 Riverdale Avenue as a gasoline filling station is a REC (see Section 4.2 for additional information on this property).

## 4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix E.

**Table 4-2 Historical Use of Adjoining Properties**

| Direction | Adjoining Properties |
|---|---|
| North | Based on the Sanborn and topographic maps and aerial photos, north adjoining properties were developed with residences as early as 1898. Detached garages were added to several residences in the early to mid 1900s. |
| East | Based Sanborn and topographic maps, the east adjoining property was developed with one or more residences, stores, detached garages/stables as early as the late 1800s. Buildings were demolished prior to 1962 and Culver Park and playground was constructed. |
| South | Based on Sanborn and topographic maps, south adjoining properties across Culver Street were occupied by a railway car barn in the late 1800s, but by 1917 were redeveloped as several flat roofed buildings of unspecific or residential use with some detached garages. By 1974, 280 Riverdale Avenue was redeveloped as a gasoline filling station (Yonkers |

| | |
|---|---|
| | building records), which is still present. Langan considers the gasoline filling station at 280 Riverdale Avenue a REC; additional details are provided in Section 4.3. |
| West | Based on the review of Sanborn and topographic maps, Riverdale Avenue was narrower in the late 1800s and early/mid 1900s and then expanded in the late 1970s/early 1908s. Former properties within the current arterial included several residences (late 1800s – 1970s) and a realty co (1942), and a gasoline filling station (1951 – 1978). Nathanial Hawthorne school was constructed in the 1950s west of the arterial and is still present.<br><br>Langan considers the former gasoline filling station (1951-1978), within the current arterial, a REC as undocumented releases of petroleum products may have impacted groundwater and soil vapor at the subject property. |

Beyond adjoining properties, the surrounding area exhibited mixed residential, commercial, and institutional uses, including an auto sales and or repair/service station at a nearby cross-gradient property (290 Riverdale Avenue; about 175 feet south/crossgradient) from 1951- early 2000s.

### 4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider review of regulatory agency files necessary to evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below.

#### *4.3.1 Adjoining Properties*

The following adjoining properties were identified in the database search.

*380 Riverdale Avenue as Citgo Station, Conoco Station, or Yonkers Fuel, Inc (south adjoining across Culver Street)*

- UST database for the following:
  - Three 6,000-galon USTs containing diesel or gasoline that were installed in 1973 and closed and removed in 2003
  - Three in-service 6,000-galon double walled USTs containing diesel or gasoline installed in 2003 with leak and overfill detection systems
- Spills for the following incidents:
  - Spill No. 0202712 (Citgo Station) was reported on June 13, 2002 after a tank test failure. After several years of inaction NYSDEC issued a Stipulation Agreement for the site. A 2019 remedial investigation identified "significant contamination;" however, concentrations were not specified. Multiple vacuum recovery events

were completed beginning in 2021. An air sparge/soil vapor extraction system was proposed, but case notes indicate related permit applications were rejected by the WCDOH. The most recent entries noted that in May 2023 VOCs were still "very high" in groundwater; however, concentrations were not provided, and in July 2024, a report was noted as "long overdue." The spill remains open and Langan has submitted a FOIA request.

- Spill No. 1804210 (Conoco Station) was reported on July 18, 2018 when a faulty meter was weeping fuel onto a dispenser line. Investigation and status notes for this incident are the same as the above spill. It appears that they are being investigated/remediated together; although the NYSDEC has not merged the case numbers. The spill remains open and Langan has submitted a FOIA request.

A gasoline filling station with open spill cases on a south adjoining property is considered a REC. As indicated in Section 3.3, contamination at this location may be contributing to VOC impacts to groundwater and soil vapor at the subject property.

*10 Culver Street (A south adjoining residence across Culver Street)*

NYSDEC Spill No. 9101603 was reported on April 26, 1991 when a small leak (about 2 gallons) was observed around a fill pipe. Sand was used to absorb the spill and in the incident was granted closed status on May 15, 1991. Based on the nature of the incident and closed status, it is not indicative of a REC.

*377 Riverdale Avenue (West adjoining within current arterial)*

This location was identified in the historic auto repair database. As stated in Section 4.2, this location was identified as a gasoline filling station. This former use is considered a REC as undocumented releases may be contributing to VOC impacts to groundwater and soil vapor at the subject property.

*Con Ed Manhole/Trench (west adjoining within Riverdale Avenue)*

This location was included in the RCRA generator database as non-generator, that previously generated hazardous waste containing lead in 2009. Violations were not reported. Based on waste type and lack of violations, this database listing is not indicative of a REC.

### *4.3.2 Surrounding Area*

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). Those warranting further discussion in the context of potential to represent an environmental concern for the subject property are discussed below.

*Accurate Plastics Inc at 18 Morris Place (about 525 feet northeast/upgradient)*

This facility was listed in the USEPA's PFAS ECHO database, which maintains a list of facilities that may handle PFAS as part of their typical operations. Undocumented releases of PFAS at this

location may have migrated and impacted area-wide groundwater in the vicinity of the subject property; therefore, this listing is indicative of a REC.

Other surrounding database listings are not expected to impact the subject property based on distance, inferred gradient, completed remediation, regulatory status, and/or nature of contamination.

## 5. CONCLUSIONS, FINDINGS, AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the subject property at 372 Riverdale Avenue, Yonkers, NY, 10705. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report.

This assessment has revealed the RECs, CRECs, HRECs, de minimis conditions, and significant [??] data gaps presented in Table 5-1.

**Table ES-1 Conclusions, Findings and Opinions**

| **ASTM E1527-21 Scope Items** |
|---|
| **Recognized Environmental Conditions (RECs)** |
| *Former Auto Repair Operations, Open Spill, and Evidence of Poor Housekeeping at 372 Riverdale Avenue/Lot 30:* The building has been used for auto repair by multiple tenants since 1974. The most recent tenant vacated in April 2026 and evidence of poor housekeeping (staining, standing fluids, trash, and debris) was observed at various locations throughout 372 Riverdale Avenue/Lot 30. NYSDEC Spill No. 2506149 was reported on October 7, 2025 when motor oil was reportedly flowing from the site into to street drains. Case notes also indicated that auto repair work was conducted on the streets with oil leaks noted. The spill case remains open. Documented and undocumented releases of petroleum products or hazardous substances related to auto repair may have impacted soil, groundwater, and soil vapor. |
| *Hazardous Waste Generation - Auto Service Center at 372 Riverdale Avenue/Lot 30:* Lot 30 was identified as a SQG in 1986 and a CESQG in 1993, 2006, and 2007 of hazardous waste containing ignitable waste and spent nonhalogenated solvents including xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol. Manifests indicate hazardous waste shipments continued through 2012. No violations or non-compliance issues were reported and the listing was not reclassified as a non-generator. Undocumented releases of hazardous substances or hazardous waste may have impacted regional environmental conditions in the vicinity of the subject property. |
| *Documented Contamination at Subject Property:* An August 15, 2017 Phase II Limited Subsurface Investigation identified groundwater impacted with petroleum related VOCs at concentrations above NYSDEC SGVs and fill with metal and SVOCs at concentrations above NYSEC RURR SCOs. |
| *Current and Historical Use of Adjoining and Nearby Upgradient Properties and Related Open Spills:* Adjoining and/or nearby upgradient properties have been occupied by gasoline filling stations (1951- present) and a plastics manufacturer identified as a potential handler of per- and polyfluoroalkyl substances (PFAS). Two open petroleum spills are associated with the gasoline filling station at the south adjoining property at 380 Riverdale Avenue with "significant" impacts to groundwater, according to the NYSDEC case notes. Documented and undocumented |

| **ASTM E1527-21 Scope Items** |
|---|
| releases at these sites may have impacted regional environmental conditions in the vicinity of the subject property. |
| **Controlled Recognized Environmental Conditions (CRECs)** |
| Langan did not identify CRECs. |
| **Historical Recognized Environmental Conditions (HRECs)** |
| *On-Site Closed Spill:* Spill No. 1710340 was reported on February 15, 2018 at Turbo Auto Sales when petroleum-impacted soil was encountered during removal of a 3,500-gallon No 2 heating Oil UST east of the garage building at 372 Riverdale Avenue. About 220 tons of impacted soil was over-excavated and disposed offsite. Post-excavation soil samples confirmed concentrations were below NYSDEC CP-51 soil cleanup levels for fuel oil impacted soil and the spill was closed on April 16, 2018. |
| **Significant Data Gaps** |
| Significant data gaps were not encountered |

## 6. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that I have the knowledge and skills, I meet the definition of an environmental professional as defined in Section 312.10 of 40 CFR Part 312.10(b), I have the specific qualifications based on education, training and experience to make a professional judgment regarding the scope of work and the data collected, and I have developed and implemented all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Robert Kovacs, PG, LSRP
Senior Associate (Environmental Professional)

Resumes outlining the qualifications of the project team are included in Appendix G.

# 8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Claudius Development LLC and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

## 8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AULs): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that

may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Business environmental risk (BER): a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due

to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

**8.2 Standard Environmental Record Sources**

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix F contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of

this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

Ransom Project No. 111.02013

June 7, 2017

## EXECUTIVE SUMMARY

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Ransom Consulting, Inc. (Ransom) for the properties located at 13 Culver Street and 372 Riverdale Avenue in the City of Yonkers, New York (the "Site"), which includes Section 1, Block 129, Lots 26 and 30, respectively. This Phase I ESA was conducted in accordance with the scope and limitations of ASTM International E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and Ransom's Corporate Services Agreement with CVS Pharmacy, Inc. (CVS) dated April 1, 2015 (the "Corporate Services Agreement"). The purpose of this Phase I ESA was to evaluate the environmental condition of the Site for evidence of a release or threat of release of hazardous substances or petroleum products (HSP) and to provide our professional opinion regarding evidence of recognized environmental conditions (RECs) in connection with the Site.

The Site consists of one 8,695 square-foot commercial structure (the "Lot 30 Site Building"), constructed sometime in 1974 on the 372 Riverdale Avenue (Lot 30) portion of the Site, a 1,320 square-foot residential structure with a basement (the "Residential Building") on the 13 Culver Street (Lot 26) portion of the Site (collectively, the Site Buildings), asphalt paved parking surfaces, and areas of limited landscaping. The Site is located in a mixed commercial and residential area of the City of Yonkers.

The Lot 30 Site Building recently operated as a Goodyear-branded automotive repair shop and tire sales center from 1974 until sometime in 2015. The Lot 30 Site Building is currently occupied by the West Coast Auto Sales company, who have utilized the Site for the sale of used cars since sometime in 2016. The Residential Building on-Site was constructed sometime prior to 1897 and has been vacant since sometime in 2009.

Prior to development of the Lot 30 Site Building in 1974, the entire Site consisted of ten residential structures, one of which was removed by 1951, and six of which were removed circa 1973. Commercial improvements (i.e., an additionally parking area) to the Lot 30 portion of the Site were completed in June of 1980, at which time two more residential structures located to the north of the Lot 30 Site Building were removed from the Site and a paved parking area was installed. The Residential Building located on the Lot 26 portion of the Site is the only remaining residential structure on-Site.

The Site is bordered by residential properties to the north and Culver Park to the east. The PEARLS Hawthorne School is located to the west of the Site, across Riverdale Avenue. To the south of the Site, across Culver Street, is a Citgo-branded gasoline filling station and residential properties. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body & Repair Center.

A total of 15 current, sealed, or former floor drains, one former/inactive 4-inch cast iron drainage pipe, one 6-inch cast iron drainage pipe, and one grease/sand interceptor were either observed within the Lot 30 Site Building or depicted on historical building plans.

The Lot 30 Site Building was observed with eight service bays, which historically had (or currently have) seven underground hydraulic lifts and one hydraulic alignment rack. The former hydraulic lift system utilized approximately five underground hydraulic oil reservoirs, two air compressors with an associated air filter, and three floor-mounted control boxes. The current underground hydraulic lift system, including seven underground hydraulic lifts and one hydraulic alignment rack, was observed with five wall-mounted hydraulic fluid reservoirs/control boxes, three floor-mounted control boxes (where the control box between Bays 3 and 4 was presumably disconnected) and two electric air compressors. It was

presumed that the system was upgraded sometime around 2006; however, the status of the formerly used underground reservoirs is unknown.

Used vehicle storage was observed within the northeastern most storage area of the Lot 30 Site Building, as well as throughout the paved parking areas surrounding the Lot 30 Site Building. At the Residential Building, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, further barring access into a room where a suspect boiler was located.

One inactive fuel-oil fired boiler was observed within the Lot 30 Site Building as well. Ransom observed waste ash within the base of the boiler and potential asbestos containing materials (ACMs) along piping associated with the boiler.

The Lot 30 Site Building historically operated with two underground storage tanks (USTs), including: one 3,000-gallon fuel oil (No. 2) underground storage tank (UST) with an associated pump and appurtenant piping that connected to the fuel-oil fired boiler, which was located on the eastern side of the Lot 30 Site Building; and one 550-gallon waste oil UST located on the southeastern corner of the Lot 30 Site Building. Both USTs were installed sometime in or around 1974 and were related to the automotive repair shop and tire sales center activities. Permitting documentation reviewed at the City of Yonkers Housing and Building Department indicated that removal activities for two USTs were completed by September 1995; however, documents reviewed did not reference UST content or capacities. Based on known information, the USTs referenced within the permitting documentation are presumed to be the former 3,000-gallon fuel oil UST and former 550-gallon waste oil UST; however, detailed UST removal documentation was not identified by Ransom.

The 1898 Sanborn Map indicted one of the former residential properties on the Site with "Low Ground," indicating potential historic filling on-Site.

Ransom observed three 55-gallon steel drums containing waste oil within the service garage area of the Lot 30 Site Building, presumably generated during former automobile repair operations. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. Additionally, evidence of six circular stains, indicative of former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining.

Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, 5-gallon buckets with cooking oil, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property.

As part of our assessment of the Site, Ransom contracted Environmental Data Resources, Inc. (EDR) to perform an environmental database search. The Site was listed in the EDR environmental database report on the Resource Conservation and Recovery Act list of Conditionally Exempt Small Quantity Generators (RCRA-CESQ) database as the Goodyear Auto Service Center and was listed as a small quantity generator and handler of hazardous waste; however, no violations were identified in association with this database listing. Additionally, the Site was listed on the EDR database of Historical Auto Stations, which identifies potential automotive facilities based on operator names, as the Goodyear Auto Service Center for the years 1999, 2000, 2002, 2009, 2010, and 2012.

Additionally, gasoline service stations were identified in the EDR report with NY Spill cases on adjoining properties to the south of the Site. The environmental database provided by EDR revealed two active spill numbers (Spill No. 0608110 and Spill No. 0202712) and a spill number of unknown status (Spill No. 110501) related to the active Citgo-branded gasoline filling station located at 380 Riverdale Avenue, adjoining the Site to the south. This property was additionally identified as NY UST Facility ID No. 3-800744, an active facility with two 6,000-gallon gasoline USTs and one 6,000-gallon diesel UST. Based on the identified active spill numbers and close proximity to the Site, Ransom concludes that this facility has the potential to have impacted the Site.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-13 for the Site, which consists of an approximate 1.02-acre parcel of land, identified by the City Assessor's Office as Block 129, Lots 26 and 30, and corresponds to 13 Culver Street and 372 Riverdale Avenue, City of Yonkers, Westchester County, New York. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. Based on the information identified during this Phase I ESA, Ransom has identified the following RECs in connection with the Site.

- **REC 1 – Automotive Repair Drainage System**: A total of 11 sealed/inactive/former floor drains, four active floor drains, one former/inactive 4-inch cast iron drainage pipe, and one active 6-inch drainage pipe were either observed or identified throughout the Lot 30 Site Building. The former/inactive 4-inch cast iron drainage pipe was depicted as leading to a grease and sand interceptor. The Lot 30 Site Building's drainage system reportedly discharged and/or currently discharges to the municipal sanitary sewer system. The identified floor and appurtenant drainage pipes, and former grease and sand interceptor, represent RECs as follows (details are presented within Section 4.9.1 of this Report):
    - REC 1A – Service Garage Sealed Floor Drain;
    - REC 1B – Boiler Room Sealed Floor Drain;
    - REC 1C – Parts Room Sealed Floor Drain;
    - REC 1D – Bathroom Floor Drains;
    - REC 1E – Employee Locker Room Sealed Floor Drain;
    - REC 1F – Tire Wash Area Floor Drain;
    - REC 1G – Former Hydraulic Lift Floor Drains; and
    - REC 1H – Former Grease and Sand Interceptor.

  Due to the close proximity of the sealed/inactive/former floor drains and former underground grease and sand interceptor to the former automobile repair activities, there is a potential for soil and/or groundwater impacts within this area. Further investigation is warranted.

- **REC 2 – Automotive Repair Hydraulic Lift Systems**: A total of seven of the eight automobile repair bays housed underground hydraulic lifts, and one bay housed an air/hydraulic alignment rack. It is believed that at least five of the seven hydraulic lifts historically had underground hydraulic oil reservoirs, which were upgraded to wall-mounted hydraulic underground lifts. Two former air compressors and associated air filter were located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. The identified current and former system components represent RECs as follows (details are presented within Section 4.4 of this Report):

- REC 2A – Hydraulic Lifts and Alignment Rack;
- REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes;
- REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs;
- REC 2D – Hydraulic Lift Control Boxes; and
- REC 2E – Former Air Compressors.

Based on the former operations and unknown condition of the subsurface in the vicinity of the current/former hydraulic lifts/alignment rack, wall-mounted hydraulic fluid reservoirs, underground hydraulic oil reservoirs, hydraulic lift control boxes, and former air compressors, there is a potential for soil impacts within these areas. Further investigation is warranted

- **REC 3 – Vehicle Storage**: Used vehicle storage was observed within the northeastern most storage area of the Lot 30 Site Building, as well as throughout the paved parking areas surrounding the Lot 30 Site Building. The areas beneath the parked vehicle was inaccessible during Site reconnaissance activities; therefore, Ransom was unable to ascertain the integrity of the surface materials in these areas. Further investigation is warranted in all vehicle storage areas throughout the Site.

- **REC 4 – Inactive Oil-Fired Boiler System**: One inactive oil-fired burner was observed in the boiler room of the Lot 30 Site Building. The oil-fired burner was observed to be in poor condition with heavy rusting and staining visible on the exterior of the boiler. Due to the presence of dust and dim lighting, the condition of the floor below the boiler could not be fully assessed. Additionally, waste ash, which may contain heavy metals, was observed within the base of the boiler. Due to the poor condition of the oil-fired burner, close proximity to a former floor drain, inability to access the area beneath the oil-fired burner, and presence of waste ash, there is a potential for residual soil impacts in this area. Further investigation into the soil conditions in this area is warranted.

- **REC 5 – Former 3,000-gallon Fuel Oil UST**: One former 3,000-gallon fuel oil UST was identified on historic construction plans on the eastern exterior side of the Lot 30 Site Building. An associated pump was identified on the eastern most portion of the storage area within the Lot 30 Site Building as well. The fuel oil UST depicted on the historical plan was connected to a pump and subsequently to the oil-fired boiler (REC 4) via underground piping. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 3,000-gallon fuel oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 6 – Former 550-gallon Waste Oil UST**: One former 550-gallon waste oil UST was identified on historic construction plans on the southeastern exterior or of the Lot 30 Site Building. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 550-gallon waste oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 7 – 55-Gallon Waste Oil Drum Storage**: Approximately six circular stains, indicative of former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining. The presence of this staining represents evidence of historical drum storage and waste generation, which presumably was how waste oil was stored after the waste oil UST was removed in 1995 until 2015, when automobile repair operations ceased. Due to the observed crack in the concrete and the evidence of staining in this area, further investigation of the soil conditions in this area is warranted.

  Additionally, Ransom observed three 55-gallon steel drums containing waste oil within the service garage area of the Lot 30 Site Building, presumably generated by former automobile repair operations. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. No further investigation is recommended in connection with the existing 55-gallon waste oil drums; however, proper removal and off-site disposal is required prior to Site redevelopment.

- **REC 8 – Current/Former Residential Use**: Ransom identified one current and eight former residential buildings associated with the Site. The existing Residential Building is known to use fuel oil for heating. The historical heating source(s) for the former residential structures are unknown. Lastly, private septic systems are also associated with residential use. Therefore, there is a potential for one or more heating oil (No. 2) USTs and/or one or more septic systems to be present on-Site as follows:

  - **REC 8A – Known Fuel Oil Use at the Residential Building**: Property records were identified by Ransom for the Residential Building located on the Lot 26 portion of the Site, which indicated the usage of fuel oil at this property. Ransom was unable to confirm the presence of a fuel oil tank or boiler at the Residential Building; however, a sealed fill pipe was observed on the eastern side of the structure, along the foundation of the Lot 30 Site Building, indicating the potential presence of a fuel oil AST in the basement. Further, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, barring access into a room where a suspect boiler was located.

  - **REC 8B –Former Residential Use**: Historic records and construction plans identified the presence of eight residential structures (not including the current Residential Building) at the Site prior to redevelopment activities in 1974 and 1980. Specific documentation regarding these structures was not identified by, or provide to, Ransom.

  Due to the potential for historic fuel oil usage on the Lot 26 portion of the Site and based on the absence of a known heating source, UST, and/or septic system information for the former residential houses, further investigation is warranted regarding this REC.

- **REC 9 – Potential Fill**: The 1898 Sanborn Map indicted one of the former residential properties with "Low Ground," which indicates that the property had a potential to have been historically filled. The location of this "Low Ground" indication is mostly beneath the present-day Lot 30 Site Building. Based on the unknown source and characteristics of this potential fill material, Ransom believes that the potential exists for off-site fill material to have been brought on-Site; therefore, Ransom recommends that a subsurface investigation be conducted to assess whether historical fill is present on-Site and if it has impacted the environmental conditions at the Site.

- **REC 10 – Potential Off-site Sources**: Ransom identified two current off-site uses where known or potential past discharges of hazardous chemicals from facilities, including a gasoline filling station and an automotive repair facility, have or may have occurred upgradient of the Site and one off-site use where potential past discharges of hazardous chemicals from facilities, including a former gasoline filling may have occurred sidegradient of the Site. The following potential off-site sources were identified in close proximity to the Site, and represent RECs.

    - **REC 10A – Off-Site Citgo Service Station**: The southerly adjacent Citgo-gasoline filling station was identified as an active service station with multiple active NY Spills incident numbers associated with this property.

    - **REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center**: A property located approximately 390 feet to the south of the Site was identified as an active auto body and repair center that has a NY Spills incident with a "Closed" status.

    - **REC 10C – Former Riverdale Auto Service Inc.**: The property located 377 Riverdale Avenue, located adjacent (across Riverdale Avenue) to the west and sidegradient of the Site, was identified as a potential off-Site source due to its use as a former gasoline service station from at least 1940 through at least 1978; however, no further information was identified.

  Due to the close proximity, NY Spill incident(s) and/or former/current use, Ransom recognizes the potential for off-Site impact to the Site from the current filling station, active auto body and repair center, and former off-site service station operations; therefore, further investigation is warranted.

In addition to the RECs identified above, Ransom identified the following condition of potential environmental concern, which is being documented as a *de minimis* condition as follows:

- **Site-Wide Solid Waste**: Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, 5-gallon buckets with cooking oil, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property.

Some additional environmental concerns were identified which are considered non-scope under ASTM, but were recognized as areas of potential business environmental risk. Specifically, based on the construction date of the Lot 30 Site Building (1974) and the Residential Building (pre-1897), hazardous building materials may be present in the Site Buildings, including asbestos-containing materials (ACM), polychlorinated biphenyls (PCBs) in fluorescent light ballasts, lead-based paint (LBP), and mercury-containing fluorescent lights and/or other equipment. Prior to demolition of the current Site Buildings, identified hazardous building materials should be removed and disposed of in accordance with local, state, and federal regulations.

Based on the findings and conclusions presented above, Ransom makes the following recommendations:

- Based upon the construction date of the Site Building (1974) and Residential Building (pre-1897), hazardous building materials may be present within the Site buildings. Ransom recommends the performance of a comprehensive Hazardous Material Inventory (HMI) survey prior to demolition of the Site Buildings.

- Ransom recommends that sub-slab soil samples be collected along the drainage pipes and on-Site sanitary sewer lines associated with the automotive repair floor drains (REC 1). In an effort to target potential heavily impacted areas, video inspection of the pipes for evidence of cracks or breaches could be conducted as part of the geophysical survey recommended below. Based on the findings of the video inspection, soil sampling could be biased towards those areas of pipe cracks/breaches.

- Ransom recommends the completion of a geophysical survey across the Site in an effort to: (1) confirm the removal of the 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6) presumably removed from the Site in 1995, and (2) assess if one or more historic USTs, former product piping, and/or septic tanks are present from the current/former residential use (REC 8). If anomalies are identified, further subsurface investigation may be warranted.

- A subsurface soil and groundwater investigation is recommended prior to the initiation of construction activities. Ransom recommends the following soil and groundwater monitoring program be completed prior to redevelopment activities:

    - Ransom recommends the collection of sub-slab soil and groundwater samples from beneath the current/former hydraulic lifts and one hydraulic alignment rack (RECs 2A and REC 2C) within the Lot 30 Site Building.

    - Ransom recommends the collection of sub-slab soil samples from beneath the five identified wall-mounted hydraulic fluid reservoirs (REC 2B) within the Lot 30 Site Building immediately adjacent to the exposed subsurface piping.

    - Ransom recommends the collection of sub-slab soil samples immediately adjacent to the three floor-mounted control boxes (REC 2D) within the Lot 30 Site Building.

    - Ransom recommends the collection of subsurface soil and groundwater samples in the locations of the former 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6).

    - Ransom recommends the collection of subsurface soil samples at the location of the crack observed near the former waste oil drum storage/staining (REC 7).

    - Ransom recommends the collection of subsurface soil samples at the location of the potential historical fill area (REC 9).

    - Ransom recommends the installation of temporary groundwater monitoring points and/or soil borings along the southern boundary of the Site to evaluate potential off-Site impacts to the Site (REC 10).

- Since there were physical obstructions (e.g., stored vehicles, dirt, welded doors, etc.), which represent a significant data gap, and based on historical operations, Ransom recommends the physical obstructions be removed and further inspection completed of the ground surface areas beneath the former air compressor (REC 2E), the stored vehicles (REC 3), the inactive oil-fired burner (REC 4) and potential residential fuel-oil fired boiler (REC 8). Further investigation activities may be warranted based on the findings.

- Ransom recommends the proper disposal of the fuel oil-fired burner and its contents (e.g., waste ash) (REC 8) identified within the Lot 30 Site Building. After removal, Ransom recommends further inspection of the surface areas beneath the fuel oil-fired burner. Further investigation activities may be warranted based on the findings.

- 55-Gallon drums present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.

- On-Site drainage structures, including potential septic system components and/or storm water drainage structures (catch basins, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned according to local, state, and federal requirements. If evidence of contamination is identified during decommissioning of these structures, Ransom should be contacted to evaluate whether additional investigation or cleanup is warranted.

- Ransom recommends that miscellaneous chemicals, hazardous materials and/or stored appliances observed at the Site should be recovered/removed from the Site and properly disposed/recycled (by a certified technician where applicable) prior to proposed redevelopment activities.

## 1.0 INTRODUCTION

The following report presents the findings of a Phase I Environmental Site Assessment (ESA) performed by Ransom Consulting, Inc. (Ransom) for the adjoined properties located at 13 Culver Street and 372 Riverdale Avenue in the City of Yonkers, Westchester County, New York (i.e., the Site), which includes Section 1, Block 129, Lots 26 and 30. A Site Location Map and Site Plan are included as Figures 1 and 2, respectively.

### 1.1 Purpose and Scope of Work

The purpose of this Phase I ESA was to document the environmental history of the Site, to evaluate the likelihood that a release of hazardous substances or petroleum products (HSP) has occurred or has the potential to impact the Site, and to provide our professional opinion regarding evidence of recognized environmental conditions (RECs) in connection with the Site. The term recognized environmental conditions means:

> *The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*

The term REC also includes controlled RECs (CRECs) and historical RECs (HRECs), as defined below:

> The term CRECs means:
>
> *A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*
>
> The term HRECs means:
>
> *A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.*

This Phase I ESA was performed in accordance with the requirements of the ASTM International E 1527-13. This project was also conducted in accordance with the Ransom's Corporate Services Agreement with CVS Pharmacy, Inc. (CVS) dated April 1, 2015 (the "Corporate Services Agreement"). The general purpose of this Phase I ESA was to evaluate the environmental condition of the Site for evidence of RECs in connection with the Site.

The scope of work for this Phase I ESA included the completion of the following tasks:

1. Review of municipal records and a search of state and federal environmental databases to identify sites of potential environmental concern for the Site and vicinity.

2. Review of reasonably ascertainable historical land use records for the Site and adjoining properties.

3. A site reconnaissance to observe current conditions.

4. Interviews with persons knowledgeable about the Site.

1.2 Limitations

This Phase I ESA was prepared exclusively for the use of T.M. Crowley & Associates, Inc. (TMC) and CVS Pharmacy, Inc., its parent, affiliates and subsidiaries and their successors, assigns, and grantees, collectively "the Users," and in accordance with the Corporate Services Agreement.

Along with the limitations set forth in various sections of the ASTM International E 1527-13 protocol, the accuracy and completeness of this report is limited by the following:

1. Access Limitations: Access limitations were encountered during site reconnaissance activities. Access to the Residential Building was limited to the eastern portion of the basement, as access to the upper floors was restricted due to safety concerns.

2. Physical Obstructions to Observations: The paved parking areas in the vicinity of the Lot 30 Site Building was observed with numerous parked vehicles; therefore, much of the paved areas surrounding the Lot 30 Site Building could not be observed. Additionally, three vehicles were parked over the hydraulic lifts within the service garage of the Lot 30 Site Building, specifically in Bay 2, Bay3, and Bay 6; therefore, these areas could not be observed. Numerous vehicles were also parked throughout the existing storage area in the northeastern most portion of the Lot 30 Site Building; therefore, concrete slab/floor conditions could not be observed. Additionally, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, further barring access to this building. Lastly, the area around the inactive fuel-oil fired boiler was cover in dirt and located in a dimly lit room; thereof conditions of the concrete surface could not be fully assessed.

3. Outstanding Information Requests:

   The United States Army Corps of Engineers (USACE) have not provided information in response to Ransom's information requests regarding wetlands permits and violations. On May 9, 2017, the USACE responded and stated that files were available for review, and that a file search was underway. At the time this report was prepared; however, Ransom was awaiting further response regarding the duplication of the files. Upon receipt and review, pertinent information will be provided in an addendum to this report.

   The City of Yonkers Fire Department have not provided information in response to Ransom's information requests regarding incident records. On May 11, 2017, the City of Yonkers Fire Department was contacted by Ransom and the request was re-initiated. At the time this report was prepared; however, Ransom was awaiting further response regarding the duplication of files. Upon receipt and review, pertinent information will be provided in an addendum to this report.

Freedom of Information Law requests were submitted to the New York State Department of Environmental Conservation (NYSDEC) regarding spill incidents for the Citgo service station located at 380 Riverdale Avenue, Yonkers NY on May 12, 2017. At the time this report was prepared, Ransom had not received a response from the NYSDEC. Upon receipt and review, pertinent information will be provided in an addendum to this report.

4. Historical Data Source Failure: The Site's first developed use could not be determined. Topographic maps, aerial photographs, and Sanborn maps suggest that the Site was developed as residential properties as early as 1897; however, prior use cannot be confirmed. This represents historical data source failure according to ASTM E 1527-13; however, based on the known prior use of the Site for residential purposes, this data source failure does not represent a significant concern warranting additional investigation.

5. Significant Assumptions: Based on Ransom's Site observations and review of United States Geological Survey (USGS) maps, Ransom assumes groundwater follows topographic gradient and flows to the north/northwest toward the Hudson River, located approximately 0.46-miles to the west of the Site. Also, based on known information, the USTs referenced within the City's permitting documentation indicated that removal activities for two USTs were completed by September 1995; however, documents reviewed did not reference UST contents or capacities; Ransom assumed this documentation to be the removal of one 3,000-gallon fuel oil UST and one 550-gallon waste oil UST; however, detailed UST removal documentation was not identified by Ransom.

6. Exceptions: None.

7. Deviations: Per the Corporate Services Agreement with CVS, Ransom performed a limited visual assessment and/or research related to suspect asbestos, lead-based paint, polychlorinated biphenyl (PCB) containing equipment, mercury-containing fluorescent lamps and other equipment, radon, and wetlands.

8. Other: None.

### 1.3 User Provided Information

An ASTM User Questionnaire was completed by Ms. Kristen Walker of TMC on April 28, 2017. On May 9, 2017 Ransom also interviewed Mr. Daniel Romano, the property owner. A copy of the User Questionnaire is included in Appendix H, as Supplemental Documentation.

#### 1.3.1 Title Records

Title records in connection with the Site were provided by the Office of the Westchester County Clerk Online Records Review system available at https://wro.westchesterclerk.com. No environmental liens or activity/use restrictions regarding the Site were included within the property deeds. A review of the available title records is summarized in Section 3.2 of this report.

#### 1.3.2 Environmental Liens or Activity and Use Limitations

No activity and use limitations (AULs) were identified by the User for the Site, nor were AULs identified in the current property deeds.

### 1.3.3 Specialized Knowledge

No specialized knowledge in connection with the Site or facility operations was provided by the User.

### 1.3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or reasonably ascertainable information about the Site that is material to RECs in connection with the Site was provided by the User.

### 1.3.5 Valuation Reduction for Environmental Issues

The User did not identify a reduction in the purchase price of the Site, compared to the fair market value.

### 1.3.6 Owner, Property Manager, and Occupant Information

No information pertinent to RECs in connection with the Site was provided by the owners, property managers, or occupants with the exception of that information presented in the remainder of this document.

### 1.3.7 Reason for Performing Phase I ESA

This Phase I ESA was performed as part of environmental due diligence to support a property transaction involving the Site.

### 1.3.8 Previous Environmental Reports

At the time this report was prepared, no knowledge or documentation regarding previous environmental investigations, assessments, and/or remedial activities performed at the Site were identified by Ransom.

## 2.0 PROJECT LOCATION/DESCRIPTION

### 2.1 Site Location and Description

The Site is located at the northeast corner of the intersection of Culver Street and Riverdale Avenue in the City of Yonkers, Westchester County, New York. For the purpose of this Phase I ESA, the Site consists of two parcels of land encompassing a total of approximately 1.02-acres and is identified by the City of Yonkers Assessor's Office as 13 Culver Street and 372 Riverdale Avenue, Section 1, Block 129, Lots 26 and 30, respectively.

The Lot 26 portion of the Site is currently developed with a two and a half-story, 1,320-square foot Residential Building with a full basement, constructed sometime prior to 1897. The Lot 30 portion of the Site is currently developed with one 8,695-square foot commercial structure, constructed sometime in 1974, which is currently occupied by West Coast Autos Sales, an automotive sales company. The Lot 30 Site Building previously operated as a Goodyear branded automotive repair shop and tire sales center from 1974 until 2015. The Lot 30 Site Building consists of eight automotive garage bays within the service garage, two restrooms, a former employee locker room, boiler room, storage areas, two offices, and showroom. The remainder of the property consists of concrete walkways and asphalt paved parking surfaces, with an area of limited landscaping consisting of several trees and bushes between the Lot 26 and Lot 30 portions of the Site.

The Site is located in a mixed commercial and residential area of the City of Yonkers. Properties to the north of the Site are primarily residential. Properties to the south of the Site, across Culver Street, are primarily residential, with the exception of a Citgo-branded gasoline filling station. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body & Repair Center. The PEARLS Hawthorne Elementary School is located to the west of the Site, across Riverdale Avenue. The property to the east of the Site is a City of Yonkers operated park, known as Culver Park.

The Site is located on the City of Yonkers, New York, U.S. Geological Survey (USGS) 7.5-minute series Quadrangle and is located at the approximate Universal Transverse Mercator (UTM) coordinates of 4,530,414 meters north and 592,563 meters east. The latitude and longitude of the Site are 40° 55' 10.5636" and -73° 54' 1.908", respectively. A Site Location Map is provided as Figure 1 (Appendix A). A Site Plan and photograph log are included as Appendices B and D, respectively.

### 2.2 Site Utilities

Based on information provided by Mr. Daniel Romano, the property owner, the Lot 30 Site Building is currently connected to water and sanitary sewer service provided by the City of Yonkers. Historical Site plans indicate that the Lot 30 Site Building has bene connected to the municipal water and sanitary sewer system since the building was erected, sometime in 1974. A total of 15 current, closed, or former floor drains were observed within the Lot 30 Site Building, which reportedly discharge to the sanitary sewer system. Electric and natural gas (for heat) service to the Lot 30 Site Building is provided by the Consolidated Edison Company of NY, Inc. (ConEdison), where a roof-mounted heating, ventilation, and air conditioning (HVAC) system was utilized. Solid waste removal is the responsibility of the tenant. Overhead heaters were observed during site reconnaissance activities within the service garage of the Lot 30 Site Building. Based on records provided by the City of Yonkers Building and Housing Department, one 3,000-gallon fuel oil UST was removed from the eastern side of the Lot 30 Site Building in sometime in or around August 1995, indicating the use of the oil-fired burner and fuel oil prior to this time.

Additionally, according to Mr. Daniel Romano, all utility services to the Residential Building has been discontinued. Records identified through the City of Yonkers City Clerk's Office indicate that the fuel oil was historically utilized at the Residential Building. No additional information regarding utilities at the Residential Building was identified by Ransom, including the presence or absence of a septic system.

## 2.3 Environmental Setting

### 2.3.1 Topography

Based on field observations, topography at the Site generally slopes downward to the north-northwest. According to the Yonkers, New York-New Jersey, 7.5-Minute USGS Quadrangle, dated 2013, the topography in the immediate vicinity of the Site declines to the north-northwest; however, the topography in the greater area of the Site declines to the west, toward the Hudson River, located approximately 0.46-miles to the west of the Site. The elevation of the Site is approximately 50-feet above mean sea level on the North American Vertical Datum (NAVD) of 1988.

### 2.3.2 Soils/Geology

Based on a review of the U.S. Department of Agriculture's (USDA) Web Soil Survey, the Site is underlain by Urban land-Woodbridge complex soils, with 3 to 8 percent slopes (UwB). Urban land soils consist of natural and disturbed soil material overlain by man-made structures, including buildings and asphalt. Woodbridge soils consist of fine sandy loams from 0 to 7-inches below grade, fine sandy loams from 7 to 30-inches below grade, and gravelly fine sandy loams from 30 to 65-inches below grade. Woodbridge soils are derived from coarse-loamy lodgment till derived from gneiss, granite, and/or schist.

### 2.3.3 Hydrogeology

Based on Ransom's observations of Site topography, groundwater at the Site is anticipated to generally flow to the north-northwest, toward the Hudson River. The Hudson River is located approximately 0.46 miles to the west of the Site.

### 2.3.4 Surface Water Bodies

Surface water bodies were not observed at or adjacent to the Site. The nearest body of water is the Hudson River located approximately 0.46-miles to the west of the Site.

### 2.3.5 Wetlands

According to the U.S. Fish and Wildlife Service National Wetlands Inventory website and delineated wetlands are not located at the Site or adjacent properties.

On May 8, 2017, Ransom submitted a Freedom of Information Act (FOIA) request to the United States Army Corps of Engineers (USACE) regarding wetlands or wetlands violates at the Site. On May 9, 2017, the USACE responded and stated that files were available for review, and that a file search was underway. At the time this report was prepared, however, Ransom was awaiting further response regarding transmittal of the files. Upon receipt and review, pertinent information will be provided in an addendum to this report.

### 2.3.6 Flood Plains

The Site is located on the Federal Emergency Management Agency (FEMA) Flood Insurance Map (Parcel 36119C0317F). Based on the FEMA map, the Site is not located within a designated Flood Zone.

### 2.3.7 Potential for Radon Gas

According to the EDR Report, the U.S. Environmental Protection Agency (U.S. EPA) Radon Zone Classification for Westchester County, NY is 3, which is defined by U.S.EPA as an indoor average level less than 2 picoCuries/Liter (pCi/L). The average radon concentrations of the 650 sites tested in the same zip code as the Site were 1.730 pCi/L for basement areas and 0.930 pCi/L for living areas, which are below the U.S. EPA residential action level of 4.0 pCi/L. Based on the radon concentration information provided in the EDR Report and the proposed slab on grade construction and commercial use of the Site, radon abatement activities should not be necessary. A copy of the EDR report is provided in Appendix E.

## 3.0 HISTORICAL/RECORDS REVIEW

### 3.1 Summary

Ransom determined the Site history based on an interview with the property owner, historical topographic maps, historical aerial photographs, historical Sanborn maps, and historical city directories.

The Site was developed as multiple separate residential properties as early as 1897. The Site originally was comprised of nine separate lots with ten residential structures, identified on historical maps as 366, 370, 372, 374, 376 and 378 Riverdale Avenue and 15, 17, 21, and 21R Culver Street. Historically, the Residential Building located on the Site has been identified as both 13 Culver Street and 15 Culver Street. By as early as 1973, the residential structures previously located at 17, 21, and 21R Culver Street, and 372, 374, 376, and 378 had been cleared from the Site. Construction of the Lot 30 Site Building was completed by as early as May 1974, at which time the Goodyear Tire & Rubber Co. took up occupancy. Commercial improvements to the Lot 30 portion of the Site were completed in June of 1980, at which time two remaining residential structures, located to the north of the Lot 30 Site Building, were removed from the Site and a paved parking area was installed. The Residential Building located at 13 Culver Street is the only remaining residential structure on-Site. The Goodyear Tire & Rubber Co. operated as an automotive repair and tire sales center from 1974 until 2015. The West Coast Custom Auto Sales company, an automotive sales company, took up occupancy of the Lot 30 Site Building sometime June 2016 and is the current occupant.

Occupancy of the Residential Building has been strictly residential from as early as 1897 through sometime in 2009, at which time the Residential Building was vacated, as it remains currently. The northern portion of the Lot 26 portion of the Site is currently utilized for vehicle storage by a neighboring property owner, no further information was identified regarding current property usage of the Residential Building and surrounding property.

### 3.2 Title Records

The Site is identified on the City of Yonkers Assessor's Tax Map Section 1, Block 129, Lots 26 and 30. The following property ownership records were identified from information provided through the Office of the Westchester County Clerk – Westchester Records Online portal https://wro.westchesterclerk.com:

| **13 Culver Street, Yonkers NY** | | | | |
|---|---|---|---|---|
| **Parcel** | **Address** | **Grantor** | **Grantee** | **Date** |
| Block: 151, Lot 8 | 401 Riverdale Avenue, Yonkers NY | New York State Department of Transportation – Real Property Division | Newross Realty Corp. c/o Jack Toal, Andrew Sunull, Lilly McNeil, and Joseph Bera | September 17, 1980 |
| Block: 129, Lot 26 | 15 Culver Street, Yonkers NY | Floyd Freeman, as Administrator of the Estate of Lillie Mae McNeil | Floyd Freeman | January 19, 1995 |
| Block: 129, Lot 26 | 15 Culver Street, Yonkers NY | Floyd Freeman | Floyd Freeman and Lucy Freeman | January 19, 1995 |
| Block: 129, Lot: 26 | 15 Culver Street, Yonkers NY | Lucy Ruth Freeman, as Executor of the | Lucy Ruth Freeman | April 12, 2004 |

| | | | | |
|---|---|---|---|---|

| Block: 129, Lot 26 | 15 Culver Street, Yonkers NY | Freeman, Lucy R | 15 Culver St Realty Corp | December 24, 2014 |
| Block: 129, Lot: 26 | 15 Culver Street, Yonkers NY | 15 Culver Street Realty Corp. | Dutchman Realty LLC | February 3, 2017 |

| **372 Riverdale Avenue, Yonkers NY** | | | | |
|---|---|---|---|---|
| **Parcel** | **Address** | **Grantor** | **Grantee** | **Date** |
| Block: 129, Lot: 37, 38, and 39 | 366 Riverdale Avenue, Yonkers, NY | Joseph Meechan and Elizabeth K. Meechan | Luma Realty Inc. | July 31, 1969 |
| Block: 129, Lot: 32 | 378 Riverdale Avenue, Yonkers, NY | Georgianna Mann | Luma Realty Inc. | September 10, 1970 |
| Block: 129, Lot: 33 | 376 Riverdale Avenue, Yonkers, NY | Rachel Coleman | Luma Realty Inc. | June 19, 1971 |
| Block: 129, Lot: 34 | 374 Riverdale Avenue, Yonkers, NY | Max Fabel and Pauline Fabel | Luma Realty Inc. | October 1, 1972 |
| Block: 129, Lot: 36 | 370 Riverdale Avenue, Yonkers, NY | Laurette Walsh | Luma Realty Inc. | December 22, 1972 |
| Block: 129, Lot: 30 | 372-8 Riverdale Avenue, Yonkers, NY | Luma Realty, Inc. | Mary Louise Romano | December 28, 1988 |
| Block: 129, Lot: 30 | 372-8 Riverdale Avenue, Yonkers, NY | Mary Louise Romano | Mary Louise Romano and John N. Romano | June 1, 2000 |
| Block: 129, Lot: 30 | 372 Riverdale Avenue, Yonkers NY | John N. Romano | Mary Louise Romano | November 1, 2003 |
| Block: 129, Lot: 30 | 372 Riverdale Avenue, Yonkers NY | Mary L. Romano | Mary Louise Romano Irrevocable Income Only Trust Fund / Andrew Romano | February 14, 2012 |
| Block: 129, Lot: 30 | 372 Riverdale Avenue, Yonkers NY | Mary L. Romano Irrevocable Income Only Trust Fund | Andrew M. Romano and Daniel P. Romano | May 28, 2013 |

### 3.3 Prior Use Interviews

Ransom interviewed Mr. Daniel Romano, the property owner, on May 9, 2017 regarding prior Site use. Mr. Romano informed Ransom that the Goodyear Tire & Rubber Co. operated as an automotive repair facility and tire sales center from 1974, at which time the Lot 30 Site Building was constructed, through sometime in 2015. Mr. Romano indicated that the Lot 30 Site Building was currently occupied by a used car dealership identified as the West Coast Custom Auto Sales company. Mr. Romano indicated that a heating oil tank was utilized for the Lot 30 Site Building, but was unaware of removal activities. Mr. Romano informed Ransom that the Residential Building had been vacant since sometime in 2009, and was heated by natural gas provided by ConEdison. Mr. Romano also indicated that the northern portion of the Lot 26 portion of the Site was currently being utilized as a vehicle storage area by a neighboring property owner; however, further information was not provided.

## 3.4 Local, State, and Federal Government Agency Record Review

### 3.4.1 City of Yonkers Assessor's Office

Information provided by the City of Yonkers Assessor's Office included current property cards and tax maps for the Site properties. Copies of the property cards and tax maps are included in Appendix H. Information provided by the Assessor's Office regarding the Site history coincided with information discussed in Section 3.1 of this report. Information pertaining to potential underground or aboveground storage tanks, hazardous waste storage, and/or adverse environmental conditions at the properties was not provided on the property cards. No additional information was provided by the City of Yonkers Assessor's Office.

### 3.4.2 City of Yonkers Building and Housing Department

Information provided by the City of Yonkers Building and Housing Department included various building permits for alterations and improvements of the Site Buildings. On May 9, 2017, Ransom reviewed available files provided by the City of Yonkers, which included the following pertinent permitting/inspection documents reviewed for the Lot 30 Site Building/property located at 372 Riverdale Avenue:

- Construction Plan: Proposed construction plans dated sometime in 1973 detailed the proposed Lot 30 Site Building engineering plans. Specifically, the plans indicated that a 550-gallon waste oil UST was to be installed on the southeast exterior corner of the Lot 30 Site Building. This waste oil UST was associated with historic automotive repair activities at the Site. This construction plan additionally illustrated that location for the 3,000-gallon fuel oil UST on the eastern exterior of the Lot 30 Site Building with an associated pump and appurtenant piping that connected to fuel-oil fired boiler inside the eastern portion of the Lot 30 Site Building. The plans also indicated seven hydraulic lifts and one hydraulic alignment rack were to be installed with the service bays of the Lot 30 Site Building with associated control boxes. The plans detailed a cross-section of the proposed underground lift housing and hydraulic oil reservoirs plans. They also depicted a floor drainage plan, where on-Site floor and roof drain (where roof venting operations were detailed) drain to the sanitary sewer system.

- Certificate of Occupancy: A Certificate of Occupancy dated June 12, 1973 listed Luma Realty as the property owner for the Lot 30 portion of the Site and the Goodyear Tire & Rubber Co. as the tenant.

- Construction Plan: Construction plans dated October 12, 1979 detail plans to demolish the remaining residential structures on the northwest portion of the Site.

- Permit Application: A permit application was submitted on July 7, 1980 for the construction of an open air paved parking area in the vicinity of the Lot 30 Site Building, in the location of the former residential structures on-Site.

- Permit Application: A permit application was submitted on June 26, 1995 by Mr. John Romano requesting permission for the removal of underground storage tanks.

- Certificate of Completion: A certificate of completion was issued on August 14, 1995 to Ms. Mary Romano for the removal of underground oil tanks for the property located at 372 Riverdale Avenue, Yonkers NY.

- Permit Application: A permit application was submitted on June 16, 2016 by Mr. Andrew Romano to complete Site improvement activities to the Lot 30 Site Building. The application was listed as denied by the City of Yonkers Building and Housing Department.

- Permit Application: A permit application was submitted on April 7, 2017 to complete improvement activities to the Lot 30 Site Building, which was subsequently denied by the City of Yonkers Housing and Building Department. Plans included within this application indicated that a flue pipe connected to the hot water heater was not properly vented and was venting carbon monoxide to the interior of the Lot 30 Site Building. Plans also indicated that the overhead gas radiant heaters within the service garage were damaged.

The following pertinent permitting/inspection documents reviewed for the Residential Building/property located at 13 Culver Street were identified:

- Permit Application: A permit application was submitted on July 10, 1956 to complete improvements/alterations to the basement of the Residential Building.

- Permit Amendment: A permit amendment was submitted on September 10, 1957 for alterations/additions to the porch of the Residential Building.

- Permit Approval: A permit approval dated September 18, 1958 granted additions and alterations to the Residential Building to the property owner, Mr. William McNeill.

- Permit Application: A permit application dated sometime in 1975 was submitted for the addition of two restrooms to the first floor of the Residential building.

Copies of the permitting documentation reviewed above are included in Appendix H, as Supplemental Documentation.

Information provided by the Building Department regarding Site history coincided with information discussed in Section 3.1 of this report. The files reviewed at the Building Department did not include information pertaining to adverse environmental conditions at the Site.

### 3.4.3 City of Yonkers Fire Department

A request for information was submitted to The City of Yonkers Fire Department on May 1, 2017; however, at the time this report was prepared, Ransom was awaiting further response regarding the request. Upon receipt and review, pertinent information will be provided in an addendum to this report.

### 3.4.4 City of Yonkers Public Works Department

No pertinent information regarding current and/or former water use or sewage disposal was provided by the City of Yonkers Public Works Department.

### 3.4.5 Westchester County Department of Health

A request for information was submitted to the Westchester County Department of Health of May 1, 2017. On May 10, 2017, the Westchester County DOH responded that Ransom's request for information had been received and that documents will be received by June 9, 2017. On June 7, 2017, a verbal response was received from Ms. Caren Halbfinger, the Public Affairs Director, of the Westchester County Department of Health that no records were available for review for the Site and documentation confirming this will be received by June 9, 2017.

### 3.4.6 New York State Department of Environmental Conservation

Freedom of Information Law requests were submitted to the NYSDEC regarding spill incidents for the Citgo service station located at 380 Riverdale Avenue, Yonkers NY on May 12, 2017. At the time this report was prepared, Ransom had not received a response from the NYSDEC. Upon receipt and review, pertinent information will be provided in an addendum to this report.

## 3.5 Historical Maps

Sanborn Maps

Sanborn Fire Insurance Maps dated 1898, 1917, 1942, 1951, 1956, 1957, 1971, 1973, 1978, 1989, 1991, and 2004 were provided by EDR. The following is a description of the Site and the surrounding properties. The Certified Sanborn Map Report is included in Appendix F.

**1898 Sanborn Map:** The Site consisted of ten residential dwellings. The property located at present-day 13 Culver Street was depicted with a two-and a half story residential dwelling and one two-story stable/outbuilding. The remainder of the Site consisted of nine residential dwellings, historically identified as 366, 370, 372, 374, 376, and 378 Riverdale Avenue and B, C, D, and H Culver Street. The C Culver Street property was identified as "Low Ground." The adjacent property to the north of the Site consisted of one residential dwelling, identified as 362 Riverdale Avenue. The adjacent property to the east of the Site consisted of vacant land. The adjacent property to the south of the Site, across Culver Street, consisted of the Yonkers Railway Co. Car Barn. The adjacent properties to the west of the Site, across Riverdale Avenue, consisted of three residential dwellings, identified as 369, 371, and 373 Riverdale Avenue. Properties located further north of the Site have been improved with residential dwellings.

**1917 Sanborn Map:** The Site consisted of a total of ten residential dwellings, including the Residential Building identified as present day 13 Culver Street. Two residential properties located on the Site, 374 and 376 Riverdale Avenue, consisted of commercial storefronts along Riverdale Avenue. The residential properties identified as B, C, D, and H Culver Street are now depicted as 15, 17, 21, and 21R Culver Street, respectively. Three stables/outbuildings were identified on the northeast portion of the Site and one automotive use outbuilding was identified on the north-central portion of the Site. No significant changes were observed to the adjacent properties to the north or west of the Site. The adjacent properties to the south of the Site have been improved with residential dwellings identified as 14, 16, 18, 20, 22, and 24 Culver Street and 380, 382, 384, and 386 Riverdale Avenue, and the car barn is no longer depicted. The property to the east of the Site has been occupied by the Cast Stone Products Inc. company and improved with a cement storage area and office building.

**1942 Sanborn Map:** No major changes were noted to the Site or adjacent properties to the north when compared to the 1917 Sanborn map. The adjacent property to the east of the Site has been improved with four structures, of which the southwestern most structure was identified as an automobile garage. Adjacent properties to the south of the Site have been improved with residential dwellings identified as 6, 8, 10, and 12 Culver Street. Further south the property located at 390 Riverdale Avenue has been improved with a large rectangular commercial structure identified as the Ludlow Garage. The adjacent property to the west of the Site, identified as 373 Riverdale Avenue, has been cleared of residential dwellings. Additional residential dwellings were noted to the southwest of the Site across the intersection of Riverdale Avenue and Culver Street. The Hawthorne High School (present-day PEARLS Hawthorne School) was noted further west of the Site.

**1951 Sanborn Map:** The Site consisted of nine residential structures, including the Residential Building on the southeast portion of the Site. The three outbuildings located to the north of the Residential Building are no longer visible. Three automotive garage/outbuildings are identified on north-central portion of the Site. Two adjacent properties to the north, identified as 74 and 76 Post Street, have been improved with automobile garages/outbuildings. The adjacent property to the west, across Riverdale Avenue (373 Riverdale Avenue), has been improved with one commercial structure identified as a gasoline filling station with a canopy and six gasoline storage tanks. No major changes were noted on adjacent properties to the north, east, or south of the Site when compared to the 1942 Sanborn map.

**1956 Sanborn Map:** No major changes were noted to the Site or adjacent properties when compared to the 1951 Sanborn map.

**1957 Sanborn Maps:** No major changes were noted to the Site or adjacent properties when compared to the 1956 Sanborn map with the exception of the filling station property to the west of the Site, which no longer depicted the canopy or the six gasoline storage tanks.

**1971 Sanborn Map:** No major changes were noted to the Site or adjacent properties to the north or west of the Site. The adjacent property to the east has been cleared of all structures and was converted to a park/playground consistent with the location of present day Culver Park identified on historic aerial maps. The adjacent property to the south of the Site identified as 380 to 382 Riverdale Avenue was cleared of the previously identified residential dwellings and converted to vacant land.

**1973 Sanborn Map:** The residential dwellings previously identified as 372, 374, 376, and 378 Riverdale Avenue and 17, 21 and 21R Culver Street have been cleared from the Site. On the 1973 Sanborn map, the Site consisted of three residential dwellings, identified as 15 Culver Street (present-day Residential Building), 360 Riverdale Avenue, and 370 Riverdale Avenue. The Site additionally consisted of three automotive storage garage structures with the remainder of the Site consisting of vacant land. No major changes were noted on adjacent properties to the north, east, or west of the Site when compared to the 1973 Sanborn map. The adjacent property to the, previously identified as 386 Riverdale Avenue, was cleared of the residential dwelling.

**1978 Sanborn Map:** The Site has been improved with one irregular shaped commercial structure, consistent with the present-day construction of the Lot 30 Site Building, and paved parking areas. Three residential structures are identified on the Site. The adjacent property to the south, across Culver Street, identified as 38 Culver Street, has been improved with a commercial structure and potential UST field identified as a gasoline filling station at the location of the present day Citgo-branded service station. No significant changes were noted to adjacent properties to the west, southeast, or north of the Site when compared to the 1973 Sanborn map.

**1989 Sanborn Map:** Two residential dwellings, previously identified as 366 and 370 Riverdale Avenue, are no longer depicted the northwest portion of the Site. No significant changes were noted to the Lot 30 Site Building or adjacent properties to the north, east, or south of the Site when compared to the 1978 Sanborn Map. The gasoline filling station located on the adjacent property to the west of the Site, across Riverdale Avenue, is no longer depicted and the property was acquired by the Nathanial Hawthorne Junior High School. Residential dwellings previously located on the southwest corner of intersection of Culver Street and Riverdale Avenue are no longer identifiable on the 1989 Sanborn map and the property has been converted to vacant land. No significant changes to adjacent properties to the north, east, or south of the Site were noted when compared to the 1978 Sanborn map.

**1991 Sanborn Map:** No significant changes were noted to the Site or adjacent properties to the north, south, east, or west of the Site when compared to the 1989 Sanborn map.

**2004 Sanborn Map:** No significant changes were noted to the Site or adjacent properties to the north, south, east, or west of the Site when compared to the 1991 Sanborn map.

Historical Topographic Maps

Historical topographic maps dated 1897, 1898, 1900, 1947, 1956, 1966, 1979, 1995, 1998, and 2013 were provided by EDR. The following is a description of the Site and the surrounding properties. The EDR Historical Topographic Map Report is included in Appendix F.

**1897 Topographic Map:** The Site appears to be developed with a row of structures presumably the identified residential structures depicted on the 1898 Sanborn map. The surrounding area appears to be moderately developed, with structures denoted by black squares on adjacent properties to the north, south, and west of the Site. The Site and surrounding properties are depicted on yellow shaded land. Three separate railroad lines, each a line of the Hudson River Railroad, are depicted as running parallel to the Hudson River to the east and west of the Site. A roadway corresponding with the location of Riverdale Avenue is present on the map as well as a roadway corresponding with Culver Street.

**1898 Topographic Map:** Increased development was observed in the general vicinity of the Site. No discernable changes were observed on the Site or on adjacent properties when compared to the 1897 topographic map.

**1900 Topographic Map:** No significant changes were observed when compared to the 1898 topographic map.

**1947 Topographic Map:** The Site is depicted as mostly white developed (presumably residential) land, with the a larger structure on the eastern portion of the Site, originating at the corner of present day Livingston Avenue and Culver Street. The adjacent property to the south appears developed by the presence of a black square (typically denoting a structure). The adjacent property to the east appears developed and the presence of a roadway corresponding to the present-day Cliff Avenue was observed as well. An increased amount of development was observed in the surrounding area when compared to the 1900 topographic map, most notably to the north of the Site. Areas marked as green representing vegetated areas are depicted further south, southwest, east, and northeast of the Site.

**1956 Topographic Map:** The Site and surrounding area are depicted on red shaded, indicating an area of increased development and/or paving. No structures are denoted on the Site or adjacent properties. The Hawthorne High School Building is depicted at the intersection of Culver Street and Hawthorne Avenue,

to the west of the Site. Areas marked as green representing vegetated areas are depicted further southwest, east, and northeast of the Site.

**1966 Topographic Map:** The Site and surrounding area are depicted on red shaded land, indicating an area of increased development. No structures are denoted on the Site or adjacent properties. No significant changes were observed when compared to the 1956 topographic map.

**1979 Topographic Map:** No significant changes to the Site or surrounding properties was depicted on the 1979 topographic map. A slight increase in the amount of developed properties can be observed as purple marked squares, which represent newly built structures when compared to the most recent previous topographic map.

**1995, 1998 Topographic Maps:** No significant changes were observed to the Site or surrounding properties when compared to the 1979 topographic map.

**2013 Topographic Map:** The Site and surrounding area are depicted as white shaded land. No discernable structures are observed on the Site or surrounding properties.

### 3.6 Aerial Photography

Aerial photographs of the Site and surrounding properties dated 1940, 1951, 1954, 1962, 1974, 1976, 1984, 1989, 1991, 1994, 1995, 2006, 2008, 2009, 2010, 2011 were provided by EDR. The following is a description of the Site and the surrounding properties. The EDR Aerial Photo Decade Package is included in Appendix C.

**1940 Aerial Photograph:** The Site consisted of presumably residentially developed land, with individual residential structures identifiable on the aerial photograph; however, the number of structures was unable to be determined due to the quality of the photograph. South of the Site, across Culver Street, consisted of several presumably residential structures. West of the Site, across Riverdale Avenue, a larger structure is identifiable on the northwest corner of the intersection of Riverdale Avenue and Culver Street (identified as a filling station on the Sanborn Maps). Additionally, a structure corresponding to the present-day location for the PEARLS Hawthorne School is identifiable further west of the Site, at the northeast corner of the intersection of Culver Street and Hawthorne Avenue. The property to the east of the Site was appears partially developed with at several identifiable structures. North of the Site consisted of potentially residential dwellings.

**1951 Aerial Photograph:** The Site consisted of at nine residential structures. No major changes were noted at the adjacent properties in comparison to the 1940 aerial photograph.

**1954 Aerial Photograph:** No major changes were noted to the Site or adjacent properties when compared to the 1951 aerial photograph.

**1962 Aerial Photograph:** No major changes were noted to the Site or adjacent properties to the north or south of the Site in comparison to the 1954 aerial photograph. The adjacent property to east of the Site has been cleared and no visible structures remain on this property, consistent with the present-day location for Culver Park. The property to the west of the Site, across Riverdale Avenue, appears to be a smaller building for filling station operations, consistent with the 1957 and 1971 Sanborn Maps. The property further to the west of the Site, appears to have been improved with a larger rectangular structure, which is consistent with the present-day building configuration of the PEARLS Hawthorne School.

**1974 Aerial Photograph:** Six of the residential structures previously identified on the Site have been removed and the Site has been improved with one large commercial structure, consistent with the present-day building construction for the Lot 30 Site Building and paved surface areas surrounding the Lot 30 Site Building. Two residential structures remained on the Site to the northwest of the Lot 30 Site Building. One residential structure, identified as the present-day on-Site Residential Building (13 Culver Street), is visible to the east of the Lot 30 Site Building. No major changes were noted to the adjacent properties to the north, west, and east of the Site. The adjacent property to the south of the Site, located at the southeast corner of the intersection of Riverdale Avenue and Culver Street, was cleared of three residential structures and improved with one small structure and one square-shaped canopy, indicative of a gasoline fueling station. This property coincides with the present-day location for the Citgo-branded gasoline fueling station.

**1976 Aerial Photograph:** Due to the poor image quality, the Site and adjacent properties are not clearly discernable on the 1976 aerial photograph.

**1984 Aerial Photograph:** The two residential structures to the northwest of the Lot 30 Site Building are no longer visible and presumed to have been cleared from the Site and turned into a commercial parking lot area. The Site appears to have been improved with additional paved areas in the location of the former residential structures. No major changes were noted at the adjacent properties in comparison to the 1976 aerial photograph with the exception of the filling station to the west no longer being present.

**1989 Aerial Photograph:** Due to the poor image quality, the Site and adjacent properties are not clearly discernable on the 1989 aerial photograph.

**1991 Aerial Photograph:** No major changes were noted at the Site or adjacent properties to the north, west, or south when compared to the 1984 aerial photograph. The property to the east of the Site was improved with paved basketball courts, consistent with the current location of Culver Park.

**1994, 1995, 2006 Aerial Photographs:** No major changes were noted at the Site or adjacent properties in comparison to the 1991 aerial photograph.

**2008 Aerial Photograph:** No major changes were noted at the Site or adjacent properties to the north or west when compared to the 2006 aerial photograph. The property to the east of the Site, identified as Culver Park, has been improved with a reconfiguration of the basketball courts and an area of disturbed paving/surface material was noted on the northern portion of this property. The property to the south of the Site, across Culver Street, identified as a Citgo-branded gasoline fueling station, appears to have been improved with a larger, rectangular shaped, canopy.

**2009 Aerial Photograph:** No major changes were noted at the Site or adjacent properties to the north, west, or south when compared to the 2008 aerial photograph. The adjacent property to the east of the Site, identified as Culver Park, has been improved with the construction of two play areas/equipment on the northern portion of the property, consistent with the present-day configuration of this property.

**2010, 2011 Aerial Photographs:** No major changes were noted at the Site or adjacent properties to the north, west, south, or east when compared to the 2009 aerial photograph.

## 3.7 Historical City Directories

To assist in identifying land use at the Property, Ransom identified historical city directories from EDR. Directories dated 1972 through 2013 were provided by EDR. The Property is located at 13 Culver Street and 372 Riverdale Avenue, Yonkers, NY. The following listings were provided regarding the Property address:

| Year | Address | Name | Operation |
|---|---|---|---|
| 1982, 1987 | 15 Culver Street | John H. McNeil and L M McNeill | Residence |
| 1992 | 15 Culver Street | Lillie M. McNeill | Residence |
| 1999 | 13 Culver Street | Occupant Unknown | Residence |
| 1999 | 15 Culver Street | Elvis Derios<br>Maribel Rios | Residence |
| 2003 | 15 Culver Street | Elvis Derios<br>Floyd Freeman | Residence |
| 2008, 2013 | 13 Culver Street | Floyd Freeman | Residence |
| 1972 | 372 Riverdale Avenue | Thomas J Scollan | Unknown |
| 1977, 1982, 1987 | 372 Culver Street | Goodyear Tire | Automotive repair shop and tire sales. |
| 1992 | 372 Riverdale Avenue | Goodyear Tire & Rubber Co. / The Auto Service Center of Yonkers | Automotive repair shop and tire sales. |
| 2003 | 372 Riverdale Avenue | Occupant Unknown | Unknown |
| 1999, 2008, 2013 | 372 Riverdale Avenue | Goodyear Auto Service Center | Automotive repair shop and tire sales. |

A copy of the City Directory Abstract is included in Appendix G.

## 3.8 Previous Investigations/Assessments

At the time this report was prepared, no knowledge or documentation regarding previous environmental investigations, assessments, and/or remedial activities performed at the Site were identified by Ransom.

## 4.0 SITE RECONNAISSANCE

On May 9, 2017, Erin R. Pente, Senior Environmental Scientist of Ransom, and Lauren Rojewski, Environmental Scientist of Ransom, conducted a general site reconnaissance. The Site visit included a visual reconnaissance of the property grounds and interior portions of the Lot 30 Site Building for the identification of HSP, evidence of releases, and/or potential releases of HSP. Mr. Daniel Romano, the property owner, provided Ransom with access to the Lot 30 Site Building. Access to the Residential Building on-Site was limited to the basement due to safety concerns. Additionally, entry through the north side of the Residential Building was restricted due to the welding shut of two doors. A photographic log is included in Appendix D.

### 4.1 Current Uses and Activities

The Lot 30 Site Building is currently occupied by a retail car sales company identified as West Coast Auto Sales, which has occupied the Lot 30 portion of the Site since the summer of 2016. The service garage and adjoining storage area within the Lot 30 Site Building, as well as the surrounding paved areas, are currently utilized for the storage of vehicles. Goodyear vacated the Site and discontinued automotive service operations and tire sales sometime in 2015. The Residential Building located on the Lot 26 portion of the Site is unoccupied, and according to Mr. Daniel Romano, not suitable for occupancy and has been vacant since sometime in 2009. The remainder of the Lot 26 portion of the Site is currently being utilized as vehicle storage by a neighboring property owner.

### 4.2 Hazardous Materials/Petroleum Storage and Handling

No automotive service operations are currently conducted at the Site. Ransom observed three 55-gallon steel drums containing waste oil within the service garage of the Lot 30 Site Building. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. Various cleaning solvents and motor oil storage containers were observed throughout the Lot 30 Site Building; however, no leaks from these stored materials were observed.

Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property. Most of the solid waste item were in good to poor condition; however no visible staining or leaks was observed on or around the materials or storage containers.

### 4.3 Waste Generation, Treatment, Storage, and Disposal

No waste is currently generated at the Site, with the exception of municipal solid wastes and recyclable materials, which are stored with separate dumpsters on the Lot 30 portion of the Site. The dumpsters were observed in good condition and no visible staining or leaks was observed on or around the dumpsters. The removal and proper disposal of these materials are the current responsibility of the tenant, West Coast Autos.

Former automotive repair operations on-Site utilized one 550-gallon waste oil UST, historically located on the southeastern exterior of the Lot 30 Site Building. The waste oil UST was presumptively removed from the Site sometime in 1995, at which time it is presumed that 55-gallon drums were utilized for the storage of waste oil until sometime in 2015. Three 55-gallon drums containing waste oil are still present within the service garage area of the Lot 30 Site Building that require proper disposal. The drums were

observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids.

Approximately six circular stains, indicative of staining related to former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining. The presence of this staining represents evidence of historical drum storage and waste generation, which presumably was how waste oil was stored after the waste oil UST was removed in 1995 until 2015, when automobile repair operations ceased.

Two five-gallon buckets, with no lids and partially filled with what appeared to be used cooking oil, were observed on the residential portion of the property. The area around the buckets was overgrown, so observation below the buckets was not feasible.

### 4.4 Polychlorinated Biphenyls

A total of seven of the eight automotive repair bays housed underground hydraulic lifts, and one bay housed an air/hydraulic alignment rack. Two single-piston underground hydraulic lifts were observed within Bay 2 and Bay 5 of the service garage area of the Lot 30 Site Building. Additionally, five double-piston underground hydraulic lifts were observed in Bay 1, Bay 3, Bay 4, Bay 6, and Bay 8 of the service garage and one hydraulic alignment rack was observed within Bay 7 of the service garage. A total of seven underground hydraulic lifts were observed within the service garage area of the Lot 30 Site Building. Five hydraulic reservoirs were observed mounted along the walls within the service garage area as well. Three floor-mounted hydraulic lift control boxes were observed within the service garage area of the Lot 30 Site Building. The concrete around the lifts appears to not be original and it was observed that the date "2006" was carved into the concrete, indicating that the hydraulic lift system upgrades may have taken place circa 2006. Several fluorescent light fixtures were observed throughout the interior of the Lot 30 Site Building as well.

Although not observed within the Site Building, the historic construction plans reviewed at the City of Yonkers Housing and Building Department identified that five of the seven hydraulic lifts potentially had historical underground hydraulic oil reservoirs, which were upgraded to wall-mounted hydraulic underground lifts as noted above. Two former air compressors and associated air filter were depicted as being located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. Details on each component if the identified current and former systems components that represent RECs are as follows:

- **Hydraulic Lifts and Alignment Rack**: The current underground hydraulic lift system, presumably an upgrade to the former hydraulic lift system circa 2006, and that was apparently not being utilized by the current property owner, includes a total of seven underground hydraulic lifts, five wall-mounted hydraulic fluid reservoirs/control boxes, three floor-mounted control boxes (where the control box between Bays 3 and 4 was presumably disconnected) and two electric air compressors that were observed during site reconnaissance activities within the service garage area of the Lot 30 Site Building. One hydraulic alignment rack was also observed within Bay 7; however, its age is unknown. Two single-piston hydraulic lifts were observed within Bay 2 and Bay 5, and five double-piston underground hydraulic lifts were observed within Bay 1, Bay 3, Bay 4, Bay 6, and Bay 8 of the service garage area of the Lot 30 Site Building during Site reconnaissance activities. Based on historical plans, the single-piston lifts were installed to approximately 8.5 feet below floor grade and the double-piston lifts were installed to

approximately 8 feet below floor grade. The hydraulic lift areas were observed to be in good condition; however, three vehicles were parked directly over the lifts within Bay 2, Bay 3, and Bay 6. Based on the former operations and unknown condition of the subsurface in the vicinity of the hydraulic lifts, there is a potential for residual soil impacts from in these areas. Further investigation is warranted.

- **Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes**: A total of five wall-mounted hydraulic fluid reservoirs were observed along the perimeter of the service garage area. The hydraulic fluid reservoirs were observed to be in good condition with minimal staining on the concrete surface beneath them. These reservoirs were presumably installed sometime in or around 2006, following the removal of the former underground hydraulic lift tanks. Residual hydraulic fluid was observed within the reservoirs. Piping emanating from the reservoirs to below the building slab was unobservable during Site reconnaissance activities; therefore, the condition of these areas is unknown. Based on the former operations and unknown condition of the subsurface in the vicinity of the hydraulic fluid reservoirs, there is a potential for residual soil impacts in these areas. Further investigation is warranted.

- **Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs**: According to the original construction plans of the Lot 30 Site Building provided by the City of Yonkers Housing and Building Department, the Lot 30 Site Building had seven underground hydraulic lifts and one air/hydraulic alignment rack. The former lift system utilized approximately five underground hydraulic oil reservoirs, two air compressors with an associated air filter, and three floor-mounted control boxes; however, the status of the formerly used underground reservoirs is unknown. These hydraulic lifts and associated reservoirs were installed circa 1974 when the Lot 30 Site Building was erected, and were taken out of use circa 2006, when the current hydraulic lifts and wall-mounted hydraulic oil reservoirs were installed. The specific details of the upgrades to the system are unknown; however, it is presumed that the number of pistons, underground housing, and location of the lifts were the same as present day. Based on historical plans, the single-piston lifts were installed to approximately 8.5 feet below floor grade and the double-piston lifts were installed to approximately 8 feet below floor grade. The underground hydraulic oil reservoirs were unobservable during Site reconnaissance activities. Further, information regarding their removal was not identified by, or provided to, Ransom, and the condition of these underground areas is unknown.

- **Hydraulic Lift Control Boxes**: A total of three floor-mounted control boxes were observed throughout the service garage area; one between Bay 1 and 2, one between Bay 3 and 4, and one between Bay 5 and 6. The control box between Bays 3 and 4 was presumably disconnected since both associated lifts had wall-mounted hydraulic fluid reservoirs/control boxes. The control boxes were observed to be in good condition with visible staining on the concrete surface beneath them. These control boxes were presumably installed circa 1974, when the Lot 30 Site Building was erected. The presence of the boxes restricted observation to conditions below the box itself; therefore, the subsurface conditions below the control boxes are unknown.

- **Former Air Compressors**: Two former air compressors and one associated air filter were identified on construction plans identified from the City of Yonkers Housing and Building Department. The former air compressors and filter were located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. These compressors were installed circa

1974 when the Lot 30 Site Building was erected, and were taken out of use circa 2006, when presumably the two electric air compressors were installed. The out-of-use air filter was observed during the Site reconnaissance. No evidence of former discharge locations were observed during Site reconnaissance activities, and the floor where these air compressor were formerly stored was unobservable due to the presence of parked vehicles.

### 4.5 Asbestos-Containing Building Materials

Based upon the construction date of the Lot 30 Site Building and Residential Building, 1974 and 1900, respectively, asbestos-containing building materials (ACM) may be present within the Lot 30 Site Building and Residential Building. Additionally, a substance indicative of asbestos joint compound was observed along piping within the boiler room of the Site Lot 30 Building.

### 4.6 Lead Paint

Lead based paint was banned for residential use in the United States in 1978, by the U.S. Consumer Product Safety Commission (16 CFR 1303). Based on the construction date of the Lot 30 Site Building (1974) and the Residential Building (1900), it is possible that lead-based paints (LBPs) are present in the Lot 30 Site Building and/or the Residential Building.

### 4.7 Mercury

During Ransom's interior reconnaissance of the Lot 30 Site Building and interior reconnaissance of the basement of the Residential Building, fluorescent bulbs were observed that may contain mercury vapor.

### 4.8 Storage Tanks (above or below ground) and Piping

#### 4.8.1 Aboveground Storage Tanks

No aboveground storage tanks (ASTs) were observed during Site reconnaissance activities.

#### 4.8.2 Underground Storage Tanks

Ransom did not observe any evidence of the presence of current/active USTs during Site reconnaissance activities. However, based on a review of records identified at the City of Yonkers Housing and Building Department, the following former USTs were identified:

- **Former 3,000-gallon Fuel Oil UST**: One 3,000-gallon fuel oil UST was presumably removed from the Site in August 1995 according to permitting documentation identified at the City of Yonkers Housing and Building Department. The former fuel oil UST was located on the eastern exterior of the Lot 30 Site Building. This UST was presumably installed during the initial construction activities sometime in 1974. Permitting documentation indicated that UST removal activities were completed by September 1995; however, documents reviewed did not reference UST content or capacities. Based on known information, the UST referenced within the permitting documentation is presumed to be the former 3,000-gallon fuel oil UST; however, detailed UST removal documentation was not identified by Ransom.

- **Former 550-gallon Waste Oil UST**: One 550-gallon waste oil UST, historically utilized in relation to former automotive service activities, was presumably removed from the Site in August

1995 according to permitting documentation identified at the City of Yonkers Housing and Building Department. This UST was presumably installed during the initial construction activities sometime in 1974. Permitting documentation indicated that UST removal activities were completed by September 1995; however, documents reviewed did not reference UST content or capacities. Based on known information, the UST referenced within the permitting documentation is presumed to be the former 550-gallon waste oil UST; however, detailed UST removal documentation was not identified by Ransom.

## 4.9 Surface Conditions

### 4.9.1 Drains

A total of four sealed floor drains and four active floor drains were observed in the Lot 30 Site Building during reconnaissance activities. Sealed floor drains were observed in the following locations throughout the Lot 30 Site Building; southwest portion of the service garage, parts storage room within the service garage, southwest portion of the boiler room, and within the former employee locker room. Active floor drains were observed in the following locations throughout the Lot 30 Site Building; the western most restroom, the eastern most restroom, the utility sink within the service garage, and within the existing storage area. Additionally, one clean out pipe was observed in the southwest portion of the service garage of the Lot 30 Site Building. Although not observed within the Site Building, the historic construction plans identified at the City of Yonkers Housing and Building Department reviewed during the site reconnaissance also depicted seven former floor drains, one near each hydraulic lift, one former/inactive 4-inch cast iron drainage pipe for the former hydraulic lift floor drains, and one active 6-inch drainage pipe for the drains along the northern portion of the Lot 30 Site Building. The former/inactive 4-inch cast iron drainage pipe was depicted as leading to a grease and sand interceptor. The Lot 30 Site Building's drainage system reportedly discharged and/or currently discharges to the municipal sanitary sewer system. No staining or evidence of a release was observed at the drains. Due to the inaccessibility of the Residential Building, floor drain locations were not noted during Site reconnaissance activities. Details on the Lot 30 Site Building floor drains and interceptor are as follows:

- **Service Garage Sealed Floor Drain**: One sealed floor drain was identified in the vicinity of the Bay 8 hydraulic lift and the eastern most hydraulic fluid reservoir, which reportedly connected to the former/inactive 4-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities surrounding the floor drain; however, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown. Due to the close proximity of the floor drain to the former automotive repair activities, there is a potential for residual soil and/or groundwater impacts from this area. Further investigation is warranted.

- **Boiler Room Sealed Floor Drain**: One sealed/debris filled floor drain was identified within the boiler room of the Lot 30 Site Building, which reportedly connected to the 6-inch cast iron drainage pipe. Although this floor drain is currently sealed, historic use of the fuel oil fired boiler and observed staining on the exterior of the boiler (REC 4), and since the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown, there is a potential for residual soil and/or groundwater impacts in this area. Further investigation is warranted.

- **Parts Room Sealed Floor Drain**: One sealed floor drain was identified within the parts room of the Lot 30 Site Building, which reportedly connected to the 6-inch cast iron drainage pipe. No

staining or evidence of impact was observed in the vicinity of this drain; however, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown.

- **Bathroom Floor Drains**: Two active floor drains were identified in each bathroom area just north of the eight service bays, which reportedly connect to the 6-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities; however, the condition of the underground drainage system that leads to the municipal sanitary sewer line is unknown.

- **Employee Locker Room Sealed Floor Drain**: One sealed floor drain was identified in the former employee locker room just north of the eight service bays, which reportedly connected to the 6-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities; however, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown.

- **Tire Wash Area Floor Drain**: One floor drain was identified in the curb utility sink just north of the eight service bays that was previously utilized as a former tire wash area, and which reportedly connects to the 6-inch cast iron drainage pipe. No staining or evidence of impact was noted during site reconnaissance activities; however, the condition of the underground drainage system that leads to the municipal sanitary sewer line is unknown.

- **Former Hydraulic Lift Floor Drains**: Seven former floor drains, which reportedly connected to a former/inactive 4-inch cast iron drainage pipe were identified on historic construction plans identified at the City of Yonkers Housing and Building Department. Former floor drains were located beneath the original hydraulic lifts within Bay 1, Bay 2, Bay 3, Bay 4, Bay 5, Bay 6, and Bay 8 of the service garage. The former/inactive 4-inch cast iron drainage pipe was identified leading from the former hydraulic lift floor drains to a former/inactive grease and sand interceptor (REC 1G). Site redevelopment activities were presumably completed sometime in or around 2006; however, Ransom did not obtain information that confirms the floor drains, drainage pipe, and grease and sand interceptor were removed or properly abandoned in-place. Further, the condition of the underground drainage system that led to the municipal sanitary sewer line is unknown.

- **Former Grease and Sand Interceptor**: A former underground grease and sand interceptor was identified on historic construction plans identified from the City of Yonkers Housing and Building Department. The former underground grease and sand interceptor was located in the western portion of the service garage area of the Lot 30 Site Building that received overflow/waste from the Lot 30 Site Building's hydraulic lift areas. As the former grease and sand interceptor was not observed during the Site reconnaissance, Ransom was unable to inspect this area.

## 4.10 Other Conditions of Concern

### 4.10.1 Inactive Boiler

One inactive oil fired boiler was observed within the boiler room of the Lot 30 Site Building. The oil-fired burner, which was situated on a concrete slab, was observed to be in poor condition with heavy rusting visible on the exterior of the boiler. Ransom was unable to inspect the area beneath the oil-fired

burner during Site reconnaissance activities. Waste ash, which may contain heavy metals, was observed within the base of the boiler.

### 4.10.2 Air Compressors

Two stationary electric air compressors were observed within the Lot 30 Site Building during site reconnaissance activities mounted and staged on a wood platform. The air compressors were 80-gallon capacity with a one-piece cast iron crankcase for lubrication oil and an oil-lubricated pump with three cast iron cylinders. The compressors were observed to be in good condition with no evidence of staining on or around the units and the concrete floor below the units was observed intact with no cracks or staining.

## 5.0 REGULATORY FILE SEARCH

As part of Ransom's assessment of the Site, EDR conducted an environmental database search. The search included reviews of federal and state database records and was conducted in general accordance with the specific requirements of ASTM International E 1527-13. A listing of the search radii for each environmental database searched is included in the EDR Report. A copy of the EDR Report is provided in Appendix E. The table below summarizes the regulatory database findings within ¼-mile of the Site, where sites between ¼-mile and 1-mile are not anticipated to impact the Site. Based on local topography, groundwater at the Site is anticipated to flow to the north-northwest, toward the Hudson River. Therefore, properties located to the south-southeast are anticipated to be hydrologically upgradient from the Site.

| EDR Site ID(s) | Property Location | Direction/ Distance from Site | Database | Site Impact | Rationale |
|---|---|---|---|---|---|
| A1, A2 | Goodyear Auto Service Center<br>372 Riverdale Avenue, Yonkers NY | Target Property | RCRA-CESQ, FINDS, ECHO, NY MANIFEST, RI Manifest, EDR Hist Auto | Not Anticipated | No violations or Spill Numbers were identified in association with the Site. See below. |
| A3, A7, A8 | Citgo Service Station / 380 Riverdale Avenue Inc.<br>380 Riverdale Avenue, Yonkers NY | Southwest 48-feet | NY Spills, NY UST, EDR Historic Auto | Potential | Identified on list of NY Spills. See below. |
| A4, A5 | ConEdison Trench 1111<br>Intersection of Riverdale Avenue and Culver Street, Yonkers NY | West-southwest 63-feet | RCRA-LQG, NJ Manifest, NY Manifest | Not Anticipated | No violates were identified in association with this listing. See below. |
| A6 | Lewis Property<br>10 Culver Street, Yonkers NY | South-southeast 91-feet | NY Spills | Not Anticipated | NY Spills No. is listed as closed/inactive. See below. |
| B9 | 377 Riverdale Avenue, Yonkers NY | West 47-feet | EDR Hist Auto | Potential | No violations or Spill Numbers were identified in association with the Site. See below. |
| D14, D15, D16, D17, D18 | Devonshire 2010 Inc. / Devonshire Tire / Devonshire Lane Service<br>390 Riverdale Avenue, Yonkers NY | South 244-feet | NY UST, NY AST EDR Hist Auto, NY Spills, RCRA NonGen/NLR, FINDS, ECHO | Potential | Identified on list of NY Spills. See below. |
| E23 | Rosario Residence<br>15 Cliff Avenue, Yonkers NY | East 98-feet | NY Spills | Not Anticipated | NYSDEC determined that no further action was required. See below. |

5.1 Goodyear Auto Service Center (A1, A2)

The Site was listed on several databases identified during the EDR search. The Site was listed on the RCRA-CESQ database as the Goodyear Auto Service Center and was listed as a conditionally exempt small quantity generator/handler of hazardous waste. No violations were associated with this database listing. Additionally, the Site was listed on the EDR database of Historical Auto Stations as the Goodyear Auto Service Center for the years 1999, 2000, 2002, 2009, 2010, and 2012.

5.2 Citgo Service Station (A3, A7, A8)

The property located at 380 Riverdale Avenue was identified as a Citgo-branded gasoline filling station was identified on the NYSDEC database of documented spills (NY Spills) as Site ID No. 371999 and listed as active. Listings for the Citgo Service station included the following:

- Spill No. 0608110 was issued on October 16, 2006 for a known release of petroleum products, initially identified during soil sampling activities. This spill incident is listed as active on the NYSDEC Spill Incidents Database.

- Spill No. 0202712 was issued on June 13, 2002 for a release of gasoline identified during tank testing activities. This spill incident is listed as active on the NYSDEC Spill Incidents Database.

- Spill No. 110501 was issued on February 1, 2002 for a release of transmission fluid to a drain located on the property. No records were available through the NYSDEC Spill Incidents database for this incident.

- NY UST Facility ID No. 3-800744 is an active facility with two 6,000-gallon gasoline USTs (Tank 001 and 002) and one 6,000-gallon diesel UST (Tank 0003), installed on July 1, 2003. Historically, this property operated with two 6,000-gallon gasoline USTs (Tank 1 and Tank 2) and one 6,000-gallon diesel UST (Tank 3), originally installed on July 1, 1973.

- EDR Historical Auto Stations identify potential automotive facilities based on historical operator names. The Citgo service station was identified at this address in 2011 and 2012.

Based on the identified spill numbers and close proximity to the Site, Ransom concludes that this facility has the potential to have impacted the Site.

5.3 ConEdison Trench 1111 (A4, A5)

A property located at the intersection of Riverdale Avenue and Culver Street was identified on the EDR list of RCRA-LQG and NJ Manifest sites, this property was identified as a large quantity generator of hazardous wastes. This property is currently maintained by ConEdison and no violations were reported in connection with this property.

5.4 Lewis Property (A6)

The Lewis Property, located at 10 Culver Street, Yonkers NY, was identified on the NY Spills database. Spill No. 193717 was reported for the release of approximately 2-gallons of fuel oil (No. 2), originating from a leak in the fill pipe, on May 15, 1991. This Spill No. is listed as inactive and due to the *de minimis*

nature of the release, this case is not expected to impact the environmental conditions of the Site and no further investigation is recommended.

5.5 377 Riverdale Avenue (B9)

The property located at 377 Riverdale Avenue (presently known as 373 Riverdale Avenue) was identified on the EDR list of Historic Auto Stations as the Riverdale Auto Service Center Inc. for the years 2011 and 2012. No further information was provided. Due to the sidegradient location of this property, its former proximity to the Site, and its depicted service station use from at least 1940 to 1978, further investigation is warranted.

5.6 Devonshire 2010 Inc. (D14, D15, D16, D17, D18)

This property located at 390 Riverdale Avenue, identified as Devonshire 2010 Inc., and the present-day location for the Devonshire Discount Tire, Auto Body & Repair Center, was identified on several EDR listings. Based on the statuses of the EDR listings for this facility and its sidegradient location relative to the Site, no further investigation is recommended. Listings for the Devonshire facility included the following:

- NY UST Facility ID No. 3-138045 is an inactive UST facility. Three 6,000-gallon gasoline USTs and one 1,000-gallon UST of unknown contents are listed as closed and abandoned in-place.

- New York AST Facility ID No. 3-138045 is an active facility which currently utilizes one 1,000-gallon #2 fuel oil AST, two 275-gallon waste oil AST. Two 275-gallon ASTs of unknown contents were removed from this property on January 1, 2006.

- EDR Historical Auto Stations identify potential automotive facilities based on historical operator names. One Transmission Parts Inc. was identified at this address in 2007. The Firestone Tire & Auto Service Center was listed at this address in 2008. The Riverdale Transmission Parts Inc. was listed at this address for 2009. The Firestone Devonshire Tire Company was listed at this address in 2010 and the Devonshire Tire Co. for the year 2011.

- NY Spills No. 1007244 was issued for the discovery of a release of fuel oil (No. 2) to soils during the removal of one 1,000-gallon UST in January of 2011. A total of 715.89 tons of petroleum impacted soils were removed from this property at this time. A closure status was issued in relation to this spill incident on January 26, 2011.

- This property was identified on the RCRA NonGen/NLR, FINDS, and ECHO databases as a non-generator, handler of hazardous waste. No violations were identified in relation to the handling of hazardous materials on the aforementioned databases.

Based on the identified spill numbers and close proximity to the Site, Ransom concludes that this facility has the potential to have impacted the Site.

5.7 Rosario Residence – 15 Cliff Avenue (E23)

The property located at 15 Cliff Avenue was identified on the NY Spills Database as Facility ID No. 509913. NY Spills No. 1503602 dated August 17, 2015 was issued to this property in response to a known release of #2 fuel oil originating from a 1,000-gallon heating oil AST during removal activities.

The NYSDEC concluded that due to the limited nature of the release and subsequent clean-up activities, that no further action was warranted.

## 5.8 Orphan Sites

An Orphan Site is a listed site in the same zip code as the subject Site which cannot be mapped because of inadequate address information. Ransom reviewed the four Orphan Sites and determined that they are located in positions considered to be cross-gradient, downgradient, or hydrologically isolated from the Site, or are beyond the applicable ASTM search parameters. Therefore, it is unlikely that these Orphan Sites will adversely impact environmental conditions at the Site.

## 6.0 ADJACENT PROPERTIES

The Site is adjoined by the following properties:

- To the north, the Site is bordered by residential properties, including the 362 Riverdale Avenue, 76 Post Road, 80 Post Road, 82 Post Road, and 84 Post Road. Further to the north are more residential properties and mixed use commercial-residential areas.

- To the south of the Site, across Culver Street, is the Citgo-branded gasoline filling station located at 380 Riverdale Avenue. Additionally, residential properties are located to the south of the Site, across Culver Street, and are located at 10, 12, 14, 16, 18, 20, and 22 Culver Street. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body & Repair Center.

- To the east of the Site is the Culver Park, a City of Yonkers operated park and playground area. Culver Park is located at the intersection of Culver Street and Livingston Avenue.

- To the west of the Site, across Riverdale Avenue, is the PEARLS Hawthorne School, located at 350 Hawthorne Avenue.

The southern adjacent Citgo-branded gasoline filling station and Devonshire Discount Tire, Auto Body & Repair Center represent potential environmental concerns due to their proximity to the Site and their historical release cases.

## 7.0 VAPOR INTRUSION ASSESSMENT

Ransom has identified potential releases of volatile contaminants on the Site. Ransom has also identified historic potential or known releases of volatile contaminants from off-site properties immediately adjacent and upgradient of the Site. Therefore, Ransom recommends performance of a Vapor Intrusion Evaluation and Assessment as part of a Phase II limited subsurface investigation. If the results of that assessment indicate that a potential vapor intrusion risk exists, Ransom will perform a Vapor Intrusion Risk Analysis, which will present alternatives for mitigation of the risk, if warranted.

## 8.0 DATA GAPS

At the time this report was prepared, several information requests remain outstanding, including the City of Yonkers Fire Department, the United States Army Corp of Engineers and NYSDEC requests. However, upon receipt and review, pertinent information provided by the above-mentioned agencies will be forwarded in an addendum to this report. This data gap represents an environmental concern warranting additional investigation to assess RECs in connection with the Site.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

### 9.1 Conclusions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM International E 1527-13 and the Corporate Services Agreement, for the Site identified by the City of Yonkers Assessor's Tax Map Section 1, Block 129, Lots 26 and 30. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this report. Based on the information identified during this ESA, Ransom has identified the following RECs in connection with the Site:

- **REC 1 – Automotive Repair Drainage System**: A total of 11 sealed/inactive/former floor drains, four active floor drains, one former/inactive 4-inch cast iron drainage pipe, and one active 6-inch drainage pipe were either observed or identified throughout the Lot 30 Site Building. The former/inactive 4-inch cast iron drainage pipe was depicted as leading to a grease and sand interceptor. The Lot 30 Site Building's drainage system reportedly discharged and/or currently discharges to the municipal sanitary sewer system. The identified floor and appurtenant drainage pipes, and former grease and sand interceptor, represent RECs as follows (details are presented within Section 4.9.1 of this Report):
    - REC 1A – Service Garage Sealed Floor Drain;
    - REC 1B – Boiler Room Sealed Floor Drain;
    - REC 1C – Parts Room Sealed Floor Drain;
    - REC 1D – Bathroom Floor Drains;
    - REC 1E – Employee Locker Room Sealed Floor Drain;
    - REC 1F – Tire Wash Area Floor Drain;
    - REC 1G – Former Hydraulic Lift Floor Drains; and
    - REC 1H – Former Grease and Sand Interceptor.

  Due to the close proximity of the sealed/inactive/former floor drains and former underground grease and sand interceptor to the former automobile repair activities, there is a potential for soil and/or groundwater impacts within this area. Further investigation is warranted.

- **REC 2 – Automotive Repair Hydraulic Lift Systems**: A total of seven of the eight automobile repair bays housed underground hydraulic lifts, and one bay housed an air/hydraulic alignment rack. It is believed that at least five of the seven hydraulic lifts historically had underground hydraulic oil reservoirs, which were upgraded to wall-mounted hydraulic underground lifts. Two former air compressors and associated air filter were located within the storage area of the Lot 30 Site Building and were connected (via underground piping) to the three floor-mounted control boxes for the former hydraulic lift operations. The identified current and former system components represent RECs as follows (details are presented within Section 4.4 of this Report):
    - REC 2A – Hydraulic Lifts and Alignment Rack;
    - REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes;
    - REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs;

- REC 2D – Hydraulic Lift Control Boxes; and
- REC 2E – Former Air Compressors.

Based on the former operations and unknown condition of the subsurface in the vicinity of the current/former hydraulic lifts/alignment rack, wall-mounted hydraulic fluid reservoirs, underground hydraulic oil reservoirs, hydraulic lift control boxes, and former air compressors, there is a potential for soil impacts within these areas. Further investigation is warranted

- **REC 3 – Vehicle Storage**: Used vehicle storage was observed within the northeastern most storage area of the Lot 30 Site Building, as well as throughout the paved parking areas surrounding the Lot 30 Site Building. The areas beneath the parked vehicle was inaccessible during Site reconnaissance activities; therefore, Ransom was unable to ascertain the integrity of the surface materials in these areas. Further investigation is warranted in all vehicle storage areas throughout the Site.

- **REC 4 – Inactive Oil-Fired Boiler System**: One inactive oil-fired burner was observed in the boiler room of the Lot 30 Site Building. The oil-fired burner was observed to be in poor condition with heavy rusting and staining visible on the exterior of the boiler. Due to the presence of dust and dim lighting, the condition of the floor below the boiler could not be fully assessed. Additionally, waste ash, which may contain heavy metals, was observed within the base of the boiler. Due to the poor condition of the oil-fired burner, close proximity to a former floor drain, inability to access the area beneath the oil-fired burner, and presence of waste ash, there is a potential for residual soil impacts in this area. Further investigation into the soil conditions in this area is warranted.

- **REC 5 – Former 3,000-gallon Fuel Oil UST**: One former 3,000-gallon fuel oil UST was identified on historic construction plans on the eastern exterior side of the Lot 30 Site Building. An associated pump was identified on the eastern most portion of the storage area within the Lot 30 Site Building as well. The fuel oil UST depicted on the historical plan was connected to a pump and subsequently to the oil-fired boiler (REC 4) via underground piping. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 3,000-gallon fuel oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 6 – Former 550-gallon Waste Oil UST**: One former 550-gallon waste oil UST was identified on historic construction plans on the southeastern exterior or of the Lot 30 Site Building. A certificate of completion was issued by the City of Yonkers Bureau of Housing and Buildings on September 19, 1995 for "removed underground oil tanks," presumably indicating the removal of the 550-gallon waste oil UST. However, due to the vague nature of the certificate of completion and lack of additional documentation for the closure activities, further investigation is warranted regarding this REC.

- **REC 7 – 55-Gallon Waste Oil Drum Storage**: Approximately six circular stains, indicative of former drum storage (presumably for waste oil), were observed between Bay 6 and Bay 7 within the Lot 30 Site Building. The concrete in the vicinity of the drums was observed with a large crack; however, no evidence of floor drains was observed in the vicinity of the staining. The

presence of this staining represents evidence of historical drum storage and waste generation, which presumably was how waste oil was stored after the waste oil UST was removed in 1995 until 2015, when automobile repair operations ceased. Due to the observed crack in the concrete and the evidence of staining in this area, further investigation of the soil conditions in this area is warranted.

Additionally, Ransom observed three 55-gallon steel drums containing waste oil within the service garage area of the Lot 30 Site Building, presumably generated by former automobile repair operations. The drums were observed to be in good condition with no visible staining on or around the drums; however, visible oil was observed on the drum lids. No further investigation is recommended in connection with the existing 55-gallon waste oil drums; however, proper removal and off-site disposal is required prior to Site redevelopment.

- **REC 8 – Current/Former Residential Use**: Ransom identified one current and eight former residential buildings associated with the Site. The existing Residential Building is known to use fuel oil for heating. The historical heating source(s) for the former residential structures are unknown. Lastly, private septic systems are also associated with residential use. Therefore, there is a potential for one or more heating oil (No. 2) USTs and/or one or more septic systems to be present on-Site as follows:

    - **REC 8A – Known Fuel Oil Use at the Residential Building**: Property records were identified by Ransom for the Residential Building located on the Lot 26 portion of the Site, which indicated the usage of fuel oil at this property. Ransom was unable to confirm the presence of a fuel oil tank or boiler at the Residential Building; however, a sealed fill pipe was observed on the eastern side of the structure, along the foundation of the Lot 30 Site Building, indicating the potential presence of a fuel oil AST in the basement. Further, two metal doors were observed to be welded shut during site reconnaissance activities of the Residential Building, barring access into a room where a suspect boiler was located.

    - **REC 8B –Former Residential Use**: Historic records and construction plans identified the presence of eight residential structures (not including the current Residential Building) at the Site prior to redevelopment activities in 1974 and 1980. Specific documentation regarding these structures was not identified by, or provide to, Ransom.

  Due to the potential for historic fuel oil usage on the Lot 26 portion of the Site and based on the absence of a known heating source, UST, and/or septic system information for the former residential houses, further investigation is warranted regarding this REC.

- **REC 9 – Potential Fill**: The 1898 Sanborn Map indicted one of the former residential properties with "Low Ground," which indicates that the property had a potential to have been historically filled. The location of this "Low Ground" indication is mostly beneath the present-day Lot 30 Site Building. Based on the unknown source and characteristics of this potential fill material, Ransom believes that the potential exists for off-site fill material to have been brought on-Site; therefore, Ransom recommends that a subsurface investigation be conducted to assess whether historical fill is present on-Site and if it has impacted the environmental conditions at the Site.

- **REC 10 – Potential Off-site Sources**: Ransom identified two current off-site uses where known or potential past discharges of hazardous chemicals from facilities, including a gasoline filling

station and an automotive repair facility, have or may have occurred upgradient of the Site and one off-site use where potential past discharges of hazardous chemicals from facilities, including a former gasoline filling may have occurred sidegradient of the Site. The following potential off-site sources were identified in close proximity to the Site, and represent RECs.

- **REC 10A – Off-Site Citgo Service Station**: The southerly adjacent Citgo-gasoline filling station was identified as an active service station with multiple active NY Spills incident numbers associated with this property.

- **REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center**: A property located approximately 390 feet to the south of the Site was identified as an active auto body and repair center that has a NY Spills incident with a "Closed" status.

- **REC 10C – Former Riverdale Auto Service Inc.**: The property located 377 Riverdale Avenue, located adjacent (across Riverdale Avenue) to the west and sidegradient of the Site, was identified as a potential off-Site source due to its use as a former gasoline service station from at least 1940 through at least 1978; however, no further information was identified.

Due to the close proximity, NY Spill incident(s) and/or former/current use, Ransom recognizes the potential for off-Site impact to the Site from the current filling station, active auto body and repair center, and former off-site service station operations; therefore, further investigation is warranted.

In addition to the RECs identified above, Ransom identified the following condition of potential environmental concern, which is being documented as a *de minimis* condition as follows:

- **Site-Wide Solid Waste**: Ransom observed Site-wide solid waste including, but not limited to, gasoline cans, paints cans, propane tanks, cleaning solvents, tires, 5-gallon buckets with cooking oil, etc. Additionally, a chest freezer and other former appliances, which may potentially contain ozone depleting substances (ODS), was observed as being stored on the exterior portion of the Residential property.

Some additional environmental concerns were identified which are considered non-scope under ASTM, but were recognized as areas of potential business environmental risk. Specifically, based on the construction date of the Lot 30 Site Building (1974) and the Residential Building (pre-1897), hazardous building materials may be present in the Site Buildings, including asbestos-containing materials (ACM), polychlorinated biphenyls (PCBs) in fluorescent light ballasts, lead-based paint (LBP), and mercury-containing fluorescent lights and/or other equipment. Prior to demolition of the current Site Buildings, identified hazardous building materials should be removed and disposed of in accordance with local, state, and federal regulations.

Based on the information identified during this Phase I ESA, Ransom did not identify any CRECs or HRECs in connection with the Site.

## 9.2 Recommendations

Based on the information identified during this assessment, Ransom concludes that additional investigation is warranted. Ransom makes the following recommendations:

- Based upon the construction date of the Site Building (1974) and Residential Building (pre-1897), hazardous building materials may be present within the Site buildings. Ransom recommends the performance of a comprehensive Hazardous Material Inventory (HMI) survey prior to demolition of the Site Buildings.

- Ransom recommends that sub-slab soil samples be collected along the drainage pipes and on-Site sanitary sewer lines associated with the automotive repair floor drains (REC 1). In an effort to target potential heavily impacted areas, video inspection of the pipes for evidence of cracks or breaches could be conducted as part of the geophysical survey recommended below. Based on the findings of the video inspection, soil sampling could be biased towards those areas of pipe cracks/breaches.

- Ransom recommends the completion of a geophysical survey across the Site in an effort to: (1) confirm the removal of the 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6) presumably removed from the Site in 1995, and (2) assess if one or more historic USTs, former product piping, and/or septic tanks are present from the current/former residential use (REC 8). If anomalies are identified, further subsurface investigation may be warranted.

- A subsurface soil and groundwater investigation is recommended prior to the initiation of construction activities. Ransom recommends the following soil and groundwater monitoring program be completed prior to redevelopment activities:

    - Ransom recommends the collection of sub-slab soil and groundwater samples from beneath the current/former hydraulic lifts and one hydraulic alignment rack (RECs 2A and REC 2C) within the Lot 30 Site Building.

    - Ransom recommends the collection of sub-slab soil samples from beneath the five identified wall-mounted hydraulic fluid reservoirs (REC 2B) within the Lot 30 Site Building immediately adjacent to the exposed subsurface piping.

    - Ransom recommends the collection of sub-slab soil samples immediately adjacent to the three floor-mounted control boxes (REC 2D) within the Lot 30 Site Building.

    - Ransom recommends the collection of subsurface soil and groundwater samples in the locations of the former 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6).

    - Ransom recommends the collection of subsurface soil samples at the location of the crack observed near the former waste oil drum storage/staining (REC 7).

    - Ransom recommends the collection of subsurface soil samples at the location of the potential historical fill area (REC 9).

    - Ransom recommends the installation of temporary groundwater monitoring points and/or soil borings along the southern boundary of the Site to evaluate potential off-Site impacts to the Site (REC 10).

- Since there were physical obstructions (e.g., stored vehicles, dirt, welded doors, etc.), which represent a significant data gap, and based on historical operations, Ransom recommends the

physical obstructions be removed and further inspection completed of the ground surface areas beneath the former air compressor (REC 2E), the stored vehicles (REC 3), the inactive oil-fired burner (REC 4) and potential residential fuel-oil fired boiler (REC 8). Further investigation activities may be warranted based on the findings.

- Ransom recommends the proper disposal of the fuel oil-fired burner and its contents (e.g., waste ash) (REC 8) identified within the Lot 30 Site Building. After removal, Ransom recommends further inspection of the surface areas beneath the fuel oil-fired burner. Further investigation activities may be warranted based on the findings.

- 55-Gallon drums present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.

- On-Site drainage structures, including potential septic system components and/or storm water drainage structures (catch basins, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned according to local, state, and federal requirements. If evidence of contamination is identified during decommissioning of these structures, Ransom should be contacted to evaluate whether additional investigation or cleanup is warranted.

- Ransom recommends that miscellaneous chemicals, hazardous materials and/or stored appliances observed at the Site should be recovered/removed from the Site and properly disposed/recycled (by a certified technician where applicable) prior to proposed redevelopment activities.

## 10.0 DECLARATION OF ENVIRONMENTAL PROFESSIONAL

Primary Assessor and Report Author

This Phase I Environmental Site Assessment was conducted in general accordance with the requirements of ASTM International E 1527-13 by the undersigned. Any work completed on this Phase I Environmental Site Assessment by an individual who is not considered an environmental professional was completed under the supervision or responsible charge of the environmental professional(s) listed below.

Lauren Rojewski
Environmental Scientist/Primary Author

Environmental Professionals

We declare that, to the best of our professional knowledge and belief, we meet the definition of an Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Kimberly A. Skibo
Project Manager/Primary Reviewer

Brian R. Pettingill, P.G.
Senior Project Manager/CVS Program Manager

RE: Phase II Limited Subsurface Investigation
Proposed CVS Pharmacy/Store No. 10386
13 Culver Street and 372 Riverdale Avenue
Section 1, Block 129, Lots 26 and 30
City of Yonkers, Westchester County, New York

Dear Ms. Parker:

Ransom Consulting, Inc. (Ransom) is providing this letter to summarize the activities and results of a Phase II Limited Subsurface Investigation (LSI) conducted at the proposed CVS Pharmacy/Store site located at 13 Culver Street and 372 Riverdale Avenue, City of Yonkers, Westchester County, New York (i.e., the "Site"). A Site Location Map and a Site Plan are included as Figures 1 and 2, respectively.

Ransom conducted this Phase II LSI on behalf of T.M. Crowley & Associates Inc. (TMC) and CVS Pharmacy, Inc. (CVS), its parent, affiliates and subsidiaries and their successors, assigns, and grantees, and in accordance with Addendum 1 of an approved CVS Corporate Services Agreement, effective date April 1, 2017. The purpose of this Phase II LSI was to evaluate Recognized Environmental Conditions (RECs) identified in Ransom's Phase I Environmental Site Assessment (ESA) Report, dated June 7, 2017. The objectives of the Phase II LSI were to:

1. Perform a geophysical survey in an attempt to locate evidence of subsurface structures, including possible underground storage tanks (USTs), former UST excavation/backfill areas, product piping, possible septic tank systems, cesspools and/or drywells, and other potential subsurface structures associated with RECs around the current and former Site Buildings;

2. Assess current soil and groundwater conditions at the Site relative to documented or suspected releases of hazardous substances or petroleum products (HSP) at the Site, and in the immediate vicinity of the Site, which were identified as RECs in our June 7, 2017 Phase I ESA; and

3. Evaluate potential impacts to the proposed redevelopment by CVS, including potential risks to Site occupants, construction workers and to the indoor air quality of the proposed CVS building, and increased costs related to managing contaminated soil and/or

groundwater, or potentially implementing vapor mitigation measures during the proposed redevelopment activities, if necessary.

## SITE DESCRIPTION AND BACKGROUND

The Site is located in the northeast corner of the intersection of Riverdale Avenue and Culver Street in the City of Yonkers, Westchester County, New York (i.e., the "Site"), which includes Section 1, Block 129, Lots 26 and 30,. The Site, which totals approximately 1.01 acres, is improved with an approximately 8,695 square-foot commercial structure (the "Lot 30 Site Building") used for automotive repair and sales operations and an approximately 1,320 square-foot residential structure (the "Lot 26 Residential Building") (collectively, the "Site Buildings"). The Site is located in a mixed commercial and residential area of the City of Yonkers.

The Lot 30 portion of the Site operated as a Goodyear-branded automotive repair shop and tire sales center from 1974 until sometime in 2015. The Lot 30 Site Building and surrounding paved parking areas are currently occupied by the West Coast Auto Sales company, who have utilized the Site for the sale of used cars since sometime in 2016. The Lot 30 Site Building is also currently being utilized by individual tenants for automotive repair and service operations, and vehicle painting operations as well. The Lot 26 Residential Building was constructed sometime prior to 1897 and has been vacant since sometime in 2009. Prior to the development of the Lot 30 Site Building in 1974, the entire Site consisted of ten residential structures, one of which was removed by 1951, and six of which were removed circa 1973. Commercial improvements (i.e., an additional parking area) to the Lot 30 portion of the Site were completed in June 1980, at which time two more residential structures were removed from the Site.

Properties to the north of the Site currently consist of residential properties. The property to the east of the Site consists of Culver Park. The PEARLS Hawthorne School is located to the west of the Site, across Riverdale Avenue. To the south of the Site, across Culver Street, is a Citgo-branded gasoline filling station and residential properties. Further south of the Citgo-branded gasoline filling station is the Devonshire Discount Tire, Auto Body, and Repair Center.

Ransom's Phase I ESA report, dated June 7, 2017, identified the following Recognized Environmental Conditions (RECs) for which further investigation was recommended:

- REC 1 – Automotive Repair Drainage System:
    - REC 1A – Service Garage Sealed Floor Drain;
    - REC 1B – Boiler Room Sealed Floor Drain;
    - REC 1C – Parts Room Sealed Floor Drain;
    - REC 1D – Bathroom Floor Drains;
    - REC 1E – Employee Locker Room Sealed Floor Drain;
    - REC 1F – Tire Wash Area Floor Drain;
    - REC 1G – Former Hydraulic Lift Floor Drains; and
    - REC 1H – Former Grease and Sand Interceptor.
- REC 2 – Automotive Repair Hydraulic Lift Systems:

  - REC 2A – Hydraulic Lifts and Alignment Rack;
  - REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes;
  - REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs;
  - REC 2D – Hydraulic Lift Control Boxes; and
  - REC 2E – Former Air Compressors.
- REC 3 – Vehicle Storage;
- REC 4 – Inactive Oil-Fired Boiler System;
- REC 5 – Former 3,000-gallon Fuel Oil UST;
- REC 6 – Former 550-gallon Waste Oil UST;
- REC 7 – 55-Gallon Waste Oil Drum Storage;
- REC 8 – Current/Former Residential Use:
  - REC 8A – Known Fuel Oil Use at Residential Building; and
  - REC 8B – Former Residential Use.
- REC 9 – Potential Fill; and
- REC 10 – Potential Off-Site Sources:
  - REC 10A – Off-Site Citgo Service Station;
  - REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center; and
  - REC 10C – Former Riverdale Auto Service Inc.

Based on the findings and conclusions presented above, Ransom made the following recommendations in our Phase I ESA to address the above RECs:

- Ransom recommended that sub-slab soil samples be collected along the drainage pipes and on-Site sanitary sewer lines associated with the automotive repair floor drains (REC 1). In an effort to target potential heavily impacted areas, video inspection of the pipes for evidence of cracks or breaches was recommended as part of the geophysical survey recommended below. Based on the findings of the video inspection, soil sampling would be biased towards those areas of pipe cracks/breaches.
- Ransom recommended the completion of a geophysical survey across the Site in an effort to: (1) confirm the removal of the 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6) presumably removed from the Site in 1995; and (2) assess if historic USTs, former product piping, and/or septic tanks are present from the current/former residential use (REC 8). If anomalies are identified, further subsurface investigation may be warranted.
- A subsurface soil and groundwater investigation was recommended prior to the initiation of construction activities. Ransom recommended the following soil and groundwater monitoring program be completed prior to redevelopment activities:

  - Ransom recommended the collection of sub-slab soil and groundwater samples from beneath the current/former hydraulic lifts and one hydraulic alignment rack (RECs 2A and REC 2C) within the Lot 30 Site Building.
  - Ransom recommended the collection of sub-slab soil samples from beneath the five-identified wall-mounted hydraulic fluid reservoirs (REC 2B) within the Lot 30 Site Building immediately adjacent to the exposed subsurface piping.
  - Ransom recommended the collection of sub-slab soil samples immediately adjacent to the three floor-mounted control boxes (REC 2D) within the Lot 30 Site Building.
  - Ransom recommended the collection of subsurface soil and groundwater samples in the locations of the former 3,000-gallon fuel oil UST (REC 5) and 550-gallon waste oil UST (REC 6).
  - Ransom recommended the collection of subsurface soil samples at the location of the crack observed near the former waste oil drum storage/staining (REC 7).
  - Ransom recommended the collection of subsurface soil samples at the location of the potential historical fill area (REC 9).
  - Ransom recommended the installation of temporary groundwater monitoring points and/or soil borings along the southern boundary of the Site to evaluate potential off-Site impacts to the Site (REC 10).

- Since there were physical obstructions (e.g., stored vehicles, dirt, welded doors, etc.), which represented a significant data gap, and based on historical operations, Ransom recommended the physical obstructions be removed and further inspection completed of the ground surface areas beneath the former air compressor (REC 2E), the stored vehicles (REC 3), the inactive oil-fired burner (REC 4) and potential residential fuel-oil fired boiler (REC 8). Further investigative activities may be warranted based on the findings.
- Ransom recommended the proper disposal of the fuel oil-fired burner and its contents (e.g., waste ash) (REC 8) identified within the Lot 30 Site Building. After removal, Ransom recommended further inspection of the surface areas beneath the fuel oil-fired burner. Further investigative activities may be warranted based on the findings.
- The 55-gallon drums present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.
- On-Site drainage structures, including potential septic system components and/or storm water drainage structures (catch basins, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned according to local, state, and federal requirements. If evidence of contamination is identified during decommissioning of these structures, Ransom should be contacted to evaluate whether additional investigation or cleanup is warranted.
- Ransom recommended that miscellaneous chemicals, hazardous materials and/or stored appliances observed at the Site should be recovered/removed from the Site and properly disposed/recycled (by a certified technician where applicable) prior to proposed redevelopment activities.

A copy of the REC plan is included as Figure 3.

## PHASE II LIMITED SUBSURFACE INVESTIGATION

Geophysical Investigation and Subsurface Floor Drain Imaging

Between June 27 and June 29, 2017, Advanced Geological Services (AGS) of Malvern, Pennsylvania performed a geophysical survey at the Site. The purpose of the geophysical survey was to identify and locate evidence of subsurface structures, including, but not limited to, current on-Site USTs, former on-Site USTs, and/or former UST excavation/backfill area(s), product piping, septic tank systems, cesspools and/or drywells, former and/or current drain systems, and foundations or former foundation areas associated with the former Site structure(s). Proposed drilling locations on both the Lot 26 and Lot 30 portions of the Site were cleared of identifiable drilling hazards (i.e., subsurface utilities, etc.) at this time as well. The proposed drilling locations were adjusted to avoid any identified hazards, where necessary, with the approval of Ransom. Additionally, an effort was made to complete imaging and evaluation of piping associated with the two identified floor drains within the former Goodyear Automotive Service Center building to evaluate for breaches within the piping.

The geophysical survey was conducted using a combination of ground penetrating radar (GPR), radio frequency (RF), hand-held electromagnetic (HHEM), and/or multi-frequency electromagnetic meter (EM). The geophysical investigation area consisted of the asphalt parking lot surrounding the Lot 30 Site Building, the interior of the Lot 30 Site Building, and exterior surface areas on the Lot 26 portion of the Site. The following anomalies/features were identified during the geophysical investigation activities:

- A backfilled excavation (presumably from the former 500-gallon UST) was identified near the southeast corner of the Lot 30 Site Building. An associated vent pipe (visible at the southeast corner of the building) was identified as extending to the edge of the excavation; and

- A suspect UST was located on the east side of the Lot 30 Site Building, near the northeast corner. This feature produced an EM response with the hand-held EM metal detection instrument and also an ambiguous GPR response. A vent pipe located on the building wall and a potential supply/return line were also identified leading from the building to the suspect UST location. The geophysical results at this location were not conclusive; therefore, AGS recommended that additional direct investigation of this location, such as excavation, be considered to determine the presence of a UST at this location.

Geophysical survey activities conducted identified evidence of one suspect UST on Lot 30. The identified metallic anomaly measured approximately 6 feet in width by 16 feet in length, corresponding to an UST with an approximate volume between 3,000 and 4,000 gallons. The top of the UST was estimated to be approximately 4 to 5 feet bgs. Based on the size and location of this suspect UST, it is presumably associated with the closed (i.e., abandoned-in-place) 3,000-gallon heating oil UST (REC 5) associated with the Lot 30 Site Building. Geophysical survey activities conducted did not identify evidence of a current or former UST associated with the Lot 26 Residential Building. GPR results also suggested that fill or building rubble may be present throughout the Site.

The geophysical survey activities encountered several limitations, including the presence of parked/immovable vehicles within the interior vehicle storage area of the Lot 30 Site Building, the presence of parked/immovable vehicles along the southwestern, northern, and eastern boundaries of the Lot 30 portion of the Site, and the presence of steel reinforcing bar embedded within the concrete slab foundation of the Lot 30 Site Building. Based on the EM results and visual observations at the Site,

Ransom believes that these limitations do not warrant further investigation; however, due to these geophysical survey limitations, further response actions may be warranted during Site redevelopment if subsurface structures are identified.

Also during the geophysical event, attempts were made to access the floor drain system located inside of the south side of the Lot 30 Site Building. The camera was inserted into the clean-out located inside of the southeast corner of the building. However, there was a wire trap approximately 5-feet beyond the clean-out opening that prevented access. Attempts were made to access the drain system through three other clean-outs located along the length of the floor drain inside the south side of the building, but they were all filled with sediments preventing access. Due to Site conditions, it was not possible to inspect the floor drain system that extends from east to west inside the south side of the auto shop area.

The geophysical summary report is included as Appendix A, where Figure 1 of Appendix A shows the color contoured EM results from accessible areas of the Site. The report also shows the areas of the Site where limitations to the geophysical existed, including where cars were parked, and where portions of the Site were covered with reinforced concrete.

Subsurface Investigation

This section summarizes the investigation activities completed by Ransom, including soil boring installation and sampling and the installation of temporary monitoring well points to evaluate the potential environmental impacts to the Site from the identified RECs.

**Soil Boring and Temporary Monitoring Well Sampling Program**

Ransom conducted a soil boring investigation at the Site on June 27, 28, and 29, 2017. A total of 25 borings (SB-1 through SB-25) were advanced at the Site. Ransom advanced these borings concurrently with our Geotechnical Engineering Evaluation conducted at the Site (borings B101 through B108). The Geotechnical report has been provided separately. Soil boring locations are depicted on Figure 4. Soil borings were advanced by Environmental Probing Investigations, Inc. (EPI) of Cream Ridge, NJ utilizing direct push Geoprobe® technology with acetate-lined macro-core samplers. The soil boring depths ranged from 3.0 to 30 feet below grade surface (bgs). Subsurface explorations generally encountered brown and tan silt with trace fine sand to approximately 8 feet bgs and brown and tan fine to medium sands between approximately 8 feet bgs and 20 feet bgs. Fill material, including brick and coarse gravel, was encountered within four soil borings (SB-14, SB-21, SB-22, and SB-24) at depths ranging between 0.5 and 4.0 feet bgs. Also, during geotechnical drilling, refusal (i.e., the depth below which the hollow-stem auger was not able to penetrate the deeper geologic formations) was encountered in two of the Site borings at depths of approximately 7 and 17 feet below existing grades (B105 and B103, respectively, see Figure 4). Rock coring was not conducted to confirm the drilling refusal surfaces. It is our opinion that the shallow refusal in B103 was on a large boulder or buried foundation stone, and not on bedrock. The deeper drilling refusal in B105 was likely at the top of competent bedrock.

A total of 30 soil samples were collected from corresponding soil borings (SB-1 through SB-25) at six-inch intervals ranging from 0.5 to 9.0 feet bgs. Soil samples were not collected from soil borings SB-4 and SB-5 due to encountering drilling refusal and/or underground utilities at these locations. Soils within each boring were observed for visual and olfactory evidence of impacts. Petroleum odors were observed within one soil boring (SB-23) at an approximate depth range of 3.5 to 4.0 feet bgs; however, no staining was observed within the soil borings advanced at the Site. Additionally, a photoionization detector (PID)

was utilized to screen the soil for the presence of volatile organic vapors. Field screening of the soil borings identified elevated PID readings within one soil boring, SB-23, ranging from 3.2 to 6.8 parts per million (ppm) at an approximate depth of 3.0 to 6.5 feet bgs. Soil boring logs are provided as Appendix B.

Additionally, eight test borings (B101 through B108) were advanced at the Site as part of the geotechnical evaluation activities. The geotechnical borings were advanced using hollow-stem auger drilling techniques with slit-barrel sampling and standard penetration testing (SPT, ASTM D 1586). Representative soil samples (B101 through B108) were placed in sealed containers and returned to Ransom's office for further evaluation and laboratory testing. Soil samples were classified in general accordance with visual-manual procedures (ASTM D 2488). Geotechnical sampling results and associated geotechnical logs will be presented within a project geotechnical report under a separate cover that will contain recommendations and design parameters.

Soil samples were collected and sent to Hampton Clarke Laboratories (Hampton-Clarke) of Fairfield, New Jersey to be analyzed for a Targeted Compound List of Volatile Organic Compounds (TCL/CP-51 VOCs) in accordance with the New York State Department of Environmental Conservation (NYSDEC) CP-51 Soil Cleanup Guidance via United States Environmental Protection Agency (USEPA) Method 8260, a Targeted Compound List of Semi-Volatile Organic Compounds (TLC/CP-51 SVOCs) in accordance with the NYSDEC CP-51 Soil Cleanup Guidance, Polychlorinated Biphenyls (PCBs) via USEPA Method 8082, Polycyclic Aromatic Hydrocarbons (PAHs) via USEPA Method 8270, the Target Analyte List of Metals (TAL Metals) via USEPA Methods 6010/6020, and/or a Targeted Compound List of Pesticides (TCL Pesticides) via USEPA Method 8081. Additionally, one composite sample was collected from soil boring SB-24 for preliminary waste characterization purposes and was analyzed for VOCs with a forward library search for up to fifteen additional compounds (VOCs+15) via USEPA Method 8260, SVOCs with a forward library search for up to fifteen compounds (SVOCs+15) via USEPA Method 8270, PCBs via USEPA Method 8082, Organochlorine Pesticides via USEPA Method 8081, TAL Metals via USEPA Method 6010/6020, and Cyanide via USEPA Method 9012B. Soil sampling analytical results are summarized on Table 1, and soil analytical results exceeding applicable NYSDEC Soil Cleanup Objectives (SCOs) are illustrated on Figure 5A and Figure 5B. The following soil sampling analytical program was followed for the Phase II LSI activities and previously identified RECs:

| Sample ID | Date | REC(s) | Analysis |
|---|---|---|---|
| SB-1 | 6/27/2017 | REC 1H | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-2 | 6/29/2017 | REC 1 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-3 | 6/27/2017 | REC 1 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-6A | 6/29/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-6B | 6/29/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-7 | 6/27/2017 | REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-8A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-8B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-9A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |

| Sample ID | Date | REC(s) | Analysis |
|---|---|---|---|
| SB-9B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-10 | 6/27/2017 | REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-11A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PAHs, and PCBs |
| SB-11B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PAHs, and PCBs |
| SB-12 | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-13A | 6/27/2017 | REC 2B | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-13B | 6/27/2017 | REC 2A and REC 2C | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-14A | 6/29/2017 | REC 2D | TCL/CP-51 VOCs and PAHs[1] |
| SB-14B | 6/29/2017 | REC 2D/REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs |
| SB-15 | 6/27/2017 | REC 2D | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-16 | 6/27/2017 | REC 2D | TCL/CP-51 VOCs, PCBs, and PAHs |
| SB-17 | 6/28/2017 | REC 5 | TCL/CP-51 VOCs and PAHs |
| SB-18 | 6/28/2017 | REC 6 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs |
| SB-19 | 6/27/2017 | REC 7 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals |
| SB-20 | 6/28/2017 | REC 8A | TCL/CP-51 VOCs and PAHs |
| SB-21 | 6/28/2017 | REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, PCBs, and TCL Pesticides |
| SB-22 | 6/27/2017 | REC 10 and REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, and TAL Metals |
| SB-23 | 6/28/2017 | REC 10 | TCL/CP-51 VOCs, PAHs, and TAL Metals |
| SB-24 | 6/29/2017 | REC 9 | TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, TAL Metals, and TCL Pesticides |
| SB-24C | 6/29/2017 | Preliminary Waste Characterization | TCL/CP-51 VOCs,+15 TCL/CP-51 SVOCs+15, TCL Pesticides, PCBs, TAL Metals, and Cyanide |
| SB-25 | 6/29/2017 | REC 2E and REC 11* | TCL/CP-51 VOCs, PCBs, PAHs, and TAL Metals |

*During Phase II LSI drilling activities, it was observed that the backroom was being utilized as a Vehicle Paint Shop (REC 11); therefore, this activity was added to the Site's REC list as REC 11, and one sample was collected concurrently with the REC 2E (former air compressors) soil sample.

Following soil boring and sampling activities, two soil borings (SB-23 and SB-22) were converted into temporary well points (TWPs) (TWP-1 and TWP-2, respectively). The TWPs were constructed with 1-inch diameter PVC 0.010-inch slotted screen and solid riser to depths ranging from 18.50 to 19.75 feet bgs. The two TWP locations are depicted on Figure 4, groundwater sampling analytical results are

[1] The PAH analysis was run out of hold time due to a recording error at one soil sample (SB-14A). Since this analytical parameter was only four of days out of hold time, this analysis may not represent worst-case scenario results, but can indicate if there is a potential for PAH-impacted soil; therefore, it can be utilized for the purposes of this Phase II LSI.

summarized on Table 2, and groundwater analytical results exceeding NYSDEC Ambient Water Quality Standards (AWQS) are depicted on Figure 6. Temporary well point TWP-1 was gauged and sampled on June 28, 2017, and TWP-2 was gauged and sampled on June 29, 2017. Groundwater was encountered in the temporary well points at an approximate depth of 8.0 feet bgs. Temporary well point logs are included as Appendix B. Groundwater samples were collected and submitted to Hampton-Clarke of Fairfield, New Jersey for analysis of TCL/CP-51 VOCs via USEPA Method 8260, TCL/CP-51 SVOCs via USEPA Method 8270, and Lead via USEPA Method 6020.

Following sampling, the borings were backfilled with the soil cuttings and bentonite hole plug to grade.

**Applicable Soil and Groundwater Regulatory Standards**

The applicable NYSDEC remediation standards for the soil and groundwater analytical results at the Site are as follows:

Soil: 6 NYCRR Part 375 (Tables 375-6.8(a) and (b), Effective December 14, 2006):
Unrestricted Use Soil Cleanup Objectives (SCOs)
Residential Use SCOs
Restricted-Residential SCOs
Commercial Use SCOs
Industrial Use SCOs
Protection of Ecological Resources SCOs
Protection of Groundwater SCOs

Groundwater: 6 NYCRR Part 703 (Table 1, reissued June 1998) and Draft Ambient Water Quality Standards, Guidance Values and Groundwater Effluent Limitations (Table 1, drafted November 1999):
Ambient Water Quality Standards (AWQS)

An account of the soil sampling activities is discussed below, and the laboratory data reports are included in Appendix C. Soil sampling analytical results are summarized on Table 1, and groundwater sampling analytical results are summarized on Table 2.

**REC 1 – Automotive Repair Drainage System**

*REC 1A – Service Garage Sealed Floor Drain // REC 1G – Former Hydraulic Lift Floor Drains // REC 1H – Former Grease and Sand Interceptor – Soil Sampling and Analytical Results*

A total of three soil borings (SB-1, SB-2, and SB-3) were advanced to a maximum depth of five feet bgs in the vicinity of the service garage sealed floor drains, former hydraulic lift floor/trench drains, and the former grease and sand interceptor identified within the Lot 30 Site Building for assessment of the former automotive repair drainage system. Field screening of the soil borings did not identify elevated PID readings. In the absence of field evidence of impacts, one soil sample was collected between 3.0 to 3.5 feet bgs, the presumed invert of the former grease and sand interceptor, from soil boring SB-1; and one soil sample was collected from both SB-2 and SB-3 between 0.5 to 1.0 feet bgs, the presumed invert of the former drainage systems. Soil samples SB-1 through SB-3 were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-1

- Barium, at a concentration of 360 milligrams per kilogram (mg/kg), exceeded the Unrestricted Use SCO (350 mg/kg) and the Residential Use SCO (350 mg/kg);
- Total chromium, at a concentration of 78 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), Residential Use SCO for trivalent chromium (36 mg/kg) and hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for trivalent chromium (41 mg/kg) and hexavalent chromium (1 mg/kg), and the Protection of Groundwater Use SCO for hexavalent chromium (19 mg/kg);
- Copper, at a concentration of 69 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 620 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg), the Residential Use SCO (400 mg/kg), the Restricted Residential Use SCO (400 mg/kg), the Protection of Ecological Resources SCO (63 mg/kg), and the Protection of Groundwater SCO (450 mg/kg);
- Total mercury, at a concentration of 0.8 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 410 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-2

- Copper, at a concentration of 61 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 520 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg), the Residential Use SCO (400 mg/kg), the Restricted Residential Use SCO (400 mg/kg), the Protection of Ecological Resources SCO (63 mg/kg), and the Protection of Groundwater SCO (450 mg/kg);
- Total chromium, at a concentration of 23 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 1.9 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 300 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-3

- Total chromium, at a concentration of 17 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg) and the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory reporting limits (RLs) or were detected at concentrations below the most stringent NYSDEC SCOs.

## REC 2 – Automotive Repair Hydraulic Lift Systems

*REC 2A – Hydraulic Lifts and Alignment Rack // REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes // REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack and Underground Hydraulic Oil Reservoirs – Soil Sampling and Analytical Results*

A total of eight soil borings (SB-6 through SB-13) were advanced to a maximum depth of 10 feet bgs in the vicinity of the existing hydraulic lifts and alignment rack, the wall-mounted hydraulic fluid reservoirs/control boxes, the former hydraulic lift system locations, and underground hydraulic oil reservoirs for assessment of the current and former hydraulic lift systems. Field screening of the soil borings did not identify elevated PID readings. In the absence of field evidence of impacts, one soil sample was collected from soil borings SB-7, SB-10, and SB-12 between 8.0 to 9.0 feet bgs, the presumed invert of the former hydraulic lift fluid reservoirs/alignment rack housing. Additionally, two samples were collected per boring location for soil borings SB-6, SB-8, SB-9, SB-11, and SB-13 between 0.5 to 1.0 feet bgs and 8.0 to 8.5 feet bgs to evaluate for impacts related to the wall mounted hydraulic fluid reservoirs as well as the current and former hydraulic lifts and underground fluid reservoirs, respectively. Soil samples were chemically analyzed for TCL/CP-51 VOCs, PAHs, and PCBs. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-9A[2]

- Benzo(a)pyrene, at a concentration of 1.2 mg/kg, exceeded the Industrial Use SCO (1.1 mg/kg); however, the concentration of 1.2 mg/kg was rounded to the number of significant digits (i.e., one) for Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), and the Commercial Use SCO (1 mg/kg); therefore, the analytical result of 1.2 mg/kg was rounded to 1 mg/kg, which meets these NYSDEC SCOs;
- Benzo(b)fluoranthene, at a concentration of 1.7 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), and the Restricted Residential Use SCO (1 mg/kg); and
- Indeno(1,2,3-cd)pyrene, at a concentration of 0.74 mg/kg, exceeded the Unrestricted Use SCO (0.5 mg/kg), the Residential Use SCO (0.5 mg/kg), and the Restricted Residential Use SCO (0.5 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

*REC 2D – Hydraulic Lift Control Boxes – Soil Sampling and Analytical Results*

A total of three soil borings (SB-14, SB-15, and SB-16) were advanced to a maximum depth of five feet bgs in the vicinity of the hydraulic lift control boxes identified within the Lot 30 Site Building for assessment of potential impacts related to the identified hydraulic lift control boxes. SB-14 was completed within a heavily stained area of concrete, where potential breaching around the control box

[2] Benzo(a)anthracene and chrysene were detected with a concentration of 1.3 mg/kg and 1.2 mg/kg, respectively; therefore, the analytical results of 1.3 mg/kg and 1.2 mg/kg were rounded to the number of significant digits (i.e., one) of the applicable standard for benzo(a)anthracene and chrysene (i.e., the NYSDEC's Unrestricted Use SCO of 1 mg/kg); therefore, the analytical results of 1.3 mg/kg and 1.2 mg/kg were rounded to 1 mg/kg, which meets the applicable the NYSDEC's Unrestricted Use SCO.

was evident. Field screening of the soil borings did not identify elevated PID readings. In the absence of field evidence of impacts one soil sample was collected at each boring location between 0.5 to 1.0 feet bgs, the presumed invert of the hydraulic lift control box piping infrastructure, with the exception of soil sample SB-14B, which was collected between 1.5 to 2.0 feet bgs. Soil samples were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs for this REC. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-14B

- Total aroclor, at a concentration of 0.16 mg/kg, exceeded the Unrestricted Use SCO (0.1 mg/kg);
- Cadmium, at a concentration of 3.7 mg/kg, exceeded the Unrestricted Use SCO (2.5 mg/kg) and the Residential Use SCO (2.5 mg/kg);
- Total chromium, at a concentration of 36 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Copper, at a total concentration of 4,900 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg), the Residential Use SCO (270 mg/kg), the Restricted Residential Use SCO (270 mg/kg), the Commercial Use SCO (270 mg/kg), the Protection of Ecological Resources SCO (50 mg/kg), and the Protection of Groundwater Use SCO (450 mg/kg);
- Total mercury, at a concentration of 3 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81 mg/kg), the Commercial Use SCO (2.8 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater Use SCO (0.73 mg/kg); and
- Zinc, at a total concentration of 580 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources Use SCO (109 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

*REC 2E – Former Air Compressors and REC 11 – Vehicle Painting Operations – Soil Sampling and Analytical Results*

One soil boring (SB-25) was advanced to a maximum depth of five feet bgs in the vicinity of the former air compressor locations identified within the Lot 30 Site Building where moderate staining on the flooring beneath the former air compressor was observed to evaluate for potential impacts related to former service station operations. Since vehicle painting operations were also conducted within the vicinity of this area, SB-25 was also used to evaluate these ongoing activities as well. Field screening of the soil boring did not identify elevated PID readings. In the absence of field evidence of impacts, one soil sample was collected from boring location SB-25 between 0.5 to 1.0 feet bgs, just below the concrete slab of the Lot 30 Site Building. Soil sample SB-25 was analyzed for TCL/CP-51 VOCs, PCBs, PAHs, and TAL Metals. Analytical results identified the following exceedances of the NYSDEC SCOs:

Soil Sample SB-25

- Total chromium, at a concentration of 32 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO

for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);

- Lead, at a concentration of 260 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total mercury, at a concentration of 0.25 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg) and the Protection of Ecological Resources SCO (0.18 mg/kg); and
- Zinc, at a concentration of 120 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 3 – Vehicle Storage – Investigation Results**

Ransom identified several areas utilized for the storage of used vehicles in relation to the automotive sales and repair operations at the Site during the June 2017 Phase I ESA activities. Vehicle storage areas were identified within the northeastern most portion of the Lot 30 Site Building as well as along the paved parking areas of the Lot 30 portion of the Site. Ransom conducted a visual inspection of the surface areas beneath the parked vehicles during the Phase II LSI activities conducted between July 27, 2017 through July 29, 2017. No evidence of cracks, breaches, or apparent impacts were identified during investigation activities; therefore, no soil samples were collected and vehicle storage is no longer considered a REC.

**REC 4 – Inactive Oil-Fired Burner – Investigation Results**

Ransom was unable to complete subsurface soil investigation activities in the vicinity of the in-active oil-fired burner during the Phases II LSI activities due to the presence of underground utilities in this area; therefore, a soil sample could not be collected representative of potential impacts at REC 4. Visual inspection of the surface conditions in the vicinity of the inactive oil-fired burner did not identify breaches within the concrete slab; however, a significant layer of dust/potential waste ash was noted.

**REC 5 – Former 3,000-gallon Fuel Oil UST – Soil Sampling and Analytical Results**

Geophysical survey activities conducted on June 28, 2017 identified one subsurface metallic anomaly indicative of an UST in the presumed location of the former 3,000-gallon fuel oil UST, located on the northeast side of the Lot 30 Site Building. One soil boring, SB-17, was advanced down-gradient (i.e., to the northwest) of the identified metallic anomaly/presumed 3,000-gallon fuel oil UST to evaluate potential impacts associated with this UST. Field screening of the soil boring did not identify elevated PID readings; additionally, no odors and/or staining were observed in the soil boring. Soil sample SB-17 was collected between 8.0 to 8.5 feet bgs, the presumed invert of the former 3,000-gallon fuel oil UST, and analyzed for TCL/CP-51 VOCs and PAHs. All analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the NYSDEC's most stringent SCOs.

**REC 6 – Former 550-gallon Waste Oil UST – Soil Sampling and Analytical Results**

Geophysical survey activities conducted on June 28, 2017 did not identify a subsurface anomaly indicative of an UST in the presumed location of the former 550-gallon waste oil UST, located on the southeast exterior corner of the Lot 30 Site Building.

One soil boring, SB-18, was advanced in the location of the former 550-gallon waste oil UST to evaluate potential impacts associated with this former UST. Field screening of the soil boring did not identify elevated PID readings; additionally, no odors and/or staining were observed in the soil boring. In the absence of field evidence of impacts, soil sample SB-18 was collected between 7.0 to 7.5 feet bgs, the approximate depth of the invert of the former UST, and was analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, TAL Metals, and PCBs. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-18

- Total chromium, at a concentration of 31 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg); and
- Manganese, at a concentration of 1,800 mg/kg, exceeded the Unrestricted Use SCO (1,600 mg/kg) and the Protection of Ecological Resources SCO (1,600 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 7 – 55-gallon Waste Oil Drum Storage – Soil Sampling and Analytical Results**

One soil boring, SB-19, was advanced to a maximum depth of five feet bgs in the vicinity of the identified staining and a breach in the concrete floor within the service garage area of the Lot 30 Site Building, associated with the former storage of 55-gallon drums, to evaluate for potential impacts related to the presumed storage/disposal of waste oil. Field screening of the soil boring did not identify elevated PID readings; in addition, no evidence of odors and/or staining were observed in the soil boring. In the absence of field evidence of impacts, one soil sample was collected between 0.5 to 1.0 feet bgs, directly beneath the concrete slab foundation breach of the Lot 30 Site Building. Soil sample SB-19 was analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, and TAL Metals. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-19

- Lead, at a concentration of 130 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 13 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg) and the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg); and
- Total mercury, at a concentration of 0.33 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg) and the Protection of Ecological Resources SCO (0.18 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 8 – Current/Former Residential Use**

*REC 8A – Current Residential Use – Geophysical Survey Results*

Property records obtained by Ransom during the June 2017 Phase I ESA activities indicated the usage of fuel oil on the Lot 26 portion of the Site. Geophysical survey activities were conducted on June 28, 2017, in the vicinity of the Lot 26 Residential Building, to evaluate for the potential presence of a fuel oil UST; however, no evidence of an UST or associated piping was identified associated with REC 8A.

*REC 8B – Former Residential Use – Geophysical Survey Results*

Historic records obtained by Ransom during the June 2017 Phase I ESA activities identified the presence of eight residential structures (not including the current Lot 26 Residential Building) at the Site prior to redevelopment activities in 1974 and 1980. Ransom conducted Site-wide geophysical survey activities between June 27 and June 29, 2017 to evaluate subsurface conditions for the presence of anomalies indicative of former structures, foundations, and/or previously unknown USTs. Geophysical survey activities did not identify subsurface anomalies related to the former residential use on-Site; however, several limitations were encountered during surveying activities, resulting in a partial survey of the Site (See section "Geophysical Investigation" Section above). Based on the geophysical findings and general Phase II results, Ransom believes that these limitations do not warrant further investigation; however, due to these geophysical survey limitations, further response actions may be warranted during Site redevelopment if subsurface structures are identified.

*REC 8A – Former Fuel Oil Use at Current Residential Building – Soil Sampling and Analytical Results*

One soil boring, SB-20, was advanced in the vicinity of a sealed fill pipe, identified during the June 2017 Phase I ESA activities on the eastern side of the Lot 26 Residential Building, to evaluate for potential impacts related to the known fuel oil use. Soil boring SB-20 was advanced to a total depth of 8 feet bgs. Field screening of the soil boring did not identify elevated PID readings; in addition, no odors and/or staining were observed in the soil boring. In the absence of field evidence of impacts, one sample was collected from the first six inches of native soils between approximately 0.0 to 0.5 feet bgs and analyzed for TCL/CP-51 VOCs and PAHs. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-20:

- Benzo(a)anthracene, at a concentration of 1.7 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), and the Protection of Groundwater SCO (1 mg/kg);
- Benzo(a)pyrene, at a concentration of 1.5 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), the Commercial Use SCO (1 mg/kg), and the Industrial Use SCO (1.1 mg/kg);
- Benzo(b)fluoranthene, at a concentration of 1.9 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), the Restricted Residential Use SCO (1 mg/kg), and the Protection of Groundwater SCO (1.7 mg/kg);

- Chrysene, at a concentration of 1.6 mg/kg, exceeded the Unrestricted Use SCO (1 mg/kg), the Residential Use SCO (1 mg/kg), and the Protection of Groundwater SCO (1 mg/kg); and
- Indeno(1,2,3-cd)pyrene, at a concentration of 0.98 mg/kg, exceeded the Unrestricted Use SCO (0.5 mg/kg), the Residential Use SCO (0.5 mg/kg), and the Restricted Residential Use SCO (0.5 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 9 – Potential Fill**

*Soil Sampling and Analytical Results*

One soil boring, SB-21, was advanced to a maximum depth of 10 feet bgs to evaluate for potential fill material on the eastern boundary of the Lot 30 portion of the Site. Material indicative of historic fill (i.e., red brick) was identified at depths ranging from 0.5 to 3.0 feet bgs within soil borings SB-14, SB-21, SB-22, and SB-24 during the Phase II LSI activities. Field screening of the soil boring did not identify elevated PID readings. In addition, no evidence of odors and/or staining was observed in the boring. In the absence of field evidence of impacts, one soil sample was collected at the six-interval exhibiting evidence of fill material (i.e. red brick). Soil samples SB-14B, SB-21, SB-22, and SB-23 were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, PCBs, TAL Metals, and/or TCL Pesticides for this REC. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-14B

- Total aroclor (specifically Aroclor-1260), at a concentration of 0.16 mg/kg, exceeded the Unrestricted Use SCO (0.1 mg/kg);
- Cadmium, at a concentration of 3.7 mg/kg, exceeded the Unrestricted Use SCO (2.5 mg/kg) and the Residential Use SCO (2.5 mg/kg);
- Total chromium, at a concentration of 36 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Copper, at a total concentration of 4,900 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg), the Residential Use SCO (270 mg/kg), the Restricted Residential Use SCO (270 mg/kg), the Commercial Use SCO (270 mg/kg), the Protection of Ecological Resources SCO (50 mg/kg), and the Protection of Groundwater Use SCO (450 mg/kg);
- Total mercury, at a concentration of 3 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81 mg/kg), the Commercial Use SCO (2.8 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater Use SCO (0.73 mg/kg); and
- Zinc, at a total concentration of 580 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources Use SCO (109 mg/kg).

Soil Sample SB-21

- Arsenic, at a concentration of 27 mg/kg, exceeded the Unrestricted Use SCO (13 mg/kg), the Residential Use SCO (16 mg/kg), the Restricted Residential Use SCO (16 mg/kg), the

Commercial Use SCO (16 mg/kg), the Industrial Use SCO (16 mg/kg), the Protection of Ecological Resources SCO (13 mg/kg), and the Protection of Groundwater SCO (16 mg/kg);
- Copper, at a concentration of 87 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 100 mg/kg, exceeded the Unrestricted use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 30 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 28 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81 mg/kg), the Commercial Use SCO (2.8 mg/kg), the Industrial Use SCO (5.7 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 110 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-22

- Lead, at a concentration of 280 mg/kg, exceeded the Unrestricted use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 29 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 0.54 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg) and the Protection of Ecological Resources SCO (0.18 mg/kg); and
- Zinc, at a concentration of 180 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

Soil Sample SB-24

- Acetone[3], at a concentration of 0.25 mg/kg, exceeded the Unrestricted Use SCO (0.05 mg/kg) and the Protection of Groundwater SCO (0.05 mg/kg);
- Barium, at a concentration of 750 mg/kg, exceeded the Unrestricted Use SCO (350 mg/kg), the Residential Use SCO (350 mg/kg), the Restricted Residential Use SCO (400 mg/kg), the Commercial Use SCO (400 mg/kg), and the Protection of Ecological Resources SCO (433 mg/kg);
- Cadmium, at a concentration of 4.2 mg/kg, exceeded the Unrestricted Use SCO (2.5 mg/kg), and the Residential Use SCO (2.5 mg/kg). The concentration of 4.2 mg/kg was rounded to the number of significant digits (i.e., one) for the Protection of Ecological Resources SCO (4 mg/kg); therefore, the analytical result of 4.2 mg/kg was rounded to 4 mg/kg, which meets the Protection of Ecological Resources SCO;
- Total chromium, at a concentration of 45 mg/kg, exceeded the Unrestricted Use SCO for trivalent chromium (30 mg/kg) and for hexavalent chromium (1 mg/kg), the Residential Use

[3] It is known that acetone is a common laboratory or glassware contaminant. Since the acetone concentration was low and since there was only one exceedance of it, Ransom believes this concertation to be attributable to the lab.

SCO for trivalent chromium (36 mg/kg) and for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for trivalent chromium (41 mg/kg) and for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);

- Copper, at a concentration of 140 mg/kg, exceeded the Unrestricted Use SCO (50 mg/kg) and the Protection of Ecological Resources SCO (50 mg/kg);
- Lead, at a concentration of 4,300 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg), the Residential Use SCO (400 mg/kg), the Restricted Residential Use SCO (400 mg/kg), Commercial Use SCO (1,000 mg/kg), the Industrial Use SCO (3,900 mg/kg) the Protection of Ecological Resources SCO (63 mg/kg), and the Protection of Groundwater SCO (450 mg/kg);
- Total mercury, at a concentration of 0.89 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Restricted Residential Use SCO (0.81), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg);
- Nickel, at a concentration of 36 mg/kg, exceeded the Unrestricted Use SCO (30 mg/kg) and the Protection of Ecological Resources SCO (30 mg/kg);
- Zinc, at a concentration of 1,500 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg);
- The pesticide p,p'-DDD, at a concentration of 0.028 mg/kg, exceeded the Unrestricted use SCO (0.0033 mg/kg) and the Protection of Ecological Resources SCO (0.0033 mg/kg); and
- The pesticide p,p'-DDE, with a concentration of 0.011 mg/kg, exceeded the Unrestricted use SCO (0.0033 mg/kg) and the Protection of Ecological Resources SCO (0.0033 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**REC 10 – Potential Off-Site Sources**

*REC 10A – Off-Site Citgo Service Station // REC 10B – Off-Site Devonshire Discount Tire, Auto Body & Repair Center // REC 10C – Former Riverdale Auto Service Inc. - Soil and Groundwater Sampling and Analytical Results*

Soil boring SB-22 was advanced along the southwestern Lot 30 Site boundary, along Culver Street, and soil boring SB-23 was advanced along the southwestern Lot 30 Site boundary, along Riverdale Avenue, to evaluate potential impacts associated with possible off-Site sources identified adjacent to the Site. Soil borings SB-22 and SB-23 were advanced to a total depth of 18.50 feet bgs and 19.75 feet bgs, respectively. Field screening of soil borings identified elevated PID readings within one soil boring, SB-23, ranging from 3.2 to 6.8 ppm at an approximate depth of 3.0 to 6.5 feet bgs. Soil sample SB-23 was collected at the interval exhibiting the highest PID readings, between 3.5 to 4.0 feet bgs. In the absence of field evidence of impacts within soil boring SB-22, no soil sample was collected. Soil sample SB-23 was analyzed for TCL/CP-51 VOCs, PAHs, and TAL Metals. Analytical results of soil sample SB-23 were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

Soil borings SB-22 and SB-23 were converted to temporary well points (TWP-2 and TWP-1, respectively) to evaluate potential impacts associated with possible off-Site sources identified adjacent to the Site. Temporary well point TWP-1 was installed within soil boring SB-23, which was further

advanced to a total depth of 19.75 feet bgs, and temporary well point TWP-2 was installed within soil boring SB-22, which was further advanced to a total depth of 18.50 feet bgs. Temporary well point TWP-1 was gauged and sampled on June 29, 2017, at which time depth to water was measured at approximately 8.0 feet bgs, while TWP-2 was gauged and sampled on June 28, 2017, at which time depth to water was measured at approximately 8.0 feet bgs. Temporary well point groundwater samples were analyzed for TCL/CP-51 VOCs, TCL/CP-51 SVOCs, and lead. Groundwater sampling analytical results identified the following exceedances of the AWQS:

Groundwater Sample TWP-1

- 1,2,4-Trimethylbenzene, at a concentration of 2,500 micrograms per liter (µg/L), exceeded the AWQS (5 µg/L);
- 1,3,5-Trimethylbenzene, at a concentration of 890 µg/L, exceeded the AWQS (5 µg/L).
- Acetone, at a concentration of 140 µg/L, exceeded the AWQS (50 µg/L);
- Benzene, at a concentration of 94 µg/L, exceeded the AWQS (1 µg/L);
- Ethylbenzene, at a concentration of 1,700 µg/L, exceeded the AWQS (5 µg/L);
- Isopropyl-benzene, at a concentration of 250 µg/L, exceeded the AWQS (5 µg/L);
- m&p-Xylenes, at a concentration of 4,600 µg/L, exceeded the AWQS (5 µg/L);
- n-Butylbenzene, at a concentration of 30 µg/L, exceeded the AWQS (5 µg/L);
- n-Propylbenzene, at a concentration of 560 µg/L, exceeded the AWQS (5 µg/L);
- o-Xylene, at a concentration of 410 µg/L, exceeded the AWQS (5 µg/L);
- sec-Butylbenzene, at a concentration of 25 µg/L, exceeded the AWQS (5 µg/L);
- Toluene, at a concentration of 150 µg/L, exceeded the AWQS (5 µg/L);
- Xylenes (total), at a concentration of 5,000 µg/L, exceeded the AWQS (5 µg/L);
- 2,4-Dimethylphenol, at a concentration of 10 µg/L, exceeded the AWQS (1 µg/L);
- Naphthalene, at a concentration of 160 µg/L, exceeded the AWQS (10 µg/L); and
- Lead (unfiltered), at a concentration of 27 µg/L, exceeded the AWQS (25 µg/L).

Groundwater Sample TWP-2

- 1,2,4-Trimethylbenzene, at a concentration of 740, exceeded the AWQS (5 µg/L);
- 1,3,5-Trimethylbenzene, at a concentration of 87 µg/L, exceeded the AWQS (5 µg/L);
- Acetone, at a concentration of 63 µg/L, exceeded the AWQS (50 µg/L);
- Benzene, at a concentration of 560 µg/L, exceeded the AWQS (1 µg/L);
- Ethylbenzene, at a concentration of 660 µg/L, exceeded the AWQS (5 µg/L);
- Isopropyl-benzene, at a concentration of 100 µg/L, exceeded the AWQS (5 µg/L);
- m&p-xylenes, at a concentration of 960 µg/L, exceeded the AWQS (5 µg/L);
- Methyl-t-butyl ether (MTBE), at a concentration of 140 µg/L, exceeded the AWQS (10 µg/L);
- n-Propylbenzene, at a concentration of 200 µg/L, exceeded the AWQS (5 µg/L);
- o-Xylene, at a concentration of 130 µg/L, exceeded the AWQS (5 µg/L);
- sec-Butylbenzene, at a concentration of 11 µg/L, exceeded the AWQS (5 µg/L);
- Toluene, at a concentration of 67 µg/L, exceeded the AWQS (5 µg/L);
- Xylenes (total), at a concentration of 1,100, exceeded the AWQS (5 µg/L);
- 2,4-Dimethylphenol, at a concentration of 3.7 µg/L, exceeded the AWQS (1 µg/L);
- Naphthalene, at a concentration of 87 µg/L, exceeded the AWQS (10 µg/L);
- Phenol, at a concentration of 4.6 µg/L, exceeded the AWQS (1 µg/L); and
- Lead (unfiltered), at a concentration of 33 µg/L, exceeded the AWQS (25 µg/L).

Additionally, due to the high concentrations of VOC and SVOC concentrations within groundwater samples TWP-1 and TWP-2, the laboratory RLs for several remaining analyzed constituents of concern exceeded the NYSDEC AWQS; please refer to Table 1 for a review of RL exceedances. All other analyzed constituents were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC AWQS.

**Preliminary Waste Characterization**

One composite soil sample, SB-24C, was collected from soil boring SB-24 for preliminary waste classification purposes. Soil sample SB-24 was a five-point composite sample collected at varying intervals between approximately 0.5 to 10.0 feet bgs. Field screening of the soils within soil boring SB-24 did not identify elevated PID readings; however fill material, including brick and coarse gravel, was encountered at a depth ranging from 0.5 and 4.0 feet bgs. In addition, no evidence of odors and/or staining were observed within the boring. Soil sample SB-24C was analyzed for VOCs+15, SVOCs+15, PCBs, TCL Pesticides, TAL Metals, and Cyanide. Analytical results identified the following exceedances of NYSDEC SCOs:

Soil Sample SB-24C

- Lead, at a concentration of 290 mg/kg, exceeded the Unrestricted Use SCO (63 mg/kg) and the Protection of Ecological Resources SCO (63 mg/kg);
- Total chromium, at a concentration of 26 mg/kg, exceeded the Unrestricted Use SCO for hexavalent chromium (1 mg/kg), the Residential Use SCO for hexavalent chromium (22 mg/kg), the Protection of Ecological Resources SCO for hexavalent chromium (1 mg/kg), and the Protection of Groundwater SCO for hexavalent chromium (19 mg/kg);
- Total mercury, at a concentration of 1.4 mg/kg, exceeded the Unrestricted Use SCO (0.18 mg/kg), the Residential Use SCO (0.81 mg/kg), the Protection of Ecological Resources SCO (0.18 mg/kg), and the Protection of Groundwater SCO (0.73 mg/kg); and
- Zinc, at a concentration of 200 mg/kg, exceeded the Unrestricted Use SCO (109 mg/kg) and the Protection of Ecological Resources SCO (109 mg/kg).

All other analyzed constituents of concern were either not detected above the laboratory RLs or were detected at concentrations below the most stringent NYSDEC SCOs.

**SUMMARY AND RECOMMENDATIONS**

Summary

Ransom performed a Phase II LSI at the Site to assess soil and groundwater quality relative to the RECs identified during Ransom's Phase I ESA. Soil samples were collected from around the Site to evaluate the potential environmental impacts to the Site from the identified RECs. Groundwater samples were collected from two temporary well points installed at upgradient locations on Site to evaluate the potential environmental impacts to the Site from potential off-Site sources of contamination.

**REC 1 – Automotive Repair Drainage System**

Soil sampling analysis identified metals concentrations, including barium, total chromium, copper, lead, total mercury, and zinc, that exceeded the NYSDEC's most stringent SCOs, including the Unrestricted Use SCO, the Protection of Groundwater Use SCO, the Residential Use SCO, and/or the Restricted

Residential Use SCO within soil borings collected in the vicinity of the former grease and sand interceptor, former hydraulic lift floor drains, and service garage sealed floor drains. Ransom's review of the data shows that the identified metals concentrations are comparable to the soil sampling results associated with the identified historic fill impacts on-Site (REC 9); therefore, it is more likely that fill materials below the building are the source of the metals concentrations. Further, although the identified concentrations exceed various SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release of metals was identified and the concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time, provided the Site remains in Commercial Use.

However, soil displaced during construction activities potentially containing elevated metals concentrations, and which will be disposed off-site, will require proper waste characterization testing and disposal at an appropriately licensed receiving facility.

**REC 2 – Automotive Repair Hydraulic Lift Systems and REC 11 – Vehicle Painting Operations**

*REC 2A – Hydraulic Lifts and Alignment Rack // REC 2C – Former Hydraulic Lifts, Air/Hydraulic Alignment Rack, and Underground Hydraulic Oil Reservoirs*

Field screening and subsequent soil analytical results did not exceed the most stringent NYSDEC SCOs; therefore, Ransom concludes that potential environmental concerns originating from the current or former hydraulic lift system have not significantly impacted the subsurface soils at the Site. Based on the soil sampling analytical results completed as part of the subsurface investigation to evaluate potential impacts, Ransom concludes that gross impacts in connection with the lifts are not present. However, it is possible that limited/residual impacts to the soil beneath and immediately surrounding the lifts are possible. Prior to, or concurrent with, Site redevelopment activities, Ransom recommends the proper decommissioning and removal of the hydraulic lifts. Since impacts were not identified, further investigation is not recommended at this time; however, if impacts are identified during Site reconstruction activities, further investigation and/or response actions may be warranted.

*REC 2B – Wall-Mounted Hydraulic Fluid Reservoirs/Control Boxes*

Soil sampling analysis identified concentrations of PAHs (specifically benzo[a]pyrene, benzo[b]fluoranthene, and indeno[1,2,3-cd]pyrene) that exceeded the NYSDEC Unrestricted Use SCO, Residential Use SCO, the Restricted Residential Use SCO, and/or the Industrial Use SCO within one soil sample (SB-9A), collected at the presumed invert of the wall-mounted hydraulic fluid reservoir piping associated with the hydraulic lift system within Bay 4 of the Lot 30 Site Building. These identified impacts are presumed to either be related to the current hydraulic fluid reservoir piping leading to the lift system or the historical fill across the Site. Based on these findings, Ransom concludes that further investigation of the identified PAH (i.e., benzo[a]pyrene) that exceeded the Industrial Use SCO is warranted. Prior to, or concurrent with, Site redevelopment activities, Ransom recommends a background investigation and/or delineation event to determine the source, followed by remediation of the identified benzo(a)pyrene impact, if applicable. Ransom recommends that the NYSDEC be notified of the discharge, in accordance with State law, if soil is determined to have been impacted by a petroleum discharge. If related to a petroleum release, Ransom recommends that soils identified above the Industrial Use SCO be excavated, documented and disposed off-site, at an appropriately licensed receiving facility. If related to the historic fil materials, Ransom recommends proper soil management during construction activities (see recommendations below).

*REC 2D – Hydraulic Lift Control Boxes*

Soil analysis identified concentrations of PCBs, specifically aroclor 1260, and metals that exceeded the Unrestricted Use SCO at one soil sample (SB-14B) in the vicinity of the western-most hydraulic lift control box located within the Lot 30 Site Building. Ransom concludes that the identified concentrations of PCBs are most likely attributable to the hydraulic lift control box utilized during automotive repair/hydraulic lift operations; however, the metals impacts (i.e., copper and total mercury) are presumably related to the observed historic fill. Although the soil analytical results did not exceed the standards for the current and proposed land use (Commercial), Ransom recommends additional investigation due to the identified impacts within the proposed detention basin area. Specifically, Ransom recommends that if displaced during Site redevelopment activities, any displaced PCB impacts in soil be disposed of off-Site at an appropriately licensed receiving facility. Ransom also recommends the proper disposal of the three-identified hydraulic lift control box units in accordance with local, state, and federal regulations.

*REC 2E – Former Air Compressors and REC 11 – Vehicle Painting Operations*

Analytical sampling results identified concentrations of metals (specifically lead, total mercury, and zinc) that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO, and total chromium that exceeded the Unrestricted Use SCO for trivalent chromium and hexavalent chromium, the Residential Use SCO for hexavalent chromium, the Protection of Ecological Resources SCO for hexavalent chromium, and the Protection of Groundwater SCO for hexavalent chromium. Ransom's review of the data shows that the identified metals concentrations are comparable to the soil sampling results associated with the identified historic fill impacts on-Site (REC 9); therefore, it is more likely that fill materials below the building are the source of the metals concentrations. Further, although the identified metals concentrations exceed several NYSDEC SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release related to elevated metals concentrations was identified and concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time provided the Site remains in Commercial use.

However, soil displaced during construction activities potentially containing elevated metals concentrations, and which will be disposed off-site, will require proper waste characterization testing and disposal at an appropriately licensed receiving facility.

**REC 3 – Vehicle Storage Operations**

Ransom did not identify areas of significant staining and/or evidence of impact associated with the vehicle storage operations; therefore, soil sampling was not completed at REC 3. Based on the lack of evidence of impact, Ransom does not recommend further investigation into the vehicle storage operations on-Site.

**REC 4 – Inactive Oil-Fired Burner**

Ransom was unable to complete subsurface soil investigation activities in the vicinity of the in-active oil-fired burner during the Phases II LSI activities due to the presence of underground utilities in this area. Although visual inspection of the surface conditions in the vicinity of the inactive oil-fired burner did not

identify breaches within the concrete slab, a significant layer of dust/potential waste ash was noted. Due to the likely presence of waste ash, which may contain heavy metals, Ransom recommends the proper removal and disposal of the inactive oil-fired burner in accordance with local, state, and federal regulations and cleaning of the dust/waste ash. Due to the inability to obtain analytical data and/or observe breaches to the floor slab beneath the inactive oil-fired burner, Ransom recommends the visual inspection of the floor slab after the slab is cleaned off and proper removal and disposal of the inactive oil-fired burner is completed. If a potential pathway to subsurface soils is identified, further investigation and/or action may be required.

**REC 5 – Former 3,000-gallon Fuel Oil UST**

Geophysical survey activities conducted on June 28, 2017 identified one subsurface metallic anomaly indicative of an UST in the presumed location of the former 3,000-gallon fuel oil UST, located on the northeast side of the Lot 30 Site Building, and appurtenant vent and product piping.

Subsequent soil sampling analysis did not identify concentrations of contaminants associated with fuel oil operations that exceeded the NYSDEC's most stringent SCOs. Based on the geophysical survey results and soil sampling analytical results completed as part of the subsurface investigation to evaluate potential impacts, Ransom concludes that gross impacts in connection with the UST are not present. However, it is possible that limited/residual impacts to the soil beneath and immediately surrounding the UST are possible. Prior to or concurrent with redevelopment, since the UST is within the footprint of the proposed CVS Pharmacy/Store, it should be properly removed and the immediately surrounding soil be assessed for evidence of a release (see Recommendations below).

**REC 6 – Former 550-gallon Waste Oil UST**

Geophysical survey activities conducted on June 28, 2017 did not identify a subsurface anomaly indicative of an UST in the presumed location of the former 550-gallon waste oil UST, located on the southeast exterior corner of the Lot 30 Site Building. Soil sampling analysis of soils collected at the presumed invert of the former 550-gallon waste oil UST identified concentrations of total chromium that exceeded the Unrestricted Use SCO for trivalent chromium and hexavalent chromium, the Residential Use SCO for hexavalent chromium, the Protection of Ecological Resources SCO for hexavalent chromium, and the Protection of Groundwater SCO for hexavalent chromium, and manganese that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO. Ransom's review of the data shows that the identified metals concentrations are not common constituents of concern for waste oil; therefore, it is more likely that fill materials used to backfill the UST grave are the source of these metals concentrations. Although the identified concentrations exceed various SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release of metals was identified and the concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time provided the Site remains in Commercial use.

**REC 7 – 55-gallon Waste Oil Drum Storage**

Soil sampling analysis of subsurface soils collected beneath the former 55-gallon waste oil drum storage area identified metals concentrations (specifically lead and total mercury) that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO, and total chromium that exceeded the Unrestricted Use SCO and the Protection of Ecological Resources SCO for hexavalent chromium.

Ransom's review of the analytical data shows that the identified metals concentrations are comparable to the soil sampling results associated with the identified historic fill impacts on-Site (REC 9); therefore, it is more likely that fill materials below the building are the source of the metals concentrations and not the storage of 55-gallon waste oil drums. Although the identified concentrations exceed various SCOs, Ransom believes that these findings are not reportable to the NYSDEC since no known spill or release of metals was identified and the concentrations do not exceed the standards for the current and proposed land use (Commercial). Based on these findings, Ransom concludes that no further action is warranted at this time, provided the Site remains in Commercial Use.

**REC 8A – Known Fuel Oil Use at Residential Building**

Geophysical survey activities were conducted on June 28, 2017 on the Lot 30 portion of the Site; however, no evidence of an UST was identified. Soil analytical results identified concentrations of PAHs that exceeded the Unrestricted Use SCO, the Residential Use SCO, the Restricted Residential Use SCO, the Commercial Use SCO, and the Industrial Use SCO in the vicinity of the sealed fill pipe, presumably related to former fuel oil usage or possibly historic fill. Based on these findings, Ransom recommends further investigation with regard to the identified impacts. If related to a petroleum release, Ransom recommends the delineation and subsequent excavation/disposal of soils with concentrations that exceed the Commercial Use and Industrial Use SCO. If related to the historic fil materials, Ransom recommends proper soil management during construction activities (see recommendations below).

**REC 8B – Former Residential Use**

Between June 27, 2017 and June 29, 2017, Ransom conducted Site-wide geophysical survey activities to evaluate subsurface conditions for the presence of anomalies indicative of former structures, foundations, and/or previously unknown USTs. Geophysical survey results did not identify evidence of previously unknown USTs or septic systems at the Site; however, due to the limited nature of the geophysical survey, Ransom recognizes that they may be discovered during Site redevelopment activities. Therefore, Ransom recommends that in the case an underground heating oil tank and/or septic system is identified, they should be properly removed and disposed of in accordance with applicable local, state, and federal regulations. Ransom should be contacted immediately if evidence of impacts is identified in connection with a previously unidentified subsurface UST or septic system.

**REC 9 – Potential Fill**

During the course of the subsurface soil investigation activities, material indicative of historic fill, particularly the presence of red brick, was identified at depths ranging from 0.5 to 3.0 feet bgs within soil borings SB-14, SB-21, SB-22, and SB-24. Analysis of the soils in the vicinity of the historic fill identified concentrations of VOCs, metals, and pesticides that exceeded the most stringent NYSDEC SCOs, including four metals (arsenic, barium, copper, and lead) that exceeded the Commercial Use SCOs and/or the Industrial Use SCOs. Based on these findings, Ransom recommends further response actions with regards to the identified historic fill on-Site (i.e., engineering controls and a long-term Soil Management Plan for implementation during future subsurface work at the Site). Ransom understands that exceedances of the Commercial Use SCOs and/or the Industrial Use SCOs related to historic fill exist within the proposed building footprint and proposed detention basin area. Ransom notes that the fill material can be reused on-Site provided that it is being reused within other areas containing the identified historic fill. If off-site disposal is required, Ransom recommends that the fill material be characterized

and disposed of in accordance with applicable local, state, and federal regulations as well as accepting facility policies.

**REC 10 – Potential Off-Site Sources**

Groundwater sampling analytical results identified concentrations of VOCs, SVOCs, and lead that exceeded the NYSDEC AWQS for groundwater collected from temporary well points TWP-1 and TWP-2. Elevated concentrations indicative of gasoline impacts were identified within groundwater from both temporary well points. Based on these findings, Ransom concludes that off-Site sources of contamination have impacted/are impacting the groundwater conditions on-Site.

New York State does not have Vapor Intrusion (VI) groundwater screening levels developed for groundwater to evaluate for potential vapor concerns within structures. In the absence of these screening levels, Ransom compared the groundwater results to the New Jersey Department of Environmental Protection (NJDEP) VI Groundwater Screening Levels (GWSL) for those compounds that exceeded the NYSDEC AWQS in an effort to evaluate potential vapor intrusion into the proposed CVS building. The results of the comparison identified several compounds with concentrations identified in groundwater from TWP-1 and TWP-2 that exceeded the applicable NJDEP VI GWSLs. The locations of these two temporary well points are proximate to the proposed CVS building and represent a potential vapor intrusion concern. Ransom recommends the installation of a passive sub-slab mitigation system concurrent with future Site redevelopment activities.

However, groundwater displaced during construction activities, potentially containing elevated VOCs, SVOCs, and lead concentrations, will require proper management (e.g. treatment and discharge permit, or containment and disposal at an appropriately licensed receiving facility).

**Preliminary Waste Characterization**

Soil sampling analysis identified metals concentrations, including total chromium, lead, total mercury, and zinc, that exceeded the NYSDEC's most stringent SCOs, including the Unrestricted Use SCO, the Protection of Ecological Resources SCO, the Protection of Groundwater Use SCO, the Residential Use SCO, and/or the Restricted Residential Use SCO within the composite soil sample collected within the footprint of the proposed detention basin. Ransom's review of the data shows that the identified metals concentrations are likely associated with the identified historic fill impacts on-Site (REC 9), see above. For soil management purposes, any soil displaced during construction activities potentially containing elevated metals concentrations, and which will be disposed off-site, will require proper waste characterization testing and disposal at an appropriately licensed receiving facility.

<u>Recommendations</u>

Based on the findings and conclusions presented above, Ransom makes the following recommendations:

- Based on the investigative results, Ransom does not recommend further investigation of REC 1, REC 2C, REC 2E, REC 3, REC 5, REC 6 or REC 11.
- Ransom recommends the proper removal and disposal of the three-identified hydraulic lift control box units, hydraulically operated lifts, and associated hydraulic oil containment

systems within the Lot 30 Site Building according to local, state and federal regulations prior to or concurrent with Site redevelopment activities.

- Due to the identified PCB impacts within the proposed detention basin (REC 2D), Ransom recommends that, if displaced during Site redevelopment activities, any displaced PCB impacts in soil be disposed of off-Site, at an appropriately licensed receiving facility.
- Due to the likely presence of waste ash, which may contain heavy metals, Ransom recommends the proper removal and disposal of the inactive oil-fired burner (REC 4) in accordance with local, state, and federal regulations.
- Ransom recommends the visual inspection of the floor slab in the vicinity of the inactive oil-fired burner (REC 4) after cleaning and removal of the burner to evaluate potential impacts in this area.
- Ransom recommends that the suspect UST (REC 5) identified during the June 28, 2017 geophysical survey activities be properly removed and disposed off-site prior to, or concurrent with, redevelopment activities in accordance with applicable federal, state and local regulations. Although soil samples surrounding the UST did not exhibit impacts, the area beneath the UST could not be sampled due to the presence of the UST itself. If soils are observed as being impacted and/or soil analytical results indicate a release to Site soils, appropriate remedial action(s) should be taken, including but not limited to, notification to the NYSDEC, soil excavation, post-remediation soil sampling, groundwater investigation, and required reporting activities. If impacts above the NYSDEC's SCOs are further identified, further remedial action (e.g., soil removal, disposal, reporting, etc.) may be warranted.
- The 55-gallon drums (REC 7) present on-Site should be removed from the Site and properly disposed of prior to Site construction activities, and documentation of their disposal should be maintained with a copy provided to CVS.
- Soil analytical results identified elevated concentrations of PAHs in the vicinity of a sealed fill pipe on the eastern exterior of the Lot 26 Site Building (REC 8A) and the wall-mounted hydraulic fluid reservoir piping associated with the hydraulic lift system within Bay 4 of the Lot 30 Site Building (REC 2B). Ransom recommends further investigation of REC 2B and REC 8A prior to notification to the NYSDEC for these identified impacts in an effort to determine if they are related to a petroleum discharge, or historic fill. If determined to be the result of a petroleum discharge, Ransom recommends the delineation, excavation and disposal of soils with concentrations that exceed the Commercial Use and/or Industrial Use SCOs prior to or concurrent with the Site redevelopment activities that were identified in conjunction with the known fuel oil use at the Lot 26 Site Building (REC 8A) and hydraulic oil at the Lot 30 Site Building (REC 2B). However, if related to historic fill, Ransom recommends proper soil management activities. Specifically, if displaced during construction, reuse on-Site at other historic fill areas is appropriate, as historic fill was observed across the Site from grade to at least three feet below grade; however, if the material is geotechnically unsuitable or it is determined to be excess, the impacted soils should be properly characterized and disposed of at an appropriately licensed facility.
- It is Ransom's opinion that the identified metals exceedances of the Commercial Use SCOs and/or the Industrial Use SCOs (i.e., arsenic, barium, copper, and lead) are related to historic fill materials. Based on these findings and since fill materials were identified across the Site,

Ransom recommends further response actions. Although not necessarily a reportable condition to the NYSDEC, Ransom recommends implementing engineering controls and a long-term Soil Management Plan, where the engineering controls will include construction of the proposed Site building, parking lot/drives and other construction features that will serve as a cap for the contaminated fill (i.e., asphalt paving, landscaping, concrete sidewalk, and building slab). The contaminated fill may remain on-Site or be reused on-Site provided that they are geotechnically suitable and the engineering controls are carried out.

- Ransom recommends that fill material displaced during Site redevelopment activities, which cannot be reused on-Site, be properly tested and managed for off-site beneficial reuse and/or tested for waste characterization parameters and disposed of in accordance with applicable local, state, and federal regulations, as well as accepting facility policies.

- It is Ransom's opinion that the identified VOCs, SVOCs, and lead impacts in groundwater (REC 10) are likely a result of off-Site sources of contamination, and likely not attributable to current and/or former on-Site automotive service operations. Groundwater was encountered during Phase II LSI activities at approximately 8 feet bgs. Based on the identified groundwater impacts, Ransom recommends the implementation of a Groundwater Management Plan (GMP) in the event that Site redevelopment activities extend beyond approximately 7 feet bgs.

- Based on the identified VOC groundwater impacts, likely attributable to off-Site groundwater impacts (REC 10), Ransom recommends the installation of a passive sub-slab vapor mitigation system concurrent with future Site redevelopment activities.

- Due to the identified PAHs and metals on-Site, Ransom recommends that a Soil Management Plan (SMP) be developed to properly manage soils displaced during remediation activities, demolition, and/or Site redevelopment activities that will be exported from the Site.

- Although no indication of a septic system(s) or other suspect UST(s) was identified, they may be discovered during Site redevelopment due to the geophysical survey limitations. Therefore, Ransom recommends that, in the case an underground tank and/or a septic tank is identified, they should be properly removed and disposed of in accordance with applicable federal, state and local regulations.

- Based on the identified exceedances of the Unrestricted and Residential Use SCOs, soils planned for export will require additional waste characterization testing, depending on the requirements of the receiving site or facility. The limited nature of our Phase II LSI, and the associated analytical testing, does not authorize exported soils being used for unrestricted reuse; therefore, exported soils are not considered to be certified clean fill material at this time.

- All on-Site drainage structures, including septic system components and storm water drainage structures (catch basins, dry wells, etc.), that will not be reused as part of the Site redevelopment should be properly decommissioned in accordance with applicable regulations.

If you have any questions regarding this letter report, please do not hesitate to call.

Sincerely,
RANSOM CONSULTING, INC.

| Cyanide | - | - | - | - | - | - | - | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | |

**Notes:**

Q = Data Qualifier
U = Not Detected
NA = Not Analyzed
J = Estimated Value
RL = Reporting Limit
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

| Cyanide | - | - | - | - | - | - | - | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | | NA | | |

**Notes:**

Q = Data Qualifier
J = Estimated Value
U = Not Detected
RL = Reporting Limit
NA = Not Analyzed
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

**Notes:**

Q = Data Qualifier
U = Not Detected
NA = Not Analyzed
J = Estimated Value
RL = Reporting Limit
All concentrations are in milligrams per kilogram (mg/kg)
**140** = concentration exceeds Protection of Groundwater Soil Cleanup Objective
***140*** = concentration exceeds Unrestricted Use Soil Cleanup Objective
**10** = reporting limit exceeds most stringent Soil Cleanup Objective
* = The SCOs listed for Total Chromium are the trivalent chromium SCOs and hexavalent chromium SCOs, respectively, as total chromium does not have an established SCO.

**Subject:** Geophysical Investigation Results
372 Riverdale Avenue & 13 Culver Street
Yonkers, New York

Dear Ms. Skibo:

Advanced Geological Services (AGS) presents this letter to Ransom Consulting, Inc. (Ransom) summarizing the geophysical investigation completed by AGS on June 27 through 29, 2017 at the properties located at 372 Riverdale Avenue and 13 Culver Street in Yonkers, New York.

At the time of the investigation the property at 372 Riverdale Avenue was being actively used by an automobile repair business. Parked cars were tightly parked throughout large portions of the property. Also, the 13 Culver Street property was being used for parking and staging of several Taco Trucks, thereby limiting access of the entire site.

The objectives of the geophysical investigation were to utilize geophysical methods to:

1) Identify potential underground storage tanks (USTs), buried structures, areas of fill, and other potential features of environmental concern at the subject property.

2) Clear numerous proposed drilling location of identifiable utilities or potential drilling hazards.

3) Attempt to video image a floor drain system on the southern side of the 372 Riverdale building where the automobile repair lifts exist.

To achieve the project objectives, AGS utilized a combination of the terrain conductivity electromagnetic (EM) method, the ground penetrating radar (GPR) method, the radio frequency utility locating method, the hand-held (EM) metal detection method, and a pipe video imaging system.

## ***Methods***

### *Terrain Conductivity Electromagnetic (EM) Method*

Terrain conductivity EM data were collected across accessible portions of the geophysical investigation area to identify anomalous features that could indicate the presence of USTs, buried structures such as foundations or building slabs, or other anomalous subsurface features. The EM method uses the principle of electromagnetic induction to measure the variability of terrain conductivity of subsurface materials. The terrain conductivity EM method is capable of detecting variations in soil conductivity that can be caused by changes in soil

composition, soil compaction, or moisture content that are often associated with previously excavated or disturbed soils. The EM method also reacts very strongly to the presence of buried metal objects such as USTs, pipelines, or buried drums, as well a metallic features on the ground surface, such as parked cars, or building structures.

A Geonics EM31 terrain conductivity EM instrument was used to collect EM data in accessible portions of the 372 Riverdale Avenue property. The EM31 operates in accordance with the theory of operation at low induction numbers. An alternating current is passed through the transmitter coil to induce eddy currents into the ground. These eddy currents generate a secondary magnetic field. A component of the induced magnetic field is detected by a receiver coil and measured by the instrument. The receiver measures the field strength of both the quadrature and the in-phase components. The quadrature response is displayed as terrain conductivity in units of milliSeimens per meter (mS/m). The in-phase response is displayed in units of parts per thousand (ppt) of the transmitted signal. The estimated maximum depth of investigation of the EM31 instrument is up to approximately 18 feet below the ground surface.

Terrain conductivity EM data were collected along parallel traverses spaced 5 feet apart. Two EM measurements were recorded every second to provide a reading approximately every 1.5 feet along each traverse. The geographical coordinates of each reading was determined using a Trimble XH-3000 global positioning system (GPS) capable of sub-meter accuracy and was recorded along with the EM reading. Real-time navigation was also achieved using the GPS instrument.

Data were reviewed during data collection to identify potential targets of interest that would require additional investigation and characterization using GPR methods. Locations of anomalous features identified in the field were marked on site with spray paint. The EM data were downloaded upon return to the AGS office, contoured, and provided final review to identify any subtle features that may not have been recognized in the field.

*Ground Penetrating Radar (GPR) Method*

The ground penetrating radar (GPR) method was used to further characterize anomalies identified in the EM results, to search for USTs and other targets of interest, as well as to clear the area surrounding proposed drilling locations of buried utilities.

The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of the down-going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard-drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR response. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are

then converted to depth using known soil velocity functions.

A GSSI SIR-3000 GPR system and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide depth of penetration of up to approximately 10 feet under ideal field conditions. High conductivity soil, some conductive ballast gravels, and de-icing salt can strongly attenuate GPR signals, thereby decreasing the effective depth of investigation of the GPR system.

GPR data were collected select portions of the site to further characterize EM anomalies and to search for features of potential environmental concern. GPR traverses were also collected in an approximate grid pattern surrounding each proposed drilling location to identify potential utilities. Locations of identified features were marked on the ground surface with spray paint.

*Hand-Held Electromagnetic (EM) Metal Detection Method*

The hand-held EM metal detection method was used to search for metallic utilities, and other buried metal objects in the areas surrounding proposed drilling locations that could pose a drilling hazard. This instrument was also used to scan areas that could not be accessed with the larger EM31 instrument. Areas scanned included the 13 Culver Street property and several accessible portions of the 372 Riverdale Avenue property.

This EM method uses the principle of electromagnetic induction to detect shallow buried metal objects. This is done by carrying a unit consisting of hand-held radio frequency transmitter and receiver above the ground and continuously scanning the surface. A primary coil broadcasts a radio frequency signal from a transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents in turn produce a magnetic field which is detected by the receiver.

The EM instrument used for this investigation was a Fisher TW-6 pipe and cable locator. This instrument is expressly designed to detect metallic pipes, cables, USTs, manhole covers, and other buried metallic objects. The instrument produces an audible response and significant meter deflections when near a metal object. The peak instrument response occurs when the unit is directly over the object. The EM instrument is ineffective in areas covered with reinforced concrete because the metal reinforcing material saturates the instrument response.

The TW-6 is operated in scanning mode, and does not allow for recording of the instrument response. For the present investigation, the accessible survey areas were scanned in a grid pattern to identify potential utilities, USTs, or other buried metal objects. Locations of potential utilities were marked on site with spray paint and/or pin flags.

*Radio Frequency (RF) Utility Locating Methods*

The areas surrounding proposed drilling locations were inspected using a RF utility locating system (also known as a precision utility locator (PUL)) to identify and trace potential electrical, telecommunication, water, and other potential identifiable utilities.

AGS utilized a Radiodetection RD4000 RF utility locating instrument. This instrument consists

of a receiver/tracer and a remote transmitter which operates at multiple radio-frequencies (RF) ranging from 8 kHz to 65 kHz. The receiver unit detects the transmitted RF signals as well as standard 60 Hz electrical power lines and broad-band RF signals when operated in passive detection modes. This utility tracing instrument is an analog device which provides visual and audible feedback to the operator when a utility coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hook-up. The receiver output varies an audible pitch and visual feedback depending upon how far the utility is from the receiver. By carefully adjusting the gain of the receiver it is possible to determine the location of the utility and to separate it from adjacent utilities.

The investigation areas were scanned using passive 60 Hz and the broad-band RF detection modes to identify potential utilities that may be present. Inductive and direct hook-up methods were used to trace specific utilities when possible. Identified utilities were marked on the ground surface with spray paint and/or pin flags.

*Pipe Video Imaging*

A pipe video inspection system was used to attempt to image the floor drain system located on the south side of the 372 Riverdale building interior. A Pearpoint Flexiprobe P340 system was used to image the floor drain system. A high-resolution camera is mounted on a fiberglass 300-foot long push-rod that is capable of negotiating most clean-outs and traps encountered. This system has the capability of recording the video on a SD card for easy transfer to a computer and review of the pipe images.

## ***Results and Discussion***

*Site-wide Investigation to Identify USTs and Potential Areas of Concern*

The property located at 372 Riverdale Avenue was being actively used by a busy automobile repair business at the time of the geophysical investigation. Cars were parked very tightly throughout large portions of the property making it impossible to access those areas. Terrain conductivity EM data were collected across an accessible portions on the western side of the property located to the north and south of the building. Figure 1 shows the color contoured EM results from those areas as well as areas where cars were parked and portions of the site covered that were with reinforced concrete.

The terrain conductivity results on the north side of the 372 Riverdale building indicate that no anomalous features are present within that area. The EM results on the south side of the building showed a strong EM response in the area where the sanitary sewer and water services extend between Culver Street and the south side of the 372 Riverdale building (Figure 1).

The areas where terrain conductivity EM data were collected were also investigated using GPR methods. The GPR results suggested that fill or building rubble may be present throughout most of these areas.

The remaining accessible portions of the 372 Riverdale property were scanned using a combination of the GPR method and hand-held EM metal detection method. Features identified during this portion of the investigation included:

- A backfilled excavation from a former 500-gallon UST located near the southeast corner of the building. A vent pipe visible at the southeast corner of the building extends to the edge of the excavation (Figure1).
- A potential former heating oil UST that may have been abandoned in place located on the east side of the building, near the northeast building corner (Figure 1). This feature produced an EM response with the hand-held EM metal detection instrument and also an ambiguous GPR response. A vent pipe located on the building wall and a potential supply/return line were also identified leading from the building to the possible abandoned UST location. The geophysical results at this locations were not conclusive. Therefore, it is recommended that additional direct investigation of this location, such as excavation, be considered to better determine if a UST is present at this location.

In additional to the UST related features described above, utilities that were identified during the investigation were marked on site and are shown on Figure 1.

Several Taco Trucks and other vehicles were present at the 13 Culver Street property at the time of the geophysical investigation that kept it from being possible to complete an EM investigation using the terrain conductivity EM instrument. Instead the accessible portions of the property were scanned using the hand-held EM metal detection method and the GPR methods. A previous site investigation inspection noted a sealed pipe protruding from the east side of the residence at 13 Culver (Figure 1). Geophysical investigation surrounding that area did not indicate the presence of any USTs. However, tracing the natural gas service for the property did extend from Culver Street to the approximate location where the sealed pipe was situated, suggesting that it may have been related to the previous gas service for the property. No USTs or other anomalies of concern were noted within the accessible portions of the property at 13 Culver Street.

*Utility Clearance of Drilling Locations*

A number of environmental boring and geotechnical borings were cleared of identifiable utilites. Utilities surrounding the borings located inside the 372 Riverdale Avenue building and those situated on reinforced concrete were identified using a combination of RF utility locating methods and GPR methods. All other boring locations were also scanned using RF and GPR methods, and additionally the hand-held EM metal detection method. Identified utilities inside the building were marked on site using chalk, and those identified outside of the building were marked using spray paint. If a utility was too close to the proposed drilling location, the proposed drilling location was adjust to an area clear of identified utilities with the approval of the Ransom representative.

*Pipe Inspection of the Floor Drain System*

A attempt was made to access the floor drain system located inside of the south side of the auto shop at the 372 Riverdale property. The camera was inserted into the clean-out located inside of the southeast corner of the building. However, there was a wire trap approximately 5 feet beyond the clean-out opening that prevented access (see photo). Attempts were made to access the drain system through three other clean-outs located along the length of the floor drain inside the south side of the building, but they were all filled with sediments preventing access. Because of the site conditions, it was not possible to inspect the floor drain system that extends from east to west inside the south side of the auto shop area.

*Illustration 1: Photo showing wire trap inside floor drain clean-out.*

***Summary and Closing***

In summary, the geophysical investigation of the 372 Riverdale Avenue and 13 Culver Street properties was limited to the accessible areas. A large number of cars parked closely together was present at the 372 Riverdale propsert at the time of the investigation, and several trucks and cars were also present at the 13 Culver Street property limiting access in portions of the properties.

At the 372 Riverdale property one backfilled UST excavation was identified near the southeast corner of the site building, and a potential abandoned in place UST was identified on the east side of the building near the northeast corner of the building. Excavation or another appropriate methods will be required to better determine if there is actually an abandoned UST present at that location.

A natural gas service line leading from Culver Street to the east side of the residence at 13 Culver Street was identified that appears to end in the approximate location where a sealed pipe was noted protruding through the foundation wall during a previous site inspection. No USTs were identified in the area where that sealed pipe was noted.

Aside from those feature noted and described above, and shown on Figure 1, no other underground features were identified during this investigation.

All geophysical data and field notes collected as a part of this investigation will be archived at the AGS office. The data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses with probable subsurface features is based on the past results of similar surveys although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees can be made or implied regarding the presence or absence of additional objects or targets beyond those identified.

If you have any questions regarding the results of this field investigation, please contact me at 610-722-5500. It was a pleasure working with you on this project and we look forward to being able to provide you with sub-surface imaging services in the future.

Sincerely,

Donald Jagel, P.G.

NOTES:

1) Terrain conductivity EM data were collected using a Geonics EM31 instrument. A GSSI SIR3000 GPR instrument was used to collect data close to buildings and parked vehicles. Utilities at the site were identified using a of a radio frequency utility locating, system (RD-4000) and a hand-held EM metal detection instrument (TW-6 m-scope). Accessible areas that could not be investigated using the terrain conductivity EM methods were also scanned using the TW-6 m-scope and GPR methods. All identified features were marked on site with spray paint.
2) Identified site features are based on the geophysical responses from several geophysical instruments. See report text for additional detail.
3) Base aerial orthophotograph downloaded from https://orthos.dhses.ny.gov/, and included file e_06570760_06_07400_4bd_2016.zip. All base orthophotographs have an acquisition date of 2016. This work was not completed by a licensed surveyor, as such should be considered approximate, and is for illustrative purposes only.
4) The items shown on this figure may not be all inclusive. AGS does not warrant the fact that additional buried features/utilities may be present which could not be identified by AGS personnel during this investigation.

Laboratory Analytical Reports

Phase II Limited Subsurface Investigation
Proposed CVS Pharmacy/Store No. 10386
13 Culver Street and 372 Riverdale Avenue
Section 1, Block 129, Lots 26 and 30
City of Yonkers, Westchester County, New York

Clear Form

# ASTM E1527-21 User Questionnaire

*Please complete the below form and return to Langan.*

Providing the following information (if available) to the environmental professional (Langan) is one of the requirements to qualify for one of the Landowner Liability Protections (LLP) offered under CERCLA. Missing or incomplete information for questions 1 through 6 could result in a determination that "all appropriate inquiry" is not complete. Additional information should be provided for "Yes" answers where relevant.

## General Information

**User/Client Names:** Claudius Development LLC

**Reason for the Phase I ESA:**

**Type of property:** Auto Repair

**Type of property transaction (e.g. sale, purchase, exchange):** Purchase

**Subject property address (provide documentation of subject property boundary):**
372 Riverdale Avenue and 13 Culver Street, Yonkers, New York 10705

**Site Contact and Contact Information:** John Saraceno

**Relying Party(ies):** NYS HCR, Westchester County

## Required Information

**(1.) Environmental liens that are filed or recorded against the subject property (40 CFR 312.25).**

Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

**(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property (40 CFR 312.26(a)(1)(v) and (vi)).**

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes ○ No ◉

**(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).**

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ○ No ◉

**(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the subject property?

Yes ◉ No ○

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes ○ No ◉

**(5.) Commonly known or reasonably ascertainable information about the subject property (40 CFR 312.30).**

| | Yes | No |
|---|---|---|
| Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? | ◉ | ○ |
| For example, | | |
| (a.) Do you know the past uses of the subject property? | ◉ | ○ |
| (b.) Do you know of specific chemicals that are present or once were present at the subject property? | ○ | ◉ |
| (c.) Do you know of spills or other chemical releases that have taken place at the subject property? | ◉ | ○ |
| (d.) Do you know of any environmental cleanups that have taken place at the subject property? | ○ | ◉ |

**(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

| | Yes | No |
|---|---|---|
| Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property? | ○ | ◉ |
| Do you have knowledge or experience with the subject property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition)? | ◉ | ○ |

**(7.) Proceedings Involving the Subject Property Questions (Section 10.9 of ASTM E1527-21 and Section 10.10 of ASTM E2247-16)**

| Do you know of: | Yes | No |
|---|---|---|
| (a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property? | ○ | ◉ |
| (b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, at, or from the subject property? | ○ | ◉ |
| (c) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? | ○ | ◉ |

**Signature**

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Langan will evaluate and rely on this information in the development of the final Phase I ESA report.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Contact: Jennifer Armstrong

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### Limited Permission To Make Copies

Langan (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

# EXECUTIVE SUMMARY

## DESCRIPTION

The LightBox City Directory Report is designed to assist environmental professionals in evaluating potential liabilities on select properties resulting from past activities. The report includes a search of available business directory data at approximately five-year intervals.

## SOURCES

Through agreements with major city directory publishers, including Cole Information, InfoUSA, and Bresser, as well as our own collections (Haines & Stewart), the LightBox City Directory Report offers comprehensive national coverage.
LightBox is authorized to reproduce and redistribute all works featured in this report. The purchaser of this LightBox City Directory Report may include it in their final report(s).

This report includes a search of the following sources:

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA) INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| ***HUDSON RIVER PCBS*** | ***NO STREET APPLICABLE*** | ***WNW 1/4 - 1/2 (0.388 mi.)*** | ***0*** | ***26*** |

Cerclis ID:: 202229
EPA Id: NYD980763841

***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/26/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

***Lists of Federal RCRA generators***

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

***Federal institutional controls / engineering controls registries***

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 10/30/2025 has revealed that

there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|

| EPA ID:: NYD980763841 | | | | |

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/30/2025 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |

***Lists of state- and tribal hazardous waste facilities***

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 10/30/2025 has revealed that there are 2 NY SHWS sites within approximately 1 mile of the target property.

***Lists of state and tribal leaking storage tanks***

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/30/2025 has revealed that there are

***Lists of state and tribal registered storage tanks***

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 24 NY UST sites within approximately 0.25 miles of the target property.

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF AST site within approximately 0.5 miles of the target property.

***Other Ascertainable Records***

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there are 61 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 01/30/2026 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/17/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 11 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there are 18 E MANIFEST sites within approximately 0.25 miles of the target property.

NY MGP: From the late 1800's to the mid 1900's, hundreds of manufactured gas plants across New York State supplied homes and industry with fuel for heating, cooking, and lighting. Today, the New York State DEC is overseeing the investigation and cleanup of contamination left behind from these plants.

A review of the NY MGP list, as provided by EDR, and dated 11/25/2025 has revealed that there is 1 NY MGP site within approximately 1 mile of the target property.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

|---|---|---|---|---|
| CON EDISON - LUDLOW | KNOWLES STREET | NNW 1/4 - 1/2 (0.387 mi.) | AW299 | 844 |

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.125 miles of the target property.

| DEC Memo: | 2/15/18 Hudson Valley Environmental pulled a 3000 gallon UST that had been previously abandoned in place in the 1990’s when the previous owners (Good Year) converted to gas. Current owner thought |

**MECHANIC SHOP (Continued)** **S121983136**

that the tank had been removed. Holes were found in tank, soil impacted. No gw impacts at this time. No waterways on property, business on municipal water. Hudson Valley Env. to do remediation. Sending draft guidance by e-mail. ga 2/15/18: This tank was removed by Hudson Valley Environmental and the contaminated soil was stockpiled on site under poly liner. Both the Yonkers FD and WCDoH were here yesterday. The owner is being required to excavate the slab underneath the tank and get all contaminated soil disposed of. The auto garage operator doesn't have a PBS registration and no tanks are on site. I left a message on Carlos' voicemail to try and get more information about the tank registration. At this time the property owner is trying to turn the lot into a CVS so he wants the contamination cleaned up ASAP. BR 4/16/18 Sebastian Bimonte, WCDoH, email to RDB: Contamination encountered during removal of a 3500 gallon #2 heating oil tank. Hudson Valley Environmental excavated and transported a total of 221.87 tons of contaminated soil to Clean Earth of Carteret located in Carteret NJ. The tank was disposed of at Brookfield Resource Management in Elmsford NY. A total of 8 post excavation samples were collected and analyzed at Phoenix Environmental Laboratories. Sample results were below CP-51 clean up objectives. NFA. SRK

Remarks: TANK REMOVAL, C/U PENDING

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

**GOODYEAR AUTO SERVICE CENTER (Continued)** **1004756535**

storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated l.l million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

| DEC Memo: | 06/13/02 CARLOS TORRES (WCHD) ON SCENE. REGULAR TANK FAILED TEST. ODOR/VAPORS IN SEWERS ONGOING PROBLEM. PREVIOUSLY REPORTED AS SPILLS 02-02336 & 02-02570 jod WCHD JACKSON REFERRED CASE TO JOHN O'MARA. In response to the DEC TechLaw review letter of Feb. 2008 the |

**CITGO STATION (Continued)** **S105996067**

consultant ENSR has contacted
DEC by phone. It was indicated that MWs have been installed and a report and RAP will be
forthcoming. PJD 4/08 3-12-15 responded to an email inquiry from consulttant and morgtage comp. No
work has occurred in years, status unknown. RDB 3-14-15 response from Consultant that work has been
done and submitted(?); I then requested a copy of the work. The only activity on the subject
property has been groundwater monitoring. Copies of the recent testing has been forwarded to the
DEC at the time of testing. A proposal was submitted to the DEC to excavate an area between the
island/ tank farm and Rosedale Ave. not a partically large area but the only open area that is
contaminated that can be accessed. RDB 3-15-15 consult, submitted one round of gw sampling from
10-14; numbers are high; I again requested a summary of the work completed. RDB 3-16-15, The DEC
does not have the 2 or three sets of data that you report submitting to Mr. O Mara. Could I please
have a comprehensive summary of work conducted and the results of the work for the last five years?
RDB 06-07-18 Stopped by site to ask for owner information. New Owner is Manoj Narang (516)
921-7190. Current operator is Suleyman Issi (914) 423-8896. Operator said they are not doing a site
investigation. Left voicemail for the owner to call me. BTR 06-11-18 Site Investigation Work Plan
from August 2014 submitted by Volumetric Techniques. Update from consultant Attached are the
following documents: Correspondance with John o'Mera, the most recent groundwater testing - Oct of
14 and a building permit which was obtained to begin abatement activities. As I had mentioned, Mr.
O'Mera never got back to us regarding the work plan previously submitted. BTR 1/25/19 NOV required,
enforcement necessary. TJP 1/30/19 NOV/STIP sent out to operator and facility owner, updates to
come. TJP 3-7-19 Received a voicemail and an email of an investigative workplan from Sandy at
Volumetric Techniques regarding the site. I spoke with Sandy on the phone an informed him that a
sign STIP was never received by the department, a signed STIP must be received before any remedial
activity. Email is in D2. TJP 3/21/19 Signed STIP and investigative workplan has been received by
the department, the workplan has been denied due to incompletion. TJP 3/27/19 Revised workplan has
been received TJP 04-09-19 Work plan was rejected and Volumetric Techniques was notified. BTR
09-09-19 Spoke with site owner Manoj. He indicated that the consultant passed away and he is in the
process of hiring a new consultant. BTR 09-10-19 Email to Manoj that a RIWP is still required. BTR
09-25-19 RIWP was submitted by Berninger Environmental. work plan is on D2. BTR 10-21-19 Update

**CITGO STATION (Continued)** **S105996067**

from J.Halpin We are looking to mobilize to perform this work October 31 and Nov 1 Thursday/Friday
. BTR 12-5-19 Update from J.Halpin: the report will be submitted Friday 12/6. BTR 12-11-19
Berninger Environmental submitted RIR. BTR 12-18-19 Email to Berninger Environmental: there is
significant contamination on site and RAP must be submitted. Also complete quarterly sampling by
January 15, 2020. BTR 01-15-20 Berninger returned to complete drilling to 23 feet bgs and collect
groundwater samples. BTR 01-17-20 Update from J. Halpin: RAP to be sent today via FTS. BTR 02-27-20
RIR addendum submitted to the Department. BTR 05-05-20 RIR addendum and RAP have been reviewed. The
RAP plan to implement AS/SVE is approved. Provide a schedule update by May 27. BTR 07-17-20
Berninger has sent the permit app to construct AS/SVE system. BTR 08-12-20 Rec'd 3QMR July 2020.
BTR 09-28-20 Update from Berninger: Checking on the status of our permit app. BTR 10-05-20
Berninger will check on their application status again. BTR 10-15-20 WCHD is still reviewing the
application. BTR 03-09-21 Update from Berninger: To date we completed 2 VEFR events recovering
approximately 600 gallons of gas/water mix. We started on feb 17th because of the holiday on the
15th as I couldn t get a truck Also performed an event on March 3. Anticipating an event for the
17th as well. The revised WCDOH permit is currently under review. BTR 06-25-21 Reviewed 2QMR April
2021. The total VOC concentrations are still above 10,000 ppb in MW2 and MW5, and MTBE is above
100ppb. VEFR events continued with 50 gallons vac'd from MW2 and 840 gallons vac'd from MW5 in
April. The AS/SVE permit was rejected again in March 2021. No resubmittal has been made. BTR
08-10-21 Received QMR. VEFR events continued in July. VOC concentrations are still high in MW-5 and
MW-2. No update on AS/SVE system. BTR 11-11-21 Received 4 QMR 21. Total VOCs are up 78% since
beginning VEFR events. BTR 11-12-21 Berninger indicated they are working on the AS/SVE permit app.
BTR 02/06/22 Received QMR dated Jan 17,2022 from Berninger Environmental. Total VOC declined in
MW-2 and MW-5 this Quarter. See report in DecDocs. TG 05/12/23 Received a QMR dated April 30, 2023
from Berninger Environmental. See report in DecDocs. VOC very high in MW-2 and 5X higher in MW-5.
TG 07/17/24 Emailed Alicia Baston at Champion Environmental Services advising her that a current
report is long overdue. TG

Remarks: health dept responded to calls from homeowners reporting an odor of gas - spill located in sewers from the gas station

| DEC Memo: | 06/13/02 CARLOS TORRES (WCHD) ON SCENE. REGULAR TANK FAILED TEST. ODOR/VAPORS IN SEWERS ONGOING PROBLEM. PREVIOUSLY REPORTED AS SPILLS 02-02336 & 02-02570 jod WCHD JACKSON REFERRED CASE TO JOHN O'MARA. In response to the DEC TechLaw review letter of Feb. 2008 the consultant ENSR has contacted DEC by phone. It was indicated that MWs have been installed and a report and RAP will be forthcoming. PJD 4/08 3-12-15 responded to an email inquiry from consulttant and morgtage comp. No work has occurred in years, status unknown. RDB 3-14-15 response from |

**CITGO STATION (Continued)** **S105996067**

Consultant that work has been
done and submitted(?); I then requested a copy of the work. The only activity on the subject
property has been groundwater monitoring. Copies of the recent testing has been forwarded to the
DEC at the time of testing. A proposal was submitted to the DEC to excavate an area between the
island/ tank farm and Rosedale Ave. not a partically large area but the only open area that is
contaminated that can be accessed. RDB 3-15-15 consult, submitted one round of gw sampling from
10-14; numbers are high; I again requested a summary of the work completed. RDB 3-16-15, The DEC
does not have the 2 or three sets of data that you report submitting to Mr. O Mara. Could I please
have a comprehensive summary of work conducted and the results of the work for the last five years?
RDB 06-07-18 Stopped by site to ask for owner information. New Owner is Manoj Narang (516)
921-7190. Current operator is Suleyman Issi (914) 423-8896. Operator said they are not doing a site
investigation. Left voicemail for the owner to call me. BTR 06-11-18 Site Investigation Work Plan
from August 2014 submitted by Volumetric Techniques. Update from consultant Attached are the
following documents: Correspondance with John o'Mera, the most recent groundwater testing - Oct of
14 and a building permit which was obtained to begin abatement activities. As I had mentioned, Mr.
O'Mera never got back to us regarding the work plan previously submitted. BTR 1/25/19 NOV required,
enforcement necessary. TJP 1/30/19 NOV/STIP sent out to operator and facility owner, updates to
come. TJP 3-7-19 Received a voicemail and an email of an investigative workplan from Sandy at
Volumetric Techniques regarding the site. I spoke with Sandy on the phone an informed him that a
sign STIP was never received by the department, a signed STIP must be received before any remedial
activity. Email is in D2. TJP 3/21/19 Signed STIP and investigative workplan has been received by
the department, the workplan has been denied due to incompletion. TJP 3/27/19 Revised workplan has
been received TJP 04-09-19 Work plan was rejected and Volumetric Techniques was notified. BTR
09-09-19 Spoke with site owner Manoj. He indicated that the consultant passed away and he is in the
process of hiring a new consultant. BTR 09-10-19 Email to Manoj that a RIWP is still required. BTR
09-25-19 RIWP was submitted by Berninger Environmental. work plan is on D2. BTR 10-21-19 Update
from J.Halpin We are looking to mobilize to perform this work October 31 and Nov 1 Thursday/Friday
. BTR 12-5-19 Update from J.Halpin: the report will be submitted Friday 12/6. BTR 12-11-19
Berninger Environmental submitted RIR. BTR 12-18-19 Email to Berninger Environmental: there is

**CITGO STATION (Continued)** **S105996067**

significant contamination on site and RAP must be submitted. Also complete quarterly sampling by
January 15, 2020. BTR 01-15-20 Berninger returned to complete drilling to 23 feet bgs and collect
groundwater samples. BTR 01-17-20 Update from J. Halpin: RAP to be sent today via FTS. BTR 02-27-20
RIR addendum submitted to the Department. BTR 05-05-20 RIR addendum and RAP have been reviewed. The
RAP plan to implement AS/SVE is approved. Provide a schedule update by May 27. BTR 07-17-20
Berninger has sent the permit app to construct AS/SVE system. BTR 08-12-20 Rec'd 3QMR July 2020.
BTR 09-28-20 Update from Berninger: Checking on the status of our permit app. BTR 10-05-20
Berninger will check on their application status again. BTR 10-15-20 WCHD is still reviewing the
application. BTR 03-09-21 Update from Berninger: To date we completed 2 VEFR events recovering
approximately 600 gallons of gas/water mix. We started on feb 17th because of the holiday on the
15th as I couldn t get a truck Also performed an event on March 3. Anticipating an event for the
17th as well. The revised WCDOH permit is currently under review. BTR 06-25-21 Reviewed 2QMR April
2021. The total VOC concentrations are still above 10,000 ppb in MW2 and MW5, and MTBE is above
100ppb. VEFR events continued with 50 gallons vac'd from MW2 and 840 gallons vac'd from MW5 in
April. The AS/SVE permit was rejected again in March 2021. No resubmittal has been made. BTR
08-10-21 Received QMR. VEFR events continued in July. VOC concentrations are still high in MW-5 and
MW-2. No update on AS/SVE system. BTR 11-11-21 Received 4 QMR 21. Total VOCs are up 78% since
beginning VEFR events. BTR 11-12-21 Berninger indicated they are working on the AS/SVE permit app.
BTR 02/06/22 Received QMR dated Jan 17,2022 from Berninger Environmental. Total VOC declined in
MW-2 and MW-5 this Quarter. See report in DecDocs. TG 05/12/23 Received a QMR dated April 30, 2023
from Berninger Environmental. See report in DecDocs. VOC very high in MW-2 and 5X higher in MW-5.
TG 07/17/24 Emailed Alicia Baston at Champion Environmental Services advising her that a current

activity. Email is in D2. TJP 3/21/19 Signed STIP and investigative workplan has been received by
the department, the workplan has been denied due to incompletion. TJP 3/27/19 Revised workplan has
been received TJP 04-09-19 Work plan was rejected and Volumetric Techniques was notified. BTR
09-09-19 Spoke with site owner Manoj. He indicated that the consultant passed away and he is in the
process of hiring a new consultant. BTR 09-10-19 Email to Manoj that a RIWP is still required. BTR
09-25-19 RIWP was submitted by Beringer Environmental. work plan is on D2. BTR 10-21-19 Update from
J.Halpin We are looking to mobilize to perform this work October 31 and Nov 1 Thursday/Friday . BTR
12-5-19 Update from J.Halpin: the report will be submitted Friday 12/6. BTR 12-11-19 Berninger
Environmental submitted RIR. BTR 12-18-19 Email to Berninger Environmental: there is significant
contamination on site and RAP must be submitted. Also complete quarterly sampling by January 15,
2020. BTR 01-15-20 Berninger returned to complete drilling to 23 feet bgs and collect groundwater
samples. BTR 01-17-20 Update from J. Halpin: RAP to be sent today via FTS. BTR 02-27-20 RIR
addendum submitted to the Department. BTR 05-05-20 RIR addendum and RAP have been reviewed. The RAP

**CITGO STATION (Continued)** **S105996067**

plan to implement AS/SVE is approved. Provide a schedule update by May 27. BTR 07-17-20 Berninger has sent the permit app to construct AS/SVE system. BTR 08-12-20 Rec'd 3QMR July 2020. BTR 10-05-20 Berninger will check on the status of their application. BTR 10-15-20 WCHD is still reviewing the application. BTR 03-09-21 Update from Berninger: To date we completed 2 VEFR events recovering approximately 600 gallons of gas/water mix. We started on feb 17th because of the holiday on the 15th as I couldn t get a truck Also performed an event on March 3. Anticipating an event for the 17th as well. The revised WCDOH permit is currently under review. BTR 06-25-21 Reviewed 2QMR April 2021. The total VOC concentrations are still above 10,000 ppb in MW2 and MW5, and MTBE is above 100ppb. VEFR events continued with 50 gallons vac'd from MW2 and 840 gallons vac'd from MW5 in April. The AS/SVE permit was rejected again in March 2021. No resubmittal has been made. BTR 08-10-21 Received QMR. VEFR events continued in July. VOC concentrations are still high in MW-5 and MW-2. No update on AS/SVE system. BTR 02/16/22 02/06/22 Received QMR dated Jan 17,2022 from Berninger Environmental. Total VOC declined in MW-2 and MW-5 this Quarter. See report in DecDocs. TG 05/12/23 Received a QMR dated April 30, 2023 from Berninger Environmental. See report in DecDocs. VOC very high in MW-2 and 5X higher in MW-5. TG 07/17/24 Emailed Alicia Baston at Champion Environmental Services advising her that a current report is long overdue. TG

Remarks: DURING GEO PROBE FOUND CONTAMINATED SOIL;

| DEC Memo: | 07-19-18 During PBS inspection the dispenser had a petroleum odor and a faulty meter that was weeping fuel onto the gasoline dispenser line. Operator is going to replace all the dispensers and will take the faulty meter out of service. BTR 1/25/19 NOV required, enforcement necessary. TJP 1/30/19 NOV/STIP sent out to operator and facility owner, updates to come. TJP 2/7/19 Spoke with the attorney of the facility owner who informed me that they are planning on returning a signed STIP and RIWP in the near future. TJP 3-7-19 Received a voicemail and an email of an investigative workplan from Sandy at Volumetric Techniques regarding the site. I spoke with Sandy on the phone an informed him that a sign STIP was never received by the department, a signed STIP must be received before any remedial activity. Email is in D2. TJP 3/21/19 Signed STIP and investigative workplan has been received by the department, the workplan has been denied due to incompletion. TJP 3/27/19 Revised workplan has been received TJP 04-09-19 Work plan was rejected and Volumetric Techniques was notified. BTR 09-09-19 Spoke with site owner Manoj. He indicated that the consultant passed away and he is in the process of hiring a new consultant. BTR 09-10-19 Email to Manoj that a RIWP is still required. BTR 09-25-19 RIWP was submitted by Berninger Environmental. work plan is on D2. BTR 10/7/2019 Updated RIWP received and approved, Berninger to submit a work schedule by October 21st, 2019. TJP 10-21-19 Update from J.Halpin We are looking to mobilize to perform this work October 31 and Nov 1 Thursday/Friday . BTR 11-12-19 Phone call with Justin. All the soil samples must be analyzed. They got refusal on the boring east of the tank field. Location 3 and 4 were really high and the PID maxed out. Other borings across the property had zero on the PID but those samples must be analyzed regardless. BTR 12-5-19 Update from J.Halpin: the report will be submitted Friday 12/6. BTR 12-11-19 Berninger Environmental submitted RIR. BTR |

**CONOCO STATION (Continued)** **S122481028**

12-18-19 Email to Berninger
Environmental: there is significant contamination on site and RAP must be submitted. Also complete
quarterly sampling by January 15, 2020. BTR 01-15-20 Berninger returned to complete drilling to 23
feet bgs and collect groundwater samples. BTR 01-17-20 Update from J. Halpin: RAP to be sent today
via FTS. BTR 02-27-20 RIR addendum submitted to the Department. BTR 05-05-20 RIR addendum and RAP
have been reviewed. The RAP plan to implement AS/SVE is approved. Provide a schedule update by May
27. BTR 07-17-20 Berninger has sent the permit app to construct AS/SVE system. BTR 08-12-20 Rec'd
3QMR July 2020. BTR 09-28-20 Update from Berninger: Checking on the status of our permit app. BTR
10-05-20 Berninger will check on the status of their permit application. BTR 10-15-20 WCHD is still
reviewing the application. BTR 11-03-20 Update from Berninger: Still no permit approval. BTR
11-10-20 Update from Berninger. They are resubmitting their application. BTR 03-09-21 Update from
Berninger: To date we completed 2 VEFR events recovering approximately 600 gallons of gas/water
mix. We started on feb 17th because of the holiday on the 15th as I couldn t get a truck Also
performed an event on March 3. Anticipating an event for the 17th as well. The revised WCDOH permit
is currently under review. BTR 06-25-21 Reviewed 2QMR April 2021. The total VOC concentrations are
still above 10,000 ppb in MW2 and MW5, and MTBE is above 100ppb. VEFR events continued with 50
gallons vac'd from MW2 and 840 gallons vac'd from MW5 in April. The AS/SVE permit was rejected
again in March 2021. No resubmittal has been made. BTR 08-10-21 Received QMR. VEFR events continued
in July. VOC concentrations are still high in MW-5 and MW-2. No update on AS/SVE system. BTR
11-12-21 Received update from Berninger: We still have to reply to a round of comments. Part of the
delay I believe other than obviously COVID was the fact that I waited 8 months for comments because
WC sent them to the wrong email address. I working with our PE to get it done ASAP BTR 01/11/22
Justin Halpin jhalpin@wrses.com emailed Beynan Ranson regarding the WCHD air permit for the AS/SVE
system. Justin wrote, Just keeping you posted: Aiming to have revised application out to WCDOH this
week. TG 02/03/22 Alicia Patti from Berninger Environmental submitted a QMR dated 10/15/21. She
expects to submit January 2022 report in a few weeks. 02/06/22 Received QMR dated Jan 17,2022 from
Berninger Environmental. Total VOC declined in MW-2 and MW-5 this Quarter. See report in DecDocs.
TG 05/12/23 Received a QMR dated April 30, 2023 from Berninger Environmental. See report in
DecDocs. VOC very high in MW-2 and 5X higher in MW-5. TG

Remarks: Upon inspection the meter under dispenser 3/4 was weeping gasoline

| DEC Memo: | 7/24/20- Charlie from CNS was on site digging to find three tanks that were registered as abandoned in place and they actually came across about 13 tanks. Three of them were 6000 gallon, one was 3000 gallon, several were 1000 gallon, and a couple were 550 gallons. In a separate tank area a 1080 fuel oil tank contained sludge and staining was apparent in the soil. The site previously was a Citgo gas station and then an auto repair station and is being re-developed. Throughout the tank farm they smelled gasoline and saw gray discolored urban fill. Charlie |

**SAFEGUARD RIVERDALE (Continued)** **S110539750**

is in route to drop off
endpoint samples at which the PID readings were 25ppm. A contractor has been called to clean and
extract the tanks. The site has been dug to 15 feet deep, 280 yd. was removed. -KJ 07-28-20 Met
with CNS Environmental. The site had 13 USTs staged for removal. One remaining UST was observed at
the back of the property and had yet to be excavated. CNS to provide property owner information.
Soil samples were taken. No groundwater samples. BTR 08-11-20 Rec'd soil endpoint results. BTR
09-18-20 Requested GW investigation based on contamination observed on 7/28 and closure report for
last tank. BTR 10-19-20 Still no groundwater investigation. BTR
10-29-20 Request to WCHD for their
status and plans. jc 11-05-21 Received TCR and groundwater sampling results. BTR 02-25-21 Soil
management plan submitted. BTR 04/12/23 Emailed Charlie Powers requesting a final report. TG
03-02-21 Spoke to CNS Environmental. Soil management plan is approved. Contractor is on-site to
install pile foundation for storage building. BTR 03-24-21 Site visit. General contractor continues
to install piles. Monitoring wells are still in place. BTR 06-24-21 Received updated groundwater
tables and NFA request. BTR 07-13-21 Closure report is forthcoming. BTR 09-07-21 Received closure
report. BTR 12-28-21 FTS link was received 09/01/21 but unable to locate the report. Request CNS
Environmental to resubmit. Interim Remedial Report saved to D2. The consultant will submit a final
remedial report after another round of groundwater sampling and vapor barrier installation. BTR
09/08/22 Charlie Powers removed that three 275 USTs were discovered and removed yesterday. he will
update the WCHD PBS program and will excavate contaminated soil once the waste classification
sample results are returned. Will call when excavation work is scheduled to start. TG 06/20/23
Called Charlie Powers to request a closure report. He will send it in a day to two. TG 06/23/23
Charlie Powers submitted a Final Remedial Closure Report dated December 2022. See report in DecDocs
for details of the site remediation. NFA. TG

Remarks: unknown amount of gasoline was spilled, clean pending

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | Homeowner was adviced to retest. Will make a decision as to how to proceed. 01/12/00: Letter sent to owner outlining requirements for closure and requesting call back. jod 12/16/09 JO'Dee will check up JO'M 1/23/12: Call to dispatch desk. Caller states he is an attorney for this estate. Owner was Jerome Stupp who has passed away. Caller states NES was hired to remove this UST more than 10 years ago and did so. No closure report was submitted. I asked caller if NES was notified of the TTF and open spill number in order to submit a report. I also asked if he contacted NES and he says he has, but they do not have records going back this far. Caller states he does have copies of the invoice/bill from NES, and the Yonker FD work permit. He will fax them to me for review. jod 1/25/12: I reviewed the original invoices from NES. NES removed the 1K UST on 3-29-2000 and then installed a new 1K STIP3 UST on 3-30-2000. Mr Stupp paid the 30% down payment - there is no indication the balance was paid. I contacted NES to see if they had a closure report in their records. jod 1/31/12: NES has no record of this job in their files. It is probable this tank removal was handled by Nick Barnaba who no longer works for NES. From the information provided, this UST was removed and replaced, there is no indication the tank was leaking at that time. Based upon the available information, no further action is required at this time. jod |
| Remarks: | TESTED TANK. TANK FAILED. |

| DEC Memo: | 7-2-15 Spoke with Lou. This is abandon house that had fire. New owner is rehabbing. 1k tank with no room for removal due to structural constraints. Drilled thru bottom of tank and got PID reading of 170ish ppm. They will run sample and see what results show and go from there. Under tank is sandy. Site is in the middle of the city with houses only several feet apart from one another. jm 8/17/15: C2G Environmental disposed of the leaking UST and one drum of petroleum contaminated soil. Soil sample results submitted for review. Tank Closure Report entered into DecDocs system. Based upon the information provided, no further action is required at this time. jod |

| DEC Memo: | 2/9/22 During Phase 1 C2G found an empty and sealed UST 10000 #2 fuel oil tank. Tank was installed in the 80s and is out of service and empty. PBS # 3-800432. During GEO probe today, around 9 ft down they got a reading of 160 PID. Amount and duration of spill is unknown. Area on public sewer and water. GW encountered. Property is currently vacant. May have been site of warehouse / auto shop in the past. C2G is waiting on property owner to determine see if she is going to hire them for cleanup. Angela Distasi 914-673-0815 is the property owner. ET 2/18/2022: WCDOH PBS data lists this registration as Accurate Plastics, Inc., 18 Morris Place. jod 05/24/22 Emailed WCHD to inquire if they have info about the removal of the tank. William Eilbacher emailed that the 10 K #2 FO tank was removed on May 18. Holes were noted in the tank by William. TG 07/20/22 William Eilbacher forwarded a Tank Closure Report prepared by C2G Environmental Consultants and submitted to the WCHD. C2G reported that they removed a 10,000 gallon AST along with 14.20 tons of contaminated soil from beneath the tank. All 10 soil samples were below NYSDEC soil Guidance Values. NFA. TG |
| Remarks: | spill outside, GEO probe investigation. 10000g tank. tank out of service and empty |

| DEC Memo: | 8/16/22 following removal of slab in the boiler room of the school impacted soils were encountered during trenching activities. The caller indicates that this is an older spill as there has been no tank in that area for decades but the spill was built in 1928. The caller indicated he had collected soil samples from the walls and GW in the trenches but has not submitted anything outside of disposal samples to the laboratory. At this time remedial activities have been limited to the trenches. BW 08/17/22 Met with Jack Eisenbach from Eisenbach & Ruhnke Engineering PC. We inspected the ongoing trenching work for the installation of new blowdown drains in the boiler room where re4 boilers are located. There is concern that the sub slab soils are impacted with oil. There appeared to be a significant accumulation of iron bacteria and bio sheen on the surface of the gw slowly flowing through the trenches. Jack Eisenbach has soil samples which will be sent to a lab for CP-51 sampling. A groundwater sample from the trenches will also be collected and analyzed for VOCs. The trenches were also screened with a PID meter and all the reading were below 3 ppm. TG 09/01/22 Soil samples from each of the piles showed that all VOC were ND and only low levels fo SVOCs were detected. The soil was drummed (18 +2sorbents in total) and transported by Luzon Env. NFA. TG |
| Remarks: | Dug up concrete slab in boil room and found contaminated soil unknown spill, unknown source or date of spill |

| DEC Memo: | PBS 3-413534 05/27/08 Bill Canavan reported mild odors entering around a pipeline. Two gas stations nearby. More subsurface investigation planned. Report submission to DEC to follow. TG 1-13-16 emailed the 8 open spills to Jennifer Hubbard At Yonkers School District, Sr. Project Manager, School Facilities Management Dept; One Larkin Center Yonkers, NY 10701; Phone 914.376.8008_ RDB 1-13-16 Response, I ll look into them. The others I found online and have contacted all involved parties to collect the documents necessary to process the closure. IN some cases the engineer or contractor has forwarded the information to WCDOH for handling but I asked them to confirm with WCDOH recipient the receipt and status. RDB 01/13/2023 HydroEnvironmental Subsurface Evaluation and Indoor air sampling report dated May22 2008 entered into DecDocs. TG |

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'MARA 9/3/98 UNREGISTERED PBS FACILITY. REMOVED 2000 GAL. #2 TANK. HOLE IN TANK. MINIMAL SOIL CONTAM. ENCOUNTERED BUT ALL OF IT COULD NOT BE EXCAVATED DUE TO PROXIMITY OF STREET AND BLDG. GAVE OK TO BACKFILL & PROCEED WITH NEW INSTALLATION. STARS SAMPLES TAKEN - AWAITING RESULTS. 12/10/98 STARS SAMPLES SHOWED CONTAMINATION REMAINS. CONTRACTOR (TAKE PRIDE) HAB BEEN GIVEN PERMISSION TO BACKFILL BY WCHD, B. MCDONALD. WCHD HAS FORWARDED CASE TO DEC - J. O'MARA (SPILLS) AND A. KLAUS (DIV OF ENVIRO. REMEDIATION) - DUE TO TYPES OF CONTAMINATION DETECTED. 12/14/98 SAMPLE RESULTS RECEIVED SHOWING STARS EXCEEDANCES. SENT LETER REQUESTING SUBSURFACE INVESTIGATION. COPIES OF LAB RESULTS & LETTER SENT TO J. O'MARA FOR FOLLOW UP. REQUESTED FUEL TANK CLOSURE REPORT FROM CONTACTOR (TAKE PRIDE). 2/9/05 on review and discussion with B Mcdonald soil results relatively clean and spill can be closed |
| Remarks: | TANK TO BE ISOLATED AND RE-TESTED. |
