1 INTRODUCTION

Environmental Chemical Corporation and team member Bhate Environmental Associates, Inc. (Bhate) have been retained by the Air Force Civil Engineer Center, under Contract Number FA8903-20-D-0001, to conduct environmental remediation activities at the former Griffiss Air Force Base (AFB) located in Rome, New York (**Figure 1**). This Annual Monitoring Report has been prepared to document the 2023 quarterly groundwater sampling/monitoring activities conducted at petroleum spill Site SS067 Building 789 (New York State Department of Environmental Conservation [NYSDEC] Spill Number [No.] 9810713) at former Griffiss AFB (**Figure 2**).

1.1 Griffiss AFB Operational History

The mission of the former Griffiss AFB varied over the years. The following information was taken from the *Final 2005 Basewide 5-Year Review* (FPM Remediations, Inc. [FPM], June 2005) and the *Preliminary Draft Historic Building Inventory and Evaluation* (Woodward-Clyde, February 1998). The base was activated on February 1, 1942, as Rome Air Depot, with the mission of storage, maintenance, and shipment of material for the United States Army Air Corps. After creation of the Air Force in 1947, Rome Air Depot was renamed Griffiss AFB on September 20, 1948 (Woodward-Clyde, February 1998). The base became an electronics center in 1950, with the transfer of Watson Laboratory Complex (later Rome Air Development Center [1951], Air Force Research Laboratory/Rome Research Site), and then the Information Directorate at Rome Research Site was established with the mission of applied research, development, and testing of electronic air-ground systems. The headquarters of the Ground Electronics Engineering Installations Agency (GEEIA) was established in June 1958 to engineer and install ground communication equipment throughout the world.

In August 1958, shortly after GEEIA took over as host unit at Griffiss AFB, the 4039th Strategic Wing was assigned as a tenant. The 4039th was equipped with aircraft including the B-52G "Stratofortress" and KC-135A "Stratotanker." Base facilities had to be modified or constructed to accommodate the Strategic Wing mission. This included the construction of new runways, taxiways, runway aprons, dormitories, storage facilities, hangars, and various other support buildings (Woodward-Clyde, February 1998). Construction of the aprons and support facilities at the southeastern end of the flight line required Six Mile Creek to be diverted into an underground culvert, and the old channel was filled in (Air Force Real Property Agency [AFRPA], April 2009). In January 1960, the first of 15 B-52G bombers, named "Mohawk Valley," arrived at the base. In January 1961, the base also received the first of many Hound Dog Missiles (GAM 77). In 1963, the 4039th was inactivated and replaced with the 416th Bombardment Wing. The 416th Bombardment Wing assumed host responsibilities at Griffiss AFB in 1970, after the Headquarters of GEEIA was inactivated. In May 1979, the 416th Bombardment Wing was the first wing to receive the air-launched cruise missiles. Griffiss AFB began receiving the air-launched cruise missiles in January 1981; they were primarily used for environmental testing and maintenance training (Woodward-Clyde, February 1998).

The 49th Fighter Interceptor Squadron served at Griffiss AFB from 1959 until its inactivation in 1987. Griffiss AFB was designated for realignment under the Base Realignment and Closure Act in 1993 and 1995, resulting in deactivation of the 416th Bombardment Wing in September 1995.

As a result of the various national defense missions carried out at the former Griffiss AFB since 1942, hazardous and toxic substances were used, and hazardous wastes were generated, stored, or disposed of at various sites on the installation. The defense missions involved were, among others: the procurement, storage, maintenance, and shipment of war material; research and development; and aircraft operations and maintenance (FPM, June 2005).

1.2 Regulatory Background

Petroleum Spill Site SS067 falls under the Spills Program managed by the NYSDEC. Under this program, spill close-out decisions can be considered even when a cleanup has not achieved the established cleanup level and there are indications that the chosen remedial strategy will not achieve the established cleanup level even if the operation is continued for a long period of time. The goal of the NYSDEC Spills Program is to return a site to pre-spill conditions and ensure adequate protection of human health and the environment. A spill is considered "closed" by the NYSDEC when records and data submitted for review demonstrate that the necessary cleanup and removal actions have been completed and no further remedial activities are required. The Spills Program uses professional judgment and enforcement discretion to allow cleanup to a lesser degree if pre-spill conditions are not achievable (NYSDEC, April 2019).

1.3 Purpose

This Annual Monitoring Report documents the 2023 free product gauging and groundwater/surface water sampling results at former Griffiss AFB Petroleum Spill Site SS067. Site-specific activities and results presented include an overview of site conditions, monitoring results, conclusions, and recommendations for future remedial actions and monitoring. The goal of this Annual Monitoring Report is to present monitoring data that will ultimately support closure of NYSDEC Spill No. 9810713.

1.4 Procedures and Report Organization

Monitoring and sampling activities were conducted in accordance with the 2022 *Final Basewide Uniform Federal Policy – Quality Assurance Project Plan, Long Term Monitoring* (Bhate, April 2022); any sampling plan modifications made following regulatory approval of the annual reporting recommendations; and *the Final Uniform Federal Policy-Quality Assurance Project Plan Corrective Action Plan for Investigation of Petroleum Spill Sites: CSS681 Apron 1 (NYSDEC Spill #1501553), CSS682 Building 785 Pipeline (NYSDEC Spill #1408594), and SS067 Building 789 (NYSDEC Spill #9810713)* (Bhate, August 2017).

For evaluation purposes, where established, all analytical data was screened against the NYSDEC, Division of Water *Technical and Operational Guidance Series (TOGS) (1.1.1), Table 1 New York*

State Ambient Water Quality Standards and Guidance Values (NYSDEC, June 1998), and *Addendum to June 1998 Division of Water and Technical and Operational Guidance Series (TOGS) No. 1.1.1* (NYSDEC, April 2000) (NYSDEC AWQ S/GV).

Laboratory analyses were performed by SGS North America Inc., Orlando, Florida and included volatile organic compounds (VOCs) by United States Environmental Protection Agency Method 8260D. All data validation was performed by Environmental Synectics, Inc. Analytical summary results from the 2023 sampling event are provided in **Appendix A**.

A description of data qualifiers used by the laboratory is provided below.

- U – The analyte was analyzed for, but not detected and reported to limit of detection.
- J – The analyte was positively identified; the result was detected above the method detection limit, but the concentration was below the reporting limit as an estimated value.
- UJ – The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria

2 SS067 (BUILDING 789) NYSDEC SPILL NO. 9810713

2.1 Site Description and History

The information presented in this section is taken from the *Final Optimization Plan Petroleum Spill Sites Remediation, Former Griffiss Air Force Base Site, Rome, New York* (AECOM Technical Services, Inc. [AECOM], November 2011), the *Preliminary Draft Historic Building Inventory and Evaluation, Griffiss Air Force Base, Rome, New York* (Woodward-Clyde, February 1998), and the *Final Record of Decision for the On-base Groundwater AOC* [area of concern] *(SD-52) at the Former Griffiss Air Force Base, Rome, New York* (AFRPA, April 2009). Site SS067 (Building 789) is in the southeastern portion of the former Griffiss AFB (**Figure 1**). In August 1958, the 4039th Strategic Wing was assigned as a tenant. Base facilities had to be modified or constructed to accommodate the Strategic Wing mission.

According to the Final Record of Decision for the On-Base Groundwater AOC, prior to construction of the Strategic Wing facilities at the southeastern end of the flightline, Six Mile Creek flowed through the site in an open channel in the area of the Apron 2/Building 789 area, but during construction, it was diverted into an underground culvert and the old channel was filled in (AFRPA, April 2009). Based on the historic building inventory, Building 789 was one of the support buildings constructed to support the Strategic Wing mission. In January 1961, the base received the first air-to-surface nuclear attack "Hound Dog Missiles," which were carried by B-52H and B-52G bombers. The Hound Dog Missile Complex at Griffiss AFB was situated at the southeastern end of the flightline and included Building 789, the Missile Assembly Shop; Buildings 790 and 791, the Missile Run-Up Shops; and Building 5910, the Power Check Pad. These missiles were removed from service at the base in 1973 (Woodward-Clyde, February 1998).

An 8,000-gallon underground storage tank (UST) (789-1) was located on the northeast side of Building 789 from 1961 until its removal in 1991 and was used to store fuel oil for boiler heating. Coinciding with the removal of UST 789-1 was the installation of UST 789-2, approximately 25 feet to the east of UST 789-1. UST 789-2 had a capacity of 5,000 gallons and was also used to store No. 1 fuel oil for boiler heating until its removal by PEER Consultants Professional Corporation in November 1998. Continuous soil screening was conducted during the excavation of UST 789-2. Observed contamination at depth was determined to be associated with the fuel pipeline system, and NYSDEC Spill No. 9810713 was assigned to the site in November 1998 (AECOM, November 2011). The site features, including monitoring wells, are shown on **Figure 2.**

As shown in **Figure 3**, located along the northwestern side of Building 789 is a section of the former Type II Jet Fuel pipeline that once distributed Jet Propulsion Fuel No. 4 to the southern section of Apron 2. As further described in Section 2 of this report, former Site SS054 includes the Pumphouse No. 1 site (former Building 781). Fuel was distributed from Pumphouse No. 1 to pipeline system petroleum, oil, and lubricants (POL) 781-2, located between Building 789 and Apron 2. POL 781-2 consisted of four lateral control pits (LCPs) adjacent to the northeast side of Apron 2 and a refueling hydrant outlet connected to each pit, formerly located in the Apron 2

pavement. The LCPs were connected by 10-inch diameter fueling and 8-inch diameter defueling pipelines. The individual refueling hydrant outlets were connected to the hydrant LCPs by 6-inch diameter lateral fueling pipelines. POL 781-2 pipelines were reportedly flushed, capped with hydraulic cement, and abandoned in place in 1996 (AECOM, November 2011).

2.2 Previous Investigations and Remedial Actions

The following section outlines the significant remedial and investigation activities at SS067 and is taken from the Final Letter Work Plan, Site SS067 Free Product Assessment and Data Gap Investigation (Bhate, May 2022), based on the Final 2020 Annual Monitoring Report for Petroleum Spill Sites, Former Griffiss Air Force Base, Rome, New York (Bhate, February 2022).

In 2001, 52,000 cubic yards of contaminated soils (with approximately 13,000 gallons of entrained free product), 25,462 gallons of free product, and 525,000 gallons of contaminated water were removed from the site. Fuel seeps were observed at multiple locations entering the excavation pit. Oil Spill Eater enzymes and Oxygen Release Compound® were applied to the excavation prior to it being backfilled (AECOM, November 2011). Building 789 was also demolished during this time (CAPE Environmental [CAPE], May 2002). The extent of excavation completed during the 2001 remedial actions is shown on **Figure 2**. From 2003 to 2010, vacuum enhanced recovery was performed (FPM, December 2008, November 2009, March 2010, August 2010, and July 2011). From 2006 to 2010, a vacuum enhanced skimming system was operational at eight recovery wells and one monitoring well, recovering approximately 6,317 gallons of free product. By the fall of 2010, light non-aqueous phase liquid recovery rates had declined to approximately 1.5 gallons per day (FPM, July 2011). From 2006 to 2019, a horizontal biosparging system was operated to prevent the downgradient migration of the free product and dissolved phase petroleum plumes. The horizontal biosparging system and free product skimming system lines and wells are shown on **Figure 2**. From 2011 to 2018, the free product recovery system was in operation. Free product recovery rates were limited to less than 1 gallon per day even following a 2017 skimmer refurbishment. Significant free product thicknesses continued to be observed in several site wells (Bhate, August 2018).

In 2018, a Data Gap Investigation (DGI) was completed which involved: 28 soil borings, photoionization detector screening, sheen testing, free product mobility analysis, setting and sampling of 12 temporary grab wells, installation of three fully-screened permanent monitoring wells, and “fingerprint” analysis of two free product samples (Bhate, October 2019). No source(s) of free product were identified. The recommendations table as well as a figure depicting locations and results from the 2018 investigation is included in **Appendix B**. In March 2019, to evaluate the distribution of the remaining free product present in the subsurface, seven wells were rehabilitated using a surfactant (Ivey-sol® 103), surging, and purging (Bhate, September 2020). Free product thickness measurements are included in **Appendix C**. In October 2019, the remaining skimmers were removed and monthly free product thickness gauging and free product bailing commenced. In September 2020, an inverted funnel device was installed at 789RW-219 to evaluate the possibility that free product was migrating along preferential pathways below the water table. Data indicated that free product was entering the well from a preferential pathway

located below the water table (Bhate, February 2022). Following the 2018 DGI and the subsequent shutdown of the air sparge and free product recovery systems, continued accumulation of free product during the monthly gauging and bailing events was observed. It was determined that further investigation was needed to identify the origin(s) of the free product and the associated migration pathways.

From June through October 2022, field activities in support of a free product assessment and data gap investigation, as outlined in the *Work Plan SS067 Free Product Assessment and Data Gap Investigation* (Bhate, May 2022), were performed to delineate the source and migration pathways of observed free product accumulations and to update the current conceptual site model (CSM). Field activities included a high-resolution site characterization (HRSC); utilization of the HRSC results to select locations and target depths for soil boring advancement and soil sampling to assess the soil profile for the presence of free product and laboratory analysis for VOCs, semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH), and per- and polyfluoroalkyl substances (PFAS); the completion of the soil borings as temporary monitoring wells for groundwater sampling and analysis of VOCs, SVOCs, TPH, and PFAS with subsequent abandonment; and the installation and sampling of five permanent monitoring wells for VOCs, SVOCs, TPH, and PFAS.

The HRSC investigation bounded the free product areas except to the west which is limited by Apron 2. The collected data is being compiled for presentation in a supplemental CSM update report. Results identified the greatest free product response and thicknesses near monitoring wells 789MW-96, 789MW-19, and 798MW-252, and near the west side of the investigation near the apron. Free product was observed to be distributed at a depth of approximately 15 feet to 23 feet below ground surface and between two high permeability zones.

2.3 Remedial Optimization Efforts in 2023

During 2023 Quarter 1, as continuation of the 2022 Data Gap Investigation, free product was gauged and bailed in February and March at 789MW-96, 789MW-102, 789RW-200, 789RW-202, 789RW-205, 789RW-211, 789RW-219, 789RW-220, 789RW-221, and 789MW-252. During 2023 Quarters 2 through Quarter 4, gauging only without free product bailing was performed in conjunction with quarterly sampling activities at the same locations as Quarter 1 with the addition gauging only at 789MW-253 and 789MW-254. A supplemental gauging and bailing event was conducted in 2023 Quarter 3 (November 2023). The maximum free product thickness measured was 4.32 feet at 789MW-254 in September 2023; this location demonstrated the greatest free product thickness during each event. In addition to 789RW-254, locations 789MW-102 (one event), 789RW-200 (four events) 789RW-202 (three events), and 789RW-219 (three events) contained greater than 1 foot of free product. Free product bailing and gauging measurements from 2019 to 2023 are provided in **Table 1** and measured product thicknesses are shown on **Figure 4**. The free product thickness trends are generally stable with the exception of 789RW-202 and 789RW-219 which showed increased thicknesses in the second half of 2023.

Following gauging in 2023 Quarter 1 and Quarter 4, the wells containing free product, with the exception of 789MW-254 in Quarter 4, were bailed to remove free product to the maximum extent practicable and then generally regauged for product thickness. The approximate volume recovered per event was 1.31 gallons (February 2023), 1.25 gallons (March 2023), and 12 gallons (November 2023) with approximately 14.5 gallons recovered during 2023. Free product recovered by event is shown on **Figure 5**. Based on the new 2023 contract with the Air Force, wells were to only be gauged and not bailed to remove free product starting with the 2nd quarter 2023.

3 QUARTERLY MONITORING RESULTS

3.1 Groundwater

The following subsections provide a summary of results for the quarterly groundwater monitoring events conducted in March, June, September, and October 2023. The 2023 monitoring plan as executed is shown in **Table 2**. Groundwater elevations and field parameter measurements are provided in **Table 3**, and quarterly detected groundwater analytical results are provided in **Table 4**. Monitoring wells are discussed from the upgradient/head of plume to downgradient near Six Mile Creek in a general west to east orientation.

Acetone data has been tracked since the beginning of 2019 Quarter 1 based on the elevated concentrations (maximum 549 micrograms per liter [µg/L] in October 2022) consistently observed in upgradient monitoring wells 789MW-98, 789MW-99, and 789MW-251. Tabulated acetone data through 2023 Quarter 4 is included in **Appendix C**. As acetone is a non-petroleum VOC, further discussion is not included in this report but will be discussed in the supplemental CSM. Field documentation, including groundwater sample collection logs and free product gauging and bailing field forms, are provided in **Appendix D**. Laboratory data validation reports are provided in **Appendix E** and laboratory analytical data packages are provided in **Appendix F**.

3.1.1 Quarterly Event No. 1 (March 2023)

3.1.1.1 Free Product/Depth to Water Measurements

Depth to free product/water was measured in 12 wells and calculated elevations used to create a potentiometric surface map of the unconfined surficial aquifer. Measurable amounts of free product were recorded in seven wells with approximately 1.25 total gallons of free product bailed. Measured free product thicknesses and bailing volumes are summarized on **Table 1**. Groundwater elevations, corrected for the presence of free product as applicable, are summarized on **Table 3**. Consistent with prior events, a groundwater depression is observed within the former excavation area with general flow to the east/southeast towards Six Mile Creek within the unconfined surficial aquifer (**Figure 6**).

3.1.1.2 Groundwater Results

Six monitoring wells (789MW-98, 789MW-99, 789MW-251, 789MW-216, 789MW-83, and 789MW-222) were sampled in March 2023. Field parameters are presented in **Table 3** and analytical detections are summarized in **Table 4** with NYSDEC AWQ S/GV exceedances summarized below and shown on **Figure 7**.

Exceedances of criteria were observed only in the following source area wells:

- Monitoring well 789MW-98: 1,2,4-trimethylbenzene (TMB) (9.3 µg/L); 1,3,5-TMB (18.5 µg/L); benzene (9.1 µg/L); m,p-xylene (8 µg/L); were detected above their respective NYSDEC AWQ S/GV.
- Monitoring well 789MW-99: benzene (1.2 µg/L) was detected above the NYSDEC AWQ S/GV.

3.1.1.3 Water Quality Parameters

Groundwater dissolved oxygen (DO) concentrations less than 0.5 mg/L are indicative of anaerobic groundwater environments, while DO concentrations greater than 1.0 indicate aerobic conditions. Within the southwestern portion of the source area/excavation boundary, DO was measured at 0.35 mg/L in 789MW-98 and 1.71 mg/L in 789MW-99, both within the excavation boundary and at the upgradient extent of dissolved contamination. Within and near the northeastern extent of the excavation at 789MW-251, DO was measured at 5.55 mg/L. Downgradient of the source area/excavation DO was measured at 0.54 mg/L in 789MW-216, 0.34 mg/L in 789MW-83, and 1.82 mg/L in 789MW-222.

Groundwater oxidation reduction potential (ORP) is an indicator of its tendency to accept or transfer electrons. In oxidative regions of the aquifer, ORP will be positive; in reducing regions, ORP will be negative. Within the source area ORP was measured at -44.7 mV in 789MW-98, -67.1 mV in 789MW-99, and 66.6 mV in 789MW-251. Downgradient ORP was measured at -71.6 mV in 789MW-216, -77.2 mV in 789MW-83, and 29.5 mV in 789MW-222. The potential of hydrogen (pH) was in the near-neutral range, measured from 6.73 to 7.32 standard units (SU).

3.1.2 Quarterly Event No. 2 (June 2023)

3.1.2.1 Free Product/Depth to Water Measurements

Depth to free product/water was measured in 16 wells. Measurable amounts of free product were recorded in 789MW254 (1.51 feet), 789MW-253 (0.5 feet), 789RW-200 (2.86 feet), 789MW-96 (0.25 feet), 789MW-252 (0.43 feet), 789RW-202 (0.52 feet), and 789MW-102 (0.83 feet). No free product was bailed during this event. Measured free product thicknesses are summarized on **Table 1**. Groundwater elevations, corrected for the presence of free product as applicable, are summarized on **Table 3**. Consistent with prior events, a groundwater depression is observed within the former excavation area with general flow to the east/southeast towards Six Mile Creek within the unconfined surficial aquifer (**Figure 8**).

3.1.2.2 Groundwater Results

Ten monitoring wells (789MW -98, 789MW -99, 789MW -95, 789MW-251, 789MW-46R, 789MW-216, 789MW -83, 789MW-222, 789MW -135, and 789MW-102) were sampled in June 2023. Field parameters are presented in **Table 3** and analytical detections are summarized in **Table 4** with NYSDEC AWQ S/GV exceedances summarized below and shown on **Figure 9.**

Exceedances of criteria were observed in the following source area wells:

- Monitoring well 789MW-98: 1,2,4-TMB (265 µg/L); 1,3,5-TMB (81.8 µg/L); acetone (190 µg/L); benzene (14.7 µg/L); ethylbenzene (23.4 µg/L); isopropylbenzene (11.6 µg/L); m,p-xylene (121 µg/L); naphthalene (30.5 µg/L); n-butylbenzene (14.7 µg/L); n-propylbenzene (30.6 µg/L); o-xylene (6.1 µg/L); p-isopropyltoluene (9.9 µg/L); and sec-butylbenzene (11.3 µg/L) were detected above their respective NYSDEC AWQ S/GV.
- Monitoring well 789MW-99: benzene (1.4 µg/L) was detected above the NYSDEC AWQ S/GV.

Exceedances of criteria were observed in the following downgradient well (free product bailed prior to sampling):

- Monitoring well 789MW-102: 1,2,4-TMB (2,100 µg/L); 1,3,5-TMB (383 µg/L); benzene (71 µg/L); ethylbenzene (377 µg/L); isopropylbenzene (64.1 µg/L); m,p-xylene (1,170 µg/L); naphthalene (398 µg/L); n-butylbenzene (70 µg/L); n-propylbenzene (154 µg/L); o-xylene (36.2 µg/L); p-isopropyltoluene (53.3 µg/L); sec-butylbenzene (52.2 µg/L); and toluene (18.3 µg/L) were detected above their respective NYSDEC AWQ S/GV.

3.1.2.3 Water Quality Parameters

Within the source area, DO was measured at 0.22 mg/L in 789MW-98 and 0.92 mg/L in 789MW-99. Within and near the northeastern extent of the excavation, DO was measured at 0.83 mg/L in 789MW-95 and at 1.15 mg/L in 789MW-251. Downgradient of the source/excavation area DO was measured at 0.24 mg/L in 789MW-46R, 0.49 mg/L in 789MW-216, 0.41 mg/L in 789MW-83, 0.46 mg/L in 789MW-222, and 3.64 mg/L in 789MW-135. Downgradient at 789MW-102 near Six Mile Creek, DO was measured at 0.31 mg/L.

ORP within the source area was measured at -154.8 mV in 789MW-98, -70 mV in 789MW-99, 101 mV in 789MW-95, and 135 in 789MW-251. Downgradient ORP was measured at -46.2 mV in 789MW-46R, -86.3 mV in 789MW-216, 26.3 in 789MW-83, 69.1 mV in 789MW-222, 158.4 mV in 789MW-135, and -134.6 mV in 789MW-102. The pH was in the near-neutral range, measured from 6.55 to 7.5 SU.

3.1.3 Quarterly Event No. 3 (September 2023)

3.1.3.1 Free Product/Depth to Water Measurements

Depth to free product/water was measured in 18 wells. Measurable amounts of free product were recorded in 789MW-254 (4.32 feet), 789MW-253 (1.0 feet), 789RW-200 (2.74 feet), 789MW-252 (0.93 feet), 789RW-202 (1.55 feet), and 789MW-102 (0.64 feet). No free product was bailed during this event. Measured free product thicknesses are summarized on **Table 1**. Groundwater elevations, corrected for the presence of free product as applicable, are summarized on **Table 3**. Consistent with prior events, a groundwater depression is observed

within the former excavation area with general flow to the east/southeast towards Six Mile Creek within the unconfined surficial aquifer (**Figure 10**).

3.1.3.2 Groundwater Results

Seven monitoring wells (789MW-99, 789MW-251, 789MW-46R, 789MW-216, 789MW-83, 789MW-222, and 789MW-135) were sampled in September 2023. Field parameters are presented in **Table 3** and analytical detections are summarized in **Table 4** with NYSDEC AWQ S/GV exceedances summarized below and shown on **Figure 11**.

Exceedances of criteria were observed only in the following source well:

- Monitoring well 789MW-99: benzene (1.1 µg/L) was detected above the NYSDEC AWQ S/GV.

3.1.3.3 Water Quality Parameters

Within the source area, DO was measured at 2.05 mg/L in 789MW-99 and at 8.28 mg/L in 789MW-251 at the northeastern extent of the excavation boundary. Downgradient of the source/excavation area DO was measured at 1.32 mg/L in 789MW-46R, 2.22 mg/L in 789MW-216, 2.49 mg/L in 789MW-83, 2.15 mg/L in 789MW-222, and 5.66 mg/L in 789MW-135.

ORP within the source area was measured at -90 mV in 789MW-99 and -35.1 mV in 789MW-251. Downgradient ORP was measured at -52 mV in 789MW-46R, -55.5 mV in 789MW-216, -36.5 in 789MW-83, -55.5 mV in 789MW-222, and -11.4 mV in 789MW-135. The pH was in the near-neutral range, measured from 6.65 to 7.66 SU.

3.1.4 Quarterly Event No. 4 (October 2023)

3.1.4.1 Free Product/Depth to Water Measurements

Depth to free product/water was measured in 18 wells. Measurable amounts of free product were recorded in 789MW-254 (1.92 feet), 789MW-253 (0.8 feet), 789RW-200 (2.72 feet), 789RW-202 (2.61 feet), and 789MW-102 (1.24 feet). No free product was bailed during this October 2023 event. Measured free product thicknesses are summarized on **Table 1**. Note that a supplemental gauging and bailing event was conducted in November 2023 and is included in **Table 1**. Groundwater elevations, corrected for the presence of free product as applicable, are summarized on **Table 3**. Consistent with prior events, a groundwater depression is observed within the former excavation area with general flow to the east/southeast towards Six Mile Creek within the unconfined surficial aquifer (**Figure 12**).

3.1.4.2 Groundwater Results

Nine monitoring wells (789MW-98, 789MW-99, 789MW-95, 789MW-251, 789MW-46R, 789MW-216, 789MW -83, 789MW-222, and 789MW-135) were sampled in October 2023. Field

parameters are presented in **Table 3** and analytical detections are summarized in **Table 4** and shown on **Figure 13**.

Exceedances of criteria were observed only in the following source area wells:

- Monitoring well 789MW-98: 1,2,4-TMB (20.5 µg/L); 1,3,5-TMB (14.6 µg/L); benzene (139 µg/L); ethylbenzene (9.5 µg/L); m,p-xylene (48 µg/L); and o-xylene (7.8 µg/L) were detected above their respective NYSDEC AWQ S/GV.
- Monitoring well 789MW-99: benzene (1.4 µg/L) was detected above the NYSDEC AWQ S/GV.
- Monitoring well 789MW-251: benzene (1.7 µg/L) was detected above the NYSDEC AWQ S/GV.

3.1.4.3 Water Quality Parameters

Within the source area, DO was measured at 0.15 mg/L in 789MW-98 and 1.14 mg/L in 789MW-99. Within and near the northeastern extent of the excavation, DO was measured at 0.73 mg/L in 789MW-95 and at 1.02 mg/L in 789MW-251. Downgradient of the source area/excavation DO was measured at 0.17mg/L in 789MW-46R, 0.13 mg/L in 789MW-216, 0.25 mg/L in 789MW-83, 0.20 mg/L in 789MW-222, and 3.89 mg/L in 789MW-135.

ORP within the source area was measured at -18.7 mV in 789MW-98, -41.8 mV in 789MW-99, 83.9 mV in 789MW-95, and 26.2 mV in 789MW-251. Downgradient ORP was measured at-17.8 mV in 789MW-46R, -52 mV in 789MW-216, 49.9 in 789MW-83, 150.8 mV in 789MW-222, and 161.2 mV in 789MW-135. The pH was in the near-neutral range, measured from 6.54 to 7.22 SU.

3.2 Surface Water

Based on elevated concentrations of petroleum VOCs historically observed and the continued presence of free product measured in downgradient monitoring well 789MW-102 into 2023 Quarter 1, the collection of surface water samples from Six Mile Creek were added to the quarterly sampling program beginning in 2023 Quarter 2. Field parameters are presented in **Table 3**. Analytical detections for Quarters 2 through 4 are summarized in **Table 5** and **Figure 14**.

Initially in Quarter 2, surface water locations 789SW-01 (approximately 150 feet upstream of 789MW-102), 789SW-02 (adjacent to 789MW-102), and 789SW-03 (approximately 150 feet downstream of 789MW-102) were established and sampled. Based on the presence of benzene above NYSDEC AWQ S/GV at 789SW-03, as described below, location 789SW-04 (approximately 500 feet downstream of 789MW-102) was added beginning in 2023 Quarter 3.

3.2.1 Quarterly Event No. 2 (June 2023)

Three surface water locations (789SW-01, 789SW-02, and 789SW-03) were sampled in June 2023. Benzene (1.5 µg/L) was detected above the NYSDEC AWQ S/GV at 789SW-03.

3.2.2 Quarterly Event No. 3 (September 2023)

Two surface water locations (789SW-03 and 789SW-04) were sampled in September 2023. Benzene (2.4 µg/L) was detected above the NYSDEC AWQ S/GV at 789SW-03; an estimated concentration of benzene (0.74 J µg/L) was reported at 789SW-04.

3.2.3 Quarterly Event No. 4 (October 2023)

Three surface water locations (789SW-02, 789SW-03, and 789SW-04) were sampled in October 2023. Benzene (2.3 µg/L) was detected above the NYSDEC AWQ S/GV at 789SW-03 and at criteria (1 µg/L) at 789SW-04.

4 CONCLUSIONS

A source of free product has not been defined to the west and the excavation by CAPE (May 2002) did not remove all sources. Free product continues to be present in several site wells, with thicknesses up to 4.32 feet observed and a total of approximately 14.5 gallons recovered during 2023. The HRSC investigation bounded the free product areas except to the west which is limited by Apron 2. Free product is present in three areas: the main product accumulation area of the unconsolidated soils and fill of the shallow unconfined surficial aquifer representing the source area/excavation area; adjacent to Six Mile Creek as observed in 789MW-102; and adjacent to Apron 2 in 789MW-254.

During 2023, VOCs were detected above NYSDEC AWQ S/GV in upgradient monitoring wells 789MW-98, 789MW-99, and 789MW-251 which are within the footprint of the former excavation area; and in downgradient well 789MW-102 (sampled after free product removal) adjacent to Six Mile Creek. Benzene was detected above NYSDEC AWQ S/GV in surface water samples collected at 789SW-03 from Six Mile Creek during all three quarterly events. Dissolved phase contamination was not observed at concentrations above NYSDEC AWQ S/GV at any other monitoring well or surface water locations sampled in 2023.

A groundwater depression is observed within the former excavation area with general flow to the east/southeast towards Six Mile Creek within the unconfined surficial aquifer. The effect of the potentiometric surface (**Figures 6**, **8**, **10**, and **12**) in relation to groundwater flow suggest an undefined up-gradient source of the free product and dissolved phase COCs.

5 RECOMMENDATIONS

Based on the 2022 Data Gap Investigation findings and 2023 groundwater/surface water sampling, quarterly sampling should continue as described in **Table 6** during 2024. Monthly free product gauging and bailing should be conducted from select wells based on the continued presence of free product observed in 789MW-254 located adjacent to Apron 2. The supplemental CSM will present an interpretation of subsurface conditions in support of further assessment of potential sources in the Apron 2 area.

Based on elevated concentrations of petroleum VOCs and free product detected in downgradient monitoring well 789MW-102 and the presence of benzene in surface water samples from Six Mile Creek during 2023, surface water sampling should continue quarterly in 2024. Additionally, damaged well 789MW-103, adjacent to Six Mile Creek approximately 220 feet downstream from 789MW-102, should be replaced to confirm free product and dissolved VOCs are not present.

Notes:
* Indicates the presence of measured free product, groundwater elevation adjusted accordingly
Stream flow measured by surface float test (object movement distance over travel time)
NAVD88 - North American Vertical Datum of 1988
btoc - below top of casing
°C - degrees Celsius
mg/L - milligrams per liter
mS/cm - millisiemen per centimeter
mV - millivolt
NTU - nephelometric turbidity unit
pH - potential of hydrogen

Table 1. Summary of Data Gaps and Proposed Investigation Activities

Area to Be Investigated	Background	Data Gap	Proposed Work to Address Data Gap
Free Product & Residual Soil Contamination Area (current free product recovery area)	Periods of low precipitation can exaggerate the amount of free product present on the water table, likewise, periods of heavy precipitation can press or trap free product within the residual overburden. This will impede accurate free product measurements if monitoring well screen intervals do not cover the full range of this movement. Both of these conditions have been observed in this area.	The actual thickness of free product within the area is suspect due to the screened interval of the monitoring wells and fluctuations in site-wide water levels since their installation.	• Install 2-inch diameter groundwater monitoring wells to an estimated depth of 30 ft bgs within areas of the site historically containing the thickest free product measurements. • These wells will be constructed with "full length" screen intervals, such that the entire depth of the boring can be used to capture any variations in free product thickness driven by water level fluctuations at the site. • A minimum of two wells will be required to assess the accuracy of previous free product data from nearby wells. • The proposed location of these wells is shown on **Figure 3**.
	Optimization, including any expansion or modifications of the free product recovery system will require an accurate measurement of the percentage of the total volume (when determined) that can actually be recovered.	The potentially recoverable fraction of the total mass of remaining free product is unknown.	• Six Direct Push Technology (DPT) soil borings will be advanced to approximately 26 ft bgs or refusal. • There may be up to six step-out soil borings based on field observations made during the investigation (pink locations on **Figure 3**). • From each boring, undisturbed soil samples will be collected from intervals that exhibit residual contamination (smear zone), as well as intervals that contain free product. • Samples will be submitted to the laboratory for centrifuge analysis using D-425-01 *Standard Test Method for Centrifuge Moisture Equivalent of Soils* (ASTM International [ASTM], 1996), to determine the fraction of free product that is recoverable from the soil matrix.

Area to Be Investigated	Background	Data Gap	Proposed Work to Address Data Gap
Former Excavation Area	Concrete rubble from demolished Building 789 is present in the backfill material of the former excavation. Approximate locations are presented on **Figure 3**. Free product may be present within or below the rubble, which could be acting as a sump or a conduit for the subsurface migration of free product.	The condition and extent of this rubble is unknown. This data could prompt a revision of the conceptual site model (CSM) and the subsequent implementation of system optimization.	• Advance up to 13 DPT soil borings (blue locations on **Figure 3**) within the former excavation to the depth of the former excavation, approx. 26 ft bgs, or until refusal is met. • Additional step-out borings may be required if refusal is encountered across the backfilled excavation area before reaching 26 ft bgs. • Samples for laboratory analysis may be collected from borings that extend to or beneath the depth of the former excavation, approx. 26 ft bgs, in order to determine if the rubble has become contaminated. • Install one 2-inch monitoring well, in the area of the rubble, to a depth of 30 ft bgs to monitor for the accumulation of product.
Dissolved Phase Plume Area	Dissolved phase plume exceedances have been detected in groundwater monitoring well 789MW-102, located crossgradient to the existing air-sparge remedial system. Groundwater monitoring wells located downgradient of the air-sparge system have not exhibited detections, indicating that the system is effective in treating the northern portion of the plume.	A portion of the dissolved phase plume may be by-passing the existing air-sparge system to the south, but no groundwater data exists between the free product area and 789MW-102. The dissolved plume may not reach horizontal sparge well AP2HW-1, but there is no groundwater data adjacent to and upgradient of the well to determine the dissolved concentrations entering the area of sparge influence.	• Advance up to 12 DPT groundwater grab sample borings (red locations on **Figure 3**) in various locations including: upgradient of the former excavation and free product area; immediately downgradient of the free product area; and at the southern end of the plume, upgradient of 789MW-102 and upgradient of AP2HW-1 • A step out process may be used to determine the southern extent of the plume and whether it is bypassing the existing air-sparge system. • Install up to two vertical air-sparge wells (to be tied into existing air-sparge system) if dissolved phase contamination is determined to be bypassing the southern end of the existing system. • Install new compliance well downgradient of new vertical air-sparge wells to assess performance.

Notes:
Existing wells are not shown.

This information is depicted to provide visual aid within the context of this document and should not be used as a sole reference in precise dimensioning of features indicated. Please verify the location of all features including underground and aboveground utilities prior to conducting any subsurface exploration or site assessment.

Notes:
Top of Slope - A point or line of slope in an excavation or cut where the higher surface changes to horizontal or meets the exiting ground slope.

Toe of Slope - A point or line of slope in an excavation or cut where the lower surface changes to horizontal or meets the exiting ground slope.

Notes:
NYSDEC - New York State Department of Environmental Conservation

AWQ - Ambient Water Quality

S/GV - Standard and Guidance Value

µg/L - Micrograms per liter

D - Dilution

J - Estimated value

Red analytical results exceed NYSDEC AWQ S/GV criteria

Notes:
NC = no criteria
J = estimated value
U = not detected; reported to limit of detection
UJ = The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria
µg/L = micrograms per liter
Bold analytical results indicate detection
Red analytical results exceed NYSDEC AWQ S/GV

Notes
Results are compared to the New York State (NYS) Department of Environmental Conservation Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality (AWQ) Standards and Guidance Values (S/GV).
* - The principal organic contaminant standard for groundwater of 5 micrograms per liter (µg/L) applies to this substance.
Shaded values are above the NYS AWQ S/GV.
B - The analyte was also detected in a blank.
U - The analyte was analyzed for, but not detected. The associated numerical value is at or below the method detection limit (MDL).
M - The differences between the two recoveries are outside of the relative percent difference limit.
D - Dilution required due to high concentration of target analyte(s).
Q - One or more quality control criteria failed.
F - Analyte was positively identified above the MDL, however the concentration is below the reporting limit (RL).
J - The analyte was positively identified, the quantitation is an approximation.

♦ - Denotes higher nominal value of duplicate sample result.
Results presented in micrograms per liter (µg/L).

YSI that was used was too large to fit down monitoring wells. YSI meter was used on groundwater bailed up from well .

*Well went dry after bailing around 2 gallons. Waited for well to recharge and sampled later

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FC3855. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 0 results (0.00%) out of the 544 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
SW8260D	MS was noted to be out of control.

April 19, 2023

Reviewed by Dale Gimble, Data Review Chemist, Synectics, Sacramento, CA

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Calvin Tanaka, Senior Scientist, Synectics, Sacramento, CA

April 24, 2023

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
789MW-222_0323SD (SD)	1,1-Dichloroethene	141	78 - 137	78 - 137	percent	J/None	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Qualified Results

No results associated with this sample delivery group required qualification.

Reason Code Definitions

Code	Definition
M	MS Recovery
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FC7171. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Ambient Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 2 results (0.18%) out of the 1088 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The laboratory noted that 1 bottle of sample 789-TB01_0623-C was broken upon receiving.

Analytical Method	Data Reviewer Comment
SW8260D	The laboratory noted the following: Blank Spike recovery for trans-1,3-Dichloropropene is outside control limits. The MS/MSD Recoveries for Ethylbenzene, trans-1,3-Dichloropropene are outside control limits. Probable cause is due to matrix interference. *Reviewer noted this was a non-SDG project MS/MSD sample. Matrix Spike Recovery and RPD for Methyl Bromide are outside control limits. Probable cause is due to matrix interference. It was noted that samples FC7171-03 and -4 were associated with CCVs out of criteria, however, sample FC7171-3 was re-analyzed with an acceptable CCV. Sample FC7171-4 was re-analyzed with Chloroethane out of criteria in the associated CCV with a high bias and the sample result was ND.

Quality Control Outliers for test method SW8260D, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
V5E1812-MB (LB)	Acetone	11.3	< 10	< 25	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
V5E1812-BS (BS)	trans-1,3-Dichloropropene	76.0	80 - 120	80 - 120	percent	J/UJ	C

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc., Birmingham, AL; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FC9357. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Ambient Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 278 results (34.07%) out of the 816 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

It was noted that COC corrections were not dated.

Analytical Method	Data Reviewer Comment
SW8260D	The laboratory noted MS/MSD/ICV/CCV out of control. Additionally, it was noted that various sample vials contained bubbles greater than 6mm and multiple samples were treated with an anti-foaming agent.

Quality Control Outliers for test method SW8260D, Ambient Blank

Ambient blanks are a sample of analyte-free water or air, which is transferred from one vessel to another or exposed to the sampling environment at the sampling site. They measure incidental or accidental sample contamination during the whole process (sampling, transport, sample preparation, and analysis). Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in ambient blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
789-AB01_0923-D (AB)	Acetone	31.4	< 10	< 25	ug/l	U/None*	A1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
A1	Ambient Blank
P	Sample preservation/collection requirement not met.
T	Trip Blank
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?		•		
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?		•		The laboratory noted the sample vial(s) for samples FC9537-1, -3, -9 and -10 contained bubbles greater than 6mm. The sample results were qualified J/UJ with a P reason code. See All Qualified Results Table.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			It was noted that a Sample Receipt Summary form was not included in the report; however, the Case Narrative noted the samples were intact, chemically preserved, and received at a maximum corrected temperature of 3.8 C.
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		Various compounds are reported with detections and non-detects at levels (LOQs) greater than the project PQGs and not all project PALs were met.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?		•		See QC outliers.
Were field blanks analyzed at the proper frequency and in control?		•		Ambient blank. See QC outliers.
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?		•		LCS only.
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			It was noted that one of three batches have an SDG specific MS/MSD.
Were MS/MSD recoveries within project acceptance limits?	•			The laboratory noted a non-SDG MS sample out of control. No action was taken on this basis.
Was the MS/MSD RPD within project acceptance limits?	•			The laboratory noted the RPD for a non-SDG MS/MSD sample out of control. No action was taken on this basis.
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?		•		It was noted that CCV V2P3838-ECC3836 was analyzed 18 minutes past the 12-hour window. No action was taken on this basis.
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			The laboratory noted Trichlorofluoromethane out of control for V2P3836-ICV3836; however, it was found to be within QAPP acceptance criteria of +/- 30%. No action was taken on this basis.
Were CCVs run at the required frequency and within project acceptance criteria?		•		The laboratory noted Trichlorofluoromethane out of control with a high bias in V2P3838-CC3836 and the associated samples were non-detect. No action was taken on this basis.
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			It was noted that part of the Analysis Log was cut off for Run IDs V2P3836 and V2P3838.
Were sample preparation sheets present and filled out appropriately?			•	
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?		•		It was noted that a CCV was out of control and the associated samples were not re-analyzed.
Were any data recommended for exclusion in the data validation process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc., Birmingham, AL; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FC10637. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Ambient Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 2 results (0.20%) out of the 1020 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

It was noted that on page 2 of the COC, the Relinquished By section was filled out with "SAME as pg 1". Additionally, it was noted COC corrections were not dated.

It was noted that the COC sample date for 789MW-99_1023 and 789MW-99_1023-A did not match the laboratory or EDD dates. Additionally, it was noted that the laboratory did not fill out question 6 on the SGS Sample Receipt Summary.

Analytical Method	Data Reviewer Comment
SW8260D	The laboratory noted MS/MSD/CCV/LCS out of control. Additionally, it was noted that an ending CCV was not available for a confirmation run. The laboratory noted Methylene Chloride for sample FC10637-5 was a suspected laboratory contaminant.

Quality Control Outliers for test method SW8260D, Ambient Blank

Ambient blanks are a sample of analyte-free water or air, which is transferred from one vessel to another or exposed to the sampling environment at the sampling site. They measure incidental or accidental sample contamination during the whole process (sampling, transport, sample preparation, and analysis). Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in ambient blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
789-AB01_1023-D (AB)	Methylene chloride	3.60	< 2	< 5	ug/l	U/None*	A1	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOD or LOQ will be qualified based on the validation guidance assigned in the project setup.

Qualified Results associated with the Ambient Blank for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
789MW-98_1023 FC10637-5	N	Methylene chloride	10.0	20.4	20.4 J	+	ug/l	A1/L/V2

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, Continuing Calibration Verification

Compliance requirements for satisfactory continuing calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data. Continuing calibration is performed to verify and evaluate instrument performance during sample analysis. Summary forms were evaluated against project acceptance criteria, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
1A50264.D (CV)	Methylene chloride	126	80 - 120	50 - 150	percent	J/None	V2	
1A50321.D (CV)	Methylene chloride	132	80 - 120	50 - 150	percent	J/None	V2	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

789MW-98_1023 FC10637-5	N	Methylene chloride	10.0	20.4	20.4 J	+	ug/l	A1/L/V2

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOD) or (LOQ) based on the sample concentration and the validation guidance. In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
789MW-222_1023-SD (SD)	Bromomethane	24.9	< 19	< 19	rpd	J/None	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Table of All Qualified Results

Test Method: SW8260D		Extraction Method: SW5030B						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
789-AB01_1023-D FC10637-16	AB	Methylene chloride	5.00	3.60 J	3.60 J	+	ug/l	C/TR/V2

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
A1	Ambient Blank
C	LCS Recovery
D	MS RPD
L	Lab Blank
M	MS Recovery
TR	Trace Level Detect
V2	CCV

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Review Questions	Yes	No	NA	Comment
Were there discrepancies between the COC and the samples received?		•		
Were there discrepancies between the COC and the sample labels?		•		See Narrative Comments.
Were samples relinquished properly on the COC?		•		See Narrative Comments.
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		Various compounds are reported with detections and non-detects at levels (LOQs) greater than the project PQGs and project PALs were not met.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?		•		Ambient blank. See QC outliers.
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		See QC outliers.
Was an LCS/LCSD pair prepared and analyzed with each batch?		•		LCS only.
Were LCS/LCSD recoveries within project acceptance limits?		•		See QC outliers.
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			It was noted that one of three batches have an SDG specific MS/MSD.
Were MS/MSD recoveries within project acceptance limits?		•		See QC outliers.
Was the MS/MSD RPD within project acceptance limits?		•		See QC outliers.
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•

Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Was instrument tuning completed every 12 hours during sample analysis?		•		The laboratory noted an ending CCV was not available for batch V5E1945; however, the associated sample was not reported from this run. No action was taken on this basis. Additionally, it was noted that V5E1920-ECC1919 was analyzed three minutes past the 12-hour requirement; however, no reported sample results were associated with this run. No action was taken on this basis.
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?		•		See QC outliers. The laboratory noted 2,2-Dichloropropane recovered above control limits and the associated sample was non-detect. No action was taken on this basis.
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?			•	
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			The laboratory noted that V1A1964-MB, V1A1966-MB, V1A1968-MB, and samples FC10637-2 and -5 were treated with an anti-foaming agent.
Were DoD QSM corrective actions followed if deviations were noted?		•		LCS/CCVs were out of control and the associated samples were not re-prepared. Additionally, it was noted that method blank V1A1968-MB contained Methylene Chloride contamination and the associated sample was not re-prepared and re-analyzed.
Were any data recommended for exclusion in the data validation process?		•

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Bhate Environmental **Job No:** FC3855

Site: Griffiss AFB; Rome, NY **Report Date:** 4/6/2023 3:28:20 PM

On 03/31/2023, 7 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 1.7 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FC3855 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** VI2871

Sample(s) FC3855-6MS, FC3855-6MSD were used as the QC samples indicated.

Matrix Spike Duplicate Recovery(s) for 1,1-Dichloroethylene are outside control limits. Probable cause is due to matrix interference.

FC3855-2: Sample was treated with an anti-foaming agent.

FC3855-5: Sample was treated with an anti-foaming agent.

VI2871-MB: Sample was treated with an anti-foaming agent.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Bhate Environmental **Job No:** FC7171

Site: Griffiss AFB; Rome, NY **Report Date:** 6/30/2023 11:19:17 AM

On 06/21/2023, 15 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FC7171 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V1A1848

Sample(s) FC7070-1MS, FC7070-1MSD were used as the QC samples indicated.

V1A1848-MB: Sample was treated with an anti-foaming agent.

Matrix: AQ **Batch ID:** V5E1812

Sample(s) FC7241-2MS, FC7241-2MSD were used as the QC samples indicated.

Blank Spike Recovery(s) for trans-1,3-Dichloropropene are outside control limits.

Matrix Spike Recovery(s) for Ethylbenzene, trans-1,3-Dichloropropene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Ethylbenzene, trans-1,3-Dichloropropene are outside control limits. Probable cause is due to matrix interference.

V5E1812-MB: Sample was treated with an anti-foaming agent.

FC7171-4 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

Matrix: AQ **Batch ID:** VI2955

Sample(s) FC7171-7MS, FC7171-7MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Methyl Bromide are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Methyl Bromide are outside control limits for sample FC7171-7MSD. Probable cause is due to sample non-homogeneity.

FC7171-4: Confirmation run.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

Parameter	CAS	Sig#	R.T. (min.)	Reason
Acetonitrile	75-05-8		2.27	Poor instrument integration
Carbon Tetrachloride	56-23-5		2.97	Overlapping peak
1-Chlorohexane	544-10-5		5.37	Poor instrument integration
Ethylbenzene	100-41-4		5.41	Poor instrument integration

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Bhate Environmental **Job No:** FC9357

Site: Griffiss AFB; Rome, NY **Report Date:** 9/13/2023 10:08:41

On 09/07/2023, 11 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FC9357 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V2P3838

Sample(s) FC9339-10MS, FC9339-10MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Trichlorofluoromethane are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Trichlorofluoromethane are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Methyl Bromide, Trichlorofluoromethane are outside control limits for sample FC9339-10MSD. Probable cause is due to sample non-homogeneity.

V2P3838-MB: Sample was treated with an anti-foaming agent.

FC9357-2 for Trichlorofluoromethane: Associated ICV and CCV outside DOD QSM control limits high, sample is ND.

FC9357-2: Sample was treated with an anti-foaming agent.

FC9357-3 for Trichlorofluoromethane: Associated ICV and CCV outside DOD QSM control limits high, sample is ND.

FC9357-3: Sample vial(s) contained bubbles greater than 6mm.
