NEU-VELLE LLC

Introduction

1.0 INTRODUCTION

General

This Remediation Activities summary report has been prepared by NEU-VELLE LLC in connection with work that was performed under contract to Tonawanda Coke Corporation for the Site 108 facility located at 3800 River Road in Tonawanda, New York. A site location and detailed site map are included in Appendix A. This report documents the activities performed at the site in connection with the New York State Department of Environmental Conservation (NYSDEC) approved Tar Removal and Tank Demolition Phased Interim Remedial Measure Pilot Project Work Plan, dated January 20, 2017 (the IRM IRMPP – Appendix B). Activities described in this report were commenced in June 2017 and ceased in October 2018. All work activities were conducted in accordance with the procedures presented in the approved Interim Remedial Measure Pilot Project Work Plan as well as concurrence with the NYSDEC on-site monitor. Representative photographs taken during the field activities are included in Appendix C. Activities included the following:

- Excavation
- Stream Diversion
- Field Sampling
- Material Management

The dates of activities are presented in the table below.

Task	Dates of Task
Mobilization	June 12, 2017 to June 16, 2017
Test Pit 4 Excavation	June 19, 2017 to June 20, 2017
Test Pit 6, 6a, and 6B Excavation	June 21, 2017 to June 22, 2017
Test Pit 7 and SD-2 Excavation	June 26, 2017 to October 5, 2017
Stream Diversion	July 6, 2017 to August 30, 2017
Tank 1 Secondary Containment Excavation	July 13, 2017 to July 17, 2017
Asbestos Abatement	July 21, 2017 to October 5, 2017
Tonawanda Coke Soil Screening[1]	February 19, 2018 to August 3, 2018
Soil Screening	August 6, 2018 to September 14, 2018

1 – Indicates task conducted by Tonawanda Coke.

1.2 Purpose and Organization of Report

This report presents the activities conducted and has been organized into the following sections:

- Section 1 - Introduction
- Section 2 - Excavation Activities
- Section 3 - Stream Diversion
- Section 4 - Material Segregation
- Section 5 - Material Management
- Section 6 – Analytical Testing
- Section 7 - Future Activities

Section 2

NEU-VELLE LLC

Excavation Activities

2.0 Excavation Activities

2.1 General

This section presents a description of the excavation activities that were performed as part of this project. This section summarizes activities performed including site control, temporary soil erosion and stormwater controls, coal tar removal methods, material staging, material segregation, stockpiles, transport, and material management. Areal extent and approximate depths of excavations are included in Appendix D.

2.2 Mobilization & Site Control

Prior to mobilization on-site, the project area was secure from unhindered and unlimited access by unauthorized personnel by means of perimeter fencing and locking gate at the site entrance off of River Road. All personnel on-site were documented. Only authorized vehicles were allowed in the project area.

Excavation equipment and materials (including loaders, excavators, dump trucks, etc.) required for project activities were mobilized and staged at the site in the vicinity of the project area. Additionally, a decontamination facility and material storage areas were constructed prior to the start of project activities.

2.3 Temporary Soil Erosion and Stormwater Controls

Soil erosion and storm water run-off structures were installed and operated, in accordance with "New York Guidelines for Urban Erosion and Sediment Control." Stormwater and erosion controls included silts fences, hay bales, absorbent socks, and mulching.

Any water accumulated in excavation areas, material storage areas, tank berms or water generated from decontamination was pumped into a vacuum truck and transferred to the Tonawanda Coke main plant located at 3875 River Road where it was managed in accordance with the plant's standard operating procedures (SOPs) SOP-PG-6 for managing tar contaminated water within the existing wastewater treatment facility.

2.4 Excavation Activities

Excavation activities were focused in six areas that were identified in the IRM IRMPP as containing subsurface coal tar. In total, approximately 6,400 tons of material was excavated from the areas listed below. The areas were determined by prior site investigations and identified as follows:

- Test Pit 4 in the interval 4.5 to 5.5 feet below grade (approximate volume excavated was);
- Test Pit B-6 in the interval 4 to 5 feet below grade;
- Test Pit B-6A at a depth of around 3 feet below grade;
- Test Pit B-6B in the upper 4 feet below grade;
- Test Pit 7 in the upper 3 feet, and in the interval 6 to 7 feet below grade;
- Sediment Sample SD-2 in the upper 18 inches; and
- Tank Farm (Tank T-1) Secondary Containment Area.

The depth and limits of excavation was determined in the field by a NEU-VELLE Environmental Professional and/or as directed by the NYSDEC on-site monitor. Confirmation of successful removal of the residual material was accomplished by visual examination and confirmation/approval by the NYSDEC on-site monitor. Test Pit 4, Test Pit B-6, Test Pit B-6A, Test Pit B-6B, and Tank 1 Secondary Containment Area were "deemed clean" (i.e., no visual presence/odors of coal tar in the excavation) by the NYSDEC on-site personnel following excavation activities. Confirmatory sampling and analytical testing was only required by the NYSDEC on-site monitor for the Tank 1 secondary containment area and stream diversion area. To facilitate removal of tar contaminated soil from within the Tank 1 secondary containment area, the existing secondary containment berm was removed. In addition, three holes were cut into the side of the tank in preparation of tank removal and contents sampling. The sampling was conducted by Tonawanda Coke staff and no analytical results were provided to NEU-VELLE. However, Tonawanda Coke suspended tank removal operations until further notice. Following completion of the excavation and cutting holes in the tanks, the secondary containment berm was reconstructed using the existing clay material removed to provide secondary containment for the tank. While extensive excavation activities were conducted in Test Pit 7 and Sediment Sample SD-2, residual coal tar still remains in these areas. To identify the limits of excavation, demarcation material (orange construction fence) was placed below grade for future excavation activities.

Dedicated equipment was used for the excavation activities. The excavation and loading of materials utilized "clean loading" procedures (i.e., controlled loading of the excavated material, minimized transport routes, etc.) to minimize contact/impact with other areas. These procedures ensured that the excavated materials were not spread to other areas including adjacent properties and roadways.

An excavator was used for the removal of residual tar-like materials from the project area. Residual tar-like materials were loaded into dump trucks for transport to the coal mixing pad or on-site storage areas for future material separation or off-site management (i.e., disposal). Prior to exiting the project area, the equipment wheels and undercarriage were inspected for the presence of coal tar. If necessary, the equipment was decontaminated to prevent the spreading of excavated materials to other areas.

The only material imported to the site was clay and gravel to construct the diversion stream. All other excavations were backfilled with on-site materials.

2.5 Decontamination Procedures

An equipment/personnel decontamination facility was constructed at the site. The decontamination facility was used for the removal of residual materials from large equipment (i.e., excavator, loader, etc.) at the end of excavation activities upon leaving the project area.

The decontamination area was lined with a polyethylene liner (i.e., HDPE) and bermed in sufficient size to contain all decontamination water and sediment. A sump was constructed in the decontamination area to allow for the collection of wash water. Wash water were collected and transferred to the Tonawanda Coke main plant for introduction into the on-site wastewater treatment process.

All equipment was decontaminated using pressure washer, steam, brushes and detergent to remove coal tar residues prior to equipment being used to handle clean materials or being demobilized from the site.

2.6 Fugitive Dust Control

The components of fugitive dust control included the following:

- Identification of fugitive dust sources; and

- Baseline dust suppression measures.

The major potential source of dust during the project is during excavation activities, material staging, material separation, and material management.

Dust control was implemented in areas of project activities that had intrusive work and material handling activities. Accordingly, dust control was required on the project site, on haul roads, access roads, and material staging/separation areas. Dust suppression methods were employed when visible observations showed dust remains suspended for 5 minutes in the air. Dust control was achieved primarily through application of water. Based on this guidance the following techniques were employed to mitigate the generation and migration of fugitive dust during the project:

- Applying water on surfaces prior to excavation activities;
- applying water on the right-of-ways, stockpiles, trenches, and other surfaces which may give rise to airborne dust;
- spraying water on temporary roads at the end of the work shift to form a thin crust;
- misting equipment and excavation faces;
- spraying water on buckets during excavation and dumping;
- watering of any visibly dry disturbed soil surface areas of operation;
- covering, when in motion, open-bodied vehicles transporting materials likely to crease air pollution;
- restricting vehicle traffic; and
- reducing the size of any open excavation.

2.7 Air Monitoring

The effectiveness of dust controls was evaluated through the use of real-time monitoring utilizing a dust meter (i.e., RAM-1 Real Time Aerosol Monitor or equivalent). The use of water spray was optimized so that fugitive dusts were sufficiently controlled, while preventing generation of surface-water runoff. The ambient air monitoring program consisted of one monitoring station located immediately downwind and one monitoring station downwind of excavation areas.

Normal operating conditions for fugitive dust control are dictated by ambient air monitoring results. In accordance with the NYSDEC TAGM No. 4031, "Fugitive Dust Suppression and Particulate Monitoring Program at Inactive Hazardous Waste Sites (October 27, 1989), the ambient air monitoring action level for PM-10 is 150 ug/m^3, integrated over a fifteen minute period.

In addition, real-time ambient air monitoring was conducted for volatile organics during work activities. Volatile organics were monitored using a field calibrated MiniRae 3000 Photo Ionization Detector.

In general, there were no issues/exceedances of action levels. Monitoring data is included in Appendix K.

2.8 Field Documentation

All project activities (i.e., material excavation, material staging, material segregation, stock-piling and management, waste disposal, etc.) were documented by a NEU-VELLE Environmental Professional in field logbooks. At a minimum, the following information was included in the field logbook:

- Project personnel;
- Date;
- Visual observations;
- Material management;
- Material/Waste Transported offsite;
- Issues/Concerns.

The field logbooks provide a detailed summary of the daily activities conducted as part of the project.

Section 3

NEU-VELLE LLC

Stream Diversion

3.0 Stream Diversion

3.1 General

This section summarizes the procedures used for the diversion of the existing on-site stream to facilitate excavation in the areas of Test Pit 7 and Sediment Sample SD-2. All generated materials were properly managed to minimize environmental impacts and to comply with all applicable federal, state and local laws and regulations. The specific methods utilized for the management of all materials was approved by NYSDEC. In addition, any material (i.e., stone, clay) imported to the site for construction of the diversion stream was approved by the NYSDEC prior to bringing it on site. A detailed map presenting the location of the new stream as well as survey elevations is included in Appendix E. Imported material details and approvals are included in Appendix F.

3.2 Stream Construction

To divert the flow of water around the excavation area of Test Pit 7 and Sediment Sample SD-2, a new stream had to be constructed at the site and isolated from the coal tar contaminated area prior to excavation of the Test Pit 7 and SD-2 areas. This work was directed by Tonawanda Coke as an out of scope item to the work plan and verbally approved by the on-site NYSDEC monitor. Prior to construction, test pits were installed along the edge of the existing stream to identify tar impacts and locate an appropriate termination point (area with no visible tar) of the new stream.

In order to construct the new stream and to isolate coal tar contamination from migrating into the new construction as well as to contain water from within the excavation, steel sheet piling was installed along the eastern side of the new stream. The new stream was designed by NEU-VELLE and verbally approved by approved by the NYSDEC on-site monitor prior to construction. The stream is approximately 20 feet in width, with a 2 on 1 side slope, and approximately 380 foot in length. It is lined with approximately two feet of imported clay and approximately one foot of washed gravel. The grade of the stream (i.e., bottom elevation of new stream is consistent with elevation of existing stream) is sufficient to convey anticipated stormwater through the site without overflow. Larger stones were placed in areas of the stream to prevent erosion. In addition, stone check dams were constructed at the entrance and termination point of the stream. Following completion of the project, it was the intent to remove the steel sheet piling which would have not been needed once site was

brought to final grade. However, Tonawanda Coke discontinued the project and therefore it was left in place.

Following excavation for the diversion stream and prior to its construction, soil samples were collected as directed by the NYSDEC monitor to confirm there was no residual tar in the location of the new stream. Details of the sampling as well as analytical results are presented in Section 6 of this report.

Section 4

NEU-VELLE LLC

Material Segregation

4.0 Material Segregation

4.1 General

This section summarizes the procedures used for the segregation of coal tar from materials excavated at the site. All segregated materials were properly managed to minimize environmental impacts and to comply with all applicable federal, state and local laws and regulations. The specific methods utilized for the segregation of materials was conducted in general accordance with the NYSDEC-approved Materials Processing and Inspection Plan for Operable Unit 3/Site 108 dated January 23, 2018. A copy of the plan as well as approval by the NYSDEC is included in Appendix G.

4.2 Material Segregation

All material generated from the excavation activities was appropriately segregated prior to any management (i.e., transported to Tonawanda Coke main site for processing, off-site disposal, etc.), as appropriate. The objective of the segregation process was to assess whether certain staged site materials have been in fact impacted by tar-like material, and to the extent so, separate such material for appropriate management. The segregation of the material was conducted using both manual and mechanical screening methods, consistent with the Material Processing Flow Chart presented in the approved work plan. However, due to the issues related to Tonawanda Coke's coke processing system (opacity exceedances), no coal tar material was allowed by the NYSDEC to be recycled after May 17, 2018. Therefore all segregated material (i.e. soil, debris) was either transported off-site for disposal or staged on site for later management determination. Details regarding management of material generated as part of the screening process are presented in Section 5 of this report.

Screening was conducted using a mobile multiple deck screening device. Material was fed into the unit's hopper via an excavator and/or loader, and the material was conveyed by its main conveyor to a triple deck screen, which separated the material by size/type. The sorted material was then conveyed to separate piles (1" and smaller, 1" to 2", and greater than 2"), via separate conveyors.

The screening process was designed to separate out the tar and debris so that the remaining soil could be reused on-site as backfill. This material was sampled consistent with DER-10, to assess the presence of volatile organic (VOC) and semi-volatile organic (SVOC) compounds above industrial standards. If the analytical results indicate the presence of constituents above industrial standards, but that are not consistent with tar-related material, management of the material will be discussed

with the NYSDEC for the potential on-site reuse and/or Contained-In Determination. Details of the sampling as well as analytical results are presented in Section 6 of this report.

All material staging areas and containers were covered at the end of the workday, or covered immediately if there was precipitation.

Section 5

NEU-VELLE LLC

Material Management

5.0 Material Management

5.1 General

This section summarizes the procedures used for the management of materials generated during the project. All generated materials were properly managed to minimize environmental impacts and to comply with all applicable federal, state and local laws and regulations. The specific methods utilized for the management of all materials was approved by NYSDEC. In total, approximately 6,400 tons of material was excavated during the project. Of this amount, approximately 500 tons was recycled in Tonawanda Coke's process operations, approximately 5,000 tons stockpiled on-site for additional separation as presented in Section 4 of this report, and the remainder transported off-site for disposal as detailed below. Applicable documentation related to the off-site material management (i.e., disposal) is presented in Appendix H.

5.2 Material Processed in Coke Ovens

All excavated materials generated from this project and deemed suitable (i.e., coal tar with limited amounts of soil) for re-use in the coke process and approved by the on-site NYSDEC monitor were transported directly to the coal mixing pad for stockpiling and re-use in the coke process. Approximately 500 tons (300 tons in 2017 and 200 tons in 2018) of excavated coal tar was processed through the Tonawanda Coke process. Any residual soil (very limited amount) in the mix was converted to ash in the coke process and part of the saleable coke project.

5.3 Liquid

Approximately 66,000 gallons of water was removed from the excavation and tank farm secondary containment area to facilitate project activities. The liquid was removed using vacuum trucks and transported to Tonawanda Coke's main facility and processed through the existing wastewater treatment system as approved by the NYSDEC onsite monitor.

5.4 Tar Contaminated Soil

All soil that was visibly contaminated with tar and could not be appropriately separated was transported off-site for appropriate management by an approved and permitted hauler, in accordance with the Department of Transportation (DOT) guidelines, as outlined in 49 CFR Parts 171 through

179, 6 NYCRR Part 364, and all other applicable state and local regulations. Shipping containers and trucks were managed in a manner to ensure compliance with 40 CFR Part 262 for off-site management of materials. This included marking containers in accordance with 40 CFR 262.34(a)(2) and 40CFR 262.34(a)(3). Each shipment was properly characterized, containerized, and manifested prior to exiting the site.

Tar contaminated soil was managed off-site as hazardous waste and managed in compliance with the Land Disposal Restrictions found in 40 CFR Part 268. Specifically, the treatment facility verified that all residues from treatment of materials met all applicable treatment standards, as provided in 40 CFR 268.48 and 40 CFR 268.49, prior to land disposal. Any material shipped off-site was accompanied by documentation notifying the receiving facility of all applicable standards associated with the materials being managed as hazardous waste.

Approximately 636.92 tons (441.21 tons to Heritage – WTI, Inc. – East Liverpool, Ohio and 195.71 tons to Ross Incineration Services located in Grafton, Ohio) of tar contaminated soil was transported off-site for appropriate disposal as a hazardous waste (EPA Waste Code K142 Material).

5.5 Tar Contaminated Debris

All tar contaminated debris (i.e., rocks, concrete, timber, etc.) was transported off-site for appropriate management by an approved and permitted hauler, in accordance with the Department of Transportation (DOT) guidelines, as outlined in 49 CFR Parts 171 through 179, 6 NYCRR Part 364, and all other applicable state and local regulations. Shipping containers and trucks were managed in a manner to ensure compliance with 40 CFR Part 262 for off-site management of materials. This included marking containers in accordance with 40 CFR 262.34(a)(2) and 40CFR 262.34(a)(3). Each shipment was properly characterized, containerized, and manifested prior to exiting the site.

Tar contaminated debris was managed off-site as hazardous waste and managed in compliance with the Land Disposal Restrictions found in 40 CFR Part 268. Specifically, the treatment facility verified that all residues from treatment of materials met all applicable treatment standards, as provided in 40 CFR 268.48 and 40 CFR 268.49, prior to land disposal. Any material shipped off-site was accompanied by documentation notifying the receiving facility of all applicable standards associated with the materials being managed as hazardous waste.

Approximately 868.33 tons of contaminated debris was transported off-site for appropriate disposal as a hazardous waste (EPA Waste Code K142 Material) at the Michigan Disposal Waste Treatment Plant located in Belleville, MI.

5.6 Non-Visually Tar Impacted Soil

Following the material segregation activities described in Section 4 of this report, approximately 2,500 yards (approximately 3,750 tons) of soil was generated as part of this project. This material was sampled consistent with DER-10 (See Section 6 of this report), to assess the presence of volatile organic (VOC) and semi-volatile organic (SVOC) compounds. If the analytical results indicate the presence of constituents above industrial standards, but that are not consistent with tar-related material, management of the material will be discussed with the NYSDEC for the potential on-site reuse and/or Contained-In Determination. Details of the sampling as well as analytical results are presented in Section 6 of this report. The soil was staged on and covered with poly at the site at the time of demobilization. Due to the closure of the site and Tonawanda Coke ceasing operations, the current condition of the covered piles is unknown.

5.7 Petroleum Contaminated Material

During excavation activities just southwest of the existing pond, contamination was observed that exhibited petroleum (i.e., fuel oil) characteristics (i.e., odor) rather than coal tar. Therefore, samples were collected to appropriately characterize the material. Based on the analysis (described and presented in Section 6 of this report), the NYSDEC on-site monitor approved the management of this material as a “petroleum contaminated material” and therefore was transported off site as a non-hazardous waste. Approximately 258.17 tons of petroleum contaminated material was transported off-site for disposal at Modern Landfill Inc. located in Model City, New York. Documentation of the management is presented in Appendix H of this report.

5.8 Asbestos Containing Material

During project activities, asbestos containing material (pipe insulation) was encountered within the tank farm area. Therefore, approximately 200 linear feet (1.74 tons) of asbestos containing material was removed from the piping to facilitate pipe removal activities. The project was considered a “small asbestos project” (less than 260 linear feet of insulation) in accordance with New York State Department of Labor (NYSDOL) Asbestos Industrial Code Rule 56 and therefore notification to the

NYSDOL was not required. The asbestos was removed by Finger Lakes Enviro-Tech, LLC. Located at 681 Addison Road in Painted Post New York and operates as a New York State Licensed Asbestos Contractor under license number 10038. Air monitoring was conducted by Envoy environmental Consultants, Inc. from Rochester, New York (Appendix L) in accordance with Code Rule 56. The removed material was transported off-site for disposal at C.I.D Landfill in Chaffee, New York. Documentation of the management is presented in Appendix H of this report.

Section 6

NEU-VELLE LLC

Analytical Testing

6.0 Analytical Testing

6.1 General

This section summarizes the procedures and sample collection methods used during the project. All sampling was conducted in accordance with recommendation and the approval of the NYSDEC on-site monitor.

6.2 Tank Farm Area (Tank T-1)

Following the excavation within the secondary containment area of Tank T-1 (see sample location map included in Appendix I-1), confirmatory soil samples were collected from the bottom of the excavation/secondary containment area in locations approved by the NYSDEC on-site monitor. The samples were collected using dedicated sampling equipment to avoid cross contamination between samples.

Following collection of samples, the samples were containerized and submitted for analysis to Paradigm Environmental (ELAP-approved) located in Rochester, New York. The samples were analyzed according to United States Environmental Protection Agency (USEPA) Solid Waste 846 (SW846) methodology in accordance with requirements from the NYSDEC on-site monitor. All samples were analyzed for volatile organics (BTEX), and Target Compound List (TCL) Semi-volatile organics in accordance with USEPA Methods 8260 and 8270, respectively.

Based on review of the analytical results in comparison to the Industrial Clean-up Objective listed in NYSDEC Remedial Program Soil Cleanup Objectives (6 NYCRR Part 375-6, dated December 14, 2006), with the exception of slight exceedances for benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene, all other constituents were below the cleanup objective. A summary of the analytical results as well as the analytical data report are included in Appendix I-1.

6.3 Stream Diversion

Following the excavation for the new stream (see sample location map included in Appendix I-2), confirmatory soil samples were collected from the bottom of the excavation in locations approved by the NYSDEC on-site monitor. The samples were collected using dedicated sampling equipment to avoid cross contamination between samples.

Following collection of samples, the samples were containerized and submitted for analysis to Paradigm Environmental (ELAP-approved) located in Rochester, New York. The samples were analyzed according to United States Environmental Protection Agency (USEPA) Solid Waste 846 (SW846) methodology in accordance with requirements from the NYSDEC on-site monitor. All samples were analyzed for volatile organics (BTEX), and TCL Semi-volatile organics in accordance with USEPA Methods 8260 and 8270, respectively.

Based on review of the analytical results in comparison to the Industrial Clean-up Objective listed in NYSDEC Remedial Program Soil Cleanup Objectives (6 NYCRR Part 375-6, dated December 14, 2006), all constituents were below the cleanup objective. A summary of the analytical results as well as the analytical data report are included in Appendix I-2.

6.4 Breeze Piles

To facilitate the removal of tar contaminated materials at the site, a layer of breeze (i.e., the entire site is covered with a layer of breeze) was excavated to reach the tar contaminated materials. The breeze was placed onsite in a pile (see Appendix I-3 for location) for future use as backfill with approval from the NYSDEC. In accordance with recommendations by the NYSDEC on-site monitor, one composite sample was collected of the breeze to characterize it for future on-site reuse.

Following collection of sample, the sample was containerized and submitted for analysis to Paradigm Environmental (ELAP-approved) located in Rochester, New York. The sample was analyzed according to United States Environmental Protection Agency (USEPA) Solid Waste 846 (SW846) methodology in accordance with requirements from the NYSDEC on-site monitor. The sample was analyzed for TCL volatile organics, and TCL Semi-volatile organics, PCB's, Pesticides, Herbicides, and metals in accordance with USEPA Methods 8260, 8270, 8082, 8081, 8151, and 6000/7000, respectively.

Based on review of the analytical results in comparison to the Industrial Clean-up Objective listed in NYSDEC Remedial Program Soil Cleanup Objectives (6 NYCRR Part 375-6, dated December 14, 2006), except for minor exceedances for benzo(a)pyrene, benzo(b)fluoranthene, and arsenic, all constituents were below the cleanup objective. A summary of the analytical results as well as the analytical data report are included in Appendix I-3.

6.5 Petroleum Contaminated Soil

During excavation activities just southwest of the existing pond (see figure in Appendix I-4), contamination was observed that exhibited petroleum (i.e., fuel oil) characteristics (i.e., odor) rather than coal tar. Therefore, in accordance with direction from the NYSDEC on-site monitor, one composite sample was collected to appropriately characterize the material.

Following collection of one composite sample, the sample was containerized and submitted for analysis to Paradigm Environmental (ELAP-approved) located in Rochester, New York. The sample was analyzed according to United States Environmental Protection Agency (USEPA) Solid Waste 846 (SW846) methodology in accordance with requirements from the NYSDEC on-site monitor and disposal facility. The sample was analyzed for percent solids, pH, ignitability, reactivity, TCLP volatile organics, and TCLP Semi-volatile organics, PCB's, and TCLP metals and Total Petroleum Hydrocarbons in accordance with USEPA Methods 9045, 1010, 7.3.3.2, 7.3.4.2, 8260, 8270, 8082, 6000/7000, and NYSDOH 310.13.

Based on review of the analytical results, the material was characterized as non-hazardous petroleum contaminate soil and transported off site for appropriate disposal as presented in Section 5 of this report. A summary of the analytical results as well as the analytical data report are included in Appendix I-4.

6.6 Separated Soil

All material generated from the excavation activities was appropriately segregated prior to any management. The objective of the segregation process was to assess whether certain staged site materials have been in fact impacted by tar-like material, and to the extent so, separate such material for appropriate management. The segregation of the material was conducted using both manual and mechanical screening methods.

The screening process was designed to separate out material that has visual tar impact so that the remaining soil could be reused as backfill on site and/or Contained-In Determination. In accordance with direction from the NYSDEC on-site monitor, the material was sampled consistent with DER-10, to assess the presence of volatile organic (VOC) and semi-volatile organic (SVOC) compounds above industrial standards.

Following collection of both composite and grab samples, the samples were containerized and submitted for analysis to Paradigm Environmental (ELAP-approved) located in Rochester, New York. The samples were analyzed according to United States Environmental Protection Agency (USEPA) Solid Waste 846 (SW846) for TCL volatile organics and TCL Semi-volatile organics in accordance with USEPA Methods 8260 and 8270.

Based on review of the analytical results in comparison to the Industrial Clean-up Objective listed in NYSDEC Remedial Program Soil Cleanup Objectives (6 NYCRR Part 375-6, dated December 14, 2006), with the exception of exceedances for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene, all other constituents were below the cleanup objective. A summary of the analytical results as well as the analytical data report are included in Appendix I-5.

Deviations from Work Plan

7.0 Deviations from Work Plan

7.1 General

This section summarizes the activities that were not completed in the NYSDEC approved Tar Removal and Tank Demolition Phased Interim Remedial Measure Pilot Project Work Plan.

7.2 Remaining Subsurface Tar Contaminated Materials

As previously stated, while extensive excavation activities were conducted in Test Pit 7 and Sediment Sample SD-2 areas, soil impacted by residual coal tar still remains in these areas. In addition, soils impacted by residual tar still remains within the secondary containment areas of Tank 2 and Tank 3. A map presenting the approximate location of these areas is included in Appendix J-1.

7.3 Tank Removals

Tank removals and the excavation of tar like materials from within the tank systems secondary containment berms must be completed to satisfy the IRM IRMPP. In addition, based on information gained on the tank systems during completion of activities previously summarized in this report, a work plan for removal of the tank systems was developed and submitted to the NYSDEC for approval. To date, the NYSDEC has not approved the plan which is included in Appendix J-2.

7.4 Stockpiled Soils

- Following completion of the activities previously presented in this report, stockpiled material remains on site. At the time of completion of the activities, four separate materials remained on site as presented below. The approximate location of these materials is presented on the figure in Appendix J-3.
- Approximately 100 yds of tar contaminated soil/breeze (placed on poly and covered)
- Approximately 2,500 yds of screened soil (placed on poly and covered)
- Approximately 10 yds of tar contaminated debris (placed in sealed roll-off)
- Approximately 3,000 yds of breeze and soils that was excavated to allow removal of underlying tar-impacted soils.

1. Introduction

1.1 Purpose

On November 4, 2016, GHD Services, Inc. (GHD), on behalf of Tonawanda Coke Corporation (TCC), submitted the "Confirmation Investigation Report" for Site 108 (the "Site") to the New York State Department of Environmental Conservation (NYSDEC). The report presented the results of an investigation that was performed at Site 108 to further clarify the environmental conditions that exist in order to support the finalization of the Focused Feasibility Study (FFS) for the Site.

Following submission of the Confirmation Investigation Report, a meeting was held between representatives of GHD, TCC, and the NYSDEC on November 29, 2016 to discuss the findings of the report. Based on these discussions, it was agreed that the best path forward is to have TCC perform an Interim Remedial Measure (IRM) Pilot Project (IRMPP) to investigate and remediate, subject to the extent of site conditions, the existing coal tar that has been identified at a few isolated locations across the Site. Information on the volume of coal tar and nature of this material is still too limited to allow for proper assessment in the FFS without additional field confirmation. Consequently, performing an IRMPP to address the coal tar separately will not only provide answers to eliminate a great deal of the uncertainty, it is expected that it may ultimately remediate the coal tar impacts at the Site without the need for additional action.

Some of the coal tar is located within, adjacent to, and possibly beneath, the abandoned tank farm on Site 108. Consequently, in order to properly address all of the coal tar on the Site at the same time, it is proposed that this IRMPP also include demolition of the tank farm.

This Work Plan provides the plans and procedures to be implemented in the scope of the IRMPP. This Work Plan was originally submitted to the NYSDEC on January 20, 2017. Following their review, comments were provided by the NYSDEC on February 9, 2017 and the responses to those comments have been incorporated into this revised version of the Work Plan.

1.2 Site Background

The TCC plant, which is located at 3875 River Road in Tonawanda, New York, and the Site, which is located at 3800 River Road in Tonawanda, New York (collectively, with the TCC plant, the Facility) were owned and operated from 1917 through 1947 by Semet-Solvay Company, a subsidiary of Allied Chemical and Dye Corporation. In 1947, Semet-Solvay Company was merged into Allied Chemical Corporation, which owned and operated the Facility until January 27, 1978, when it was sold to TCC.

Prior to TCC's acquisition of the Facility in 1978, a few areas of the Site were historically used for the disposal of waste. In 1973, the Semet-Solvay Division was granted permission by the Erie County Health Department to establish a new refuse disposal area located at the Site. The Site was eventually filled with refuse, wood, scrap polyethylene, and ceramic saddle packing from refining equipment. Site 108 is located on the west side of River Road, and extends to the Niagara River, as shown on Figure 1.1. The Site is heavily overgrown with mature trees, shrubs, and tall grasses.

There are no occupied buildings on Site 108. TCC does have one building still in use that houses certain electrical equipment and pumps tied to Facility operations.

Site 108 also includes a former tank farm consisting of the shells of three large aboveground storage tanks, each 45 feet in diameter. The tanks have not been used since prior to TCC's purchase of the Site from Allied Chemical. In addition, prior operations at Site 108 included the unloading of coke, coal, and coal tar that was delivered by boat. The coal was transported to the Facility's main operation by underground conveyor and/or piping systems. Similar to use of the former tank farm, these operations ceased prior to the Site's acquisition by TCC.

2. Objective

The goal of the IRMPP is for all of the coal tar present on the Site to be removed during the pilot project. It is planned to uncover and extract coal tar in the following phases:

- Phase 1: the six known locations of coal tar in the subsurface areas on the Site.
- Phase 2: surficial coal tar within the bermed area surrounding the abandoned tank farm.
- Phase 3: removal of the coal tar from the abandoned aboveground storage tanks.
- Phase 4: demolition and removal of the abandoned storage tanks.
- Phase 5: remediation of any coal tar/soil mix identified beneath the former tanks or in the subsurface within the bermed area.

The pilot project phased process will provide the information necessary to answer questions regarding the volume and nature of the coal tar that exists on the Site. If the volume of coal tar is too great, or the material is not compatible with TCC's process, the knowledge gained from the IRMPP will be used to develop a final remedy for the coal tar in the FFS. If appropriate, on-Site coal tar will be remediated during the IRMPP process, thereby eliminating the need to propose a final remedy for the material in the revised FFS.

3. Focused Work Areas

Based on the Site investigations performed in 2016, six areas (or pockets) of subsurface coal tar not associated with the abandoned tank farm were identified as follows:

- Test Pit 4 in the interval 4.5 to 5.5 feet below grade
- Test Pit 7 in the upper 3 feet, and in the interval 6 to 7 feet below grade
- Test Pit B-6 in the interval 4 to 5 feet below grade
- Test Pit B-6A at a depth of around 3 feet below grade
- Test Pit B-6B in the upper 4 feet below grade
- Sediment Sample SD-2 in the upper 18 inches

The locations of the identified coal tar pockets are shown on Figure 3.1. The stratigraphic logs for these sample locations are presented in Appendix A. The coal tar located below grade at these locations is bound in a soil matrix and is referred to in this IRMPP as a coal tar/soil mix.

In addition to these six subsurface locations, coal tar was also present in the three abandoned tanks on Site 108. The depth of tar within the tanks was estimated to be between 2 and 9 feet, tank dependent, as shown on Figure 3.2. Coal tar was also found to be present within the bermed areas surrounding the tanks at depths of up to 18 inches. The coal tar within and immediately around the tanks is believed to be relatively free of impurities. At the present time, the extent to which the coal tar within the bermed areas has penetrated into the underlying soil is not known. The extent of penetration will be determined following removal of the relatively pure coal tar at the surface.

Phase 1 of the IRMPP will be to remove and recycle all of the coal tar and coal tar/soil mix from the six known source areas. Phase 2 of the IRMPP will be the removal of the surficial coal tar from within the bermed area around the tank farm. Phase 3 of the IRMPP will be the removal of the coal tar from within the abandoned tanks. Phase 4 will be the demolition and removal of the abandoned storage tanks, and Phase 5 will be the remediation of any coal tar/soil mix identified beneath the former tanks or in the subsurface within the bermed area. Phases 1 through 5 will be implemented using the methods described in the remainder of this work plan. As previously conveyed in prior reports, the intent is to recycle as much material as possible, subject to the material meeting all necessary legal and regulatory requirements. Per the request of the NYSDEC, recycling of IRM-related material will not be performed until all of the requirements of Schedule A of the Order on Consent R9-20151215-132A are in place. Schedule A requirements include finalized Standard Operating Procedures (SOPs) for managing coal tar on the mixing pad[1] (including tracking documentation), an Operations and Maintenance Plan for the waste material managed on the mixing pad, compliance with Best Management Practices to be updated to the facility's current plan, and emission compliance for the coking operation. TCC is in the process of providing all required plans / documentation to NYSDEC to comply with Schedule A which will be in place prior to recycling activities commencing.

4. Coal Tar Remediation Methods

Coal tar and coal tar/soil mix appropriate for recycling will be removed from Site 108 and transported to the mixing pad[1] at the main TCC facility for introduction to the coking process. The work will be implemented either directly by TCC personnel using dedicated equipment, or by an independent remediation contractor. Pure coal tar from the aboveground storage tanks and from the surface within the bermed area is expected to be easily recoverable and able to be recycled through the coking process. Recycling of coal tar/soil will be subject to the type and quantity of impurities that are identified (e.g., soil, stones, and vegetation) as identified in Section 4.2 below. The rate at which tar material is introduced to TCC's coking operation will be closely monitored to prevent upset to the process or impacts to the coke end product. Recycling of any coal tar material will only be undertaken if it meets the necessary legal and regulatory requirements.

[1] The mixing pad is a concrete containment pad, with a poured concrete floor and wall, on which coal tar sludge is manually blended with raw coal prior to being charged to the coke ovens.

The removal of the tar material will be done using methods designed to minimize the volume of impurities that are captured during the removal process, thereby minimizing the overall volume of coal tar-impacted material requiring recycling. All activities will be conducted in accordance with the site-specific Health and Safety Plan (HASP), Community Air Monitoring Plan (CAMP), and Odor Control Plan (OCP). The CAMP is included as Attachment C to the HASP found in Appendix B. The OCP is discussed in Section 9 of this work plan.

The following sections discuss removal of the various sources of coal tar.

4.1 Removal of Pure Coal Tar

Wherever possible, pure coal tar will be removed first, whether from a tank, the ground surface within the bermed area, or an exposed excavation face; the intent being to keep the coal tar as pure as possible, which allows more flexibility in the handling of the recovered material. The pure coal tar will be either pumped or scooped from its in-situ location directly into a tank or water-tight storage vessel that can be transported to TCC's operating Facility on the east side of River Road. If deemed appropriate, the coal tar's flowability/recoverability will be enhanced through the application of heat or other appropriate materials to collect as much of the coal tar as reasonably possible. Any such enhancement methods will be reviewed with the NYSDEC (and approval obtained) prior to implementation. All transport of coal tar materials from Site 108 across River Road to TCC's operating facility will be done using TCC equipment and RCRA-trained personnel (either TCC personnel or TCC's assigned contractor). Flagmen will be used whenever vehicles transporting these materials are crossing River Road to ensure that this crossing is done safely and without incident.

4.2 Removal of Coal Tar/Soil Mix

For the coal tar/soil mix that is located in subsurface layers, a backhoe will be used to carefully remove the overlying layers of soil down to the top of the coal tar/soil mix interval. The excavation will be started in the exact location of the original test pit to provide the best chance for locating the material. Once exposed, the lateral extent of the coal tar/soil mix layer will be determined by carefully scraping away the overlying soil from the surrounding area. Once a sufficient area of coal tar/soil mix is exposed, removal will begin and will continue until the limits (both vertically and horizontally) of coal tar/soil mix have been reached based on visual examination.

If there are minimal impurities present, the material will be placed directly into water-tight containers for transport to the TCC mixing pad. If significant impurities are present, every attempt will be made to decant the coal tar from the impurities. This may be accomplished by excavation of sumps allowing the coal tar to decant in situ, or through placement into containers situated to promote the separation of the coal tar from the impurity. Any decanted coal tar will be placed into a tank or water-tight container and transported to the mixing pad. The length of time and/or the number of sumps necessary for decanting will be based on experience gained during the excavation process. Once separation has been reasonably maximized, the segregated materials will be transferred to TCC's mixing pad for recycling at a rate appropriate for the degree of purity. Any material that is removed from the excavation and placed into a container to promote the separation of the tar

material will also be transferred to TCC's mixing pad for recycling at a rate appropriate for the degree of purity.

In those cases where the coal tar is fully enveloped in the surrounding soil matrix and it is unlikely that any separation of coal tar will occur from the enveloping soil matrix, the coal tar/soil mix will be placed directly into water-tight containers for transport to TCC's mixing pad for recycling.

In the event that the volume of material sent to the mixing pad exceeds its given capacity, the material will be temporarily stored in water-tight containers until sufficient space is available on the mixing pad. The length of time that such temporary storage will be required will be determined as part of the IRMPP and is entirely dependent upon the rate at which such materials can be added into TCC's coking operation, while preventing upset to the process or impacts to the coke end product. NYSDEC will be advised periodically regarding the amount of storage capacity in use, with records being made available for inspection, as needed.

To the extent practicable, it is planned to remove all of the coal tar/soil mix from all of the known locations on Site 108 during the IRMPP and place the material onto the mixing pad, or alternatively, into temporary storage containers should volumes exceed the capacity of the mixing pad. In the event that the temporary storage of the material in containers is necessary, it is planned to leave those containers on Site 108 in a staging area near the former tank farm. The containers would be inspected weekly to ensure that the materials are being properly stored. The feasibility of this approach will depend on the volume of impacted material encountered and removed. If the volume of material begins to significantly outpace the rate of recycling, the excavation of additional material will be suspended and will not resume until the amount of material in storage can be reasonably managed, based on the recycling rate and compliance with facility recycling requirements.

All transport of coal tar materials from Site 108 across River Road to TCC's operating Facility will be done using TCC equipment and RCRA-trained personnel (TCC or TCC's assigned contractor). Flagmen will be used whenever vehicles transporting these materials are crossing River Road to ensure that this crossing is done safely and without incident.

Once the coal tar/soil mix has been removed, confirmation soil samples will be collected from the base and sidewalls of the excavation at a rate of one sample per 2,500 square feet[2] of exposed surface area that was in contact with the coal tar removed. A minimum of one sample will be collected from each excavation. Each sample will be analyzed for benzene, toluene, ethylbenzene, total xylenes, and polycyclic aromatic hydrocarbons (PAHs). The samples will be submitted to a New York State accredited laboratory (TestAmerica Laboratory or equivalent) for analysis. The analytical results will be reviewed and compared to New York State Part 375 criteria. If the material left in place exceeds the Industrial Use Soil Cleanup Objectives (SCOs), it may require being covered as part of the final remedy. If the material left in place exceeds the Part 375 definition of grossly contaminated material (GCM), it will either be recycled (if allowable), disposed at a permitted facility, or left in place to be addressed as part of the final remedy. The determination will be made based on the type, volume, and location of the material involved.

[2] The confirmation sampling proposed in this Work Plan is focused on the removal of coal tar which will be visually identifiable. Consequently the need to strictly adhere to the confirmation sampling requirements in DER-10 Section 5.4(b) is not necessary in this case, but reasonable frequency of sampling is appropriate.

Following the receipt and review of the analytical results and any subsequent actions, the overlying non-impacted material that was removed from the excavation will be placed back into the excavation. If insufficient material is available for backfilling the excavation, material from the surrounding area will be used to level the ground surface near the excavation areas. Importation of additional clean fill is not anticipated as long as reasonable grades and drainage can be maintained. Representative samples of the new surface area of the material that was backfilled into the excavation will be collected and analyzed if any is suspected of exceeding Industrial Use SCOs. If any does exceed the Industrial Use SCOs, these areas will have to be covered as part of the final remedy.

In the event that slag material is encountered in any of the excavations, excavation shall immediately cease and the NYSDEC will be notified. A qualified radiological consultant will inspect the slag and make a determination of whether the slag is Technologically Enhanced Naturally Occurring Radiological Material (TENORM). If it is TENORM, a determination will be made by TCC whether to continue the IRM or any portion thereof. Any TENORM removed from an excavation will be separately contained, stored, and shipped off-site for disposal at a permitted facility.

4.3 Removal of Coal Tar and/or Coal Tar/Soil Mix below the Tank Farm

Removal of coal tar and/or coal tar/soil mix from beneath the former tank farm will be completed as described in Sections 4.1 and 4.2 after demolition and removal of the abandoned aboveground storage tanks is complete. Tank removal is discussed in Section 5 of this work plan.

The coal tar/soil mix from within the bermed area will be carefully removed after the overlying, generally pure coal tar has been recovered. A backhoe will be used to extract the coal tar/soil mix and either place it directly into water-tight containers or decant the material as discussed in Section 4.2.

Removal of the coal tar/soil mix from the tank farm area will continue until the limits (both vertically and horizontally) of coal tar/soil mix have been reached based on visual examination. The excavation operation will be done as effectively as possible to remove all coal tar identified while minimizing disturbance of the surrounding materials in which there is no coal tar present.

5. Tank Removal Methods

The project includes the removal of three aboveground storage tank systems and management of the coal tar contained within the tanks. Tank removal will be completed in a similar manner as was used to remove the Barrett Tank Farm at TCC's main Facility as described in the document entitled "Tank Removal Work Plan" (May 2010 – Great Lakes Environmental & Safety Consultant) and as further detailed herein.

Prior to removal of the tank systems, all piping and ancillary equipment associated with the tanks will be removed. The piping and ancillary equipment will be wrapped in plastic and transported to the decontamination area discussed in Section 7 for cleaning, as appropriate, before transport off Site for salvage or disposal. Prior to tank removal, all material from within the tanks will be removed

and transported to the mixing pad as presented in Section 4.1 of this IRMPP. Once the tanks have been emptied of coal tar to the extent practicable, the tanks will be disassembled (i.e., cut) into manageable size pieces and transported to the decontamination area for appropriate cleaning and/or offsite disposal. If determined that cleaning is not possible (i.e., evidence of coal tar present that cannot be removed), the tank pieces will be staged in a covered container (e.g.,roll-off box) for appropriate off-site disposal.

6. Temporary Soil Erosion and Storm Water Controls

Prior to the start of Site work activities, temporary erosion control and storm water management structures will be installed at the Site to control surface water run-on and to minimize the potential for erosion and migration of coal tar during project activities. Furthermore, the discharge of coal tar, coal tar/soil mix, or coal tar/sediment mix to the Niagara River will be prevented at all times.

Soil erosion and storm water run-off structures will be installed, operated, and inspected in accordance with “New York Guidelines for Urban Erosion and Sediment Control.” Storm water and erosion controls will include the following:

- Silt fence and hay bales around excavation areas.
- Temporary storm water diversion ditches for the control of surface water run-off from upgradient areas onto the work area.
- Temporary check dams and diversion structures/equipment to divert surface water flow around the work area.
- Management of diverted water to ensure that the water infiltrates through the surface soils and does not reach the Niagara River via a surface path.
- Sedimentation control structures around the decontamination and staging areas.

The excavation of the coal tar at location SD-2 will also include the following measures:

- Installation of Jersey barrier wall sections (or equivalent) immediately along the bank of the on-site ditch in the vicinity of the planned excavation.
- Cloaking of the Jersey barrier wall with polyethylene sheeting to make the barrier wall water-tight to ensure that water in the on-site ditch does not enter the excavation and that any water encountered in the excavation or entering the excavation does not reach the on-site ditch.

Silt fence, as appropriate, will be installed along the perimeter of the project area. The silt fence will be anchored a minimum of 6 inches into the ground and staked every 10 feet. Hay bales will be used in conjunction with silt fence along low lying areas of the excavation, staging, and decontamination areas that are expected to receive a greater amount of run-off. The hay bales will be installed immediately adjacent to a 3-foot high silt fence. The hay bales will be secured to the ground with stakes or equivalent. Inspection and proper maintenance of the controls will be performed as an integral component of site maintenance during project activities.

A temporary storm water diversion ditch will be installed, as appropriate, to divert run-off from upgradient areas. The diversion ditch will be constructed above the area(s) to be excavated and will

direct flow around the project area. In addition, diversion ditches will be installed as appropriate to divert run-off around the decontamination and staging areas.

It is not expected that any of the excavations will encounter groundwater. However, if groundwater is encountered in any of the excavations, it is intended that the work will continue with the water in place. No removal of groundwater is planned unless its presence makes it too difficult to continue with the excavation. Similarly, any rainwater that enters an excavation will be allowed to infiltrate through the base of the excavation. In the event that it becomes necessary to remove the water in an excavation in order to continue the coal tar removal process, the water will be pumped into a tanker and transferred to the TCC plant where it will be managed in accordance with the plant's standard operating procedures (SOPs) SOP-PG-6 for managing tar contaminated water. Any water accumulating in any of the soil storage containers or water generated from the equipment decontamination operations will be collected and transported back to the TCC plant and managed as contaminated water. All contaminated water sent to TCC's plant will be subject to the Industrial Use Permit with the Town of Tonawanda.

7. Site Control and Decontamination

The project area will be made secure from unhindered and unlimited access by unauthorized personnel. Access to Site 108 is limited by virtue of a fenced entrance off of River Road. When not allowing for ingress and egress, the gates will be closed. As Site 108 is not an active operational site, there is no concern regarding third-party or worker exposures during Site work. Installation of appropriate barrier methods (i.e., barrier tape, concrete barriers, fencing, cones, and rope, etc.) will be used for remediation worker protection around individual work areas.

The excavation and loading of coal tar and coal tar/soil mix will utilize "clean loading" procedures minimizing contact/impact with other areas. These procedures will ensure that coal tar is not spread to other areas, including adjacent properties and roadways. Dedicated equipment (e.g., excavator, bulldozer, etc.) will be used for transferring the material. The equipment will be decontaminated prior to leaving the Site. In addition, materials slated for salvage (e.g., tank pieces, piping) may also be decontaminated as needed prior to removal from the Site.

An equipment/personnel decontamination area will be constructed at Site 108. The decontamination area will be lined with a polyethylene liner (i.e., HDPE) and bermed in sufficient size to contain all decontamination water and sediment. In addition, the decontamination area will be constructed with hard walls (i.e., plywood sheeting covered with polyethylene sheeting) to minimize overspray. A sump will be constructed in one corner of the decontamination area to allow for the collection of wash water. Wash water will be collected and transferred to the Facility for introduction into the on-Site treatment process.

All reusable equipment shall be decontaminated using steam, brushes, water, detergent, and/or solvent (e.g.,kerosene) to remove coal tar residues prior to equipment being used to handle clean materials or being demobilized from the Site. In the event that a solvent is to be used and is not compatible with the HDPE liner of the decontamination area, the use of that solvent will be restricted to use within a steel container (e.g. roll off box) that is located in the decontamination area. Equipment subject to decontamination includes excavators, bulldozers, tanks, hand tools, and

PPE. Decontamination residues (e.g., spent solvent/rags, solids) and disposable PPE will be containerized and characterized for proper off-Site disposal. Additional discussion on personnel decontamination is included in the HASP. Wash water will be collected and transferred to the Facility for introduction into the on-Site treatment process following SOP-PG-6 This process includes passing the water through the tar decanter which is designed to remove tar (which is recycled) from the water component. The effluent from the treatment process will be subject to TCC's existing Industrial Use Permit with the Town of Tonawanda.

A truck inspection/wash will also be constructed near the access road to the Site to ensure that transport vehicles leaving the Site are free of contaminants prior to turning onto public rights-of-way. All transport truck exteriors, wheels, and undercarriage will be inspected for the presence of coal tar. If necessary, the trucks will be decontaminated to prevent the spreading of coal tar from the Site. Truck wash water will be collected and transferred to the Facility for introduction into the on-Site treatment process. Recovered material that cannot be recycled will be collected and characterized for disposal.

8. Material Staging, Stockpiles, and Transport

Material staging areas will be constructed for the temporary storage of materials to be managed (i.e., excavated materials for recycling, tanks/piping for scrap/salvage, material for off-site disposal) as a result of the project activities. It is noted that it is initially planned to store coal tar/soil mix material in individual disposal containers rather than in bulk storage piles. However, depending upon the volume of coal tar/soil mix generated, it may be necessary to revert to storing these materials in bulk. The staging areas will be prepared and maintained as follows:

- Preparation of Storage Areas
  - The area will be graded to provide positive drainage away from the intended storage locations.
  - All stones, roots, debris and other objects that may puncture polyethylene ground protection will be removed.
  - The ground surface, where bulk material will be staged, will be covered with a minimum of one layer of 0.15 millimeter (6-mil) polyethylene sheeting or equivalent material. All seams will be overlapped a minimum of 6 inches and sealed with duct tape to prevent the leaching of contaminants. All material overlying coal tar/soil mix layers is intended to be stored in bulk fashion.
  - The ground surface, where the disposal containers for coal tar and coal tar/soil mix will be stored, does not require any surface cover; only perimeter berms to prevent run-on and run-off.
- Storage Area Protection
  - At the end of each work day, contaminated materials will be completely covered with a minimum of one layer of 0.15 millimeter (6-mil) polyethylene sheeting, or an equivalent

material. All seams will be overlapped a minimum of 6 inches and sealed with duct tape to prevent the leaching of contaminants.

  - Material covers will be weighted or secured by appropriate means to prevent tearing or removal by weather conditions.

- Maintenance
  - Material covers, site grading, signage, and security measures shall be properly maintained for the duration of storage. Damaged covers and other protections will be repaired or replaced as necessary.

The staged materials will be covered at the end of the work day and during precipitation events. The covered material will be secured during inclement weather and during periods of inactivity. Temporary erosion and storm water controls will be utilized as described in Section 6 to prevent coal tar run off.

All containers, stockpiles, or other storage areas will be labelled at the end of the day to identify the source of the material, the date it was generated, the nature of the material (e.g. 80 percent pure tar, 50/50 coal tar/soil mix, etc.) and how it is to be handled as part of the recycling pilot process.

Efforts will be made to store coal tar contaminated materials (not including coal tar /soil mix) for not more than 90 calendar days, with the time limit beginning the first day the material is placed in a stockpile, truck bed, or storage/disposal container. However, due to the uncertain nature and volume of the material that may be encountered, storage beyond 90days may be necessary, Additional approval from the NYSDEC will be required for storage time greater than 90 days and will be requested as soon as possible, or by at least 60 days of storage. The NYSDEC will be provided with an updated list of materials generated and in storage on a bi-weekly basis so that the age of generated material is documented and tracked. Storage containers will be inspected weekly to ensure that the materials are being properly stored.

Trucks and disposal containers will be prepared and maintained as follows:

- The interior of truck beds and disposal containers will be lined with one layer of 0.15 millimeter (6-mil) polyethylene sheeting, or an equivalent material. All base and sidewall seams shall be overlapped 6 inches and sealed with duct tape to prevent the leaching of contaminants.
- At the end of each work day, trucks and transport containers storing material will be completely covered with waterproof tarps or hard cover tops. Tarps will be placed over the top of the truck bed or container (rather than over the material inside) and shall extend over the sides to prevent water accumulation and the evaporation of contaminants.
- Tarps will be weighted or secured by appropriate means to prevent tearing or removal by weather conditions.
- Trucks and transport containers will be labeled, signed, fenced, or otherwise secured (as needed) at the end of each work day.
- Trucks, transport containers, and tarps shall be properly maintained for the duration of material storage.

- Damaged tarps or transport containers shall be repaired or replaced within 24 hours after notification.

9. Odor Control and Vapor Management

Odor control and vapor management practices will be implemented during the excavation and loading of coal tar-impacted materials. A response plan is included as part of the CAMP to identify actions that may be implemented in response to elevated levels of target compounds or odor. The odor control and vapor management practices will include:

- Minimizing areas of open excavation at any one time.
- Backfilling excavations immediately upon completion.
- If an excavation has to stay open and volatilization and odors are a concern, then the area would be covered.
- Direct loading of impacted materials into covered transport containers to minimize staging/stockpiling impacted material.
- If transportation logistics require material to be staged or stockpiled on-Site, the material will be covered with plastic sheeting.

Additional odor control methods will be employed any time there is an exceedance of the VOC response levels specified in the CAMP (Attachment C of the HASP) at the perimeter of the Site or if there are nuisance odors detected off-site.

The additional means to eliminate odor nuisances may include use of chemical odorants in spray or misting systems or using foams to cover exposed odorous soil.

10. Field Documentation

All coal tar remediation and tank removal activities will be documented in a field logbook or equal. At a minimum, the following information should be included in the field logbook:

- Project personnel
- Date
- Visual observations
- Material management
- Waste transported off Site for recycling at the mixing pad, scrap/salvage, or disposal
- Issues/Concerns

This documentation will provide a detailed summary of the daily activities.

11. Meetings/Reporting

To ensure that this project is implemented as effectively as possible and with as few disruptions as possible, it is planned that a Site meeting be held with the NYSDEC each month. At each meeting, the following will occur:

- The previous month's progress will be reviewed.
- The planned work for the next month will be discussed.
- Any necessary modifications to the work or schedule will be agreed upon.
- The success of the IRMPP will be discussed and a determination made as to whether to continue with the next phases of the project.

Minutes of the monthly meetings will be distributed to the project stakeholders.

In addition, the NYSDEC will receive a bi-weekly update on the volume of materials excavated and in storage. The age of all material in storage will also be provided bi-weekly.

A final IRM certification report will be prepared within 60 days of completion of all activities associated with the coal tar remediation and tank removal. At a minimum, the report will include the following information:

- Documentation of the volume of coal tar/soil removed from the excavations.
- Documentation of the volume of coal tar removed from the tanks and bermed area.
- Documentation of the storage conditions for all coal tar and coal tar/soil mix material.
- Certification that the tank removal was performed in accordance with the tank removal work plan.
- A summary of the management of all materials generated as part of the project.

12. Schedule

The planned schedule for implementing this IRM is as follows:

January 20, 2017	Submittal of IRMPP Work Plan to NYSDEC
March 23, 2017	NYSDEC Approval of IRMPP Work Plan
April 30, 2017	Contract award for tank demolition and certain IRMPP activities that will be performed by third party contractors
May 15, 2017	Begin excavation of subsurface coal tar areas
June 1, 2017	Begin tar removal from bermed area around tanks
June 15, 2017	Begin tar removal from within tanks and bermed area, and tank demolition

July 15, 2017	Begin excavation of bermed area coal tar
Completion +60 days	Submit IRM certification report to NYSDEC

Note – Site activities are all subject to conditions identified during the process. Should unexpected issues be identified, or the volume of material identified be different than expected, TCC reserves its rights to discontinue on-Site work and enter into discussions with NYSDEC regarding next steps.

Attachment A Job Safety Analyses (JSAs)
Attachment B Project Safety Forms
Attachment C Community Air Monitoring Plan (CAMP)

1. Introduction

This Health and Safety Plan (HASP) describes the health and safety procedures and emergency response guidelines that will be implemented during field activities at the Tonawanda Coke Corporation (Site) in Tonawanda, New York, NYSDEC Site #915055. An Emergency Response Plan and Community Air Monitoring Plan are included as part of this HASP. This HASP shall be implemented and adhered to during all field activities that are presented in the Work Plan.

The Site is located at 3875 River Road, Tonawanda, New York. Figures presenting the Site Location and Site Plan are included in the Work Plan.

This HASP will be provided to any Contractors selected to perform work in support of the field activities. The selected Contractors will be required to develop and implement a HASP, which at a minimum meets all the requirements set forth in this document.

The scope of work to be completed includes the following:

- Mobilization and demobilization of labor, materials, and equipment to and from the Site, which include Site preparation/setup.
- Excavation activities and soil and waste removal.
- Loading of soil and waste in to roll-off boxes or dump trailers for transportation to Main Plant Site
- Backfilling
- Removing waste from above ground storage tanks.

Additional work may include:

- Soil sampling.
- Sediment sampling within the Niagara River embayment.
- Sediment sampling of the on-Site ditch(s).
- Sediment sampling from on-Site ponds.

During a portion of these activities, personnel may come in contact with waste materials, chemicals, debris, soils, groundwater, surface water, sediment, and wash waters, which may contain hazardous substances. This HASP has been developed to minimize direct contact by project personnel with materials potentially having chemical presence by ensuring:

i) The communication of the contents of this HASP to project personnel.

ii) The elimination of unsafe conditions. Efforts shall be initiated to identify conditions that can contribute to an accident and to remove exposure to these conditions.

iii) The review all activities before beginning the task/job, after an incident, and/or any unusual circumstances. Stop activities to think about the task, analyze the task hazards, determine methods to reduce risk, and review the results with affected personnel.

iv) The review of existing and the development of new Job Safety Analysis (JSA) forms for each project work activity. Supervisors and affected personnel are responsible for the development

and any on-going revisions of project JSAs. JSAs for all known work activities are presented Attachment A.

v) The reduction of unsafe acts. Project personnel shall make a conscious effort to work safely. A high degree of safety awareness must be maintained so those safety factors involved in a task become an integral part of the task. Supervisory personnel shall ensure that project personnel committing unsafe acts are held accountable via counseling, mentoring, and, if necessary, reprimand.

vi) The frequent inspection of project activities. Regular safety inspections of the work site, materials, and equipment by qualified persons ensure early detection of unsafe conditions. Safety and health deficiencies shall be corrected as soon as possible, and project activities shall be temporarily suspended until the appropriate corrective actions are taken. Documentation of the daily inspections and corrective actions taken should be kept with the project files.

For the purpose of this HASP, activities performed at the Site involving contact with materials, which potentially have an elevated chemical presence will be considered contaminated operations requiring the use of Personal Protective Equipment (PPE). A detailed description of the required PPE is presented in Section 6.1 and is also identified on each JSA form.

The applicability of this HASP extends to all project personnel who will be on Site, including State and Federal Agency personnel, contractor personnel, subcontractor personnel, and visitors to the Site.

All project activities at the Site will be conducted in accordance with the provisions of an approved Site-specific HASP. A copy of the Site-specific HASP and employer-specific Standard Operating Procedures (SOPs) will be maintained on Site whenever activities are in progress.

1.1 Project Organization

All personnel conducting activities on Site must conduct their activities in compliance with all applicable Safety and Health standards as specified by OSHA including, but not limited to, the OSHA 29 CFR 1910, 29 CFR 1926. Project personnel must also be familiar with the procedures and requirements in their approved Site-specific HASP and the applicable procedures found within their company's SOP's and Safety and Health Policy Manual. In the event of any conflicting safety procedures/requirements, personnel shall implement those safety practices, which afford the highest level of safety and protection.

Project Management and Safety Organization

Project Manager – Jim Kay

The Project Manager (PM) shall be responsible for the overall implementation of the HASP, and for ensuring that all health and safety responsibilities are carried out in conjunction with this project. This shall include, but is not limited to, review and approval of the HASP; qualifying/directing subcontractors relative to safety and health performance; coordinating all safety and health submittals; providing the appropriate technical information to write submittals; and consultation with the selected contractor's Corporate Safety and Health Manager with regards to appropriate changes to the HASP.

Site Safety & Health Officer (SHO) – TBD

The SHO is the person who, under the supervision of the PM and the contractor's Corporate Safety and Health Manager, shall be responsible for the communication of the Site requirements to project personnel and any subcontractor personnel. The SHO will have prior experience in working at hazardous waste sites and is responsible for carrying out the health and safety responsibilities by making sure that:

i) He/she is onsite at all times during the project work activities.

ii) All necessary clean-up and maintenance of safety equipment is conducted by project personnel.

iii) Emergency services are contacted when necessary.

iv) A Site-specific Hazard Communication (HAZCOM) Program is maintained on Site.

v) Project safety forms attached to the HASP are correctly completed and filed.

vi) A pre-entry briefing is conducted, which will serve to familiarize project personnel with the procedures, requirements, and provisions of this HASP.

vii) All necessary records are maintained in the project files (e.g., air monitoring results, calibration log sheets, incident reports, daily toolbox meeting sheets, daily safety logbook entries, training certificates and/or certifications, etc.).

viii) Daily safety meetings are held and documented.

ix) Safe work practices for project personnel are enforced.

x) Safety of any visitors who enter the Site is ensured.

xi) Communication is maintained with the PM.

xii) Orders the immediate shutdown of project activities in the case of a medical emergency, unsafe condition, or unsafe practice.

xiii) Designates work areas and define minimum PPE requirements.

xiv) Provides the safety equipment, PPE, and other items necessary for project personnel.

xv) Conducts the required worker and community air monitoring programs.

xvi) Enforces the use of required safety equipment, PPE, and other items necessary for project personnel safety.

xvii) Ensures that there is a competent person in place who will be supervising excavation work.

xviii) Conducts job Site inspections with the Construction Superintendent (CS) or Site Supervisor (SS) as a part of quality assurance for safety and health.

xix) Reports safety and health concerns to the selected contractor's management as necessary.

Emergency Coordinator (EC) - TBD

The SHO or his/her designate will act as the EC. The EC shall be able to implement the emergency procedures and is responsible for implementing the following activities in the event of an emergency:

i) The EC shall immediately respond to all imminent or actual emergency situations. The EC shall notify all project personnel and emergency response agencies, identify the problem, assess the health or environmental hazards, and take all reasonable measures to stabilize the situation.

ii) The EC shall take all reasonable measures necessary to ensure that fire, explosion, emission or discharge does not occur, re-occur, or spread. These measures may include stopping operations, collecting and containing released materials, and/or removing or isolating containers.

iii) The EC shall develop Emergency Evacuation Routes on a daily bases and communicate them to all project personnel.

iv) The EC shall also be responsible for follow-up activities after any incident such as the cleanup of the affected area, maintenance and decontamination of emergency equipment, and completion and submission of an incident report.

Construction Superintendent (CS) / Site Supervisor (SS) - TBD

Health and safety is a line management responsibility, and as such, the CS and/or SS will implement and support the overall onsite direction and enforcement of the health and safety for this project. The CS and/or SS must meet the requirements of the "competent person" as per the OSHA regulations. The CS and/or SS will report to the PM for this project.

The CS and/or SS is the person who, under the supervision of the PM, shall be responsible for the communication of the Site requirements to project personnel and subcontractors, and is responsible for carrying out the health and safety responsibilities by making sure that:

i) All underground utilities have been properly located prior to initiating work activities

ii) Each work area is secured with fencing at the end of each day.

iii) All necessary cleanup and maintenance of safety equipment is conducted by project personnel.

iv) JSA forms are developed, reviewed, and revised accordingly.

v) Project personnel stop, think about, act accordingly and review the work activities that they are about to start before initiating activities.

vi) Project safety forms attached to the HASP are properly completed and then filed.

vii) A pre-entry briefing is conducted for all project personnel, which will serve to familiarize everyone with the procedures, requirements, and provisions of this HASP.

viii) Orders the immediate shutdown of project activities in the case of a medical emergency, unsafe condition, or unsafe practice.

ix) Provides the safety equipment, PPE, and other items necessary for project personnel.

x) Enforces the use of required safety equipment, PPE, and other items necessary for personnel or community safety.

xi) Conducts job site inspections as a part of quality assurance for safety and health.

xii) Reports safety and health concerns to the selected contractor's PM as necessary.

xiii) Is responsible for the overall implementation of the HASP, and ensuring that all health and safety responsibilities are carried out during the project work activities. This shall include, but is not limited to, review and approval of any subcontractor HASPs, communication of Site requirements to Subcontractor personnel, and consultation with the PM regarding appropriate changes to the HASP.

xiv) The CS and/or SS also have the responsibility for enforcing safe work practices for all project personnel.

xv) A competent person oversees all excavation and trenching work to ensure that work is completed in accordance with the OSHA Standards presented in 1926 Subpart P.

xvi) The CS and/or SS watch all personnel for any ill effects, especially those symptoms caused by heat stress and/or chemical exposure.

xvii) The CS and/or SS oversee the safety of any visitors who enter the Site.

Regional Safety & Health Manager (CSHM) – Craig Gebhardt

The RSHM is an individual who is trained as a health and safety professional, works full-time in a health and safety role, and who serves in a consulting role to the PM, SHO, and CS and/or SS regarding potential health and safety issues.

Equipment Operators

All equipment operators are responsible for the safe operation of heavy equipment. Operators are responsible for inspecting their equipment on a daily basis to ensure safe performance. Brakes, hydraulic lines, backup alarms, and fire extinguishers must be inspected routinely throughout the project. Documentation of daily inspections will be required via an equipment inspection checklist. Heavy equipment inspections will be submitted to the CS for review and subsequently placed in the project files. Unsafe conditions/acts are to be immediately reported to the CS. Equipment will be taken out of service if an unsafe condition occurs.

Project Personnel Safety Responsibilities

Project personnel are responsible for their own safety as well as the safety of those around them and shall use any equipment provided in a safe and responsible manner, as directed by their supervisor. Project personnel will follow the policies set forth in this HASP and those in their employer-specific SOPs and Safety and Health Program.

Project personnel are directed to take the following actions when appropriate:

i) Review all activity hazards and preventative measures before initiating work.

ii) Assist in the development/revision of JSA forms that are appropriate to their current work activities.

iii) Suspend any operations that may cause an imminent health hazard to project personnel.

iv) Inspect tools and other equipment before each use or as the manufacturer and/or OSHA mandates.

v) Correct job site hazards when possible without endangering life or health.

vi) Report safety and health concerns to the SHO CS and/or SS.

Subcontractors

Selected subcontractor(s) will be responsible for providing a CS and/or SS ("competent person") and a SHO to direct their activities and to meet all applicable OSHA Regulations. This may be the same individual if so qualified. These individuals will be responsible for ensuring that all contract specifications are met, including those related to project health and safety. Subcontractors will be responsible for the health and safety of their personnel, which includes following all applicable OSHA Regulations and the subcontractors' Site-specific HASP(s). Subcontractors will be required to attend an initial Site briefing and subsequent daily safety meetings.

Authorized Visitors

Authorized Visitors shall be provided with all known information with respect to the project operations and hazards, as applicable to the purpose of their visit.

2. Site Characterization and Potentially Hazardous Compounds

The Site has been impacted with coal tar wastes including PAHs, organic solvents, phenols, and heavy metals. It has been determined that the following list of chemicals represents the Chemicals of Concern (COCs) at the site:

- Benzene
- Toluene
- Ethylbenzene
- Xylenes
- Methylene Chloride
- Acetone
- 1,2-Dichloroethene
- Vinyl Chloride
- 2-Methylnaphthalene
- Anthracene
- Benzo(a)anthracene
- Benzo(a)pyrene
- Benzo(b)fluoranthene
- Benzo(k)fluoranthene

- Chrysene
- Fluoranthene
- Fluorene
- Naphthalene
- Phenanthrene
- Pyrene
- Dibenzofuran

Table A.1 shows the properties of the compounds listed above.

3. Basis for Design

Regulations set forth by OSHA in Title 29, CFR, Parts 1910 and 1926 (29 CFR 1910 and 1926) form the basis of this HASP. Emphasis is placed on Section 1926.65 (Hazardous Waste Operations and Emergency Response), 1910 Subpart I (Personal Protective Equipment), 1910 Subpart Z (Toxic and Hazardous Substances), 1926 Subpart O (Motor Vehicles, Mechanized Equipment, and Marine Operations), and 1926 Subpart F (Excavations). Some of the specifications within this section are in addition to the OSHA regulations, and reflect the positions of U.S. EPA, and the National Institute for Occupational Safety and Health (NIOSH), regarding safe operating procedures at hazardous waste sites.

The health and safety of the public and Site personnel and the protection of the environment will take precedence over cost and scheduling considerations for all project work.

4. Personnel Training

4.1 General

Project personnel shall complete hazardous waste operations and emergency response training (HAZWOPER), as required by the OSHA Standard 29 CFR 1926.65. Project personnel shall also initially receive a minimum of 3 days of actual field experience under the direct supervision of a trained, experienced supervisor. Personnel who completed their training more than 12 months prior to the start of this project shall have also completed an 8-hour HAZWOPER refresher course within the past 12 months. The CS and or SS shall complete the additional 8 hours of training that is required for managers and/or supervisors along with any "competent persons" training that may be needed for required work.

Additional safety training for specific tasks/activities may include safety training for excavation safety. Further safety training may also be required based on the scheduled scope of work. This safety training is to be conducted and documented before any tasks that require additional training are initiated. It is the responsibility of the SHO and CS and/or SS to ensure that personnel have the necessary training and skills prior to activity assignment. Task safety training requirements are included on each JSA form.

4.2 Basic 40-Hour Course

The following is a list of the topics typically covered in a 40-hour training course:

i) General safety procedures

ii) Physical hazards (fall protection, noise, heat stress, cold stress)

iii) Names and job descriptions of key personnel responsible for Site health and safety

iv) Safety, health, and other hazards typically present at hazardous waste sites

v) Use, application, and limitations of PPE

vi) Work practices by which employees can minimize risks from hazards

vii) Safe use of engineering controls and equipment on site

viii) Medical surveillance requirements

ix) Recognition of symptoms and signs, which might indicate overexposure to hazards

x) Worker right-to-know (Hazard Communication OSHA 1926.59/1910.1200)

xi) Routes of exposure to contaminants

xii) Engineering controls and safe work practices that may be implemented

xiii) Components of a project HASP

xiv) Decontamination practices for personnel and equipment

xv) Confined space entry procedures

xvi) General emergency response procedures

4.3 Supervisor Course

Management and supervisors (i.e., the CS and SS), who work at the Site are required to receive an additional 8 hours of training in topics that are pertinent to the management of hazardous waste operations, which typically includes:

i) Instruction in detailed project safety and health procedures dealing with emergencies

ii) PPE programs

iii) The implementation of specialized emergency response procedures

iv) Air monitoring techniques

4.4 Site-Specific Training

All project personnel attending the initial safety meeting will accomplish the project-specific training on the contents of this HASP before work begins. The review will include a discussion of the chemical, physical, and biological hazards that may be present at the Site, the protective equipment and safety procedures to be used and followed, and emergency procedures that will be implemented at the Site. The Training Acknowledgment Form that project personnel will sign off on is presented in Attachment B (Project Safety Forms).

4.5 Daily Safety Meetings

Daily safety meetings (tailgate safety talks) will be held to cover the work that is anticipated to be accomplished each day, the associated hazards, the protective clothing and procedures required to minimize exposure to these hazards, and the required emergency response procedures. The CS, SS and/or SHO will present these meetings prior to beginning the day's fieldwork. No work will be performed in an Exclusion Zone (EZ) before the daily safety meeting has been held. Additional safety meetings shall also be held prior to initiating new tasks, and repeated if new hazards are encountered. The form for documenting the daily safety meetings is also found in Attachment B.

4.6 First Aid and CPR

At least one individual current in First Aid/CPR will be assigned to the work crew for every 10 individuals working at the Site and will be immediately available during all field activities to provide assistance as necessary. Refresher training in First Aid and CPR is required to keep the certificate current. These individuals must also receive training regarding the precautions and protective equipment necessary to protect against exposure to blood-borne pathogens. Blood-borne pathogen training should be included as part of the First Aid/CPR training course delivered by the training provider.

5. Medical Surveillance

In accordance with the requirements detailed in 29 CFR 1926.65 and 29 CFR 1910.134, all project personnel who will come in contact with potentially contaminated materials will have received medical surveillance by a licensed physician or physician's group.

Medical records for all project personnel will be maintained by their respective employers. The medical records will detail the tests that were taken and will include a copy of the consulting physician's statement regarding the tests and the individual's suitability for work as per the employer's medical surveillance program which is to be in accordance with 29 CFR 1926.65.

The medical records will be available to the employee or his designated representative upon written request, as outlined in 29 CFR 1910.1020.

If it becomes necessary to use subcontractors, they will also provide certifications to the SHO showing that their personnel involved in Site activities have all necessary medical examinations prior to commencing work. The certifications will show proof of medical surveillance and respiratory fit testing. Personnel not obtaining medical certification will not perform work within contaminated areas.

Interim medical surveillance will be completed if an individual exhibits poor health or high stress responses due to any project activity or when accidental exposure to elevated concentrations of contaminants occur.

6. Personal Protective Equipment

PPE will be required to safeguard project personnel from various hazards. Varying levels of protection may be used depending on the level of contaminants and the degree of any physical

hazard. This section presents the various levels of personal protection and defines the conditions of use for each level. Subcontractor Site-specific HASPs, if required, will adequately address PPE concerns for each specific task activity based on their proposed scope of work.

6.1 Levels of Protection

Protection levels are determined based upon chemical and physical hazards present in the work area. The specific protection levels to be employed at the Site for each work task are presented on each JSA form, which are presented in Attachment A.

6.1.1 Level D Protection

The minimum level of protection that will be required for all project personnel will be Level D. Level D will only be used in clean areas where there is no potential for exposure to the contaminants of concern. The following equipment is to be worn as Level D PPE:

i) Work clothing as prescribed by the weather

ii) Steel toed work boots meeting American National Standard Institute (ANSI) Z41

iii) Safety glasses or goggles, meeting ANSI Z87

iv) Leather work gloves

v) High visibility safety vest (Class II) when working near moving equipment

vi) Hard hat, meeting ANSI Z89

vii) Hearing protection when noise levels exceed 85 dBA. Hearing protection will have a minimum Noise Reduction Rating (NRR) of at least 20 dBA

6.1.2 Modified Level D Protection

Modified Level D will be worn when airborne contaminants are not present at levels where respiratory protection is required, but where project activities present an increased potential for skin contact with hazardous substances. The following equipment is to be worn as Modified Level D:

i) Tyvek coveralls or polyethylene coated Tyvek coveralls (if liquids/splash hazards are present)

ii) Steel toed work boots meeting ANSI Z41

iii) Neoprene, or polyvinyl chloride (PVC) overboots

iv) Safety glasses or goggles

v) Hard hat

vi) Face shield in addition to safety glasses or goggles when projectiles and/or splashing liquids pose a hazard

vii) Disposable nitrile inner gloves (NDEX 8005, as manufactured by Best, or equivalent)

viii) Nitrile over gloves

ix) Hearing protection (if necessary)

x) A high visibility safety vest (Class II) when working near moving equipment

6.1.3 Level C Protection

Level C protection will be required when the airborne concentration of suspected contaminants are present in the worker's breathing zone at sustained levels of greater than 1 part per million (ppm) of organic vapor as measured with a photoionization detector (PID) or 5mg/m3 of particulate as measured by a particulate monitor.

The following equipment will be used for Level C protection:

i) Full-face air purifying respirator (APR) with organic vapor/acid gas cartridges in combination with particulate filters (P-100) which are NIOSH approved (MSA GME P100 cartridges or equivalent)

ii) Polyethylene coated Tyvek or Saranex hooded suit (if liquids/splash hazards are present) or Tyvek coveralls, ankles, and cuffs taped to boots and gloves

iii) nitrile over glove, as manufactured by Best or equivalent

iv) inner nitrile disposable gloves (NDEX 8005, as manufactured by Best, or equivalent)

v) safety toe work boots, ANSI approved

vi) chemical resistant neoprene or rubber boots with steel toes, or latex/PVC booties over safety toe shoes

vii) hard hat, ANSI approved

viii) hearing protection (if necessary)

ix) a high visibility safety vest (Class II)

6.1.4 Level B Protection

Level B protection is not expected to be worn but would be required if sustained airborne concentrations of suspended organic vapors are greater than 1 ppm in the presence of vinyl chloride or 50 ppm in the absence of vinyl chloride. The action level necessitating Level B protection may be revised subject to determination of the compounds triggering the Level B protection requirement.

The following equipment will be used for Level B protection:

i) Supplied air respirator (NIOSH approved). Respirators may be positive pressure-demand self-contained breathing apparatus (SCBA), or positive pressure-demand airline respirator (with 5-minute escape bottle for immediately dangerous to life and health (IDLH) situations)

ii) Polyethylene coated Tyvek or Saranex hooded coverall with ankles and cuffs taped to boots and gloves

iii) Nitrile over gloves, as manufactured by Best or equivalent

iv) Inner nitrile disposable gloves (NDEX 8005, as manufactured by Best, or equivalent)

v) Safety toe work boots, ANSI approved

vi) Chemical resistant neoprene or rubber boots with steel toes, or latex/PVC booties over safety toe shoes

vii) Hard hat, ANSI approved

viii) Hearing protection (if necessary)

ix) A high visibility safety vest (Class II) if exposed to moving heavy equipment

6.1.5 Selection of PPE

Equipment for personal protection will be selected based on the potential for contact, Site conditions, ambient air quality, and the judgment of the PM, CS, SS, SHO and the RSHM. The PPE used will be chosen to be effective against the compound(s) present on the Site.

Additional specialized PPE such as flotation devices and hip waders may be required for some tasks and are identified on the JSAs found in Attachment A.

6.2 Respiratory Protection

Respiratory protection is an integral part of personnel health and safety at sites with potential airborne contamination.

6.2.1 Site Respiratory Protection Program

The Site respiratory protection program will consist of the following:

i) All project personnel who may use respiratory protection will have an assigned respirator.

ii) All project personnel who may use respiratory protection will have been fit tested and trained in the use of a full-facepiece APR within the past 12 months.

iii) All project personnel who may use respiratory protection must, within the past year, have been medically certified as being capable of wearing a respirator. Documentation of the medical certification must be provided to the SHO prior to commencement of Site work.

iv) Only cleaned, maintained, NIOSH approved respirators are to be used on this Site.

v) If respirators are used, the respirator cartridge is to be properly disposed of at the end of each work shift, prior to expected breakthrough or when breathing becomes labored (filter load-up occurs).

vi) Contact lenses may be worn with a full-face respirator.

vii) All project personnel who may use respiratory protection must be clean-shaven. Mustaches and sideburns are permitted, but they must not interfere with the sealing surface of the respirator.

viii) Respirators will be inspected and a negative pressure test performed prior to each use.

ix) After each use, the respirator will be wiped with a disinfectant cleansing wipe or washed during a formal respirator cleaning procedure. When used, the respirator will be thoroughly cleaned at the end of the work shift. The respirator will be stored in a clean plastic bag, away from direct sunlight in a clean, dry location, in a manner that will not distort the facepiece.

Respiratory protection may be required during some of the project activities. This is to ensure worker protection from potentially contaminated particulates, SVOCs, and VOCs. It is expected that Modified Level D personal protection will be worn during the majority of the project activities involving the handling of impacted materials. However, the SHO will make the determination of the acceptable level of protection based upon the results of the air-monitoring program.

A photoionization detector (PID) with a 10.6 or greater eV lamp will be used to determine if organic vapors are present. A background reading will be established prior to commencing work activities at each active work area. When VOCs are detected in the worker breathing zones, colorimetric tubes will be used to determine if benzene or vinyl chloride is present. If present, work activities will cease until a review of additional engineering controls has been completed by the Project team. The results of the air sampling will be reviewed to ensure that the proper respiratory protection procedures are being implemented.

Action levels to determine the level of respiratory protection necessary for organic vapors are based on the sustained (15-minute) concentration of Site contaminants measured within the breathing zone. The action levels and appropriate respiratory protection are referenced in Table A.2 of this document. The PID action levels have been set based on the presence of the known VOCs, which have been identified at the Site. However, if the ambient concentrations of organic vapors are due to identifiable substances, the level of respiratory protection may be altered by the SHO.

The appropriate air purifying respirator cartridges to be used at the Site are a combination organic vapor/acid gas and P-100 cartridge. The cartridge must be of the same manufacturer as the respirator face piece.

A particulate meter will also be utilized to determine airborne dust/particulate concentrations. Action levels to determine the level of respiratory protection necessary for dust levels are based on the concentration of Site contaminants that may potentially be attached to the dust that are measured within the breathing zone. The action levels and appropriate respiratory protection for particulates are included in Table A.2 of this document.

6.3 Using PPE

Depending upon the level of protection selected for this project, specific donning and doffing procedures may be required. The procedures presented in this section are mandatory if Level B or Level C PPE is used.

All personnel entering the EZ must put on the required PPE in accordance with the requirements of this plan. When leaving the EZ, PPE will be removed in accordance with the procedures listed, to minimize the spread of contamination.

6.3.1 Donning Procedures

These procedures are mandatory only if Level B or Level C PPE is used on the project:

i) Remove bulky outerwear. Remove street clothes and store in clean location.

ii) Put on work clothes or coveralls.

iii) Put on the required chemical protective coveralls.

iv) Put on the required chemical protective boots or boot covers.

v) Tape the legs of the coveralls to the boots with duct tape.

vi) Put on the required chemical protective gloves.

vii) Tape the wrists of the protective coveralls to the gloves.

viii) Don the required respirator and perform appropriate fit check.

ix) Put hood or head covering overhead and respirator straps and tape hood to facepiece.

x) Check and secure all seams.

xi) Don remaining PPE, such as hard hat.

When these procedures are instituted, one person (bottle watch/decontamination attendant) must remain outside the work area to ensure that each person entering has the proper protective equipment.

6.3.2 Doffing Procedures

The following procedures are only mandatory if Level B or C PPE is required for this project. Whenever a person leaves a Level B or C work site, the following decontamination sequence will be followed:

i) Upon entering the Contamination Reduction Zone (CRZ) rinse contaminated materials from the boots or remove contaminated boot covers

ii) Clean reusable protective equipment

iii) Remove protective garments, equipment, and respirator. All disposable clothing should be placed in a covered container, which is labeled

iv) Clean the respirator using the appropriate method as determined by the SHO

v) Wash hands, face, and neck and shower as soon as possible at the end of the day

vi) Proceed to clean area and dress in clean clothing

vii) Clean and disinfect respirator for next use

All disposable equipment garments, and PPE must be placed in covered containers and labeled for disposal. See Section 10.0 for detailed information on decontamination procedures.

6.4 Selection Matrix

The level of personal protection selected will be based upon real-time air monitoring of the work environment and an assessment by the SHO and CS and/or SS of the potential for skin contact with contaminated materials. The PPE selection matrix is given in each JSA form that is presented in Attachment A. This matrix is based upon information available at the time this plan was written.

6.5 Duration of Work Tasks

The duration of activities involving the usage of PPE will be established by the SHO based upon ambient temperature and weather conditions, the capacity of personnel to work in the designated level of PPE (heat stress, see Section 8.3) and the limitations of the protective equipment (i.e., ensemble permeation rates, life expectancy of air purifying respirator cartridges, etc.).

All rest breaks will be taken in the Support Zone (SZ) after full decontamination and PPE removal. Rest breaks will be observed based upon the heat stress monitoring guidelines presented in Section 8.3.

6.6 Limitations of Protective Clothing

PPE ensembles have been selected to provide protection against contaminants at anticipated concentrations. However, no protective garment, glove, or boot is chemical-proof, nor will it afford protection against all chemical types. Permeation of a given chemical through PPE is a complex process governed by contaminant concentrations, environmental conditions, physical condition of the protection garment, and the resistance of a garment to a specific contaminant. Chemical permeation may continue even after the source of contamination has been removed from the garment.

In order to obtain optimum usage from PPE, the following procedures are to be followed by all Site personnel using PPE:

i) When using disposable coveralls, don a clean, new garment after each rest break or at the beginning of each shift

ii) Inspect all clothing, gloves, and boots both prior to and during use for:

   a. Imperfect seams

   b. Non-uniform coatings

   c. Tears

   d. Poorly functioning closures

iii) Inspect reusable garments, boots, and gloves both prior to and during use for:

   a. Visible signs of chemical permeation

   b. Swelling

   c. Discoloration

   d. Stiffness

   e. Brittleness

   f. Cracks

   g. Any sign of puncture

   h. Any sign of abrasion

Reusable gloves, boots, or coveralls exhibiting any of the characteristics listed above will be discarded. PPE used in areas known or suspected to exhibit elevated concentrations of contaminants will not be reused.

Project personnel also carry certain responsibilities for their own health and safety, and are required to observe the following safe work practices:

i) Familiarize themselves with this HASP

ii) Use the "buddy system" when working in exclusion zones

iii) Use the safety equipment in accordance with training received, labeling instructions, and common sense

iv) Maintain safety equipment in good condition and proper working order

v) Refrain from activities that would create additional hazards (e.g., smoking, eating, etc., in restricted areas, leaning against dirty, contaminated surfaces)

vi) Smoking, eating, and drinking will be prohibited except in designated areas. These designated areas may change during the duration of the project to maintain adequate separation from the active work area(s). Designation of these areas will be the responsibility of the SHO

vii) Soiled disposable outerwear shall be removed and placed into a covered container prior to washing hands and face, eating, using lavatory facilities, or leaving the Site

7. Site Control

Site control is provided by the implementation of the following measures:

i) The PM, SHO, CS and/or SS are to be advised of the dates and purpose of all field activities

ii) All visitors must sign in and sign out each time they access the Site

iii) The selected contractor will ensure that a secure fence is in place around each active work area during the project activities

7.1 Authorization to Enter

All personnel working in exclusion zones (EZs) must have completed hazardous waste operations initial training as defined under OSHA Regulation 29 CFR 1926.65. They shall also have completed their training or refresher training within the past 12 months, and have been certified by a physician as fit for hazardous waste operations in order to enter a Site area designated as an EZ or contaminant reduction zone (CRZ). Personnel without such training or medical certification may enter the designated support zone (SZ) only. The SHO will maintain a list of authorized persons; only personnel on the authorized list will be allowed within the EZ or CRZ.

7.2 Site Orientation and Hazard Briefing

No person will be allowed in the general work area during project activities without first being given a Site orientation and hazard briefing. This orientation will be presented by the SHO, and will consist of attending an initial safety meeting. This training will cover the chemical, physical, and biological hazards, protective equipment, safe work procedures, and emergency procedures for the project. A Training Acknowledgment Form for documentation purposes is presented in Attachment B. In addition to this meeting, daily safety meetings will be held each day before work begins. All individuals on Site, including visitors, must document their attendance to this briefing as well as to each daily safety meeting on the form that is also included in Attachment B.

7.3 Certification Documents

A training and medical certification file will be established for the project and kept on Site during all project activities. The 40-hour training, update, and respirator fit test certificates, as well as current medical clearance for all project field personnel will be maintained within that file. Subcontractor personnel, if needed, will provide a copy of their training, respirator fit test, and medical certification to the selected contractor's SHO prior to the start of fieldwork.

7.4 Entry Requirements

In addition to the authorization, hazard briefing and certification requirements listed above, no person will be allowed to enter the Site unless he/she is wearing the minimum SZ PPE as described in Section 6.0. Personnel entering the EZ or CRZ must wear the required PPE for those locations as identified on each JSA form.

7.5 Emergency Entry and Exit

Individuals who must enter the Site on an emergency basis will be briefed of the hazards by the SHO. All hazardous activities will cease in the event of an emergency and any sources of emissions will be controlled, if possible.

Individuals exiting the Site because of an emergency will gather in a safe area, as determined by the SHO for a head count. The SHO is responsible for ensuring that all individuals who entered the work area have exited in the event of an emergency. See Section 11.0 of this HASP for additional information.

7.6 Contamination Control Zones

Contamination control zones are maintained to prevent the spread of contamination and to prevent unauthorized people from entering hazardous areas.

7.6.1 Exclusion Zone (EZ)

The EZ consists of the specific work area, or may be the entire area of suspected contamination. All employees entering the EZ must use the required PPE, and must have the appropriate training and medical clearance for hazardous waste work. The EZ is the defined area where there is a possible respiratory and/or contact health hazard. Barrier tape, fencing, or other appropriate means will identify the location of each EZ.

7.6.2 Contamination Reduction Zone (CRZ)

The CRZ or transition area will be established to perform decontamination of personnel and equipment and to provide a buffer zone around the EZ. All personnel entering or leaving the EZ will pass through this area to prevent any cross-contamination. Tools, equipment, and machinery will be decontaminated in the CRZ (or a separate CRZ decontamination area) that may be set up to better address equipment decontamination. The decontamination of all personnel will be performed on Site in the CRZ that is adjacent to each EZ. Personal protective outer garments and respiratory protection will be removed in the CRZ and prepared for cleaning or disposal. This zone is the only appropriate corridor between the EZ and the SZ.

7.6.3 Support Zone (SZ)

The SZ is a clean area outside of the CRZ located to prevent project personnel from exposure to hazardous substances. Eating and drinking will be permitted in the support area only after proper decontamination. Smoking will not be allowed in any portion of the SZ.

8. Activity Hazard/Risk Analysis and General Safety Practices

This section identifies and evaluates the potential chemical, physical, and biological hazards, which may be encountered while conducting project activities. Specific JSA forms (see Attachment A) have been developed to address the hazards associated with anticipated project activities, which are outlined in Section 1.0 of this HASP.

NOTE: If a non-routine task or previously unidentified task becomes necessary then a JSA that addresses the new task shall be developed and implemented before initiating the new activity.

In addition to the chemical hazards identified in Table A.1 of this HASP, physical and biological hazards may exist at the Site including: potential heat/cold stress; hazards presented by the use of heavy equipment; underground/overhead utility hazards; hazards presented by excavations/trenches; fall hazards; biological hazards including, poison ivy, mosquitoes, ticks, bees, wasps, snakes; uneven terrain and slippery surfaces; electrical and other hazardous energy sources, hazards presented by undertaking hot work and the use of decontamination equipment. It will be the responsibility of the SHO and all project personnel to identify the physical and/or biological hazards posed by the various project activities that they are partaking in and implement all necessary preventative measures.

8.1 General Practices

Additional general safety practices to be implemented are as follows:

i) A copy of the HASP must be at the project Site, in a location readily available to all personnel

ii) All project personnel must use the buddy system (working in pairs or teams)

iii) Food, beverages, or tobacco products must not be present or consumed in the EZ and CRZ. Cosmetics must not be applied within these zones

iv) Emergency equipment such as eyewash, fire extinguishers, etc., must be removed from storage areas and staged in readily accessible locations

v) Contaminated waste, debris, and clothing must be properly contained and legible and understandable precautionary labels must be affixed to the containers

vi) Removing contaminated soil or waste debris from protective clothing and/or equipment using compressed air, shaking, or any other means that disperses contaminants into the air is prohibited

vii) Containers must be moved only with the proper equipment, and must be secured to prevent dropping or loss of control during transport

viii) Visitors to the Site must be instructed to stay outside of the EZ and CRZ and remain within the SZ during the extent of their stay. Visitors must be cautioned to avoid skin contact with surfaces, which are contaminated or suspected to be contaminated

8.1.1 Buddy System

All project personnel shall use the buddy system. Visual contact must be maintained between project team members at all times, and personnel must observe each other for signs of chemical exposure and heat stress. Indications of adverse effects include, but are not limited to:

i) Changes in complexion and skin coloration

ii) Changes in coordination

iii) Excessive salivation and papillary response

iv) Changes in speech pattern

Team members must also be aware of potential exposure to possible safety hazards, unsafe acts, or noncompliance with safety procedures. Personnel shall inform their partners, fellow team members, SHO, CS and/or the SS of non-visible effects of exposure to toxic materials. The symptoms of such exposure may include:

i) Headaches

ii) Dizziness

iii) Nausea

iv) Blurred vision

v) Cramps

vi) Irritation of eyes, skin, or respiratory tract

If protective equipment or noise levels impair communications, pre-arranged hand signals must be used for communication. Personnel must stay within line of sight of another team member. Downrange field teams in conjunction with the "buddy" system will use the following hand signals. These signals are very important when working with heavy equipment. The entire field team shall know them before operations commence.

Signal	Meaning
Hand gripping throat	Out of air; Can't breathe
Grip partner's wrist	Leave area immediately
Hands on top of head	Need assistance
Thumbs up	OK; I'm all right; I understand
Thumbs down	No; Negative

8.1.2 Sanitation

Sanitation at the Site will be maintained according to OSHA and Department of Health requirements.

8.1.3 Break Area

Breaks must be taken in the SZ, away from the active work area after project personnel go through decontamination procedures. There will be no eating, drinking, or chewing gum in any area other than the SZ.

8.1.4 Potable Water

The following rules apply for all project field operations:

i) An adequate supply of potable water will be provided in each CRZ. Potable water must be kept away from hazardous materials, contaminated clothing, and contaminated equipment

ii) Portable containers used to dispense drinking water must be capable of being tightly closed, and must be equipped with a tap dispenser. Water must not be drunk directly from the container, nor dipped from the container

iii) Containers used for drinking water must be clearly marked and not used for any other purpose

iv) Disposable cups must be supplied, and both a sanitary container for unused cups and a receptacle for disposing of used cups must be provided

8.1.5 Washing Facilities

Access to facilities for washing one's hands, face and neck before eating, drinking, or smoking will be provided.

8.1.6 Lavatory

If permanent toilet facilities are not available, an adequate number of portable chemical toilets will be provided.

8.1.7 Trash Collection

Trash collected from the CRZ will be separated as potentially contaminated waste. Trash collected in the support and break areas will be disposed of as non-hazardous waste. Trash receptacles will be set up in the CRZ and in the SZ.

8.2 Chemical Exposure

Preventing exposure to toxic chemicals is a primary concern. Chemical substances can enter the unprotected body by inhalation, skin absorption, ingestion, or through a puncture wound (injection). A contaminant can cause damage at the point of contact or can act systematically, causing a toxic effect at a part of the body distant from the point of initial contact. The Site chemical contaminants of concern and their properties are identified in Table A.1.

Chemical exposures are generally divided into two categories: acute and chronic. Symptoms resulting from acute exposures usually occur during or shortly after exposure to a sufficiently high concentration of a contaminant. The concentration required to produce such effects varies widely from chemical to chemical. The term "chronic exposure" generally refers to exposures to "low" concentrations of a contaminant over a long period of time. The "low" concentrations required to produce symptoms of chronic exposure depend upon the chemical, the duration of each exposure, and the number of exposures. For a given contaminant, the symptoms of an acute exposure may be completely different from those resulting from chronic exposure.

For either chronic or acute exposure, the toxic effect may be temporary and reversible, or may be permanent (disability or death). Some chemicals may cause obvious symptoms such as burning, coughing, nausea, tearing eyes, or rashes. Other chemicals may cause health damage without any

such warning signs (this is a particular concern for chronic exposures to low concentrations). Health effects such as cancer or respiratory disease may not become evident for several years or decades after exposure. In addition, some toxic chemicals may be colorless and/or odorless, may dull the sense of smell, or may not produce any immediate or obvious physiological sensations. Thus, a worker's senses or feelings cannot be relied upon in all cases to warn of potential toxic exposure.

The effects of exposure not only depend on the chemical, its concentration, route of entry, and duration of exposure, but may also be influenced by personal factors such as the individual's smoking habits, alcohol consumption, medication use, nutrition, age, and sex.

An important exposure route of concern at the Site is inhalation. The lungs are extremely vulnerable to chemical agents. Even substances that do not directly affect the lungs may pass through lung tissue into the bloodstream, where they are transported to other vulnerable areas of the body. Some toxic chemicals present in the atmosphere may not be detected by human senses (e.g., they may be colorless, odorless, and their toxic effects may not produce any immediate symptoms). Respiratory protection is therefore extremely important if there is a possibility that the work site atmosphere may contain such hazardous substances. Chemicals can also enter the respiratory tract through punctured eardrums. Where this is a hazard, individuals with punctured eardrums should be medically evaluated specifically to determine if such a condition would place them at an unacceptable risk and preclude their working at the task in question.

Direct contact of the skin and eyes by hazardous substances is another important route of exposure. Some chemicals directly injure the skin. Some pass through the skin into the bloodstream where they are transported to vulnerable organs. Abrasions, cuts, heat, and moisture enhance skin absorption. The eye is particularly vulnerable because airborne chemicals can dissolve in its moist surface and be carried to the rest of the body through the bloodstream (capillaries are very close to the surface of the eye). Wearing protective equipment, not using contact lenses in contaminated atmospheres (since they may trap chemicals against the eye surface), keeping hands away from the face, and minimizing contact with liquid and solid chemicals can help protect against skin and eye contact.

Although ingestion should be the least significant route of exposure at the Site, it is important to be aware of how this type of exposure can occur. Deliberate ingestion of chemicals is unlikely; however, personal habits such as chewing gum or tobacco, drinking, eating, smoking cigarettes, and applying cosmetics at the Site may provide a route of entry for chemicals.

The last primary route of chemical exposure is injection, whereby chemicals are introduced into the body through puncture wounds (e.g., by stepping or tripping and falling onto contaminated sharp objects). Wearing safety shoes, avoiding physical hazards, and taking common sense precautions are important protective measures against injection.

Chemical Hazard Controls

Airborne exposure or contact with the contaminants of concern at the Site shall be controlled by:

i) Skin contact with chemicals may be controlled by use of the proper PPE and good housekeeping procedures. The proper PPE (e.g., polycoated Tyvek®, gloves) as described in Section 6.0 of this HASP shall be worn for all activities where contact with potentially harmful media or materials is anticipated.

ii) Monitoring air concentrations for volatile organic chemicals and particulates shall be conducted in the breathing zone with a PID with an 11.7 eV lamp or greater and a particulate monitor, as discussed in Section 9.0.

iii) Contact the CSHM for additional information regarding a particular product's or activity's exposure hazards.

iv) Using respiratory protection as appropriate, in areas known to have concentrations above the specified action level.

Hazard Communication

Personnel required to handle or to use hazardous materials as part of their job duties will be trained and educated in accordance with the Hazard Communication Standard. The training shall include instruction on the safe usage, and handling procedures of hazardous materials, how to read and access Material Safety Data Sheets (MSDSs), and the proper labeling requirements.

The MSDSs for those chemicals in use at the Site will be available to project personnel. The SHO will be responsible for maintaining a copy of all MSDSs on Site.

8.3 Heat Stress

Heat stress is caused by a number of interacting factors including environmental conditions, clothing, workload, etc., as well as the physical and conditioning characteristics of the individual. Since heat stress is one of the most common illnesses associated with heavy outdoor work conducted with direct solar load, and in particular, because wearing PPE can increase the risk of developing heat stress, workers must be capable of recognizing the signs and symptoms of heat-related illnesses. Personnel must be aware of the types and causes of heat-related illnesses and be able to recognize the signs and symptoms of these illnesses in both themselves and their co-workers.

Heat Rashes

Heat Rashes are one of the most common problems in hot work environments. Commonly known as prickly heat, a heat rash is manifested as red papules and usually appears in areas where the clothing is restrictive. As sweating increases, these papules give rise to a prickling sensation. Prickly heat occurs in skin that is persistently wetted by unevaporated sweat, and heat rash papules may become infected if they are not treated. In most cases, heat rashes will disappear when the affected individual returns to a cool environment.

Heat Cramps

Heat Cramps are usually caused by performing hard physical labor in a hot environment. These cramps have been attributed to an electrolyte imbalance caused by sweating. It is important to understand that cramps can be caused both by too much and too little salt.

Cramps appear to be caused by the lack of water replenishment. Because sweat is a hypotonic solution (plus or minus 0.3 percent NaCl), excess salt can build up in the body if the water lost through sweating is not replaced. Thirst cannot be relied on as a guide to the need for water; instead, water must be taken every 15 to 20 minutes in hot environments.

Under extreme conditions, such as working for six to eight hours in heavy protective gear, a loss of sodium may occur. Drinking commercially available carbohydrate-electrolyte replacement liquids is effective in minimizing physiological disturbances during recovery.

Heat Exhaustion

Heat Exhaustion occurs from increased stress on various body organs due to inadequate blood circulation, cardiovascular insufficiency, or dehydration. Signs and symptoms include pale, cool, moist skin, heavy sweating, dizziness, nausea, headache, vertigo, weakness, thirst, and giddiness. Fortunately, this condition responds readily to prompt treatment.

Heat exhaustion should not be dismissed lightly, however, for several reasons. One is that the fainting associated with heat exhaustion can be dangerous because the victim may be operating machinery or controlling an operation that should not be left unattended; moreover, the victim may be injured when he or she faints. Also, the signs and symptoms seen in heat exhaustion are similar to those of heat stroke, which is a medical emergency.

Workers suffering from heat exhaustion should be removed from the hot environment, be given fluid replacement, and be encouraged to get adequate rest.

Heat Stroke

Heat Stroke is the most serious form of heat stress. Heat stroke occurs when the body's system of temperature regulation fails and the body's temperature rises to critical levels. This condition is caused by a combination of highly variable factors, and its occurrence is difficult to predict.

Heat stroke is a medical emergency. The primary signs and symptoms of heat stroke are confusion, irrational behavior, loss of consciousness, convulsions, a lack of sweating (usually), hot, dry skin, and an abnormally high body temperature, e.g., a rectal temperature of 41°C (105.8°F). If body temperature is too high, it causes death. The elevated metabolic temperatures caused by a combination of workload and environmental heat load, both of which contribute to heat stroke, are also highly variable and difficult to predict.

If a worker shows signs of possible heat stroke, professional medical treatment should be obtained immediately. The worker should be placed in a shady area and the outer clothing should be removed. The worker's skin should be wetted and air movement around the worker should be increased to improve evaporative cooling until professional methods of cooling are initiated and the seriousness of the condition can be assessed. Fluids should be replaced as soon as possible. The medical outcome of an episode of heat stroke depends on the victim's physical fitness and the timing and effectiveness of first aid treatment.

Regardless of the worker's protestations, no employee suspected of being ill from heat stroke should be sent home or left unattended unless a physician has specifically approved such an order.

Proper training and preventive measures will help avert serious illness and loss of work productivity. Preventing heat stress is particularly important because once someone suffers from heat stroke or exhaustion, that person may be predisposed to additional heat injuries.

Heat Stress Safety Precautions

Heat stress monitoring and work rest cycle implementation should commence when the ambient adjusted temperature exceeds 72°F. A minimum work rest regimen and procedures for calculating ambient adjusted temperature are described below.

Adjusted Temperature[1]	Work-Rest Regimen Normal work Ensemble [2]	Work-Rest Regimen Impermeable Ensemble
90°F (32.°C) or above	After each 45 minutes of work	After each 15 minutes of work
87.5° to 90°F (30.8°C to 32.2°C)	After each 60 minutes of work	After each 30 minutes of work
82.5° to 87.5°F (28.1° to 30.8°C)	After each 90 minutes of work	After each 60 minutes of work
77.5° to 82.5°F (25.3° to 28.1°C)	After each 120 minutes of work	After each 90 minutes of work
72.5° to 77.5°F (30.8° to 32.2°C)	After each 150 minutes of work	After each 120 minutes of work

Notes:

(1) Calculate the adjusted air temperature (ta adj) by using this equation: ta adj °F=ta °F + (13 x percent sunshine). Measure air temperature (ta) with a standard thermometer, with the bulk shielded from radiant heat. Estimate percent sunshine by judging what percent time the sun is not covered by clouds that are thick enough to produce a shadow (100 percent sunshine = no cloud cover and a sharp, distinct shadow; 0 percent sunshine = no shadows).

(2) A normal work ensemble consists of cotton coveralls or other cotton clothing with long sleeves and pants.

In order to determine if the work rest cycles are adequate for the personnel and specific Site conditions, additional monitoring of individual heart rates will be conducted during the rest cycle. To check the heart rate, count the radial pulse for 30 seconds at the beginning of the rest period. If the heart rate exceeds 110 beats per minute, shorten the next work period by one-third and maintain the same rest period.

Additionally, one or more of the following control measures can be used to help control heat stress and are mandatory if any Site worker has a heart rate (measure immediately prior to rest period) exceeding 115 beats per minute:

i) Project personnel will be encouraged to drink plenty of water and electrolyte replacement fluids throughout the day.

ii) On-Site drinking water will be kept cool (50 to 60°F).

iii) A work regimen that will provide adequate rest periods for cooling down will be established, as required.

iv) All personnel will be advised of the dangers and symptoms of heat stroke, heat exhaustion, and heat cramps.

v) Cooling devices such as vortex tubes or cooling vests should be used when personnel must wear impermeable clothing in conditions of extreme heat.

vi) Project personnel shall be instructed to monitor themselves and co-workers for signs of heat stress and to take additional breaks as necessary.

vii) A shaded rest area must be provided. All breaks should take place in the shaded rest area.

viii) Project personnel must not be assigned to other tasks during breaks.

ix) Project personnel must remove impermeable garments during rest periods. This includes Tyvek garments.

x) All project personnel must be informed of the importance of adequate rest, acclimation (usually takes about 2 hours/day for 1-2 weeks to become acclimated), and proper diet in the prevention of heat stress disorders.

8.4 Sun Exposure

Overexposure to sunlight is a common concern when field activities occur during warm weather conditions. Overexposure can occur on clear, sunny days as well as on overcast and cloudy days. Ultraviolet (UV) rays from the sun can cause skin damage or sunburn, but can also result in vision problems, allergic reactions, and other skin concerns. Two types of UV rays are emitted from the sun: UVA and UVB rays.

UVB rays cause sunburn, skin cancer, and premature aging of the skin. UVB rays stimulate tanning but are also linked to other problems such as impaired vision, skin rashes, and some allergic and other reactions to certain drugs. Extra care should be taken if activities are to be conducted on or near water. Sunlight reflected off the surface of the water is intensified resulting in accelerated effects. The following steps should be taken to protect against overexposure to sunlight:

i) Always use sunscreen: Apply a broad-spectrum sunscreen with Sun Protection Factor (SPF) of at least 15 or higher liberally on exposed skin. Reapply every 2 hours or more. Even waterproof sunscreen can come off when you towel off or sweat.

ii) Cover up: Wearing tightly woven, loose-fitting, and full-length clothing is a good way to protect your skin from UV rays.

iii) Wear a hat: A hat with a wide brim offers good sun protection to your eyes, ears, face, and the back of your neck – areas particularly prone to overexposure to the sun.

iv) Wear sunglasses that block 99 to 100 percent of UV radiation: Sunglasses that provide 99 to 100 percent UVA and UVB protection will greatly reduce sun exposure that can lead to cataracts and other eye damage. Check the label when buying sunglasses.

v) Seek shade: Shade is a good source of protection, but keep in mind that shade structures (e.g., trees, umbrellas, canopies) do not offer complete sun protection.

vi) Limit time in the midday sun: The sun's rays are strongest between 10 a.m. and 4 p.m. Whenever possible, limit exposure to the sun during these hours.

8.5 Cold Stress

Cold stress is similar to heat stress in that it is caused by a number of interacting factors including environmental conditions, clothing, workload, etc., as well as the physical and conditioning

characteristics of the individual. Fatal exposures to cold have been reported in individuals failing to escape from low environmental air temperatures or from immersion in low temperature water. Hypothermia, a condition in which the body's deep core temperature falls significantly below 98.6⌈F (37⌈C), can be life threatening. A drop in core temperature to 95⌈F (35⌈C) or lower must be prevented.

Air temperature is not sufficient to determine the cold hazard of the work environment. The wind chill must be considered as it contributes to the effective temperature and insulating capabilities of clothing. The equivalent chill temperature should be used when estimating the combined cooling effect of wind and low air temperatures on exposed skin or when determining clothing insulation requirements to maintain the body's core temperature.

The body's physiologic defense against cold includes constriction of the blood vessels, inhibition of the sweat glands to prevent loss of heat via evaporation, glucose production, and involuntary shivering to produce heat by rapid muscle contraction.

The frequency of accidents increases with cold temperature exposures as the body's nerve impulses slow down, individuals react sluggishly, and numb extremities make for increased clumsiness. Additional safety hazards include ice, snow blindness, reflections from snow, and possible skin burns from contact with cold metal.

Pain in the extremities may be the first early warning of danger to cold stress. During exposure to cold, maximum severe shivering develops when the body temperature has fallen to 95⌈F (35⌈C). This must be taken as a sign of danger to the individuals on site, and cold exposures should be immediately terminated for any individual when severe shivering becomes evident. Useful physical or mental work is limited when severe shivering occurs.

Predisposing Factors for Cold Stress

There are certain predisposing factors that make an individual more susceptible to cold stress. It is the responsibility of the project team members to inform the SHO/SS to monitor an individual, if necessary, or use other means of preventing/reducing the individual's likelihood of experiencing a cold related illness or disorder.

Predisposing factors that will increase an individual's susceptibility to cold stress are listed below:

- Dehydration: The use of diuretics and/or alcohol, or diarrhea can cause dehydration. Dehydration reduces blood circulation to the extremities.
- Fatigue during Physical Activity: Exhaustion reduces the body's ability to constrict blood vessels. This results in the blood circulation occurring closer to the surface of the skin and the rapid loss of body heat.
- Age: Some older and very young individuals may have an impaired ability to sense cold.
- Poor Circulation: Vasoconstriction of peripheral vessels reduces blood flow to the skin surface.
- Heavy Work Load: Heavy workloads generate metabolic heat and make an individual perspire even in extremely cold environments. If perspiration is absorbed by the individual's clothing and is in contact with the skin, cooling of the body will occur.
- The Use of PPE: PPE usage that traps sweat inside the PPE may increase an individual's susceptibility to cold stress.

- Lack of Acclimatization: Acclimatization, the gradual introduction of workers into a cold environment, allows the body to physiologically adjust to cold working conditions.
- History of Cold Injury: Previous injury from cold exposures may result in increased cold sensitivity.

Prevention of Cold Stress

There are a variety of measures that can be implemented to prevent or reduce the likelihood of individuals developing cold related ailments and disorders. These include acclimatization, fluid and electrolyte replenishment, eating a well-balanced diet, wearing warm clothing, the provision of shelter from the cold, thermal insulation of metal surfaces, adjusting work schedules, and personnel education.

- Acclimatization: Acclimatization is the gradual introduction of workers into the cold environment to allow their bodies to physiologically adjust to cold working conditions. However, the physiological changes are usually minor and require repeated uncomfortably cold exposures to induce them.
- Fluid and Electrolyte Replenishment: Cold, dry air can cause individuals to lose significant amounts of water through the skin and lungs. Dehydration affects the flow of blood to the extremities and increases the risk of cold injury. Warm, sweet, caffeine-free, non-alcoholic drinks and soup are good sources to replenish body fluids.
- Eating a Well Balanced Diet: Restricted diets including low salt diets can deprive the body of elements needed to withstand cold stress. Eat high-energy foods throughout the day.
- Warm Clothing: It is beneficial to maintain air space between the body and outer layers of clothing in order to retain body heat. However, the insulating effect provided by such air spaces is lost when the skin or clothing is wet.
- Work/Rest Regimes: Schedule work during the warmest part of the day, if possible. Rotate personnel and adjust the work/rest schedule to enable individuals to recover from the effects of cold stress.

The parts of the body most important to keep warm are the feet, hands, head, and face. As much as 40 percent of body heat can be lost when the head is exposed.

8.6 Earthwork - Excavation and Trenching

Project activities (test trenching) will involve excavation work. Prior to initiating excavation activities, the CS is responsible for making sure that the following conditions are in place:

i) Ensure that all above and underground utilities have been properly located prior to initiating work activities.

ii) Ensure that the Safety Inspection Checklist for Excavations has been completed prior to allowing project personnel to enter any excavation.

iii) Ensure that the proper fencing materials are available to secure each active work area.

The selected contractor's competent person shall observe all excavation and trenching operations where project personnel will enter. The competent person shall be responsible for evaluating,

classifying and inspecting excavation and trenching operations to prevent possible cave-in and entrapment, and to avoid other hazards presented by excavation activities.

It is the responsibility of the CS and SHO to implement the following components of the selected contractor's Excavation and Trenching Safety Program as they relate to project activities:

i) Ensure that all excavations are completed in accordance with the approved Excavation and Trenching Safety Program.

ii) Ensure that the proper protective materials and equipment are available and being used to complete the excavation and/or trenching procedures

iii) Ensure that the necessary inspections of the excavation are completed as required.

Personnel who are required to enter or work in excavations greater than 5 feet in depth must be protected from the hazards of cave-ins. This requires the use of sloping and/or shoring systems that comply with State and Federal OSHA standards. Excavation and trenching operations require pre-planning to develop appropriate designs for such systems. The selected contractor will make the appropriate plans.

The estimated location of all underground installations shall be determined before digging begins. If there are any nearby buildings, walls, sidewalks, trees, or roads that may be threatened or undermined by the excavation, where the stability of any of these items may be endangered by the excavation, they must be removed or supported by adequate shoring, bracing, or underpinning.

Excavations may not go below the base of footings, foundations, or retaining walls, unless they are adequately supported or a person who is registered as a PE has determined that they will not be affected by the soil removal. OSHA recommends using civil engineers or those with licenses in a related discipline and experience in the design and use of sloping and shoring systems. PE qualifications shall be documented in writing and available at the Site.

The selected contractor's Excavation and Trenching Safety Program and the OSHA Excavation Standard (29 CFR 1926 Subpart P) will be followed during all excavation activities and provide detailed information regarding such activities.

Access and Egress

Personnel access and egress from trench and/or excavations are as follows:

i) A stairway, ladder, ramp, or other means of egress must be provided in excavations greater than four feet deep and for every 25 feet of lateral travel.

ii) All ladders shall extend three feet above the top of the excavation.

Atmosphere Monitoring and Testing

Air quality is measured by the following three parameters:

i) Oxygen concentration

ii) Flammability

iii) Organic vapors

There is a potential for hazardous atmospheres to exist in each proposed excavation. As such, project personnel will not be allowed to be exposed to any hazardous atmosphere. Whenever potentially hazardous atmospheres are suspected in excavations, the competent person shall test the atmosphere. A gas monitor capable of measuring the oxygen level, lower explosive limit (LEL) and toxicity will be used to take readings prior to and while workers are in any excavation. A hazardous atmosphere is defined as one that could contain less than 19.5 percent of oxygen, concentrations of hazardous substances greater than their permissible exposure level (PEL) including carbon monoxide and a LEL reading greater than ten percent. A forced air ventilator will first be used to pump fresh air into the excavation and to push out (purge) any potentially contaminated air.

In the event that an unusual odor or liquid is suspected in excavations, the competent person shall stop work and arrange for air quality assessment and mitigation, if necessary.

Daily Inspections

The competent person shall perform daily inspections of excavations, the adjacent areas, and all protective systems for situations that could potentially result in slope failure.

The competent person shall inspect, evaluate, and document (a form is provided in Attachment B) the inspection of the excavation on an Excavation Inspection Checklist at the following intervals:

i) Prior to the start of work, after each extended halt in work, and as needed throughout the shift as new sections of the excavation is opened.

ii) After every rainstorm and other natural or man-made event that may increase the load on the walls of the excavation, or otherwise affect their stability.

The competent person shall stop the work and instruct all project personnel to leave the excavation when any potential hazards are detected. The competent person has the authority to immediately suspend work if any unsafe condition is detected.

8.7 Heavy Equipment Safety

Personnel operating heavy equipment (such as drill rigs or backhoes) and personnel working in the vicinity of heavy equipment shall adhere to the following practices:

i) Heavy equipment is to be inspected when equipment is initially mobilized/delivered to a job site or after it is repaired and returned to service to ensure that it meets all manufacturer and OSHA specifications.

ii) Heavy equipment is to be inspected on a daily basis. Documentation of this daily pre-operational inspection is to be filed with the project files.

iii) Heavy equipment is only to be operated by authorized, competent operators.

iv) Seat belts are to be provided on heavy equipment that is not designed for stand up operation.

v) Equipment/vehicles whose payload is loaded by a crane, excavator, loader, etc. will have a cab shield and/or canopy to protect the operator.

vi) Personnel will not be raised/lowered in buckets.

vii) Personnel will not ride on fender steps or any place outside the cab.

viii) Before leaving the equipment controls, ensure that the equipment is in its safe resting position. For a backhoe, apply the parking brake, put the front loader bucket down on ground level, and ensure that the rear excavator bucket is locked in the travel position. Bulldozers and scraper blades, loader buckets, dump bodies, and similar equipment will be fully lowered or blocked when not in use.

ix) Before raising any booms, buckets, etc., check for overhead obstructions.

x) Project personnel involved in the operation shall not wear any loose-fitting clothing, which has the potential to be caught in moving machinery.

xi) Personnel shall wear high visibility safety vests, steel-toed shoes, safety glasses, hearing protection, and hard hats during heavy equipment operations.

xii) When moving heavy equipment or when working in tight quarters, a spotter will be used.

Overhead Electrical Clearances

If excavation work is conducted in the vicinity of overhead power lines, the power to the lines must be shut off or the equipment must be positioned and blocked such that no part, including cables, can come within the minimum clearances as follows:

Nominal System Voltage	Minimum Required Clearance
0 to 50 kV	10 Feet
51 to 100 kV	12 Feet
101 to 200 kV	15 Feet
201 to 300 kV	20 Feet
301 to 500 kV	25 Feet
501 to 750 kV	35 Feet
751 to 1,000 kV	45 Feet

8.8 Noise

Exposure to noise over the OSHA action level can cause temporary impairment of hearing; prolonged and repeated exposure can cause permanent damage to hearing. The risk and severity of hearing loss increase with the intensity and duration of exposure to noise. In addition to damaging hearing, noise can impair voice communication, thereby increasing the risk of accidents on Site. The selected contractor's Hearing Conservation Program will be implemented for affected project personnel.

Control

All personnel must wear hearing protection with a Noise Reduction Rating (NRR) of at least 20 when noise levels exceed 85 dBA. When it is difficult to hear a co-worker at normal conversation distance, the noise level is approaching or exceeding 85 dBA, and hearing protection is necessary. All Site personnel who may be exposed to noise must also receive baseline and annual audiograms and training as to the causes and prevention of hearing loss.

Whenever possible, equipment that does not generate excessive noise levels will be selected for this project. If the use of noisy equipment is unavoidable, barriers or increased distance will be used to minimize worker exposure to noise, if feasible.

8.9 Manual Lifting

When lifting objects, use the following proper lifting techniques:

i) Feet must be parted, with one foot alongside the object being lifted and one foot behind. When the feet are comfortably spread, a more stable lift can occur and the rear foot is in a better position for the upward thrust of the lift.

ii) Do not lift more than 50 pounds without the assistance of another individual.

iii) Use the squat position and keep the back straight - but remember that straight does not mean vertical. A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the guts that can cause a hernia.

iv) Grip is one of the most important elements of correct lifting. The fingers and the hand are extended around the object you're going to lift - using the full palm. Fingers have very little power - use the strength of your entire hand.

v) The load must be drawn close, and the arms and elbows must be tucked into the side of the body. Holding the arms away from the body increases the strain on the arms and elbows. Keeping the arms tucked in helps keep the body weight centered.

vi) The body must be positioned so that the weight of the body is centered over the feet. This provides a more powerful line of thrust and also ensures better balance. Start the lift with a thrust of the rear foot. Do not twist your back while lifting or moving heavy objects.

8.10 Hand and Power Tools

Hand Tools Requirements:

i) Hand tools must meet the manufacturer's safety standards.

ii) Hand tools must not be altered in any way.

iii) At a minimum, eye protection must be used when working with hand tools.

iv) Wrenches (including adjustable, pipe, end, and socket wrenches) must not be used when jaws are sprung to the point that slippage occurs.

v) Impact tools (such as drift pins, wedges, and chisels) must be kept free of mushroom heads.

vi) Wooden handles must be free of splinters or cracks and secured tightly to the tool.

Power Tools Requirements:

i) All power tools must be inspected regularly and used in accordance with the manufacturer's instructions and the tool's capabilities.

ii) Electric tools must not be used in areas subject to fire or explosion hazards, unless they are approved for that purpose.

iii) Portable electric tools must be connected to a Ground Fault Circuit Interrupter (GFCI) when working in wet areas.

iv) Proper eye protection must be used when working with power tools.

v) Personnel must be trained in the proper use of each specific tool.

vi) Any damaged or defective power tools must be immediately tagged and removed from service.

8.11 Adverse Weather Conditions

The SHO, CS and/or SS shall decide on the continuation or discontinuation of work based on current and pending weather conditions. Electrical storms, tornado warnings, and strong winds (approximately 40 mph) are examples of conditions that would call for the discontinuation of work and evacuation of site. Strong winds can generate hazardous conditions during the handling of materials.

In addition, no work with elevated super structures (e.g., operation of excavators etc.) will be permitted during any type of electrical storm or during wind events that have wind speeds exceeding 25 mph.

8.12 Working Near Water

Sediment sampling activities are to be performed while wading in the shallow water approximately 10 to 15 feet off the bank of the Niagara River, as well as in on-site ditches and ponds. All sediment sampling and sediment excavation activities shall be in compliance with OSHA 29 CRF 1926-106. The following safety guidelines shall be adhered to while conducting sediment sampling within the River:

- All personnel working on or near the bank of the River should be equipped with an approved personal flotation device.
- Prior to and after each use, the personal flotation device shall be inspected for defects which would alter their strength or buoyancy.
- Ring buoys with a minimum 90 feet of line must be readily available for emergency operations. The distance between buoys cannot exceed 200 feet.
- Due to the anticipated scope of work, a lifesaving skiff may be necessary. However, the SS in conjunction with the RSHM will evaluate current site conditions to determine if a skiff is required.
- Sediment sampling activities are only to be conducted in the presence of at least three GHD personnel, to include at a minimum a two-person sampling team and one on-shore attendant.
- Personnel entering the water should be equipped with a harness and lifeline that is tied to an appropriate structure on land.
- Personnel shall not enter the water in the spring while ice flows from Lake Erie are present. Much of the ice is not visible as flows below the surface of the River.
- Personnel shall not wade into the river further than waist deep. If sample locations or water conditions require entry into deeper water, sampling shall be deferred until conditions allow for safe entry or until a boat can be procured to safely access sampling locations.

8.13 Biological Hazards

Biological hazards may include poison ivy, snakes, thorny bushes, ticks, mosquitoes, and other pests.

8.13.1 Vegetation Overgrowth

Overgrown weeds, bushes, trees, grass and other vegetation are fire and safety hazards. There are a number of hidden hazards not immediately recognized due to the overgrowth of vegetation in areas where field activities may occur, including discarded junk, litter, and debris. Construction materials such as boards, nails, concrete, and other debris may be hidden beneath blades of tall grass, weeds, and bushes. Other hazards may include steep slopes, potholes, trenches, soft spots, dips, etc.; all dangerously concealed from the view of the individual walking or operating motorized equipment in the area. Additionally, there are biological hazards such as snakes, ticks, chiggers, and mosquitoes that breed in overgrowth conditions.

Here are some simple actions you can take:

i) Assess the work area and determine if the area requires vegetation clearance. Consider that overgrowth that extends above the lowest level of motorized equipment (i.e., bumper or fender) or 6 inches above your ankle has hidden hazards that you will not be able to readily identify.

ii) Determine if the area is safe to walk or whether you need motorized equipment. Consider the limitations of the equipment.

iii) Identify slip, trip, and fall hazards and remove from the general work area. Remember to give adequate clearance so that the items being removed do not pose future hazards.

iv) Adequately protect yourself against the hazards by wearing boots that protect the ankles, long pants, and using insecticides.

v) Consider the limitations of manual or mechanical equipment for the clearance of overgrowth, particularly the safety hazards when using sling blades, machetes, weed eaters, bush hogs, or other brush removing equipment.

Before taking any action, determine whether there any ecological issues that would affect or prevent the removal of overgrowth in protected areas such as wetlands, wildlife habitats, or sanctuaries for endangered and/or protected species.

8.13.2 Tick-Borne Diseases

Lyme Disease, Erlichiosis, and Rocky Mountain Spotted Fever (RMSF) are diseases transmitted by ticks and occur throughout the United States during spring, summer, and fall.

Lyme Disease: The disease commonly occurs in summer and is transmitted by the bite of infected ticks. "Hot spots" in the United States include New York, New Jersey, Pennsylvania, Massachusetts, Connecticut, Rhode Island Minnesota, and Wisconsin. Few cases have been identified in other states.

Erlichiosis: The disease also commonly occurs in summer and is transmitted by the bite of infected ticks. "Hot spots" in the United States include New York, Massachusetts, Connecticut, Rhode Island Minnesota, and Wisconsin. Few cases have been identified in other states.

Primarily the Deer Tick transmits these diseases, which is smaller and redder than the common Wood Tick. The disease may be transmitted by immature ticks, which are small and hard to see. The tick may be as small as a period on this page.

Symptoms of Lyme disease include a rash or a peculiar red spot, like a bull's eye, which expands outward in a circular manner. The victim may have headache, weakness, fever, a stiff neck, swelling and pain in the joints, and eventually, arthritis. Symptoms of Erlichiosis include muscle and joint aches, flu-like symptoms, but there is typically no skin rash.

Control

Tick repellent containing diethyltoluamide (DEET) should be used in tick- infested areas, and pants legs should be tucked into boots. In addition, workers should search the entire body every three or four hours for attached ticks. Ticks should be removed promptly and carefully without crushing, since crushing can squeeze the disease-causing organism into the skin. A gentle and steady pulling action should be used to avoid leaving the head or mouth parts in the skin. Hands should be protected with surgical gloves when removing ticks.

8.13.3 Poisonous Plants

Common Poison Ivy (Rhus radicans) grows as a small plant, a vine, and a shrub. Poison Ivy occurs in every state. The leaves always consist of three glossy leaflets. Poison Sumac (Rhus vernix) grows as a woody shrub or small tree 5 to 25 feet tall. It usually contains nine leaves, with eight paired leaves and one on top, and is common in swampy areas. The plants are potent sensitizers and can cause a mild to severe allergic reaction. This reaction is called contact dermatitis.

Dermatitis, in Rhus-sensitive persons, can result from contact with the milky sap found in the roots, stems, leaves, and fruit. The sap may retain its potency for months or years in a dry atmosphere, and can occur during any time of the year. The sap may also be carried by animals, equipment or apparel.

The best form of prevention is to avoid contact. This can occur by wearing long sleeves and gloves if necessary. Disposable clothing, such as Tyvek, is recommended in high-risk areas to avoid exposure from contaminated apparel. Barrier creams and cleaners are also recommended.

8.13.4 Insects

Construction work presents many opportunities to be exposed to a variety of insects. Many these insects may present health and safety hazards. Wasps, bees, spiders, and mosquitoes present the bulk of these hazards.

Bees and wasps present problems to people working outdoors due to being stung and having adverse reactions to the venom injected during the sting. Mosquitoes on the other hand cause hazards by transmitting disease(s) from other infected animals and humans.

It is important to recognize the venomous spiders (spiders dangerous to humans) that are present in your work environment. Inspect boots, clothing and other areas before using/entering, as spiders tend to hide in dark places. Many spiders are nocturnal.

Preventing Exposure

Preventing exposure to insects can be accomplished by the following:

i) Wearing proper clothing and PPE

ii) Inspecting work areas for wasp or bee nests prior to conducting work activities

iii) Awareness of regional insects and their behavioral habits

iv) Shaking out clothing and shoes and inspecting areas for spiders

v) Using repellants

Proper Clothing

While working outdoors it is important to wear proper clothing and PPE. Insects tend to be attracted to bright colors, floral, prints, black, white, green, tan and khaki colors. Also it is important to wear long pants and if possible a long-sleeved shirt. Personnel should tuck the pant bottoms into the tops of boots and use insect proof work gloves (leather, thick cloth, etc.).

Repellants

It is important to ensure that there is an adequate supply of insect repellent. Use insect repellent, which contains DEET. Apply it to any exposed skin as per the manufacturer's directions.

Reaction to insect bites can range from mild reactions to severe allergic reactions. In addition, mosquitoes may carry life-threatening diseases such as West Nile virus.

Bee (and Wasp) Stings

Reaction to bee stings may range from painful swelling, redness, itching all the way to shock. Swelling, redness, and itching should stop hurting within a day or two. Treatment for these items can be done at home. The treatment will involve initially removing any stinger left in the skin by scraping away from the skin and towards the venom sac (thus preventing one from squeezing more venom into the wound). Afterwards apply ice and anti-histamine cream. If irritation, swelling and/or pain persist seek medical attention.

If the victim of a bee sting is aware that they are allergic to bees, or if they begin to exhibit signs such as difficulty swallowing, difficulty breathing, abdominal cramps, nausea then they may be going into anaphylactic shock and will require medical treatment.

If personnel know that they are allergic to insects then they will be required to carry their own insect sting kit as directed by their personal physician. The victim must be taken to the hospital immediately.

Mosquito Bites

Mosquito bites can range from mild skin irritation to severe viral infections. One of the most common viruses that mosquitoes carry is the West Nile virus. West Nile virus can cause encephalitis (swelling of the brain) and meningitis (swelling of the spinal cord).

First symptoms are as follows: rapid onset of headaches, dizziness, difficulty swallowing, deep muscle aches, nausea, stiff neck, high-fever, high fever, confusion, muscle weakness. Once any of these symptoms are exhibited seek medical attention.

8.13.4.1 Poisonous Spiders

Black Widow

Black Widow spiders are not usually deadly (especially to adults) and only the female is venomous. The female spider is shiny black, usually with a reddish hourglass shape on the underside of her spherical abdomen. Her body is about 1.5 inches long while the adult male's is approximately half that. The spider's span ranges between 1 to 3 inches. The adult males are harmless, have longer legs, and usually have yellow and red bands and spots over their back, and the young black widows are colored orange and white. The bite of a black widow is often not painful and may go unnoticed. However, the poison injected by the spider's bite can cause severe reactions in certain individuals.

Symptoms

Spider bites can range from mild skin irritation to severe infections and tissue damage depending on the type of spider. New York State has only one spider that is considered dangerous to humans (the black widow). Symptoms that may be experienced include abdominal pain, profuse sweating, swelling of the eyelids, pains to muscles or the soles of the feet, salivation and dry-mouth (alternating), and paralysis of the diaphragm. If a person is bitten, they should seek immediate medical attention. Clean the area of the bite with soap and water. Apply a cool compress to the bite location. Keep effected limb elevated to about heart level. Ask doctor if Tylenol or aspirin can be taken to relieve minor symptoms. Additional information can be obtained from the Poison Center (1-800-222-1222). Black widows are found throughout the tropics, U.S. and Canada.

8.13.5 Threatening Dogs

If you are approached by a frightened or menacing dog:

i) Do not attempt to run and don't turn your back.

ii) Stay quiet, and remember to breathe.

iii) Be still, with arms at sides or folded over chest with hands in fists.

iv) Slowly walk away sideways.

v) Don't stare a dog in the eyes, as this will be interpreted as a threat.

vi) Avoid eye contact.

vii) If you have a jacket, you could wrap it around your arm and should he snap, take the bite harmlessly.

viii) Try calling its bluff. Yell, "Sit!" "Stay!" or "Go home!" You might convince the dog that you are the stronger in the situation.

8.13.6 Rodents

Rodentia: (rats, mice, beavers, squirrels, guinea pigs, capybaras, coypu)

Rodents, or Rodentia, are the most abundant order of mammals. There are hundreds of species of rats; the most common being the black and brown rat.

The **Brown Rat** has small ears, blunt nose, and short hair. It is approximately 14 to 18 inches long (with tail). They frequently infest garbage/rubbish, slaughterhouses, domestic dwellings,

warehouses, shops, supermarkets; in fact, anywhere there is an easy meal and potential nesting sites.

The **Black Rat** can be identified by its' tail, which is always longer than the combined length of the head and body. It is also slimmer and more agile than the Norwegian or Brown rat. Its size varies according to its environment and food supply.

The **House Mouse** has the amazing ability to adapt and it now occurs more or less in human dwellings. In buildings, mice will live anywhere and they are very difficult to keep out. Mice are also totally omnivorous; in other words, they will eat anything.

Rats and mice often become a serious problem in cold winter months when they seek food and warmth inside buildings. They may suddenly appear in large numbers when excavation work disturbs their in-ground nesting locations or their food source is changed.

There are six major problems caused by rats and mice:

i) They eat food and contaminate it with urine and excrement.

ii) They gnaw into materials such as paper, books, wood, or upholstery, which they use as nest material. They also gnaw plastic, cinder blocks, soft metals such as lead and aluminum, and wiring, which may cause a fire hazard.

iii) Rats occasionally bite people and may kill small animals.

iv) They, or the parasites they carry (such as fleas, mites, and worms), spread many diseases such as salmonella, trichinosis, rat bite fever, Hantavirus, Weils disease, and the bubonic plague.

v) Rats can damage ornamental plants by burrowing among the roots or feeding on new growth or twigs. They also eat some garden vegetables, such as corn and squash.

vi) Rats and mice are socially unacceptable. These rodents have been a problem for centuries, chiefly because they have an incredible ability to survive and are so difficult to eliminate. In addition, they are extremely compatible with human behavior and needs.

8.14 Aggressive or Menacing Behavior

When confronted by an individual whose behavior becomes aggressive or menacing, staff should remain as calm as possible. Avoid arguing with or physically confronting the individual. Attempt to distance yourself from the individual. Advise others in the area to leave the scene and request police assistance by having someone call 911. Use the team approach. A staff member who is physically unable to break away from an attacker should shout for help.

The use of physical force is justified when a person believes that such force is necessary to protect himself or herself against the use or imminent use of unlawful physical force by another person. The use of physical force is also justified in the defense of another party, such as a co-worker, who is being subjected to unlawful physical force. Staff members can use any technique of legal self-defense in order to halt or distract an attacker until law officers arrive on the scene.

Should an aggressor only be interested in the taking or damaging of property, do not interfere. Obtain a description of the individual to provide to local authorities, including height, weight, race,

sex, clothing, accent, unusual markings such as tattoos, facial piercings, scars, hair color, and weapon, if any.

File an Incident Report with your immediate supervisor who will forward same accordingly.

9. Air Monitoring Program

This section of the HASP presents the requirements for conducting air monitoring at the Site. The air-monitoring program is designed to ensure protection for personnel working on Site as well as the surrounding community. The on-Site monitoring program will be conducted by the SHO and will consist of monitoring project personnel exposures to VOCs and dust/particulate matter. A Community Air Monitoring Plan (CAMP) will also be conducted at the Site and is presented in Attachment C. The air monitoring program will be completed with the use of real-time direct reading instruments.

Inhalation hazards are caused from the intake of vapors and contaminated dust. Air monitoring shall be performed during ground intrusive activities and during the handling and movement of all soils (both potentially impacted and clean). The purpose of air monitoring is to identify and quantify airborne contaminants in order to determine the level of worker protection needed. Initial screening for identification is often qualitative, but the determination of its concentration (quantification) must wait subsequent testing. Two principle approaches are available for identifying and/or quantifying airborne contaminants:

i) The use of real-time (on-Site) reading instruments (i.e., photoionization detector [PID])

ii) Laboratory analysis of air samples obtained by the use of various sampling equipment and methods

Direct reading instruments may be used to rapidly detect VOCs, and dusts. They are the primary tools of initial site characterization. The information provided by direct reading instruments could be used to institute appropriate measures (i.e., PPE, evacuation), and determine the most appropriate equipment for future monitoring. All direct reading instruments have inherent constraints in their ability to detect hazards. It is imperative that direct reading instruments are operated, and the data interpreted by qualified individuals who are thoroughly familiar with the particular devices, operating principles and limitations. At hazardous waste sites, where unknown and multiple contaminants are the rule rather than the exception, instrument readings should be interpreted conservatively. The following guidelines may facilitate accurate recording and interpretation:

i) Calibrate instruments according to the manufacturer’s instruction before and after each use.

ii) Develop chemical response curves if the instrument manufacturer does not provide these. Response curves/response factors are necessary to adapt PID action levels to actual PID readings when a specific contaminant of concern is detected via air sampling and/or colorimetric evaluation.

iii) Remember that the instrument readings have limited value where contaminants are unknown. When reading unknown contaminants, report them as "needle deflection", or "positive instruments response", or "units", rather than a specific concentration (i.e., PPM). Conduct additional monitoring at any location where a positive response occurs.

iv) A reading of zero should be reported as "no instrument response" rather than "clean" because quantities of the chemicals may be present that are not detectable by the instrument.

v) The survey should be repeated with several detection systems to maximize the number of chemicals detected.

The data collected throughout the monitoring effort shall be used to determine the appropriate levels of protection.

9.1 Site Air Monitoring

During invasive activities, the SHO will perform air monitoring to evaluate the exposure of project personnel to chemical and physical hazards, verify the effectiveness of engineering controls, evaluate the effectiveness of Site control measures, and to determine the proper level of PPE. During the progress of activities, the SHO will monitor the levels of VOCs and particulate levels on an hourly basis or more frequently as necessary based on Site conditions. The following monitoring equipment will be used for this purpose:

i) A PID equipped with an 10.6 or greater eV lamp

ii) A combination oxygen, combustible gas and carbon monoxide instrument (for entering excavations)

iii) A particulate monitor

An EZ perimeter air monitoring program will be implemented. PID and particulate monitoring will be conducted on an hourly basis or more frequently as necessary at the perimeter of the EZ in order to evaluate the effectiveness of Site control measures and verifies the integrity of the Site's clean areas. If necessary, the SHO in conjunction with the SS will adjust the EZ and CRZ boundaries.

In the event that an EZ perimeter air sample identifies readings that are above background conditions then air monitoring readings will also be taken at the Site perimeter. The SHO will evaluate all air sampling results and modify operating conditions on the Site as necessary to ensure all potentially exposed receptors are within safe limits.

All instruments will be calibrated on a daily basis in accordance with the manufacturer's guidelines. Records of all calibrations and real-time measurements will be kept in a bound field logbook or documented via air monitoring and calibration log sheets. All air monitoring data collected by SHO will be filed and made available upon request.

9.1.1 Real-Time VOC Monitoring

The SHO will continuously monitor for the presence of VOCs during the handling of impacted materials and intrusive activities. PID readings will be taken in and around all EZs. In addition, a combination oxygen, combustible gas and carbon monoxide instrument will be used to monitor the air in any excavation prior to and during personnel entry into the excavation. Action levels for upgrading or downgrading of PPE have been established and Table A.2 presents the action levels for the on-Site Air Monitoring Program.

An action level is a point at which increased protection or cessation of activities is required due to the concentration of contaminants in the work area. Most activities shall be initiated in Level D. The appropriate actions will be taken at designated action levels.

In addition to the action levels, an upgrade to Level C or evacuation of the immediate area is required if:

i) Any symptoms occur

ii) Sustained readings (15 minutes or greater) occur in the worker's breathing zone that are above the applicable action levels

iii) Requested by an individual performing the task

iv) Any irritation to eye, nose, throat, or skin occurs

9.1.2 Particulate Monitoring

The particulate action levels are located in Table A.2. Dust control measures (water spray, etc.) should be implemented at the Site to control visible dust emissions. All readings should be taken in the worker's breathing zone.

9.1.3 Oxygen, Combustible Gas, and Carbon Monoxide Monitoring

Air monitoring for oxygen, combustible gas, and carbon monoxide will also be conducted during excavation and during other activities where oxygen deficient, elevated carbon monoxide readings, and/or flammable atmospheres may be encountered. The point of excavation and the immediate work area around these activities must be monitored to ensure that an adequate level of oxygen is present, and to determine if a flammable atmosphere exists, especially prior to and during any entry into an excavation. All work activity must stop where monitoring indicates the flammable vapor concentration is 10 percent of the lower explosive limit (LEL) at a location with a potential ignition source. Such an area must be ventilated to reduce the concentration to an acceptable level.

Action levels for combustible gases, oxygen, and carbon monoxide are provided in Table A.2.

10. Decontamination Procedures

In general, everything that enters the EZ at this Site must either be decontaminated or properly discarded upon exit from the EZ. All personnel, including any State and local officials must enter and exit the EZ through the CRZ. Prior to demobilization, potentially contaminated equipment will be decontaminated on a wash pad (decontamination pad) and the equipment will be inspected by the SHO before it is moved into the clean zone. A temporary decontamination facility will be constructed at the Site. Any material that is generated by decontamination procedures will be collected and stored in a designated area in the EZ until disposal arrangements are made.

The type of decontamination solution to be used is dependent on the type of chemical hazards. The decontamination solution for heavy equipment and for any reusable PPE is Alconox/Liquinox soap. The MSDSs for Liquinox and any other chemical containing products brought to the Site will be maintained on Site by the SHO.

10.1 Equipment Decontamination Procedures

All equipment that comes in contact with waste material must be decontaminated within the CRZ by high-pressure water cleaner upon exit from the EZ. Decontamination procedures will include knocking soil/mud from machines; water brush scrubbing using a solution of water and Liquinox; and a final water rinse. Personnel shall wear Level C or Modified Level D protection, as determined by the SHO, when decontaminating equipment. All decontamination wash water and residues will be carefully collected and disposed of in accordance with the appropriate environmental regulations. Following decontamination and prior to exiting from the EZ, the SHO shall be responsible for ensuring that the item has been sufficiently decontaminated. This inspection shall be included in the Site log.

10.2 Personnel Decontamination Procedures

Procedures for decontamination must be followed to prevent the spread of contamination and to eliminate the potential for chemical exposure. Personnel decontamination will be completed in accordance with the procedures that are presented below. Potentially contaminated PPE and trash will be stored in covered and labeled containers until disposal arrangements are made. It will be kept separate from trash generated in clean areas of the Site.

All disposable equipment shall be doffed before meal breaks and at the conclusion of the workday and replaced with new equipment prior to commencing work. Spent PPE will be kept in covered containers.

Personnel decontamination will take place upon exiting the contaminated work area in the CRZ.

Modified Level D decontamination procedures are as follows:

Step 1 - Remove all visible contamination and loose debris by washing with clean water.

Step 2 - Remove all outer clothing that came in contact with the contamination (i.e., boot covers and outer gloves) and either dispose of in disposable container or wash in detergent solution and rinse.

Step 3 - Remove protective clothing; dispose of in disposable container.

Step 4 -Remove inner gloves, dispose of in disposable container.

Step 5 - Wash and rinse hands.

Level C decontamination procedures to be utilized as follows:

Step 1 - Remove all visible contamination and loose debris by washing with clean water.

Step 2 - Remove all outer clothing that came in contact with the contamination (i.e., boot covers and outer gloves) and either dispose of in disposable container or wash in detergent solution and rinse.

Step 3 - Remove protective clothing; dispose of in disposable container.

Step 4 - Remove respirator, sanitize prior to reuse.

Step 5 - Remove inner gloves; dispose of in disposable container.

Step 6 - Wash and rinse hands with soap and water.

11. Emergency Response and Contingency Procedures

It is essential that project personnel be prepared in the event of an emergency. Emergencies can take many forms; illnesses or injuries, chemical exposure, fires, explosions, spills, leaks, releases of harmful contaminants, or sudden changes in the weather. The following sections outline the general procedures for emergencies.

Emergency information should be posted as appropriate. Radios will be provided for contact purposes. All emergencies will be reported to the appropriate emergency responders. They may give the selected contractor further direction as to the responsibilities during any emergency situation. In general, project personnel will shut down equipment and evacuate to a safe pre-determined meeting area (rally point) during Site emergencies.

The SHO will contact and meet on-Site with local emergency response agencies (e.g., fire department, police department, etc.) prior to initiating construction activities. The purpose of this meeting is to inform these local authorities of the nature of the work and potential risks, to ensure that these responders are equipped to respond to a Site emergency, and to identify and resolve any potential problems, concerns, or conflicts.

The SHO will be informed of Site hazards and activities prior to project initiation so those emergency situations can be handled most efficiently. A general orientation meeting to discuss emergency response procedures is to be held prior to initiating project activities.

The SHO will notify all project personnel of the emergency through radio/cell phone communications. Radios and cell phones will be taken to the rally point to enable further receipt of instruction(s) from the SHO.

11.1 Accident, Injury and Illness Reporting

Any work-related incident, accident, injury, illness, exposure, or property loss shall be immediately reported to your supervisor, the SHO and the SS. The SS and/or SHO will report the accident details to the RSHM and will submit a completed accident report form to GHD. The sample Incident Reporting Form is provided in Attachment B. The selected contractor may use their own company-specific form if they so choose. The report must be filed for the following circumstances:

i) Accident, injury, illness, or exposure to project personnel

ii) Injury to any subcontractor personnel

iii) Damage, loss, or theft of property

iv) Any motor vehicle accident regardless of fault, which involves a company vehicle, rental vehicle, or personal vehicle while the individual is acting in the course of employment

The SHO and PM will investigate occupational accidents resulting in employee injury or illness. This investigation will focus on determining the cause of the accident and modifying future work activities to eliminate the hazard.

All project personnel have the obligation and right to report unsafe work conditions, previously unrecognized safety hazards, or safety violations of others. If you wish to make such a report, it may be made orally to your supervisor or other member or management, or you may submit your concern in writing, either signed or anonymously.

11.2 Emergency Contacts

Fire Department	911
Police Department	911
Ambulance	911
Hospital: Kenmore Mercy Hospital	(716) 447-6121

See Figure 1 – Hospital Route Map Directions to the Hospital.

Communication between work areas and the command post, located within the CZ, will be via verbal communication, auto horn, or two-way radio. The SHO will use a mobile telephone to communicate with outside emergency and medical facilities.

The following signals shall be established for use with auto or compressed air-type horns:

i) 3 Blasts: evacuate exclusion zones and meet at the designated evacuation area

ii) An "All Clear" will be conveyed by radio communication

11.3 Additional Emergency Numbers

GHD Incident Reporting Hotline	(866) 529-4886
National Response Center (NRC)	(800) 424-8802
Poison Information	(800) 764-7661
Utility Locating Commission (One Call Nationwide)	811
Agency for Toxic Substances & Disease Registry (24 Hours)	(404) 488-4100
U.S. EPA Emergency Response	(800) 424-8802
State of New York Emergency Response Commission	(513) 457-9996
NYSDEC Site Representative (TBD)	(716) 851-7220
Project Manager (Jim Kay)	(519) 884-0510
Regional Corporate Safety and Health Manager (Craig Gebhardt)	(716) 297-6150
Contractor Site Superintendent (TBD)	TBD
Contractor Safety and Health Officer (TBD)	TBD

11.4 Emergency and First Aid Equipment

Emergency safety equipment will be available for use by project personnel and will be located and maintained on Site. The safety equipment will include, but is not limited to, the following:

i) Portable emergency eye wash and drench shower (pressurized)

ii) Two 20-pound ABC type dry chemical fire extinguishers

iii) Field eye wash/flush bottles

iv) Approved first-aid kit for a minimum of twenty personnel

v) Fire blanket

vi) Spill response kit containing absorbent materials (booms/socks, pads, and earth/clay), overpack drum, shop vacuum, and hand tools (shovel, rake/hoe, etc.)

vii) Portable air horn

11.5 Project Personnel Responsibilities During Emergencies

Safety and Health Officer (SHO)

As the administrator of the HASP, the SHO has primary responsibility for responding to and correcting emergency situations. The SHO will:

i) Take appropriate measures to protect personnel including: posting of acceptable Site evacuation routes, withdrawal from the EZ, total evacuation and securing of the Site or upgrading or downgrading the level of protective clothing and respiratory protection.

ii) Take appropriate measures to protect the public and the environment including isolating and securing the Site, preventing runoff to surface waters, and ending or controlling the emergency to the extent possible.

iii) Ensure that appropriate Federal, State, and local agencies are informed, and emergency response plans are coordinated. In the event of fire or explosion, the local fire department should be summoned immediately. In the event of an air release of toxic materials, the local authorities should be informed in order to assess the need for evacuation. In the event of a spill, sanitary districts and drinking water systems may need to be alerted.

iv) Ensure that appropriate decontamination treatment or testing for exposed or injured personnel is obtained.

v) Determine the cause of the incident and make recommendations to prevent the reoccurrence.

vi) Ensure that all required reports have been prepared.

11.6 Medical Emergencies

Any person who becomes ill or injured in the EZ must be decontaminated to the maximum extent possible. If the injury or illness is minor, full decontamination should be completed and first aid administered prior to transport. If the patient's condition is serious, at least partial decontamination should be completed as much as possible without causing further harm to the patient. First aid should be administered while awaiting an ambulance or paramedics. All injuries and illnesses must immediately be reported to the SHO, SS and PM.

Any person transporting an injured/exposed person to a clinic or hospital for treatment should take with them directions to the hospital and a copy of the identified chemicals on Site to which they may have been exposed.

Any vehicle used to transport contaminated personnel, will be cleaned or decontaminated as necessary.

11.7 Fire or Explosion

In the event of a fire or explosion, the local fire department should be summoned immediately. Upon their arrival, the SHO or designated alternate will advise the fire commander of the location, nature, and identification of the hazardous materials on Site.

If it is safe to do so, Site personnel should:

i) Report to the PM

ii) Use fire-fighting equipment available on Site

iii) Remove or isolate flammable or other hazardous materials, which may contribute to the fire

11.8 Spill Control and Countermeasures

If a spill has occurred, the first step is personal safety, then controlling the spread of contamination if possible. Project personnel will immediately contact Site management to inform them of the spill and activate emergency spill procedures.

General Spill Response Procedures

If a spill occurs, the following general procedures will be followed:

i) Notify the SHO, SS and PM

ii) Evacuate immediate area of spill

iii) Determine the needed level of PPE

iv) Don required levels of PPE and prepare to make entry to apply spill containment and control procedures

v) After obtaining the proper spill response tools (shovels, booms and pads, absorbent socks, etc.) and PPE, personnel will attempt to contain the spill so that it does not enter any conveyance (sewer, drainage ditch, etc.) that eventually discharges to surface water

vi) Locate and abate source of spill

vii) Absorb or otherwise clean up the spill and containerize the material, sorbent, and affected soils

viii) Clean and decontaminate the affected area(s)

ix) Replace used/spent spill kit contents

All spill material and debris will be managed in a manner that complies with applicable federal, state, and local environmental rules regarding recycling or disposal of wastes.

The SHO and SS have the authority to commit resources as needed to contain and control released material and to prevent its spread to off-Site areas.

12. Recordkeeping

The SHO shall establish and maintain records of all necessary and prudent monitoring activities as described below:

i) Name and job classification of the employees involved on specific tasks

ii) Records of fit testing and medical surveillance results for project personnel

iii) Records of all OSHA and other applicable safety training certifications for project personnel

iv) Records of daily Site safety inspections

v) Records of training acknowledgment forms and daily safety meetings

vi) Emergency report sheets describing any incidents or accidents

vii) Air monitoring equipment calibrations

viii) Air monitoring data

Tables

Table A.1

Properties of Potential Site Contaminants

	Chemical Name (Synonyms)	Concentration at Site	Exposure Limits	Routes Of Entry	Symptoms/Health Effects	Chemical Properties	Physical Characteristics
Benzene CAS-71-43-2	Benzene Benzol CAS-71-43-2	66 ppm	TLV: 0.5 ppm [skin] PEL: 1 ppm STEL: 2.5 ppm IDLH: 500 ppm	Inhalation Absorption (skin) Ingestion	ACUTE: Irritation to eyes, skin, respiratory tract; dizziness; headache; nausea; staggered gait; fatigue, abdominal pain. CHRONIC: Defatting of the skin, may have effects on bone marrow and immune system, decrease in blood cells. Carcinogenic to humans.	(FP) 12°F (VP) 75 mm (IP) 9.24 eV (UEL) 7.8% (LEL) 1.2%	Colorless to light-yellow liquid with an aromatic odor. Solid below 42°F.
Toluene CAS-108-88-3	Toluene Methylbenzene Toluol CAS-108-88-3	140 ppm	TLV: 20 ppm PEL: 200 ppm STEL: NE IDLH: 500 ppm	Inhalation Ingestion Absorption	ACUTE: Irritation to eyes and respiratory tract. Ingestion may cause chemical pneumonitis. Affects CNS. Unconsciousness and cardiac dysrhythmia at high level exposures. CHRONIC: Defatting of the skin. Affects CNS. Enhanced hearing damage.	(FP) 40°F (VP) 21 mm (IP) 8.82 eV (UEL) 7.1% (LEL) 1.1%	Colorless liquid with a sweet, pungent, benzene-like odor.
Ethylbenzene CAS-100-41-4	Ethylbenzene Ethylbenzol EB CAS-100-41-4	60 ppm	TLV: 20 ppm PEL: 100 ppm STEL: NE IDLH: 800 ppm	Inhalation Ingestion Skin contact Eye contact	ACUTE: Causes irritation of the eyes, skin, mucous membranes, and respiratory tract. Effects on CNS. CHRONIC: Defatting of the skin, narcosis, and coma.	(FP) 55°F (VP) 7 mm (IP) 8.76 eV (UEL) 6.7% (LEL) 0.8%	Colorless liquid with an aromatic odor.
Xylene (o;m;p isomers) CAS-106-42-3	Xylene (o;m;p isomers) CAS-106-42-3	100 ppm	TLV: 100 ppm PEL: 100 ppm STEL: 150 ppm IDLH: 900 ppm	Inhalation Absorption Ingestion	ACUTE: Irritation to eyes and respiratory tract. Ingestion may cause chemical pneumonitis. Affects CNS. CHRONIC: Defatting of the skin, lung damage resulting in chronic bronchitis. Affects CNS and blood.	(FP) 90/82/81°F (IP) 7/9/9 mm (IP) 8.56eV (UEL) 6.7% (LEL) 0.9%	Colorless liquid with an aromatic odor. (p-isomer solid <56°F).
Methylene Chloride CAS-75-09-2	Methylene Chloride DMC Dichloromethane CAS-75-09-2	2.6 ppm	TLV: 50 ppm PEL: 25 ppm STEL: NE IDLH: 2,300 ppm	Inhalation Ingestion Absorption	ACUTE: Irritation of the eyes, skin and respiratory tract. Exposure could cause lowering of consciousness and formation of carboxyhemoglobin, fatigue and unnatural drowsiness. CHRONIC: Dermatitis. May cause damage to CNS and liver. Possible human carcinogen.	(FP) NE (VP) 350 mm (IP) 11.32 eV (UEL) 23.0% (LEL) 13.0%	Colorless liquid with a chloroform-like odor. Gas above 104°F.

Notes:

FP	FP - Flash Point	PEL	PEL - OSHA Permissible Exposure Limit
IDLH	IDLH - Immediately Dangerous to Life ord Health	STEL	STEL - Short Term Exposure Limit
IP	IP - Ionization Potential	TLV	TLV - ACGIH Threshold Limit Value
NE	NE - Not Established (Information Not Available)	VP	VP - Vapor Pressure
NA	NA - Not Applicable	C	C - Ceiling Exposure Limit
CNS	CNS - Central Nervous System	[skin]	[skin] - potential for dermal absorption
PNS	PNS - Peripheral Nervous System	mm	mm - milimeters Hg (mercury)
ppm	ppm - parts per million	eV	eV - electrovolts
mg/m3	mg/m3 - miligrams per cubic meter		

Table A.1

Properties of Potential Site Contaminants

	Chemical Name (Synonyms)	Concentration at Site	Exposure Limits	Routes Of Entry	Symptoms/Health Effects	Chemical Properties	Physical Characteristics
Acetone CAS-67-64-1	Acetone 2-Propanone Methyl ketone Dimethyl ketone CAS-67-64-1	0.7 ppm	TLV: 500 ppm PEL:1,000 ppm STEL:750 ppm IDLH: 2,500 ppm	Inhalation Ingestion Skin contact Eye contact	ACUTE: Vapors irritating to eyes and respiratory tract. May cause headaches and dizziness, effects on CNS, liver, kidneys and gastrointestinal tract. CHRONIC: Prolonged contact causes defatting of the skin, possibly dermatitis. Substance may affect blood and bone marrow.	(FP) 0°F (VP) 180 mm (IP) 9.69 eV (UEL) 12.8% (LEL) 2.5%	Colorless liquid, with a fragrant mint-like odor.
1,2-Dichloroethylene CAS-540-59-0	cis-1,2-Dichloroethene Acetylene dichloride 1,2-Dichloroethylene CAS-540-59-0	2.7 ppm	TLV: 200 ppm PEL: 200 ppm STEL: NE IDLH: 1000 ppm	Inhalation Ingestion Skin contact Eye contact	ACUTE: Irritation of the eyes and respiratory tract. CNS depression. Exposure could cause lowering of consciousness. CHRONIC: Defatting of the skin. May cause damage to liver.	(FP) 36-39°F (VP) 180-265 mm (IP) 9.65 eV (UEL) 12.8% (LEL) 5.6%	Colorless liquid (usually a mixture of the cis and trans isomers) with a slightly acrid, chloroform-like odor.
Vinyl Chloride CAS-75-01-4	Vinyl Chloride Chloroethene VCM Chloroethylene CAS-75-01-4	2.2 ppm	TLV: 1 ppm PEL: 1 ppm STEL: NE IDLH: NE	Inhalation Skin contact Eye contact	ACUTE: Irritation to eyes. Affects CNS. May cause unconsciousness. CHRONIC: Affects liver, spleen, blood and peripheral blood vessels, tissue and bones in fingers. Human carcinogen.	(FP) NA (gas) (VP) 3.3 atm (IP) 9.99 eV (UEL) 33.0% (LEL) 3.6%	Colorless gas or liquid (<7°F) with a pleasant odor at high concentrations.
Fluoranthene (PAH)	Fluoranthene (PAH)	150 ppm	TLV: 0.2 mg/m3 PEL: 0.2 mg/m3 STEL: NE IDLH: NE	Absorption Inhalation Ingestion	ACUTE: Dermatitis and bronchitis CHRONIC: Cancer of lungs, skin, bladder and kidneys. Skin carcinogen.	(FP) NE (VP) NE (IP) NE (UEL) NE (LEL) NE	Colored needles, light yellow, fine crystals.
Chrysene CAS-65996-93-2 218-01-9	Chrysene CAS-65996-93-2 218-01-9	47 ppm	TLV: -(L) PEL: 0.2 mg/m3 benzene - soluable fraction STEL: NE IDLH: 80 mg/m3	Inhalation Skin contact Eye contact	ACUTE: Bronchitis. CHRONIC: Dermatitis, may cause damage to bladder, kidneys and lungs. Potential occupational carcinogen	(FP) Varies (VP) NE (IP) Varies (UEL) NE (LEL) NE	Black or dark brown amorphous residue. A polycyclic aromatic hydrocarbon (PAH). Pure chrysene is a colorless crystalline solid that is virtually insoluble in water. Animal Carcinogen.

Notes:

Table A.1

Properties of Potential Site Contaminants

	Chemical Name (Synonyms)	Concentration at Site	Exposure Limits	Routes Of Entry	Symptoms/Health Effects	Chemical Properties	Physical Characteristics
Naphthalene CAS-91-20-3	Naphthalene Naphthalin Coal tar White tar CAS-91-20-3	270 ppm	TLV: 10 ppm PEL: 10 ppm STEL: 15 ppm IDLH: 250 ppm	Inhalation Ingestion Skin contact Absorption Eye contact	ACUTE: Levels above 10 ppm may cause: Inhalation - Headache, nausea, excessive sweating and vomiting; Skin - May cause irritation and if hypersensitive to naphthalene then severe irritation may occur; Eyes - Irritation. Direct contact may cause blurring vision and damage to the cornea; Ingestion - Nausea, vomiting, abdominal pain, bladder irritation, and brown or black coloration of urine. CHRONIC: Clouding of the eyes. Chronic skin problems in cases of hypersensitivity. Liver and kidney damage.	(FP) 174°F (VP) 0.08 mm (IP) 8.12 eV (UEL) 5.9% (LEL) 0.9%	Colorless to brown solid with an odor of mothballs. Sometimes found as a crystalline white solid. Shipped as a molten solid.
Phenanthrene CAS-65996-93-2	Phenanthrene Coal tar pitch volatile CAS-65996-93-2	180 ppm	TLV: 0.2 mg/m3 PEL: 0.2 mg/m3 STEL: NE IDLH: 80 mg/m3	Inhalation Absorption Ingestion Skin/mucus membrane contact	ACUTE: Photosensitivity; nausea; headache; dizziness CHRONIC: Mutagen (may cause birth defects); eye damage. Potential occupational carcinogen.	(FP) 340 F (VP) 1 mm (IP) 7.8 eV (UEL) NE (LEL) NE	White crystalline solid with a faint aromatic odor
Pyrene (PAH) CAS-65996-93-2	Pyrene (PAH) CAS-65996-93-2	99 ppm	TLV: 0.2 mg/m3 PEL: 0.2 mg/m3 STEL: NE IDLH: NE	Absorption Inhalation	ACUTE: Dermatitis and bronchitis CHRONIC: Cancer of lungs, skin, bladder and kidneys. Skin carcinogen.	(FP) NE (VP) NE (IP) NE (UEL) NE (LEL) NE	Colorless to light yellow solid or off-white solid.
PAHs CAS-65996-93-2	Polyaromatic Hydrocarbons PAHs Coal Tar Pitch Volatiles CAS-65996-93-2	1350 ppm (Maximum cumulative concentration)	TLV: 0.2 mg/m3 PEL: 0.2 mg/m3 STEL: NE IDLH: 80 mg/m3	Inhalation Ingestion	ACUTE: Bronchitis. CHRONIC: Dermatitis, may cause damage to bladder, kidneys and lungs. Potential occupational carcinogen.	(FP) Varies (VP) NA (IP) Varies (UEL) NA (LEL) NA	Black or dark brown amorphous residue. Properties vary depending upon specific compound.

Notes:

FP	FP - Flash Point	PEL	PEL - OSHA Permissible Exposure Limit

Table A.2

On-Site Air Monitoring Program Action Levels
Health and Safety Plan
Tonawanda Coke Site, NYSDEC Site #915055

Monitoring Device	*Action Level*	*Action*
Photoionization Detector (PID)	**Benzene present in the Breathing Zone:**	Determine via Colorimetric Sampling
10.6 or greater eV lamp	<1.0 ppm or Background	Full-Face Respirator Available
Detector Tubes	≥1.0 ppm and ≤5 ppm	Full-face air purifying respirator Level C PPE MSA GME P100 Cartridge
	>5 ppm and <500 ppm	Supplied air respirator Level B PPE. Implement additional engineering controls
	≥500 ppm	Shut down activities. Notify SHO. Implement additional engineering controls
	Benzene not present in the Breathing Zone:	Determine via Colorimetric Sampling
	<10 ppm or Background	Full-Face Respirator Available
	≥10 ppm and <50 ppm	Wear Full-Face Respirator - Level C PPE
	≥50 ppm and <1,000 ppm	Wear Supplied Air Respirator - Level B PPE, Implement Additional Engineering Controls
	≥1,000 ppm	Shut down activities. Notify SHO. Implement additional engineering controls
	Vinyl Chloride present in the Breathing Zone:	Determine via Colorimetric Sampling
	<1 ppm or Background	No Action Required - Continue Monitoring
	≥1 ppm	Level B - Continue Monitoring
Dust/Particulate - (Impacted Soils/Sludges/Sediments)	<2.0 mg/m³ or Background	Full-Face Respirator Available
	≥2.0 mg/m³ and <50 mg/m³	Wear Full-Face Respirator - Level C PPE
	>50 mg/m³	Wear Supplied Air Respirator - Level B PPE, Implement Additional Engineering Controls
Hydrogen Sulfide	>5 ppm	Shut down activities. Notify SHO. Implement additional engineering controls
Carbon Monoxide	>35 ppm	Shut down activities. Notify SHO. Implement additional engineering controls
Combustible Gas Indicator	>10 Percent LEL	Cease operations and move to a safe place. Notify SHO. Do not continue working until conditions are constantly below 10 percent LEL
Oxygen Meter	<19.5 Percent or >23.5 Percent When oxygen levels are outside this range, percent LEL readings are not reliable	Cease operations and move to a safe place. Notify SHO. Do not continue working until oxygen levels are between 19.5 and 23.5 percent

If GHD is unable to identify/quantify the contaminants, supplied air will be required when the PID reading is greater than background, as the contaminant will be unknown and NIOSH, OSHA, and the manufacturer's use requirements for Level C (air purifying respirators) will not be met. If PID readings subside, workers can downgrade as necessary. GHD will upgrade to supplied air and attempt to obtain additional information for possible chemicals present in GHD's work area. The Owner will need to provide/obtain additional information as to the identity of the contaminant(s) in order to permit the use of Modified D and/or Level C.

ppm parts per million

Table 2

On-Site Air Monitoring Program Action Levels
Health and Safety Plan
Retail Gas Facility

Monitoring Device	***Action Level***	***Action***
Photoionization Detector (PID) with 10.2 eV lamp or greater	***PID Action Levels for General Site Activities (sustained readings - greater than 5 minutes - taken from the worker's breathing zone)***	
	<10 ppm or Background (PID reading)	Initiate activities in Level D PPE
	≥10 ppm and <50 ppm (PID reading)	Notify GHD PM if an upgrade in respiratory protection is required. Wear FFAPR equipped with organic vapor/P100 cartridges - Level C PPE. Implement additional engineering controls.
	≥50 ppm	Shut down activities and evacuate - Notify PM/PC and RSHM immediately.

Monitoring will occur before beginning any activities (**LIST ACTIVITIES HERE**) and at least every 15 minutes during potential exposure. NOTE: Since benzene is only a small component of gasoline (less than 5%), a conservative action level of 10 ppm via PID monitoring has been adopted for use by CRA in lieu of the individual exposure levels for benzene or gasoline. The individual PEL for benzene is 1 ppm while the individual TLV for gasoline is 300 ppm.

Job Safety Analyses (JSAs)

Boat Safety

Field staff must review job-specific work plan and coordinate with project manager to verify that all up-front logistics are completed prior to starting work including, but not limited to, permitting, access agreements, and notification to required contacts (e.g., site managers, inspectors, clients, subcontractors, etc.). Additionally, a tailgate safety meeting must be performed and documented at the beginning of each workday. **Stop, Think, Act, Review (STAR)** must be used prior to any activity. All personnel must possess the appropriate training prior to initiating scheduled tasks. Also consider weather conditions. GHD personnel have the authority and responsibility to use **Stop Work Authority (SWA).**

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Mob equipment to boat launch	• Over loading boat capacity • Inclement weather • Lifting hazards • Manual material handling • Back injury • Pinch points • Moving or flying projectiles inside vehicle while transporting equipment • Slip/trip/fall hazards • Fuel spill	• Review boat capacity and complete weight survey including personnel and gear • Monitor weather forecasts • Make sure grip is adequate; wear leather/cotton gloves • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical or a buddy lift) will be required • Ensure all equipment is properly secured during transport • Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and keep lower back in a neutral position • Avoid one-handed carrying if possible; maintain awareness of footing • Refuel in appropriate location, no sparks or static buildup • Practice STAR	Competent operator and Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
2	Launch boat	• Lifting hazards • Manual material handling • Back injury • Pinch points • Moving or flying projectiles inside vehicle while transporting equipment • Slip/trip/fall hazards • Fuel spill • Drowning	• Practice STAR • Make sure grip is adequate; wear leather/cotton gloves • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical or a buddy lift) will be required • Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and keep lower back in a neutral position • Avoid one-handed carrying if possible; maintain awareness of footing • Review JSA for proper fueling • Wear appropriate PFD or life vest • Bring boating safety kit	Competent operator	
3	Navigate boat to site	• Causing unnecessary wake • Running aground • Disturbing others • Drowning	• Obey posted signage • Follow channel marked with buoys • Follow proper boating etiquette • Practice STAR • Wear appropriate PFD or life vest • Bring boating safety kit • Remain seated	Competent operator	
4	Perform sampling activities	• Tipping boat • Boating traffic	• Remain seated when operating; If the boat tips over, remain with the boat • Be aware of surroundings, verify water depth in shallow waters	Field Staff	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress/ergonomics/lifting techniques; **Exposure** - inhalation/skin hazards. Specify the hazards and do not limit the description to a single word such as "Caught".

(3) Aligning with the Job Steps, Task Activity Description, and Potential Hazard columns, describe what actions or procedures are necessary to eliminate or minimize the hazards. Be clear, concise and specific. Use objective, observable, and quantified terms. Avoid subjective general statements such as "be careful" or "use as appropriate".

Site personnel participating in JSA review:
I have participated in the review and discussion of the Job Safety Analysis (JSA) listed on this document and understand the duties I am responsible to fulfill. As part of my work, I know I have the responsibility and obligation to STOP work with a **Stop Work Authority (SWA)** if conditions change and/or potential hazards have been identified.

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Decontamination of sampling equipment (including pumps, bailers, tubing, etc.)	• Contaminant exposure • Pinch points • Slip/trip/hit/fall hazards • Lifting hazards • Back injury • Manual material handling	• Set up decon station to capture any spills to avoid cross-contamination and manage wastes • Wear appropriate PPE • Scrub equipment clean then rinse and verify it is clean and free of contamination • Avoid putting hands in or near pinch points • Maintain good housekeeping and be aware of surroundings • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical means, such as a dolly, cart, or a buddy lift) will be required • Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and keep lower back in a neutral position • Refer to the HASP for additional lifting techniques	Field Staff	
2	Decontamination of personnel	• Contaminant exposure • Slip/trip/hit/fall hazards	• Refer to the HASP for specific procedures but in general start with most contaminated article and remove until inner gloves are the last item left • Dispose of used PPE in accordance with site requirements • Wash hands and face before eating, drinking, or using tobacco products • Take care when removing PPE (boots, gloves, etc.); sit down to remove/change boots as necessary	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
3	Management of waste derived from decontamination activities	• Contaminant exposure • Lifting hazards • Back injury • Manual material handling	• Containerize decon waste (e.g., water, used PPE) as required • Properly dispose of decon fluids (e.g., sediments) • Refer to step 1 and the HASP for additional lifting information	Field Staff	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress/ergonomics/lifting techniques; **Exposure** - inhalation/skin hazards. Specify the hazards and do not limit the description to a single word such as "Caught".

(3) Aligning with the Job Steps, Task Activity Description, and Potential Hazard columns, describe what actions or procedures are necessary to eliminate or minimize the hazards. Be clear, concise and specific. Use objective, observable, and quantified terms. Avoid subjective general statements such as "be careful" or "use as appropriate".

Site personnel participating in JSA review:
I have participated in the review and discussion of the Job Safety Analysis (JSA) listed on this document and understand the duties I am responsible to fulfill. As part of my work, I know I have the responsibility and obligation to STOP work with a **Stop Work Authority (SWA)** if conditions change and/or potential hazards have been identified.

Excavation Oversight

Field staff must review job-specific work plan and coordinate with project manager to verify that all up-front logistics are completed prior to starting work including, but not limited to, permitting, access agreements, and notification to required contacts (e.g., site managers, inspectors, clients, subcontractors, etc.). Additionally, a tailgate safety meeting must be performed and documented at the beginning of each workday. **Stop, Think, Act, Review (STAR)** must be used prior to any activity. All personnel must possess the appropriate training prior to initiating scheduled tasks. Also consider weather conditions. GHD personnel have the authority and responsibility to use **Stop Work Authority (SWA).**

Katherine Galanti				

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Perform the STAR process; discuss SWA; verify Permit to Excavate and Utility Clearance Form is completed (overhead and underground); verify excavation layout	• Underground utility strike • Overhead utilities	• QSF 019 and Permit to Excavate Forms completed and signed off • Utility Locate Ticket number on file within 10 days of excavation startup? • Mark work area and safe distances for overhead lines; use spotter as necessary	Senior Field Team Leader	
2	Set up necessary work area and traffic controls	• Fall-in • Caught-between • Struck-by • Lifting hazards • Manual material handling • Back injury	• Demarcate site and work areas to ensure that personnel and truck/equipment traffic is maintained safely and smoothly • Stockpile and laydown area are set up properly • Perform a pre start meeting, inform subcontractor of safe lifting practices • Reduce travel distance when there is a need to carry/lift materials • Make sure grip is adequate; wear leather/cotton gloves when setting up barricades • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical or a buddy lift) will be required • Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and keep lower back in a neutral position • Avoid one handed carrying if possible; maintain awareness of footing	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
3	Hand digging and potholing activities (where/if necessary based on utility locates)	• Underground utility strike	• Use preventive techniques • Maintain proper utility clearances with heavy equipment and use hand digging/potholing when necessary • Refer to step 2 and the HASP for additional lifting information	Field Staff	
4	Heavy equipment operations to excavate and handle soils and waste materials	• Caught-between and struck-by hazards • Underground/overhead utilities	• Stay out of swing radius • Use spotters to verify clear route of travel and work area • Maintain eye contact with operator and/or signal operator • Keep soil 2 feet from edges • Inspect heavy equipment and document inspection • Ensure the above utility clearances and safe work protocols are followed	Field Staff	
5	Excavating activities	• Soil cave-in • Noise hazard • Struck-by/against hazards • Potential contact with chemical waste material, organic vapors, and particulate	• Keep proper distances from edge of excavation • Limit equipment operations in trench area • Keep work area free of trip hazards • Perform necessary soil classification • Use hearing protection as necessary • Wear designated PPE and conduct air monitoring	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
6	Excavation entry activities (if required)	• Soil cave-in • Struck-by/against hazards • Hazardous atmospheres • Slip/trip/fall hazards • Emergency egress	• Keep proper distances from edge of excavation • Limit equipment operations in trench area • Keep work area free of trip hazards • Perform necessary soil classification • Use daily inspection form to document/meet competent person inspection requirements • Inspect trench after any change in conditions (e.g., rain, equipment vibrations) • Provide fall protection measures • Utilize shoring equipment properly – ensure that tabulated data sheet is on site • Use 4 gas monitor and PID to screen excavation air prior to and during entry • Ladder safety and proper slope of ladder • Use harness and lifeline when entering trenches over 5 feet deep	Field Staff	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Katherine Galanti				

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Discuss STAR and SWA	• Site personnel not aware of STAR and SWA	• Project team (GHD) discusses importance of and documentation procedures for SWA during pre-job safety meeting • Use SWA to stop any work that is unsafe • Discuss PPE requirements • Work gloves required at all times • No fixed open blade knives (FOBKs) allowed	Senior Field Team Leader	
2	Inspect and calibrate sampling and monitoring equipment	• Lost time from improperly functioning equipment • Incorrect sampling procedures/ collection due to malfunctioning equipment	• Ensure all equipment is functioning properly; complete Quality Control documents	Field Staff	
3	Establish Access/Egress Routes into ditch/pond by placing rope and/or ladders on side slopes	• Hand Injury • Pinch points • Back strains • Property damage • Gravity hazards • Biological hazards	• Wear work gloves at all times • Be aware of hand placement • When placing ladder, do not overextend the load away from body. • Check tie off point to ensure integrity. Tie rope and/or ladder off to a rigid object • To extent possible, place ladder feet on bottom of pond/slope. Tie off ladder to prevent further movement/slippage • Be aware of bees, wasps, etc. Use bug spray as needed	Field Staff	
4	Entering Ditch/Pond	• Injury • Slips/Trips/Falls • Limited access/egress • Biological hazards	• Wear required PPE including hard hat • Wear work gloves and be aware of hand placement at all times • Utilize pathway which is free of slip/trip hazards to the extent possible. Communicate any encountered potential slip/trip hazards to other field	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
			team members • Maintain 3 points of contact at all times • Ensure ladder or rope to aid entry is secure • Ensure access/egress routes have been established prior to entering pond • Be aware of surroundings and assess presence of other potential biological hazards		
5	Lowering Equipment down slope into ditch/pond	• Injury • Gravity hazards and impact injury • Back strain • Damaged Equipment	• Position one person at the top of the slope and one near the bottom. The person at the bottom of the slope should be positioned out of the pathway should equipment fall to prevent impact injury • Wear work gloves at all times • Lower equipment slowly in controlled manner using a rope or by hand • Do not overextend when lowering equipment • Avoid dropping equipment, lower carefully and in controlled manner • Verbally communicate with team members when equipment is being lowered	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
6	Walking in Ditch/Pond to Sample Location	• Slips/trips/hit/fall hazards • Heat stress • Biological hazards • Wildlife encounters • Potential adverse weather conditions	• Use buddy system while in ditch/pond • Spot check to identify hazards, establish pathways which is most free of slip and trip hazards, beware of trip hazards, keep work areas free of clutter, communicate hazards to on-site personnel • Be aware of surroundings • Ensure stable footing is present before proceeding • Heightened awareness of wasps, ants, bees, ticks, spiders, other animals and poison plants and use bug spray as necessary • Perform a thorough self-examination for ticks at the end of the day • Monitor for heat stress, establish work/rest regimes, wear heat stress PPE, and have liquids available • Be aware of any rapidly changing environmental conditions and respond accordingly	Field Staff	
7	Advancing hand auger or post-hole digger	• Overhead and underground utilities • Lifting hazards • Back injury • Manual material handling • Improper hand auger operation • Dust/flying debris/contaminants	• Inspect route to be traveled • Use precaution when advancing hand auger/post-hole tool • Assess the potential for underground structures (i.e., utilities) at the sign of unusual resistance • Do not work under overhead utilities • Know the length of the hand auger/post-hole tool and how close it could come to utilities • Use proper bending/lifting techniques by bending and lifting with legs and not with back • Do not twist at waist when turning the auger • Dust particles may become airborne; if dust becomes excessive, use a dust mask • When pulling the hand auger/post-hole out of the boring, materials can become airborne	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
			• Pull up slowly using your legs • Do not jerk the hand auger/post-hole out of the hole • Get assistance if you cannot maintain proper posture by yourself • Wear nitrile gloves under high-visibility work gloves when advancing the hand auger/post-hole tool to avoid dermal contact with potential contaminants		
8	Sample collection	• Contaminant exposure • Cuts from container breakage • Sample misidentification • Pinch Points • Lost time due to incorrect sample selection	• Wear nitrile gloves when handling sample containers and replace between soil samples • Inspect glass bottles for breaks/cracks • Do not attempt to use any suspect containers • Close glass sample containers carefully to avoid breakage • Avoid placing hands/fingers in pinch point locations (e.g., between cooler and lid) • Confirm selected samples are correct based on work plan selection criteria, PID readings, and soil boring logs • Check sample labels for accuracy prior to placing in cooler	Field Staff	
9	Removing Equipment from ditch/pond	• Injury • Gravity hazards and impact injury • Back strain • Damaged Equipment	• Position one person at the top of the slope and one near the bottom. The person at the bottom of the slope should be positioned out of the pathway should equipment fall to prevent impact injury • Wear work gloves at all times • Raise equipment slowly in controlled manner using a rope or by hand • Do not overextend when raising equipment • Avoid dropping equipment, raise carefully and in controlled manner • Verbally communicate with team members when equipment is being lowered	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
10	Exiting Ditch/Pond	• Injury • Slips/Trips/Falls • Sloped sidewalls • Limited access/egress • Biological hazards	• Wear required PPE including hard hat • Wear work gloves and be aware of hand placement at all times • Utilize pathway which is free of slip/trip hazards to the extent possible. Communicate any encountered potential slip/trip hazards to other field team members • Maintain 3 points of contact at all times • Ensure ladder or rope to aid exit is secure • Ensure all tools have been removed from ditch/pond so that personnel are not carrying equipment while navigating the slope or ladder (See Step 9)	Field Staff	
11	Packing samples in cooler(s)	• Bottle breakage • Contaminant exposure • Cuts • Pinch points • Back strain • Lost time due to incorrect sample packaging or hold time exceedances	• Wear nitrile gloves when handling sample containers • Pack glass containers in bubble wrap • Check COC against sample labels and SSOW for accuracy before shipping • Avoid placing hands/fingers in pinch point locations (e.g., between cooler and lid) • Refer to steps 3 and 4 and the HASP for additional lifting techniques • Ensure equipment and supplies are loaded correctly and do not shift during transport	Field Staff	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress/ergonomics/lifting techniques; **Exposure** - inhalation/skin hazards. Katherine Galanti				

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Discuss STAR and SWA	• Site personnel not aware of STAR and SWA	• Project team (GHD) discusses importance of and documentation procedures for SWA during pre-job safety meeting • Use SWA to stop any work that is unsafe	All persons on project team	
2	Check weather	• Unexpected storm, fog; rain; snow; lightening, thunder • Heat/cold stress	• Check local weather forecast • Discuss weather issues and precautions to take while driving and on site during the pre-job safety meeting • If weather conditions (e.g., fog, rain, snow) impair the ability/vision of the driver, exit at nearest safe location and assess the situation • While on site, at first sign of lightning/thunder utilize SWA and assess weather conditions • In extreme temperatures, ensure all personnel have proper clothing, hydration, and heat/cold protection (e.g., canopy, fan, glove warmers)	Senior Field Team Leader	
3	Sign in	• Site Manager and Operator not aware of GHD staff presence in facility or on grounds	• Sign in at front desk • Ask to speak to Site Manager or alternate designate	Field Staff	
4	Don necessary GHD and client required PPE	• Contact with recyclable material or equipment	• Wear all required PPE (hard hat, vest, boots, and glasses) at all times while in the facility	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
5	Unload equipment from vehicle	• Lifting hazards • Back injury • Manual material handling • Cuts • Pinch points • Hand/foot injury • Forgotten equipment • Damaged equipment	• Reduce travel distance when there is a need to carry/lift materials • Make sure grip is adequate; wear leather/cotton gloves • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical or a buddy lift) will be required • Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and keep lower back in a neutral position • Avoid one-handed carrying if possible; maintain awareness of footing • Wear leather/cotton gloves and avoid placing hands/fingers in pinch point locations • Wear steel-toed boots • Verify requested equipment against warehouse form • Load equipment in an organized manner to prevent shifting during transport or use cargo netting	Field Staff	
6	Complete site inspection and walkover of the property and work areas – Note any hazards that will impact site personnel and/or their operations	• Slip/trip/fall hazards • Insects/reptiles • Pedestrian injury • Poison plants	• Check in with site personnel and sign appropriate visitor or safety log (may require watching safety video [i.e., plant]) • Check with site contact to determine safely accessible areas and areas where PPE are required • Wear PPE as directed by site personnel or dependent upon your evaluation of conditions • If building(s) looks dilapidated or in poor condition, do not enter • Watch for vehicles or other mobile equipment moving around • Make sure areas are well lit and you are accompanied by a site representative (if applicable) • Watch where you step on pavement (potholes, dips, or obstructions) and in	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
			vegetated/wooded areas (dips, holes, branches, vines, etc.) • Do not take photographs while walking • Do not talk on cell phone while walking • If in vegetated or wooded areas, watch for beehives, wear insect repellent (if area and season dictate) as needed, be mindful of gopher holes/tunnels, small animal dens, snakes, stray dogs/cats, transient/homeless individuals, poison ivy/oak/sumac, etc.		
7	Sign out	• Site Manager and Operator not aware that GHD staff have left facility	• Sign out at front desk • Ask to speak to Site Manager or alternate designate	Field Staff	
8	Demobilization	• Collision • Injury or death to vehicle occupants or other parties	• Perform perimeter vehicle check • Maintain awareness of pedestrian/vehicular traffic when exiting the site • Utilize defensive driving techniques • Complete post-departure checklist and report vehicle problems to company vehicle maintenance manager or rental car agency	Field Staff	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress/ergonomics/lifting techniques; **Exposure** - inhalation/skin hazards. Specify the hazards and do not limit the description to a single word such as "Caught".

(3) Aligning with the Job Steps, Task Activity Description, and Potential Hazard columns, describe what actions or procedures are necessary to eliminate or minimize the hazards. Be clear, concise and specific. Use objective, observable, and quantified terms. Avoid subjective general statements such as "be careful" or "use as appropriate".

Site personnel participating in JSA review:
I have participated in the review and discussion of the Job Safety Analysis (JSA) listed on this document and understand the duties I am responsible to fulfill. As part of my work, I know I have the responsibility and obligation to STOP work with a **Stop Work Authority (SWA)** if conditions change and/or potential hazards have been identified.

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Discuss STAR and SWA.	• Site personnel not aware of STAR and SWA	• Project team (GHD) discusses importance of and documentation procedures for SWA during pre-job safety meeting • Use SWA to stop any work that is unsafe	Senior Field Team Leader	
2	Inspect and calibrate sampling and monitoring equipment.	• Lost time from improperly functioning equipment • Incorrect sampling procedures/collection due to malfunctioning equipment	• Ensure all equipment is functioning properly • Complete Quality Control documents	Field Staff	
3	Prepare to collect soil samples: Technician will choose the location of the sample and communicate sample location to the operator.	• Back strain • Pinch points • Cuts • Punctures • Sample misidentification	• Use proper lifting techniques and buddy system if needed • Avoid placing hands/fingers in pinch point locations • Use proper tools when opening container packaging • Do not use fixed open blade knives when opening boxes or containers • Ensure the sample id label matches sample location with site plan/GHD site supervisor/subcontractor • Setup a safe area for technician to obtain sample from bucket	Field Staff	
4	Obtaining the soil sample from the excavation via remote means – use the hydraulic excavator: Operator will place bucket on ground in a safe location after obtaining the sample from the agreed location.	• Excavation collapse • Contaminant exposure • Heavy equipment operation	• Stay clear of the edge of the excavation; demarcate areas that were undermined • Wear nitrile gloves and follow air monitoring program as per HASP • Follow JSAs specific for excavation and heavy equipment activities; maintain excavation safety • Be aware of swing radius of heavy equipment	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
5	Sample collection from excavator bucket: Operator will place heavy equipment in a zero energy state via lockout (interlocks) and placing bucket on ground. If not equipped with interlocks or equivalent safety devices then operator will shut off engine with bucket on ground. Technician will collect soil sample from the bucket once heavy equipment is in a zero energy state and leave the area.	• Contaminant exposure • Cuts from container breakage • Sample misidentification • Struck-by/crushing injuries	• Wear nitrile gloves and replace between soil samples • Inspect glass bottles for breaks/cracks • Do not attempt to use any suspect containers • Communicate to all present not to distract the excavator operator • Establish eye/hand contact with excavator operator and approach when safe • Have operator activate hydraulic system kill switch if equipped and maintain two thumbs up visible to technician • If excavator is not equipped with a hydraulic system kill switch, then the operator must leave the cab prior to sample collection • Do not stand in front of or behind the bucket; stand to either side to collect sample • Close glass sample containers carefully to avoid breakage • Signal operator with thumps up when clear of swing radius • Check sample labels for accuracy prior to placing in cooler	Field Staff	
6	Sample selection	• Bottle breakage • Contaminant exposure • Pinch points • Lost time due to incorrect sample selection	• Wear nitrile gloves when handling sample containers • Confirm selected samples are correct based on work plan selection criteria, PID readings, and soil boring logs • Avoid placing hands/fingers in pinch point locations (e.g., between cooler and lid)	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
7	Packing samples in cooler(s)	• Bottle breakage • Contaminant exposure • Cuts • Pinch points • Back strain • Lost time due to incorrect sample packaging or hold time exceedances	• Wear nitrile gloves when handling sample containers • Pack glass containers in bubble wrap • Check COC against sample labels and SSOW for accuracy before shipping • Avoid placing hands/fingers in pinch point locations (e.g., between cooler and lid) • Use proper lifting techniques and buddy system if needed • Ensure equipment and supplies are loaded correctly and do not shift during transport	Field Staff	
8	Investigation derived waste (IDW) management	• Contaminant exposure • Heavy lifting • Pinch points • Slips/trips/fall hazards • Mislabeled waste	• Wear nitrile gloves when handling IDW • Use proper lifting techniques to transport/dispose of IDW into drums and use buddy system if needed • Avoid placing hands/fingers in pinch point locations • Maintain awareness of walking surfaces • Label IDW with generator, a contact number, identification of contents, and site location • Specify IDW as either hazardous or non-hazardous material	Field Staff	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress/ergonomics/lifting techniques; **Exposure** - inhalation/skin hazards. Specify the hazards and do not limit the description to a single word such as "Caught".

(3) Aligning with the Job Steps, Task Activity Description, and Potential Hazard columns, describe what actions or procedures are necessary to eliminate or minimize the hazards. Be clear, concise and specific. Use objective, observable, and quantified terms. Avoid subjective general statements such as "be careful" or "use as appropriate".

Site personnel participating in JSA review:
I have participated in the review and discussion of the Job Safety Analysis (JSA) listed on this document and understand the duties I am responsible to fulfill. As part of my work, I know I have the responsibility and obligation to STOP work with a **Stop Work Authority (SWA)** if conditions change and/or potential hazards have been identified.

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Eliminate all potential sources of ignition	• Explosion and/or fire	• Inform all Site personnel that smoking is prohibited on Site • Shut down all open flame and sparking equipment within vapor hazard • Use only explosion-proof equipment within the hazard area • Ground all heavy equipment that will or may touch the tank	Senior Field Team Leader and Field Staff	
2	Open access portal to tank	• Explosion and/or fire • Product Spill • Chemical Exposure	• Use non-sparking tools • Have spill absorption material/kit available on Site • Place containment materials (bucket, sorbent pads/booms) under points where tank wall is being breached • Use proper PPE in accordance with the HASP	Field Staff	
3	Purge tank vapors	• Explosion and/or fire • Inhalation exposure to vapors (both to workers and public)	• Frequently test % of Lower Explosion Limit (ILEL) in tank at varying elevations (floor, breathing zone)	Field Staff	
4	Tank Entry		See JSA for Confined Space Entry	Field Staff	
5	Collect samples in accordance with sampling plan	• Falling debris • Contaminant exposure • Lifting hazards • Back injury • Manual material handling • Dust/flying debris/contaminants • Slip or fall due to uneven terrain	• Beware of overhead hazards • Wear nitrile gloves when handling sample containers and replace between samples • Use proper bending/lifting techniques by bending and lifting with legs and not with back • Dust particles may become airborne; if dust becomes excessive, use a dust mask • Keep footing secure	Field Staff

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Check weather	• Unexpected storm • Fog; rain; snow; lightening/thunder • Heat/cold stress	• Check local and destination weather forecast • Discuss weather issues and precautions to take while driving to the destination • If weather conditions (e.g., fog, rain, snow) impair the ability/vision reschedule site visit • In extreme temperatures, ensure all personnel have proper clothing, hydration, and heat/cold protection	Field Team Leader	
2	Prepare to enter river	• Boat traffic • Proper PPE • Prepare to carry equipment in river • River current • River Depth • River water temperature • Slip/trip/fall hazards	• Maintain awareness river traffic • Make sure PPE is properly secured. This includes water proof waders and life jacket • Reduce travel distance when there is a need to carry/lift materials • Make sure grip is adequate; wear leather/cotton gloves • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical or a buddy lift) will be required • Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and keep lower back in a neutral position • Avoid one-handed carrying if possible; maintain awareness of footing • Refer to the HASP for additional lifting information • Maintain resistance to river current. If	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
			current is too swift do not enter the river. • If river water is greater than three feet deep, do not enter the river. Utilize a boat for field activities and follow proper boat protocol. • Test river water temperature to not induce hypothermia. If river water is extremely cold, do not enter the river. • Practice STAR		
3	River Wading	• Slips/trips/hit/fall hazards • Heat stress • Cold stress • Biological hazards • Wildlife encounters • Potential adverse weather conditions	• Project team to consist of 3 persons minimum: 2 person sampling team and 3rd person shore attendant • Use buddy system while walking through the river • Spot check to identify underwater hazards, establish pathways which is most free of slip and trip hazards, beware of trip hazards, communicate hazards to on-site personnel • Heightened awareness of wasps, ants, bees, snakes, turtles, alligators and use bug spray as necessary • Monitor for heat stress, establish work/rest regimes, wear heat stress PPE, and have liquids available • Monitor for cold stress, wear warm clothing, have access to fluids and high energy food and schedule a work and rest regime • Be aware of any rapidly changing environmental conditions and respond accordingly	Field Staff

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
1	Discuss STAR and SWA	• Site personnel not aware of STAR and SWA	• Project team (GHD) discusses importance of and documentation procedures for SWA during pre-job safety meeting • Use SWA to stop any work that is unsafe	Senior Field Team Leader	
2	Check weather	• Unexpected storm • Fog, rain, snow; lightening/thunder • Heat/cold stress	• Check local weather forecast • If adverse weather conditions are likely, prepare a contingency plan for lodging, etc. with project manager • Discuss weather issues and precautions to take while driving and on site during the pre-job safety meeting • If weather conditions (e.g., fog, rain, snow, etc.) impair the ability/vision of the driver, exit at nearest safe location and assess the situation • While on site, at first sign of lightening/thunder utilize SWA and assess weather conditions • In extreme temperatures, ensure all personnel have proper clothing, hydration, and heat/cold protection (e.g., canopy, fan, glove warmers)	Driver	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
3	Load equipment into vehicle	• Lifting hazards • Manual material handling • Back injury • Cuts • Pinch points • Hand/foot injury • Forgotten or damaged equipment • Materials or equipment leaving the vehicle bed during travel create hazards for other drivers	• Reduce travel distance when there is a need to carry/lift materials • Make sure grip is adequate; wear leather/cotton gloves • Size up the load; if the object is too large or odd shaped OR is in excess of 50 pounds (23 kg) then assistance (mechanical or a buddy lift) will be required • Maintain neutral back posture - Lift with the legs (bend at the knees and use the leg muscles) to protect the lower back and make sure to shift with the feet rather than twisting at the back • Maintain neutral wrist posture when lifting, carrying, pushing or pulling. The wrist is the strongest and most stable when it is straight. • Avoid one-handed carrying if possible; maintain awareness of footing • Avoid placing hands/fingers in pinch point locations • Wear safety-toed boots • Verify requested equipment against warehouse form • Load equipment in an organized manner to prevent shifting during transport or use cargo netting • Secure materials or equipment with cargo netting. Ensure netting does not loosen during travel by securing the straps with plastic wire ties or equivalent measures.	Field Staff	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
4	Complete GHD Daily Operator Vehicle Checklist	• Damaged vehicle lights, tires, windows, mirrors, horn • Inadequate vehicle documents and/or safety items	• Check for fluid leaks under vehicle • Test operation of headlights, front/rear turn signals, backup lights, brake lights, and emergency flashers • Visually check the pressure/wear of tires • Ensure the vehicle has a spare tire • Assure windshield and window glass is clean and free from obstructions • Test the windshield wipers and horn • Verify vehicle registration, insurance card, and inspection sticker is present and valid • Ensure the vehicle contains a first aid kit, fire extinguisher, and road hazard kit • Check immediate vehicle perimeter and initial path of travel for obstructions	Driver	
5	Check and adjust seat, steering wheel, headrest, and mirrors	• Back/body strain • Blind spot • Impaired vision	• Adjust seat, headrest, and steering wheel height so body is fully supported/comfortable and pedals are within easy reach • Ensure mirrors are properly adjusted	Driver	
6	Fasten seat belt(s) and ensure passenger(s) seat belts are fastened	• Serious injury, ejection, or death from collision and/or traffic citation	• Verify driver and passenger(s) seat belts are in good condition and properly latched	Driver	
7	Ensure vehicle doors are locked	• Serious injury, ejection, or death from collision • Unwanted intrusion • Lost equipment	• Manually lock all doors to vehicle	Driver	
8	Start engine and check gauges and warning lights	• Vehicle breakdown	• Verify sufficient fuel and other hazard lamps (e.g., battery, oil, and temperature) are not lit	Driver	
9	Mobilize to site	• Arriving late • Collision • Injury or death to occupants or other parties	• Do not use cell phones or perform other distracting activities while vehicle is in motion • Constantly scan intersections, move eyes, check mirrors, and assess traffic lights (fresh vs. stale) • Maintain safety cushion around vehicle (front, sides, and rear) and 4-second following distance • Utilize all driving defensive techniques	Driver	

Job steps[1]	Task activity	Potential hazard(s)[2] Include energy sources from hazard wheel -	Corrective measure(s)[3]	Person responsible (Print first and last names)	Verified by (Print first and last names)
10	Arrive at site	• Pedestrian injury • Collision	• Maintain awareness of pedestrian/vehicular traffic when entering site and traveling to work zone	Driver	
11	Park vehicle	• Pedestrian injury • Collision • Property damage	• Maintain awareness of pedestrian/vehicular traffic • Park vehicle in pull-through parking space or facing the exit • Parking in a parking space that is not a designated parking space will require the placement of the 360-degree topper on the hood of the vehicle • Use caution and mirrors/spotter when backing vehicle • Set parking brake	Driver	
12	Demobilization	• Collision • Injury or death to occupants or other parties	• Check immediate vehicle perimeter and initial path of travel for obstructions • Maintain awareness of pedestrian/vehicular traffic when exiting site • Utilize defensive driving techniques • Complete post-departure checklist and report vehicle problems to company vehicle maintenance manager or rental car agency	Driver	

(1) Each Job or Task consists of a set of steps. Be sure to list all the steps in the sequence that they are performed. Specify the equipment or other details to set the basis for the potential (associated) hazards.

(2) A hazard is a potential danger. What can go wrong? How can someone get hurt? Consider, but do not limit, the analysis to: **Contact** - victim is struck by or strikes an object; **Caught** - victim is caught on, caught in or caught between objects; **Fall** - victim falls to ground or lower level (includes slips and trips); **Exertion** - excessive strain or stress/ergonomics/lifting techniques; **Exposure** - inhalation/skin hazards. Specify the hazards and do not limit the description to a single word such as "Caught".

(3) Aligning with the Job Steps, Task Activity Description, and Potential Hazard columns, describe what actions or procedures are necessary to eliminate or minimize the hazards. Be clear, concise and specific. Use objective, observable, and quantified terms. Avoid subjective general statements such as "be careful" or "use as appropriate".

Site personnel participating in JSA review:
I have participated in the review and discussion of the Job Safety Analysis (JSA) listed on this document and understand the duties I am responsible to fulfill. As part of my work, I know I have the responsibility and obligation to STOP work with a **Stop Work Authority (SWA)** if conditions change and/or potential hazards have been identified.

Section 1

A. Employee Identification ☐ **GHD Employee** ☐ **Temporary Employee** ☐ **Subcontractor**			
Employee No.	Last Name	First Name	Employee's Company - if Subcontractor
Date of Hire	Position/Title	Supervisor	Home Office Location - if GHD Employee

B. General Information	
Where did the Near Miss occur? ☐ Office ☐ Project Site ☐ Other _____ ☐ Canada ☐ United States ☐ UK	Type of Near Miss (Check all that apply) ☐ Employee Injury/Illness ☐ Vehicle Accident ☐ Property Damage ☐ Environmental
Address of Near Miss (City, State/Province/County, Postal/Zip Code)	Specific Location of Near Miss (e.g., where on site)

Date and Hour of Near Miss		Date and Hour Reported to GHD		Time Employee Began Work
Month Day Year	a.m. p.m.	Month Day Year	a.m. p.m.	a.m. p.m.

Witnesses? ☐ Yes ☐ No	Witness Name and Telephone Number

C. Project Information (Project Related Near Miss Only): Project Related: ( ) Yes ( ) No				
Project #	Project Name	GHD Project Manager	Client	Client Contact

Was the Client Advised of the Near Miss? ☐ Yes ☐ No ☐ N/A	Name:	Date and Time Month Day Year Time

Section 2

A Details of the Near Miss
1. What job/task was being performed when the Near Miss occurred? (Example: collecting groundwater samples).
2. Provide a detailed description of the employee's specific activities at the time of the Near Miss. Include details of equipment/materials being used, including the size and weights of objects being handled, and weather conditions at time of the Near Loss. If necessary, attach additional pages to the report.

Section 2 (continued)

B. Near Miss Investigation	
Conduct a 5-Why Root Cause Analysis Investigation. In addition, if there was the potential for a significant injury or loss, report the Near Miss to the Incident Hot Line (this will determine if a Tap Root Cause Analysis is necessary).	
HASP prepared? ☐ Yes ☐ No ☐ N/A Submit a PDF of HASP to Investigation Team. If yes, was the HASP on site? ☐ Yes ☐ No	Did the safety plan identify and provide safety procedures for the specific tasks being performed when the Near Miss occurred? ☐ Yes ☐ No If no, why not? (Explain) _____ Did the employee utilize the STAR process before initiating the task? ☐ Yes ☐ No If no, why not? (Explain) _____

5-Why Root Cause:	Additional information: Attach photos, witness statement(s), affected employee statement, as applicable, to the end of this document.
1. Why did "above" happen?	
2. Why did "1" happen?	
3. Why did "2" happen?	
4. Why did "3" happen?

Health and Safety Plan Amendment Form

This document is to be completed for ANY changes that occur within the Site Health and Safety Plan (HASP). This document is to be sent to the Regional Safety & Health Manager (RSHM) for review, verification and sign off of the HASP.

Amendment #	
Site Name/Project ID	
Date	
Client Contact (same/change)	
Reason for Amendment (SOW change, JSA addition, Chemical, etc.)	
Alternate or Additional Safeguard Procedures	
Required changes in PPE	
Additional Comments:	

Project Manager Notified	☐
RSHM Notified	☐
Client PM Notified (if necessary)	☐

Site HSE Officer (sign above)	Date

The Project Manager is ultimately responsible for the accuracy of the information on this amendment and ensuring any changes to the original HASP is discussed with all affected site personnel prior to commencing work

This original form must be placed in the project file and a copy needs to be attached to the Site Health and Safety Plan (HASP).

Evaluation Form for Emergency Rescue Services on Permit-Required Confined Spaces

Directions: This evaluation must be completed initially and then annually for sites and/or facilities which rely on community/local rescue services to provide emergency rescue services to their permit-required confined spaces. The rescue service should visit each site and/or facility to view all permit-required confined spaces and review their potential hazard(s). All questions must be answered satisfactorily in order to be able to list 911 on the CS permit and rely on the rescue service. It is acceptable to work with and assist rescue services in achieving a satisfactory evaluation.

Name of Service:		Contact's Name:	
Emergency Phone No.:		Business Phone No.:	

Item No.	Description		Yes	No
1.	Does the rescue service have the ability, in terms of proficiency, with rescue-related tasks and equipment?		☐	☐
2.	Will the rescue service stand by (on site) at the permit space for IDLH or potential ILDH atmospheres? The cost for providing this service is $_____.		☐	☐
3.	Can the rescue service respond in a 10- to 15-minute timeframe for non-IDLH situations (i.e., mechanical hazards that may cause broken bones, abrasions, etc.)? The availability of the rescue service is (i.e., 24 hours a day or are there times when key personnel would not be available)? _____		☐	☐
4.	Does the rescue service:			
	A.	Provide all required PPE and equipment that may be needed at the site and/or facility? If no, GHD will provide.	☐	☐
	B.	Train rescue personnel annually in accordance with the standard?	☐	☐
5.	Will the rescue service commit to providing rescue services to the site and/or facility?		☐	☐
6.	Is there an adequate method of communication between the attendant and rescue service to summon help?		☐	☐
7.	Has the rescue service practiced rescues or successfully performed a permit space rescue within the last 12 months?		☐	☐

Evaluation Completed By:

Confined Space Entry Coordination Document

Each company involved in confined space entry and related work has responsibilities. If more than one Company is involved in entering a confined space, one representative will be designated as the "lead employer". The lead employer must complete the coordination document below. This document explains the duties of each employer involved in the confined space work. This will ensure that the same standard is being applied to all contractors and that one plan is followed when entering the confined space.

(***Insert Company name***) will act as lead employer for the Confined Space Activities listed on permit (attach permit). As lead employer for this portion of the project, (***company name***) reserves the right to stop work at any time should any of the entry requirements not be adhered to.

(List company names and authorizing signatures)

Company Name	Print Name	Authorizing Signature

Check applicable boxes only:

☐	Each contractor listed above needs to provide general confined space training to their workers.
☐	The lead employer is responsible for training all of the contractors on the confined space plan before the work begins.
☐	The contractor (name) shall act as lead employer for the duration of the CSE.
☐	Permit attached.

Underground Utilities Checklist

(QSF-019)

Pre-Drilling/Excavation Checklist and Utility Clearance Log

Project number:	**Project name:**
Date:	**Project location:**
Public utility locator:	**Public utility locator phone number:**
Date of public utility locator request:	**Public locator call reference number:**
Private utility locator (If applicable):	**Private utility locator phone number:**

Utilities (indicate that location/utility presence was checked)

Borehole/ Excavation location	Date (mm/dd/yyyy)	Telephone	Water	Storm sewer	Sanitary sewer	Process sewer	Gas	Electrical	Cable	Overhead utilities	Other	Comments/Warnings
Utility owner												

Instructions: This checklist is to be completed by GHD personnel prior to initiation of field activities as a safety measure, to ensure that all underground utility lines, other underground structures, and above-ground power lines are clearly marked in the area selected for boring or excavation.

Notes: _____

Client: _____ **Client representative:** _____ **Phone number:** _____

Client or property owner acknowledgement of utility clearance: _____ **(Client, property owner, or authorized agent signature)**

Subcontractor acknowledgement of utility clearance: _____ **(Subcontractor or subcontractor representative signature)**

GHD field representative name: _____ **Signature:** _____

GHD project manager's review/confirmation of locate completion: _____

In the event that client or property owner acknowledgement cannot be obtained, it is strongly encouraged that all boreholes be hydro vacuumed and the costs passed on to the client.
Attach any clearance documentation from utility owner/operator to this document.

Underground Utilities Checklist for GHD Personnel

Pre-Drilling/Excavation Checklist and Utility Clearance Log

Drilling or excavation work may not proceed if any of the questions answered below are answered "No." Implement stop work authority and contact the GHD project manager to discuss and resolve any concerns or issues. Document the reason for a "No" answer in the comments section below.

Yes	No	N/A	Pre-Mobilization
☐	☐	☐	1. Has a utility locator request been completed within the last 30 days (verify time limit with state or provincial law)? If no, stop work and comment below.
☐	☐	☐	2. Is a scaled site plan, map or drawing showing the proposed borehole locations attached to this form?
☐	☐	☐	3. Does each borehole and excavation location allow for clear entry and exit, adequate workspace, and a clear path for raising the mast (or boom) and operating the drill rig and all support equipment? Ensure that the minimum OSHA/state/provincial utility clearance requirements between the mast or boom and the power line(s) are met. For instance, OSHA requires a minimum approach distance of 10 feet for systems below 50 kV and an increase of 4" for every 10 kV over 50 kV. Confirm if additional permits are required if the boom or mast will be working 5 meters (15 feet) or less from the electrical lines.
☐	☐	☐	4. Are all of the proposed borehole and excavation locations at least 1.0 meters (3 feet) from any subsurface or above-ground utilities shown on client's building plans? Check here ☐ if plans not provided by client (therefore not applicable to this job.
☐	☐	☐	5. Are all of the proposed borehole and excavation locations at least 1.0 meters (3 feet) from any subsurface or above-ground utilities shown on public right-of-way street improvement or other public property plan or site map?
☐	☐	☐	6. Has the site representative, familiar with the site, indicated no knowledge of any subsurface or above-ground utilities within 3 metres (10 feet) of the proposed borehole and excavation locations? (Review locations with site representative)
☐	☐	☐	7. Are all of the proposed borehole and excavation locations at least 1.0 meters (3 feet) from any subsurface utilities identified during a geophysical survey? Check here ☐ if no geophysical survey has been completed (therefore not applicable to this job).
☐	☐	☐	8. Have all utility locating service providers, notified by the public line locator, marked out their facilities in the vicinity of the borehole and excavation locations or otherwise notified us that they do not have any facilities near the proposed locations? (Attached confirmation and utility locate sheets from public locator)
☐	☐	☐	9. Are all proposed borehole and excavation locations at least 1.5 meters (5 feet) from a visual line connecting two similar looking manhole covers?
☐	☐	☐	10. Are all proposed borehole and excavation locations at least 1.5 meters (5 feet) from a visual line perpendicular to the street from the water, gas, and electrical meters?
☐	☐	☐	11. Are all proposed boring and excavation locations clear of pavement joints, curbs, crash posts, or other engineered structures?
☐	☐	☐	12. Does the ground surface/pavement lack signs of previous excavation (e.g., no pavement subsidence, no differences in pavement texture or relief, no pavement patching)?
			Pre-Drilling and Excavation
☐	☐	☐	13. Has it been verified that the proposed drilling or excavation work will not affect any work currently in progress?
☐	☐	☐	14. Has the drill rig or heavy equipment been inspected prior to use and documented? (See Drill Rig Inspection Checklist or Mobile Equipment Safety Inspection Checklist)
			15. Have barricades been erected to prevent unauthorized access, where applicable?
☐	☐	☐	16. Have all known live electrical or product lines within 3 meters (10 feet) of the dig path been visually verified? If no, comment below.
			17. For boreholes that have not been cleared or are within 3 meters of a utility:
☐	☐	☐	a. Before drilling have you cleared a hole to 2.4 meters (8 feet) below grade using an air-knife, or equivalent, before drilling and is the diameter of this hole greater than the final outside diameter of the boring? If not required comment below.
☐	☐	☐	b. Does the soil you encountered in the hand-dug hole appear to be native material (i.e., free of clean gravel, clean sand, aggregate base [gravelly sand ~ 10% fines] or other non-native looking material)? If not required comment below.

Have the above concerns been discussed with the GHD project manager?	☐ Yes	☐ No	☐ Not Applicable
Has the start of subsurface work been communicated to the GHD project manager?	☐ Yes	☐ No	☐ Not Applicable
Have the above concerns been discussed with the client?	☐ Yes	☐ No	☐ Not Applicable
Has the scope of work been approved by the client?	☐ Yes	☐ No	☐ Not Applicable

Attachment C
Community Air Monitoring Plan (CAMP)

Attachment C Community Air Monitoring Plan

This Community Air Monitoring Plan (CAMP) has been developed for the Tonawanda Coke Corporation (Site), NYSDEC Site #915055, located in Tonawanda, New York. The CAMP has been developed in accordance with the New York State Department of Health's (NYSDOH's) Generic Community Air Monitoring Plan.

Overview

This site-specific CAMP requires real-time monitoring for volatile organic compounds (VOCs) and particulates (i.e., dust) at the downwind perimeter of each designated work area when certain activities are in progress at contaminated sites. The CAMP is not intended for use in establishing action levels for worker respiratory protection. Rather, its intent is to provide a measure of protection for the downwind community (i.e., off-site receptors including residences and businesses and on-site workers not directly involved with the subject work activities) from potential airborne contaminant releases as a direct result of intrusive work activities. The action levels specified herein require increased monitoring and corrective actions to abate emissions, and/or work shutdown. Additionally, the CAMP will help to confirm that work activities do not spread contamination off site through the air.

Designated air monitoring station locations will be established around the perimeter of the site for use as monitoring locations. The site-specific CAMP presented below will be implemented during ground intrusive activities at the site. Each day that this activity is in progress upwind and downwind air monitoring stations will be set up to collect data. The instruments that will be used to collect the air monitoring data will have data logging capabilities. The data will be downloaded periodically, stored electronically and will be available to agency personnel for their review.

Reliance on this CAMP should not preclude simple, common sense measures to keep VOCs, dust, and odors at a minimum around the work areas.

Community Air Monitoring Plan

Real-time air monitoring for VOCs and particulate levels at the perimeter of the site will be necessary, as described below.

Continuous monitoring will be required during all ground intrusive activities at the Site. Ground intrusive activities include excavation and waste removal activities, the installation of soil borings, monitoring wells, and test trenches.

Periodic monitoring for VOCs will be required during non-intrusive activities such as the collection of soil sample and groundwater samples. Periodic monitoring during sample collection might reasonably consist of taking a reading upon arrival at a sample location, monitoring while sample collection and then taking a reading prior to leaving a sample location.

VOC Monitoring, Response Levels, and Actions

VOCs will be monitored at the downwind perimeter of the site on a continuous basis. Upwind concentrations should be measured at the start of each workday and periodically thereafter to establish background conditions, particularly if wind direction changes. The specific type of air monitoring equipment that will be used at the site for VOC monitoring will be a MiniRae 3000, or equivalent. The equipment will be calibrated in accordance with the manufacturer's guidelines. The equipment will be

capable of calculating 15 minute running average concentrations, which will be compared to the levels specified below.

1. If the ambient air concentration of VOCs at the downwind perimeter of the site exceeds 5 parts per million (ppm) above background for the 15 minute average, work activities must be temporarily halted and monitoring continued. If the total organic vapor level readily decreases (per instantaneous readings) below 5 ppm over background, work activities can resume with continued monitoring.
2. If total organic vapor levels at the downwind perimeter of the site persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities must be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities can resume provided that the total organic vapor level 200 feet downwind of the designated work area or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less - but in no case less than 20 feet, is below 5 ppm over background for the 15 minute average.
3. If the organic vapor level is above 25 ppm at the perimeter of the Site, activities must be shut down.
4. All 15 minute readings must be recorded and be available for State (NYSDEC and NYSDOH) personnel to review. Instantaneous readings, if any, used for decision purposes will also be recorded.

Particulate/Fugitive Dust Monitoring, Response Levels, and Actions

Particulate concentrations will be monitored continuously at upwind and downwind monitoring stations on the site perimeter. The particulate monitoring will be performed using real time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM 10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The particulate monitor that will be used will be a TSI 8520 DustTrak, or equivalent. The equipment will be equipped with an audible and/or visible alarm to indicate exceedance of the action level. In addition, fugitive dust migration should be visually assessed during all work activities.

1. If the downwind PM 10 particulate level is 100 micrograms per cubic meter (mcg/m^3) greater than background (upwind perimeter) for the 15 minute period or if airborne dust is observed leaving the designated work area, then dust suppression techniques must be employed. Work may continue with dust suppression techniques provided that downwind PM 10 particulate levels do not exceed 150 mcg/m^3 above the upwind level and provided that no visible dust is migrating from the designated work area.
2. If, after implementation of dust suppression techniques, downwind PM 10 particulate levels are greater than 150 mcg/m^3 above the upwind level, work must be stopped and a re-evaluation of activities initiated. Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM 10 particulate concentration to within 150 mcg/m^3 of the upwind level and in preventing visible dust migration.
3. All readings must be recorded and be available for State (NYSDEC and NYSDOH) personnel to review.

The following fugitive dust suppression and corrective procedures will be employed at the site.

1. Reasonable fugitive dust suppression techniques will be employed during all remedial activities, which may generate fugitive dust.

2. The following techniques are generally effective for the controlling of the generation and migration of dust during construction activities and may be employed as necessary:

   a. Applying water on haul roads.

   b. Wetting equipment and excavation faces.

   c. Spraying water on buckets during excavation and dumping.

   d. Hauling materials in properly tarped or watertight containers.

   e. Restricting vehicle speeds to 10 mph.

   f. Covering excavated areas and material after excavation activity ceases.

   g. Reducing the excavation size and/or number of excavations.

When techniques involving water application are used, care must be taken not to use excess water, which can result in unacceptably wet conditions. Using atomizing sprays will prevent overly wet conditions, conserve water, and provide an effective means of suppressing the fugitive dust.

Subject: RE: Tonawanda Coke, OU3 IRM, #915055 - Clay Import for Diversion Ditch

Rob,

The Department has reviewed the request dated 8/22/2017to use approximately 200 tons of clay soil at the Tonawanda Coke, Operable Unit 3 site. Based on the information provided, the request is hereby approved.

The proposed fill material meets the Unrestricted soil cleanup objectives (SCOs) (Appendix 5 of DER-10)>. Therefore, this material may be placed at the site without restriction.

Testing in accordance with DER-10 and approval by the Department is required for any additional material imported from this source.

Thank you,
Ben McPherson

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Wednesday, July 19, 2017

PARADIGM
ENVIRONMENTAL SERVICES, INC

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Wednesday, July 19, 2017

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Monday, August 21, 2017

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Preparation Date: 8/24/2017

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

PERMIT TRANSMITTAL LETTER
PERMIT NO. 9-2924-00099/00003
Mined Land ID No. 90707

Dear Permittee:

Enclosed is your permit which was issued in accordance with applicable provisions of the Environmental Conservation Law. The permit is valid for only that project, activity or operation expressly authorized.

The DEC permit number and Program ID number, should be retained for your records and should be referenced on all future correspondence and applications related to the permit. If modifications are desired after permit issuance, you must submit the proposed revisions and receive written approval from the Permit Administrator prior to initiating any change. If the Department determines that the modification represents a material change in the scope of the authorized project, activity, operation or permit conditions, you will be required to submit a new application for permit.

Please note the expiration date of the permit. Applications for permit renewal should be made well in advance of the expiration date (minimum of 30 days) and submitted to the Regional Permit Administrator at the above address.

PLEASE REVIEW ALL PERMIT CONDITIONS CAREFULLY. IN PARTICULAR, IDENTIFY YOUR INITIAL RESPONSIBILITIES UNDER THIS PERMIT IN ORDER TO ASSURE TIMELY ACTION IF REQUIRED. SINCE FAILURE TO COMPLY PRECISELY WITH PERMIT CONDITIONS MAY BE TREATED AS A VIOLATION OF THE ENVIRONMENTAL CONSERVATION LAW, **YOU ARE REQUESTED TO PROVIDE A COPY OF THE PERMIT TO THE PROJECT CONTRACTOR, FACILITY OPERATOR, AND OTHER PERSONS DIRECTLY RESPONSIBLE FOR PERMIT IMPLEMENTATION (IF ANY).**

If you have any questions regarding the administrative processing of this permit or request for modification, please contact this office at the above address. Technical questions relating to the specific conditions should be directed to a Mined Land Specialist of the Region 9 Minerals Unit at 716/372-0645.

Respectfully,
Charles D. Cranston
Deputy Regional Permit Administrator

PERMIT

Under the Environmental Conservation Law (ECL)

Permittee and Facility Information

Permit Issued To:
TUG HILL ENVIRONMENTAL LLC
870 ARSENAL ST
WATERTOWN, NY 13601
(315) 864-7461

Facility:
BERGEY MINE SITE
2666 RIDGE ROAD
LEWISTON, NY 14092

Facility Location: in LEWISTON in NIAGARA COUNTY
Facility Principal Reference Point: NYTM-E: 183.2 NYTM-N: 4790.2
Latitude: 43°11'53.2" Longitude: 78°53'56.7"
Authorized Activity: The mining of clay and topsoil (approximately 1,000,000 cubic yards total), affecting 40 acres of land with no on-site processing; provide compensatory mitigation for 0.36 acre of federally jurisdictional wetland impacted by mining, by creating approximately 1.50 acres of emergent wetland within the mine lake; reclamation of the affected mine site to a 26 acre recreational lake surrounded by wildlife habitat and two sites for potential residential construction.

Modification # 1 is the permit transfer from Michael J. Bergey to Tug Hill Environmental LLC.

Permit Authorizations

Mined Land Reclamation - Under Article 23, Title 27
Permit ID 9-2924-00099/00003 (Mined Land ID 90707)

Renewal	Effective Date: 6/5/2009	Expiration Date: 6/4/2014
Modification # 1	Effective Date: 11/6/2012	Expiration Date: 6/4/2014

Water Quality Certification - Under Section 401 - Clean Water Act
Permit ID 9-2924-00099/00004

Renewal	Effective Date: 6/5/2009	Expiration Date: 6/4/2014
Modification # 1	Effective Date: 11/6/2012	Expiration Date: 6/4/2014

NYSDEC Approval

By acceptance of this permit, the permittee agrees that the permit is contingent upon strict compliance with the ECL, all applicable regulations, and all conditions included as part of this permit.

Permit Components

MINED LAND RECLAMATION PERMIT CONDITIONS

NATURAL RESOURCE PERMIT CONDITIONS

WATER QUALITY CERTIFICATION SPECIFIC CONDITION

GENERAL CONDITIONS, APPLY TO ALL AUTHORIZED PERMITS

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

MINED LAND RECLAMATION PERMIT CONDITIONS

1. **Conformance With Plans** All activities authorized by this permit must be in strict conformance with the approved plans submitted by the applicant or applicant's agent as part of the permit application. Such plans were approved by the department on 6/4/2004 and consist of the following items:

a. Narrative plan entitled "Mining Plan, O&H Contracting Bergey Mine Site...." by O&H Contracting, dated 7/6/99;
b. Graphic Plans by O&H Contracting, Inc. consisting of:
   i) "Mining Plan" as revised 5/00 by W.E.H.;
   ii) "Reclamation Plan" as revised 6/29/00 by W.E.H.;
   iii) "Cross Sections" as revised 6/29/00 by W.E.H.;
c. U.S. Army Corps of Engineers Provisional Approval No. 2003-00583(2) (for Nationwide Permit No. 39) dated September 22, 2003;
d. Letter by Ken Ziccarelli to Michael Meyers, dated 10/25/99;
e. Letter by William E. Hopkins to Michael Meyers dated 5/13/00;
f. Letter by William E. Hopkins to Paul Giachetti dated 6/27/00 with attachments (6 sheets);
g. Letter by William E. Hopkins to Paul Giachetti dated 8/1/00 with attachments (9 sheets);
h. Letter by William E. Hopkins to Michael McMurray dated 9/23/00 and Figure 5B.10, Grassed Waterway Construction Details, page 5B.15, New York Guidelines for Urban Erosion and Sediment Control, October 1991 - Third Printing;
i. Letter by William E. Hopkins to Paul Giachetti dated 12/18/00;
j. Undated letter by Ken Ziccarelli to Ken Taft, received 1/15/04;
k. Letter by Ken Ziccarelli to Paul Giachetti dated 3/22/04.

2. **Supercedance of Plan Elements** Unless otherwise specified herein, where there are conflicts between elements of the approved plans, the most recently dated approved plan element shall prevail with respect to the conflicting material. If any condition of this permit conflicts with the approved plans, the permit condition(s) shall prevail with respect to the conflicting material, unless specific written approval is obtained from the Department prior to implementation.

3. **Maintain Area Markers for Permit Term** The permittee shall provide permanent markers such as stakes, posts or other devices acceptable to the Department to identify and delineate the permit area, as outlined on the approved Mining Plan Map. These markers are to be installed prior to the start of mining and shall be maintained for the duration of the permit term.

4. **Haul Road Location** The location of the haul road shall be as shown in the U.S. Army Provisional approval No. 2003-00583(2).

5. **Haul Road Construction** The main haul road shall be paved with blacktop millings for a distance of 300 feet from Rt. 104 prior to commencement of any mining operations to prevent tracking of soil onto the state highway and resulting dust. Any conflict between this condition and NYS Department of Transportation requirements for the Highway Work Permit, shall be brought to the attention of this Department and must be resolved by written approval from this Department prior to implementation.

6. **Offsite discharges** Discharges from the limits of the Lifeof Mine (LOML) into the east ditch (Ditch "TWF") are prohibited without prior written permission from the Department. This ditch is located outside the LOML to the southeast of the site. It flows into the property from the south and then proceeds in an easterly direction.

7. **Storm Water SPDES General Permit requirement** Prior to any ground disturbance at the mine site, a Notice of Intent (form) for Stormwater Discharge Associated with Industrial Acitvity, for activation of coverage under SPDES General Permit 98-03, shall be submitted to the Bureau of Water Permits' address on the form. A Notice of Intent form for termination of coverage may not be submitted until written acceptance of final reclamation of the entire mine site by the Department has been received. The general permit and Notice of Intent forms may be obtained from the Department's website, www.dec.state.ny.us.

8. **No Unpermitted Discharge Outside Limits of Mine** There shall be no natural swales or channels or constructed features such as ditches, pipes, etc., that are capable of discharging waters to any offsite areas or to any areas outside the limits of the Life of Mine except those explicitly described and shown in the narrative and graphic portions of the approved Mined Land Use Plan. All silt laden water and storm water generated on, or running across, the site shall be retained within the approved project area. The permittee must comply with all applicable State Pollutant Discharge Elimination System (SPDES) permit requirements and provide necessary notifications for off-site point source discharges.

9. **Strip and Stockpile Soils for Reclamation** Prior to the excavation of previously undisturbed areas, topsoil and overburden shall be stripped, stockpiled separately, and used for reclamation of mined areas. These stockpiles shall be seeded to establish a vegetative cover within 30 days, or as soon as practicable following their construction. The permittee shall locate all overburden stockpiles within the permitted area of the approved Life of Mine. Sufficient quantities of topsoil must be retained on the site for use in reclamation, unless prior approval is granted by the Department.

10. **Dust Control** Water or other approved dust palliatives must be applied to haulageways and other parts of the mine, as often as necessary, to prevent visible dust from leaving the mine property.

11. **Fueling of Equipment and Reporting of Spills** Fueling of equipment shall be controlled to prevent spillage. Any spillage of fuels, waste oils, other petroleum products or hazardous materials shall be reported to the Department's Spill Hotline number (1-800-457-7362) within 2 hours. The permittee shall retain the Department's Spill Response number for immediate access in the permittee's office and at the mine site.

12. **Post Permit Sign** The permit sign enclosed with this permit shall be posted in a conspicuous location on the worksite and adequately protected from the weather.

13. **Bond, Surety to Remain in Force** Any required reclamation bond or other surety, in an amount determined by the Department, shall be maintained in full force and effect. Such a bond or other surety shall not be terminated until the reclamation of the mined area is approved by the department in writing.

14. **Notification of Local Prohibition** The permittee is hereby notified that the Town of Lewiston has determined that mining is prohibited at this location and that a zoning approval is required. A copy of the determination letter by Joseph L. Leone, Jr., dated May 6, 2004, is enclosed. Also see "Item C" on permit page 6 of 6.

15. **Notice of Intent to Commence Work** The permittee shall submit a Notice of Intent to Commence Work to the attention of the Division of Mineral Resources at the Allegany Sub-Office listed within, at least 48 hours in advance of the time of commencement and shall also notify him/her promptly in writing of the completion of work.

NATURAL RESOURCE PERMIT CONDITIONS - Apply to the Following Permits: WATER QUALITY CERTIFICATION

1. **Conformance With Plans** All activities authorized by this permit must be in strict conformance with the approved plans submitted by the applicant or applicant's agent as part of the permit application. Such approved plans were prepared by [See Mined Land Reclamation Condition No. 1].

2. **State May Order Removal or Alteration of Work** If future operations by the State of New York require an alteration in the position of the structure or work herein authorized, or if, in the opinion of the Department of Environmental Conservation it shall cause unreasonable obstruction to the free navigation of said waters or flood flows or endanger the health, safety or welfare of the people of the State, or cause loss or destruction of the natural resources of the State, the owner may be ordered by the Department to remove or alter the structural work, obstructions, or hazards caused thereby without expense to the State, and if, upon the expiration or revocation of this permit, the structure, fill, excavation, or other modification of the watercourse hereby authorized shall not be completed, the owners, shall, without expense to the State, and to such extent and in such time and manner as the Department of Environmental Conservation may require, remove all or any portion of the uncompleted structure or fill and restore to its former condition the navigable and flood capacity of the watercourse. No claim shall be made against the State of New York on account of any such removal or alteration.

3. **State Not Liable for Damage** The State of New York shall in no case be liable for any damage or injury to the structure or work herein authorized which may be caused by or result from future operations undertaken by the State for the conservation or improvement of navigation, or for other purposes, and no claim or right to compensation shall accrue from any such damage.

4. **Precautions Against Contamination of Waters** All necessary precautions shall be taken to preclude contamination of any wetland or waterway by suspended solids, sediments, fuels, solvents, lubricants, epoxy coatings, paints, concrete, leachate or any other environmentally deleterious materials associated with the project.

5. **State May Require Site Restoration** If upon the expiration or revocation of this permit, the project hereby authorized has not been completed, the applicant shall, without expense to the State, and to such extent and in such time and manner as the Department of Environmental Conservation may lawfully require, remove all or any portion of the uncompleted structure or fill and restore the site to its former condition. No claim shall be made against the State of New York on account of any such removal or alteration.

WATER QUALITY CERTIFICATION SPECIFIC CONDITIONS

1. **Water Quality Certification** The NYS Department of Environmental Conservation hereby certifies that the subject project will not contravene effluent limitations or other limitations or standards under Sections 301, 302, 303, 306 and 307 of the Clean Water Act of 1977 (PL 95-217) provided that all of the conditions listed herein are met.

GENERAL CONDITIONS - Apply to ALL Authorized Permits:

1. **Facility Inspection by The Department** The permitted site or facility, including relevant records, is subject to inspection at reasonable hours and intervals by an authorized representative of the Department of Environmental Conservation (the Department) to determine whether the permittee is complying with this permit and the ECL. Such representative may order the work suspended pursuant to ECL 71- 0301 and SAPA 401(3).

The permittee shall provide a person to accompany the Department's representative during an inspection to the permit area when requested by the Department.

A copy of this permit, including all referenced maps, drawings and special conditions, must be available for inspection by the Department at all times at the project site or facility. Failure to produce a copy of the permit upon request by a Department representative is a violation of this permit.

2. **Relationship of this Permit to Other Department Orders and Determinations** Unless expressly provided for by the Department, issuance of this permit does not modify, supersede or rescind any order or determination previously issued by the Department or any of the terms, conditions or requirements contained in such order or determination.

3. **Applications For Permit Renewals, Modifications or Transfers** The permittee must submit a separate written application to the Department for permit renewal, modification or transfer of this permit. Such application must include any forms or supplemental information the Department requires. Any renewal, modification or transfer granted by the Department must be in writing. Submission of applications for permit renewal, modification or transfer are to be submitted to:

Regional Permit Administrator
NYSDEC REGION 9 ALLEGANY SUB-OFFICE
182 EAST UNION - STE 3
ALLEGANY, NY14706 -1328

4. **Submission of Renewal Application** The permittee must submit a renewal application at least 30 days before permit expiration for the following permit authorizations: Water Quality Certification, Mined Land Reclamation.

5. **Permit Modifications, Suspensions and Revocations by the Department** The Department reserves the right to exercise all available authority to modify, suspend or revoke this permit. The grounds for modification, suspension or revocation include:

a. materially false or inaccurate statements in the permit application or supporting papers;

b. failure by the permittee to comply with any terms or conditions of the permit;

c. exceeding the scope of the project as described in the permit application;

d. newly discovered material information or a material change in environmental conditions, relevant technology or applicable law or regulations since the issuance of the existing permit;

e. noncompliance with previously issued permit conditions, orders of the commissioner, any provisions of the Environmental Conservation Law or regulations of the Department related to the permitted activity.

6. **Permit Transfer** Permits are transferrable unless specifically prohibited by statute, regulation or another permit condition. Applications for permit transfer should be submitted prior to actual transfer of ownership.

NOTIFICATION OF OTHER PERMITTEE OBLIGATIONS

Item A: Permittee Accepts Legal Responsibility and Agrees to Indemnification
The permittee, excepting state or federal agencies, expressly agrees to indemnify and hold harmless the Department of Environmental Conservation of the State of New York, its representatives, employees, and agents ("DEC") for all claims, suits, actions, and damages, to the extent attributable to the permittee's acts or omissions in connection with the permittee's undertaking of activities in connection with, or operation and maintenance of, the facility or facilities authorized by the permit whether in compliance or not in compliance with the terms and conditions of the permit. This indemnification does not extend to any claims, suits, actions, or damages to the extent attributable to DEC's own negligent or intentional acts or omissions, or to any claims, suits, or actions naming the DEC and arising under Article 78 of the New York Civil Practice Laws and Rules or any citizen suit or civil rights provision under federal or state laws.

Item B: Permittee's Contractors to Comply with Permit
The permittee is responsible for informing its independent contractors, employees, agents and assigns of their responsibility to comply with this permit, including all special conditions while acting as the permittee's agent with respect to the permitted activities, and such persons shall be subject to the same sanctions for violations of the Environmental Conservation Law as those prescribed for the permittee.

Item C: Permittee Responsible for Obtaining Other Required Permits
The permittee is responsible for obtaining any other permits, approvals, lands, easements and rights-of-way that may be required to carry out the activities that are authorized by this permit.

Item D: No Right to Trespass or Interfere with Riparian Rights
This permit does not convey to the permittee any right to trespass upon the lands or interfere with the riparian rights of others in order to perform the permitted work nor does it authorize the impairment of any rights, title, or interest in real or personal property held or vested in a person not a party to the permit.

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Commercial or Industrial Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 200-300

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? no

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? no

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Grab and composite samples collected were submitted by Neu-Velle, for the Tonawanda Coke Corporation, to Paragigm Environmental Services for analyses. The clay material provided from the Tug Hill Environmental (permittee) Bergey Mine is from a natural, virgin, clean and contaminant free source of aggregates that is annually monitored by the New York State Department of Transportation and the New York State Department of Environmental Conservation. Permit No. 9-2924-00099/00003 and Mine Land ID Number 90707. The specific material was up to 300 tons of clay material.

See attachments.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

Revised August 2014

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Tug Hill Environmental LLC (Permittee) - Tom Santarsiero

Location where fill was obtained:

Bergey Mine Site - Lewiston NY

Identification of any state or local approvals as a fill source:

Permit No. 9-2924-00099/00003 and Mine Land ID No. 90707

If no approvals are available, provide a brief history of the use of the property that is the fill source:

See attachments

Provide a list of supporting documentation included with this request:

See attached Permit and analytical results.

Revised August 2014

The information provided on this form is accurate and complete.

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e). Use of this form is not a substitute for reading the applicable Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is: Commercial or Industrial Use

Have Ecological Resources been identified? yes

Is this soil originating from the site? no

How many cubic yards of soil will be imported/reused? 100-200

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone? yes

Does it contain less than 10%, by weight, material that would pass a size 80 sieve? yes

Is this virgin material from a permitted mine or quarry? yes

Is this material recycled concrete or brick from a DEC registered processing facility? no

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

No samples were taken for analyses. The material provided from the Lafarge Holcim Lockport plant is from a natural, virgin, clean and contaminant free source of aggregates that is annually monitored by the New York State Department of Transportation and the New York State Department of Environmental Conservation. Mine File Number 90017. See attachment.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.5 (other material), no chemical testing needed.

Revised August 2014

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

Lafarge Holcim

Location where fill was obtained:

Lafarge Lockport Quarry

Identification of any state or local approvals as a fill source:

Mine File Number 90017

If no approvals are available, provide a brief history of the use of the property that is the fill source:

See attachments

Provide a list of supporting documentation included with this request:

See attached Mining Permit, sieve and Letter from Lafarge.

To: Robert J. Kuberka
Cc: Al Lyons
Subject: RE: Tonawanda Coke, OU3 IRM, #915055 - Gravel Import for Diversion Ditch

Rob,
The Department has reviewed the request dated 08/09/2017 to import 200 tons of washed stone and 50 tons of crusher run material from Lafarge Lockport Quarry. Based on the information provided, the request is hereby approved.

The proposed washed stone material meets the requirements for material other than soil (i.e., gravel, rock, stone, recycled concrete or recycled brick) as specified in section 5.4(e)5 of DER-10. Therefore, this material may be placed without restriction within OU3.

The proposed crusher run material does not meet the requirements for material other than soil (i.e., gravel, rock, stone, recycled concrete or recycled brick) as specified in section 5.4(e)5 of DER-10. However, considering the quantity and source of material the Department is waiving the requirement for analytical testing. This material may be used for the construction of the access bridge across the diversion ditch or as subsurface fill.

Testing in accordance with DER-10 and approval by the Department is required for any additional material imported from this source.

Thank you,
Ben

Subject: RE: Tonawanda Coke, OU3 IRM, #915055 - Gravel Import for Diversion Ditch

Rob,
If you want to add in the amount of crusher run that will also be imported to the site then I can approve the import of both the stone and crusher run using one form.

To do this just increase the volume in Section 1, box 4 and specify the breakdown of the material in Section 3 (E.g. up to 200 cuyd of #57 washed stone and up to 50 cuyd of 2" crusher run).

As an FYI, crusher run would normally require some analytical since >10% passes a size 80 sieve. However, given the source and the limited volume (anticipated ~50 cuyd) needed at the site I will waive that requirement for this importation.

This waiver does not apply to any future importation of crusher run.

Thanks,
Ben

Rob,

Please correct the following and resubmit the form:

1) Section 1, box 3: the soil is not originating from the site. This box should be 'no';
2) Section 2, Box 2: a copy of the sieve results need to be attached to support this; and
3) Section 3, Typo: please correct "New York State Department of Environmental Conservation Transportation".

Thanks,
Ben

Hi Ben:
Attached is the completed form and supporting information…Thanks, Rob

---

From: Mcpherson, Benjamin J (DEC) [mailto:benjamin.mcpherson@dec.ny.gov]
Sent: Monday, August 07, 2017 12:58 PM
To: Robert J. Kuberka <rkuberka@tonawandacoke.com>
Cc: Al Lyons <Al@neu-velle.biz>
Subject: Tonawanda Coke, OU3 IRM, #915055 - Gravel Import for Diversion Ditch

Rob,
It is my understanding that washed stone will be imported and stockpiled to the site for the construction of the diversion ditch. As previously noted, TCC needs to fill out and sign the attached form (along with any supporting information required) for any material imported to the site for use as fill. A separate form is needed for each source (if applicable).

Secondly, please provide an update on the recycling of coal tar sludge waste that is staged on the Mixing Pad. Based on my last inspection of the Pad it does not appear that much sorting/recycling of staged material has occurred. I am concerned that if material does not continue to be recycled that the effective capacity of the Pad will be full, which may hinder progress when excavation resumes in the ditch area.

I look forward to your response.
Thanks,
Ben

Mr. Robert Kuberka
Tonawanda Coke Corporation
3875 River Road
Tonawanda, NY 14150

Dear Mr. Kuberka:

RE: Tonawanda Coke Corporation
#915055 – OU3
Tonawanda (T), Erie County
Material Processing and Inspection Plan

The Department has received the revised *Material Processing and Inspection Plan for Operable Unit 3/Site 108* (January 2018) as prepared by Neu-velle, LLC on behalf of Tonawanda Coke Corporation (TCC). As requested in my January 4, 2018 letter, the Plan text has been clarified and the Department's flowchart has been included in the Plan. Considering this, the Plan in contingently approved pending the revision of the following items:

1) Section 2.3, Fourth Paragraph: the fourth sentence of this paragraph of this sentence will be deleted, as it is inconsistent with other sections of the Plan and Department guidance. On-site soil meeting industrial use soil cleanup objectives (SCOs) may be used as on-site backfill only with Department approval;

2) Section 2.5, Third Paragraph: only clay that is part of the soil matrix which is intermixed with coal tar may be excluded from the definition of debris (for the purpose of this Plan only). As such, the specific reference to clay in this section should be removed as it is not substantially different from soil;

3) Section 2.5, Third Paragraph: the references to the Barrett Tank cleanup will be removed from the Plan, as requested in my January 4, 2018 letter;

4) Section 2.5, Fourth Paragraph: the statements regarding the organic nature of on-site soil are not supported by existing site documents, and will be removed from the report. The *Confirmation Investigation Report* (GHD Services, March 2017) reports that soil in test pits from the IRM areas contain "sand" and "silt, little sand

and clay" in addition to fill and tar impacts. This is consistent with the Department's observations during the majority of the IRM excavation work. These types of soil are not anticipated to have a significant organic content and TCC has not provided site specific data to the contrary. As previously indicated by the Department, soil significantly impacted with coal tar may be processed on the Mixing Pad, but material that is primarily soil will require further segregation prior to processing (to remove the soil) or off-site disposal; and

5) Section 2.5, Increase in Ash Content: it is not clear how the 1.3% increase in ash content was calculated. These calculations will be added to the Plan as an appendix or otherwise appropriate.

If you wish to discuss this matter in more detail, feel free to contact me at benjamin.mcpherson@dec.ny.gov or 716-851-7220.

Sincerely,

Benjamin McPherson
Project Manager
Assistant Engineer (Environmental)

Section 1

NEU-VELLE LLC

Introduction

1.0 INTRODUCTION

1.1 General

This Material Processing and Inspection Plan (Plan) has been prepared by NEU-VELLE LLC (NEU-VELLE), on behalf of Tonawanda Coke Corporation (TCC), in connection with its facility located at 3800 River Road in Tonawanda, New York (the Site), and the Department-approved Tar Removal and Tank Demolition Phased Interim Remedial Measure Pilot Project Work Plan, dated January 20, 2017 (the IRM Work Plan). This Plan delineates the project area addressed to date pursuant to the IRM Work Plan, and specifies activities that will be performed in furtherance of New York State Department of Environmental Conservation (NYSDEC or the Department)-authorized management and recycling of tar-like materials, and activities to be taken during the current phase of the IRM Work Plan to stabilize the Site during the winter months and the processing of stockpiled materials on-Site.

The IRM Work Plan includes the following scope of work:

- Excavation within the six known test pit locations.
- Removal of surficial coal tar within the bermed area surrounding the abandoned tank farm.
- Removal of coal tar from the abandoned aboveground storage tanks.
- Demolition and removal of the abandoned storage tanks.
- Remediation of any coal tar/soil mix identified beneath the former tanks or in the subsurface within the bermed area.

To date, the six test pit locations have been excavated and the excavated material is currently staged on-Site for future management and recycling (i.e., segregation and processing). Additional tar seams and impact have been identified in several areas, requiring a significant expansion of the IRM excavation area originally proposed. These excavation activities have included the need to re-route an on-Site stream, and taking additional Site precautions to avoid potential leaching to the Niagara River. In total, approximately 6,400 tons of material has been excavated as of the date of this report, with approximately 310 tons having been recycled in process operations, approximately 5,000 tons having been stockpiled on-Site, and approximately 1,070 tons having been sent off-site for disposal. All activities have been conducted pursuant to NYSDEC oversight, including regular Site inspections and discussions on material management.

All personnel associated with this project have completed appropriate training, and will complete a program of refresher classroom instruction or on-the-job training to ensure compliance with the requirements of 40 CFR 265.

1.2 Purpose and Organization of Report

This report presents the general design and proposed implementation requirements for the activities that will be performed during activities to be taken during the current phase of the IRM Work Plan to stabilize the Site during the winter months and the processing of stockpiled materials on-Site. This Plan has been organized into the following sections:

- Section 1 - Introduction
- Section 2 - Material Processing
- Section 3 - Inspections
- Section 4 - Reporting

Section 2

NEU-VELLE LLC

Material Segregation and Processing

2.0 MATERIAL PROCESSING

2.1 General

This section presents the activities associated with the processing of material excavated from the project in to TCC's operations, as allowed for under existing State and Federal regulations, and approved in the IRM Work Plan by the Department. The material processing will be performed by qualified individuals trained per the requirements of this Plan, and be overseen by the TCC Environmental Manager or a qualified third party contractor foreman, and include the following minimum activities.

- Site Control;
- Material Segregation
- Material Transportation;
- Mixing Pad Operations;
- Material Processing;
- Debris Transportation and Disposal;
- Decontamination procedures;
- Field documentation; and
- Worker Contamination Prevention.

A detailed description of each activity follows.

2.2 Site Control

The project area is made secure from unhindered and unlimited access by unauthorized personnel due to the presence of a locked gate. Only authorized vehicles and personnel will be allowed in the project area during all activities contemplated by this Plan.

2.3 Material Segregation

All material generated from this project will be appropriately segregated prior to any management (i.e., transported to TCC for processing, off-site disposal, etc.), as appropriate. The objective of the segregation process is to assess whether certain staged Site materials have been in fact impacted by tar-like material, and to the extent so, separate such material for appropriate management. Initial review and segregation of staged materials will be conducted at the Site. The segregation of the material will be conducted using both manual and mechanical screening methods, consistent with the Material Processing Flow Chart presented in Appendix A. For

illustration purposes, a written discussion of the Material Processing Flow Chart is discussed as follows below.

Material that, based on olfactory and visual assessment, is significantly impacted by tar will be separated and staged for transport to the mixing pad located at the TCC main facility at 3875 River Road, Tonawanda, NY (the Facility) prior to recycling in TCC's operations. Any debris will be removed from the mix of material and separately staged. This segregation will be done by trained individuals. All equipment will be managed and decontaminated prior to use for any other Site-related operations. NYSDEC will be provided access to review this material on a periodic basis, as it believes appropriate, and the TCC Environmental Manager will maintain records regarding the material staged, and transported to, the mixing pad.

For any other staged Site material, TCC will utilize a mobile multiple deck screening device, to review the state of the staged material, and as appropriate, screen out any tar material that might be present. The mobile screening device is capable of separating 4 products. Material is fed into the unit's hopper via an excavator or loader, and the material is conveyed by its main conveyor to a triple deck screen, which separates the material by size/type. The sorted material is then conveyed to separate piles via separate conveyors. Use of a similar type of screening operation has been previously approved by the NYSDEC for use at other site remediation projects. Given the current cold weather, any tar-like material is expected to be clearly obvious during the screening process, based on consistency, coloring, and expected smell, making the cold weather period the optimal time to conduct the screening process.

The screening process will be utilized on one pile of staged material at a time. Any material that is screened, and for which no tar impact is identified, will be separated on-Site and reused as Site backfill. This material will have analytical samples taken, consistent with DER-10, to assess the presence of volatile organic (VOC) and semi-volatile organic (SVOC) compounds above industrial standards. If the analytical results identify the presence of constituents above industrial standards, but that are not consistent with tar-related material, the NYSDEC will be contacted to discuss management, and the potential for such analytical results being acceptable for on-Site reuse, given background levels and other related considerations, which may including seeking a regulatory Contained-In Determination.

Any material that is identified as being impacted by tar-like material from the screening process, or above industrial standards for tar-like constituents, will be managed in a two-step process. First, the screened out tar-like material will be collected and added to the significantly impacted material staged on-Site for processing at the TCC mixing pad. Records of such material being transferred will be maintained by the TCC Environmental Manager. Second, the soil that was collected from the screening process will be collected and separately staged at the Site. This material will then have analytical samples taken, consistent with the requirement of DER-10, to assess the presence of VOCs and SVOCs above industrial standards. Upon receipt of the results, the NYSDEC will be consulted to discuss how such material should be managed, including the potential for beneficially reusing on-Site, and whether a regulatory determination (*i.e.* Contained-In Determination) may be required to address and manage the material.

It is TCC's intent to avoid, to the maximum extent possible, the need to send off-site any material that meets, or moderately exceeds, industrial standards. Final management of all materials will be determined in consultation with the NYSDEC.

2.4 Material Transportation

Material appropriate for processing in the TCC coking process will be loaded into trucks for transportation to the mixing pad. The management of materials will utilize "clean loading" procedures minimizing contact/impact with other areas, as identified in the IRM Work Plan. These procedures will ensure that the materials are not spread to other areas during transport, including adjacent properties and roadways. Equipment (e.g. excavator, bulldozer, etc.) will be decontaminated prior to leaving the site.

A trackhoe, or equivalent, will be used for loading staged materials from the project area. Staged materials will be directly loaded into trucks for transport to the coal mixing pad for re-use in the coke process. If necessary, the dump trucks will be decontaminated to prevent the spreading of excavated materials to other areas. This same equipment will be used to manage any staged material to be beneficially reused on-Site.

Material not suitable for processing in the TCC coking process, and that will be transported off-site, will be done by a permitted approved hauler, in accordance with the Department of Transportation (DOT) guidelines as outlined in 49 CFR Parts 171 through 179, 6 NYCRR Part 364, and any other applicable state and local regulations. Each shipment of solid or liquid waste generated from the project will be properly characterized and containerized prior to exiting the site.

A non-hazardous bill of lading or hazardous manifest will be prepared and completed for each shipment prior to exiting the site.

2.5 Mixing Pad Operations

Based on information provided by TCC, as well as visual inspection, the mixing pad is constructed entirely of reinforced concrete. NEU-VELLE previously certified to the integrity of the mixing pad. The mixing pad is approximately 60 feet wide by 100 feet in length, and was designed and constructed in 1994. The mixing pad consists of a 12 inch thick base, founded on a footer system that extends to approximately one foot below grade around the entire perimeter of the mixing pad. The base of the pad was constructed in multiple concrete pours using lap type construction. The walls were constructed of 12' thick reinforced concrete and extend to approximately 4 foot above grade. The walls were independently poured and were keyed into the base at a height of approximately 6 inches above the concrete floor.

Based on the size of the mixing pad, the available storage volume is approximately 1,000 cubic yards, which is based on staging the material on a 2 on 1 slope to a height of approximately 10 feet at the center of the mixing pad. This equates to a side wall height of 3 feet (allowing one foot of freeboard at the perimeter). Once material is placed on the mixing pad, TCC will inspect it for debris (i.e., large bricks, concrete, wood, etc.) that is not suitable for introducing into the existing coke process and remove as necessary, for staging into appropriate containers (i.e., roll-off's, dump trucks, trailers, etc.) for appropriate off-site disposal. Debris not suitable for processing will be

segregated and disposed of off-site appropriately.

Prior to introducing any materials into the TCC coking operations, it will be staged on the mixing pad for additional segregation of debris (i.e., large wood pieces, brick, rocks, etc.), as necessary. For purposes of this Plan, debris does not include minimal amounts of soil, and small wood debris that is intermixed with tar, such that the mixture can readily be managed within TCC's operations without effecting its final end product or compliance with State and Federal regulations.

Upon carbonization these materials will be ultimately converted to coke ash or carbon within the coke matrix and they will become part of the saleable product offered by TCC. The basis for the exclusion of minimal amounts of soils and small wood pieces as debris is due to the fact that the organic portions of such materials will be converted to carbon during the coking process, with any remaining of inorganic debris being converted to coke ash within the matrix of the saleable coke product, and can be regularly managed in that context. Charcoal is of the same chemical composition as metallurgical coke, except that it is made from wood instead of coal. Before it was found in England during the Industrial Revolution that coal could make coke, all metallurgical coke was made from wood and other organic materials. All organic materials will turn into carbon (coke) when carbonized.

Once the material is properly segregated on the pad and debris is removed, the material will be pre-mixed with coal/breeze on the pad. One part material to 3 parts coal/breeze, such that this mixture will represent approximately 25% of the blend, will be introduced into the TCC process. After being pre-mixed to this ratio on the pad, the pre-mixed material from the Site will become approximately 1/6th of the total coal charged into each coke oven. Assuming an individual oven charge is approximately 18.6 tons, the Site material within each oven charge will equate to a volume of approximately 0.78 tons of the entire oven charge, or about 4.2 percent of the charge by weight ((18.6 x 0.25)/6). At this volume, and assuming operation of 27 ovens per day, this procedure is capable of processing approximately 21 tons per day of Site material. Should production levels increase, the amount of material processed on a daily basis will increase in a corresponding manner.

Soil, wood, and other organic materials included in the mix will be converted into saleable product in the coking process. Ash is a typical constituent of the final product matrix and is saleable. Therefore, based on the projection volumes presented above (25% of 1/6$^{th)}$, this equates to approximately 4.2% by weight, which will increase the ash content in the product blend approximately 1.3% (Appendix B). Based on historic values, the ash content of saleable coke is typically approximately 6.7%. Assuming an increase of 1.3% ash content due to the introduction of the Site material, this equates to a final ash content in the product of approximately 8%. Based on customer requirements, typical saleable ash content ranges between 7% - 9%. Therefore, the introduction of Site material will not affect the quality of TCC's saleable product, as it is within the range that process-related environmental controls are equipped to manage, including the pushing controls installation and Site practices. No true difference is expected in the circumstance of air emission or particulate discharge. And regardless, the facility's Continuous Operating Monitoring System, and the Method 9 and Method 303 observations, will confirm consistency with existing State and Federal regulations and requirements.

Visual and olfactory observations will be made to discern the quality of the impacted material, and the debris to be removed. Documentation will be kept identifying the material brought to the mixing pad on a concurrent basis, with notations to be included regarding the types of debris removed from any piles, and other notable observations regarding the status of the material.

The mixing pad will be inspected on a weekly basis as presented in Section 3 of this Plan, and consistent with existing TCC procedures. The Department will be provided notice, on a weekly basis, of all material moved to the mixing pad.

2.6 Material Processing

Material will be removed from the mixing pad for introduction to the coking process by trained personnel using dedicated equipment. Following segregation of debris that is not suitable for processing, the material will be blended with either coal or breeze, or both, to be reintroduced into the coking process, depending on the intended mix. TCC will charge the material as either a portion of the entire coal charge, segregated in sections of the ovens or a combination of both strategies. When the material is introduced as percentage of the entire coal charge, TCC anticipates no more than 5% of the mix to be Site material. The segregated portion of the mix will be introduced into the ovens in a segregated "pocket," which will allow the material to be placed in such a way to remain off the floor of the hot oven to minimize operational issues, such as floor klinkers (hard deposits of tar pitch stuck to the oven floor) and sticking ovens (ovens may not push out due to the friction caused by klinkers during pushing). Use of a "pocket" will not have any adverse effects related to environmental compliance, or the final composition of the saleable product.

TCC will mix the Site material with enough coal/breeze to be properly handled in the system. TCC maintains to make a premium product for its customers, as well as keep pushing emissions in compliance. As such, TCC may vary the percentages and ratios to maintain a quality product, as well as to ensure environmental compliance requirements are being met, during the recycling process. The variations on the percentage mixture will not result in a greater than 5% contribution of Site-related material. Based on the expected introduction rate, as well as past experience with processing similar material from the Barret Tank project and the IRM Work Plan, it is assumed that the material will be processed at a rate of approximately 20 – 30 tons per day.

All battery ovens will be closely monitored when processing recycled material to prevent upset to the process and environmental requirements, or impacts to the coke end product. The NYSDEC project manager will be provided 48 hours' electronic notice of any material having been added to a mix, and of an oven being pushed with recycled material. In addition, due to current controls for the TCC operations, including the pushing emissions controls (shed & baghouse) installation, the continuous battery stack opacity monitoring system, daily 3rd party Method 303 and Method 9 inspections, and facility inspections and enhanced procedures, controlled processing of this material will be successful, and can be addressed consistent with existing State and Federal environmental regulations for which TCC is already subject to.

2.7 Debris Transportation and Disposal

All tar contaminated debris (i.e., large bricks, concrete, wood, etc.) that is not suitable to be processed, will be transported off-site by a permitted and approved hauler, in accordance with the Department of Transportation (DOT) guidelines as outlined in 49 CFR Parts 171 through 179, 6 NYCRR Part 364, and any other applicable state and local regulations. Each shipment of waste will be properly characterized, containerized, and manifested prior to exiting the site.

2.8 Decontamination Procedures

The existing equipment/personnel decontamination facility will be used during material processing activities. The decontamination facility will be used for removal of residual materials from large equipment (excavator, loader, haul trucks, etc.) prior to leaving the project site. Wash waters will be collected and transferred to TCC's main facility for processing in the existing wastewater treatment system.

2.9 Field Documentation

All site activities will be documented as appropriate. At a minimum, the following information will be documented (i.e., inspection checklist/form):

- Project personnel;
- Date;
- Visual observation of material and circumstances present (erosion control, tanks, secondary containment, etc.);
- Volume of material transported to the mixing pad; and
- Issues/Concerns

This documentation will provide a detailed summary of the daily activities, as well as an inventory of materials scheduled to be processed.

2.10 Worker Contamination Prevention

Materials will be managed to avoid the spread of residual materials from the site as follows:

- Work practices will focus on keeping materials off of workers and their personal clothing by using appropriate protective clothing, as necessary.
- Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand-to-mouth contact is strictly prohibited within the material staging areas.
- The hands and face must be thoroughly washed upon leaving the work area and prior to engaging in any activity indicated above.

- Personal protective equipment and clothing must be worn by all personnel entering restricted areas of the site, as necessary.

- Contact with surfaces/materials either suspected or known to be contaminated will be avoided to minimize the potential for transfer to personnel, cross contamination and need for decontamination.

- All equipment leaving the site will be visually inspected and decontaminated, as needed.

Section 3

NEU-VELLE LLC

Inspections

3.0 SITE INSPECTIONS

3.1 General

This section summarizes procedures for inspections that will be conducted at the site.

3.2 Mixing Pad

On a weekly basis, the mixing pad will be visually inspected by the TCC Environmental Manager, or his trained designee, while the processing of material from the Site is being conducted. The inspection will include an estimate of volume of material on the pad, amount of debris removed from the pad for off-site disposal, as well as area condition. Excess liquids accumulated on the pad will be removed as necessary, in accordance with existing facility operation procedures. The inspections will be documented as indicated in Section 4 of this work plan.

3.3 Storage Tanks

The Site currently has three large aboveground storage tanks that are approximately 45 feet in diameter.

The western most storage tank was previously taken down to approximately 5 feet above the ground surface. It currently contains coal tar to approximately 4 feet (approximately 47,000 gallons) above grade. The middle tank is intact except for a portion of its roof, which was previously removed. The tank currently stores approximately 9 feet of coal tar above grade, and 3 feet of water (approximately 107,000 gallons of tar and 36,000 gallons of water). The eastern most storage tank is intact except for four holes that were cut into the side wall above any material to inspect the contents of the tank. The tank currently stores approximately 1.5 feet of coal tar above grade, and 1 foot of water (approximately 18,000 gallons of tar and 12,000 gallons of water. The tanks are located within an existing clay berm (western and middle tank are in separate berms) to provide secondary containment.

The bermed area for the western and middle tanks is approximately 75’W x 140’L x 5’H. This equates to approximately 390,000 gallons of containment volume. The bermed area for the eastern tank is approximately 75’D x 6’H. This equates to approximately 198,000 gallons of containment volume. Based on the available containment volume for each area, secondary containment in the event of a release is not a concern.

The storage tanks and their containment structures will be inspected on a weekly basis during until such time as the tar has been removed from the aboveground storage tanks, associated appurtenances, and bermed area, consistent with the requirements of the IRM Work Plan. The weekly inspection will require the Environmental Manager, or his trained designee, to confirm the integrity of the tanks, conditions of any bermed area acting as secondary containment, and depth of accumulated liquid (i.e., precipitation within the containment area). If depth to grade is not uniform within each of the bermed areas, multiple measurements will be taken to document conditions for further consideration. If concerns are identified regarding tank integrity or the

collection of material within a bermed area, the NYSDEC project manager will be notified promptly. The inspections will be documented as indicated in Section 4 of this Plan.

3.4 Material Storage Areas

Material stored on-Site for screen processing or transport to the Facility's mixing pad will be staged on and covered with poly sheeting to prevent storm water run-on and run-off. At the end of each work day, all material will be covered with poly sheeting and secured prior to leaving the site. The staged material will be inspected on a weekly basis, concurrent with the aboveground tank inspection, to insure that the materials are properly covered. In addition, in the event of inclement weather (i.e., wind, rain, snow), including snowfall above 1 foot, or a rain event with excess of .5 inches, the storage areas will be inspected the following day to insure that all materials are properly stabilized and maintained. The inspections will be documented as indicated in Section 4 of this Plan.

3.5 Erosion Control

As part of the IRM Work Plan, erosion control and stormwater management structures were installed at the site to control surface-water run-on and to minimize the potential for erosion and migration of coal tar during project activities. Soil erosion and storm-water structures include:

- Silt fence;
- Storm-water diversion ditch;
- Temporary check dams and diversion structures; and
- Seeding/mulching.

During project activities, Site inspections will be conducted on a concurrent basis as those for the aboveground storage tanks and Site stockpiled materials. At a minimum, the inspection will cover all erosion and sediment control practices to ensure integrity and effectiveness. The inspections will be documented as indicated in Section 4 of this Plan.

Section 4

NEU-VELLE LLC

Reporting

4.0 REPORTING

On a weekly basis, a summary report will be prepared documenting the activities conducted with respect to Site 108, and transmitted to the NYSDEC project manager. At a minimum, the summary report will include the following information:

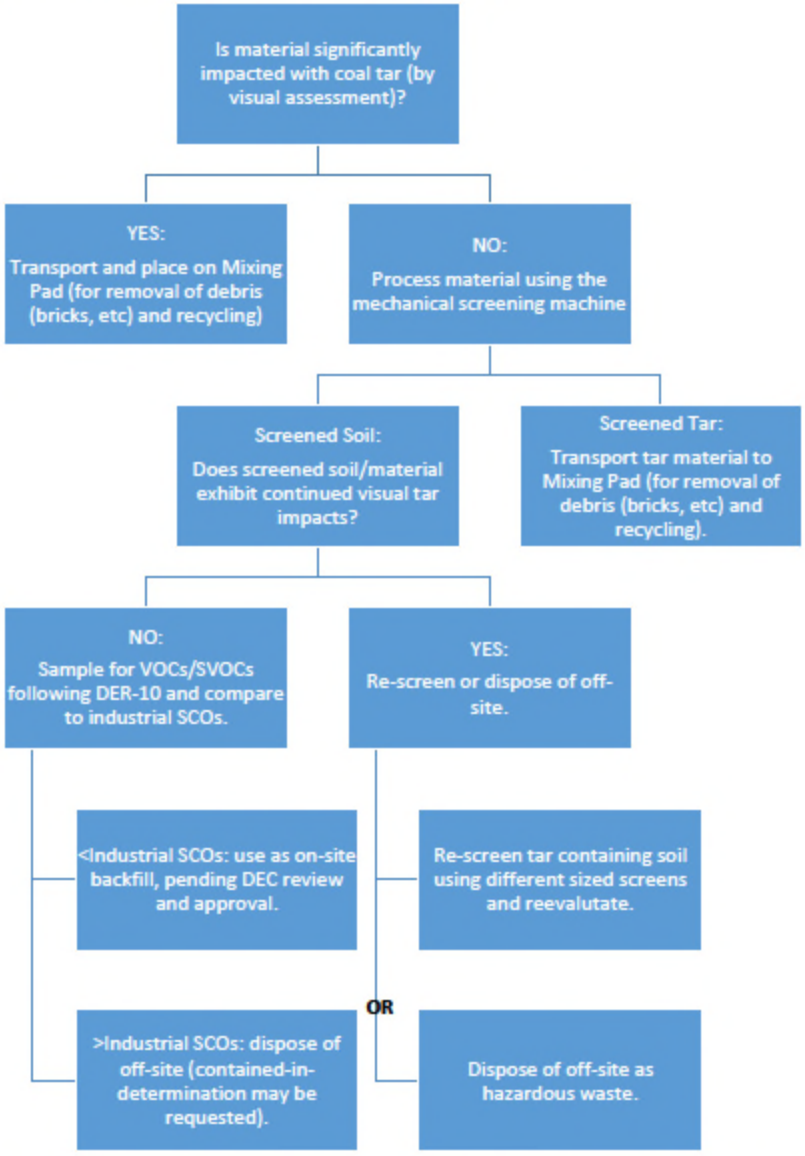
- Volume of material segregated for recycling, screen processing, and for beneficial reuse on-Site.
- Volume of material transported to mixing pad;
- Volume of material processed;
- Materials disposed off-site;
- Materials remaining on-site; and
- Inspection documentation (i.e., inspection checklist/form).

Appendix A

NEU-VELLE LLC

Material Processing Flow Chart

Flowchart based on Section 2.3 of the *Material Processing and Inspection Plan* (revised December 2017), and amended by NYSDEC.



NOTE: the final management of all materials and/or wastes will be made in consultation with NYSDEC.

Appendix B

NEU-VELLE LLC

Ash Content Calculation

TONAWANDA COKE CORPORATION

ESTIMATED AVERAGE INCREASE IN TOTAL COAL CHARGE ASH CONTENT DUE TO SITE 108 TAR/SOIL ADDITION

INFORMATION ON TCC 'S AVERAGE COAL BLEND CHARGE TO A COKE OVEN

TCC's Average Coal Blend Charge Weight		18.6 tons of coal blend per oven charged
Ave Ash in Coal Blend Charged to Ovens at TCC	6.7%	ash content
Total Ash Charged Per Oven		1.25 tons of ash per oven charged

APPROXIMATE ASH IN SITE 108 TAR/SOIL MIXURES TO BE RECYCLED

Estimated Average Ash Content of 108 Tar/Soil	30%	ash content on average

APPROXIMATE MIXTURE OF 108 TAR/SOIL WITH COAL/BREEZE ON TCC MIXING PAD

108 Tar/Soil is mixed with Coal/Breeze in Ratio of	1 Part to 3 Parts Coal/Breeze	
Resulting Percent of Coal/Breeze in the 108 Mix	75%	of the 108 mix is coal/breeze
Resulting Percent of 108 Tar/Soil in the 108 Mix	25%	of the 108 mix is tar/soil

APPROXIMATE AMOUNT OF SITE 108 MIX ADDED TO EACH COKE OVEN CHARGE

108 Mix Charged to the Ovens	~ 1/6th of Charge Weight	3.1 tons of the oven charge is 108 mix
Remaining Coal Blend	~ 5/6th of Charge Weight	15.5 tons of the oven charge is the usual TCC blend

FIRST QUICK CALCULATION OF ASH ADDED PER CHARGE DUE TO SITE 108 MATERIAL

Assume that the Coal/Breeze Mixed with Tar/Soil on Pad Contains the Same Average Ash Content as the Usual TCC Blend

Ash added to the charge = (1/6) (25%) (30%) =	1.25%	of the total charge is ash added by site 108 material
(18.6 tons per charge) (1/6) (25%) (30%) =		0.23 tons of ash added by ash in 108 Tar/Soil
If this ash is added to the usual TCC Blend ash, 6.7% + 1.25% =	7.95%	total ash content of the whole charge

A MORE MATHEMATICALLY RIGOROUS (WEIGHTED AVERAGE) CALCULATION OF TOTAL ASH IN A COAL CHARGE CONTAINING SITE 108 MATERIAL

Assume, again, that the Coal/Breeze Mixed with Tar/Soil on Pad Contains the Same Average Ash Content as the Usual TCC Blend

1/6 [(Blend % Ash)(75%) + (Max Tar/Soil % Ash)(25%)] + 5/6 (% Blend Ash) =

1/6[(6.7%)(75%) + (30%)(25%)] + 5/6 (6.7%) =	7.67%	total ash content of the whole charge

ACTUAL ESTIMATED INCREASE IN ASH RESULTING FROM ADDING THE SITE 108 MATERIAL

7.67% minus 6.7% =	0.97%	increase in total ash content of the charge due to site 108 material
This represents an ash content increase of	14.49%	above the usual TCC charge

CONCLUSION

The first quick calculation (above) overestimated the impact of adding site 108 tar/soil material because it neglected to account for the loss of ash in the displaced 1/6th of the charge

This quick calculation estimated a total ash increase of 1.25% (up to 7.95% ash for the whole charge)

A more rigorous calculation produces a total ash increase (on average) of 0.97% (up to 7.67% ash for the whole charge)

This ash increase, by whichever method estimated, is within the quality standards of the TCC coal blend

Naphthalene	mg/kg	**30.9**	**13.9**	**511**	1000
Nitrobenzene	mg/kg	ND<6.56	ND<1.55	ND<33.1	NI
N-Nitroso-di-n-propylamine	mg/kg	ND<6.56	ND<1.55	ND<33.1	NI
N-Nitrosodiphenylamine	mg/kg	ND<6.56	ND<1.55	ND<33.1	NI
Pentachlorophenol	mg/kg	ND<13.1	ND<3.1	ND<66.2	55
Phenanthrene	mg/kg	**67.9**	**2.41**	**194**	1000
Phenol	mg/kg	ND<6.56	ND<1.55	ND<33.1	1000
Pyrene	mg/kg	**37.2**	ND<1.55	**83.4**	1000

(mg/kg) = millograms per kilograms = parts per million (ppm)

ND = Not detected

NI = Not indicated in NYSDEC Part 375-6 (Table 375-6.8B)

Shaded area represents NYSDEC Part 375-6 (Table 375-6.8B) exceedance

EPA 5035A - L

Data File: x43734.D

This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Reporting limit elevated due to non-target compounds

Method Reference(s): EPA 8260C
EPA 5035A - L

Data File: x43750.D

This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Monday, July 31, 2017

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Preparation Date: 9/19/2017

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Thursday, September 21, 2017

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Al Lyons

From: Mcpherson, Benjamin J (DEC) <benjamin.mcpherson@dec.ny.gov>
Sent: Thursday, August 24, 2017 4:06 PM
To: Al Lyons
Cc: Robert J. Kuberka
Subject: RE: Tonawanda Coke Petroleum Contaminated Soil
Attachments: FW: PHC Chromatograms

Al,

Based on the information provided and field observations of the material in question, your request to manage the 'petroleum contaminated soil' as non-hazardous waste is approved. If any portion of this material is found to contain visible coal tar or exhibits characteristic(s) associated with coal tar (e.g. odor) then that portion of the material must be managed as hazardous waste.

Information on the proposed disposal facility must be provided to me prior to the material leaving the site. I will also need to be notified 5 days prior to the scheduled loading and transport of the material off-site so I may be available to inspect the material.

As a point of clarification, please note that Department chemists have noted that the chromatograms for the Tar and Petroleum Soil samples are extremely similar and would lead me to contest the statement that samples have a "totally different signature". However, given my field observations and the waste characterization results it does seem reasonable to manage the material as a non-hazardous waste.

Please let me know if you have any questions regarding this matter.

Thank you,
Ben

Benjamin McPherson

Analytical Report For

Neu-Velle

For Lab Project ID

173463

Referencing

Tonawanda Coke Site 108

Prepared

Wednesday, August 9, 2017

Any noncompliant QC parameters or other notes impacting data interpretation are flagged or documented on the final report or are noted below.

Rebecca Ross

Certifies that this report has been approved by the Technical Director or Designee

179 Lake Avenue • Rochester, NY 14608 • (585) 647-2530 • Fax (585) 647-3311 • ELAP ID# 10958

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

PARADIGM
ENVIRONMENTAL SERVICES, INC.

Lab Project ID: 173463

Client: **Neu-Velle**

Project Reference: Tonawanda Coke Site 108

Sample Identifier:	Petroleum Soil		
Lab Sample ID:	173463-05	**Date Sampled:**	8/3/2017
Matrix:	Soil	**Date Received:**	8/4/2017

Petroleum Hydrocarbons by GC

Analyte	Result	Units	Qualifier	Date Analyzed
Medium weight PHC as Fuel Oil #6	**30800**	mg/Kg		8/8/2017

Sample chromatogram not an exact match to reference chromatogram. Closest match made.

Method Reference(s): NYSDOH 310.13

Preparation Date: 8/7/2017

ELAP does not offer this test for approval as part of their laboratory certification program.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Wednesday, August 23, 2017

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on the final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Analytical Report For

Neu-Velle

For Lab Project ID

183805

Referencing

Tonawanda Coke

Prepared

Thursday, August 30, 2018

This project has been reissued to report client specified list of compounds for Volatile and Semivolatile Organics.

Any noncompliant QC parameters or other notes impacting data interpretation are flagged or documented on the final report or are noted below.

Certifies that this report has been approved by the Technical Director or Designee

179 Lake Avenue • Rochester, NY 14608 • (585) 647-2530 • Fax (585) 647-3311 • ELAP ID# 10958

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Data File: x53510.D

This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Thursday, August 30, 2018

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

Re: Tonawanda Coke Corporation
#915055 – OU3
Tonawanda (T), Erie County
IRM Schedule

Dear Mr. Stravino:

Staff with the New York State Department of Environmental Conservation (Department) requested an updated Coal Tar IRM scheduled from Mr. Albert Lyons, Jr. on September 12, 2018. This schedule was received on September 18, 2018 and proposes the submission of an additional work plan for the tank farm demolition to the Department. Mr. Lyons has proposed to submit such a work plan to the Department by September 28, 2018.

Please note that the Department expects the following items to be addressed by the work plan to be submitted on September 28, 2018:

1. Management procedures for the water, coal tar, coal tar sludge, soil, and any other materials located in the tanks or the surrounding tank berms. This includes, but is not limited to, the type and amount of waste characterization sampling, decontamination procedures, and disposal requirements for each media.

2. During the demolition of the piping surrounding the tanks, a significant amount or tar and water flowed out of a pipe towards the tank farm. Investigation to determine the extent of coal tar remaining in on-site piping is required. Pipes and other appurtenances found to contain coal tar or are otherwise contaminated by coal tar will be addressed as part of the IRM.

3. The ground surface in the areas surrounding the screening area and former material stockpiles exhibit various levels of coal tar impacts from the screening operation. Procedures for the assessment and removal of residual coal tar impacts from the ground surface are required. After removal and grading is complete soil samples should be collected to document the current surface soil conditions.

4. Provisions for the grading and seeding of the screening area and former material stockpiles after Item 3 (above) is addressed.

5. A summary of the amount of IRM material remaining on-site relating to the soil screening and segregation.

6. The analytical results from the screened soil piles will be provided along with proposed disposal options.

7. It was noted during field inspections that the southern bank of the diversion ditch (near its outlet) requires repair to stabilize the bank soil. Provisions for this repair will be included in the work plan.

Please contact me should your client wish to discuss the above in greater detail.

Very truly yours,

Teresa J. Mucha
Associate Attorney

NEU-VELLE LLC

Introduction

1.0 INTRODUCTION

1.1 General

This Tank Removal Work Plan (Work Plan) has been prepared by NEU-VELLE LLC (NEU-VELLE), on behalf of Tonawanda Coke Corporation (TCC), in connection with its facility located at 3800 River Road in Tonawanda, New York (the Site), and the Department-approved Tar Removal and Tank Demolition Phased Interim Remedial Measure Pilot Project Work Plan, dated January 20, 2017 (the IRM Work Plan). This Plan specifies activities that will be performed in furtherance of the Department-authorized management and recycling of tar-like materials and activities during the removal of the tanks at the Site.

This work plan presents the planned activities to effectively remove the tank systems and tar-like residual materials in the tanks and within the earthen berm containment area, management of material previously generated at the site, and site restoration. In addition, procedures have been developed to protect safety and health and to insure that ground or surface water contamination will not occur as a result of the project activities.

All work will be conducted in a manner to ensure compliance with 40 CFR Part 262 for management of materials to be managed off-site. This will include at a minimum:

1. Container Management

    a. All containers used will be marked in accordance with 40 CFR 262.34(a)(2) and 40CFR 262.34(a)(3).

    b. All containers will be inspected in accordance with 40 CFR 265.174

2. Accumulation Time Limit (40 CFR 262.34)

    a. Material generated as part of this project that will not be re-used or recycled will not be accumulated (stored following characterizations) on-site for more than 90 days.

3. Contingency Plan 40 CFR 265 Subpart D

    a. To insure compliance with 40 CFR 265, a contingency plan has been developed for the project. The contingency plan is designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.

4. Personnel Training 40 CFR 265.16

    a. Personnel associated with this project will successfully complete a program of classroom instruction or on-the-job training that teaches them

to perform their duties in a way that ensures the facility's compliance with the requirements of 40 CFR 265.

1.2 Purpose and Organization of Report

This report presents the general design and proposed implementation requirements for the removal of the tanks and contents at the site.

- Section 1 - Introduction
- Section 2 - Tank Removal & Remedial Activities
- Section 3 - Material Management
- Section 4 – Site Restoration and Repairs
- Section 5 - Reporting

Section 2

NEU-VELLE LLC

Tank Removal & Remedial Activities

2.0 TANK REMOVAL & ASSOCIATED ACTIVITIES

2.1 General

This section presents the activities associated with removing the tanks from the site. The project includes the removal of the contents from three aboveground storage tank systems, removing the tank systems, and the excavation and management of residual tar-like materials in the area of the tank systems (i.e., within the secondary containment area). The project will be performed by a qualified remedial contractor and include at a minimum the following activities. A detailed description of each activity follows.

- Site Control;
- Mobilization;
- Temporary soil erosion and storm water controls;
- Material Staging;
- Storage tank(s) cleaning/removal;
- Excavation of residual tar-like materials;
- Decontamination procedures;
- Field documentation; and
- Worker Contamination Prevention.

A detailed description of each activity follows.

2.2 Site Control

Prior to mobilization on site, the project area will be made secure from unhindered and unlimited access by unauthorized personnel. This will be accomplished by the installation of appropriate barriers (i.e., barrier tape, concrete barriers, fencing, cones, rope, etc.). Tonawanda Coke will provide and maintain security and personnel identification at all times during the project. Only authorized vehicles will be allowed in the project area.

2.3 Mobilization

Excavation/tank removal equipment and materials, including a loader, excavator, shear, dump truck, vacuum truck, etc., required for tank cleaning and removal activities will be mobilized and staged at the site in the vicinity of the project area. Additionally, a decontamination facility and generated materials storage area will be constructed to be used during the tank removal activities.

2.4 Temporary Soil Erosion and Stormwater Controls

Prior to the start of the tank removal activities, temporary erosion control and stormwater management structures will be installed at the site to control surface-water run-on and to minimize the potential for erosion and migration of tank contents and other residual tar-like materials during project activities. Soil erosion and storm-water run-off structures will be installed, operated, and inspected in accordance with "New York Guidelines for Urban Erosion and Sediment Control". Storm-water and erosion controls will include the following:

- Silt fence and hay bales around excavation areas;
- Temporary storm-water diversion ditches for the control of surface-water run-off from up-gradient areas onto the project area;
- Temporary check dams and diversion structures/equipment to divert surface-water flow around the project area of concern; and
- Sedimentation control structures around the decontamination and material storage areas.

Silt fence, as appropriate, will be installed along the perimeter of the project area. The silt fence will be anchored a minimum of six inches into the ground and staked every ten feet. Hay bales will be used in conjunction with silt fence along low lying areas of the excavation, staging, and decontamination areas that are expected to receive a greater amount of run-off. The hay bales will be installed immediately adjacent to a three-foot high silt fence. The hay bales will be secured to the ground with stakes or equivalent. Inspection and proper maintenance of the controls will be performed as a component of site maintenance during project activities.

2.5 Material Staging (materials intended for off-site management)

A material staging area will be constructed for the temporary storage of materials to be managed (i.e., scrapped, salvaged, off-site disposal) as a result of the project activities. In particular, the following materials will be staged separately:

- Uncontaminated metal (i.e., tanks, piping, etc.);
- Contaminated metal (tanks, piping, etc.);
- Tar Contaminated Soil;
- Tar Contaminated debris (i.e., brick, vegetation, etc.); and
- Water.

The material staging areas will be constructed in the vicinity of the project area. The staged materials (if determined to be contaminated) will be covered at the end of the work day and during precipitation events. The covered material will be secured during inclement weather and

during periods of inactivity. Temporary erosion and storm water controls will utilized as described above to limit coal tar run-off. Contaminated materials may be placed in stockpiles, trucks, or disposal containers (i.e., roll-offs) as follows.

2.5.1 Generated Materials

Generated materials (i.e., excavated materials, tanks/piping, water, etc.) will be maintained as follows:

1. Preparation of Storage Areas

   - The area will be graded to provide positive drainage away from intended storage locations.

   - All stones, roots, debris and other objects that may puncture polyethylene (PE) ground protection will be removed.

   - The ground surface where material will be staged will be covered with a minimum of 1 layer of 0.15 millimeter (6-mil) polyethylene sheeting or equivalent material. All seams will be overlapped and sealed, as appropriate.

2. Storage Area Protection

   - At the end of each work day, contaminated materials will be completely covered with a minimum of 1 layer of 0.15 millimeter (6-mil) polyethylene sheeting, or an equivalent material. All seams will be overlapped and sealed, as appropriate.

   - Material covers will be weighted or secured by appropriate means to prevent tearing or removal by weather conditions.

3. Maintenance

   - Material covers, site grading, signing and security measures shall be properly maintained for the duration of storage. Damaged covers and other protections will be repaired or replaced as necessary.

2.5.2 Material Containers & Transportation

Trucks and disposal containers will be maintained as follows:

- The interior of truck-beds and disposal containers will be lined with 1 layer of 0.15 millimeter (6-mil) polyethylene sheeting, or an equivalent material. All seams shall be overlapped and sealed, as appropriate.

- At the end of each work day, trucks and disposal containers storing material will be completely covered with waterproof tarpaulins, or hard cover tops. Tarpaulins will be placed over the top of the truck bed or container (rather than over the material inside) and shall extend over the sides to prevent water accumulation and the evaporation of contaminants.

- Tarpaulins will be weighted or secured by appropriate means to prevent tearing or removal by climatic conditions.

- Trucks and disposal containers will be labeled, signed, fenced or otherwise secured (as needed) at the end of each work day.

- Trucks, disposal containers and tarpaulins shall be properly maintained for the duration of material storage.

2.6 Storage Tank Cleaning/removal

Prior to removal of the tank systems, piping and ancillary equipment associated with the tanks will be disconnected (i.e., piping and ancillary equipment back to pump house). The presence of contamination (i.e., asbestos) on piping and ancillary equipment will be based on physical observation and appropriate testing prior to removal. Piping and ancillary equipment with the presence of asbestos or other regulated materials will be wrapped in plastic and transported to the decontamination area for staging prior to decontamination or off-site disposal, as necessary. All piping and ancillary equipment removed as part of this project will be taken to the decontamination facility for appropriate cleaning. In the event that decontamination is not feasible, it will be containerized and transported off site for appropriate disposal within 90 days.

An assessment was conducted by Tonawanda Coke of the material within the tank systems prior to development of this work plan. Based on the assessment, the material is tar and a saleable product. Therefore, the tar in the tanks is considered a saleable product and will be pumped from each tank and transported off-site to Tonawanda Coke's tar customer. In the event that it will not be transported off site as a saleable product, the material will be transported to Tonawanda Coke's tar recovery process. Once at the Tonawanda Coke facility, the tar will be unloaded into the 6 Sump where it will be conveyed into the tar decanter system. Following processing through the decanter system, it will be conveyed (i.e., pumped) to the tar dehydrator and ultimately sold off-site as a saleable product. Introduction/processing rate of the tar will be based on the facilities capability (i.e., storage volume) to manage the material. No material will be introduced into the system without approval from the NYSDEC on-site monitor. Any water in the tanks or secondary containment system will be pumped into vacuum trucks and transported to Tonawanda Coke's existing wastewater treatment system for appropriate treatment prior to discharge to the local Town of Tonawanda sanitary sewer system. Any material from within the tanks that can't be pumped (i.e., tar sludge), will be characterized prior to appropriate management.

Following review of the analytical results and concurrence from the New York State Department of Conservation (NYSDEC), the materials will be removed and transported either to the existing coal mixing pad for future re-use in the coking process or transported off-site to an approved disposal facility within 90 days of determination that it can't be recycled.

Following removal of the tank contents, the tanks will be disassembled (i.e., cut) into manageable size pieces and transported to the decontamination facility for appropriate cleaning and offsite salvage. If determined that cleaning is not feasible (i.e., because of pervasive contamination), the tank pieces will be staged in the material storage area for appropriate off-site disposal within 90 days of determination.

2.7 Excavation of Residual Tar-Like Materials

Following removal of the tanks, excavation within the secondary containment area (i.e., earthen berms) will be conducted to remove any residual tar-like materials. The depth and limits of excavation will be determined in the field by the environmental professional and/or as directed by the NYSDEC on-site monitor. Excavation activities will continue until no visual evidence of residual tar-like material is present. Confirmation of successful removal of the residual material within the project area will be accomplished by visual examination collection of confirmation soil samples from the base and sidewalls of the excavation at a rate of one sample per 2,500 square feet of exposed surface area that was in contact with the coal tar removed. A minimum of one sample will be collected from each excavation area. Each sample will be analyzed for benzene, toluene, ethylbenzene total xylenes, and polycyclic aromatic hydrocarbons (PAHs). The samples will be submitted to a New York State accredited laboratory for analysis. The analytical results will be reviewed and compared to New York State Part 375 criteria. If the material left in place exceeds the Industrial Use Soil Cleanup Objectives (SCOs), it may require being covered as part of the final remedy. If the material left in place exceeds the Part 375 definition of grossly contaminated material, it will be recycled, disposed at a permitted facility, or left in place to be addressed as part of the final remedy, as approved by the NYSDEC on-site monitor. The determination will be made based on the type, volume, and location of the material involved.

The excavated materials will be removed and transported either to the existing coal mixing pad for future re-use in the coking process or transported off-site to an approved disposal facility within 90 days of determination that it can't be recycled. Dedicated on-site trucks and excavating equipment will be used for the area of excavation. The excavation and loading of excavated material will utilize "clean loading" procedures minimizing contact/impact with other areas. These procedures will ensure that the excavated materials are not spread to other areas including adjacent properties and roadways. Dedicated equipment (e.g. excavator, bulldozer, etc.) will be decontaminated prior to leaving the site. Decontamination will be performed at the designated on-site decontamination station in accordance with Section 2.8 of this plan.

A trackhoe, or equivalent, will be used for removing residual tar-like materials from the project area. Excavated materials will be directly loaded into a dump truck for transport to the coal mixing pad for future re-use in the coke process. Prior to exiting the project area, the truck exterior, wheels, and undercarriage will be inspected for the presence of coal tar. If necessary the dump trucks will be decontaminated to prevent the spreading of excavated materials to other areas of the site.

2.8 Decontamination

An equipment/personnel decontamination facility is currently constructed at the site and will be utilized as part of this project. The decontamination facility will be used for removal of residual materials from large equipment (excavator, loader, haul trucks, etc.) at the end of excavation activities upon leaving the project area. In addition, the facility will be used to decontaminate materials (i.e., tank pieces, piping, etc.) prior to offsite disposal and/or salvage. The decontamination facility is constructed of an impervious lined floor to provide appropriate secondary containment of generate materials and wash waters. The facility will be equipped with a pressure washer or steam cleaner and storage containers for wastewater. Wash waters will be collected and transported to Tonawanda Coke's existing wastewater treatment system for appropriate treatment prior to discharge to the local Town of Tonawanda sanitary sewer system.

2.9 Worker Contamination Prevention

Materials will be managed to avoid the spread of residual materials from the site as follows:

- Work practices will focus on keeping materials off of workers and their personal clothing by using appropriate protective clothing, as necessary.
- Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand-to-mouth contact is strictly prohibited within the material staging areas.
- The hands and face must be thoroughly washed upon leaving the work area and prior to engaging in any activity indicated above.
- Personal protective equipment and clothing must be worn by all personnel entering restricted areas of the site, as necessary.
- Contact with surfaces/materials either suspected or known to be contaminated will be avoided to minimize the potential for transfer to personnel, cross contamination and need for decontamination.
- All equipment leaving the site will be visually inspected and decontaminated, as needed.

2.10 Field Documentation

All site activities will be documented as appropriate. At a minimum, the following information will be documented (i.e., inspection checklist/form):

- Project personnel;
- Date;
- Visual observation of material and circumstances present (erosion control, tanks, secondary containment, etc.);
- Volume of material transported off site (i.e., mixing pad, tar recover process, off-site. etc.); and
- Issues/Concerns

This documentation will provide a detailed summary of the daily activities, as well as an inventory of materials scheduled to be processed.

Section 3

NEU-VELLE LLC

Material Management

3.0 MATERIAL MANAGEMENT

3.1 General

This section summarizes procedures for the management of materials generated during the removal of the tank systems. All generated materials will be properly managed to minimize environmental impacts and to comply with all applicable federal, state, local laws and regulations. These procedures, in conjunction with applicable non-hazardous and hazardous waste manifests, will accompany the material from its point of origin to its final destination.

3.2 Flowable Tank Contents

The contents in tanks will be heated, as necessary, to help reduce viscosity and to facilitate transfer and loading. A positive displacement pump will be utilized to convey the tar from the tanks to tanker trucks or appropriate containers for transport off-site. The material in the tanks is tar and a saleable product. Therefore, the tar in the tanks is considered a saleable product and will be pumped from each tank and transported off-site to Tonawanda Coke's tar customer.

3.3 Non-Flowable Tank Contents and Excavated Tar

Non-flowable tar (i.e., sludge) and excavated tar from within the secondary containment area will be characterized prior to appropriate management. Characterization will include collecting representative composite samples for laboratory analysis. The samples will be analyzed for total halogens and total PCBs in accordance with USEPA SW846 Methods 8260 and 8082A, respectively. The results will be utilized to determine the management of the materials.

Following review of the analytical results and concurrence from the New York State Department of Conservation (NYSDEC), the materials will be removed and transported either to the existing coal mixing pad for future re-use in the coking process or transported off-site to an approved disposal facility within 90 days of determination that the material can't be recycled.

3.4 Previously Excavated Material

As part of the previous activities conducted at the site, approximately 3,000 cubic yards of material currently remains on site. This material consists of approximately 2,500 cubic yards of soil and approximately 500 cubic yards of a mixture of soil, coal, breeze, and tar. This material is currently being staged on and covered with plastic. It would be Tonawanda Coke's intention to recycle the 500 cubic yard material in the coking process upon approval by the NYSDEC. With respect to the 2,500 cubic yards of soil, it is Tonawanda Coke's intention to pursue a contained-in determination on this material due to it not containing visible tar. To facilitate this contained-in determination, representative samples were collected upon the direction of the on-site NYSDEC monitor. The samples were transported to Paradigm Environmental Services located in Rochester, New York and analyzed for volatile organic and semi-volatile organic compounds in accordance with USEPA SW846 Methods 8260 and 8070, respectively. A summary of the analytical results is included in Appendix C. The analytical data reports are included in appendix D. Following approval by the NYSDEC, the material will be managed (i.e., transported off site for disposal) within 90 days of the contain-in determination.

3.4 Water

Water removed from the tank secondary containment area and collected as part of the equipment and materials decontamination area will be pumped into a vacuum truck and transported to Tonawanda Coke's existing wastewater treatment system for appropriate treatment prior to discharge to the local Town of Tonawanda sanitary sewer system.

Site Restoration and Repairs

4.0 SITE RESTORATION AND REPAIRS

4.1 General

This section summarizes procedures for the restoration of the site in the areas of impact (i.e., material screening, material staging areas, etc.) as well as the repair of any site features.

4.2 Material Staging and Screening Areas

The areas of the material screening and staging areas will be visually inspected for the presence of tar. Any tar remaining in these areas will be staged on site for transport either to the existing coal mixing pad for future re-use in the coking process or transported off-site to an approved disposal facility within 90 days of determination that it can't be recycled. Following removal of any tar from within these areas, representative samples (with concurrence by NYSDEC on-site monitor) will be collected to document the condition of the surface soils. Samples will be transported to an approved laboratory and analyzed for volatile organic and semi-volatile organic compounds in accordance with USEPA SW846 Methods 8260 and 8070, respectively. Following the receipt of analytical data, it will be reviewed and compared to the New York State Part 375 Industrial Use Soil Cleanup Objectives (SCOs).

4.3 Grading and Seeding

Following the field activities, all areas on site that were disturbed will be appropriately graded to promote appropriate drainage and seeded to establish erosion control.

4.4 Diversion Ditch

Following demobilization from the site, the stormwater diversion ditch will be inspected for proper operation. Any defects (i.e., significant erosion, etc.) will be repaired as appropriate.

Section 5

NEU-VELLE LLC

Reporting

5.0 REPORTING

Upon completion of the project activities, a summary report will be prepared. At a minimum the summary report will include the following information:

- P.E. Certification: certification that the tank removals were performed in accordance with the work plan(s);
- Activities summary: will provide a summary of the activities in that were conducted (i.e., tank cleaning, tank removal, excavation, etc.);
- Material management: a summary of the management of all materials generated as part of the tank removal project.

EPA 5035A - L

Data File: x53510.D

This sample was not collected following SW846 5035A specifications. Accordingly, any Volatiles soil results that are less than 200 ug/Kg, including Non Detects, may be biased low, per ELAP method 5035 guidance document from 11/15/2012.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.

Report Prepared Tuesday, August 28, 2018

Analytical Report Appendix

The reported results relate only to the samples as they have been received by the laboratory.

Each page of this document is part of a multipage report. This document may not be reproduced except in its entirety, without the prior consent of Paradigm Environmental Services, Inc.

All soil/sludge samples have been reported on a dry weight basis, unless qualified "reported as received". Other solids are reported as received.

Low level Volatiles blank reports for soil/solid matrix are based on a nominal 5 gram weight. Sample results and reporting limits are based on actual weight, which may be more or less than 5 grams.

The Chain of Custody provides additional information, including compliance with sample condition requirements upon receipt. Sample condition requirements are defined under the 2003 NELAC Standard, sections 5.5.8.3.1 and 5.5.8.3.2.

NYSDOH ELAP does not certify for all parameters. Paradigm Environmental Services or the indicated subcontracted laboratory does hold certification for all analytes where certification is offered by ELAP unless otherwise specified. Aliquots separated for certain tests, such as TCLP, are indicated on the Chain of Custody and final reports with an "A" suffix.

Data qualifiers are used, when necessary, to provide additional information about the data. This information may be communicated as a flag or as text at the bottom of the report. Please refer to the following list of analyte-specific, frequently used data flags and their meaning:

"<" = Analyzed for but not detected at or above the quantitation limit.
"E" = Result has been estimated, calibration limit exceeded.
"Z" = See case narrative.
"D" = Sample, Laboratory Control Sample, or Matrix Spike Duplicate results above Relative Percent Difference limit.
"M" = Matrix spike recoveries outside QC limits. Matrix bias indicated.
"B" = Method blank contained trace levels of analyte. Refer to included method blank report.
"J" = Result estimated between the quantitation limit and half the quantitation limit.
"L" = Laboratory Control Sample recovery outside accepted QC limits.
"P" = Concentration differs by more than 40% between the primary and secondary analytical columns.
"NC" = Not calculable. Applicable to RPD if sample or duplicate result is non-detect or estimated (see primary report for data flags). Applicable to MS if sample is greater or equal to ten times the spike added. Applicable to sample surrogates or MS if sample dilution is 10x or higher.
"" = Indicates any recoveries outside associated acceptance windows. Surrogate outliers in samples are presumed matrix effects. LCS demonstrates method compliance unless otherwise noted.*
"(1)" = Indicates data from primary column used for QC calculation.
"A" = denotes a parameter for which ELAP does not offer approval as part of their laboratory certification program.
"F" = denotes a parameter for which Paradigm does not carry certification, the results for which should therefore only be used where ELAP certification is not required, such as personal exposure assessment.

GENERAL TERMS AND CONDITIONS
LABORATORY SERVICES

These Terms and Conditions embody the whole agreement of the parties in the absence of a signed and executed contract between the Laboratory (LAB) and Client. They shall supersede all previous communications, representations, or agreements, either verbal or written, between the parties. The LAB specifically rejects all additional, inconsistent, or conflicting terms, whether printed or otherwise set forth in any purchase order or other communication from the Client to the LAB. The invalidity or unenforceability in whole or in part of any provision, tern or condition hereof shall not affect in any way the validity or enforceability of the remainder of the Terms and Conditions. No waiver by LAB of any provision, term, or condition hereof or of any breach by or obligation of the Client hereunder shall constitute a waiver of such provision, term, or condition on any other occasion or a waiver of any other breach by or obligation of the Client. This agreement shall be administered and interpreted under the laws of the state which services are procured.

Warranty. Recognizing that the nature of many samples is unknown and that some may contain potentially hazardous components, LAB warrants only that it will perform testing services, obtain findings, and prepare reports in accordance with generally accepted analytical laboratory principles and practices at the time of performance of services. LAB makes no other warranty, express or implied.

Scope and Compensation. LAB agrees to perform the services described in the chain of custody to which these terms and conditions are attached. Unless the parties agree in writing to the contrary, the duties of LAB shall not be construed to exceed the services specifically described. LAB wi use LAB default method for all tests unless specified otherwise on the Work Order.

Payment terms are net 30 days from the date of invoice. All overdue payments are subject to an interest charge of one and one-half percent (1-1/2%) per month or a portion thereof. Client shall also be responsible for costs of collection, including payment of reasonable attorney fees if such expense is incurred. The prices, unless stated, do not include any sale, use or other taxes. Such taxes will be added to invoice prices when required.

Prices. Compensation for services performed will be based on the current Lab Analytical Fee Schedule or on quotations agreed to in writing by the parties. Turnaround time based charges are determined from the time of resolution of all work order questions. Testimony, court appearances or data compilation for legal action will be charged separately. Evaluation and reporting of initial screening runs may incur additional fees.

Limitations of Liability. In the event of any error, omission, or other professional negligence, the sole and exclusive responsibility of LAB shall be to re-perform the deficient work at its own expense and LAB shall have no other liability whatsoever. All claims shall be deemed waived unless made in writing and received by LAB within ninety (90) days following completion of services.

LAB shall have no liability, obligation, or responsibility of any kind for losses, costs, expenses, or other damages (including but not limited to any special, direct, incidental or consequential damages) with respect to LAB's services or results.

All results provided by LAB are strictly for the use of its clients and LAB is in no way responsible for the use of such results by clients or third parties. All reports should be considered in their entirety, and LAB is not responsible for the separation, detachment, or other use of any portion of these reports. Client may not assign the lab report without the written consent of the LAB.

Client covenants and agrees, at its/his/her sole expense, to indemnify, protect, defend, and save harmless the LAB from and against any and all damages, losses, liabilities, obligations, penalties, claims, litigation, demands, defenses, judgments, suits, actions, proceedings, costs, disbursements and/or expenses (including, without limitation attorneys' and experts' fees and disbursements) of any kind whatsoever which may at any time be imposed upon, incurred by or asserted or awarded against client relating to, resulting from or arising out of (a) the breach of this agreement by this client, (b) the negligence of the client in handling, delivering or disclosing any hazardous substance, (c) the violation of the Client of any applicable law, (d) non-compliance by the Client with any environmental permit or (e) a material misrepresentation in disclosing the materials to be tested.

Hazard Disclosure. Client represents and warrants that any sample delivered to LAB will be preceded or accompanied by complete written disclosure of the presence of any hazardous substances known or suspected by Client. Client further warrants that any sample containing any hazardous substance that is to be delivered to LAB will be packaged, labeled, transported, and delivered properly and in accordance with applicable laws.

Sample Handling. Prior to LAB's acceptance of any sample (or after any revocation of acceptance), the entire risk of loss or of damage to such sample remains with Client. Samples are accepted when receipt is acknowledged on chain of custody documentation. In no event will LAB have any responsibility for the action or inaction of any carrier shipping or delivering any sample to or from LAB premises.

Client authorizes LAB to proceed with the analysis of samples as received by the laboratory, recognizing that any samples not in compliance with all current DOH-ELAP-NELAP requirements for containers, preservation or holding time will be noted as such on th final report.

Disposal of hazardous waste samples is the responsibility of the Client. If the Client does not wish such samples returned, LAB may add storage and disposal fees to the final invoice. Maximum storage time for samples is 30 days after completion of analysis unless modified by applicable state or federal laws. Client will be required to give the LAB written instructions concerning disposal of these samples.

LAB reserves the absolute right, exercisable at any time, to refuse to receive delivery of, refuse to accept, or revoke acceptance of any sample, which, in the sole judgment of LAB (a) is of unsuitable volume, (b) may be or become unsuitable for or may pose a risk in handling, transport, or processing for any health, safety, environmental or other reason whether or not due to the presence in the sample of any hazardous substance, and whether or not such presence has been disclosed to LAB by Client or (c) if the condition or sample date make the sample unsuitable for analysis.

Legal Responsibility. LAB is solely responsible for performance of this contract, and no affiliated company, director, officer, employee, or agent shall have any legal responsibility hereunder, whether in contract or tort including negligence.

Assignment. LAB may assign its performance obligations under this contract to other parties, as it deems necessary. LAB shall disclose to Client any assignee (subcontractor) by ELAP ID # on the submitted final report.

Force Majeure. LAB shall have no responsibility or liability to the Client for any failure or delay in performance by LAB, which results in whole or in part from any cause or circumstance beyond the reasonable control of LAB. Such causes and circumstances shall include, but not limited to, acts of God, acts or orders of any government authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, difficulties or delays in transportation, mail or delivery services, inability to obtain sufficient services or supplies from LAB's usual suppliers, or any other cause beyond LAB's reasonable control.

Law. This contract shall be continued under the laws of the State of New York without regard to its conflicts of laws provision.

This report is part of a multipage document and should only be evaluated in its entirety. The Chain of Custody provides additional sample information, including compliance with the sample condition requirements upon receipt.
