A FORUM FOR
SOUTH HILL ELEMENTARY SCHOOL
FAMILIES & STAFF

Regarding Environmental Sampling Results

Over the Summer 2007, the South Hill Elementary School property was tested for the presence of volatile organic compounds (VOCs) in soil vapor, sub-slab and crawlspace air. The purpose of this forum is to present the results of those tests, explain what they mean, and answer questions from parents and staff. The focus of this meeting will be limited to the South Hill Elementary School.

On hand for this forum will be representatives from the New York State Departments of Environmental Conservation (DEC), Health (DOH), and Education (SED) as well as representatives for the School District who will moderate the discussions.
