Contact Name:	KEITH BARTLEY
DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/19/03 - ROSSAN, DDO - Called Mr. Kieth Bartley, who confirmed that contaminated soil letter should be sent to: ATT: Mr. Kieth Bartley c/o USA Tanks Plant Maintenance 206 Grandview Avenue Staten Island, NY 10303 5/22/03 TIPPLE UPDATING/ SITE VISIT ON THE 16TH REVEALED OIL FROM RUPTURED TANK ON TANK ROOM FLOOR, SEAPING THROUGH THE SUBSURFACE INTO THE BOILER ROOM, SUMP IN BOILER ROOM FLOOR, DRAIN IN WALKWAY OUTSIDE BASEMENT DOOR, BELOW VENT/FILL LINE SATURATING BRICK STEPS AND WALKWAY DOWN TO BASEMENT DOOR, AND HAD BEEN TRACKED THROUGHOUT THE AREA. A SUBSEQUENT VISIT 5/19 REVEALS THAT OIL WAS STILL DRAINING OUT OF THE SATURATED SOILS INTO THE BOILER ROOM, AND ONLY THE BEGINNINGS OF A SURFACE CLEANUP HAD OCCURED TO DATE. 7/16/2003Tipple updating// spills 02-00169 and 03-03928 at this address closed and referred to this spill contaminated soil letter sent to both property owner: Estate of Michael McSherry 3616 Route 94 Chester, NY 10918-1149 and Management Company Classic Realty- John Gubias 3600 Feildston Rd Bronx, NY 10463----718-601-5858 7/15 site visit revealed oil still seeping into sump and along the wall in the boiler room. The walkway sump with soil walls was full of fresh oil, stairs in the walkway and laid up stone foundation wall between the tank room and the walkway were still contaminated with a

SPILL NUMBER 0303928 (Continued) **S105998994**

coating of oil. The new surface spill appeared to be impacting the walkway outside the basement door and the soil walled sump in the walkway. 5/5/04: Tipple sent a letter requesting cleanup details and documentation. certified mail 7001 0360 0000 8150 4272 11/30/04: Sent letter requesting documentation of work 05/19/06: This spill is transferred from Mr.Koon to Q.Abidi. Called Keith Bartley at (917)669-1093. Left message to call me back. 06/23/06: Contacted to Kristen at (718)981-5710 she told temporary tank set there. Mr.Keith Bartley didn t do the complete job for this spill. She will find out the information about the spill and she will call me back. -QA 08/30/06: Called Keith Bartley and left message to call me back. -QA 09/11/06: Contacted Mr. Keith Bartley(917)669-1093 he said that he will send closing confirmation letter very soon. -QA 10/10/06: Mr. John Herbig (Intech Environmental)called me and said he is going to take soil samples from the basement after chemical analysis he will send me the report for closing the spill. -QA 10/19/06: Talked to John Herbig he said he has collected soil samples from the basement and sent to chemical lab for analysis as soon as he will get the report he will send it to me. -QA 10/26/06: Contacted Mr. John Herbig he said that he received lab results of soil samples he will fax it to me. -QA 11/13/06: Mr. John Herbig (impact Environmental) called me and said soil sample report has come from the lab. He will mail me the report in a week. -QA 11/16/06: Mr. John Herbig called me and said that he has mailed me the soil sample report in couple of days I will receive that. The soil sample data which he faxed me is not readable. i am waiting to receive his mail. -QA 11/27/06: Reviewed the Investigation Summary Report dated November 16, 2006 [in eDocs]. The report presents soil sample results which indicate that a release of petroleum has occurred and soil contamination present at the site. The Department requires additional investigation to determine if there has been an impact to groundwater and to fully delineate soil and groundwater contamination. Sent a letter to Mr. Morris Arlos (owner) to prepare a Work Plan for additional investigation and submit it to Department within 30 days. -QA 12/14/06: Received letter from Mr. Kevin Kleaka, Project Manager (Impact Environmental) that additional investigation activities are not possible in the basement of the building due to limited place. He is going to break the concrete of the basement to excavate the contaminated soil. Additional soil samples will be taken at the site after excavation and removal of the contaminated soil to demonstrate the effectiveness of the remedial activities. -QA 12/20/06: Called Mr. Kevin Kleaka (Consultant and Project Manager) at (631)269-8800 and said to make two temporary well at the side walk of 262 Alexander Avenue to check the potential impact of groundwater. Before that we will not review any remedial plan. -QA 01/08/077: Received phone call from John Herbig of Impact Envt l, regarding DEC s request for two groundwater samples in sidewalk outside site building; he noted there is already a well in sidewalk related to investigations at 40th Police Precinct, across Alexander Ave. from site. He asked if it would be acceptable to just sample that well, rather than installing two new wells in sidewalk. After reviewing location of existing well (MW-5 from 40th Precinct investigations) which is west-northwest of ASTs in basement of site bldg, and location of soil sample with TAGM exceedance for VOCs, SP-2, and considering that URS has established local groundwater flow direction at 40th Pct. is to west-northwest, J. Kolleeny told Mr. Herbig that sampling of well MW-5 would be acceptable to evaluate impacts to groundwater from this spill. After

SPILL NUMBER 0303928 (Continued) **S105998994**

sampling well, Impact Envt l can prepare a remedial action plan. - J. Kolleeny 01/11/07: Talked to Mr. John Herbig at (631)774-5597, received his fax regarding groundwater sample results. MTBE is high. [Only compound greatly exceeding its GW std. was MTBE, suggesting main impact to GW is from 40th Police Precinct across street to west.] Now Impact environmental can submit remedial action plan to DEC regarding this spill. -QA 02/05/07: Called Mr. John Herbig (631)774-5597 and reminded him to send electronic version single Pdf file for both the reports, Investigation Summary report and Corrected Action Plan. After receiving that we will approve your plan. -QA 02/07/07: Reviewed the corrective Action Plan dated January 29, 2007 for this site, submitted by impact environmental. The report proposes excavation of an area of residual soil contamination beneath the basement floor at the site, followed by collection of end-point soil samples. The corrective Action plan is approved. Letter mailed out to responsible party. -QA 05/09/07: Called Mr. John Herbig (631)774-5597 and discussed regarding spill. He said that at this site owner is waiting when all tenants will be relocated then work will be started at this site. -QA 12/04/2007: This spill case was transferred to A. Doronova. AD 12/06/2007: Called and spoke to Mr. John Herbig of Impact Env. regarding remedial action plan implementation. He told me that First Alexander LLC was potential buyer and that this company is no longer involved with this property, and due that RAP was not implemented at the site. Called to Building Management (718) 601-5858 of this property. Spoke with a manager. He told that First Alexander LLC is the current owner of this site. This company bought the property approximately one year ago. Now this property under new contract for sale. Received a call from Mr. Morris Arlos - the owner of First Alexander LLC. He confirmed that this property is now under contract. The closing is scheduled on the beginning of January 2008. The new owner - Galaxy was informed about the spill case and agreed to do site remediation, according to Mr.Morris Arlos. Contact person for the Galaxy - Richard Sica, phone: (718) 601-7000. Will contact Galaxy after January 10, 2008. AD 12/07/2007: Spoke to Mr. Sica. His company is aware of the spill and remedial action plan. He will contact us after site purchase to discuss further actions. AD 02/14/2008: Spoke with Mr. Sica regarding the site. He told me that the closing was moved on early March. AD 04/21/2008: Called and left a message to Building Management. AD 08/07/2008: Called and left a message to R. Sica of Gallaxy. AD 11/04/2008: Called and left a message to R. Sica. and to Building Management. AD 12/08/2008: Looked in the ACRIS database, the property now belongs to The Community Preservation Corp. (CPC). Called and spoke with Kristy Seyfert of CPC, phone: 212-869-5300, fax: (212)659-0102. She confirmed that CPC owns the property. She asked me to sent them an official letter and NYSDEC Spill report. AD 12/18/2008: Sent a letter to CPC with a request to prepare and submit a RAP to DEC till January 29, 2009. Faxed a copies of the letter and NYSDEC Spill report to Ms. Seyfert. DL PDF copy to eDocs. AD 02/19/2009: Called and left a message to Ms. Seyfert of CPC regarding past due of RAP submission. Later receved a phone call from K. Seyfert. She said that she did not received the letters. Sent these letters again via fax and e-mail: From: Ainura Doronova [mailto:axdorono@gw.dec.state.ny.us] Sent: Thursday, February 19, 2009 3:26 PM To: Kristy Seyfert <kseyfert@communityp.com Subject: 2515 Seventh Ave., New York NYSDEC Spill No. 0401623 and 262Alexander Ave., Bronx NYSDEC Spill No. 0301707 Dear Ms. Seyfert: Attached please find copies of the letters, regarding

above-referenced sites, which were sent to you previously, but were not received by your company according to your statement. Please be advised that response is time sensitive. To receive a deadline postponement you should submit an official request. Sincerely, Ainura Doronova Environmental Engineer later received an e-mail from her saying: Thank you I am in receipt of the attachment and will address the situation ASAP. Kristy Seyfert Loan Analyst The Community Preservation Corporation 28 E. 28th Street, 9th Fl. New York, NY 10016 T: (212) 869-5300 x560 F: (212) 659-0102 kseyfert@communityp.com 05/18/2009: Did not receive any response yet. Called and left a message to Ms. Seyfert. AD 07/27/2009: Called and spoke with Ms. Seyfert - (212)869-5300, ext 560. She said that this case was referred to someone else. This person is on vacation till July 30, 2009. Left my contact info for her. AD 10/02/2009: Called and spoke with K. Seyfert of CPC regarding the submission of the report. She referred me to Ms. Jill Belli - contact person for this case (ext. 626). Called her and left a message. AD 12/08/2009: Did not receive any response from Ms. Belli of CPC. Called and left a message to Ms. Belli again. AD 12/09/2009: Called and again could not reach Ms. Belli or Ms. Seyfert. Will send Remediation Needed Letter to Mr. John McCarthy - vice president of CPC. AD 12/14/2009: Issued and sent Remediation needed Letter to Mr. McCarthy of CPC. Response is due January 25, 2010. DL pdf copy to eDocs. AD 02/2010: Did not receive any response. AD 09/12/2011: Was forwarded an e-mail from Nick Recchia regarding implementation of the 2007 RAP.: Dear Mr. Paul John. Our client is ready to implement the approved corrective action plan which was approved in 2007 and is attached. The contractor will have the area of excavation open for DEC inspection this Wed. 9/14/2011. We would like to move forward in closing this spill case file upon your inspection and reviews ASAP. If you could have someone available to inspect the excavation this Wednesday it would be appreciated I will be on site to collect endpoint soil samples. If you can give me a specific time to meet and co-ordinate for the inspection that would be great. My contact information is below. My cell phone is 516-395-8763. Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA Inc. 55 Hilton Avenue, Garden City, NY 11530 Phone: (516) 746-4400 x Fax (516) 746-4432 nrecchia@eeaconsultants.com Called and spoke with Mr. Recchia of EEA. EEA will overlook the remedial excavation in the basement of the building and will collect a post-excavation endpoint soil samples. Discussed this site with J. Kolleeny of DEC. It was decided that EEA can proceed with RAP implementation. Decision on a closure of the spill will be made based on the results of end-point soil samples. AD 09/13/2011: Received an e-mail from Mr. Recchia saying: Ainura. The client contact is Telly Zervoudis. Please advise us ASAP we would like to move forward with closing out this spill. Thanks. Galaxy General Contracting 3152 Albany Cresent Bronx, NY 10463 T ervoudis@galaxygc.com Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Called and left a message to Mr. Recchia of EEA. Later spoke with him regarding RAP implementation. He said that removal of contaminated soil will start tomorrow, and he expects that collection of endpoint samples will be in a few days. Requested him to notify DEC about date of sampling. AD 09/14/2011: Received an e-mail from Mr. Recchia saying: Ainura, EEA is performing the remedial action to excavate and remove soils as per the approved RAP. We anticipate collecting endpoint soil samples tomorrow. EEA will prepare a full report of remedial action activities, endpoint

SPILL NUMBER 0303928 (Continued) **S105998994**

sample data, site photos, etc. signed and sealed by our engineer. Sincerely Yours, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Called and informed Mr. Recchia that I cannot visit the site on Thursday, September 15, 2011, due to the previously scheduled meeting. Requested to take a pictures of the excavation, document all activities and to take PID readings. AD 09/27/2011: Received an e-mail from N. Recchia saying: Ainura, Hope all is well. I was hoping you could help us out here by taking a quick look at the endpoint results from the excavation. Our client wants to backfill ASAP because it is in the building and they had to shore up the walls. All endpoint samples were collected from the sidewalls of the excavation. The bottom of the excavation was bedrock at a depth of 2 to 2 feet below floor grade. I reviewed the results and it appears that all samples are below the new CP-51 Soil Cleanup Policy which replaces TAGM. I included a photo of the excavation. I apologi e for not having a table or drawing ready for you at this time but we want to backfill this ASAP. I will prepare a full report and send it to you next week. Thanks for your help. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Looked at the submitted data. No exeedances of VOCs or SVOCs levels were detected in all six endpoint soil samples. Asked Mr. Recchia to submit a sketch of the excavation with locations of the soil samples. Later received the requested sketch. Approved the backfill of the excavation. AD 10/17/2011: received an e-mail from Mr. Recchia saying: Ainura, Attached please find our final remedial action report for this property. Please review and let me know the spill status. Thanks you. Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist EEA Inc. DL the report to eDocs. Will review. AD 10/26/2011: Reviewed the report. It states that EEA performed remedial excavation of contaminated soils in the vicinity of the former AST s area. A total of 14.4 tons of contaminates soil was removed off-site. Post-excavation end-point soil samples were collected on September 15, 2011 from 6 sidewalls locations. No bottom soil samples were collected due to presence of a shallow bedrock, which was found at a depth of 1.5 to 2.8 below the basement floor level. According to the analytical data, no VOCs or SVOCs were detected above NYSDEC standards. Based on the result, EEA concludes that contamination was removed and recommends spill case closure. The submitted site map is different from site maps presented by previous consultant. To clarify this difference with Mr. Recchia. Will discuss spill closure request with J. Kolleeny of DEC. AD 10/27/2011: Discussed the site with J. Kolleeny. To ask MR. Recchia if there are any sumps in the basement to be checked for presence of LNAPL or product sheen. AD 10/28/2011: Called and spoke with Mr. Recchia. Requested to clarify excavation location on the site map, and info on sumps. Sent him an e-mail with an attached site plan saying: Mr. Recchia: Could you please verify location of the excavation completed by EEA on this site plan? Also, if there are any sumps in the basement they should be checked for presence of LNAPL or product sheen. AD 01/03/2011: Received an e-mail from Mr. Recchia saying: Ainura, Sorry for the confusion. Our drawing is somewhat misleading I can see your concern and confusion. I have revised our drawing and it is in the area of the former AST s and SP-2 area. We didn t focus on the whole basement location in our drawing only the former tank area and area around SP-2. Sorry for the confusion. I have revised the drawing. I hope this helps. EEA did not observe any basement sumps in the building. Sincerely, Nicholas J. Recchia, C.P.G. Vice President, Senior Hydrogeologist Reviewed the submitted

SPILL NUMBER 0303928 (Continued) **S105998994**

site map. Soil was excavated in the area of the former AST s and soil boring SP-2 area. DL the revised site map to eDocs. Will issue a closure approval letter. AD 11/04/2011: Sent a Spill Closure approval letter to Telly Zervoudis of Galaxy General Contracting Corp. at 3152 Albany Crescent, Bronx, NY 10463 via e-mail: T ervoudis@galaxygc.com. DL pdf copy of the letter to eDocs. Case closed. AD

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 3/04/2003 - Closed Due To The Nature / Extent Of The Spill Report1/2/03 Reassigned From Sigona To Foley. Investigation Being Performed By Spartan Amoco Under Spill 9909670. Open Mobil 9208906.3/3/04 As Per The Closure Request Report Submitted For Mobil By Gsc, Spill 8905353 Initiated A Subsurface Investigation Conducted From 12/11/89-1/10/90 Which Included Installation Of 5 Mws (Mw-1A Thru Mw-5A). Vocs Were Above Groundwater Standards. This Was Summari ed In The February 1990 Roux Subsurface Evaluation Report. Mw-1A Through Mw-5A Were Destroyed (4/90-11/91) Due To Construction Activities Conducted By Amoco. Five 4000Gal Gas Usts, One 550Gal Waste Oil Ust, And One 550Gal Fuel Oil Ust And Piping Were Removed From Site.A Subsurface Investigation Conducted In April 1991 Included Installation Of Two Soil Borings And One Monitoring Well(Mw-6). Results Were Summari ed In 6/91 Roux Supplemental Subsurface Investigation Report.A Subsurface Investigation Conducted In November 1991 Included Installation Of 11 Monitoring Wells (Mw-1 Through Mw-5 And Mw-7 Through Mw-12) And One Air Sparge Well (Sp-1). Results Were Summari ed In A Gti Report.Spill 9208906 Was Issued To The Site On 11/2/92 As A Result Of Contaminated Soil Observed During Amoco Site Construction Activities.
Remarks:	4K TANK FAILED PETRO-TITE. L R = 1 GAL / 30 MIN. CLOSED DUE TO LACK OF ANY RECENT INFO - DOES NOT MEET ANY CLEANUP REQUIREMENTS.

Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 218930
DEC Memo: PBS 2-156590 1/20/04 File review (Foley): Prior to divesting this site in March 1990, a site assessment was performed by Roux (hired by Mobil) which indicated elevated BTEX existed in both groundwater and soil, but no free product was found. Upon transfer of property(8/90), the new owner began to install new USTs. During tank replacement, 875 tons of contaminated soil was removed and disposed of. During construction, two upgradient wells were destroyed. Three downgradient wells remained intact. The two wells which were destroyed showed ND for BTEX during sampling. In May 1991, there was an apparent vapor problem in the kiosk at the now active Amoco station. Amoco installed a venting system to alleviate the problem. Based on this, Mobil installed two borings and one well in the vicinity of the kiosk. The report indicated that the soils surrounding the kiosk did not contain very high levels of BTEX in soil. The monitoring well installed contained 0.01 of product. This well is upgradient of all former Mobil tank areas. Additional constuction at the site for a car wash has destroyed three downgradient wells. Thus, only one well remains on the property. However, upon completion of the construction, up to ten additional wells shall be installed at the site. Wells will be installed after construction is completed. 11/91 Eleven monitoring wells and a sparge point were installed. 12/9/91 MW-11 had 0.84 of product. 1/22/92 MW-11 had 0.21 of product. 2/20/92 MW-11 had 7.16 of product. A vac truck has been scheduled on a biweekly basis to extract LNAPL from MW-11. 3/92 LNAPL was detected in MW-11 (0.07-3.02). Approx 70gal was extracted from MW-11 on 3/4, 3/13, 3/16 using vac truck. Trace amounts of LNAPL were hand-bailed from MW-11 on 3/18 3/27. Water sample from car wash well was collected by Tyree, analy ed by Method 602, and returned ND. 4/92 MW-11 had 0.08-0.18 of LNAPL and approx 2.5gal LNAPL bailed. 6/8/92 An EZY Skimmer was installed in MW-11. 7/92-6/93 No LNAPL was detected in any wells. 1/94-3/94 MW-10 had 0.28 product. MW-11 had 0.01 product. 5/94 MW-11 had trace amount of product. 7/11/94 SVE started. DTW 16 bgs. 6 combination SVE/AS points. Will sample all MWs before sparge system started. 2/8/95 0.01 product in BD-1. BTEX from ND(MW-1) to 30,000ppb(MW-5). 10/27/99 Cross Deegan Realty notified by station operator of possible inventory loss. Alvin Petroleum exposed portions of system over next two weeks. No system leaks were detected. 11/9/99 Alvin Petro. requests a tightness test be performed. Crompco detected a leak in one of the four tanks and reported the failure. 11/10/99 Alvin Petro. exposed and removed remote fill box on the tank that failed test. A coupling that connects the piping to the overflow box was found cracked. The coupling was replaced and system retested tight. 11/16/99 Crompco retested system with FDNY and passed. 11/22/99 Impact Environmental performed a limited subsurface investigation of soil adjacent to coupling and concluded that gasoline had impacted soil/GW. Report states that current owner only intends on addressing contamination from 10/99 spill and not the 1992 spill. 10/31/00 Three wells sampled and gauged. SVE system removed from service. ORC socks in wells MW-1 and MW-5. BTEX from 15ppb(MW-12) to 868ppb(MW-1). MTBE from 31ppb(MW-11) to 49,000ppb(MW-1). 2/5/01 Seven wells sampled. BTEX from ND(MW-12) to 240ppb(MW-1). MTBE from <1ppb(MW-12) to 64,000ppb(MW-7). 4/26/01 Seven wells sampled. MTBE has increased in monitoring wells hydraulically downgradient from the current

MOBIL (Continued) **S104278682**

dispenser island and USTs. MTBE ranged from 14ppb(MW-11) to
920,000ppb(MW-10). BTEX ranged from 12.8ppb(MW-11) to
6,080ppb(MW-10). 10/23/01 Eight wells sampled. BTEX from 14ppb(MW-6)
to 4,750ppb(MW-10). MTBE from 18ppb(MW-11) to 270,000ppb(MW-10).
1/17/02 Eight wells sampled. BTEX from ND(MW-5) to 1,794ppb(MW-10).
MTBE from 29(MW-5) to 65,000ppb(MW-7). 4/30/02 Six wells sampled.
BTEX from ND(MW-5 MW-6) to 1173ppb (MW-10). MTBE from 7.6ppb(MW-1)
to 24,000ppb(MW-5). 5/15/02 Sensitive Receptor survey identified PS
31 approx 850 to the southeast. There are residential and commercial
buildings with basements immediately adjacent to the site to the
north. A subway tunnel is located beneath E 149th St.

03/17/03 REASSIGNED FROM ROMMEL TO VOUGHT. 11/18/03 Received
CAP/Remediation Plan, 3rd Quarter 2003 monitoring report, and tank
test results(pass). 12/10/03 Reassigned from Vought to Foley. See
closed spills 0307681, 9208906. Review of Remediation Plan: A SVE/AS
system was installed by Handex and operated on the property to
address spill 9208906. The system is comprised of four soil vapor
extraction wells and six air sparge points. At this time, the system
is not operational. A monitoring program is being performed. 11/9/99
Tank system tightness test performed by Crompco indicated a leak near
the remote fill box. The leak was repaired. Soil staining and
petroleum odor was noted below the fill box. Spill 9909670 was
reported. 11/22/99 Impact Environmental started subsurface
investigation. Groundwater results exceeded standards. 7/7, 7/25,
10/23/00 Enhanced fluid recovery performed on MW-2 as an IRM. Impact
Environmental proposes 1) monthly EFR on hottest wells for 6 months,
2) replacement/upgrade of air sparge equipment installed to address
9208906, 3) SVES to be modified to include MW-2. 9/3/03 Impact
Environmental sampling data (for Amoco): BTEX levels range from
ND(MW-5, 11, 12) to 1606ppb(MW-6). MTBE ranges from ND(MW-12) to
650,070ppb(MW-6). 10/6/03 GSC sampling data (for Mobil): BTEX ranged
from ND(MW-2) to 3800ppb(MW-6). MTBE ranges from 9.8ppb(MW-11) to
1,240,000ppb(MW-6). 11/26/03 Impact Environmental data from 4Q2003
report shows MW-6 and MW-2 to be hot spots. BTEX ranges from
ND(MW-12) to 6923ppb(MW-6). MTBE ranges from ND(MW-12) to
869,600ppb(MW-6). 2/2/04 Faxed stip to Mr. Hank Alpert, Cross Deegan
Realty. Due back 2/23/04. (FAX 516-365-1606) 2/11/04 STIP returned.
Cover letter states that a previous CAP for spill 9909670 was
already approved by DEC and was authori ed to develop CAP for spill
0307681 (dated 11/13/03). 2/13/04 STIP fully executed. 3/4/04 Letter
received from DDC(Bruce Rottner) to J. Semelmacher. Requests Amoco s
participation in DOT reconstruction project instead of reimbursement
of cleanup costs. 3/15/04 Called B. Rottner. He explained that he
recieved a phonecall from the owners attorney who stated that
contamination was from a Dept of Sanitation garage. However,
monitoring well on that property was installed and was clean. Spartan
will be sending another letter to DDC at which time B. Rottner will
forward a copy to me. 3/10/04 Received 1Q04 monitoring report. Need
to delineate around MW-6 and MW-2. 6/18/04 Received 2Q2004 monitoring
report. 6/30/04 Met with Spartan Petroleum (H. Alpert) and Impact
Env. Received hand-delivered letter dated 6/28/04. Site is located on
149th St between Gerard and River Avenues. The site was impacted by a
release detected in 1992 while under lease to Mobil Oil. Mobil
installed an SVE/AS system. A new release was confirmed and Spartan
released Mobil from contractual obligations. As an IRM, EFR was
performed on MW-2. Approx 1075gal GW was extracted. An enhanced

MOBIL (Continued) **S104278682**

SVE/AS was run from July 12, 2001 to the present. During the period from 11/9/99 to 3/3/03, there was a steady decline in contaminant concentrations. In May 2003, BTEX concentrations began to increase unexpectedly. A system test was performed and all lines and tanks tested tight. An off-site source was suspected. Identified a NYCDOS truck terminal upgradient. Also found many monitoring wells on the NYSDOS site. Thru a FOIL request, review of the NYSDEC files incidate that the NYCDOS site is impacting 99 E 149th St. Request closure. 10/4/04 Received 3Q04 monitoring report. 11/19/04 Met with K. Kleaka and K. Scroope, Impact Env. NYCDOS property on eastside of Gerard Avenue (DOS Manhattan West 9). See spill s 9513870, 9910856. 11/23/04 Email from J. Kolleeny- City s consultant, LiRo, had been performing EFR on wells with free product for several years until last year when a multi-phase extraction system went on line. A MW along E 149th St has had product in it which LiRo identified as weathered 2FO. Although they have been willing to vac out this well, and the remedial system now has extraction wells near it, LiRo has argued that the product in the well was likely coming from off-site because they claimed there was no DOS tanks at that end of their site. However, the PBS list an old 2000gal heating oil tank and a new (4/03) tank at the site. Asked LiRo to locate these tanks. Will keep me updated. 4/13/05 Spoke to K. Kleaka, Impact Env. Will be proposing to shutdown system soon as recovery is decreasing. Still concerned about DOS site having impacts on property. Proposal will include confirmatory soil sampling. 5/6/05 1Q05- GW sample collected on 3/14/05 from MW-8 did not detect any VOCs. Samples from MW-1 and MW-5 detected concentrations of VOCs but not above GWQS. MW-12 was paved over. Several detected concentrations from MW-2,6,7,9,10 11 exceeded GWQS. These concentrations are within ROI of system. Told H. Benjamin that it was not necessary to reinstall MW-12. 5/23/05 Sent email to K. Kleaka, Impact Env. After reviewing the July 2004-Sept 2004 and Jan 2005-March 2005 quarterly reports for Manhattan West 9 (operated by NYCDOS at 125 East 149th St, Bronx), it is not clear that the contamination detected at MW-2 is due to impacts from the NYCDOS facility. Historical data for 99 E 149th St shows a significant spike of MTBE at MW-6(869.6ppm) and at MW-2(191.2ppm). The historical data for the NYCDOS facility, dating back to 2000(with some data gaps), does not indicate that the facility is acting as a source of off-site contamination. The only MTBE detection in the NYCDOS wells was in the NW corner of the property(170ppb in 1/00). NYSDOS has been operating a MPE system since 11/12/03. 11/8/05 3Q05 report - Total of 537.84lbs of hydrocarbons removed. Approx 9lbs recovered in last 22 day period. Groundwater concentrations highest in MW-2 at 1420ppb total BTEX and 1500ppb MTBE. MW-6 at 100ppb BTEX and 53ppb MTBE. MW-7 at 10ppb BTEX and 56ppb MTBE. 1/11/06 Met with K. Kleaka and H. Benjamin, Impact. To submit 4Q05 report. Redeveloped sparge points to try and increase efficiency of system which continues to operate. 2/17/06 4Q05 report submitted. SVE continues to operate. Lab analysis from 11/28/05 did not detect VOCs in MW-8. Wells MW-5 and MW-11 had concentrations which did not exceed GWQS. Samples from MW-1,2,6,9,and 10 did exceed GWQS. 3/30/06 1Q06 report submitted. BTEX from ND(MW-1,5,6,8,9,11) to 970ppb(MW-2). MTBE from ND(MW-5,6,8) to 980ppb(MW-2). SVE continues to operate. Total estimated hydrocarbons recovered is 538lbs. 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 11/27/06 Reviewed 2nd and 3rd Qtr 2006 Monitoring Reports. Groundwater contamination persists in the area of monitoring well MW-2 (4000ppb). H. Benjamin

MOBIL (Continued) **S104278682**

of Impact Env. proposed performing a pulse test on the system to see if rebound will occur since the system appears to have reached asymptotic conditions. I sent an email to Mr. Benjamin requesting a map showing the radius of influence for each air sparge and SVE point and that GW contamination at MW-2 must be addressed. I also asked if there was soil contamination at the site. If so, has the SVE system effectively treated it? Must prove by confirmatory soil sampling. Email is in the file. - JAM 02/13/07 Reviewed a letter submitted by Impact Env. and dated January 17, 2007. The letter proposes: 1. All monitoring wells will be redeveloped utili ing a surge block and vacuum truck. 2. Monthly Enhanced Fluid Recovery (EFR) events will be performed on MW-2 to reduce the contaminant concentrations in the surrounding area. Said events will be performed utili ing a 2X4 inch diameter K-Packer on a 2-inch diameter drop pipe to maximi e liquid and vapor capture. 3. Groundwater sampling will continue on a quarterly schedule. 4. SVE Sparge operations will continue with the existing system. I sent an email approving these proposals. Groundwater sampling data and recommendations will be submitted in the next quarterly report. A hard copy of the email will be in the file. - JAM 3/29/07 Reviewed 4th Qtr 2006 Monitoring Report submitted by Impact Env. and dated March 6, 2007. All wells were sampled on November 29, 2006. Results were non-detect for total VOCs except for MW-2, which shows persistent levels of VOCs (2,675ppb Total VOCs). The SVE/AS system continues to operate at the site. According to the report, monthly EFR events on MW-2 should have begun in February 2007 and results will be included in the next Monitoring Report. - JAM 6/21/07 Reviewed 1st Qtr 2007 Monitoring Report submitted by Impact Env and dated May 30, 2007. On February 28, 2007, all wells were redeveloped and EFR events commenced on MW-2 All wells were then sampled on March 1, 2007. Wells MW-1, MW-6, and MW-9 showed non-detect results for total VOCs. Wells MW-5, MW-7, MW-8, MW-10 and MW-11 had slight exceedences for Napthalene (ranging from 68ppb to 100ppb). MW-2 showed a decrease of total VOCs from last monitoring round to 1,936ppb. The SVE/AS system continues to operate. - JAM 12/04/07 Reviewed 2nd Qtr 2007 Monitoring Report submitted by Impact Env and dated Sept 18, 2007. All wells were sampled on June 14, 2007 and monthly EFR events continue on MW-2. Wells MW-1, MW-2, MW-9, MW-10 and MW-11 showed exceedences for total VOCs. Wells MW-5, MW-6 were not sampled because they were dry. MW-2 still has the highest level of VOCs, however, it showed a decrease from the last monitoring round to 857ppb from 1,936ppb. The SVE/AS system continues to operate. - JAM Reviewed 3rd Qtr 2007 Monitoring Report submitted by Impact Env and dated Oct 30, 2007. All wells were sampled on Sept 6, 2007 and monthly EFR events continue on MW-2. Results from wells MW-1, MW-2, MW-5, MW-6, MW-7, MW-8 and MW-9 showed non-detect levels for total VOCs. Wells MW-10, MW-11 showed minor exceedences for MTBE (44ppb and 50ppb respectively). Based on the latest result, monthly EFR events appear to have effectively reduced contaminants in MW-2. The SVE/AS system continues to operate. - JAM 4/14/08 Received a call from Hal Benjamin about the Exposure Assessment submitted in March 2008 by Impact Env. They are requesting spill closure and I will get back to him after I review the report. - JAM 5/1/08 Reviewed Exposure Assessment Report. Based on the Exposure Assessment, Impact Env. concludes that the source of contamination has been effectively mitigated and small levels of residual groundwater contamination pose no threat to human health. Impact requests spill closure. I requested a summary of historic soil data associated with this spill. -JAM

MOBIL (Continued) **S104278682**

6/11/08 Spoke to Hal Benjamin, Impact. An on-site well provides the operating car wash with water. I requested that this well be sampled and results reported in a letter. Spill closure will be reevaluated when results are available. - JAM 8/8/08 Reviewed letter from Spartan dated July 16, 2008. The on-site well that services the carwash was sampled and all analytes were found non-detect. I called Hal and asked the depth at which the car wash well pulls water from and if there are any sampling requirements for that well. He will get back to me. - JAM 11/13/08 Since the on-site car wash supply well did not detect and VOCs and only minor levels of MTBE were detected in two on-site wells, this site poses no threat to human health or the environment. This spill case was closed and an NFA letter was issued to: Henry Alpert Cross Deegan Realty, Corp. 3333 New Hyde Park Rd, Suite 201 New Hyde Park, NY 11042 NFA letter uploaded to eDocs. - JAM

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was K FOLEY 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM. SOIL G/W. 12/10/03 Reassigned from Sigona to Foley. 1/28/04 Spoke to Brian Melancon of GSC (845-561-9890), Mobil s consultant. Mobil wants to close out spills. They divested property in March 1990 but have been active in remediating their spill. Cross Deegan Realty only plans on addressing their spill 9909670 (by restoring to pre-spill conditions). I requested that GSC send in a formal closure request with data justifying closure of Mobil spills. 3/1/04 GSC submitted closure request report. 7/94-10/00 ExxonMobil operated an SVE/AS system removing approx 8861 lbs of VOCs. Four air sparge/vapor extraction wells and one air sparge well were installed. In October 2000, the system was shut down due to asymptotic recovery rates. DEC was notified of system deactivation in March 2001 Handex Site Status Report. Spill 9708729 was issued to the site on 10/25/97 in response to dumping of oil into sewer system. Spill 9909670 was issued to the site on 11/9/99 for petrotite failure on 4000gal gas UST. 4/6/04 NFA letter to be hand delivered at Albany meeting 4/7. Reviewed GSC s closure request report(3/1/04). Concentrations were decreasing to ND prior to Spartan s tank test failure. See Spartan files (spill 9909670)
Remarks:	FROM PRIOR TO MAR 90 CONTAM. SOIL EXISTS-OLD MONITORING

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY LiRo installed and is currently operating a multi-phase extraction system to address soil and groundwater contamination and recover free product. Product in some wells may be from off-site source (?), there s a nearby gas station and it s possible that some

MOBIL (Continued) **S104278682**

product in wells at the gas station may be coming from Manhattan 9. See Kerry Foley for details. Kolleeny approved boring locations for LiRo s semi-annual soil monitoring on October 26, 2004. This site transferred from Kolleeny to A. Zhitomirsky on 4/15/05. - JK 4/20/2005 AZ reviewed a Monitoring Report for the remedial system dated January 28, 2005. The site was formerly managed by Jonathan Kolleeny (NYSDEC). The report presents remedial system performance monitoring data. The report states that based on the site monitoring data, the MPE system is effectively treating contamination. Induced vacuum measurements from monitoring wells MW-3, MW-4 and MW-14 were observed to be below desirable levels. Vacuum should be increased in these wells. LiRo has proposed to shut down extraction wells EW-1, EW-3 and EW-5 since analytical data indicate that no apparent VOC contamination persists in that portion of the site. The Department concured with this proposal.AZ 6-7-2005 AZ reviewed a Monitoring Report received on May 3, 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. In the report LiRo proposed to shut down extraction wells EW-1 through EW-6, EW-13 and EW-14, since soil and groundwater data indicate that no apparent VOC contamination persists away from the Gerard Avenue sidewalk portion of the site. The Department concured with shutting down EW-1, EW-2, EW-3, and EW-13. The other extraction wells should continue to operate to address the remaining soil and groundwater contamination. However, the induced vacuum measurements from monitoring wells along Gerard Avenue were observed to be below desirable levels. The vacuum in nearby extraction wells should be increased to improve the induced vacuum in these monitoring wells. AZ 8-22-2005 Reviewed a Monitoring Report dated July 29, 2005. The report presented remedial system performance and groundwater monitoring data. In the report LiRo proposed to modify the current groundwater sampling schedule. Also, LiRo recommended completing proposed soil borings LBR-9 and LBR-10 with shallow screens to allow them to serve as pressure monitoring points in order to better evaluate system performance. The Department concured with these proposals.AZ 1-3-2006 Reviewed a Monitoring Report dated November 30, 2005. The report presents remedial system performance and groundwater monitoring data. The report states that elevated VOC concentrations persist in the area of PM-1. Naphthalene was also observed to exceed NYSDEC guidance value at PM-1. Results of recent groundwater sampling indicate that MW-10 continue to exceed 100 ppb total VOCs. In the report LiRo proposes to shut down several extraction wells. The Department concurred with shutting down wells EW-4, EW-6 and EW-14. The remainder of extraction wells should continue to operate to address the remaining soil and groundwater contamination. AZ 4-10-2006 Reviewed a Monitoring Report dated February 27, 2006. LiRo recommended continued operation of extraction wells EW-8,9 and 10 to continue rmediation of the soil contamination recently observed at LBR-9/PM-1. AZ 7/5/2006 Reviewed a Monitoring Report for the remedial system dated April 21, 2006. The site was formerly managed by Jonathan Kolleeny (NYSDEC). The report presents remedial system performance monitoring data. Groundwater samples were collected from monitoring wells MW-2, MW-6 and MW-10 on March 1, 2006. TVOCs in MW-6 is 139 ppb which is the highest number observed in this well. The numbers are on the clear upward trend in this well. MW-10 - TVOCs - 91 ppb, MW- 2 - TVOCs - 91 ppb - upward trend. AZ 11-20-2006 Reviewed a Monitoring Report for the remedial system dated

MOBIL (Continued) **S104278682**

August 9, 2006. URS proposed to advance a confirmation soil boring SB-5 near MW-04, LBR-02 and PM-01. I called J. Staten (URS)and concurred with this proposal. E-mail with the approval for the soil sampling plan was sent to Jane Staten (URS). AZ 12-18-2006 Reviewed a Monitoring Report for the remedial system dated August 10, 2006. MPE is operated at the site. The vacuum measurements ranged from 0 (MW-07) to 3.1 The closest extraction well to MW-07 has been shut off. Total VOCs and naphthalene ranged from 1 ppb to 56 ppb in MW-02. Low volumes of gw were extracted and treated during this monitoring period. URS has instructed Franklin to adjust the drop tubes in an effort to extract more groundwater. AZ 1-9-2007 Reviewed a Monitoring Report July through October 2006 for the remedial system dated November 14, 2006. MPE is operated at the site. Flowmeter broke at the end of September. It was not fixed; therefore, the total amount of gallons treated is unknown. Vacuum readings in MW-14 is 0 on 3 occasions. GW results - 65 ppb of total VOC in MW-02. AZ 1/23/2007 At the meeting with DDC/URS on January 10, 2007, the site was discussed. The firm, ATC Associates, will be taking over operation of Manhattan West 9. DEC requested that URS will analy e and improve performance of MW-14. AZ 7-6-2007 Reviewed a Monitoring Report for the remedial system for the period of November 2006 through January 2007 and dated February 15, 2007. MPE is operated at the site. The MPE flowmeter continues to malfunction and requires replacement, but ATC will replace the flowmeter at this time. According to the report, only monitring well MW-02 is exhibiting contaminant concentrations above DEC GW Quality Criteria. The minor exceedances in MW-02 are too low for remedial treatment. On December 2006 URS advanced two soil borings. The analytical results showed VOC exceedances of TAGM 4046 in each soil sample. Total VOCs ranged from 403,400 to 446,260 ppb. Based on the latest sampling resultsURS will operate MPE system using only extraction well EW-09. Also, drop tubes will be raised to 5 above GWT to focus on vadose one contamination. If MPE modifications are not effective, URS will excavate any remaining vadose one soil contamination. AZ 11/30/2007 I have reviewed System Performance Monitoring Report for the period April through August 2007. An e-mail was sent to DDC/URS/V. Brevdo: ...URS will sample all monitoring wells during the next quarterly groundwater event. Also, URS will advance a soil boring near the location of boring SB-05. URS requested NYSDEC permission to shut down the MPE system while samples are collected. This recommendation is rejected. Neither soil sampling results of the previous sampling round nor a figure with estimated extent of soil contamination were included in the report. Soil sampling data should be included in proposals for future borings and/or proposals for the system shutdown. Soil sampling performed in December 2006 showed total VOC contamination in a range of 400, 000 ppb. These high levels of soil contamination justify continuing operation of the MPE system. AZ 6-5-2008 An e-mail sent to Jane Staten: I have reviewed the System Performance Monitoring Report and Confirmation Soil Sampling results for the above site. I have a few questions/comments: 1. It seems that the contaminated interval is soil is between 5 and 7 in the area of MW-04. However, you proposing excavation to the depth of five feet. I suggest performing the excavation to the depth of seven feet underground structures and utilities allowing. Also, the area near soil borings B-3.5, LBR-4 and well MW-10 is not covered by your excavation plan. What are your suggestions for this area? Could you submit to DEC soil plume map so we can decide on the extent of the excavation or other soil

MOBIL (Continued) **S104278682**

remediation strategy? AZ 7-18-2008 An e-mail was sento to URS: DEC concurs to the removal of the MPE system under the condition that the remaining contaminated soil be removed via excavation and end-point samples will be taken to confirm complete removal of the contamination. Also, a soil plume map showing historical contaminant concentrations throughout the site should be included in the post excavation remedial report. AZ 9-12-2008 I contacted Jane Staten. She advised me that URS is preparing documentation for soil excavation. They received DEC approval for excavation. AZ 1-5-2009 Reviewed a Monitoring Report through the 3rd Quarter 2008 and dated October 2, 2008. MPE system was operating since April 2004. Currently MPE system is being removed. On July 28 and 29, 2008, URS sampled groundwater monitoring wells. Total VOCs concentrations ranged from non detect to 80 ppb. DEC approved hot spot excavation on September 12, 2008. According to the report, URS is currently preparing the bid documents for the excavation work. Due to the low contaminant concentrations in groundwater, DEC suggests decreasing frequency of groundwater sampling from quarterly to semi-annual. An e-mail was sent to DDC/URS/V.Brevdo. AZ 3-3-2009 An e-mail was sent to J. Staten (URS): It seems that monitoring well MW-16 should be decommissioned. If the floor of the garage is covered in oily sludge then a new spill should be called in by the City or URS. Hot spot excavation should be performed as planned. Full round of groundwater sampling should be performed before petitioning for the spill closure. A temporary well (groundwater sampling point) might be installed at the location of MW-16 (which exhibited 83 ppb of the total VOC). AZ 4-23-2009 An e-mail was sent to J. Staten (URS): I have reviewed a Monitoring Report for this site for the 4th Quarter of 2008. The report stated that monitoring well MW-10 will be removed from the monitoring list because no components exceeded the quality criteria. However, downgradient wells should be monitored regardless of the contaminants presence. Since this site has groundwater flowing in northern and western directions, at least one downgradient well should be monitored in each direction. MW-10 should be monitored. Also, one downgradient well should be monitored at the western edge of the plume. AZ 9-10-2009 An e-mail was sent to J. Staten (URS): I have reviewed report for the above site. The report stated that well MW-16 was decommissioned because URS observed that it was filled to the top of the riser with dirt and water. This well consistently showed elevated reading for VOCs. This well should be re-installed. Also, a well downgradient from the contaminated wells should monitored. URS should add a downgradient well to their monitoring schedule. AZ 9-14-09 Based on the latest URS s submissions (report for the 2nd quarter 2009 dated June 10-2009) and on a correspondence from J. Staten, downgradient wells were sampled. MW-16 was sampled over 8-year period. Over this time, well MW-16 did not exhibit compounds above Groundwater Quality Criteria until a minor exceedance occurred in December 2007. Subsequent samples collected in 2008 also showed a couple of compounds above Groundwater Quality Criteria, but the concentrations were not significant (total VOC concentration under 100 ppb). AZ 12-1-09 An e-mail was sent to Jane Staten/Afsar Samani/Marcy Ab agh/Vadim Brevdo: Dear Jane, I have reviewed Summary of the Excavation Activities and Request for Spill Closure for the above site dated August 19, 2009. Also, I m in receipt of your e-mail dated Nov. 20, 2009. The e-mail stated that the City, through DCAS, is involved with the owner of the Manhattan West 9 Garage (a private party) in an extensive renovation of that building. DDC stated that

MOBIL (Continued) **S104278682**

the planned renovation work is imminent and includes partial replacement of the Garage floor slab which will destroy the monitoring wells inside the garage. The hot spot excavation found that no VOCs or SVOCs were detected in any soil samples. The results of the excavation are approved. Please make sure that grab samples are taken when performing any soil sampling. Composite samples could be taken only in addition to grab samples. Groundwater samples were collected from 19 wells. No groundwater samples were taken from wells MW-15 and MW-16 because they were destroyed. The latest site-wide groundwater sampling results showed that MW-06 had exceedances of VOCs. Also, the latest available results from MW-16, which is destroyed, showed that it had VOCs exceedances. Groundwater natural attenuation is being used at this site as a remedial strategy for groundwater. Since the groundwater wells will be destroyed at this facility during floor slab replacement and the City would like to close this spill, I request that soil sampling should be performed while doing garage floor replacement. Special attention should be given to the area where MW- 06 and MW-16 are located. These activities should be coordinated between DCAS and NYCDDC. Environmental consultant should be present at the time of the excavation and perform soil sampling. If signs of contaminated soil/groundwater are observed during the excavation, A NEW SPILL SHOULD BE CALLED IN TO NYSDEC HOTLINE. If contaminated soil is discovered it should be removed to the extent possible, end point samples taken and activities immediately reported to NYSDEC. AZ 3-5-2010 Discussed with Jane Staten sampling plan for MW-9 site. She asked for directions for locations of soil sampling points. If utilities, underground structures and the scope of future work allow, samples should be taken in the area of MW-06, MW-16, diesel dispenser, 550 gal gasoline UST (removed), 4,000 gal diesel UST (removed), 4,000 gal diesel UST, 550 hoist oil, 550 kerosene, 550 motor oil and 550 gasoline USTs (abandoned in place). About 23 samples will be taken. AZ 8-3-2010 An e-mail was sent to H. Roberts: Harvey,Request regarding closure of spill 9513870 was denied as per my letter dated 12/01/2009. Soil sampling should be performed at the site as per my letter. If you have any questions regarding this matter please contact me at 718-482-6387. Thank you, AZ 8-3-2010 An e-mail from H. Roberts: Alex, We ve been in touch with DOS regarding the renovation work at the Manhattan West 9 Garage. There is no schedule yet for floor slab replacement (see emails below). We ll let you know when the floor replacement gets scheduled. AZ 10-11-2011 I was contacted by K. Shenahan. The current site owner is postponing work on breaking the existing floor and sampling the soil due to the lack of funds. 10/13/2011 an e-mail was received from K. Shenahan: Alex, NYCDDC s environmental consultants have been successfully implementing site remediation at this site since 2004. Remediation technologies included a multi-phase extraction system, natural attenuation and excavation. Recently, the owner of the property informed NYCDDC that the financing of a proposed facility rehabilitation project would not be approved until the spill number was closed. Therefore, URS has prepared this e-mail to summari e the current situation at this site and formally request closure of spill 9513870. Background There has been no activity on this site since late 2009. The MPE system began operating in April 2004 and consisted of a network of 14 extraction wells. By February 2005, site monitoring data showed that free product was no longer present at the site and groundwater contaminant levels were significantly reduced.

MOBIL (Continued) **S104278682**

In addition, soil borings showed significant decreases in soil contamination. Based on these results, three of the extraction wells were shut off. In October and November 2005, LiRo advanced an additional five soil borings to evaluate system performance. Two of the five borings showed the presence of minor residual contamination. In December 2006, URS completed another round of confirmation soil sampling and the data was clean except for one boring near well EW-09. As a result, operation of the MPE system was focused on the area around EW-09. In October 2007, URS advanced another confirmation soil boring and collected two soil samples from the area that was previously found to be contaminated. This data also indicated the presence of residual soil contamination. On January 24, 2008, URS issued an investigation summary report with recommendations for a hot spot excavation for soil and natural attenuation for groundwater. In an e-mail dated June 5, 2008, the NYSDEC responded to the report with several comments to which URS responded in a letter dated June 12, 2008. In an e-mail dated July 18, 2008, the NYSDEC approved removal of the MPE system, hot spot excavation, and natural attenuation for groundwater. In addition, the NYSDEC approved closure of spill 9910856 in an e-mail dated September 12, 2008. The hot spot excavation work was performed by Franklin on June 23, 2009. On August 19, 2009, URS issued a report to the NYSDEC documenting the results of soil excavation work conducted to remediate petroleum contaminated soil (soil confirmation sampling results are attached). The As-Built drawing illustrated the limits of soil excavation. The report also included a formal request to close spill 9513870 assigned to the site. The request to close the spill number was based on the fact that the remedial excavation was successful and there was only trace concentrations of volatile organic compounds (VOCs) detected in groundwater samples collected from the site (groundwater data for the past 5 years is attached). On November 20, 2009, URS also sent the NYSDEC an e-mail notifying them that owner of the facility was planning an extensive renovation of the site including replacement of the concrete floor slab which would destroy the monitoring wells located inside the garage. On December 1, 2009, the NYSDEC sent an e-mail to URS indicating the favorable results of soil excavation were acceptable. In addition, the NYSDEC deferred approving the request for spill number closure until after floor slab replacement project. The NYSDEC requested that field screening and soil sampling be conducted during the concrete floor slab replacement project especially in the area of monitoring wells MW-06 and MW-16. The most recent groundwater data collected at the site indicates very low concentrations of VOC in the following wells: MW-02 (14 ppb, no exceedances) MW-06 (42 ppb, 4 exceedances) MW-14 (2 ppb, no exceedances) MW-15 (4 ppb, no exceedances) MW-16 (65 ppb, 2 exceedances) MW-20 (13 ppb, no exceedances) MW-21 (9 ppb, no exceedances) Summary URS is formally requesting spill 9513870 be closed since it appears that the groundwater and soil have been remediated to the limits of the effectiveness of the approved remedial technologies. We hope this summary and attached data provides you with sufficient information to evaluate this request. URS will reiterate to the property owner that if and when he performs the facility rehabilitation project, he is required by law to notify the NYSDEC if petroleum contaminated soils are encountered. AZ The following e-mail was sent to K. Shenahan/V. Brevdo/M. Asbagh: Dear Kevin, I have reviewed the Technical Memo dated October 12, 2011. The Memo stated that NYCDDC s Environmental Consultants have been

MOBIL (Continued) **S104278682**

successfully implementing site remediation since 2004. Remediation technologies included a multi-phase extraction (MPE) system and excavation. MPE system was operating at the site in 2004-2008. As a result, free phase product was no longer present at the site and groundwater contaminant levels were significantly reduced. The hot spot excavation work was performed in 2009. Post excavation end point sampling detected that no VOCs or SVOCs were detected in any soil samples. The remedial excavation was successful and there was only trace concentrations of volatile organic compounds (VOC) detected in groundwater. Based on the most recent groundwater sampling results, only six minor exceedances of groundwater standards were detected. A current owner of the facility is planning an extensive renovation of the site including replacement of the concrete floor slab which would destroy the monitoring wells located inside the garage. If contamination is encountered during the slab replacement, a spill should be called in. Based on the documentation provided to date, spill case 9513870 has been closed. All monitoring wells associated with this project should be closed according to the Department s Groundwater Monitoring Well Decommissioning Procedures . The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was not addressed by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department s spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department s files regarding this release may not be maintained indefinitely. Sincerely, Alex Zhitomirsky

Remarks: under ground tanks with unk petroleum or waste oil have caused soil to be contaminated-still under investigation

DEC Memo:	12/07/05: This spill transferred from J.Kolleeny to S.Kras ewski. 09/23/10: J.Kann - spill transferred from K. Tang to J.Kann. 5/29/12: J.kann - since little is known about this facility, a P0 priority was assigned. 10/23/13: J.Kann - a work plan was submitted and edoced under 9005760. 01/07/14: J.Kann - revised IWP approved on 12/23/13. There was some confusion between the two Mitchell Houses. The revised IWP only covers Alexander Avenue. SIR due 6/23/14. Site included in the multi site stip sent to NYCHA today. 12/12/14: J.Kann - SIR submitted to DEC on 10/15/14 after an approved extension. The report was reviewed and it required revisions due to the confusion of the two Mitchell houses. The revised report was email to the Department on 12/11/14. Six soil borings were advanced and three wells were installed. Results of the twelve soil samples collected for analysis of VOCs and SVOCs yielded no exceedences of CP-51. All groundwater concentrations were below TOGS 1.1.1. NFA. Spill closed.
Remarks:	CALLER WAS REMOVING TOPSOIL TO REMOVE TANKS AND REALIZED SOIL WAS CONTAMINATED. CONTRACT WORK WAS STOPPED UNTIL DEC NOTIFIED.

SWIS:	0301
Town:	New York City
Record Added Date:	05/15/2015
Record Updated Date:	08/14/2015
Update By:	BXANDERS
Site Description:	Location: The Site is located in an urban area in the Mott Haven section of the Bronx and is comprised of approximately 47.411 square foot (sf) irregularly (rectanuglar?) shaped lot. The site includes all of Block 2309 Lot 12 and a portion of Lot 1 and has 75 feet of frontage along Bruckner Boulevard and approximately 300 (360?) feet of frontage along E. 134th Street. Site Features: The site is currently vacant. Current Zoning/Use: The site is oned M1-2/R6A residential/commercial and is currently vacant, though part is used as a parking lot by the adjacnet building. Historical Use: The subject property was historically used as a piano factory, woodworking factory and marble factory (1890s through 1920s), and a revolving door factory and window and door factory (1940s through 2007). Site Geology and Hydrogeology: Subsurface soils at the site consist of historic fill materials to a depth of approximately 5 to 10 feet below grade. Silty sand is present immediately below this layer to a depth of 15 feet. The depth to bedrock is anticipated at approximately 20 to 30 feet below land surface. Groundwater at the Site is present under water table conditions at a depth of approximately 10 feet below grade. Based on regional water table elevation maps, groundwater flow is expected to be southwest toward the Harlem River.
Env Problem:	Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Updated By: JHOCONNE
Site Description: Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is oned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utili ed tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utili ed both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered ha ardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying hori ontal flow directions: generally northward towards West 142nd Street and eastward along

2350 FIFTH AVENUE CORP (Continued) **1000108749**

142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH s air guidelines. To minimi e the potential for the inhalation of site-related contaminants, a sub-slab depressuri ation system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying hori ontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor

2350 FIFTH AVENUE CORP (Continued) **1000108749**

(air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH s air guidelines. To minimi e the potential for the inhalation of site-related contaminants, a sub-slab depressuri ation system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Description: Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is oned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utili ed tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utili ed both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered ha ardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The

The dry cleaning facility operated as registered ha ardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying hori ontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted

2350 FIFTH AVENUE CORP (Continued) **1000108749**

residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH s air guidelines. To minimi e the potential for the inhalation of site-related contaminants, a sub-slab depressuri ation system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 57691
Site Description: Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is oned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utili ed tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utili ed both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered ha ardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for

From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utili ed tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utili ed both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered ha ardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying hori ontal flow directions:

2350 FIFTH AVENUE CORP (Continued) **1000108749**

generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH s air guidelines. To minimi e the potential for the inhalation of site-related contaminants, a sub-slab depressuri ation system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 57691
Site Description: Location: The site is located on the west side of Fifth Avenue between 141st Street and 142nd Street in the borough of Manhattan, City and State of New York. Site Features: The site is approximately 1.54 acres, and is entirely occupied by a building. The building is comprised of three connected sections: a two-story section along Fifth Avenue, a three-story section in the center, and a one-story section to the west. Surrounding the site are high-rise residential buildings to the west, south, and southeast of the site. The Harlem River Drive is to the east/northeast, and a National Guard Armory occupies the block immediately to the north. Current Zoning/Use: The site is owned by 2350 Fifth Avenue Corporation. It is oned for light manufacturing (M1-1). The Harlem River is located approximately 200 to 300 feet east of the site. Following completion of remediation, the site is currently occupied by a self-storage facility and a charter school. Past Use of the Site: Based on historical Sanborn fire insurance maps, the site and the surrounding area were in the process of being filled in between 1860 and 1893, and as of 1909 it was mostly vacant or occupied by a contractor s yard. The existing building was originally constructed as a Borden Company ice cream factory: the three-story section in 1923; the two-story section in 1932; and the one-story section in 1950. The floor slab in the one-story (western) section included layers of insulating materials for refrigeration. The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utili ed tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utili ed both first-generation and second-generation dry-cleaning machines.

The area surrounding the site was mostly occupied by garages, auto repair shops, and light manufacturing in the 1930s through the 1950s, with the exception of the block directly north of the site, where the Fifth Avenue Armory was constructed between 1921 and 1933. The residential development, which occupies the area to the south and west of the site, was constructed between 1957 and 1959. From 1970 to 1994 the site was occupied by an industrial laundry and dry cleaning operation which utili ed tetrachloroethylene (PCE or perc) as a cleaning solvent. The dry cleaning operation utili ed both first-generation and second-generation dry-cleaning machines. The majority of PCE released was associated with the first generation machine use, which involved more handling of PCE than the later machines. The dry cleaning facility operated as registered ha ardous waste handler with U.S. Environmental Protection Agency (EPA), ID number NYD071026173. Between 1995 and 1996, most of the ground floor of the building, with the exception of the far western portion, was renovated for use as a New York City public school. The central and eastern portions of the building were occupied by P.S. 141 for a period in the fall of 1997, and were later used by a church for services, offices, and classes. The church vacated the building in December 2004. The remainder of the central and western portion of the building was renovated in 2001 for use as a self storage facility, and in 2006 the self storage facility expanded into the

2350 FIFTH AVENUE CORP (Continued) **1000108749**

former school portion of the building. Currently the site is use for self storage facility and for art studio space. Site Geology and Hydrogeology: Groundwater in the vicinity of the site is divided into two apparently semi-confined aquifers. The presence of a clay layer acts as an aquitard/aquiclude separating the aquifer into a shallow aquifer above the clay and deeper aquifer below the clay. The groundwater surface in the shallow aquifer is irregular and approximately six to ten feet below grade. Measurements of groundwater elevation indicated varying hori ontal flow directions: generally northward towards West 142nd Street and eastward along 142nd Street towards the Harlem River.

Env Problem: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE) and its breakdown products [trichloroethene (TCE), cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride (VC)] in soil, groundwater and soil vapor and sub-slab insulation material. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in soil, groundwater, soil vapor and sub-slab insulation material is being managed under the Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Direct contact with contaminated soil is unlikely since it is located under pavement and the on-site building. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Site-related contaminants were historically found in the indoor air of the on-site building at concentrations exceeding NYSDOH s air guidelines. To minimi e the potential for the inhalation of site-related contaminants, a sub-slab depressuri ation system was installed beneath the building. Environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings.

FINDS:

Registry ID: 110000808074

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of ha ardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Town:	New York City
Record Added Date:	05/08/2015
Record Updated Date:	11/23/2016
Update By:	JAMORAS
Site Description:	Location: The site is located in an urban area in the Bronx and is comprised of a single irregularly shaped tax parcel covering approximately 1.4 acres. The lot is bordered to the northwest and northeast by commercial properties, to the southeast by the Third Avenue Bridge and to the southwest by the Harlem River. Site Features: The main site feature includes a vacant 19,450 square foot one-story commercial building (no basement) constructed in 1931; asphalt, concrete and cobblestone-paved exterior driving/storage areas; an approximate 10,500 square foot private parking lot and sparsely-vegetated areas. Current Zoning and Land Use: The site is oned as M1-3/R8 residential/ commercial (a Special Mixed Use District) and is currently inactive. The parcels adjacent to the northwest and northeast are currently used for commercial and industrial purposes. Past Use of the Site: The subject property was

FORMER MUGLER SHORING INC. (Continued) **S117936658**

historically used for manufacturing purposes since at least 1891: J.L. Mott Iron Works (1891-1922), Hydraulic Steel Company (1922-1935), General Builders Supply Corporation (1935-1968), Brill Equipment Company (1949-1956), US Gear Manufacturing Company (1965-1971), Ohio Gasket Manufacturing Corporation (1971), and Mugler Inc. (since 1965). The site has been vacant since October of 2014. A Phase II Environmental Assessment Investigation was performed in 2014 which indicated the presence of petroleum related contamination in soil and groundwater. Site Geology and Hydrogeology: Subsurface soils at the site consist of fill materials and silty-sand to a depth of approximately 5 feet below grade. A silty clay was present below this layer to a depth of 15 feet closer to the River. Further inland a medium to coarse sand was encountered beneath the fill to a depth of approximately 15 feet. Groundwater depth ranges from five to seven feet below grade and flows to the southwest towards the Harlem River.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater samples were analy ed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor samples were analy ed for VOCs. Based upon the subsurface investigations conducted to date, the contaminants of concern for the site include petroleum related VOCs, SVOCs and metals. Soil: A total of 34 soil samples were collected from 23 soil borings. VOCs were not reported above 6 NYCRR Part 375.6 restricted residential soil cleanup objectives (RRSCOs) in any of the samples. Several SVOCs exceeded their RRSCOs including indeno(1,2,3-cd)pyrene (up to a maximum concentration of 0.82 parts per million (ppm) compared to the RRSCO of 0.5 ppm), ben o(a)anthracene (1.6 ppm compared to the RRSCO of 1 ppm) and ben o(a)pyrene (1.3 ppm compared to the RRSCO of 1 ppm). Most of these exceedances were from samples collected from a depth of 0 to 2 feet, however one exceedance was from a sample collected from a depth of 6-8 feet. Arsenic (up to a maximum concentration of 33.5 ppm compared to the RRSCO of 16 ppm) and lead (2,280 ppm compared to the RRSCO of 400 ppm) exceeded their respective RRSCOs. These metal exceedances were found in one sample collected at a depth of 5 to 7 feet. Data does not indicate any off-site impacts in soil related to this site. Groundwater: A total of 12 groundwater samples (one sample from each of 12 groundwater monitoring wells) were analy ed during the RI. Only two VOCs were detected in four of the samples. These are MTBE (up to a maximum concentration of 100 parts per billion (ppb) compared to the ambient water quality standard (AWQS) of 10 ppb) and methyl chloride also known as chloromethane (39 ppb compared to the AWQS of 5 ppb). SVOCs were detected in only one of the 12 samples. Analytical data for SVOCs indicated detections above the AWQS guidance values for following compounds in that one sample: ben (a)anthracene (up to a maximum concentration of 0.03 ppb compared to the AWQS of 0.002 ppb) and ben o(a)pyrene (0.03 ppb compared to the AWQS of ND). Data does not indicate any off-site impacts in groundwater related to this site. Soil Vapor: Eight soil vapor samples and five sub-slab vapor samples were collected from the site. Heptane and hexane were reported at elevated concentrations in some of the soil vapor samples with the highest concentrations reported in SG5 as 3330 and 6200 g/m3, respectively. The location of SG5 is close to the location of one of the suspected Underground Storage Tanks (USTs). Data does not indicate any off-site impacts in soil vapor related to this site. Special Resources Impacted/Threatened: Due to the proximity of the Site to the Harlem River, a Fish and Wildlife Resource Impact

FORMER MUGLER SHORING INC. (Continued) **S117936658**

	Analysis (FWRIA) was also conducted. Based on the nature and location of the contamination at the site, with limited impact to subsurface soils and groundwater and no evidence of migration / discharge of contaminants to the River, there are no expected adverse impacts to River.
Health Problem:	The site is completely fenced, which restricts public access. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site redevelopment. Environmental sampling indicates that site-related contamination does not pose a soil vapor concern for off-site buildings.

DEC Memo:	DEMEO needs to send a TTF letter to Sanitation) 8/9/12-Vought-Notes above by DEC Sangesland. Vought primary off-hours responder. Vought noted PBS 2-455660 for site also listed as 125 East 149th Street. As primary off-hours responder, Vought called TJ O Connor (Dry As A Bone Ph:516-678-5115) to see if failure was wet or dry leak and left message on voicemail to return call as soon as possible. Vought called Al Mignone (Ph:646-235-3183) for more information and left message to return call. Vought called PBS contact: NYC Dept. of Sanitation 125 Worth Street Room 823B New York, NY 10013 Attn: M. Bonacorsa Ph:(646)885-4874 Fax:(212)442-8624 or (212)442-8625 Bonacorsa retired from NYCDOS as per receptionist and letter should be sent to Mr. Chingas. Vought sent out TTF letter to above address and faxed letter as well. Vought sent out letter to NYCDOS Chingas and added copy to e-docs and left Demeo copy as well. 9/18/12 TJD File review. NYSDOS (Al Mignone) has provided copies of initial failing tank test report performed on 8/8/12 (Dry as a Bone) and a subsequent passing tank test report performed on 8/13/12 (AARCO). Initial failed test was reported as a dry leak. NYCDOS reports no repairs were made to system and was retested by another contractor and passed. Testing reports and e-mail correspondence have been

documentation in support of spill closure relating to reported tank test failure. System failed initial system test (Dry as a Bone)on 7/17/12 - reported as a dry leak. Tank alone was retested on 7/23/12 and passed. Failure determined to be associated with a failed vent pipe which was replaced 9/11/12 by Windmill Tank Service. Additionally threads on interstial space access bung on tank top were also determined to be contributing to an air leak and were repaired by maufacturer (Highland Tank) on 9/11/12. Following repairs entire tank system was retested by AARCO on 9/13/12 and passed. No further action is required. Spill closed.

DEC Memo:	12/4/14- Spoke to Ray Lara from PTC. He said they cleaned and emptied he tank. They tested the tank and failed. They are going to perform the isolation test. 2/20/15-Mark Salamack from PTC sent an email dated 2/9/15 with the following information. The one on Lenox Avenue and the one on 5th Avenue are both in the same complex called the Savoy...whose main address is 45 West 139th Street in Manhattan...these are both above ground tanks that were tested when they went from 6 oil to 2 oil...both had a problem with the way an electronic gauge was connected on top of each tank...there was no contamination or spilled oil in either case...they have both been retested and passed the tightness tests...as we have not been paid yet for the job we have not sent anything to you to get the spill s closed. Based on the information that the gauge was repaired, there was no contamination or spill in this site and the tank system was retested and past the test this spill is closed

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 7/31/2002 - Sangesland spoke with Isaac at Petroleum Tank Cleaners (718-624-4842). PTC was doing some excavations around the stick valves of several buried tanks at Lincoln Hospital. PTC has started excavations in the area and will continue with hopes of getting clean end point samples. Tanks were probably tank tested recently. Sangesland will check PBS for the site. 8/2/2002 - Sangesland spoke with Isaac at PTC. He said they dug out quite a bit of contaminated soil, but didn t get it all. Because of the location of the excavation, PTC had to back fill the site with sand. PTC says they found an old gasoline tank which was empty, but had not been closed out. This tank was located adjacent to the fuel oil tanks they knew about. PTC was given direction to: 1) Delineate the site in 3-D. 2) Determine GW level and direction 3) Prepare submit a remediation work plan 4) Process the documentation to properly close out the tank(PBS) 8/2/2002 - Mark Robbins contacted the DEC to say his firm (HydroTech 631-462-5866) was going to bid on doing a delineation/remediation at the site. 8/13/2002 Sangesland spoke with Mark Robbins. Mr. Robbins requested a letter from the DEC outlining the list of work required on this site. This is needed by the Hospital to process a purchase order. 4/29/2005 Sangesland spoke to Mark Robbins at HydroTech. They have 4 wells which have been under long term monitoring. Mark believes the site may be close to close out. 05/27/14-Hiralkumar Patel. with approval from DEC DeMeo, case transferred from DEC Sangesland to DEC Patel. 06/03/14-Hiralkumar Patel. visited site. met John Healy at the hospital. informed him about an open spill case. he has no knowledge of this case as he was not working at the facility in 2002. as per PBS record, the site has total of eight (8) active tanks. he mentioned that one 1(1) 10,000 gal diesel UST is located along E 149th Street. two days tanks (one 100 gal and one 275 gal) for diesel product are on building s roof. the remaining five (5) tanks (one 10,000 gal diesel and four 50,000 gal 2 fuel oil) are located underground, in front of the EMS entrance along Park Ave. found total of six (6) monitoring wells around the tank field along Park Ave. Mr. Healy mentioned that there was an old gasoline UST in area of fuel oil tank field. he will look for any environmental reports. asked him to check and sample existing monitoring wells at the site. John Healy Sr. Stationary Engineer Engineering Department Lincoln Hospital 234 E 149th Street Bronx, NY 10451 Ph. (718) 579-5680 (O) (347) 865-3201 (C) Fax (718) 579-4758 email: john.healy@nychhc.org reviewed available documents: *-*
-*-*-*-*-*-*-*-*-*-* 1) 08/14/2002: DEC Sangesland sent letter requiring complete delineation and submission of RAP. 2) 09/10/2002: Subsurface Investigation Report: - prepared by HydroTech - five USTs

LINCOLN HOSPITAL (Continued) **S106006138**

(4 - 50,000 gal fuel oil, 1 - 10,000 gal diesel) are situated beneath the asphalt parking lot to the west of emergency room - boiler plant is situated to the south of the parking lot - all five tanks are situated in north-south direction - a former dispenser is situated on top of a concrete island that is located to the north of the 10,000 gal diesel tank - PTC was contracted to replace direct fill pipes associated with each UST - identified petroleum impacted soil during the installation of fill pipes for diesel UST - impacted soil extended to at least a depth of 8 ft bg - a soil sample was collected for fingerprint analysis; result indicated that the petroleum most closely resembled fuel oil 1 with a very slight presence of gasoline - subsurface investigation conducted in Aug. 2002 - installed four soil borings (SP-1 through SP-4) - boring SP-1 was installed to 16 ft bg, where refusal was encountered - borings SP-2, SP-3 and SP-4 were installed to 20 ft bg; no refusal encountered in these borings - found PID readings between 463 and 693 ppm from 0 to 16 ft bg in SP-1; maximum PID reading found at 16 ft bg where refusal encountered - in SP-2, found PID reading of 382 ppm at 16-18 ft bg and 189 ppm at 18-20 ft bg - in SP-3, found PID readings between 289 and 628 ppm from 8 to 18 ft bg; 24 ppm recorded at 18-20 ft bg - in SP-4, found PID reading of 486 ppm at 14-16 ft bg and 102 ppm at 16-18 ft bg - total five soil samples were collected (two from SP-1, and one each from SP-2, SP-3 and SP-4) - water table was identified at 12 to 16 ft bg ---------- soil analyticals:

- 06/16/14-Hiralkumar Patel. 1:07 PM:- left message at HydroTech. 1:09 PM:- left message for Mr. Healy. 1:19 PM:- received call from Mr. Healy. he has contacted Hydro Tech for any available documents, but neither Hydro Tech nor property owner has any document related to this spill case. based on available information, informed Mr. Healy that the department requires collection and analysis of groundwater samples from existing monitoring wells. 2:02 PM:- sent email to Mr. Healy. asked him to submit results of groundwater samples and site-specific groundwater flow direction by the end of 07/18/14. email copied to Mark Robbins at Hydro Tech. 10/01/14-Hiralkumar Patel. 10:36 AM:- left message for

LINCOLN HOSPITAL (Continued) **S106006138**

Mr. Healy. 10:46 AM:- sent email to Mr. Healy including copy of email dated 06/16/14. informed him that the report must be submitted immediately. email copied to Mark at HydroTech. 10/07/14-Hiralkumar Patel. 9:33 AM:- received email from Mr. Healy stating that Hydrotech is no longer their vendor and he will contact Woodard Curran. 11/18/14-Hiralkumar Patel. 1:08 PM:- left message for Mr. Healy. 11/19/14-Hiralkumar Patel. received email from Mr. Healy (at 10:07 PM on 11/18/14) including copy of quote from Woodard Curran. he received quote yesterday and waiting for approval.
08/28/15-Hiralkumar Patel. alternate address: 212-268 East 149th Street, 415 Morris Ave, 419-541 Morris Ave, 2824 Park Ave, 201-219 East 146th Street, 410-448 Canal Place, 229-245 East 144th Street PBS : 2-327727. as per PBS record, the site has/had following tanks: - four (4) 50,000 gal 2 oil USTs, in-service, installed in Sep. 1970 - two (2) 10,000 gal diesel USTs, in-service, installed in Sep. 1970 - one (1) 100 gal diesel AST in contact with impervious barrier, in-service, installed in Sep. 1970 - one (1) 275 gal diesel AST in contact with impervious barrier, in-service, installed in Oct. 2009 - one (1) 100 gal diesel AST on legs, removed in Nov. 2009 PBS registration expired on 08/28/2012. ---------- other spills: 9208811, 9310375, 9515003, 0313236, 0912680, 0912687, 1206812, 1502628 spill : 9208811 was reported on 10/30/1992 due to 3 gal 2 oil spill. case closed. spill : 9310375 was reported on 11/26/1993 as 30 gal 6 oil spilled into sewer due to tank overfill. case closed. spill : 9515003 was reported on 02/22/1996 as 30 gal 6 oil spilled due to truck malfunction. case closed. spill : 0313236 was reported on 03/02/2004 as 50,000 gal 2 oil tank (tank 4) failed a tightness test. tank was repaired and tested tight. case closed. spill : 0912680 was reported on 03/05/2010 as 25 gal diesel spilled onto parking lot and storm drain due to overfill. case closed and referred to spill : 0912687. spill : 0912687 was reported on 03/05/2010 due to diesel spill onto parking lot and storm drain. case closed. spill : 1206812 was reported on 10/10/2012 as 10,000 gal diesel tank (tank 6) failed a tightness test due to loose gasket. case closed. spill : 1502628 was reported on 06/09/2015 as 50,000 gal 2 fuel oil tank failed a tightness test. case still open. a TTF letter was sent on 06/16/2015. 1:02 PM:- spoke with Angelo (718-579-4645) in facility department. he mentioned that John Healy is no longer working at the site. he asked to contact Patrick Hallahan. Patrick Hallahan Chief Engineer Ph. (718) 579-5680 email: patrick.hallahan@nychhc.org 1:05 PM:- left message for Mr. Hallahan. 1:11 PM:- spoke with Dave Krochko (914-448-2266) at Woodard Curran regarding gw sampling activities. he mentioned that they never received signed proposal from the property owner and still waiting for reply. 2:53 PM:- called office of NYC Health and Hospitals Corp. for point-of-contact regarding the site. site representative asked to send letter to Mr. Raju s attention. NYC Health Hospitals Corp. 125 Worth Street New York, NY 10013 Attn.: Ramanathan Raju Ph. (212) 788-3321 3:20 PM:- sent letter to Mr. Hallahan and Mr. Raju including copy of letter dated 08/14/2002 and email dated 06/16/2014. asked them to submit report by the end of 10/16/15 including groundwater sample results and flow direction. also asked them to immediately renew PBS registration. letter emailed to Mr. Hallahan.
09/18/15-Hiralkumar Patel. 11:53 AM:- received message from Evan Trumpatori. he inspected site yesterday to verify location of each monitoring well. during inspection, he noted that five of the wells are actually stick lines for USTs. he only found two (2) 1-inch

LINCOLN HOSPITAL (Continued) **S106006138**

wells. Evan Trumpatori Woodard Curran Ph. (914) 294-2414 (O) (631) 662-9991 (C) email: etrumpatori@woodardcurran.com 1:25 PM:- spoke with Evan. asked him to sample the two existing wells. 10/20/15-Hiralkumar Patel. received email from Evan (at 4:32 PM on 10/15/15) including sampling report. abstract: - the nearest surface body is the Harlem River, located approx. 1,800 ft west of the site - five of the seven reported monitoring wells were product level gauging ports for USTs - the remaining were 1-inch wells - no free product was present in either well - marginally elevated PID readings (6.5 ppm in MW-1 and 0.3 ppm in MW-2) were noted in both wells and petroleum odor was observed in well MW-2 - both wells were installed to a depth of approx. 20 ft bg - depth to groundwater was approx. 15 ft bg ---------- - few VOC compounds noted above limit (max. 46 ppb of n-Propylben ene) - recommended installation of an additional monitoring wells to determine site specific groundwater flow direction report includes google view of the site with two well locations, but does not include site sketch with tank systems and its gauging ports. 10:07 AM:- sent email to Evan and asked to submit a site sketch including tank systems, its gauge ports and existing wells. email copied to Leonard Balgobin (Leonard.Balgobin@nychhc.org), Dave Krochko (dkrochko@woodardcurran.com) and Michael Heijden (mvanderheijden@woodardcurran.com). PBS registration has not been renewed yet. 10/23/15-Hiralkumar Patel. 9:22 AM:- received email from Evan including a google view. as per the submitted map, the north end of the four 50,000 gal tanks are under the existing building. 10/26/15-Hiralkumar Patel. 10:17 AM:- spoke with Evan and inquired him about position of north end of the four 50,000 gal tanks (under the building?). he mentioned that the google pic is old and currently there is a paved concrete area. so north end of the tanks are not under the building. asked Evan to submit a line drawing (with scale). 11/06/15-Hiralkumar Patel. 1:58 PM:- received email from Evan including a scaled site map. 12/02/15-Hiralkumar Patel. after discussing with DEC DeMeo, case closed based on available information (source removal, minimal impact to groundwater and no planned change of property use). PBS registration has not been renewed yet. 2:01 PM:- sent spill closure letter to Mr. Hallahan. letter emailed to Mr. Hallahan and Evan. **also refer spill : 1502628.**

Spiller Address: Not reported
Spiller Company: 001
Contact Name: MARIO MANDALONE
DEC Memo: 12/12/05: This spill transferred from J.Kolleeny to S.Kras ewski. 07/28/06: Two 25K USTs installed in 1948 that stored 4/ 6 oil were closed-removed in 1996. One 30K UST that stores 2 oil was installed in 1997 and is currently in service. Soil contamination was encountered during tank replacement. 4 MWs were installed in 1996 and is currently bailing oil/water. NYCHA recommends that a site assessment be performed. - SK 9/26/06: This spill was transferred from S.Kras ewski to J. Kann. -JK 12/12/12: J.Kann - the IWP was received in May 2009. The plan and historic files were reviewed. Based on the review, comments were sent to NYCHA on 12/12/12 (edoced). 3/5/13: J.Kann - revised IWP (Addendum letter and Figure 3) recvd on 2/11/13. Information reviewed and found acceptable. Pointed out in an email to NYCHA that the locations identified in the Addendum letter and revised Figure 3 are correct (however, the text of Section 3.2 of the IWP was not revised to reflect the change). SIR due 9/5/13. 12/2/13: J.Kann - stip sent to nycha on 10/30. Signed stip rcvd 12/2 and forwarded to legal. 1/28/14: J.kann - approved modifications to IWP after discussion/email with/from consultant (edoced) 2/06/14: J.Kann- visited site today. Borings were advanced in the sidewalk. Stained soils noted at the groundwater interface and collected for analysis. Historical data shows not product or contamination downgradient of the site (across Madison Avenue). Additional drilling will be performed on Monday 2/10/14. 3/5/14: J.Kann- rcvd RIR on 3/5/14. Reviewed the RIR. Concurred with recommendations. Sent and email to NYCHA. Quarterly monitoring should commence and a 2014 2nd quarter monitoring report is due on July 31, 2014. A RAP is due on 9/5/2014 7/23/14: J.Kann - reviewed RAP. VEFR is proposed in two wells containing product. Monitoring over 6 months. NYCHA needs to install 4 or 6 inch well in sidewalk after scaffolding over sidewalk is removed. email sent to NYCHA on 7/24/14. 5/12/17: J.kann - visited site today. Wells did not contain product. Boiler room walls clean. Given the minimal impacts previously noted and limited to weathered 6 oil, tanks removed over 15 years ago and no dissolved phase in gw, spill closed. Possible weathered 6 oil contaminated soils at groundwater interface, so contaminated spill clause included in closure letter. Spill closed.
Remarks: TANKS BEING REMOVED - CONTAMINATED SOIL FOUND

Town:	New York City
Record Added Date:	05/15/2015
Record Updated Date:	10/03/2016
Update By:	JHOCONNE
Site Description:	Location: The Site is located in an urban area in the South Bronx and is bordered to the northeast by Bruckner Boulevard, to the southeast by Lincoln Avenue, to the southwest by Block 2316, Lot 35, which is part of the pier head and bulk head, followed by the Harlem River, and to the northwest by the Third Avenue bridge. Site Features: The property is currently developed with a one-story 19,450 sf commercial building constructed in 1931. The entire site is paved. Current Zoning/Use: The site is oned M1-3/R8 residential/commercial, a Special Mixed Use District, and is currently occupied by a moving company and a bus company as a maintenance garage and yard. Historical Use: The subject property was historically used for coal storage (1891 - 1908), the New Jersey Central Rail Bronx Freight Terminal (1908 - 1950s), and crane repair, a paint shop, blacksmith shop, bus depot and vehicle repair shop (1968 - present). Site Geology and Hydrogeology: Subsurface soils at the Site consist of historic fill materials to a depth ranging from 5 to 7 feet below the surface followed by native silty-sand and peat layers. According to the USGS topographic map for the area (Central Park Quadrangle), the elevation of the property is approximately 5 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the west. Groundwater occurs beneath the Site at a depth of approximately 7 feet below grade under water table conditions. Based on regional flow maps and the proximity to surface water, groundwater flow is expected to be to the southwest toward the Harlem River but is likely influenced by tidal fluctuations.

FORMER BRONX FREIGHT TERMINAL (Continued) **S117936673**

Env Problem:	Nature and Extent of Contamination: Soil - SVOCs (typically PAHs), pesticides (4,4 DDD, 4,4 DDE, 4,4 DDT) and metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, nickel and inc) above Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Use Soil Cleanup Objectives (RRSCOs) in shallow soils. Results were typical of fill material found in the area. One petroleum related VOC was noted in deeper soil at boring 15B6 on the northwest side of the Site that exceed its UUSCO. Specifically, ethylben ene at 31 parts per million, or ppm (USCOs of 1 ppm). Several SVOCs, including ben (a)anthracene at a maximum of 9.6 ppm (UUSCO of 1 ppm), ben o(a)pyrene at a maximum of 9 ppm (UUSCO of 1 ppm), ben o(b)fluoranthene at a maximum of 7 ppm (UUSCO of 1 ppm), ben o(k)fluoranthene at a maximum of 6.5 ppm (UUSCO of 0.8 ppm), chrysene at a maximum of 10 ppm (UUSCO of 1 ppm), Diben (a,h)anthracene at a maximum of 0.91ppm (UUSCO of 0.33 ppm) and indeno(1,2,3-cd)pyrene at a maximum of 4.6 ppm (UUSCO of 0.5 ppm) were noted in deeper soil samples. Groundwater -The following petroleum-related VOCs exceeded groundwater standards: ben ene at 9.2 parts per billion (ppb), ethylben ene at 280 ppb, isopropylben ene at 95 ppb, naphthalene at 1,300 ppb, n-Propylben ene at 20 ppb and toluene at 12 ppb at MW-6 on the northwest side of the Site in the vicinity of the petroleum contaminated soil. Soil Vapor - Tetrachloroethene (PCE) was detected at an elevated concentration of 161 micrograms per cubic meter (ug/m3) at SV-1 on the north side of the Site.
Health Problem:	Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo:	Tank is UNDER 1080 gal - non PBS. They did not have an exact si e. There is no visible spill at this site, only a TTF. 8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/13/2015: Rashad Per NYC building records 308 Willis Ave has no alternate address. No PBS records or additional spill reports found. No documents found in D2. According to building records the owner is: Willis Bricks LLC C/O Express Fine Jewlery 55 West 47th Street - Suite 340 New York, NY 10036 8/18/2015: Rashad Email sent to Abraham from NYC tank testing: After reviewing the spill report for 308 Willis Ave, Bronx NY, spill 1006590 dated 9/17/2010, I would like to request the following information: Tank test failure report. Test results for supply/return and vent/fill lines. Property owners information. 8/24/2015: Rashad Received email from Goldie with tank test failure report. Report indicates ullage (dry) portion of leak. Letter attached also states This letter is to certify that on September 3, 2010 New York City Tank Testing isolated, tested and reconnected the vent line at the above mentioned premises. The results are as follows: The vent line had a gross failure. Recommendations: At the current time NYC Tank Testing recommends uncovering the top of tank and isolating all necessary lines. Documents uploaded to D2. 12/7/2016: Rashad Spill will be administratively closed as per tank test failure guidance document for TTF greater then 5 years old. Leak was a dry leak and according to tank test documents, failure was in vent line, not tank. Spill administratively closed.
Remarks:	tank test failure, no other info known

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 1/26/04. 21:30 J.Krimgold @ site. Access to the basement is through a dry cleaning on the first floor. Shop is closed - no access. FDNY Ha Mat pumped out 2 x 55 gal drums from basement. 1/27/04. J. Krimgold @ site. 275 gal AST in basement was overfilled. Due to an excessive pressure. A cap on a service opening blow out and about 150 gal of oil was released onto the basement floor. Alba Fuel Corp. (contact Esad Cocoh) made a delivery of 270 gal (according to the delivery slip) of 2 oil to the tank with 150 gal of oil in it.

COMM/RES BUILDING (Continued) **S106124045**

However, refusing to take responsibility. Strong petrol. odor in the dry cleaning shop and second floor apartment. Frank Jamenes - house owner @ cell. (347) 806-1999. 1/29/04. AL Eastmond was hired by Alba Fuel to clean up. 2/11/04. J.Krimgold visit the site. Spill has been cleaned up. NFA.

Remarks: All but 5 gallons in basement (concrete floor). Five gallons pumped out through sump pump. Fire company on scene.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TRANSFERRED FROM Y.KRIMGOLD TO KOLLEENY TO I.ISLAM 5/3/05- The site s soil GW are currently under remediation by LiRo Engineers by injecting bio-nutrient(through 24 wells) and Iso-Gen Oxygen (through 8 wells). Reviewed the quarterly site monitoring report (Nov./04-Jan./05). Initially, vacuum track was also used to remove Free Product from wells which was followed by bio-nutrient injection. Relative to baseline sampling data, significant improvement in GW quality has been achieved so far in almost all site wells. Installation of ORC socks has been recommended via email for the wells showing persistently high level of Total VOC concentration. Soil investigation is done annually and groundwater quarterly. All wells are found free from Free Product.Installed the quarterly report in the eDoc Folder. - II 7/29/05- Reviewed the Feb.- May/05 monitoring report. Overall GW contamination improved compared to the

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

baseline sampling conducted in 2003. Recent data exhibit low hetero-trophic bacteria count in some of the wells even though DO and other biotreatment parameters are reasonable. The next soil sampling is planned for October 2005. Oxygen delivery system running and site monitoring will continue. Installed the report in the eDoc folder.- II 11/29/05- Reviewed the Jun-Aug/05 site monitoring report dt. Sept. 30/05. The final injection of bio-nutrient occurred in April 21/04. In addition,oxygen supplement through delivery wells started with eight delivery wells have now been reduced to four wells down the road due to failure of the Iso-Gen well controllers. ORC socks were also installed in wells LW-9 and LW-19 in Jan/05 and wells LW-5 and LW-15 in May/05. No free product has been observed recently. August/05 GW sampling results exhibit mixed results as TVOCs concentrations increased at some wells(particularly at LW-10) while decreased at others. But overall significant improvement is observed compared to the baseline samplings conducted in 2003. The consultant LiRo is supposed to resample well LW-10 to evaluate the sudden discrepancy. The proposed upcoming soil sampling plan by LiRo is hereby approved with two additional borings to be advanced adjacent to LW-14 and LW-19. Filed the report in the EDoc folder.- II 03/08/06: this spill transferred from I. Islam to Q. Abidi. 4/19/06: Reviewed Quarterly Monitoring report Sept. 2005 - Dec. 2005. Six groundwater samples were taken on December 28, 2005 during monitoring. Analytical data show four groundwater samples are still contaminated. Free product was not observed during monitoring. Soil samples were taken on December 20, 2005. Two new soil borings were made, LW-9 and LW-11 data shows TVOCs are very high. Only two of five planned soil borings were completed.. LiRo recommends postponing completion of the other soil borings for about six months.They also recommend continuing oxygen delivery system and monitoring at the site. Sent an e-mail to DDC and consultants on 4/19/06 approving these recommendations, and suggesting that the new CM (URS) review all data and evaluate the site to recommend a future course of action. - QA 08/18/06: Transferred to S.Kras ewski. According to the URS Bi-monthly update report on june 9, 2006 URS collected GW samples. VOC analysis revealed no VOCs above GW quality criteria except in LW-09. - SK 10/27/06 Spill case transferred from S. Kras ewski to J. Maisonave. - JAM 12/8/06 Reviewed the Revised Remedial Strategy Report submitted by URS dated November 17, 2006. Site Summary: On Jan. 27, 2003 the DEC approved a remedial strategy by Liro to inject a bio-nutrient slurry and to install the Iso-Gen Oxygen Delivery Sytem (uses a low capacity pump and electrolytic cell to dissociate water into hydrogen and oxygen) on eight wells. In Jan 2005 the number of oxygen delivery wells was reduced to four due to failure of the well controllers. Consequently, Liro installed ORC socs in the other four wells between Jan and May 2005. The bio-nutrient slurry was injected into twenty-four injection wells between Nov 2003 and Apr 2004. URS was retained as the site manager in Mar 2006 and provided this revised remedial strategy because the manufacturer of the Iso-Gen Oxygen Delivery System had gone out of business and continued operation and maintenance of the system requires monthly replacement of the electrolytic cells. URS proposes implementing chemical oxidation followed by enhanced bioremediation if warranted in lieu of the currently approved remedial strategy. RegenOx will be injected in 10 wells at a rate of 200lbs per injection well with injections occurring once a month for 4 months. Additionaly, URS proposes advancing 4 soil borings near the

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

previously detected vadose one soil contamination at monitoring well LW-06 to determine if remedial measures are required. Report uploaded to eDocs. -JAM 1/10/07 Meeting with DDC and URS. Verbally approved Revised Remedial Strategy. - JAM 1/19/07 Reviewed UST Closure Report submitted by James McCullah Co., Inc. dated Nov. 2006. DDC contracted to remove two 2,000-gallon diesel oil tanks and one 1,000-gallon Gasoling tank. The tanks were removed on July 11, 2006. All three tanks were steel, five-foot diameter, double-walled tanks buried approx. four feet below grade. Tanks were found to be in good condition. All piping was also removed. Five end-point soil samples were collected from between 7 -12 below grade and analy ed for VOCs and SVOCs. Groundwater was not encountered before reaching bedrock at 11 feet below grade. No signs of contamination were observed, through olfactory and PID screening. Some VOCs were detected however, no detections were above TAGM. SVOCs in sample 1 were the only detections above TAGM. Report uploaded to eDocs. - JAM 8/17/07 Reviewed Soil Sampling Results Report dated July 31, 2007 submitted by URS. On June 12, 2007, URS advanced four soil borings near monitoring well LW-06. Two soil samples were collected from each and the analytical results showed no VOCs detected above TAGM. On May 1, and 2, 2007, URS collected groundwater samples from 16 monitoring wells. Five wells were inaccessible or dry and could not be sampled. VOCs were non-detectible in eight wells. VOC exceedences were detected in wells with concentrations ranging from 16ppb in well LW-06 to 2,018ppb in well LW-10. Elevated concentrations persist in wells LW-10 and LW-20. Conclusions: Soil analytical show that no VOCs exceed TAGM. However, elevated PID readings were detected during the screening of soil samples, which contradict sample results. URS attributes this to the hot humid weather, which may have affected the PID readings. Petroleum odors were not observed from the soil. Minor SVOCs exceeded TAGM, attributed to urban fill. URS proposes chemical oxidation to address dissolved phase contamination observed. URS will prepare a bid package and perform this work. I expect a remedial summary report when work is completed. Report uploaded to eDocs. - JAM 11/18/08 Reviewed System Performance Report for Monitoring Period July through September 2008 submitted by URS dated October 24, 2008. Franklin was contracted by URS to install the injections wells and on August 1, August 29 and October 10, 2008 completed three rounds of RegenOx injections. Thirty-three injection wells were installed and in each of the three injection rounds, 140lbs of RegenOx and 100 gallons of water was applied in each well. URS collected groundwater samples monthly between July and September, 2008. URS states that groundwater samples show improvement after the RegenOx injection and recommends continuing groundwater monitoring monthly while the injections are still occurring. URS anticipates Franklin will perform the next injections in December 2008. The report is uploaded to eDocs. - JAM 10/19/09 Reviewed the System Performance Report for Monitoring Period October through December 2008 submitted by URS dated February 18, 2009. On December 18, 2008, URS collected groundwater samples from eight wells in the monitoring program. Analytical results showed total VOC concentrations ranging from 43ppb in LW-19 to 4,502ppb in LW-14. Compared with results from the previous sampling event in September 2008, three wells showed decreased total VOCs and four wells showed increased total VOCs. URS states, After three rounds of RegenOx injections, the groundwater analytical data show fluctuating contaminant concentrations... Franklin is expected to perform a fourth round of injections in March

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

2009. URS will continue to monitor groudnwater quality. This report is uploaded to eDocs. - JAM 11/18/09 Reviewed System Performance Report through 3rd Quarter 2009 submitted by URS dated October 6, 2009. The report summari es four rounds of RegenOx injections and 2 rounds of groundwater sampling, which occurred after the injections. The four rounds of injections occurred on August 1, August 28, October 14 of 2008 and February 27, 2009. On June 10, and September 17, 2009, URS collected groundwater samples from 12 of the 13 monitoring wells. Well LW-12 was inadvertently missed in June and well LW-20 was dry in September. NO VOCs were detected above GWQS in wells LW-02, LW-04, LW-07, LW-12, and MW-01. The remaining wells had total VOC concentrations ranging from 166ppb in LW-19 to 7,291ppb in LW-14. URS states that the rebound effect is attributed to the desorption of contaminants from soils in the northeast portion of the site. This corresponds to the conclusion presented in the ISRP by LiRO submitted in 2002, which noted contamination in the northeast portion of the site that could be attributed to the heating oil system or an unknown source. URS will perform soil sampling in the northeast portion of the site in November of 2009. No RegenOx injections are scheduled. URS is also considering using a stronger oxidant like sodium persulfate. The report is uploaded to eDocs. - JAM 6/9/10 Reviewed the System Performance Report through 4th Quarter 2009 submitted by URS dated February 5, 2010. URS conducted groundwater sampling on December 16 and 17, 2009 and results showed VOC concentrations ranging from 100 ppb in LW-10 to 2,938 ppb in LW-14. URS has performed 4 rounds of ChemOx injections and the results of groundwater monitoring after injections initially showed improvement. According to URS, it appears rebound is occuring in the northeast portion and the source may be from contamintion adsorbed on the soil in the smear- one dissolving into the groundwater. In November 2009, URS performed a limited soil investigation in the northeast portion of the site and found contamination in 5 soil samples collected just above and below the water table in that area (groundwater is at 10ft below grade). URS proposes additional RegenOx injections into existing injection wells to target two areas; the area near wells LW-3 and LW-6, and the other area near borings SB-08, SB-09, SB-10, and SB-11. They also propose installing ORC socks in wells BN-03 and BN-08, located along the sidewalk along 131st Street. Report uploaded to eDocs. I called and left a message with Kevin Shanahan today to discuss the status of the out of service fuel oil tank in the northeast portion of the site. - JAM 6/10/10 Spoke to Kevin Shanahan at URS. I searched the PBS Registration (PBS 2-455849) and found that a 5,000-gallon 2 Fuel Oil UST is listed as In Service. I asked Kevin to have the tank inspected and if it is in fact out of service, then the tank should be closed and the PBS registration updated. Perhaps the tank should be removed as it may be a source for contamination found in soil and groundwater. If so then contaminated soil should be excavated and the source removed prior to implementing another round of ChemOx injections. He agreed and will get back to me after URS inspects the tank. The latest groundwater sampling report will be issued and when Kevin gets back to me after the tank inspection, I will write a response with DEC s requirements to DDC. - JAM 10/25/10 In the quarterly status update meeting with the DDC and URS on 10/19/10, URS said that the results from the site reconnaissance was submitted in the report dated September 30th. URS will propose additional ChemOx injections to treat residual dissolved phase contamination under a separate letter. - JAM 11/05/2010: This

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

spill case was transferred to A. Doronova. - AD 02/17/2011: Had a quarterly meeting with DDC and URS. Discussed the proposed 5th round of RegenOx injections. Since the previous rounds did not indicate significant improvements in GW quality, asked URS to do USTs inventari ation and find out if it is feasible to remove closed-in-place USTs which are acting as a continuous sources of contamination according to a GW contamination plume map. Put RegenOx injection proposal on hold, till the requested info will be submitted to DEC. AD 02/18/2011: Received a Remediation Performance Report, submitted by URS Corporation (URS) and dated February 15, 2011. The report presents groundwater sampling results and states that some of the site s monitoring wells showed elevated levels of VOCs and that one well (LW-20) exhibited free product during the last monitoring round. Based on the data, URS recommends an additional round of RegenOx injections in two areas of the site. Will wait for USTs info before making decision. AD 03/07/2011: Received a call from K. Shanahan of URS regarding feasibility of removal of USTs in question from the site. He said that there are some issues with their removal. Told him that then these areas should be investigated further and long-term remediation will be required. Also he insisted on implementation of RegenOx injections since it was already approved by DDC and they have contractor ready to perform it. Told him that previous rounds of injection did not show significant improvement, and that they should consider different compound for injections. I said that they can submit their proposal for RegenOx application for my review. Later received an e-mail from K. Shanahan saying: Ainura, Thank you for taking some time this morning to discuss the latest developments for this site. Here is a basic summary of our discussions: 1. URS informed DEC that removal of the closed-in-place 4,000-gallon heating oil UST is not considered feasible due to structural concerns of the adjacent elevator. DEC indicated that if this tank cannot be removed, it may result in a long-term remediation project since any source areas associated with this tank would remain. 2. URS informed DEC that removal of the six closed-in-place 550-gallon USTs is complicated by the presence of the new diesel and gasoline supply piping and electrical conduit running directly over the closed tanks. DEC requested that URS consider protecting the lines and removing the tanks. If the lines are damaged during construction, they could be repaired. URS preliminarily agreed and will arrange for the UST removal in this area. 3. URS requested that DEC approve the limited Regenox Injection Plan URS prepared in December 2010 (see attached). The design is complete and the contractor has been procured for this work. DEC reiterated that they did not feel the four Regenox applications have resulted in significant VOC reductions but they would consider the request to complete this addition work. DEC also suggested that URS look at alternative bioremediation technologies for this site. In summary, URS will have the six closed-in-place 550-gallon USTs removed and DEC will review the attached plan for limited Regenox Injections. If possible DEC will provide URS an approval to move forward. Thanks, Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203 716-923-1215 Reviewed the attached scope of work where URS proposes implement additional round of RegenOx injections in two areas of the site, using ten existing injection wells. Free product will be removed from the affected well (LW-20) before beginning the injections. A summary report with conclusions and recommendations will be provided to DEC. AD 03/10/2011: Discussed

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

this proposal with J. Kolleeny of DEC. AD 03/11/2011: Issued and sent an approval letter with the following comment: If the RegenOx application is not effective in reducing VOC levels, an alternative remediation approach should be proposed for the site. DL the letter to eDocs. AD 07/31/2011: Received a 1st quarter monitoring report for 2011. Dl to eDocs. Will review. AD 08/25/2011: received an e-mail from Kevin saying: Ainura, Closed in-place USTs are being removed today, tomorrow and possibly on Monday depending upon utility complications. Kevin J. Shanahan Project Manager URS Corporation 77 Goodell Street Buffalo, New York 14203 716-923-1215 AD 08/19/2011: Reviewed the report. It states that the most recent remedial action conducted at the Manhattan East 10 facility involved using RegenOxTM injections to treat dissolved phase groundwater contamination. Four rounds of injections were completed between August 1, 2008 and February 27, 2009. After the four rounds of RegenOxTM injections, the groundwater analytical data continue to show fluctuating contaminant concentrations. The groundwater sampling for the first quarter of 2011 was completed on March 7 and 8, 2011. The samples were analy ed for petroleum related volatile organic compounds (VOCs) using USEPA Method SW 8260. Samples were collected from wells LW-02, LW-03, LW-04, LW-06, LW-07, LW-09 (IW-22), LW-10 (IW-21), LW-12, LW-14, LW-15, LW-19 and MW-01. LW-20 was not sampled because product was detected in the well. The measured quantity of product in the well was 0.03 feet. The analytical results showed no VOCs exceeded the NYSDEC GQS in wells LW-02, LW-04, LW-06, LW-07, LW-12, and MW-01. The remaining six wells exhibited several VOCs above the NYSDEC Groundwater Quality Criteria, with total VOC concentrations ranging from 96 ppb in LW-09 to 3,510 ppb in LW-14. The most recent groundwater results support URS recommendations for additional RegenOxTM injections and the installation of ORC socks as outlined in previous quarterly monitoring reports. URS anticipates that removal of the six USTs will be completed in September 2011. Upon approval from NYSDEC to inject additional RegenOx in accordance with the December 2010 submittal, URS will proceed with additional RegenOxTM injections to address residual groundwater contamination in accordance with the Scope of Work already provided to NYSDEC. URS will continue groundwater monitoring on a quarterly basis. Since product has been detected in LW-20 for three consecutive quarters, a petroleum absorbent sock will be installed in this well during the next sampling event. - URS recommendations for additional RegenOxTM injections and the installation of ORC socks were approved by DEC back in March of 2011. AD 12/01/2011: Received 2nd quarter 2011 monitoring report. DL to eDocs. Will review. AD 01/17/2012: Reviewed the report. It states that on August 26, 2011, Franklin removed the five 550-gallon USTs, along with the tank encasement and fill material. Since the removal of the 350-gallon UST may have posed a threat to the structural integrity of the building above it, it was not removed. No environmental impacts were noted during the UST removal work. Analytical results for soil samples collected following removal of these tanks will be submitted in the next quarterly report. Following the removal of the five USTs, URS is making plans to implement the next round of RegenOxTM injections. The injection work plan proposes that 60 pounds of oxidant (Part A), 30 pounds of activator (Part B), and 120 gallons of water will be injected into wells IW-02, IW-03, IW-04, IW-07, and IW-10, all located in the area where the tanks were removed. In the more contaminated northeast area of the site, the work plan proposes injecting 120 pounds of oxidant,

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

60 pounds of activator, and 240 gallons of water into injection wells IW-06, IW-29, IW-30, IW-31, IW-32, and IW-33. The groundwater sampling for the second quarter of 2011 was completed on June 13 and 14, 2011. All wells were sampled except for LW-20 since product was found in this well at a thickness of 0.01 feet. The depth to groundwater at the site ranges from approximately 7 to 11 bgs. The predominant flow direction is to the east and northeast. The analytical results showed no VOCs exceeded the NYSDEC Standards in wells LW-02, LW-04, LW-06, LW-12, and MW-01. In well LW-07, MTBE was the only VOC detected, at 17 ppb. The remaining six wells exhibited several VOCs above the NYSDEC Groundwater Quality Criteria, with TVOCs ranging from 31 ppb in LW-09 to 3,884 ppb in LW-14. After four rounds of RegenOxTM injections, the groundwater analytical data showed fluctuating contaminant concentrations. URS concludes that future RegenOxTM treatments would address the higher level contamination that remains in the downgradient area, especially given the fact that the 4,000-gallon closed in-place heating oil tank and any associated contaminated soil cannot be removed via excavation. URS will continue to perform groundwater monitoring on a quarterly basis. The most recent groundwater results support URS recommendations for additional RegenOxTM injections and the installation of ORC socks as outlined in previous quarterly monitoring reports. URS is preparing to conduct the next round of injections in accordance with the December 2010 scope of work. No DEC response or approval is needed. AD 02/08/2012: Received a third quarter 2011 monitoring report. DL to eDocs. Will review. AD 03/13/2012: Reviewed the report. It states that groundwater sampling for the third quarter of 2011 was completed on September 7 and 8, 2011. All wells were sampled except for LW-03 because of an obstruction in the well, and LW-20 since product was found in this well at a thickness of 0.01 feet. The obstruction in well LW-03 has since been removed. The depth to groundwater at the site ranges from approximately 7 to 11 bgs. The predominant flow direction is to the east and northeast. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. Minor quantities of product have been detected in monitoring well LW-20 for the past several groundwater sampling events. During the June 2011 event, a petroleum absorbent sock was installed in this well to collect product. During the September 2011 site visit, the sock was replaced. URS will continue to monitor product and replace the absorbent sock in this well as necessary. The analytical result from this sampling event showed no exceedance of any NYSDEC Standards for VOCs in wells LW-02, LW-04, LW-07, LW-12, and MW-01. There were no VOCs detected in samples collected from wells LW-02, LW-07, and MW-01; in LW-04 and LW-12 only MTBE was detected. In well LW-06, n-propyl ben ene was the only VOC that exceeded the standards at 6 ppb as compared to a criterion of 5 ppb. The remaining five wells exhibited two or more VOCs above the standards, with TVOCs ranging from 14 ppb in LW-09 to 2,332 ppb in LW-14. URS concludes that VOC-impacted groundwater and saturated soils remain in the eastern half of the site. URS recommends installation of five additional groundwater monitoring wells and analysis of soil and groundwater samples in this area to better delineate the extent of soil, groundwater and free product impacts. Based on the groundwater data obtained over the past few years, URS sure that the remediation by chemical oxidation has had a positive effect. Therefore, URS intends to implement additional

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

RegenOx injections once the new wells have been installed and the extent of the VOC impacts has been refined. Summary: The report presents groundwater sampling results and states that significant groundwater impacts remain in the eastern part of the site. Based on the data, URS recommends further delineation of the groundwater contaminant plume via installation of five monitoring wells, with collection of soil and groundwater samples, followed by an additional application of chemical oxidant in this area of the site. A summary report with conclusions and recommendations will be provided to DEC. To issue an approval letter. AD 03/14/2012: Issued and sent the approval letter to A. Samani of DDC with the following comment: If the additional RegenOx application is not effective in reducing VOC levels, an alternative remedial approach should be proposed for the site. DL pdf copy of the letter to eDocs. AD 06/13/2012: Received 4th Quarter 2011 and 1st Quarter 2012 Monitoring Reports. DL pdf copy to eDocs. Will review. AD 07/26/2012: Reviewed the report. It states that the 13 wells are currently included in the quarterly groundwater monitoring program: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09 (IW-22), LW-10 (IW-21), LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01. Groundwater sampling for the fourth quarter of 2011 was completed on December 12, 2011. The groundwater sampling for the first quarter of 2012 was completed on March 5 and 6, 2012. During both sampling events, all wells were sampled except for LW-20, which currently contains a petroleum-absorbent sock and typically contains free product. For the first quarter 2012, the analytical results showed that no VOCs exceeded the Standards in 5 wells: LW-02, LW-04, LW-07, LW-12 and MW-01. In well LW-06, only n-propylben ene was detected above criteria at 8ppb as compared to a criterion of 5 ppb. The remaining 6 wells: (LW-03, LW-09, LW-10, LW-14, LW-15 and LW-19) exhibited several VOCs above the NYSDEC Groundwater Quality Criteria; the most contaminated well was LW-14, with TVOCs of 3,299 ppb. The remaining wells exhibited TVOCs ranging from 17 ppb in LW-09 to 776 ppb in LW-15. URS states that analysis of recent groundwater sampling data indicates that moderate VOC concentrations persist in the northeastern part of the site. According to URS, the existing monitoring well network is not sufficient to delineate this plume. Therefore, URS has elected to install four additional monitoring wells in this area to be included in the quarterly monitoring program. URS has scheduled the new well installation for June 2012. The work plan for wells installation was approved by DEC in March 1012. URS also intends to implement additional RegenOx injections once the new wells have been installed and the extent of the VOC impacts has been refined. In an email dated March 14, 2012, the NYSDEC approved this recommendation. The NYSDEC also suggested that other remedial alternatives be considered for the site if the additional RegenOx application is unsuccessful. URS will continue to monitor groundwater on a quarterly basis, and will implement the delineation and remediation strategies identified above. AD 12/05/2012: Received 2nd and 3rd Quarter of 2012 Monitoring Reports. DL pdf copy to eDocs. Will review. AD 01/28/2013: Reviewed the report. It states that Associated Environmental Service (Associated) installed monitoring wells MW-02 through MW-05 from June 18 through 22, and October 1 and 2, 2012 under URS supervision. A total of four soil samples were collected during installation of the monitoring wells (MW-02 through MW-05). VOCs were detected above NYSDEC Soil Cleanup criteria in the shallower sample depth at MW-2(9-10 - 37,580ppb) and MW-03(7.5-8.5 -104,100ppb) locations. Recent

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

analytical data indicates that both of these samples were collected close to depth of the groundwater table at the site. Groundwater Sampling data: The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The GW samples are analy ed for petroleum related VOCs using United States Environmental Protection Agency (USEPA) Method SW 8260. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. The groundwater sampling for the second quarter of 2012 was completed on June 4 and 5, 2012 except for newly-installed monitoring well MW-03 which was developed and sampled on July 23, 2012. The third quarter sampling event was conducted on August 28, 2012. During both the second and third quarter sampling events, monitoring well LW-20 was not sampled because it contains a petroleum absorbent sock and typically contains free product. Wells MW-02 and MW-04 also were not sampled during the either quarter because installation of these two wells was completed after the sampling events. Well MW-05 was not sampled in the second quarter event because it was found to be dry; this well was sampled in the third quarter. For the third quarter sampling event on August 28, 2012, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 9 monitoring wells: LW-02, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, MW-01, and MW-05. The five monitoring wells with exceedances of the criteria exhibited total VOCs ranging from 65 ppb in LW-19 to 2,161 ppb in LW-14. Results from this most recent sampling event generally were in the same range as the results from the previous event in June. Based on recent trends in groundwater sampling data and soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011, URS states that it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only well LW-03 continues to exhibit minor VOC contamination. The last quarterly report of 2009 presented the results of a soil sampling program that showed significant soil contamination in the saturated one in the northeast corner of the site and recommended additional injection of RegenOx for treatment. In an email dated March 14, 2012, the NYSDEC approved this recommendation. Based on those soil sampling results, as well as data collected during the recent installation of four additional GW monitoring wells in this area, URS prepared a work plan for the injections to be implemented in fourth quarter 2012. URS will continue quarterly GW monitoring at the site. AD 04/09/2013: Received an e-mail from K. Schanahan of URS with attached GW monitoring Report and a Scope of Work for Additional Round of RegenOx Injection saying the following: Ainura, During the last project status meeting we discussed the Manhattan East 10 site operated by the New York City Sanitation Department. Based on our discussions it was decided that URS would send you the Work Order for the next Regenox Injection event for your review and approval. Specifically, I believe you wanted to look at the proposed injection locations and quantities. The Work Order is attached. Please let us know if this is acceptable as soon as possible since our contractor is ready to initiate construction. We have also attached the latest monitoring report which was posted to the website today for

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

reference. Please note the favorable groundwater concentrations for the recent sampling event. Kevin J. Shanahan Senior Project Manager URS Corporation Received a phone call from Kevin Schanahan of URS. He asked to expedite the approval of the work plan. Reviewed the work plan. It states that RegenOx injections were succesful in reducing VOCs levels in site monitoring wells, but says that some of the site s monitoring wells still indicated elevated levels of VOCs and that one well (LW-20) exhibited free product sheen during the last monitoring round. Based on the data, URS recommends performing an additional round of RegenOx injections targeting the northeast area of the site, via thirty injection points. Free product will be removed from the affected well before beginning the injections. A summary report with conclusions and recommendations will be provided to DEC. 04/10/2013: Issued and sent an approval letter to A. Samani. DL pdf copy of the letter to eDocs. AD 04/12/2013: Received hard copy of the Groundwater Monitoring and Remediation Report for 4th Quarter 2012 and 1st Quarter 2013. DL to eDocs. Will review. AD 05/28/2013: Reviewed the report. It states that in September 2012, URS issued a Work Order to conduct RegenOx injections via direct-push injection borings at 14 locations in the northeast corner of the site. Figure 4 shows the actual injected locations both inside the building and in the sidewalk. The injections were conducted from the bottom of the boring progressing upward; the injection interval for each boring extended from bedrock or refusal up to 8 feet below ground surface (bgs) or until the reagents begin to daylight from the boring. The goal was to inject 30 pounds of Part A RegenOx, 30 pounds of Part B RegenOx and 100 gallons of water into each vertical foot of the injected interval. The first three injection borings were conducted on October 22, 2012 as a preliminary event to determine how easily the borings could be installed, how much material was likely to be injected at each location, and how much daylighting or other issues could be expected. The remainder of the injections were completed in the period from January 15 through 21, 2013. The table below summari es the actual injection intervals and quantities for each of the 13 borings that were completed. Overall, the actual quantity of 1,410 pounds of Part A RegenOx injected during this event was within the target range of 1,260 and 2,100 pounds determined during the design. Based on the apparent improvement in groundwater quality as a result of the recent RegenOx event URS intends to implement additional injection events in the second quarter of 2013. Grooundwater sampling: The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2012 was completed on November 26 and 27, 2012; the first quarter 2013 sampling event was completed on February 13 and 14, 2013. Monitoring well LW-20 was not sampled during either event because it contained a heavy sheen of free product. Monitoring well LW-15 was not sampled during the first quarter 2013 because it was blocked by a car. For the most recent sampling event on February 13 and 14, 2013, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-06, LW-07, LW-12, LW-14, MW-01, MW-04 and MW-05. In addition, monitoring wells LW-03, LW-09, and LW-19 each only exceeded the criterion for one or two compounds and had low total VOC concentrations of 33 ppb, 8 ppb, and 24 ppb, respectively. The highest total VOC concentration was in well MW-02 with 739 ppb total

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

VOCs. After the RegenOx injections completed in 2008-2009, the groundwater analytical data showed favorable results in the western half of the site and uncertain results in the eastern half of the site which is located further downgradient. wells in the western area of the site such as LW-03 and LW-06 initially showed an increase in concentration following the first RegenOx injections in 2008 and 2009, but are now consistently low. Based on these results, it appears that the contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOC concentrations prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb and now are consistently below 100 ppb. Conclusions: URS states that based on recent trends in groundwater sampling data, it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only well LW-03 continues to exhibit minor VOC contamination. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011, also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations have been relatively consistent for the past several years. However, following a round of chemical oxidation injections completed in October 2012 and January 2013, the most recent monitoring results indicate significant reductions in total VOC concentrations in several of the most contaminated wells. Future monitoring events will indicate whether the reductions observed are sustained and how many additional injection events may be required to achieve remediation goals. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data, URS recommends the following: - Continue to conduct additional RegenOx injections events in the northeast area of the site, as warranted. As requested by the NYSDEC at the last quarterly meeting, URS will submit the proposed scope of work for the next RegenOx injection to the NYSDEC for review. - Continue the quarterly groundwater monitoring and sampling. AD 11/14/2013: Received hard copy of the Groundwater Monitoring and Remediation Report for 2nd and 3rd Quarters of 2013. DL to eDocs. Will review. AD 12/05/2013: Reviewed the report. It states that in April 2013, URS issued Work Order R-84-02 for one round of RegenOx injections to be conducted at the site. The work order proposed injection borings at a total of 30 locations following the same methodology and target injection quantities as the prior scope of work (30 pounds Part A and B RegenOx and 100 pounds of water per foot). The injections were completed between April 30 and June 4, 2013. Injections were successfully completed at 16 of the proposed locations; injection could not be completed at several locations due to overhead obstructions that limited access with the equipment; the remainder of the proposed injections could not be completed due to refusal encountered during installation. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02,

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second quarter of 2013 was completed on May 6 and 7, 2013; the third quarter 2013 sampling event was completed on July 29 and 30, 2013. All of the wells currently in the groundwater monitoring program were sampled during both events. For the most recent sampling event on July 29 and 30, 2013, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 10 monitoring wells: LW-02, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04 and MW-05. The highest total VOCs were in wells LW-14 with 8,671 ppb and LW-20 with 3,092 ppb. In the remaining wells, the total VOC concentrations ranged from 33 ppb to 873 ppb. Minor quantities of product have been detected in monitoring well LW-20 over the past year. A petroleum absorbent sock was installed in the well in June 2011 and replaced approximately every six months as it became saturated. In an effort to flush the product from the well, URS redeveloped the well in May 2013 by pumping 100 gallons of water from the well. The sock and development water were disposed of off-site. During the two subsequent sampling events, product has not been detected in this well, or any other monitoring wells. The report states that over 25,000 pounds of RegenOx has been injected into the saturated one over the past five years to oxidi e petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data, URS concludes that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only wells LW-03 and LW-10 continue to exhibit minor VOC contamination. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, several locations with elevated VOC concentrations that warrant additional remedial actions. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: No additional investigations at this time. Conduct at least one additional RegenOx injection event in the northeast area of the site. Continue the quarterly groundwater monitoring and sampling. There are no proposals requiring DEC approval at this time. AD 05/20/2014: Received hard copy of the Groundwater Monitoring and Remediation Report for 4th Quarter of 2013 and 1st quarter of 2014. Will review. AD 06/19/2013: Reviewed the report. It states that the groundwater sampling for the fourth quarter of 2013 was completed on October 21-23, 2013. The first quarter 2014 sampling event was completed on January 20 and 21, 2014. Samples were collected from all of the wells currently in the groundwater monitoring program during the fourth quarter 2013 event. During the first quarter 2014, a sample could not be collected from well LW-06 because it was covered by a steel plate. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. GW data: For the most recent sampling event in January 2014, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-07, LW-09, LW-10, LW-12, MW-01, MW-02, MW-04, and MW-05. The highest total VOC concentrations were in wells LW-14 with 4,846

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

ppb, LW-20 with 1,157 ppb, and LW-15 with 771 ppb. In the remaining wells, the total VOC concentrations ranged from 17 ppb to 225 ppb. The analytical results from the previous sampling event in October 2013 were similar to the January 2014 results. Conclusions: According to URS, over 25,000 pounds of RegenOx has been injected into the saturated one over the past five years to oxidi e petroleum?related VOCs in groundwater. They state that based on recent trends in groundwater sampling data it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. In the western half of the site, only a few wells continue to exhibit minor VOC contamination. The soil sampling completed during removal of five 550?gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, several locations with elevated VOC concentrations that warrant additional remedial actions. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: - No additional investigations at this time. - Conduct at least one additional RegenOx injection event in the northeast area of the site. - Continue the quarterly groundwater monitoring and sampling. There are no proposals requiring DEC approval at this time. AD 09/11/2014: Received hard copy of the Groundwater Monitoring and Remediation Report for 2nd and 3rd quarters of 2014. Will review. AD 10/28/2014: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the second and third quarter of 2014 (through July). The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the westcentral and northern portions of the site. The groundwater sampling for the second quarter of 2013 was completed on April 16 and 17, 2014; the third quarter 2014 sampling event was completed on July 15?17, 2014. During both the second and third quarter, samples were collected from all of the wells in the groundwater monitoring program except well LW?06 because it was covered by a steel plate. For the most recent sampling event in July 2014, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04, and MW-05. The highest total VOC concentrations were in wells LW-20 with 1,257 ppb and LW-14 with 1,221 ppb. In the remaining five wells, the total VOC concentrations ranged from 12 ppb to 95 ppb. The analytical results from the previous sampling event in April 2014 were similar to the July 2014 results. Actions: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Actions: - No additional investigations at this time. - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from continued monitoring of the site. There is no proposal which requires DEC approval at this time. AD 03/30/2015: Received a hard copy of the Groundwater Monitoring and Remediation

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

Report for 4th quarters of 2014 and 1st quarter of 2015. Will review. AD 04/06/2015: Reviewed the report. It states that URS performs quarterly groundwater monitoring at this site. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the westcentral and northern portions of the site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2014 was completed on October 21, 2014; samples were collected from all wells in the program except for LW-06 because it was covered by a steel plate and LW-09 because it was blocked by a car. The first quarter 2015 sampling event was completed on January 19 and 20, 2015; samples were collected from all wells in the program except for LW-06 because it was covered by a steel plate. The samples are analy ed for petroleum related VOCs and naphthalene using USEPA Method SW 8260. GW data: For the most recent sampling event in January 2015, the analytical results showed that no VOCs exceeded the NYSDEC GW Quality Standards in monitoring wells LW-02, LW-04, LW-07, LW-09, LW-10, LW-12, LW-19, MW-04, and MW-05. The highest tVOCs were in wells LW-20 with 1,728 ppb, LW-14 with 1,639 ppb, and MW-01 with 686 ppb. In the remaining four wells, the tVOCs ranged from 38 ppb to 202 ppb. The analytical results from the previous sampling event in October 2014 were generally the same as the most recent results with wells LW-14 and LW-20 showing the highest total VOCs. URS states in the report that the result of 686 ppb total VOCs at well MW-01 during this quarter was unexpected since the highest previous result from this well since it was installed in 2004 was only 3 ppb. Future monitoring events will indicate whether the total VOCs remain elevated at this location. Conclusions: A total of 19,000 pounds of RegenOx oxidi er and 19,000 pounds of activator has been injected into the saturated one since 2008 to oxidi e petroleum-related VOCs in groundwater. According to URS, based on recent trends in groundwater sampling dats, it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of 5 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOCs in many of the wells show significant improvement following the recent RegenOx injections. There are however, a few wells with elevated VOCs (LW-14 and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Actions: - No additional investigations at this time. - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program. There are no proposals which require DEC s approval at this time. AD 09/17/2015: Received the following e-mail from URS: Document report.sp9810588.20150917.bronx_west2.2ndq2015_monitoring_rpt.pdf has been uploaded. This document is described as: Groundwater Monitoring

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

and Remediation Summary Report for the Second Quarter 2015 for the Bronx West 2 Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 10/19/2015: Reviewed the report. It states that in June 2015, URS issued Work Order R-96-01 for one round of RegenOx injections to be conducted at the site. The work order proposed injection borings at a total of 40 locations following the same methodology and target injection quantities as the prior scope of work (30 pounds each of RegenOx oxidant and activator and 100 pounds of water per foot). Injection locations that could not be injected in 2013 or 2014 were attempted again during the 2015 round of injections if access was possible. Seven new injection locations (IB-44 through IB-50) were also added to the scope of work for this event in order to address remaining areas of higher contamination. The injections were completed between June 11 and July 2, 2014. GW sampling: URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. Monitoring well locations are shown on Figure 3. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second quarter of 2015 was completed on April 14 and 15, 2015; the groundwater sampling for the third quarter of 2015 was completed on July 13 and 14, 2015; samples were collected from all wells in the program during both events. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW analytical data; For the most recent sampling event in July 2015, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04, and MW-05. The highest total VOC concentrations were in wells LW-14 with 6,092 ppb and LW-15 with 1,175 ppb. In the remaining five wells, the total VOC concentrations ranged from 11 ppb to 322 ppb. The analytical results from the previous sampling event in April 2015 were generally the same as the most recent results, with wells LW-14, LW-15, and LW-20 showing the highest total VOC concentrations. Conclusions: A total of 23,215 pounds of RegenOx oxidi er and 23,215 pounds of activator has been injected into the saturated one since 2008 to oxidi e petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data (see Figure 5), it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Future actions for the site are outlined below. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following:

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

Actions: No additional investigations at this time. Continue the quarterly groundwater monitoring and sampling. Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program. Proposals/Approvals Required: None. AD 02/05/2016: Received the following e-mail: Document report.sp9709777.20160205.manhattan_east_10.4th_q2015. monitoring_and_remediation_report.pdf has been uploaded. This document is described as: Groundwater Monitoring and Remediation Report for the Fourth Quarter 2015 for the Manhattan East 10 site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 03/18/2016: Reviewed the report. It contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the fourth quarter of 2015. GW sampling: URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. Monitoring well locations are shown on Figure 3. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2015 was completed on October 21 and 22, 2015; samples were collected from all wells in the program during this event. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW data: For the most recent sampling event in October 2015, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-19, MW-01, MW-04, and MW-05. The highest total VOC concentrations were in wells LW-14 with 2,772 ppb, LW-20 with 952 ppb, and LW-15 with 724 ppb. In the remaining three wells, the total VOC concentrations ranged from 23 ppb to 213 ppb. As shown above, wells in the western area of the site such as LW-03 and LW-06 initially showed an increase in concentration following the first RegenOx injections in 2008 and 2009, but have remained consistently low since then. These wells are outside the area where the 2012-2015 RegenOx injections have been conducted. Based on these results, it appears that the overall contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOC concentrations prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb. The October 2015 results from this well showed no detected VOCs. Most wells in the northeast area of the site showed an increase in VOC concentrations following the 2008 and 2009 RegenOx injections. Total VOC concentrations at these wells generally remained consistent through 2012 with the exception of well LW-19, where concentrations had reduced to trace concentrations in 2011. As shown on the chart above, the 2012-2015 RegenOx injections appear to have had a positive effect on groundwater quality in the vicinity of wells MW-02 and MW-03, while total VOC concentrations in wells LW-14, LW-15, and LW-20 have been more variable. The fluctuation in contaminant concentration in

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

these wells may be due to the fact that the saturated soil is more contaminated in this area, and that the RegenOx has created some rebound of VOC levels after injection of the oxidant. The rebound phenomenon occurs when an oxidant oxidi es all the contamination in the dissolved phase and then begins to dissolve contamination adsorbed on soil or present as non-aqueous phase liquid (NAPL). The last several quarters show that the elevated concentrations are now decreasing at most wells with the exception of LW-14 which showed a significant increase in the first three quarters of 2015. The total VOC concentration in LW-14 in October 2015 was significantly lower. Additional sampling events will be required to determine the long-term effectiveness of the most recent injections, and whether additional remedial actions are required. Conclusions: A total of 23,215 pounds of RegenOx oxidi er and 23,215 pounds of activator has been injected into the saturated one since 2008 to oxidi e petroleum-related VOCs in groundwater. Based on recent trends in groundwater sampling data, it appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Future actions for the site are outlined below. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Actions: No additional investigations at this time. Continue the quarterly groundwater monitoring and sampling. Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program. There are no proposals requiring DEC approval. AD 04/28/2016: Received the following e-mail from URS: Document report.sp9709777.20160428.manhattan_east_10.1st_q2016. monitoring_and_remediation_report.pdf has been uploaded. This document is described as: Groundwater Monitoring and Remediation Report for the First Quarter 2016 for the Manhattan East 10 Sanitation Garage site. Please log in to http://ddcreports.ursbufweb.com to view the document. It can be found under the eDocs page. Thank you. Will review. AD 05/12/2016: Reviewed the report. It contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the first quarter of 2016 (through January). URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The samples are analy ed for petroleum related VOCs and naphthalene using USEPA Method SW 8260. The groundwater sampling for the first quarter of 2016 was completed on January 13 and 14, 2016; samples were collected from all wells in the program except well MW-02 which was blocked by a vehicle. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs.

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west?central and northern portions of the site. GW data: For the most recent sampling event in January 2016, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in monitoring wells LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-12, LW-19, MW-01, MW-04, and MW-05. The highest total VOCs was in well LW-14 with 2,804 ppb. The total VOCs in the remaining wells were 1,036 ppb in LW-15, 669 ppb in LW-20, 192 ppb in MW-03, and 38 ppb in LW-10. Conclusions: A total of 23,215 pounds of RegenOx oxidi er and 23,215 pounds of activator has been injected into the saturated one since 2008 to oxidi e petroleum-related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOCs in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOCs (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: - No additional investigations at this time. - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injection, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report. Proposals/Approvals Required: - None. AD 05/19/2016: Discussed this site on a quarterly meeting with DDC and URS. Additional in-situ chemical injections will be proposed. AD 05/27/2016: Received the following e-mail from Kevin Shanahan of URS: Hi Ainura, The last chemical oxidation injection event at the Manhattan East 10 sanitation garage was completed in June 2015. We would like to complete another chemical oxidation injection event next month. Attached is the proposed injection plan for your reference. The only changes from the previous injection plan were: 1.Deleting locations where overhead obstructions prohibited the contractor from performing the injections 2.Deleting some locations close to the heating oil UST 3.Adding two locations adjacent to well LR-15 This technology has already been approved but we wanted to make sure you were OK with one additional injection event. Please let us know when you can. Thanks, Kevin J. Shanahan Project Manager, Environmental Business Unit, Metro New York D +1-716-923-1215 M +1-716-480-7352 kevin.shanahan@aecom.com Reviewed the work plan. Will send an approval letter. AD 05/31/2016: Issued and sent an approval letter to J. Aliberti. AD 07/13/2016: Received the following e-mail from K. Shanahan: Hello, We are in the process of creating a new web-site for storage of reports issued to NYSDEC. The old web-site is no longer functional. The new site should be up and running within the next month. In the interim, we intend to issue reports by e-mail so we do not have any delays. Attached please find the report for the Manhattan East 10 site for the second quarter of 2016. Thanks, Kevin J. Shanahan Project Manager, Environmental Business Unit, Metro New York D +1-716-923-1215 M +1-716-480-7352

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

kevin.shanahan@aecom.com AECOM 257 W. Genesee Street Suite 400 Buffalo, New York 14202-2657, USA T +1-716-856-5636 aecom.com Will review. AD 08/15/2016: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the second quarter of 2016 (through April). URS performs quarterly groundwater monitoring to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the second quarter of 2016 was completed on April 11 and 12, 2016; samples were collected from all wells in the program. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. For the most recent sampling event in April 2016, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 13 of the 17 monitoring wells that were sampled. The highest total VOC concentration was in well LW-15 with 1,253 ppb. The total VOC concentrations in the remaining wells were 153 ppb in LW-14, 17 ppb in LW-20, and 113 ppb in MW-03. Based on these results, it appears that the overall contaminant concentrations in this area have been reduced to trace amounts and it is likely that no further remedial actions will be required in this area. Chemical oxidation was particularly successful at monitoring well LW-10 where the total VOCs prior to RegenOx injections ranged between 1,000 ppb and 6,000 ppb. The April 2016 results showed that no VOCs were detected in this well. The total VOCs at wells LW-14 and LW-20 have dropped significantly over the last several quarters. However, the total VOCs in LW-15 has been increasing slightly over the last several quarters. Additional sampling events will be required to determine whether the recent reductions will be sustained and whether additional remedial actions are required. Conclusions: A total of 23,215 pounds of RegenOx oxidi er and 23,215 pounds of activator have been injected into the saturated one since 2008 to oxidi e petroleum-related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. According to URS, in the eastern half of the site, total VOCs in many of the wells show significant improvement following the recent implementation of RegenOx injections. There are however, a few wells with elevated VOCs (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Future actions for the site are outlined below. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Continue the quarterly groundwater monitoring and sampling. Conduct one additional RegenOx injection event in the northeast area of the site as approved by NYSDEC in a letter dated May 31, 2016. Proposals/Approvals Required: None. AD 11/11/2016: Received the following e-mail from URS: The document Manhattan East 10 - 3Q 2016 Report has been posted to the NYCDDC SharePoint site. report.sp9709777.2016-11-11.Manhattan_East_10.3rd_Q2016.
Monitoring_and_Remediation_Report.pdf Will review. AD 12/15/2016:
Reviewed the report. This report contains the groundwater monitoring
data and remediation activities for the Manhattan East 10 facility
for the third quarter of 2016 (through July). On May 31, 2016, NYSDEC
issued a letter approving of the additional RegenOx injection event.
CGE completed the injection work between June 20 and July 8, 2016.
RegenOx was successfully injected at 23 locations including three
injection locations (IB?33B, IB?33C, and IB?40) that were added
during this injection event. Eleven of the originally proposed
locations could not be injected due to refusal, limited access, or
utility interference. GW sampling: URS performs quarterly groundwater
sampling to document the progress of the remedial activities at this
site. The wells currently included in the quarterly groundwater
monitoring program are: LW?02, LW?03, LW?04, LW?06, LW?07, LW?09,
LW?10, LW?12, LW?14, LW?15, LW?19, LW?20, and MW?01 through MW?05.
The groundwater sampling for the third quarter of 2016 was completed
on July 11 and 12, 2016; samples were collected from all wells in the
program except well LW?15 which was blocked by a vehicle. This well
was sampled separately on August 24, 2016. The depth to groundwater
at the site ranges from approximately 8 to 11 feet bgs. The
predominant flow direction is to the east and northeast, although
there is considerable variability across the site. The depth to
bedrock at this site ranges from 9 feet in the southern part of the
site to more than 20 feet in the west-central and northern portions
of the site. For the most recent sampling event in July 2016, the
analytical results showed that no VOCs exceeded the NYSDEC
Groundwater Quality Standards in 10 of the 17 monitoring wells that
were sampled. The highest total VOCs were in wells LW-14 with 895 ppb
and LW-20 with 469 ppb. The total VOCs in the remaining wells ranged
from 25 ppb to 101 ppb. Conclusions: In the eastern half of the site,
total VOC concentrations in many of the wells show significant
improvement following the recent implementation of RegenOx
injections. There are however, a few wells with elevated VOC
concentrations (LW?14, LW?15, and LW?20) that may warrant additional
remedial actions pending the results of future monitoring. Based on
the current status of the site, the remedial actions, and the most
recent groundwater monitoring data as summari ed above, URS
recommends the following: - Continue the quarterly groundwater
monitoring and sampling. - Conduct additional RegenOx injections,
bioremediation amendment injection, or other remedial action in the
northeast area of the site as appropriate based on the results from
the ongoing groundwater monitoring program and heating oil tank
closure report, when available. Proposals/Approvals Required: - None.
AD 01/26/2017: Received the following e-mail: The document Manhattan

report.sp9709777.2017-01-26.Manhattan_East_10.4th_Q2016.
Monitoring_and_Remediation_Report.pdf Will review. AD 03/03/2017:
Reviewed the 4th QMR for 2016. It states that URS performs quarterly
groundwater sampling to document the progress of the remedial
activities at this site. The wells currently included in the
quarterly groundwater program are: LW-02, LW-03, LW-04, LW-06, LW-07,

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the fourth quarter of 2016 was completed on October 10 and 11, 2016; samples were collected from all wells in the program. The depth to groundwater at the site ranges from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. The highest total VOC concentrations were in wells LW-14 with 5,974 ppb and LW-20 with 607 ppb. The total VOC concentrations in the remaining wells with exceedances ranged from 18 ppb to 234 ppb. The consultant states that the total VOC concentration at well LW-20 has dropped consistently for the last three years. The total VOCs in LW-15 was also lower in the two most recent samples. Total VOC concentrations at well LW-14 remain highly variable. The fluctuation in contaminant concentration at this well may be due to the fact that the saturated soil is more contaminated in this area, and that the RegenOx has created some rebound of VOC levels after injection of the oxidant. Conclusions A total of 27,795 pounds of RegenOx oxidi er and 27,795 pounds of activator have been injected into the saturated one since 2008 to oxidi e petroleum?related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550-gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following several years of RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that may warrant additional remedial actions pending the results of future monitoring. Actions and Proposals: Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Actions: - Continue the quarterly groundwater monitoring and sampling. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. Proposals/Approvals Required: - URS recommends dropping wells MW-01, MW-04, and LN-06 from the groundwater sampling program. These wells are upgradient of the tank systems and samples collected from these wells have not shown petroleum impacts. The modified well network will be sufficient to monitor dissolved phase impacts to groundwater at the site. AD 03/28/2017: Received an e-mail with a link to 1st QMR 2017. Will upload and review. AD 05/03/2017: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the first quarter of 2017 (through January). URS performs quarterly groundwater sampling to document the progress of the remedial activities at this site. The wells currently included in the quarterly groundwater monitoring program are: LW-02, LW-03, LW-04, LW-06, LW-07, LW-09, LW-10, LW-12, LW-14, LW-15, LW-19, LW-20, and MW-01 through MW-05. The groundwater sampling for the first quarter of 2017 was completed on January 11 and 12, 2017; samples were collected from all wells in the program except well MW-01 which was blocked by a vehicle. The depth to groundwater at the site ranges

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

from approximately 8 to 11 feet bgs. The predominant flow direction is to the east and northeast, although there is considerable variability across the site. The depth to bedrock at this site ranges from 9 feet in the southern part of the site to more than 20 feet in the west-central and northern portions of the site. GW data: For the most recent sampling event in January 2017, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 10 of the 16 monitoring wells that were sampled. The highest total VOC concentrations were in wells LW-14 with 6,288 ppb and LW-15 with 1,267 ppb. The total VOC concentrations in the remaining wells with exceedances ranged from 15 ppb to 709 ppb. Conclusions: A total of 27,795 pounds of RegenOx oxidi er and 27,795 pounds of activator have been injected into the saturated one since 2008 to oxidi e petroleum-related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550?gallon closed in place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following RegenOx injections. There are however, a few wells with elevated VOC concentrations (LW-14, LW-15, and LW-20) that warrant additional remedial action. Recommendations for the site are outlined below. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Actions: - Continue the quarterly groundwater monitoring and sampling. - URS intends to conduct two additional RegenOx injection events in the northeast area of the site in 2017. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. URS recommends dropping wells MW-01, MW-04, and LW-06 from the groundwater sampling program. These wells are upgradient of the tank systems and samples collected from these wells have not shown petroleum impacts. The modified well network should be sufficient to monitor dissolved phase impacts to groundwater at the site. AD 05/19/2017: Sent an e-mail to Mr. Shanahan of URS approving their recommendation regarding three wells. AD 06/21/2017: Received an e-mail with a link to 2nd QMR 2017. Will upload and review. AD 07/26/2017: Reviewed the report. This report contains the groundwater monitoring data and remediation activities for the Manhattan East 10 facility for the second quarter of 2017 (through April). The groundwater sampling for the second quarter of 2017 was completed on April 10 and 11, 2017; samples were collected from all wells in the program, including the three wells recently removed from the program. For the sampling event in April 2017, the analytical results showed that no VOCs exceeded the NYSDEC Groundwater Quality Standards in 12 of the 17 wells that were sampled. The highest total VOCs was in well LW-14 with 3,792 ppb. The total VOCs in the remaining wells with exceedances ranged from 25 ppb to 579 ppb. Conclusions: A total of 32,795 pounds of RegenOx oxidi er and 32,795 pounds of activator have been injected into the saturated one since 2008 to oxidi e petroleum?related VOCs in groundwater. It appears that the groundwater impacts historically detected in the western half of the site have been successfully remediated by chemical oxidation. The soil sampling completed during removal of five 550?gallon closed in

MANHATTAN EAST 10 DOS -DDC (Continued) **S104510350**

place USTs in August 2011 also indicated that there were no soil impacts in this area. In the eastern half of the site, total VOC concentrations in many of the wells show significant improvement following RegenOx injections. There are however, a few wells with elevated VOCs (LW-14, LW-15, and LW-20) that warrant additional remedial action. Additional RegenOx injections were conducted in April/May 2017 and a second round of injections will be conducted in June 2017. Based on the current status of the site, the remedial actions, and the most recent groundwater monitoring data as summari ed above, URS recommends the following: Actions: - Continue the quarterly groundwater monitoring and sampling. - URS intends to conduct an additional RegenOx injection event in the northeast area of the site in June 2017. - Conduct additional RegenOx injections, bioremediation amendment injection, or other remedial action in the northeast area of the site as appropriate based on the results from the ongoing groundwater monitoring program and heating oil tank closure report, when available. Proposals/Approvals Required: - None. AD

Remarks: THEY DID A TEST ON THE TANK SYSTEM AND IT FAILED THE TEST.THE TANK IS NEW SO THEY SUSPECT IT IS THE PIPELINE SYSTEM. THIS IS THE AT DEPT SANITATION GARAGE.

hour secondary. 11/16/2014- -DEC Piper responded to site. Royal env on scene with vac truck. Basement has been vacced, approx 4-500 gallons in truck, unk amount down sewer. Spill was due to a faulty day tank win which castle serviced a couple of days prior. Since the church isnt using all 4 boilers the day tank is obsolete though still in service. Oil spilled to basement floor. There is little debris to be drummed and the room will need several good cleanings with the power washer and detergent. The floor is very solid though royal will look for signs of subsurface loss as they clean. If necessary samples will be taken. DEC and Royal popped man hole outside in street and noticed oil droplets, sausage boom lowered and DEP called. Report to follow when all is complete. 11/17/14- DEC Piper met with Rich Clifford and Royal on site and went over requirements stated above. Castle has taken responsibility for release and will comply with requirements. 2/17/15- DEC Piper received documetation of disposal. based on work to date, inpections, manifests, this spill is closed.

Remarks: A leaking tank was discovered in a church basement. Royal Environmental will be doing the clean up.

FILM STORAGE WAREHOUSE SITE (Continued) **S113917008**

HW Code:	231009
Record Add:	02/06/2003
Record Upd:	06/14/2006
Updated By:	DMMOLOUG
Site Description:	The former Film Storage Warehouse is approximately 0.25 acres and is located at 203-209 West 146th St. in Manhattan. The property is located on the north site of West 146th St. between Adam Clayton Powell Jr. Boulevard and Fredrick Douglass Boulevard. The site is bounded on the north and west by residential buildings, and on the east by commercial buildings with residences on the upper floors. The former warehouse site has been unoccupied for over 50 years and is currently vacant. A site investigation was funded by EPA as a targeted site assessment. A Site Investigation Report was approved in November 2004. The site did not qualify for addition to the Registry of Inactive Ha ardous Waste Disposal sites.
Env Problem:	Several contaminants were detected in soils including semivolatile compounds, (primarily polyaromatic hydrocarbons)and several metals. Most of the soil contamination appears to be related to historic fill material. The building interior also has debris piles containing asbestos and lead (from insulation and lead paint, respectively). Soil vapor beneath the building contains volatile organic compounds above expected background concentrations.

Site Description: Location: The site is located in the Melrose section of Bronx County (Borough of The Bronx, New York City). The site is located on the west side of Melrose Avenue between East 156th and East 157th Streets. Site Features: The site is a vacant lot covered with vegetation, and is surrounded with a chain-link fence. The site is bordered to the north by a community garden, to the east by Melrose Avenue, to the south by a 6-story apartment building, and to the west by a school (PS 29). Current Zoning and Land Use: The site is oned for residential. There are no buildings on the site, and the property is not currently in use. Past Use of the Site: The Department began a Site Characteri ation in this area during the Fall of 2003 based on results obtained from a petroleum spill investigation at the FDNY Engine 71/Ladder 55 property located at 720 Melrose Avenue, which indicated elevated levels of tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (DCE) in groundwater. Based on the field sampling program (which was conducted in several phases, and was completed in the Spring of 2007), and a review of available historical information, the site was identified as a primary source of the area-wide chlorinated solvent contamination. According to Sanborn fire insurance maps and an interview with a long-time resident, this site was occupied by a dry cleaner during the 1950 s. The maps show that the solvent tanks were located in the rear of the building. Since the time of that former facility s operation, the site has been abandoned. Site Geology and Hydrogeology: The site is underlain by a fill unit (5-7 thick), a fine-medium sand unit with some silt (5-25 thick), and bedrock (11-28 below grade). Groundwater is approximately 16-19 below ground surface in the vicinity of the site. In some areas, the groundwater is below the surface of bedrock). Groundwater on-site flows SE towards Melrose Avenue, and then to the south towards the East River (7,000 south of the site) along a former stream bed.

Env Problem: Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 6,200 ppb, well above the Part 703.5 class GA standard of 5 ppb. Trichloroethene (up to 500 ppb), and cis-1,2-dichloroethene (up to 3,500 ppb) have also been found in shallow groundwater above their respective Part 703.5 class GA standards (5 ppb each). The plume of PCE-contaminated groundwater has migrated south at least 2 blocks under a residential area. - Soil PCE has been found in on-site soils up to 2.2 ppm, slightly above the soil cleanup objective for unrestricted use (1.3 ppm). - Soil Vapor Concentrations of PCE in

FORMER MELROSE AVENUE DRY CLEANER (Continued) **S113916992**

	soil vapor have been found up to 5,810 ug/m^3. Significant Threat: The site poses a significant environmental threat based on the property s past use as a dry cleaner, which contaminated groundwater beneath the site with PCE at levels several orders of magnitude above standards and a significant threat to public health due to the concentrations of PCE detected in groundwater and soil, in conjunction with the proximity of occupied structures.
Health Problem:	The site is fenced, however, site access is still possible and persons who enter the site could potentially contact contaminants in the soil by walking on soil, digging or otherwise disturbing the soil. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition because there are no on-site buildings. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development and occupancy. In addition, vapor sampling indicates soil vapor intrusion is a concern for off-site buildings.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Da s to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Ha ardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks ha ardous waste sites, potentially ha ardous waste sites, and remedial activities performed in support of EPA s Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially ha ardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no ha ard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Ha ardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of ha ardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move ha ardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on greenfield sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a 200 million Environmental Restoration or Brownfields Fund as part of the 1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100 of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Bro nfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a ha ardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice (the Department) provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and ha ardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Ha ardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of ha ardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate ha ardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a Watch List to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organi ations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely ha ardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all si es that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Ha ard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to ha ardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Ha ardous Substance Waste Disposal Site Inventory
The list includes any known or suspected ha ardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Ha ardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Ha ardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is fro en in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR E cl si e Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR s researchers. Manufactured gas sites were used in the United States from the 1800 s to 1950 s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially ha ardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR s review was limited to those categories of sources that might, in EDR s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as High Risk Historical Records , or HRHR. EDR s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

276 GRAND CONCOURSE
276 GRAND CONCOURSE
BRONX, NY 10451

TARGET PROPERTY COORDINATES

Latitude (North):	40.813892 - 40 48 50.01
Longitude (West):	73.928881 - 73 55 43.97
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	590338.9
UTM Y (Meters):	4518438.0
Elevation:	28 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

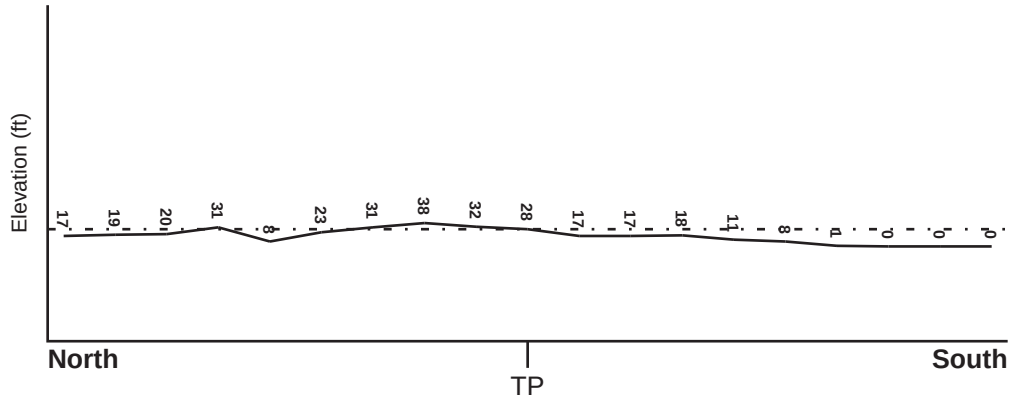
TOPOGRAPHIC INFORMATION

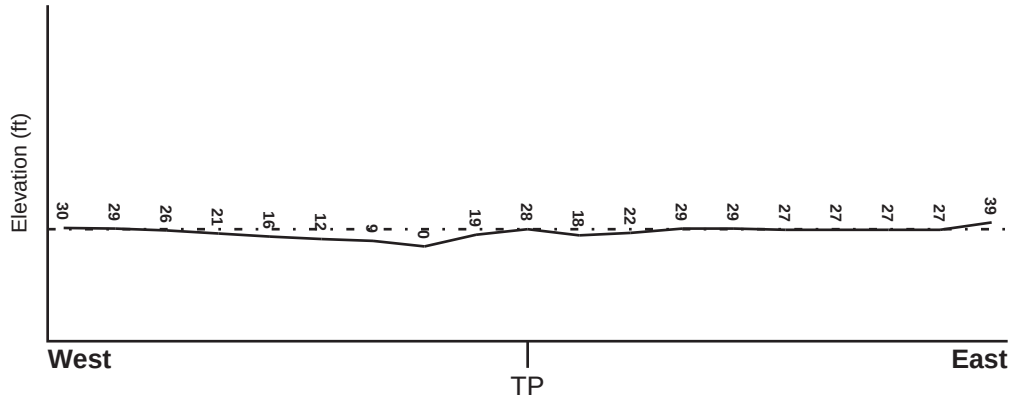
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Propert Ele ation: 28 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5 Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970083F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970079F	FEMA FIRM Flood data
3604970087F	FEMA FIRM Flood data
3604970091F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific H drogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* 1996 Site specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleo oic
System:	Ordovicias
Series:	Lower Ordovician and Cambrian carbonate rocks
Code:	OC *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture s (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generali ing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil La er Information							
	Boundar			Classification			
La er	Upper	Lo er	Soil Te ture Class	AASHTO Group	Unified Soil	Permeabilit Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5 Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5 Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood ones as defined by FEMA. It includes the National Flood Ha ard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generali ing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digiti ing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8072
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR s Topographic map are digiti ed quaternary faultlines, prepared in 1975 by the United State Geological Survey

Laboratory Reports

Phoenix Environmental Laboratories

PHOENIX
Environmental Laboratories, Inc.

Friday, July 06, 2018

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 276 GRAND CONCOURSE BRONX NY
Sample ID#s: CA81746 - CA81752

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

An elevated reporting level was reported for TO15 due to a matrix interference of non target compounds.

If there are any questions regarding this data, please call Phoenix Client Services.

Sample Criteria Exceedances Report

GCA81746 - EBC

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

July 10, 2018

SDG I.D.: GCA80477

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

July 10, 2018

SDG I.D.: GCA80467

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
Due to the presence of a large amount of non-target petroleum material, this sample required a dilution. Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
Poor surrogate recoveries were observed. Sample was re-extracted with similar results.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

Pesticide Comment:
Some of the continuing calibration standard recoveries were below criteria due to matrix interference. Samples were rerun with with similar results. A negative sample bias is suspected.

Semi-Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

July 10, 2018

SDG I.D.: GCA81764

8260 Volatile Organics:
1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

SIM Analysis:
The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

Toxaphene is reported to the lowest possible reporting level. The NY TOGS criteria for this compound can not be achieved.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Semi-Volatile Comment:
One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

Volatile Comment:
Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

Semi-Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

Pesticide Comment:
Sample was evaluated against an external standard.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

Semi-Volatile Comment:
One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

Semi-Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

S - Laboratory solvent, contamination is possible.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

S - Laboratory solvent, contamination is possible.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

Semi-Volatile Comment:
One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

Semi-Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

S - Laboratory solvent, contamination is possible.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Semi-Volatile Comment:
One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

PCB Comment:
Poor surrogate recovery was observed for PCBs. Sample was re-extracted with similar results.

S - Laboratory solvent, contamination is possible.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

Semi-Volatile Comment:
One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

Semi-Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

S - Laboratory solvent, contamination is possible.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Volatile Comment:
Where the LOD justifies lowering the RL/PQL, the RL/PQL of some compounds are evaluated below the lowest calibration standard in order to meet criteria.

S - Laboratory solvent, contamination is possible.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Tuesday, February 12, 2019

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 310 GRAND CONCOURSE, BRONX NY
SDG ID: GCC40860
Sample ID#s: CC40860 - CC40863

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

February 12, 2019

SDG I.D.: GCC40860

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
Poor IS recovery was observed for volatiles due to matrix interference. Sample was analyzed twice with similar results.

Pesticide Comment:
Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the affected compounds.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

Pesticide Comment:
A dilution of the pesticide extract was necessary due to matrix interference caused by the presence of PCBs in the sample, the requested criteria could not be met for all pesticide compounds.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
Poor surrogate recovery was observed for one acid and/or one base surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

Volatile Comment:
Poor IS recovery was observed for volatiles due to matrix interference. Sample was analyzed twice with similar results.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

PHOENIX
Environmental Laboratories, Inc.

Friday, February 08, 2019

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 310 GRAND CONCOURSE, BRONX
SDG ID: GCC40890
Sample ID#s: CC40890 - CC40895

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

February 08, 2019

SDG I.D.: GCC40890

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

February 11, 2019

SDG I.D.: GCC40219

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Pesticide Comment:
A dilution of the pesticide extract was necessary due to matrix interference caused by the presence of PCBs in the sample, the requested criteria could not be met for all pesticide compounds.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
B* = Present in blank, a bias is possible.
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:
To achieve client's objectives, where the lowest calibration standard or LOD justifies lowering the RL/PQL, the RL/PQL of some compounds have been lowered to meet criteria.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If there are any questions regarding this data, please call Phoenix Client Services.
This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

SDG Comments

January 24, 2020

SDG I.D.: GCF14397

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:
Poor surrogate recovery was observed for one acid surrogate. The other surrogates associated with this sample were within QA/QC criteria. No significant bias suspected.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Comments:

TRIP BLANK INCLUDED.

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Kevin sorry to bother you but the COC we have says 1,4 Dioxane by 8270. But Jonathan submitted a Volatiles Trip Blank with these which doesn't really apply do you agree?

Project ID: 310 GRAND CONCOURSE BRONX
SDG ID: GCF26142
Sample ID#s: CF26142 - CF26147

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2004878-01 through -08: The collection date and time were obtained from the container labels.

Perfluorinated Alkyl Acids by Isotope Dilution

L2004878-01 through -04: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

WG1339105-2: The LCS recovery, associated with L2004878-01 through -06, is above the acceptance criteria for 1h,1h,2h,2h-perfluorooctanesulfonic acid (6:2fts) (144%-LCSD only), 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2fts) (161%/146%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported.

WG1339105-4/-5: The MS/MSD recoveries, performed on L2004878-05, are outside the acceptance criteria for 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2fts) (157%/ 143%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	Not Specified	**Lab Number:**	L2004878
Project Number:	YNS1901	**Report Date:**	02/25/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Project Name:	Not Specified	**Lab Number:**	L2004878
Project Number:	YNS1901	**Report Date:**	02/25/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number:	YNS1901	**Report Date:**	02/06/20

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by Isotope Dilution

L2002142-02: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

The WG1332581-3 LCSD recovery, associated with L2002142-01 and -02, is above the acceptance criteria for 1h,1h,2h,2h-perfluorodecanesulfonic acid (8:2fts) (143%); however, the associated samples are non-detect to the RL for this target analyte. The results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	YNS1901	**Lab Number:**	L2002142
Project Number:	YNS1901	**Report Date:**	02/06/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Project Name:	YNS1901	**Lab Number:**	L2002142
Project Number:	YNS1901	**Report Date:**	02/06/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

March 05, 2020: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by Isotope Dilution

L2008955-01 and -02: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

WG1345924-2 and WG1345924-4/-5: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	310 GRAND CONCOURSE	**Lab Number:**	L2008955
Project Number:	YNS1901	**Report Date:**	03/05/20

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration

Project Name:	310 GRAND CONCOURSE	**Lab Number:**	L2008955
Project Number:	YNS1901	**Report Date:**	03/05/20

Data Qualifiers

Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
EPA TO-12 Non-methane organics
EPA 3C Fixed gases
Biological Tissue Matrix: EPA 3050B

DATA USABILITY SUMMARY REPORT (DUSR)
Volatile Organic Compounds
Method TO-15
USEPA Level 4 Review

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40890
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/20/19
KGS Reviewer: Sherri Pullar	Project: 3020

Lab Sample ID	Client Sample ID	Collection Date	Analysis	Matrix
GCC40890	SS4	02/05/19	VOA	Air
GCC40891	SS6	02/05/19	VOA	Air
GCC40892	SS1	02/05/19	VOA	Air
GCC40893	SS5	02/05/19	VOA	Air
GCC40894	SS3	02/05/19	VOA	Air
GCC40895	SS2	02/05/19	VOA	Air

Summary - Data validation was performed on the data for six (6) air samples collected from 310 Grand Concourse, Bronx, NY on 02/05/2019 and submitted for Volatile Organic (VOC) analyses by Method TO-15. Samples were analyzed and reported for VOCs. All sample results in this SDG were subjected to Level 4 data validation, which includes evaluation of preparatory batch, instrument-related QC results and calculations. The USEPA Region-II SOP # HW-31, Revision 6, June 2014, Validating Air Samples Volatile Organic Analysis of Ambient Air in Canister by Method TO-15 was used in evaluating the Volatiles data in this summary report.

Narrative and Completeness Review – The case narrative and data package were checked for completeness.

Qualification: None required.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/05/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All air samples were analyzed within the method holding time for summa canisters (30 days).

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 02/06/2019 (Chem20) exhibited acceptable %RSDs (≤30.0%) for all compounds and average RRF values (≥0.050) for all compounds with the exception of some compounds listed in Table 4 in SOP # HW-31, were ≥0.01.

Qualification: None required.

- Initial calibration curve analyzed on 02/05/2019 (Chem24) exhibited acceptable %RSDs (≤30.0%)

for all compounds and average RRF values (≥0.050) for all compounds with the exception of some compounds listed in Table 4 in SOP # HW-31, were ≥0.01.

Qualification: None required.

Continuing Calibration Verification (CCV): - The %D for the CCVs analyzed and reported with these samples on 02/06/2019 were within acceptance limits with the exception of 1,2,4-trichlorobenzene (34.2%).

Qualification: Results for 1,2,4-trichlorobenzene were qualified estimated (J/UJ) in samples SS1, SS2, SS3, SS4, SS5, and SS6.

- The %D for the CCVs analyzed and reported with these samples on 02/05/2019 were within acceptance limits with the exception of ethanol (35.4%). Results for ethanol were not reported from this batch.

Qualification: None required.

Surrogates –4-Bromofluorobenzene (BFB) surrogate spike recovered within the laboratory control limits.

Qualification: None required.

Internal Standard (IS) Area Performance: - Samples exhibited acceptable area counts for the internal standards.

Qualification: None required.

LCS –The LCS percent recoveries (%R) for the reported analytes were within control limits with the exception of benzyl chloride (136%), 1,2,4-trichlorobenzene (164%), and hexachlorobutadiene (151%). Results for benzyl chloride and 1,2,4-trichlorobenzene were non-detect in the field samples.

Qualification: The result for 1,2,4-trichlorobenzene was qualified as estimated (J) in samples SS2, SS5, and SS6.

Method Blank – The method blank prepared and analyzed with these samples was free of contamination.

Qualification: None required.

Canister Blank – The canister blank prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – No field blanks were included in this SDG.

Qualification: None required.

Field Duplicate — No field duplicates were included in this SDG.

Qualification: None required.

Compound Quantitation – Samples SS1, SS5, SS3, SS6, and SS4 were at 10x dilution for acetone and reporting limits were adjusted accordingly. Analyte non-detections were reported as "U"; these results should be considered the equivalent of "RL (reporting limit) U."

Qualification: None required.

– Sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$\text{Concentration } (\mu g/m^3) = \frac{\text{Result (ppbv) x Molecular weight x DF}}{24.46}$$

SS4 (CC40890)

Toluene
Result (ppbv) = 0.971
Molecular Weight @ 25ºC=92.14
DF = 1

$$\text{Concentration } (\mu g/m^3) = \frac{0.971 \times 92.14 \times 1}{24.46} = 3.66 \mu g/m^3$$

Compound	Laboratory ($\mu g/m^3$)	Validation ($\mu g/m^3$)	%D
Toluene	3.66	3.66	0.0

Data Review Summary — The VOC air results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile air data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40890 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
SEMI-VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40860
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/23/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B1 (0-2)	CC40860	01/30/2019	SVOC	Soil
B2 (0-2)	CC40861	01/30/2019	SVOC	Soil
B3 (0-2)	CC40862	01/30/2019	SVOC	Soil
B4 (0-2)	CC40863	01/30/2019	SVOC	Soil

Summary - Data validation was performed on four (4) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 01/30/2019 and submitted for Semi-Volatile Organic (SVOC) analyses by SW846 Method 8270.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/05/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning - All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 02/06/2019 (CHEM04) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 01/17/2019 (CHEM06) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 01/16/2019 (CHEM19) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

Continuing Calibration Verification (CCV) – The %D for the CCVs analyzed and reported with these samples on 2/06/2019 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception 4-chloro-3-methylphenol (21.4%), benzoic acid (62.8%), hexachlorocyclopentadiene (90.7%), 3-nitroaniline (50.2%), 2,4-dinitrophenol (79.0%), 2-nitroaniline (81.3%), and 4,6-dinitro-2-methylphenol (70.9%), .

Qualification: Non-detect results for 4-chloro-3-methylphenol, benzoic acid, hexachlorocyclopentadiene, 3-nitroaniline, 2,4-dinitrophenol, 2-nitroaniline, and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in samples B4 (0-2), B1 (0-2), and B3 (0-2).

– The %D for the CCVs analyzed and reported with these samples on 2/07/2019 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception 2,4-dinitrophenol (45.3% and 93.8%), 2-nitroaniline (25.6%), hexachlorocyclopentadiene (56.8%), and 4,6-dinitro-2-methylphenol (74.2%).

Qualification: Non-detect results for 2,4-dinitrophenol, 2-nitroaniline, hexachlorocyclopentadiene, and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in sample B2 (0-2).

– The %D for the CCVs analyzed and reported with these samples on 2/07/2019 were within acceptance limits listed in Table 2 in SOP HW-35A.

Qualification: None required.

Surrogates –Surrogate %R values were within the QC acceptance limits with the exception of terphenyl-d14 in sample B2 (0-2) and 2-Fluorophenol in samples B4 (0-2) and B2 (0-2).

Qualification: Non-detected results for n-nitrosodimethylamine and pyridine were qualified as estimated (UJ) in sample B4 (0-2) and B2 (0-2). Results for benzyl butyl phthalate, benz(a)anthracene, chrysene, benzo(b)fluoranthene, indeno(1,2,3-cd)pyrene, and benzo(ghi)perylene were qualified as estimated (J) in sample B2 (0-2). Non-detect results for bis(2-ethylhexyl)phthalate, di-n-octylphthalate, benzo(k)fluoranthene, benzo(a)pyrene, dibenz(a,h)anthracene, and 3,3'-dichlorobenzidine were qualified as estimated (UJ) in sample B2 (0-2).

Internal Standard (IS) Area Performance – Samples exhibited acceptable area count for the six internal standards.

Qualification: None required.

Method Blank (MB) – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – No field blanks were submitted with this SDG.

Qualification: None required.

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%. No qualifications were required.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: SB1 (0-2) (CC40860)
Phenanthrene

Sample weight= 15.29g
Volume purged=1.0ml
DF = 1
%Solids=91

$$\text{Concentration } (\mu g/kg) \text{ (dry)} = \frac{160808 \times 40 \times 1 \times 1000}{2120336 \times 1.005 \times 15.29 \times 0.91} = 216.9\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Phenanthrene	220	220	0.0

Data Review Summary – The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semivolatile data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40860 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40860
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/24/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B1 (0-2)	CC40860	01/30/2019	VOC	Soil
B2 (0-2)	CC40861	01/30/2019	VOC	Soil
B3 (0-2)	CC40862	01/30/2019	VOC	Soil
B4 (0-2)	CC40863	01/30/2019	VOC	Soil

Summary - Data validation was performed on four (4) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 1/30/2019 and submitted for Volatile Organic (VOC) analyses by SW846 Method 8260C. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/05/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were analyzed within the 14-day holding time required for soil samples.

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 02/04/2019 (CHEM18) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) - The %D for the CCVs analyzed and reported with these samples on 02/05-06/2019 were within acceptance limits for all target VOCs.

Qualification: None required.

- The %D for the CCVs analyzed and reported with these samples on 02/06/2019 were within acceptance limits for all target VOCs with the exception of bromomethane (32.0%) and chloroethane (30.8%).

Qualification: Non-detect results for bromomethane and chloroethane in samples B2 (0-2) and B4 (0-2) were qualified as non-detect (UJ).

Surrogates –All surrogate percent recoveries were within the control limits with the exception of dibromofluoromethane in samples B2 (0-2) and B4 (0-2).

Qualification: Non-detect results for 1,1,1-trichloroethane, 1,1-dichloroethane, 1,1-dichloroethene, 2,2-dichloropropane, acrolein, acrylonitrile, bromochloromethane, bromomethane, carbon disulfide, carbon tetrachloride, chloroethane, chloroform, chloromethane, cis-1,2-dichloroethene, dichlorodifluoromethane, methyl t-butyl ether, methylene chloride, trans-1,2-dichloroethene, trichlorofluoromethane, trichlorotrifluoroethane, and vinyl chloride were qualified as estimated (UJ) in samples B2 (0-2) and B4 (0-2). Results for acetone and tetrahydrofuran were qualified as estimated bias low (J-) in samples B2 (0-2) and B4 (0-2).

Internal Standard (IS) Area Performance – Samples exhibited acceptable area counts for all internal standards.

Qualification: None required.

MS/MSD – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Method Blank – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – Trip blanks were not included in this SDG.

Qualification: None required.

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

Qualification: None required.

– Sample compound spectra were compared against the laboratory standard spectra.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as "U"; these results should be considered the equivalent of "PQL U." Analyte detections below the PQL were reported as J qualified results. These J qualifiers were retained unless superseded by a more severe qualifier.

Qualification: None required.

- All sample results were reported within the linear calibration range.
- %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.

B1 (0-2) (CC40860)

Methyl Ethyl Ketone

Sample weight= 4.52g
Volume purged=5.0ml
DF = 1
%Solid = 91%

$$\text{Concentration } (\mu g/kg)\text{ (dry)} = \frac{87323 \times 50 \times 1 \times 5.0}{341376 \times 0.197 \times 4.52 \times 0.91} = 78.9\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Methyl Ethyl Ketone	79	79	0.0

Data Review Summary –VOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile soil data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40860 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
POLYCHLORINATED BIPHENYLIS (PCBs)
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40860
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/23/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B1 (0-2)	CC40860	01/30/2019	PCB	Soil
B2 (0-2)	CC40861	01/30/2019	PCB	Soil
B3 (0-2)	CC40862	01/30/2019	PCB	Soil
B4 (0-2)	CC40863	01/30/2019	PCB	Soil

Summary - Data validation was performed on four (4) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 01/30/2019 and submitted for PCBs by SW-846 Method 8082 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/05/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 01/28/2019 (ECD24) exhibited acceptable %RSD on both columns.

Qualification: None required.

– Initial calibration curve analyzed on 02/04/2019 (ECD6) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 02/06/2019 exhibited acceptable %Ds for all compounds.

Qualification: None required.

– All CCVs analyzed on 02/08/2019 exhibited acceptable %Ds for all compounds.

Qualification: None required.

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CC40832 BL) associated with the soil samples extracted on 02/07/2019 and analyzed on 02/08/2019 was free of contamination.

Qualification: None required.

– Method Blank (CC40860 BL) associated with the soil samples extracted on 02/05/2019 and analyzed on 02/06/2019 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CC40832 were analyzed on 02/08/2019. All %RECs were within the laboratory control limits.

Qualification: None required.

– Laboratory Control Sample associated with ID: CC40860 were analyzed on 02/06/2019. All %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate – A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample B1 (0-2) (CC40860). All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

DATA USABILITY SUMMARY REPORT (DUSR)
TRACE METALS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40860
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/24/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B1 (0-2)	CC40860	01/30/2019	Metals	Soil
B2 (0-2)	CC40861	01/30/2019	Metals	Soil
B3 (0-2)	CC40862	01/30/2019	Metals	Soil
B4 (0-2)	CC40863	01/30/2019	Metals	Soil

Summary - Data validation was performed on four (4) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 1/30/2019 and submitted for the following analyses:

1.1 Trace Metals-ICP-AES by SW-846 Method 6010C.
1.2 Mercury by SW-846 Method 7471A.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/05/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were analyzed within the 6 months holding times for Trace Metals analysis by ICP-AES.

Qualification: None required.

– All soil samples were digested and analyzed within the 28 days holding times for Mercury analysis.

Qualification: None required.

Initial and Continuing Calibration Verification (ICV and CCV) – ICP-AES – All %RECs in the ICV and CCVs were within QC limits.

Qualification: None required.

Mercury – All correlation coefficient for Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs %REC values were within the QC limits.

Qualification: None required.

CRQL Check Standard (CRI) – Aluminum (138.9%), calcium (220.0%), iron (187.2%), copper (110.6%), and antimony (79.3%) were outside the control limits. Remaining CRI analyzed %RECs were within the control limits.

Qualification: Aluminum, calcium, copper, and iron in samples B1 (0-2), B2 (0-2), B3 (0-2), and B4 (0-2) were qualified as estimated bias high (J+). Antimony in sample B3 (0-2) was qualified as estimated bias low (J-). Non-detect results for antimony were qualified as estimated (UJ) in samples B1 (0-2), B2 (0-2), and B4 (0-2).

ICP-AES Interference Check Sample – All %REC values were within the QC limits for ICSA and ICSAB.

Qualification: None required.

Blanks (Method Blank, ICB and CCB) – ICP-AES Method Blank-Soil (CC40212) digested on 02/05/2019 was free of contamination.

Qualification: None required.

– All ICB and CCBs were free of contamination.

Qualification: None required.

– Mercury – All ICB and CCBs were free of contamination.

Qualification: None required.

–Mercury – Method Blank (CC40673 BLK) digested on 02/06/2019 was free of contamination.

Qualification: None required.

Field Blank (FB) and Equipment Blank (EB) – Field Blanks were not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – ICP-AES and Mercury – Laboratory Control Sample %RECs were within the laboratory control limits with the exception of iron (127%) and vanadium (122%).

Qualification: Results for iron and vanadium were qualified estimated bias high (J+) in samples B1 (0-2), B2 (0-2), B3 (0-2), and B4 (0-2).

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Sample Duplicate – ICP-AES and Mercury – ICP-AES and Mercury – No Laboratory Duplicate was performed on a sample from this SDG.

Qualification: None required.

ICP-AES Serial Dilution – ICP serial dilution was not performed on a sample from this SDG.

Qualification: None required.

Verification of Instrumental Parameters – The following Forms were present in the data package:

– Method Detection Limits, Form- X.
– ICP-AES Interelement Correction Factors, Form -XIA and Form-XIB.
– ICP-AES Linear Ranges, Form XII.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual calculation

Sample: B1 (0-2) (CC40860)

Barium

$$\text{Concentration (mg/Kg) (dry wt.)} = \frac{C \times V \times DF \times 1L \times 1000g \times 1mg}{W \times S \times 1000ml \times 1\ kg \times 1000ug}$$

V= 50ml
W= 0. 72g
%Solids =91
DF=1.0

$$\text{Concentration (mg/Kg) (dry wt.)} = \frac{1085.54ug/L \times 50 \times 1.0 \times 1L \times 1000g \times 1mg}{0.72 \times 0.91 \times 1000ml \times 1\ kg \times 1000ug} = 82.84\ mg/kg$$

Compound	Laboratory (mg/kg)	Validation (mg/kg)	%D
Barium	82.8	82.8	0.0

Data Review Summary – The trace metal results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Trace Metals data package requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40860 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
SEMI-VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40219
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/24/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B5 (0-2')	CC40219	02/01/2019	SVOC	Soil
B6 (0-2')	CC40220	02/01/2019	SVOC	Soil

Summary - Data validation was performed on two (2) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 02/01/2019 and submitted for Semi-Volatile Organic (SVOC) analyses by SW846 Method 8270.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/04/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning - All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 01/30/2019 (CHEM29) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

Continuing Calibration Verification (CCV) – The %D for the CCVs analyzed and reported with these samples on 2/04-05/2019 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception hexachloroethane (57.8%), 2-nitrophenol (58.6%), benzoic acid (89.3%), hexachlorocyclopentadiene (92.0%), 2,4-dinitrophenol (100.0%), 4,6-dinitro-2-methylphenol (99.6%), and pentachlorophenol (64.2%).

Qualification: Non-detect results for hexachloroethane, 2-nitrophenol, benzoic acid, hexachlorocyclopentadiene, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and pentachlorophenol were qualified as estimated (UJ) in samples B6 (0-2') and B5 (0-2').

Surrogates –Surrogate %R values were within the QC acceptance limits.

Qualification: None required.

Internal Standard (IS) Area Performance – Samples exhibited acceptable area count for the six internal standards.

Qualification: None required.

Method Blank (MB) – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – No field blanks were submitted with this SDG.

Qualification: None required.

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%. No qualifications were required.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: SB5 (0-2) (CC40219)
Naphthalene

Sample weight= 15.10g
Volume purged=1.0ml
DF = 1
%Solids=83

$$\text{Concentration } (\mu g/kg)\ (dry) = \frac{37387 \times 40 \times 1 \times 1000}{1025001 \times 0.942 \times 15.10 \times 0.83} = 123\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Naphthalene	120	120	0.0

Data Review Summary – The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semivolatile data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40219 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40219
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/25/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B5 (0-2')	CC40219	02/01/2019	VOC	Soil
B6 (0-2')	CC40220	02/01/2019	VOC	Soil

Summary - Data validation was performed on two (2) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 2/01/2019 and submitted for Volatile Organic (VOC) analyses by SW846 Method 8260C.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/04/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were analyzed within the 14-day holding time required for soil samples.

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 01/25/2019 (CHEM03) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

- Initial calibration curve analyzed on 02/04/2019 (CHEM18) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) - The %D for the CCVs analyzed and reported with these samples on 02/04-05/2019 were within acceptance limits for all target VOCs with the exception of carbon tetrachloride (29.9%).

Qualification: Non-detect result for carbon tetrachloride was qualified as estimated (UJ) in sample B5 (0-2').

- The %D for the CCVs analyzed and reported with these samples on 02/05/2019 were within acceptance limits for all target VOCs.

Qualification: None required.

Surrogates –All surrogate percent recoveries were within the control limits.

Qualification: None required.

Internal Standard (IS) Area Performance – Samples exhibited acceptable area counts for all internal standards.

Qualification: None required.

MS/MSD – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample B6 (0-2') (CC40220). All %RECs/RPDs were within the laboratory control limits with the exception of acetone (62% and 68% %R), 2,2-dichloropropane (141% and 137% %R), carbon tetrachloride (149% and 146% %R), 1,1,1-trichloroethane (136% and 132% %R), and 1,2-dichloroethane (137% and 136% %R). Results for 2,2-dichloropropane, carbon tetrachloride, 1,1,1-trichloroethane, and 1,2-dichloroethane were non-detect in the parent sample.

Qualification: Non-detect result for acetone in sample B6 (0-2') was qualified as estimated (UJ).

Method Blank – The method blanks prepared and analyzed with these samples contained acetone (5.1 µg/Kg).

Qualification: Result for acetone in sample B6 (0-2') was qualified as non-detect (U and reported to the RL).

Field Blanks – Trip blanks were not included in this SDG.

Qualification: None required.

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

Qualification: None required.

– Sample compound spectra were compared against the laboratory standard spectra.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as "U"; these results should be considered the equivalent of "PQL U." Analyte detections below the PQL were reported as J qualified results. These J qualifiers were retained unless superseded by a more severe qualifier.

Qualification: None required.

- All sample results were reported within the linear calibration range.
- %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.

B5 (0-2') (CC40219)

Acetone

Sample weight= 6.56g
Volume purged=5.0ml
DF = 1
%Solid = 83%

$$\text{Concentration } (\mu g/kg) \text{ (dry)} = \frac{3981 \times 50 \times 1 \times 5.0}{159815 \times 0.120 \times 6.56 \times 0.83} = 9.5\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Acetone	9.5	9.5	0.0

Data Review Summary –VOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile soil data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40219 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
POLYCHLORINATED BIPHENYLIS (PCBs)
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40219
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/24/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B5 (0-2')	CC40219	02/01/2019	PCB	Soil
B6 (0-2')	CC40220	02/01/2019	PCB	Soil

Summary - Data validation was performed on two (2) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 02/01/2019 and submitted for PCBs by SW-846 Method 8082 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/04/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 01/29/2019 (ECD24) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 02/05/2019 exhibited acceptable %Ds for all compounds on the reporting column.

Qualification: None required.

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CC40220 BL) associated with the soil samples extracted on 02/04/2019 and analyzed on 02/05/2019 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CC40220 were analyzed on 02/05/2019. All %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate – A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample B6 (0-2') (CC40220). All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/24/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B5 (0-2')	CC40219	02/01/2019	Pesticides	Soil
B6 (0-2')	CC40220	02/01/2019	Pesticides	Soil

Summary - Data validation was performed on two (2) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 02/01/2019 and submitted for Pesticides by SW-846 Method 8081 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/04/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/ECD Instrument Performance Check – 4,4'-DDT and Endrin breakdown exhibited acceptable results.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 01/31/2019 (ECD4) exhibited acceptable %RSD on both columns.

Qualification: None required.

– Initial calibration curve analyzed on 02/05/2019 (ECD7) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 02/06/2019 exhibited acceptable %Ds for all compounds on reporting column.

Qualification: None required.

– All CCVs analyzed on 02/05-06/2019 exhibited acceptable %Ds for all compounds on reporting column with the exception of endosulfan sulfate (24%) and methoxychlor (38% and 30%).

Qualification: Result for endosulfan sulfate was qualified as estimated (J) and the non-detect result for methoxychlor was qualified as estimated (UJ) in sample B6 (0-2').

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CC40220 BL) associated with the soil samples extracted on 02/04/2019 and analyzed on 02/05/2019 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CC40220 LCS was analyzed on 02/05/2019. All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample B6 (0-2) (CC40220). All %RECs/RPDs were within the laboratory control limits with the exception of methoxychlor (76.7% RPD), endrin ketone (31.4% RPD), and gamma-chlordane (31.9% RPD). Results for methoxychlor, endrin ketone and gamma-chlordane were non-detect in sample B6 (0-2).

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

–Sample confirmation %D for all samples was <40% with the exception of 4,4'-DDT (94.7%) in sample B6 (0-2').

Qualification: Result for 4,4'-DDT in sample B6 (0-2') was qualified as estimated (J).

– Pesticides data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCC40219 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
TRACE METALS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCC40219
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/25/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
B5 (0-2')	CC40219	02/01/2019	Metals	Soil
B6 (0-2')	CC40220	02/01/2019	Metals	Soil

Summary - Data validation was performed on two (2) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 2/01/2019 and submitted for the following analyses:

1.1 Trace Metals-ICP-AES by SW-846 Method 6010C.
1.2 Mercury by SW-846 Method 7471A.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/05/2019 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were analyzed within the 6 months holding times for Trace Metals analysis by ICP-AES.

Qualification: None required.

– All soil samples were digested and analyzed within the 28 days holding times for Mercury analysis.

Qualification: None required.

Initial and Continuing Calibration Verification (ICV and CCV) – ICP-AES – All %RECs in the ICV and CCVs were within QC limits.

Qualification: None required.

Mercury – All correlation coefficient for Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs %REC values were within the QC limits.

Qualification: None required.

CRQL Check Standard (CRI) –All CRI analyzed %RECs were within the control limits.

Qualification: None required.

ICP-AES Interference Check Sample – All %REC values were within the QC limits for ICSA and ICSAB.

Qualification: None required.

Blanks (Method Blank, ICB and CCB) – ICP-AES Method Blank-Soil (CC40209) digested on 02/04/2019 contained calcium (4.8 mg/Kg) and iron (12.1 mg/Kg). Results for calcium and iron in the field samples were greater than the method blank contamination.

Qualification: None required.

– All ICB and CCBs were free of contamination.

Qualification: None required.

– Mercury – All ICB and CCBs were free of contamination.

Qualification: None required.

–Mercury – Method Blank (CC40204 BLK) digested on 02/05/2019 was free of contamination.

Qualification: None required.

Field Blank (FB) and Equipment Blank (EB) – Field Blanks were not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – ICP-AES and Mercury – Laboratory Control Sample %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate — A field duplicate was not included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Sample Duplicate – ICP-AES and Mercury – ICP-AES and Mercury – No Laboratory Duplicate was performed on a sample from this SDG.

Qualification: None required.

ICP-AES Serial Dilution – ICP serial dilution was not performed on a sample from this SDG.

Qualification: None required.

Verification of Instrumental Parameters – The following Forms were present in the data package:

– Method Detection Limits, Form- X.
– ICP-AES Interelement Correction Factors, Form -XIA and Form-XIB.
– ICP-AES Linear Ranges, Form XII.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual calculation

Sample: B5 (0-2') (CC40219)

Barium

$$\text{Concentration (mg/Kg) (dry wt.)} = \frac{C \times V \times DF \times 1L \times 1000g \times 1mg}{W \times S \times 1000ml \times 1\ kg \times 1000ug}$$

V= 50ml
W= 0. 73g
%Solids =83
DF=10.0

Concentration (mg/Kg) (dry wt.)= $\frac{3302.16ug/L \times 50 \times 10.0 \times 1L \times 1000g \times 1mg}{0.73 \times 0.83 \times 1000ml \times 1\ kg \times 1000ug}$ = 2725 mg/kg

Compound	Laboratory (mg/kg)	Validation (mg/kg)	%D
Barium	2730	2730	0.0

DATA USABILITY SUMMARY REPORT (DUSR)
SEMI-VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA81764
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/25/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW 1	CA81764	06/28/2018	SVOC	GW
MW 3	CA81765	06/28/2018	SVOC	GW

Summary - Data validation was performed on two (2) of the six (6) groundwater (GW) samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 06/28/2018 and submitted for Semi-Volatile Organic (SVOC) analyses by SW846 Method 8270C. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/29/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All water samples were extracted within 7 days from sample collection and analyzed within 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning – All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 06/14/2018 (CHEM29)-Full Scan exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

– Initial calibration curve analyzed on 07/02/2018 (CHEM25)-SIM Scan exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) – CCV analyzed on 07/03/2018 (CHEM29)-Full scan exhibited acceptable %Ds and RRF values for compounds listed in Table 2 in SOP HW-33A with the exception benzoic acid (56.2% and 55.3%).

Qualification: Non-detect results for benzoic acid was qualified as estimated (UJ) in samples MW 1 and MW 3.

– CCV analyzed on 07/02-03/2018 (CHEM25)-SIM scan exhibited acceptable %Ds and RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Surrogates –Surrogate %REC values were within the QC acceptance limits for the full scan with the exception of terphenyl-d14 in sample MW 1 (114%). Results for the associated compounds were non-detect in sample MW 1.

Qualification: None required.

– All surrogate %REC values were within the QC acceptance limits for the SIM scan with the exception of terphenyl-d14 in samples MW 1 (143%) and MW 3 (143%). Results the associated compounds were non-detect in sample MW 1 and MW 3.

Qualification: None required.

Internal Standard (IS) Area Performance – All samples exhibited acceptable area count for all six internal standards.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CA81764 BLANK)-SIM Scan associated with the water samples extracted on 06/29/2018 and analyzed on 07/02/2018 was free of contamination.

Qualification: None required.

– Method Blank (CA81764 BLANK)-full Scan associated with the water samples extracted on 06/29/2018 and analyzed on 07/02/2018 was free of contamination.

Qualification: None required.

Field Duplicate –An aqueous duplicate pair was submitted with this SDG. The field duplicate pair was not designated for validation.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – No sample from this SDG was analyzed for SVOC (Full and SIM) as MS/MSD.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)}$$

Cx = concentration of analyte as ug/L
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: MW 1 (CA81764)

Naphthalene

Initial Volume: 850ml
Final volume: 1ml
Volume injected: 1µl
Dilution Factor: 1

$$\text{Concentration } (\mu g/L) = \frac{142521 \times 40 \times 1ml \times 1 \times 1000}{1215482 \times 0.935 \times 1 \times 850ml} = 5.90\mu g/L$$

Compound	Laboratory (µg/L)	Validation (µg/L)	%D
Naphthalene	5.9	5.9	0.0

Data Review Summary –The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semi-Volatile water data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA81764 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA81764
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/26/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW 1	CA81764	06/28/2018	VOC	GW
MW 3	CA81765	06/28/2018	VOC	GW

Summary - Data validation was performed two (2) of the six (6) groundwater (GW) samples and one (1) trip blank (TB) sample as per client instructions Samples were collected from 310 Grand Concourse, Bronx, NY on 06/28/2018 and submitted for Volatile Organic (VOC) analyses by SW846 Method 8260C. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/29/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were analyzed within the 14-day holding time required for GW samples.

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 06/25/2018 (CHEM02) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) - The %D for the CCVs analyzed and reported with these samples on 06/29-30/2018 were within acceptance limits for all target VOCs with the exception of bromomethane (38.0%).

Qualification: Non-detect result for bromomethane was qualified as estimated (UJ) in sample MW 3.

- The %D for the CCVs analyzed and reported with these samples on 07/02/2018 were within acceptance limits for all target VOCs with the exception of bromomethane (32.8%).

Qualification: Non-detect result for bromomethane was qualified as estimated (UJ) in sample MW 1.

Surrogates –Surrogate percent recoveries were within the control limits for all the samples.

Qualification: None required.

Internal Standard (IS) Area Performance – Samples exhibited acceptable area counts for all internal standards.

Qualification: None required.

MS/MSD – MS/MSD were not performed on a sample from this SDG.

Qualification: None required.

Method Blank – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – Note: As per the clients request the trip blank was not validated. Trip Blank (Lab Sample ID: CA81770), was submitted with this sample set and contained acetone (4.2 µg/L).

Qualification: Result for acetone in sample MW 3 was qualified as non-detect (U and reported to the RL).

Field Duplicate –An aqueous duplicate pair was submitted with this SDG. The field duplicate pair was not designated for validation.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

Qualification: None required.

– Sample compound spectra were compared against the laboratory standard spectra.

Qualification: None required.

Compound Quantitation –Analyte non-detections were reported as "U"; these results should be considered the equivalent of "RL U." Analyte detections below the PQL were reported as J qualified results. These J qualifiers were retained unless superseded by a more severe qualifier.

Qualification: None required.

– All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)}$$

Cx = concentration of analyte as µg/L
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.

Trip Blank (CA81770)

Acetone
Sample Volume= 25ml
Volume purged=25ml
DF = 1

$$\text{Concentration } (\mu g/L) = \frac{3613 \times 25 \times 10 \times 1}{316276 \times 0.027 \times 25} = 4.23 \mu g/L$$

Compound	Laboratory (µg/L)	Validation (µg/L)	%D
Acetone	4.2	4.2	0.0

Data Review Summary –The VOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile water data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA81764 at the end of the data validation report.

KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW 1	CA81764	06/28/2018	PCBs	GW
MW 3	CA81765	06/28/2018	PCBs	GW

Summary - Data validation was performed on two (2) of the six (6) groundwater (GW) samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 06/28/2019 and submitted for PCBs by SW-846 Method 8082A in accordance with NYSDEC, Analytical Services Protocol (ASP) Format. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/29/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All water samples were extracted within 7 days from sample collection and analyzed within 40 days following sample extraction.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 07/05/2018 (ECD24) exhibited acceptable %RSD on both columns.

Qualification: None required.

– Initial calibration curve analyzed on 07/05/2018 (ECD29) exhibited acceptable %RSD on both columns.

Qualification: None required.

– Initial calibration curve analyzed on 06/05/2018 (ECD3) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 07/06/18 exhibited acceptable %Ds for all compounds on the reporting column.

Qualification: None required.

– All CCVs analyzed on 07/06/18 exhibited acceptable %Ds for all compounds on the reporting column.

Qualification: None required.

– All CCVs analyzed on 07/03-04/18 exhibited acceptable %Ds for all compounds on the reporting column.

Qualification: None required.

Surrogates – All surrogates %RECs values for all water samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CA81764 BL) associated with the water samples extracted on 07/02/2018 and analyzed on 07/04/2018 was free of contamination.

Qualification: None required.

– Method Blank (CA81766 BL) associated with the water samples extracted on 07/05/2018 and analyzed on 07/06/2018 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CA81764 were analyzed on 07/04/2018. All %RECs were within the laboratory control limits.

Qualification: None required.

– Laboratory Control Sample associated with ID: CA81768 were analyzed on 07/06/2018. All %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate –An aqueous duplicate pair was submitted with this SDG. The field duplicate pair was not designated for validation.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was analyzed as MS/MSD.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

CA81764 LCS

Aroclor-1016

On Column concentration (B)= 529.045ng
Sample Volume= 1000ml
DF= 1
Vi= 5ml

$$\text{Concentration } (\mu g/L) = \frac{529.045ng \times 5ml \times 1}{1000} = 2.65\mu g/L$$

Compound	Laboratory (µg/L)	Validation (µg/L)	%D
Aroclor-1016	2.65	2.65	0.0

Data Review Summary – The PCBs results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– PCBs data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA81764 at the end of the data validation report.

PESTICIDES
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA81764
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/25/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW 1	CA81764	06/28/2018	Pesticides	GW
MW 3	CA81765	06/28/2018	Pesticides	GW

Summary - Data validation was performed on two (2) of the six (6) groundwater (GW) samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 06/28/2018 and submitted for Pesticides by SW-846 Method 8081 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/29/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All water samples were extracted within 7 days from sample collection and analyzed within 40 days following sample extraction.

Qualification: None required.

GC/ECD Instrument Performance Check – 4,4'-DDT and Endrin breakdown exhibited acceptable results (±20%).

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 06/29/2018 (ECD7) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 07/03-04/2018 exhibited acceptable %Ds for compounds on reporting column.

Qualification: None required.

Surrogates – All surrogates %RECs values for water samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CA81764 BL) associated with the water samples extracted on 07/02/2018 and analyzed on 07/03/2018 was free of contamination.

Qualification: None required.

– Method Blank (CA81768 BL) associated with the water samples extracted on 07/05/2018 and analyzed on 07/06/2018 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CA81764 LCS was analyzed on 07/03/2018. All %RECs were within the laboratory control limits. RPDs for heptachlor, 4,4'-DDD, endosulfan sulfate, endrin ketone, and endrin aldehyde were outside the control limits. Results for heptachlor, 4,4'-DDD, endosulfan sulfate, endrin ketone, and endrin aldehyde were non-detect in the associated field samples.

Qualification: None required.

Field Duplicate –An aqueous duplicate pair was submitted with this SDG. The field duplicate pair was not designated for validation.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was analyzed as MS/MSD.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

CA81764 LCS

Alpha-BHC

On Column concentration (B)= 40.7006ng
Sample Volume= 0.900ml
DF = 1

Concentration (µg/L) = $\frac{40.7006ng \times 0.9ml \times 1}{1000}$ = 0.0366µg/L

Compound	Laboratory (µg/L)	Validation (µg/L)	%D
Alpha-BHC	0.037	0.037	0.0

Data Review Summary – The pesticide results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Pesticides data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA81764 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
TRACE METALS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA81764
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/26/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW 1	CA81764	06/28/2018	Metals*	GW
MW 3	CA81765	06/28/2018	Metals*	GW

*Metals results are for both total and dissolved.

Summary - Data validation was performed on two (2) of the six (6) groundwater (GW) samples as per client instructions. Only the samples validated in this SDG are listed above. Samples were collected from 310 Grand Concourse, Bronx, NY and submitted for the following analyses:

1.1 Trace Metals-ICP-AES by SW-846 Method 6010C.
1.2 Mercury by SW-846 Method 7470.
1.3 Trace Metals-ICP-MS by SW-846 Method 6020.
1.4 Furnace Metals by SW-846 Method 7010.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/29/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All water samples were analyzed within the 6 months holding times for Trace Metals analysis by ICP-AES and MS.

Qualification: None required.

– All water samples were digested and analyzed within the 28 days holding times for Mercury analysis.

Qualification: None required.

Initial and Continuing Calibration Verification (ICV and CCV) – ICP-AES – All %RECs in the ICV and CCVs were within QC limits for the total metals.

Qualification: None required.

– All %RECs in the ICV and CCVs were within QC limits for the associated dissolved metals.

Qualification: None required.

Mercury – All correlation coefficient for dissolved Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs dissolved %REC values were within the QC limits.

Q*ualification:* None required.

– All correlation coefficient for total Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs total %REC values were within the QC limits.

Q*ualification:* None required.

CRQL Check Standard (CRI) – dissolved CRI analyzed %RECs were within the control limits with the exception of copper.

Qualification: Non-detect results for dissolved copper were qualified as estimated (UJ) in samples MW 1 and MW 3.

– Total CRI analyzed %RECs were within the control limits with the exception of nickel.

Qualification: Results for nickel were qualified as estimated (J) in sample MW 1 and MW 3.

ICP-AES Interference Check Sample – All %REC values were within the QC limits for ICSA and ICSAB for both total and dissolved metals.

Qualification: None required.

Blanks (Method Blank, ICB and CCB) – MS Method Blank-dissolved (CA81764 BLK) digested on 06/29/2018 was free of contamination.

Qualification: None required.

– Mercury Method Blank-dissolved (CA81768 BLK) digested on 07/05/2018 was free of contamination.

Qualification: None required.

– ICP-AES Method Blank-dissolved (CA81767 BLK) digested on 06/29/2018 was free of contamination.

Qualification: None required.

– Dissolved ICB and CCBs contained sodium and antimony. Antimony was non-detect in the field dissolved samples.

Qualification: Result for dissolved sodium was qualified as non-detect (U) in sample MW 3.

– ICP-AES Method Blank-Total (CA81297 BLK) digested on 06/29/2018 contained iron (0.016 µg/L). Results for iron in the field samples was greater than the blank contamination.

Qualification: None required.

– Furnace Method Blank-Total (CA81444 BLK) digested on 07/02/2018 was free of contamination.

Qualification: None required.

– Mercury Method Blank-Total (CA81166 BLK) digested on 07/03/2018 was free of contamination.

Qualification: None required.

– Total ICB and CCBs contained antimony. Antimony was non-detect in the field samples.

Qualification: None required.

Field Blank (FB) and Equipment Blank (EB) – Field Blanks were not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – ICP-AES, ICP-MS, and Mercury – Laboratory Control Sample %RECs were within the laboratory control limits for dissolved metals.

Qualification: None required.

– Laboratory Control Sample %RECs were within the laboratory control limits for total metals.

Qualification: None required.

Field Duplicate –An aqueous duplicate pair was submitted with this SDG. The field duplicate pair was not designated for validation.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Furnace – Matrix Spike (MS) was performed on sample MW 1 (GCA81764). %RECs were within the laboratory control limits for dissolved thallium.

Qualification: None required.

– ICP-AES – Matrix Spike (MS) was performed on sample MW 1 (GCA81764). %RECs were within the laboratory control limits for dissolved metals with the exception of potassium (72.9%).

Qualification: Results for potassium were qualified as estimated (J) in sample MW 1.

– Mercury – Matrix Spike (MS) was not performed on a sample from this SDG for dissolved mercury.

Qualification: None required.

– ICP-AES, ICP-MS, and Mercury – Matrix Spike (MS) was not performed on a sample from this SDG.

Qualification: None required.

Sample Duplicate –Mercury – Laboratory Duplicate was not performed on a sample from this SDG for dissolved mercury.

Qualification: None required.

– Furnace – Laboratory Duplicate was performed on sample MW 1 (GCA81764). RPDs were within the laboratory control limits for dissolved thallium.

Qualification: None required.

– ICP-MS – Laboratory Duplicate was performed on sample MW 5 (GCA81767). RPDs were within the laboratory control limits for dissolved metals. Note: This sample was not designated for validation.

Qualification: None required.

– ICP-AES, ICP-MS, and Mercury – Laboratory Duplicate was not performed on a total sample from this SDG.

Qualification: None required.

ICP-AES Serial Dilution – ICP serial dilution for dissolved metals was performed on sample MW 5 (GCA81767). For all results for which the concentration in the original sample is ≥ 50x the Method Detection Limits (MDL), the serial dilution analysis (a five-fold dilution) was within the acceptable limit (%D ±10%). Note: This sample was not designated for validation.

Qualification: None required.

– ICP serial dilution was not performed on a total sample from this SDG.

Qualification: None required.

Verification of Instrumental Parameters – The following Forms were present in the data package:

– Method Detection Limits, Form- X.
– ICP-AES Interelement Correction Factors, Form -XIA and Form-XIB.
– ICP-AES Linear Ranges, Form XII.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual calculation

Sample: MW 1 (CA81764)

Barium

DF: 1

0.9203 mg/L was reported on the raw data and the laboratory reported 0.920 mg/L on Form-I.

Data Review Summary – The dissolved and total trace metal results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Trace Metals data package requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA81764 at the end of the data validation report.

USEPA Level 4 Review

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA81746
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/27/19
KGS Reviewer: Sherri Pullar	Project: 3020

Lab Sample ID	Client Sample ID	Collection Date	Analysis	Matrix
CA81748	SG1	06/28/18	VOA	Air
CA81749	SG2	06/28/18	VOA	Air
CA81750	SG3	06/28/18	VOA	Air
CA81752	SG4	06/28/18	VOA	Air

Summary - Data validation was performed on four (4) of the seven (7) air samples as per the client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/28/2018 and submitted for Volatile Organic (VOC) analyses by Method TO-15. Samples were analyzed and reported for VOCs. Only the samples validated in this SDG are listed above. The USEPA Region-II SOP # HW-31, Revision 6, June 2014, Validating Air Samples Volatile Organic Analysis of Ambient Air in Canister by Method TO-15 was used in evaluating the Volatiles data in this summary report.

Narrative and Completeness Review – The case narrative and data package were checked for completeness.

Qualification: None required.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/29/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All air samples were analyzed within the method holding time for summa canisters (30 days).

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 07/02/2018 (Chem20) exhibited acceptable %RSDs (≤30.0%) for all compounds and average RRF values (≥0.050) for all compounds with the exception of some compounds listed in Table 4 in SOP # HW-31, were ≥0.01 with the exception of trans-1,2-dichloroethene (sim) (32.7%).

Qualification: Non-detect results for trans-1,2-dichloroethene in samples SG1, SG2, SG3 and SG4 were qualified as estimated (UJ).

Continuing Calibration Verification (CCV): - The %D for the CCVs analyzed and reported with these samples on 07/02/2018 were within.

Qualification: None required.

- The %D for the CCVs analyzed and reported with these samples on 07/04/2018 were within acceptance limits with the exception of methyl ethyl ketone (34.3%).

Qualification: Non-detect result for methyl ethyl ketone was qualified estimated (UJ) in sample SG1.

Surrogates –4-Bromofluorobenzene (BFB) surrogate spike recovered within the laboratory control limits.

Qualification: None required.

Internal Standard (IS) Area Performance: - Samples exhibited acceptable area counts for the internal standards.

Qualification: None required.

LCS — Laboratory Control Sample associated with ID: CA80115 were analyzed on 07/03/2018. %RECs were within the laboratory control limits with the exception of methyl ethyl ketone (66%), cis-1,2-dichloroethene (51%), and 1,2,4-trichlorobenzene (134%). Result for 1,2,4-trichlorobenzene was non-detect in the associated samples.

Qualification: The non-detect results for cis-1,2-dichloroethene and methyl ethyl ketone were qualified as estimated (UJ) in samples SG1.

— Laboratory Control Sample associated with ID: CA81752 were analyzed on 07/02/2018. %RECs were within the laboratory control limits with the exception of 1,2,4-trichlorobenzene (149%).

Qualification: The result for 1,2,4-trichlorobenzene was qualified as estimated (J) in samples SG2 and SG3.

Method Blank – The method blank prepared and analyzed with these samples was free of contamination.

Qualification: None required.

Canister Blank – The canister blank prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – No field blanks were included in this SDG.

Qualification: None required.

Laboratory Duplicate — Laboratory Duplicate was performed on sample SG 4 (GCA81752). RPDs were within the laboratory control limits.

Qualification: None required.

Field Duplicate — No field duplicates were included in this SDG.

Qualification: None required.

Compound Quantitation – Samples were run at multiple dilutions (5x, 10x, 15x, 600x and 1200x dilution) for many compounds and reporting limits were adjusted accordingly. Analyte non-detections were reported as "U"; these results should be considered the equivalent of "RL (reporting limit) U."

Qualification: None required.

– Sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$\text{Concentration } (\mu g/m^3) = \frac{\text{Result (ppbv) x Molecular weight x DF}}{24.46}$$

SG2 (GCA81746)

Toluene
Result (ppbv) = 6.62
Molecular Weight @ 25ºC=92.14
DF = 1

$$\text{Concentration } (\mu g/m^3) = \frac{6.62 \times 92.14 \times 1}{24.46} = 24.9 \mu g/m^3$$

Compound	Laboratory ($\mu g/m^3$)	Validation ($\mu g/m^3$)	%D
Toluene	24.9	24.9	0.0

Data Review Summary — The VOC air results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile air data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA81746 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
SEMI-VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA80477
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/23/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
SB6 (0-2 FT)	CA80477	06/22/2018	SVOC	Soil
SB6 (12-14 FT)	CA80478	06/22/2018	SVOC	Soil

Summary - Data validation was performed on two (2) of the five (5) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/22/2018 and submitted for Semi-Volatile Organic (SVOC) analyses by SW846 Method 8270. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning - All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 06/15/2018 (CHEM27) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

Continuing Calibration Verification (CCV) – The %D for the CCVs analyzed and reported with these samples on 6/28-29/2018 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception hexachlorocyclopentadiene (96.2%), 2,4-dinitrophenol (98.2%), 2-nitroaniline (70.4%), and 4,6-dinitro-2-methylphenol (96.8%).

Qualification: Non-detect results for hexachlorocyclopentadiene, 2,4-dinitrophenol, 2-nitroaniline, and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in samples SB6 (0-2 FT), and SB6 (12-14 FT).

Surrogates –Surrogate %R values were within the QC acceptance limits with the exception of 2-Fluorophenol in sample SB6 (0-2 FT).

Qualification: Non-detected results for n-nitrosodimethylamine and pyridine were qualified as estimated (UJ) in sample SB6 (0-2 FT).

Internal Standard (IS) Area Performance – Samples exhibited acceptable area count for the six internal standards.

Qualification: None required.

Method Blank (MB) – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – No field blanks were submitted with this SDG.

Qualification: None required.

Field Duplicate — A field duplicate was included in this SDG however the FD and the parent sample were not designated for validation.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%. No qualifications were required.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.

DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: SB6 (0-2 FT) (CA80477)
Phenanthrene

Sample weight= 15.13g
Volume purged=1.0ml
DF = 1
%Solids=89

$$\text{Concentration } (\mu g/kg)\text{ (dry)} = \frac{172266 \times 40 \times 1 \times 1000}{673690 \times 1.073 \times 15.13 \times 0.89} = 707.9\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Phenanthrene	710	710	0.0

Data Review Summary – The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semivolatile data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80477 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA80477
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/23/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
SB6 (0-2 FT)	CA80477	06/22/2018	VOC	Soil
SB6 (12-14 FT)	CA80478	06/22/2018	VOC	Soil

Summary - Data validation was performed on two (2) of the five (5) soil samples and two (2) trip blanks as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/22/2018 and submitted for Volatile Organic (VOC) analyses by SW846 Method 8260C. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were analyzed within the 14-day holding time required for soil samples.

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 06/04/2018 (CHEM18) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) - The %D for the CCVs analyzed and reported with these samples on 07/01/2018 were within acceptance limits for all target VOCs with the exception of carbon tetrachloride (26.6%), bromodichloromethane (20.7%), dibromochloromethane (22.2%), and bromoform (35.1%).

Qualification: Non-detect results for carbon tetrachloride, bromodichloromethane, dibromochloromethane, and bromoform in samples SB6 (0-2 FT) and SB6 (12-14 FT) were qualified as non-detect (UJ).

Surrogates –All surrogate percent recoveries were within the control limits.

Qualification: None required.

Internal Standard (IS) Area Performance – Samples exhibited acceptable area counts for all internal standards.

Qualification: None required.

MS/MSD – Sample SB8 (0-2 FT) (Lab Sample ID: CA80480) was spiked and analyzed as MS/MSD samples. Percent recovery and RPD were within QC limits with the exception of methylene chloride, acetone, dichlorodifluoromethane, trichlorofluoromethane, carbon disulfide, trans-1,3-dichloropropene, bromoform, trans-1,4-dichloro-2-butene, 1,4-dichlorobenzene, 1,2,4-trichlorobenzene, and 1,2,3-trichlorobenzene. This sample was not validated in this SDG.

Method Blank – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – Note that trip blanks were not designated for validation in this SDG. Trip Blank Low (Lab Sample ID: CA80483) was submitted with this sample set. Target VOCs were non-detect in the Trip Blank Low sample with the exception of acetone (56 µg/Kg), tetrahydrofuran (4.9 µg/Kg), and toluene (0.56 µg/Kg). Acetone and tetrahydrofuran were non-detect in the field samples.

Qualification: Result for toluene was qualified as non-detect (U and reported to the RL) in sample SB6 (0-2 FT).

– Note that trip blanks were not designated for validation in this SDG. Trip Blank High (Lab Sample ID: CA80482) was submitted with this sample set. VOCs were non-detect in the HL TB sample.

Qualification: None required.

Field Duplicate — A field duplicate was included in this SDG however the FD and the parent sample were not designated for validation.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

Qualification: None required.

– Sample compound spectra were compared against the laboratory standard spectra.

Qualification: None required.

Compound Quantitation – Analyte non-detections were reported as "U"; these results should be considered the equivalent of "PQL U." Analyte detections below the PQL were reported as J qualified results. These J qualifiers were retained unless superseded by a more severe qualifier.

Qualification: None required.

- All sample results were reported within the linear calibration range.
- %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.

SB6 (0-2 FT) (CA80477)

Carbon Disulfide

Sample weight= 3.44g
Volume purged=5.0ml
DF = 1
%Solid = 89%

$$\text{Concentration } (\mu g/kg) \text{ (dry)} = \frac{20160 \times 50 \times 1 \times 5.0}{447808 \times 1.696 \times 3.44 \times 0.89} = 2.17\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Carbon Disulfide	2.2	2.2	0.0

Data Review Summary –VOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile soil data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80477 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)

USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA80477
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/23/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
SB6 (0-2 FT)	CA80477	06/22/2018	PCB	Soil
SB6 (12-14 FT)	CA80478	06/22/2018	PCB	Soil

Summary - Data validation was performed on two (2) of the five (5) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 06/22/2018 and submitted for PCBs by SW-846 Method 8082 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 06/05/2018 (ECD3) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 07/02-03/2018 exhibited acceptable %Ds for all compounds.

Qualification: None required.

– All CCVs analyzed on 07/03/2018 exhibited acceptable %Ds for all compounds.

Qualification: None required.

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CA80478 BL) associated with the soil samples extracted on 06/28/2018 and analyzed on 07/02/2018 was free of contamination.

Qualification: None required.

– Method Blank (CA81753 BL) associated with the soil samples extracted on 06/29/2018 and analyzed on 07/02/2018 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CA80478 were analyzed on 07/02/2018. All %RECs were within the laboratory control limits.

Qualification: None required.

– Laboratory Control Sample associated with ID: CA81753 were analyzed on 07/02/2018. All %RECs were within the laboratory control limits with the exception of Aroclor-1260 (32% RPD). Aroclor-1260 was non-detect in the associated samples.

Qualification: None required.

Field Duplicate – A field duplicate was included in this SDG however the FD and the parent sample were not designated for validation.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample SB6 (12-14 FT) (CA80478). All %RECs were within the laboratory control limits. RPDs were outside the control limits for Aroclor-1016 and Aroclor-1260. Results for both compounds were non-detect in the parent sample.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

CA80478 LCS

Aroclor-1016

On Column concentration (B)= 415.418ng
Sample weight= 15.0g
DF= 10
Vi= 5ml

%Solids= 100%

Concentration (µg/kg) (dry) = $\frac{415.418ng \times 10ml \times 5}{15.0g}$ = 1384.73µg/kg

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Aroclor-1016	1380	1380	0.0

Data Review Summary – The PCBs results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– PCBs data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80477 at the end of the data validation report.

TRACE METALS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA80477
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/23/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
SB6 (0-2 FT)	CA80477	06/22/2018	Metals	Soil
SB6 (12-14 FT)	CA80478	06/22/2018	Metals	Soil

Summary - Data validation was performed on two (2) of the five (5) soil samples as per client instructions. Only the samples validated in this SDG are listed above. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/22/2018 and submitted for the following analyses:

1.1 Trace Metals-ICP-AES by SW-846 Method 6010C.
1.2 Mercury by SW-846 Method 7471A.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were analyzed within the 6 months holding times for Trace Metals analysis by ICP-AES.

Qualification: None required.

– All soil samples were digested and analyzed within the 28 days holding times for Mercury analysis.

Qualification: None required.

Initial and Continuing Calibration Verification (ICV and CCV) – ICP-AES – All %RECs in the ICV and CCVs were within QC limits.

Qualification: None required.

Mercury – All correlation coefficient for Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs %REC values were within the QC limits.

Qualification: None required.

CRQL Check Standard (CRI) – Copper (151.4%), calcium (257.4%), and iron (135.7%) were outside the control limits. Remaining CRI analyzed %RECs were within the control limits.

Qualification: Iron, copper, and calcium in samples SB6 (0-2 FT) and SB6 (12-14 FT) were qualified as estimated bias high (J+).

ICP-AES Interference Check Sample – All %REC values were within the QC limits for ICSA and ICSAB.

Qualification: None required.

Blanks (Method Blank, ICB and CCB) – ICP-AES Method Blank-Soil (CA80447) digested on 06/28/2018 contained zinc. Results for zinc in the field samples were greater than the blank contamination.

Qualification: None required.

– All ICB and CCBs contained copper. Copper results were greater than the ICB/CCB contamination.

Qualification: None required.

– Mercury – All ICB and CCBs were free of contamination.

Qualification: None required.

–Mercury – Method Blank (CA80447 BLK) digested on 06/29/2018 was free of contamination.

Qualification: None required.

Field Blank (FB) and Equipment Blank (EB) – Field Blanks were not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – ICP-AES and Mercury – Laboratory Control Sample %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate — A field duplicate was included in this SDG however the FD and the parent sample were not designated for validation.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Sample Duplicate – ICP-AES and Mercury – ICP-AES and Mercury – No Laboratory Duplicate was performed on a sample from this SDG.

Qualification: None required.

ICP-AES Serial Dilution – ICP serial dilution was not performed on a sample from this SDG.

Qualification: None required.

Verification of Instrumental Parameters – The following Forms were present in the data package:

– Method Detection Limits, Form- X.
– ICP-AES Interelement Correction Factors, Form -XIA and Form-XIB.
– ICP-AES Linear Ranges, Form XII.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual calculation

Sample: SB6 (0-2 FT) (CA80477)

Barium

Concentration (mg/Kg) (dry wt.)= $\frac{C \times V \times DF \times 1L \times 1000g \times 1mg}{W \times S \times 1000ml \times 1\ kg \times 1000ug}$

V= 50ml
W= 0. 83g
%Solids =89
DF=1.0

Concentration (mg/Kg) (dry wt.)= $\frac{1308.14ug/L \times 50 \times 1.0 \times 1L \times 1000g \times 1mg}{0.83 \times 0.89 \times 1000ml \times 1\ kg \times 1000ug}$ = 89.55 mg/kg

Compound	Laboratory (mg/kg)	Validation (mg/kg)	%D
Barium	89.6	89.6	0.0

Data Review Summary – The trace metal results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Trace Metals data package requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80477 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
SEMI-VOLATILE ORGANIC COMPOUNDS
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCA80467
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 09/20/19
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
SB1 (0-2 FT)	CA80467	06/22/2018	SVOC	Soil
SB1 (12-14 FT)	CA80468	06/22/2018	SVOC	Soil
SB2 (0-2 FT)	CA80469	06/22/2018	SVOC	Soil
SB2 (12-14 FT)	CA80470	06/22/2018	SVOC	Soil
SB3 (0-2 FT)	CA80471	06/22/2018	SVOC	Soil
SB4 (0-2 FT)	CA80472	06/22/2018	SVOC	Soil
SB4 (12-14 FT)	CA80473	06/22/2018	SVOC	Soil

Summary - Data validation was performed on seven (7) of the eight (8) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/22/2018 and submitted for Semi-Volatile Organic (SVOC) analyses by SW846 Method 8270. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning - All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 06/13/2018 (CHEM05) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 06/27/2018 (CHEM06) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 06/15/2018 (CHEM27) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

Continuing Calibration Verification (CCV) – The %D for the CCVs analyzed and reported with these samples on 07/03/2019 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception of hexachlorocyclopentadiene (64.0%).

Qualification: Non-detect result for hexachlorocyclopentadiene was qualified as estimated (UJ) in samples SB4 (0-2 FT).

– The %D for the CCVs analyzed and reported with these samples on 6/29/2018 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception 2,4-dinitrophenol (70.0%) and 4,6-dinitro-2-methylphenol (63.9%).

Qualification: Non-detect results for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in sample SB4 (12-14 FT).

– The %D for the CCVs analyzed and reported with these samples on 7/01/2018 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception hexachlorocyclopentadiene (91.2%), 2,4-dinitrophenol (96.2%), and 4,6-dinitro-2-methylphenol (95.0%).

Qualification: Non-detect results for hexachlorocyclopentadiene, 2,4-dinitrophenol, and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in sample SB3 (0-2 FT).

– The %D for the CCVs analyzed and reported with these samples on 6/28-29/2018 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception hexachlorocyclopentadiene (96.2%), 2,4-dinitrophenol (98.2%), 2-nitroaniline (70.4%), and 4,6-dinitro-2-methylphenol (96.8%).

Qualification: Non-detect results for hexachlorocyclopentadiene, 2,4-dinitrophenol, 2-nitroaniline, and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in sample SB1 (0-2 FT), SB1 (12-14 FT), SB2 (0-2 FT), and SB2 (12-14 FT).

Surrogates –Surrogate %R values were within the QC acceptance limits with the exception of 2-Fluorophenol and 2,4,6-tribromophenol in sample SB3 (0-2 FT).

Qualification: Non-detected results for n-nitrosodimethylamine, pyridine, 4-bromophenyl phenyl ether, hexachlorobenzene, pentachlorophenol, pentachloronitrobenzene, phenanthrene, anthracene, carbazole, di-n-butylphthalate, fluoranthene, benzidine, and pyrene were qualified as estimated (UJ) in sample SB3 (0-2 FT).

Internal Standard (IS) Area Performance – Samples exhibited acceptable area count for the six internal standards.

Qualification: None required.

Method Blank (MB) – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – No field blanks were submitted with this SDG.

Qualification: None required.

Field Duplicate — No field blanks were included in this SDG.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%. No qualifications were required.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: SB1 (12-14 FT) (CA80468)
2-Methylnaphthalene

Sample weight= 15.07g
Volume purged=1.0ml
DF = 1
%Solids=89

$$\text{Concentration } (\mu g/kg)\ (dry) = \frac{276823 \times 40 \times 1 \times 1000}{656677 \times 0.718 \times 15.07 \times 0.89} = 1751.0\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
2-Methylnaphthalene	1800	1800	0.0

Data Review Summary – The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semivolatile data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80467 at the end of the data validation report.

Summary - Data validation was performed on seven (7) of the eight (8) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/22/2018 and submitted for Volatile Organic (VOC) analyses by SW846 Method 8260C. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were analyzed within the 14-day holding time required for soil samples.

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 07/06/2018 (CHEM14) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

- Initial calibration curve analyzed on 06/04/2018 (CHEM18) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) - The %D for the CCVs analyzed and reported with these samples on 7/10/2018 were within acceptance limits for all target VOCs.

Qualification: None required.

- The %D for the CCVs analyzed and reported with these samples on 06/30/2018 were within acceptance limits for all target VOCs with the exception of carbon tetrachloride (26.6%), dibromochloromethane (21.1%), and bromoform (35.1%).

Qualification: Non-detected results for carbon tetrachloride, dibromochloromethane, and bromoform in samples SB4 (12-14 FT), SB2 (0-2 FT), and SB1 (12-14 FT) were qualified as non-detect (UJ).

- The %D for the CCVs analyzed and reported with these samples on 07/02/2018 were within acceptance limits for all target VOCs with the exception of carbon tetrachloride (26.6%), bromodichloromethane (20.7%), dibromochloromethane (22.2%), and bromoform (35.1%).

Qualification: Non-detect results for carbon tetrachloride, bromodichloromethane, dibromochloromethane, and bromoform in samples SB4 (0-2 FT), SB3 (0-2 FT), and SB1 (0-2 FT) were qualified as non-detect (UJ).

- The %D for the CCVs analyzed and reported with these samples on 07/02-03/2018 were within acceptance limits for all target VOCs with the exception of carbon tetrachlororide (26.2%), bromodichloromethane (20.9%), trans-1,3-dichloropropene (21.1%), dibromochloromethane (22.8%), and bromoform (37.4%).

Qualification: Non-detect results for carbon tetrachlororide, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, and bromoform in sample SB1 (12-14 FT) were qualified as non-detect (UJ).

- The %D for the CCVs analyzed and reported with these samples on 07/03/2018 were within acceptance limits for all target VOCs with the exception of carbon tetrachloride (28.4%), bromodichloromethane (22.1%), trans-1,3-dichloropropene (20.9%), dibromochloromethane (21.6%), and bromoform (36.0%).

Qualification: Non-detect results for carbon tetrachloride, bromodichloromethane, trans-1,3-dichloropropene, dibromochloromethane, and bromoform in sample in sample SB2 (12-14 FT) were qualified as non-detect (UJ).

Surrogates –All surrogate percent recoveries were within the control limits with the exception of dibromofluoromethane in sample SB3 (0-2 FT).

Qualification: Non-detect results for dichlorodifluoromethane, chloromethane, vinyl chloride, bromomethane, chloroethane, trichlorofluoromethane, 1,1-dichloroethene, trichlorotrifluoroethane, carbon disulfide, acrolein, methylene chloride, acetone, trans-1,2-dichloroethene, methyl t-butyl ether, 1,1-dichloroethane, acrylonitrile, cis-1,2-dichloroethene, 2,2-dichloropropane, bromochloromethane, chloroform, carbon tetrachloride, tetrahydrofuran, 1,1,1-trichloroethane were qualified as estimated (UJ) in sample SB3 (0-2 FT).

Internal Standard (IS) Area Performance – Samples exhibited acceptable area counts for all internal standards with the exception of 1,4-dichlorobenzene-d4 in samples SB2 (0-2 FT) and SB4 (0-2 FT).

Qualification: Non-detect results for dichlorodifluoromethane, chloromethane, vinyl chloride, bromomethane, chloroethane, trichlorofluoromethane, 1,1-dichloroethene, trichlorotrifluoroethane, carbon disulfide, acrolein, methylene chloride, acetone, trans-1,2-dichloroethene, methyl t-butyl ether, 1,1-dichloroethane, acrylonitrile, cis-1,2-dichloroethene, 2,2-dichloropropane, bromochloromethane, chloroform, carbon tetrachloride, tetrahydrofuran, 1,1,1-trichloroethane were qualified as estimated (UJ) in samples SB2 (0-2 FT) and SB4 (0-2 FT).

MS/MSD – Sample SB4 (0-2 FT) (Lab Sample ID: CA80472) was spiked and analyzed as MS/MSD samples. Percent recovery and RPD were within QC limits with the exception of acetone (40% %R and 40% RPD), bromoform (58% and 60% %R), tert-butyl alcohol (69% and 69%), and trichlorofluoromethane (63% & 53% %R).

Qualification: The non-detect results for acetone, bromoform, tert-butyl alcohol, and trichlorofluoromethane were qualified as estimated (UJ) in sample SB4 (0-2 FT).

Method Blank – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – Trip Blank Low (Lab Sample ID: CA80476) was submitted with this sample set. Target VOCs were non-detect in the Trip Blank Low sample with the exception of acetone (140 µg/Kg) and toluene (1.7 µg/Kg).

Qualification: Results for acetone were qualified as non-detect (U) in samples SB2 (0-2 FT), SB3 (0-2 FT), and SB4 (0-2 FT). Results for acetone were qualified as non-detect (U and reported to the RL) in samples SB1 (0-2 FT) and SB4 (12-14 FT). Results for toluene were qualified as non-detect (U and reported to the RL) in samples SB1 (0-2 FT) and SB4 (0-2 FT).

– Trip Blank High (Lab Sample ID: CA80475) was submitted with this sample set. VOCs were non-detect in the HL TB sample with the exception of toluene (75 µg/Kg). Results for toluene in the associated samples were non-detect.

Qualification: None required.

Field Duplicate — No field blanks were included in this SDG.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

Qualification: None required.

– Sample compound spectra were compared against the laboratory standard spectra.

Qualification: None required.

Compound Quantitation – Samples SB1 (12-14 FT), SB2 (0-2 FT), SB2 (12-14 FT), SB3 (0-2 FT), and SB4 (0-2 FT) required 50x, 250x, and 1000x dilutions; reporting limits were adjusted accordingly. Analyte non-detections were reported as "U"; these results should be considered the equivalent of "PQL U." Analyte detections below the PQL were reported as J qualified results. These J qualifiers were retained unless superseded by a more severe qualifier.

Qualification: None required.

– All sample results were reported within the linear calibration range.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.

SB1 (0-2 FT) (CA80467)

Acetone

Sample weight= 6.26g
Volume purged=5.0ml
DF = 1
%Solid = 84%

$$\text{Concentration } (\mu g/kg)\text{ (dry)} = \frac{26035 \times 50 \times 1 \times 5.0}{382656 \times 0.237 \times 6.26 \times 0.84} = 13.65\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Acetone	14	14	0.0

Data Review Summary –VOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile soil data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80467 at the end of the data validation report.

SB4 (12-14 FT)	CA80473	06/22/2018	PCB	Soil

Summary - Data validation was performed on seven (7) of the eight (8) soil samples as per client instructions. Samples were collected from 310 Grand Concourse, Bronx, NY on 06/22/2018 and submitted for PCBs by SW-846 Method 8082 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 06/05/2018 (ECD3) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 07/02-03/2018 exhibited acceptable %Ds for all compounds.

Qualification: None required.

– All CCVs analyzed on 07/03/2018 exhibited acceptable %Ds for all compounds.

Qualification: None required.

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CA80478 BL) associated with the soil samples extracted on 06/28/2018 and analyzed on 07/02/2018 was free of contamination.

Qualification: None required.

– Method Blank (CA81753 BL) associated with the soil samples extracted on 06/29/2018 and analyzed on 07/02/2018 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CA80478 were analyzed on 07/02/2018. All %RECs were within the laboratory control limits.

Qualification: None required.

– Laboratory Control Sample associated with ID: CA81753 were analyzed on 07/02/2018. All %RECs were within the laboratory control limits with the exception of Aroclor-1260 (32% RPD). Aroclor-1260 was non-detect in the associated samples.

Qualification: None required.

Field Duplicate – No field blanks were included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

Summary - Data validation was performed on seven (7) of the eight (8) soil samples as per client instructions. Only the samples validated in this SDG are listed above. Samples were collected from 310 Grand Concourse, Bronx, NY on 6/22/2018 and submitted for the following analyses:

1.1 Trace Metals-ICP-AES by SW-846 Method 6010C.
1.2 Mercury by SW-846 Method 7471A.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were analyzed within the 6 months holding times for Trace Metals analysis by ICP-AES.

Qualification: None required.

– All soil samples were digested and analyzed within the 28 days holding times for Mercury analysis.

Qualification: None required.

Initial and Continuing Calibration Verification (ICV and CCV) – ICP-AES – All %RECs in the ICV and CCVs were within QC limits.

Qualification: None required.

Mercury – All correlation coefficient for Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs %REC values were within the QC limits.

Qualification: None required.

CRQL Check Standard (CRI) – Copper, calcium, thallium, and iron were outside the control limits. Remaining CRI analyzed %RECs were within the control limits. Thallium results in the field samples were non-detect.

Qualification: Iron, copper, and calcium in samples SB1 (0-2 FT), SB1 (12-14 FT), SB2 (0-2 FT), SB2 (12-14 FT), SB3 (0-2 FT), SB04 (0-2 FT), and SB4 (12-14 FT) were qualified as estimated bias high (J+).

ICP-AES Interference Check Sample – All %REC values were within the QC limits for ICSA and ICSAB.

Qualification: None required.

Blanks (Method Blank, ICB and CCB) – ICP-AES Method Blank-Soil (CA80447) digested on 06/28/2018 contained zinc. Results for zinc in the field samples were greater than the blank contamination.

Qualification: None required.

– All ICB and CCBs contained copper. Copper results were greater than the ICB/CCB contamination.

Qualification: None required.

– Mercury – All ICB and CCBs were free of contamination.

Qualification: None required.

–Mercury – Method Blank (CA80447 BLK) digested on 06/29/2018 was free of contamination.

Qualification: None required.

Field Blank (FB) and Equipment Blank (EB) – Field Blanks were not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – ICP-AES and Mercury – Laboratory Control Sample %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate — No field blanks were included in this SDG.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Sample Duplicate – ICP-AES and Mercury – ICP-AES and Mercury – No Laboratory Duplicate was performed on a sample from this SDG.

Qualification: None required.

ICP-AES Serial Dilution – ICP serial dilution was not performed on a sample from this SDG.

Qualification: None required.

Verification of Instrumental Parameters – The following Forms were present in the data package:

– Method Detection Limits, Form- X.
– ICP-AES Interelement Correction Factors, Form -XIA and Form-XIB.
– ICP-AES Linear Ranges, Form XII.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual calculation

Sample: SB1 (0-2 FT) (CA80467)

Barium

Concentration (mg/Kg) (dry wt.)= $\frac{C \times V \times DF \times 1L \times 1000g \times 1mg}{W \times S \times 1000ml \times 1\ kg \times 1000ug}$

V= 50ml
W= 0.78g
%Solids =84
DF=1.0

Concentration (mg/Kg) (dry wt.)= $\frac{924.75ug/L \times 50 \times 1.0 \times 1L \times 1000g \times 1mg}{0.78 \times 0.84 \times 1000ml \times 1\ kg \times 1000ug}$ = 70.57 mg/kg

Compound	Laboratory (mg/kg)	Validation (mg/kg)	%D
Barium	70.6	70.6	0.0

Data Review Summary – The trace metal results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Trace Metals data package requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCA80467 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
PERFLUORINATED ALKYL ACIDS (PFAS)
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: L2008955
Laboratory: Alpha Analytical,	Date: 03/13/20
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW1	L2008955-01	02/27/2020	PFAS	GW
MW3	L2008955-02	02/27/2020	PFAS	GW
Field Blank	L2008955-03	02/27/2020	PFAS	GW

Summary - Data validation was performed on the data for two (2) groundwater samples and one (1) field blank that were collected from 310 Grand Concourse, Bronx, NY on 02/27/2020 and submitted for PFAS by A2-NY-537-Isotope.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No other discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/28/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within 28 days following sample extraction.

Qualification: None required.

Initial Calibration and Continuing Calibration Verification (CCV) – Initial calibration and continuing calibration verifications met the method acceptance criteria.

Qualification: None required.

Surrogates – M2-6:2FTS in samples MW1 and MW3; and M2-8:2FTS in sample MW1 were outside the QC acceptance limits. The remaining surrogate %REC values were within the QC acceptance limits for the SIM scan. Results for 8:2FTS were non-detect in sample MW1.

Qualification: Results for 6:2FTS were qualified as estimated (J) in samples MW1 and MW3.

Method Blank (MB) and Equipment Blank (EB) – Method Blank (WG1345924-1 BL) associated with the soil samples extracted on 03/01/2020 and analyzed on 03/02/2020. The method blank prepared and analyzed with these samples contained PFPeA (0.432 ng/L) and PFHxA (0.412 ng/L). Field sample results for PFPeA and PFHxA were greater than the concentration in the method blank.

Qualification: None required.

– Method Blank (WG1346167-1 BL) associated with the soil samples extracted on 03/02/2020 and analyzed on 03/03/2020. The method blank prepared and analyzed with these samples contained PFHxA (0.368 ng/L).

Qualification: Result for PFHxA was qualified as non-detect (U) in the Field Blank.

– Field Blank (L2008955-03) associated with the soil samples collected on 02/27/2020 and analyzed on 03/03/2020. The Equipment Blank contained PFHxA (0.343 ng/L). Result for PFHxA was qualified due to method blank contamination. Note: Field blank results were not included in the EDD.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample and Laboratory Control Sample Duplicate associated with Batch ID: WG1345924-2/3 were analyzed on 03/02/2020. All %RECs and RPDs were within the laboratory control limits.

Qualification: None required.

– Laboratory Control Sample and Laboratory Control Sample Duplicate associated with Batch ID: WG1346167-2/3 were analyzed on 03/03/2020. All %RECs and RPDs were within the laboratory control limits.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample MW1 (L2008955-01). All RPDs and %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate – No field duplicate samples were collected in this SDG.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Data Review Summary – The PFAS results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– PFAS data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.

– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: L2008955 at the end of the data validation report. Note: The field blank results were not included in the EDD or the Data Summary Table.

SB8A(5-7)	L2004878-05	02/03/2020	PFAS	Soil
Soil Duplicate	L2004878-06	02/03/2020	PFAS	Soil
Equipment Blank	L2004878-07	02/03/2020	PFAS	Soil
Trip Blank	L2004878-08		PFAS	Soil

Summary - Data validation was performed on the data for six (6) soil samples, one (1) equipment blank, and one (1) trip blank that were collected from 310 Grand Concourse, Bronx, NY on 02/03/2020 and submitted for PFAS by A2-NY-537-Isotope.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No other discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/04/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were extracted within 14 days from sample collection and analyzed within 28 days following sample extraction.

Qualification: None required.

Initial Calibration and Continuing Calibration Verification (CCV) – Initial calibration and continuing calibration verifications met the method acceptance criteria.

Qualification: None required.

Surrogates – MPFBA, M5PFPEA, M3PFBS, M5PFHXA, M4PFHPA, M8PFOA, and M6PFDA in sample SB7A (2-4'); D3NMEFOSAA in samples BSDA(8-10), B6DA(5-7), SB7A(2-4'), and SB8A(1-3); and D5-NETFOSAA in samples BSDA(8-10), B6DA(5-7), and SB7A(2-4') were outside the QC acceptance limits. The remaining surrogate %REC values were within the QC acceptance limits for the SIM scan.

Qualification: Non-detect results for PFBA, PFDA, PFHPA, and PFPEA in sample SB7A (2-4') was qualified as estimated (UJ). Results for PFHxA and PFOA were qualified as estimated (J) in sample SB7A (2-4'). Non-detect results for NMEFOSAA in samples BSDA (8-10), B6DA (5-7), SB7A (2-4'), and SB8A (1-3) were qualified as estimated (UJ). Non-detect results for NETFOSAA in samples B6DA (8-10), B6DA (5-7), and SB7A (2-4') were qualified as estimated (UJ).

Method Blank (MB) and Equipment Blank (EB) – Method Blank (WG1337901-1 BL) associated with the soil samples extracted on 02/06/2020 and analyzed on 02/08/2020. The method blank prepared and analyzed with these samples contained PFPeA (0.531 ng/L) and PFHxA (0.324 ng/L).

Qualification: The results for PFPeA in the equipment blank sample was qualified as non-detect (U). Results for PFHxA in the equipment blank and trip blank samples were qualified as non-detect (U).

– Method Blank (WG1339105-1 BL) associated with the soil samples extracted on 02/10/2020 and analyzed on 02/22/2020. The method blank prepared and analyzed with these samples contained PFBA (0.096 ng/L). Result for PFBA was non-detect in the associated samples.

Qualification: None required.

– Trip Blank (L2004878-08) associated with the soil samples collected on 01/15/2020 and analyzed on 02/05/2020. The Trip Blank contained PFHxA (0.337 ng/L) however this result was qualified as a non-detect due to method blank contamination.

Qualification: None required.

– Equipment Blank (L2004878-07) associated with the soil samples collected on 01/15/2020 and analyzed on 02/05/2020. The Equipment Blank contained PFPeA (0.425 ng/L), PFHxA (0.451 ng/L), PFOA (0.639 ng/L). Results for PFPeA and PFHxA were qualified due to method blank contamination. Results for PFOA in the associated samples were either non-detect or greater than the EB concentration.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample and Laboratory Control Sample Duplicate associated with Batch ID: WG1337901-2/3 were analyzed on 02/08/2020. All %RECs and RPDs were within the laboratory control limits.

Qualification: None required.

– Laboratory Control Sample and Laboratory Control Sample Duplicate associated with Batch ID: WG1339105-2/3 were analyzed on 02/22/2020. All RPDs were within the laboratory control limits. %RECs were outside the control limits for 6:2FTS (144% %R) and 8:2FTS (161% and 146% %R). Results for 6:2FTS and 8:2FTS were non-detect in the associated samples.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample SB8A(5-7) (L2004878-05). All RPDs were within the laboratory control limits. %RECs were outside the laboratory control limits for 8:2FTS (157% and 143% %R). Result for 8:2FTS was non-detect in the parent sample.

Qualification: None required.

Field Duplicate – Soil Duplicate (Lab Sample ID: L2004878-06) was the field duplicate sample of SB8A (1-3) (Lab Sample ID: L2004878-04). The FD sample results for detected PFAS in the FD sample pair are summarized in the table below. The calculated %RPDs between detected FD sample results were less than 50% with the exception of PFOS and Total PFOA/PFOS. Result for NETFOSAA was detected in the field duplicate but was non-detect in the field sample.

Lab Sample ID	L2004878-04		L2004878-06		
Client Sample ID	SB8A (1-3)		Soil Duplicate		
Collection Date	02/03/2020		02/03/2020		
Analyte	**Result (µg/Kg)**	**Flag**	**Result (µg/Kg)**	**Flag**	**%RPD**
NETFOSAA	ND	U	0.1	J	NC
PFHXA	0.08	J	0.07	J	16.7
PFOS	0.84	J	0.25	J	**109.6**
PFOA	0.15	J	0.15	J	0
PFPEA	0.5	J	0.05	J	11.8
PFOA/PFOS, TOTAL	0.99	J	0.4	J	85.6

Qualification: Results for PFOS were qualified as estimated in the field duplicate pair. The results for NETFOSAA in samples SB8A (1-3) and Soil Duplicate were qualified as estimated (UJ/J, respectively).

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Data Review Summary – The PFAS results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– PFAS data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: L2004878 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
PERFLUORINATED ALKYL ACIDS (PFAS)
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: L2002142
Laboratory: Alpha Analytical,	Date: 03/14/20
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
SB9(1-3)	L2002142-01	01/15/2020	PFAS	Soil
SB7(10-12)	L2002142-02	01/15/2020	PFAS	Soil
Trip Blank	L2002142-03	01/15/2020	PFAS	Soil

Summary - Data validation was performed on the data for two (2) soil samples and one (1) trip blank that were collected from 310 Grand Concourse, Bronx, NY on 01/15/2020 and submitted for PFAS by A2-NY-537-Isotope.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No other discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 01/16/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were extracted within 14 days from sample collection and analyzed within 28 days following sample extraction.

Qualification: None required.

Initial Calibration and Continuing Calibration Verification (CCV) – Initial calibration and continuing calibration verifications met the method acceptance criteria.

Qualification: None required.

Surrogates – D3-NMEFOSAA in sample SB7 (10-12) was outside the QC acceptance limits. The remaining surrogate %REC values were within the QC acceptance limits for the SIM scan.

Qualification: Non-detect results for NMEFOSAA in sample SB7 (10-12) was qualified as estimated (UJ).

Method Blank (MB) and Equipment Blank (EB) – Method Blank (WG1332581-1 BL) associated with the soil samples extracted on 01/22/2020 and analyzed on 01/31/2020. The method blank prepared and analyzed with these samples contained PFHxA (0.376 µg/Kg) and PFOA (0.592 µg/Kg). Results for PFHxA was non-detect in the associated samples.

Qualification: The result for PFOA in sample SB7 (10-12) was qualified as non-detect (U).

– Method Blank (WG1331784-1 BL) associated with the soil samples extracted on 01/20/2020 and analyzed on 01/31/2020. The method blank prepared and analyzed with these samples contained PFBA (0.032 ng/L). Result for PFBA was non-detect in the associated samples.

Qualification: None required.

– Trip Blank (L1954044-28) associated with the soil samples collected on 01/15/2020 and analyzed on 02/05/2020. The Trip Blank contained PFHxA (0.346 ng/L). Results for PFHxA were non-detect in the associated field samples.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample and Laboratory Control Sample Duplicate associated with Batch ID: WG1331784-2/3 were analyzed on 01/31/2020. All %RECs and RPDs were within the laboratory control limits with the exception of 8:2FTS (143% %R). Result for 8:2FTS was non-detect in the associated sample.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were not performed on a sample from this SDG.

Qualification: None required.

Field Duplicate – No field duplicate samples were submitted in this SDG.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Data Review Summary – The PFAS results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– PFAS data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: L2002142 at the end of the data validation report.

DATA USABILITY SUMMARY REPORT (DUSR)
SEMI-VOLATILE ORGANIC COMPOUNDS (1,4-DIOXANE)
USEPA Region II –Data Validation

Site: 310 Grand Concourse, Bronx, NY	SDG #: GCF40660
Laboratory: Phoenix Environmental Laboratories, Inc.	Date: 03/12/20
KGS Reviewer: Sherri Pullar	Project: 3020

Client Sample ID	Lab Sample ID	Collection Date	Analysis	Matrix
MW1	CF40660	02/27/2020	SVOC	GW
MW3	CF40661	02/27/2020	SVOC	GW

Summary - Data validation was performed on the data for two (2) groundwater samples that were collected from 310 Grand Concourse, Bronx, NY on 02/27/2020 and submitted for Semi-Volatile Organic (SVOC) SIMs analysis for 1,4-dioxane by SW846 Method 8270C SIM. All sample results in this SDG were subjected to Level 4 data validation.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/28/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning – All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 02/12/2020 (CHEM22)-SIM Scan for 1,4-dioxane exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV)– CCV analyzed on 03/03/2020 (CHEM33)-SIM scan for 1,4-dioxane exhibited acceptable %Ds and RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Surrogates –Surrogate %REC values were within the QC acceptance limits for the SIM scan.

Qualification: None required.

Internal Standard (IS) Area Performance – All samples exhibited acceptable area count for the internal standard for 1,4-dioxane.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB)– Method Blank (CF40660 BLANK)-Scan for 1,4-dixone associated with the samples extracted on 02/28/2020 and analyzed on 03/03/2020 was free of contamination.

Qualification: None required.

Field Duplicate — A duplicate pair was not submitted with this SDG.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – MS/MSD were performed on sample MW1 (CF40660) for 1,4-Dioxane. All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: CF40660 LCS

1,4-Dioxane

Initial Volume: 100ml
Final volume: 1ml

Volume injected: 1µl
Dilution Factor: 1

$$\text{Concentration } (\mu g/L) = \frac{66178 \times 5 \times 1ml \times 1 \times 1000}{806402 \times 0.183 \times 1 \times 1000ml} = 2.241 \mu g/L$$

Compound	Laboratory (µg/L)	Validation (µg/L)	%D
1,4-Dioxane	2.241	2.241	0.0

Data Review Summary –The 1,4-dioxane results reported in this SDG are acceptable as reported and may be used for their intended purpose.
–1,4-dioxane water data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF40660 at the end of the data validation report.

Summary - Data validation was performed on the data for six (6) soil samples that were collected from 310 Grand Concourse, Bronx, NY on 02/03/2020 and submitted for Semi-Volatile Organic (SVOC) SIMs analysis for 1,4-dioxane by SW846 Method 8270C SIM. All sample results in this SDG were subjected to Level 4 data validation.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 02/04/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were extracted within 14 days from sample collection and analyzed within 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning – All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 11/13/2019 (CHEM33)-SIM Scan for 1,4-dioxane exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV)– CCV analyzed on 02/06/2020 (CHEM33)-SIM scan for 1,4-dioxane exhibited acceptable %Ds and RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Surrogates –Surrogate %REC values were within the QC acceptance limits for the SIM scan.

Qualification: None required.

Internal Standard (IS) Area Performance – All samples exhibited acceptable area count for the internal standard for 1,4-dioxane.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB)– Method Blank (CF26146 BLANK)-Scan for 1,4-dixone associated with the soil samples extracted on 02/05/2020 and analyzed on 02/06/2020 was free of contamination.

Qualification: None required.

Field Duplicate — One soil duplicate pair was submitted with this SDG. Sample Soil Duplicate (Lab Sample ID: CF26147) was the field duplicate sample of SB8A (1-3) (Lab Sample ID: CF26145). The results for 1,4-dioxane were non-detect in the FD sample pair.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – MS/MSD were performed on sample SB8A (5-7) (CF26146) for 1,4-Dioxane. All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: CF26146 LCS

1,4-Dioxane

Sample weight= 15.00g
Volume purged=1.0ml
DF = 1

$$\text{Concentration } (\mu g/kg)\ (dry) = \frac{357143 \times 100 \times 1 \times 1000}{742557 \times 1.121 \times 15.00} = 2860.326 \mu g/kg$$

Compound	Laboratory (µg/Kg)	Validation (µg/Kg)	%D
1,4-Dioxane	2861	2861	0.0

Data Review Summary –The 1,4-dioxane results reported in this SDG are acceptable as reported and may be used for their intended purpose.
–1,4-dioxane data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
–Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF26142 at the end of the data validation report.

B5D (10-12)	CF14405	01/15/2020	SVOC	Soil
DUPLICATE	CF14406	01/15/2020	SVOC	Soil

Summary - Data validation was performed on ten (10) soil samples were collected from 310 Grand Concourse, Bronx, NY on 01/15/2020 and submitted for Semi-Volatile Organic (SVOC) analyses by SW846 Method 8270.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 01/16/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning - All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 11/21/2019 (CHEM28) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 01/07/2020 (CHEM28) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 11/18/2019 (CHEM29) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

– Initial calibration curve analyzed on 01/07/2020 (CHEM29) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-35A.

Qualification: None required.

Continuing Calibration Verification (CCV) – The %D for the CCVs analyzed and reported with these samples on 01/21/2019 were within acceptance limits listed in Table 2 in SOP HW-35A.

Qualification: None required.

– The %D for the CCVs analyzed and reported with these samples on 1/17/2020 were within acceptance limits listed in Table 2 in SOP HW-35A.

Qualification: None required.

– The %D for the CCVs analyzed and reported with these samples on 1/17-18/2020 were within acceptance limits listed in Table 2 in SOP HW-35A with the exception hexachlorocyclopentadiene (67.8%), 2,4-dinitrophenol (71.3%), and 4,6-dinitro-2-methylphenol (66.7%).

Qualification: Non-detect results for hexachlorocyclopentadiene, 2,4-dinitrophenol, and 4,6-dinitro-2-methylphenol were qualified as estimated (UJ) in samples B5D(3-5), B5D (10-12), and DUPLICATE.

Surrogates –Surrogate %R values were within the QC acceptance limits with the exception of 2-fluorophenol in sample B5D (3-5) (29%). The surrogates were diluted out from Sample SB7 (2-4) 10x dilution run.

Qualification: Non-detected results for n-nitrosodimethylamine and pyridine were qualified as estimated (UJ) in sample B5D (3-5).

Internal Standard (IS) Area Performance – Samples exhibited acceptable area count for the six internal standards.

Qualification: None required.

Method Blank (MB) – Method Blank (CF14405 BLANK)-Scan associated with the soil samples extracted on 01/16/2020 and analyzed on 01/17/2020 was free of contamination.

Qualification: None required.

Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – No field blanks were submitted with this SDG.

Qualification: None required.

Field Duplicate – One soil duplicate pair was submitted with this SDG. Sample Duplicate (Lab Sample ID: CF14406) was the field duplicate sample of B6D (1-3) (Lab Sample ID: CF14397).

The FD sample results for detected SVOCs in the FD sample pair are summarized in the table below. The calculated %RPDs between detected FD sample results were < 50% (see below).

Lab Sample ID	CF14397		CF14406		
Client Sample ID	B6D (1-3)		Duplicate		
Collection Date	1/15/2020		1/15/2020		
Analyte	**Result (µg/Kg)**	**Flag**	**Result (µg/Kg)**	**Flag**	**%RPD**
2-Methylnaphthalene	120	J	190	J	45
Acenaphthene	530		360		38
Anthracene	990		680		37
Benz(a)anthracene	2100		1400		40
Benzo(a)pyrene	2000		1300		42
Benzo(b)fluoranthene	1600		1100		37
Benzo(ghi)perylene	1000		680		38
Benzo(k)fluoranthene	1500		980		42
Carbazole	390		280		33
Chrysene	2100		1400		40.
Dibenz(a,h)anthracene	260		180	J	36
Dibenzofuran	270		220		20
Fluoranthene	4200		2600		47
Fluorene	390		280		32
Indeno(1,2,3-cd)pyrene	1100		750		38
Napththalene	160	J	180	J	12
Phenanthrene	4600		3100		39
Pyrene	3700		2200		50

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – MS/MSD were performed on sample SB7 (10-14) (CF14403). All %RECs/RPDs were within the laboratory control limits with the exception of benzoic acid (5% and 2% %R; 73.7% RPD), hexachlorocyclopentadiene (28% %R), 2,4-dinitrotoluene (91% %R), and benzidine (18% R; 56.0% RPD).

Qualification: Non-detect results for benzoic acid, hexachlorocyclopentadien, 2,4-dinitrotoluene, and benzidine were qualified as estimated (UJ) in sample SB7 (10-14).

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: B6D (1-3) (CF14397)
Naphthalene

Sample weight= 15.14g
Volume purged=1.0ml
DF = 1
%Solids=88

$$\text{Concentration } (\mu g/kg) \text{ (dry)} = \frac{99021 \times 40 \times 1 \times 1000}{2050303 \times 0.905 \times 15.14 \times 0.88} = 160.22\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Naphthalene	160	160	0.0

Data Review Summary – The SVOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Semivolatile data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF14397 at the end of the data validation report.

Trip Blank Low	CF14408	01/15/2020	VOC	Trip Blank

Summary - Data validation was performed on ten (10) soil samples from 310 Grand Concourse, Bronx, NY on 01/15/2020 and submitted for Volatile Organic (VOC) analyses by SW846 Method 8260C. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 01/16/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times –All samples were analyzed within the 14-day holding time required for soil samples.

Qualification: None required.

GC/MS Tuning - All BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration - Initial calibration curve analyzed on 01/06/2020 (CHEM03) exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV) - The %D for the CCVs analyzed and reported with these samples on 01/16-17/2020 were within acceptance limits for all target VOCs.

Qualification: None required.

Surrogates –All surrogate percent recoveries were within the control limits.

Qualification: None required.

Internal Standard (IS) Area Performance – Samples exhibited acceptable area counts for all internal standards.

Qualification: None required.

MS/MSD – No sample from this SDG was prepared for MS/MSD analysis.

Qualification: None required.

Method Blank – The method blanks prepared and analyzed with these samples were free of contamination.

Qualification: None required.

Field Blanks – Trip Blank Low (Lab Sample ID: CF14408) was submitted with this sample set. Target VOCs were non-detect in the Trip Blank Low sample.

Qualification: None required.

– Trip Blank High (Lab Sample ID: CF14407) was submitted with this sample set. VOCs were non-detect in the HL TB sample.

Qualification: None required.

Field Duplicate — One soil duplicate pair was submitted with this SDG. Sample Duplicate (Lab Sample ID: CF14406) was the field duplicate sample of B6D (1-3) (Lab Sample ID: CF14397). The FD sample results for detected VOCs in the FD sample pair are summarized in the table below. calculated %RPDs between detected FD sample results were < 50% (see below).

Lab Sample ID	CF14397		CF14406		
Client Sample ID	B6D (1-3)		Duplicate		
Collection Date	1/15/2020		1/15/2020		
Analyte	**Result (µg/Kg)**	**Flag**	**Result (µg/Kg)**	**Flag**	**%RPD**
Acetone	23	J	ND	U	NC
Naphthalene	3.4	J	ND	U	NC

Qualification: Results for acetone and naphthalene were qualified as estimated (J/UJ) in FD pair samples (B6D (1-3) and Duplicate).

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

Qualification: None required.

– Sample compound spectra were compared against the laboratory standard spectra.

Qualification: None required.

Compound Quantitation –Analyte non-detections were reported as "U"; these results should be considered the equivalent of "PQL U." Analyte detections below the PQL were reported as J qualified results. These J qualifiers were retained unless superseded by a more severe qualifier.

Qualification: None required.

– All sample results were reported within the linear calibration range.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(DF)}{(Ais)(RRF)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.
DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.

B6D (1-3) (CF14397)

Acetone

Sample weight= 4.63g
Volume purged=5.0ml
DF = 1
%Solid = 88%

$$\text{Concentration } (\mu g/kg)\ (dry) = \frac{12481 \times 50 \times 1 \times 5.0}{256402 \times 0.129 \times 4.63 \times 0.88} = 23.15\ \mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Acetone	23	23	0.0

Data Review Summary –VOC results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Volatile soil data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF14397 at the end of the data validation report.

B5D (10-12)	CF14405	01/15/2020	PCB	Soil
DUPLICATE	CF14406	01/15/2020	PCB	Soil

Summary - Data validation was performed on ten (10) soil samples collected from 310 Grand Concourse, Bronx, NY on 01/15/2020 and submitted for PCBs by SW-846 Method 8082 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 01/16/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 01/14/2020 (ECD1) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 01/19/2020 exhibited acceptable %Ds for all compounds.

Qualification: None required.

– All CCVs analyzed on 01/19-20/2020 exhibited acceptable %Ds for all compounds.

Qualification: None required.

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CF14405 BL) associated with the soil samples extracted on 01/17/2020 and analyzed on 01/19/2020 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CF14405 were analyzed on 01/19/2020. All %RECs were within the laboratory control limits.

Qualification: None required.

Field Duplicate – One soil duplicate pair was submitted with this SDG. Sample Duplicate (Lab Sample ID: CF14406) was the field duplicate sample of B6D (1-3) (Lab Sample ID: CF14397). The results for detected PCBs were non-detect in the FD sample pair.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample B5D (10-12) (CF14405). All %RECs were within the laboratory control limits. RPDs were outside the control limits for Aroclor-1016 and Aroclor-1260. Results for Aroclor-1016 and Aroclor-1260 were non-detect in the parent sample.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual Calculation

CF14405 LCS

Aroclor-1016

On Column concentration (B)= 406.725ng
Sample weight= 15.0g

DF= 10
Vi= 5ml
%Solids= 100%

Concentration (µg/kg) (dry) = $\frac{406.725ng \times 10ml \times 5}{15.0g}$ = 1355.75µg/kg

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Aroclor-1016	1360	1360	0.0

Data Review Summary – The PCBs results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– PCBs data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF14397 at the end of the data validation report.

Summary - Data validation was performed on ten (10) soil samples collected from 310 Grand Concourse, Bronx, NY on 01/15/20208 and submitted for Pesticides by SW-846 Method 8081 in accordance with NYSDEC, Analytical Services Protocol (ASP) Format. Only the samples validated in this SDG are listed above.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 01/16/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All samples were extracted within 14 days from sample collection and analyzed within the 40 days following sample extraction.

Qualification: None required.

GC/ECD Instrument Performance Check – 4,4'-DDT and Endrin breakdown exhibited acceptable results.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 01/16/2020 (ECD4) exhibited acceptable %RSD on both columns.

Qualification: None required.

– Initial calibration curve analyzed on 01/20/2020 (ECD7) exhibited acceptable %RSD on both columns.

Qualification: None required.

Continuing Calibration Verification (CCV) – All CCVs analyzed on 01/20/2020 exhibited acceptable %Ds for all compounds on reporting column.

Qualification: None required.

– All CCVs analyzed on 01/20/2020 exhibited acceptable %Ds for all compounds on reporting column.

Qualification: None required.

– All CCVs analyzed on 01/21/2020 exhibited acceptable %Ds for all compounds on reporting column with the exception of beta-BHC and endrin aldehyde. Result for beta-BHC was not reported from this batch.

Qualification: Result for endrin aldehyde was qualified as estimated (J) in sample SB7 (2-4).

– All CCVs analyzed on 01/21/2020 exhibited acceptable %Ds for all compounds on reporting column with the exception of beta-BHC, endosulfan sulfate, and endrin aldehyde. Endrin aldehyde was not reported from this run for sample SB7(2-4).

Qualification: Non-detect results for endosulfan sulfate and beta-BHC were qualified as estimated (UJ) in SB7 (2-4) and SB7 (10-14). Non-detect result for endrin aldehyde in sample SB7 (10-14) was qualified as estimated (UJ).

Surrogates – All surrogates %RECs values for all soil samples were within the laboratory control limits.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB) – Method Blank (CF14405 BL) associated with the soil samples extracted on 01/17/2020 and analyzed on 01/20/2020 was free of contamination.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – Laboratory Control Sample associated with ID: CF14405 LCS was analyzed on 01/20/2020. All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Field Duplicate — One soil duplicate pair was submitted with this SDG. Sample Duplicate (Lab Sample ID: CF14406) was the field duplicate sample of B6D (1-3) (Lab Sample ID: CF14397). The results for pesticides were non-detect in the FD sample pair.

Qualification: None required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) – Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) were performed on sample B5D (10-12) (CF14405). All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Compound Quantitation, Compound Identification and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

–Sample confirmation %D for all samples was <40%.

Qualification: None required.

Manual Calculation

CF14405 LCS

Alpha-BHC

On Column concentration (A) = 39.455ng
Sample Weight= 15.0g
DF = 2
Vi= 5ml
%Solids= 100%

$$\text{Concentration } (\mu g/kg)(dry) = \frac{39.455ng \times 5ml \times 2}{15.0g} = 26.303\mu g/kg$$

Compound	Laboratory (µg/kg)	Validation (µg/kg)	%D
Alpha-BHC	26.3	26.3	0.0

Data Review Summary – The pesticide results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Pesticides data package meet requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF14397 at the end of the data validation report.

DUPLICATE	CF14406	01/15/2020	Metals	Soil

Summary - Data validation was performed on ten (10) soil samples were collected from 310 Grand Concourse, Bronx, NY on 01/15/2020 and submitted for the following analyses:

1.1 Trace Metals-ICP-AES by SW-846 Method 6010C.
1.2 Mercury by SW-846 Method 7471A.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 06/28/2018 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were analyzed within the 6 months holding times for Trace Metals analysis by ICP-AES.

Qualification: None required.

– All soil samples were digested and analyzed within the 28 days holding times for Mercury analysis.

Qualification: None required.

Initial and Continuing Calibration Verification (ICV and CCV) – ICP-AES – All %RECs in the ICV and CCVs were within QC limits.

Qualification: None required.

Mercury – All correlation coefficient for Mercury calibration curve analyzed were ≤0.995.

Qualification: None required.

– All ICVs and CCVs %REC values were within the QC limits.

Qualification: None required.

CRQL Check Standard (CRI) – Mercury was outside the control limits. Remaining CRI analyzed %RECs were within the control limits.

Qualification: Mercury in samples B6D (1-3), B6D (6-8), SB9 (1-3), SB8 (1-3), SB7 (2-4), B5D (3-5), and DUPLICATE were qualified as estimated bias low (J-) and non-detect results were qualified as estimated (UJ) in samples B5D (10-12), SB7 (10-14), and SB8 (5-7).

ICP-AES Interference Check Sample – All %REC values were within the QC limits for ICSA and ICSAB.

Qualification: None required.

Blanks (Method Blank, ICB and CCB) – ICP-AES Method Blank-Soil (CF14397) digested on 01/16/2020 was free of contamination.

Qualification: None required.

– ICP-AES Method Blank-Soil (CF14405) digested on 01/17/2020 was free of contamination.

Qualification: None required.

– All ICB and CCBs were free of contamination.

Qualification: None required.

– Mercury – All ICB and CCBs were free of contamination.

Qualification: None required.

–Mercury – Method Blank (CF14398 BLK) digested on 01/17/2020 was free of contamination.

Qualification: None required.

Field Blank (FB) and Equipment Blank (EB) – Field Blanks were not submitted with this SDG.

Qualification: None required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD) – ICP-AES and Mercury – Laboratory Control Sample %RECs were within the laboratory control limits with the exception of potassium.

Qualification: Result for potassium in sample B5D (10-12) was qualified as estimated (J).

Field Duplicate — One field duplicate pair was included in this SDG. Sample Duplicate (Lab Sample ID: CF14406) was the field duplicate sample of B6D (1-3) (Lab Sample ID: CF14397). Lead had a calculated %RPD > 50% for the duplicate pair and antimony was detect in one field sample and non-detect in the other. The FD sample results are summarized in the table below.

Client Sample ID:	B6D (1-3)		Duplicate		
Lab Sample ID:	CF14397		CF14406		
Date Sampled:	01/15/2020		01/15/2020		
	Result (mg/Kg)		Result (mg/Kg)		RPD (%)
Aluminum	10800		12900		17.7
Antimony	7.2		ND	U	NC
Arsenic	7.65		6.73		12.8
Barium	283	J+	180		44.5
Beryllium	0.54		0.68		23.0
Cadmium	1.69		1.56		8.0
Calcium	58300		57000		2.3
Chromium	25.3		22.7		10.8
Cobalt	7.59		8.63		12.8
Copper	72.1	J	57.3		22.9
Iron	21300		22000		3.2
Lead	874	J-	431		**67.9**
Magnesium	14000	J	14000		0
Manganese	343		345		0.6
Mercury	0.46	J-	0.49	J-	6.3
Nickel	20.3	J	22.7		11.2
Potassium	1820		2010		9.9
Sodium	436	J	716		48.6
Vanadium	31.9		35.8		11.5

Client Sample ID:	B6D (1-3)		Duplicate		
Lab Sample ID:	CF14397		CF14406		
Date Sampled:	01/15/2020		01/15/2020		
	Result (mg/Kg)		Result (mg/Kg)		RPD (%)
Zinc	361		254		34.8

Qualification: Results for lead in the field duplicate pair (B6D (1-3) and Duplicate) were qualified as estimated (J). Results for antimony in the field duplicate pair (B6D (1-3) and Duplicate) were qualified as estimated (J/UJ, respectively).

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD) –Mercury – Matrix Spike (MS) was performed on sample B6D (6-8) (GCF14398). %RECs were within the laboratory control limits.

Qualification: None required.

– ICP-AES – Matrix Spike (MS) was performed on sample B6D (1-3) (GCF14397). %RECs were within the laboratory control limits with the exception of barium, sodium, and lead.

Qualification: Result for barium was qualified as estimated bias high (J+), lead and sodium were qualified as estimated (J) in sample B6D (1-3).

– ICP-AES – Matrix Spike (MS) was performed on sample B5D (10-12) (GCF14405). %RECs were within the laboratory control limits with the exception of manganese.

Qualification: Result for manganese was qualified as estimated (J) in sample B5D (10-12).

Sample Duplicate – ICP-AES and Mercury – Mercury – Laboratory Duplicate was performed on a sample B6D (6-8) (GCF14398). RPD was within laboratory control limits.

Qualification: None required.

– ICP-AES – Laboratory Duplicate was performed on a sample B6D (1-3) (GCF14397). RPD was within laboratory control limits with the exception of copper, magnesium, and nickel.

Qualification: Results for copper, magnesium, and nickel were qualified as estimated (J) in sample B6D (1-3).

– ICP-AES– Laboratory Duplicate was performed on a sample B5D (10-12) (GCF14405). RPD was within laboratory control limits with the exception of manganese.

Qualification: Result for manganese was qualified as estimated (J) in sample B5D (10-12).

ICP-AES Serial Dilution – ICP serial dilution was performed on dissolved sample B6D (1-3) (GCF14397). For all results for which the concentration in the original sample is ≥ 50x the Method Detection Limits (MDL), the serial dilution analysis (a five-fold dilution) was within the acceptable limit (%D ± 10%) with the exception of sodium.

Qualification: Result for sodium in sample B6D (1-3) was qualified as estimated (J).

– ICP serial dilution was performed on dissolved sample B5D (10-12) (GCF14405). For all results for which the concentration in the original sample is ≥ 50x the Method Detection Limits (MDL), the serial dilution analysis (a five-fold dilution) was within the acceptable limit (%D ± 10%) with the exception of barium, cobalt, chromium, copper, potassium, sodium, nickel, and vanadium.

Qualification: Results for barium, cobalt, chromium, copper, potassium, sodium, nickel, and vanadium. in sample B5D (10-12) were qualified as estimated (J).

Verification of Instrumental Parameters – The following Forms were present in the data package:

– Method Detection Limits, Form- X.
– ICP-AES Interelement Correction Factors, Form -XIA and Form-XIB.
– ICP-AES Linear Ranges, Form XII.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

– %Solids for all soil samples in this SDG were >50%.

Qualification: None required.

Manual calculation

Sample: B6D (1-3) (CF14397)

Barium

$$\text{Concentration (mg/Kg) (dry wt.)} = \frac{C \times V \times DF \times 1L \times 1000g \times 1mg}{W \times S \times 1000ml \times 1\ kg \times 1000ug}$$

V= 50ml
W= 0.80g
%Solids =88
DF=1.0

$$\text{Concentration (mg/Kg) (dry wt.)} = \frac{3984.64ug/L \times 50 \times 1.0 \times 1L \times 1000g \times 1mg}{0.80 \times 0.88 \times 1000ml \times 1\ kg \times 1000ug} = 283.0\ mg/kg$$

Compound	Laboratory (mg/kg)	Validation (mg/kg)	%D
Barium	283	283	0.0

Data Review Summary – The trace metal results reported in this SDG are acceptable as reported and may be used for their intended purpose.
– Trace Metals data package requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
– Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF14397 at the end of the data validation report.

B5D (10-12)	CF14405	01/15/2020	SVOC	Soil
DUPLICATE	CF14406	01/15/2020	SVOC	Soil

Summary - Data validation was performed on the data for ten (10) soil samples that were collected from 310 Grand Concourse, Bronx, NY on 01/15/2020 and submitted for Semi-Volatile Organic (SVOC) SIMs analysis for 1,4-dioxane by SW846 Method 8270C SIM. All sample results in this SDG were subjected to Level 4 data validation.

Narrative and Completeness Review – The case narrative and data package were checked for completeness. No discrepancies were noted.

Sample Delivery and Condition – All samples arrived at the laboratory on 01/16/2020 in acceptable condition and temperature and were properly preserved. Proper custody was documented.

Qualification: None required.

Holding Times – All soil samples were extracted within 14 days from sample collection and analyzed within 40 days following sample extraction.

Qualification: None required.

GC/MS Tuning – All DFTPP tunes in the initial and continuing calibrations met the percent relative abundance criteria.

Qualification: None required.

Initial Calibration – Initial calibration curve analyzed on 11/13/2019 (CHEM33)-SIM Scan for 1,4-dioxane exhibited acceptable %RSDs and average RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Continuing Calibration Verification (CCV)– CCV analyzed on 01/17/2020 (CHEM29)-SIM scan for 1,4-dioxane exhibited acceptable %Ds and RRF values for compounds listed in Table 2 in SOP HW-33A.

Qualification: None required.

Surrogates –Surrogate %REC values were within the QC acceptance limits for the SIM scan.

Qualification: None required.

Internal Standard (IS) Area Performance – All samples exhibited acceptable area count for the internal standard for 1,4-dioxane.

Qualification: None required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB)– Method Blank (CF14405 BLANK)-Scan for 1,4-dixone associated with the soil samples extracted on 01/17/2020 and analyzed on 01/17/2020 was free of contamination.

Qualification: None required.

Field Duplicate — One soil duplicate pair was submitted with this SDG. Sample Duplicate (Lab Sample ID: CF14406) was the field duplicate sample of B6D (1-3) (Lab Sample ID: CF14397). The results for 1,4-dioxane were non-detect in the FD sample pair.

Qualification: None required.

Matrix Spike (MS)/Matrix Spike Duplicate (MSD) – MS/MSD were performed on sample B5D (10-12) (CF14405) for 1,4-Dioxane. All %RECs/RPDs were within the laboratory control limits.

Qualification: None required.

Target Compound Identification – All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).

– Sample compound spectra were compared against the laboratory standard spectra.

– No QC deviations were observed.

Compound Quantitation and Reported Detection Limits – All sample results were reported within the linear calibration range.

Qualification: None required.

Manual Calculation

$$Cx = \frac{(Ax)(IS)(VE)(DF)}{(Ais)(RRF)(\text{Volume injected, } \mu L)(V)(\%Solids)}$$

Cx = concentration of analyte as ug/kg
Ax = Area of the characteristic ion for the compound to be measured, counts.
Ais = Area of the characteristic ion for the specific internal standard, counts.
IS = Concentration of the internal standard spiking mixture, ng
RRF= Mean relative response factor from the initial calibration.

DF = Dilution factor calculated. If no dilution is performed, DF= 1
V= Volume for liquids in ml, weight for soils/solids in grams.
VE= final volume of concentrated extract

Sample: CF14405 LCS

1,4-Dioxane

Sample weight= 15.00g
Volume purged=1.0ml
DF = 1

$$\text{Concentration } (\mu g/kg)\ (dry) = \frac{326322 \times 100 \times 1 \times 1000}{669401 \times 1.121 \times 15.00} = 2899.10 \mu g/kg$$

Compound	Laboratory (µg/Kg)	Validation (µg/Kg)	%D
1,4-Dioxane	2899	2899	0.0

Data Review Summary –The 1,4-dioxane results reported in this SDG are acceptable as reported and may be used for their intended purpose.
–1,4-dioxane data package meets the requirement for New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol (ASP) Category B Deliverables.
–Validation qualifiers (if required) were entered into the EDD and a summary of the data are listed in the Data Summary Table for SDG: GCF14397 at the end of the data validation report.
