REVISED MAY 2026

CERTIFICATIONS

I, Timothy K. Hampton, am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Berm Material Management Work Plan was implemented and that all construction activities were completed in substantial conformance with the Department-approved Berm Material Management Work Plan dated September 12, 2024.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department. I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Timothy K. Hampton, of Day Engineering and Geology, D.P.C., am certifying as Owner's Designated Site Representative, and I have been authorized and designated by all site owners to sign this certification for the site.

CONSTRUCTION COMPLETION REPORT

1.0 BACKGROUND AND SITE DESCRIPTION

Lighthouse Pointe Property Associates, LLC entered into a Brownfield Cleanup Agreement (BCA) with the New York State Department of Environmental Conservation (NYSDEC) in June 2020, to investigate and remediate a property located in the Town of Irondequoit, Monroe County, New York. The property will be remediated to restricted residential use. If the final remedy for the Site includes a cover system, it will need to meet the requirement of DER-10.

The site is located in the County of Monroe, New York and consists of eight parcels with a total area of approximately 18.87 acres. The Inland Site is currently comprised of eight parcels; two of the parcels are owned by FRS Properties, LLC, and six of the parcels are owned by Ontario Properties, Inc. Each of the parcels have an address located on Marina Drive. Each of the parcels are located on Monroe County Tax Map 047.18-1, with properties listed as parcels 5.1, 5.2, 6.1, 7.12, 7.2, 7.112, 8.1, and 8.2. The site is bounded by Rochester Yacht Club to the north, Pattonwood Drive to the south, a residential neighborhood and the Lighthouse Pointe Inland East BCP Site to the east, and the Genesee River and the Lighthouse Pointe Riverfront North BCP Site to the west. The boundaries of the site are shown on Figure 1 and Figure 1A (boundaries highlighted blue).

A berm constructed of material that originated from the perimeter of an off-site marina basin had been placed on a portion of the Site. The location of the berm is shown on Figure 2, and it covers an approximate area of 19,318 square feet. In a NYSDEC letter dated September 8, 2023, it was identified that the soil/fill material used to construct the berm needed to be sampled in accordance with DER-10 Section 5.4(e).

On October 13, 2023, DAY submitted a Berm Material Sampling Plan to address the NYSDEC's requirement that the soil/fill material imported (without approval) to the Site will be sampled in accordance with DER-10 Section 5.4(e). In a letter dated January 31, 2024, the NYSDEC conditionally approved the Berm Material Sampling Plan.

In March 2024 the berm material sampling plan was implemented, and the work was documented in a Berm Material Sampling and Analysis Report dated July 8, 2024. During this work, samples of berm material were successfully collected from the ground surface to bottom of the berm at nine test boring locations, and the results of screening did not show field evidence of impact (i.e., no odors, no elevated photoionization detector (PID) readings, no sheen or free product, no staining, etc.).

Analytical laboratory results for berm material samples tested contained concentrations of volatile organic compounds (VOCs), 1,4-dioxane, metals, cyanide, pesticides, and polychlorinated biphenyls (PCBs) that were either non-detect or below respective Restricted Residential Use soil cleanup objectives (SCOs), Commercial Use SCOs and Protection of Groundwater SCOs. The detected concentrations of semi-volatile organic compounds (SVOCs) in the three samples tested were below Commercial Use SCOs. However, one of the three samples contained three SVOCs [i.e., benzo(a)anthracene, benzo(b)fluoranthene and chrysene] that exceeded their respective Restricted Residential Use SCOs and/or Protection of Groundwater SCOs by a factor of 1.8 or less. Per- and polyfluoroalkyl substances (PFAS) detected in each of the three samples tested did not exceed respective Restricted Residential Use SCOs or Commercial Use SCOs. However, the concentrations of PFOS detected in each of the three samples tested (i.e., B-1,2,3, B-4,5,6 and B- 7,8,9) exceeded its Protection of Groundwater SCO by a factor of 5 or less.

2.0 SUMMARY OF SITE REMEDY

2.1 REMEDIAL ACTION OBJECTIVES

Based on the request by the NYSDEC to prepare an Interim Site Management Plan ("ISMP") for the Inland Site, draft/interim Remedial Action Objectives (RAOs)were developed and presented in the Interim Site Management Plan, Lighthouse Pointe Inland (Marsh 2023). The generic RAOs identified in NYSDEC's DER-10 Section 4.1(c) were presented for use for the various media. The generic RAOs are listed below for soil, groundwater, and soil vapor, which are the media impacted at the Site.

2.1.1 Groundwater RAOs

RAOs for Public Health Protection

- Prevent ingestion of groundwater with contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.

RAOs for Environmental Protection

- Restore groundwater aquifer to pre-disposal/pre-release conditions..
- Prevent the discharge of contaminants to surface water.
- Remove the source of ground or surface water contamination.

2.1.2 Soil RAOs

RAOs for Public Health Protection

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of or exposure from contaminants volatilizing from contaminants in soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater or surface water contamination.
- Prevent impacts to biota due to ingestion/direct contact with contaminated soil that would cause toxicity or bioaccumulation through the terrestrial food chain.

2.1.3 Soil Vapor RAOs

RAOs for Public Health Protection

- Mitigate impacts to public health resulting from existing, or the potential for, soil vapor intrusion into buildings at a site.

2.2 DESCRIPTION OF SELECTED REMEDY

The berm material area was remediated in accordance with the remedy approved by the NYSDEC in the Berm Material Management Work Plan dated September 12, 2024.

The factors considered during the selection of the remedy are those listed in 6NYCRR 375-1.8. The following are the components of the selected remedy:

1. Removal and disposal of debris, trash and C&D from the upper one foot of berm material.

Components of the Berm Material Management Work Plan that have been completed include the following:

- Notification to the NYSDEC Project Manager at least seven days prior to the start of fieldwork.
- Site preparation involving mobilization of heavy equipment and air monitoring equipment.
- Removal of large pieces of debris, trash and C&D from the upper one foot of berm material.
- Connection of and layout hoses and nozzles onto existing hose bibs for dust suppression, if needed.
- Further waste characterization laboratory testing, waste profiling of the removed

material.

- Disposal of Debris, Trash and C&D at an appropriate regulated landfill facility.
- Health and safety and community air monitoring.
- Field documentation.
- Preparation of this CCR.

Future actions to be taken to ensure that the berm material remains stabilized and is effective at mitigating potential exposure include the following:

- Inspect the berm area annually.
- Reapply additional commercially available bagged topsoil and grass seed as deemed necessary to ensure vegetative growth over entire berm.
- Remove any additional pieces of debris, trash and C&D greater than six inches longest axis from the surface of the berm material should it be observed, and dispose of the removed material in accordance with applicable regulations.
- Further address the berm material in the final site remedy.

3.0 DESCRIPTION OF REMEDIAL ACTIONS PERFORMED

Interim remedial activities completed at the Site were conducted in accordance with the NYSDEC-approved Berm Material Management Work Plan for the Portion of Lighthouse Point Inland Site dated September 12, 2024, and the NYSDEC conditional approval letter dated November 13, 2024. All deviations from this Work Plan are noted below.

3.1 GOVERNING DOCUMENTS

The Berm Material Management Work Plan included a site-specific Health and Safety Plan (HASP) with a Community Air Monitoring Plan (CAMP). These governing plans were adhered to during the execution of the Berm Material Management Work Plan.

3.1.1 Site Specific Health & Safety Plan (HASP)

All remedial work performed under this Berm Material Management Work Plan was in full compliance with governmental requirements, including Site and worker safety requirements mandated by Federal OSHA. On-site workers were required to have OSHA 1910.120 Hazardous Waste Operations and Emergency Response (HAZWOPER) Certification.

The Health and Safety Plan (HASP) was complied with for the remedial and invasive work performed at the Site. Accidents and/or reportable HASP incidents did not occur during the implementation of the work described herein.

3.1.2 Community Air Monitoring Plan (CAMP)

The CAMP implemented during the fieldwork was included within the HASP that was provided in Appendix A of the approved Berm Material Management Work Plan. The CAMP was based on, and conducted in accordance with, the New York State Department of Health (NYSDOH) Generic CAMP included as Appendix 1A of DER-10. In addition, NYSDEC CAMP special requirements were implemented when work was completed within 20 feet of potentially exposed populations or occupied structures (i.e., in proximity to the residential properties that adjoin the work area to the east). Total volatile organic compound (VOC) and particulate concentrations were monitored between the work zone

and residential properties to the east and at downwind perimeter locations during work that involved the disturbance of contaminated material and potentially contaminated material (i.e., during debris, trash and C&D removal, and during regrading work). Each day, wind directions were monitoring and prior to intrusive work and throughout the duration of the intrusive work. Particulates in air were monitored using Thermo Fisher Scientific DataRAM real time aerosol monitors. An initial action level of 100 micrograms per cubic meter ($\mu g/m^3$) above background for the 15-minute average was used during CAMP monitoring for particulates. Total VOCs in air was measured using MiniRAE 2000 photoionization detectors (PIDs). A PID action level of 5 ppm above background for the 15-minute average was used during CAMP monitoring for VOCs. The daily CAMP Air Monitoring Report Sheets with field figures are included in Appendix A. Results of the CAMP monitoring are further discussed in Section 3.2.5.

3.2 REMEDIAL PROGRAM ELEMENTS

3.2.1 Contractors and Consultants

Contractors and consultants that performed work as part of the supplemental polishing phase remedial actions, and a description of their associated tasks, are provided below.

- Victor Excavating (Victor) – Site preparation activities; removal of debris, trash and C&D from the upper one foot of berm material using an excavator equip with a trommel bucket; removal of arborvitae trees and staging; loading of debris, trash and C&D into roll-off dumpsters; and re-grading of the berm.
- Casella Waste Systems, Inc. (Casella) – Provide roll-off dumpsters; prepare waste profile; and provide waste hauling from Site to Landfill.
- Waste Management (WM) – Company that operates the disposal facility and approved the waste profile for the removed material.
- High Acres Landfill – Disposal facility where the debris, trash and C&D removed from the upper one foot of berm was disposed.
- ALS Environmental (ALS) – Analytical laboratory testing services.

3.2.2 Site Preparation

The NYSDEC Project Manager was notified at least seven days prior to the start of the fieldwork. Prior to beginning the removal of debris, trash and C&D, roll-off dumpsters were delivered to the Site, and a utility stakeout was completed that included mark out of buried utilities. Each roll-off dumpster was fitted with a poly plastic liner prior to being used. In addition, One excavator was equipped with an Okada TMB70 Trommel Bucket, and another excavator was equipped with a toothless grading bucket. Hoses connected to a water supply were set up in proximity to the berm material, in case dust suppression became necessary. No erosion controls were installed prior to the work.

3.2.3 General Site Controls

- Site security: Access to the Site was limited to staff, workers and pertinent agencies involved with the project.
- Job site record keeping: Daily site activities were recorded by Day Engineering, P.C. (DAY) in a field logbook, including names of on-Site personnel. Copies of these field notes are provided in Appendix B.
- Equipment decontamination and residual waste management: Trucks and heavy equipment (excavators) arrived on-Site clean. Prior to leaving the Site, the trucks and heavy equipment were cleaned as necessary to remove visible dirt/debris. Each roll-off dumpster was lined with plastic sheeting and covered with a tarp prior to being transported from the Site to the disposal facility.
- Stockpile methods: The berm material consists of a soil matrix with lesser amounts of debris, trash and C&D. The debris, trash and C&D were removed from the upper one foot of berm material using a screening process further defined in this CCR. The resulting debris, trash and C&D that included some adhered soil were direct-loaded into the lined roll-off dumpsters using the excavator.

3.2.4 Nuisance Controls

- Truck wash and egress housekeeping: Heavy equipment (i.e., excavators) generally stayed within the limits of the berm. The excavators were cleaned over and at the west toe of the berm material to remove visible dirt/debris before being taken off-

Site. The cleaning involved use of shovels and brushes to remove the berm material from the excavators that consisted primarily of soil. The soil removed from the excavators was placed on the berm material area. Trucks that were on-Site did not encounter the berm material and therefore did not need to be decontaminated or washed.

- Dust control: Dust generation during intrusive activities completed during the implementation of the remedial actions was monitored by DAY as part of the CAMP, and the results are discussed in Section 3.2.5. Hoses were attached to hose bibs near the berm material to allow for dampening, if necessary, to control airborne dust.
- Odor control: No nuisance odors were encountered during the field activities.
- Responding to complaints: No complaints were received during the implementation of the remedial actions.

3.2.5 CAMP Results

CAMP monitoring was completed by DAY during all ground intrusive activities. Continuous perimeter and work zone air monitoring was conducted using a Thermo Scientific, Inc. DataRAM particulate detection monitor and MiniRAE 2000 PID during the removal of debris, trash and C&D, handling activities, and final grading. The CAMP monitoring was conducted between December 9, 2024 and December 13, 2024, which is when active material excavation, material screening and material regrading were being conducted at the berm. At the beginning of each workday, and in accordance with CAMP Special Requirements, one CAMP monitoring station was set up between the work zone and the adjoining residential properties east of the Site. A second CAMP monitoring station was set up downwind of the work zone. Wind direction and work areas were taken into account on a daily basis when selecting monitoring stations. Air monitoring was also conducted within the work zone. Prior to the commencement of debris, trash and C&D removal each day, background volatile organic compound (VOC) vapor and particulate levels were recorded upwind of the work zone.

Information pertaining to the CAMP monitoring is summarized in Table A below

Table A – CAMP Monitoring Summary

Monitoring Station	Date	Intrusive Activities Being Performed	Range of 15-Minute TWA VOC Readings (PPM)	Range of 15-Minute TWA Particulate Readings (mg/m3}	Corrective Actions
CAMP 1	12/9/2024	excavate and screen berm material	0.0 – 0.0	0.000 – 0.003	Not Required
CAMP 2	12/9/2024	excavate and screen berm material	0.0 – 0.0	0.000 – 0.003	Not Required
CAMP 1	12/10/2024	excavate and screen berm material	0.0 – 0.0	0.000 – 0.000	Not Required
CAMP 2	12/10/2024	excavate and screen berm material	0.0 – 0.0	0.000 – 0.001	Not Required
CAMP 1	12/11/2024	excavate, screen and grade berm material	0.0 – 0.0	0.000 – 0.003	Not Required
CAMP 2	12/11/2024	excavate, screen and grade berm material	0.0 – 0.0	0.000 – 0.019	Not Required
CAMP 1	12/12/2024	excavate, screen and grade berm material	0.0 – 0.0	0.000 – 0.000	Not Required
CAMP 2	12/12/2024	excavate, screen and grade berm material	0.0 – 0.0	0.000 – 0.000	Not Required
CAMP 1	12/13/2024	excavate, screen and grade berm material	0.0 – 0.0	0.000 – 0.000	Not Required
CAMP 2	12/13/2024	excavate, screen and grade berm material	0.0 – 0.0	0.000 n- 0.001	Not Required

During field activities, CAMP action levels were not exceeded. Since CAMP action levels were not exceeded and there was no visible fugitive dust leaving the work zone, dust suppression was not necessary. Copies of field data sheets relating to the CAMP are provided in Appendix A.

3.2.6 Reporting

Project updates were occasionally provided to the NYSDEC via phone call and email from DAY. In general, updates included a summary of completed work and anticipated upcoming activities.

A DAY representative took field notes on work completed each day, which are included in electronic format in Appendix B.

The digital photo log required by the Berm Material Management Work Plan is included in electronic format in Appendix C.

3.3 CONTAMINATED MATERIALS REMOVAL

The location of the berm where debris, trash and C&D were removed, is shown in Figure 2.

3.3.1 Debris, Trash and C&D Removal

Between December 9, 2024 and December 13, 2024, an excavator equipped with an Okada TMB70 Trommel Bucket was used to remove pieces of debris, trash and C&D from the upper one foot of berm material. Segregation of this material was conducted over the berm material so that the soil portion of the material was placed in the same general area where it originated. The debris, trash and C&D with some adhered soil were direct loaded into ten lined roll-off bins provided by Casella. A laser level and measuring stick were used to verify that the upper one foot of berm material had been screened for debris, trash and C&D material. Following the removal of debris, trash and C&D, a different excavator equipped with a grading bucket was used to grade the soil to stabilize the berm and minimize erosion.

During a July 11, 2025 site visit, the NYSDEC noted that areas of the berm had not been stabilized, and that debris could be observed protruding from the berm soils. Some areas of the berm surface, primarily under existing tree canopy, were noted to be sparsely vegetated. As a result, the initial April 2025 submission of this CCR was disapproved. To address this condition, the following actions were taken:

On October 9, 2025, large pieces of visible solid waste greater than 6 inches in size (wood, plastic, concrete, asphalt, etc.) on the surface of the berm were removed by hand and disposed as solid waste via the site owner's solid waste dumpsters. It is estimated that less than three cubic yards of solid waste greater than 6 inches in size were removed.

Between October 9, 2025 and October 14, 2025, a total of 220 bags of Scotts commercial topsoil (0.75-cubic yard/bag) were used to dress the ground surface ($\leq$2 inches

of topsoil) over sparsely vegetated areas of the berm, primarily beneath existing tree canopy. Approximate areas where the topsoil was applied are shown on Figure 3. Subsequently, numerous bags of Scotts grass seed were applied to the newly topsoiled areas of the berm and covered with numerous bales of straw to establish additional vegetative growth and stabilize the berm as a measure to minimize erosion.

As a result of the action taken as described in this section, the upper screened berm material is considered interim cover. If a cover system is proposed as part of the final remedy, additional evaluation and measures will be needed in the area off the berm.

3.3.1.1 Disposal Details

As part of the previous investigation of the berm material, samples were collected from nine test borings in the berm on March 7, 2024. The analytical laboratory results of these samples were used to assist in characterization the waste. These previous samples included the following:

- Discrete B-1 through B-9, which were analyzed for:
  - Target compound list (TCL) VOCs and tentatively identified compounds (TICs).
- Composite samples B-1,2,3, B-4,5,6, and B-7,8,9, which were analyzed for:
  - TCL semi-volatile organic compounds (SVOCs),
  - 1,4-dioxane,
  - target analyte list (TAL) metals,
  - cyanide,
  - polychlorinated biphenyls (PCBs),
  - pesticides and
  - per- and polyfluoroalkyl substances (PFAS).

The previous test results for samples described above were provided to Waste Management to assist in obtaining waste disposal approvals. Based on its review of the previous test results, Waste Management requested a sample from each roll-off be tested for toxicity characteristic leaching procedure (TCLP) lead to further characterize the material. On January 8, 2025, a DAY representative collected one discrete sample from each roll-off bin

(designated as samples RO-1 through RO-10). These 10 samples were tested for TCLP lead. Based on these test results, the material was characterized as non-hazardous regulated solid waste, and waste profile #128876NY was generated. Copies of ALS's analytical data packages for the previous samples collected from the berm on March 7, 2024, and the ten supplemental samples collected from the ten roll-offs on January 8, 2025, are included in Appendix D.

Between February 19, 2025 and March 12, 2025, Casella loaded the 10 roll-off bins containing the non-hazardous regulated solid waste onto its NYSDEC Part 364 Permitted trucks (Permit #8A-1099), and transported the roll-offs off-site to off-Site to High Acres Landfill, where the material was disposed under waste profile #128876NY. DAY was on-site during load out activities on February 19, 2025. A total of approximately 114.54 tons of debris, trash and C&D with some adhered soil was disposed.

Copies of waste transport and disposal documentation are provided in Appendix E. In addition, Appendix E includes a letter from Casella indicating that the roll-off dumpsters were free of debris and properly covered before being transported off-site.

As part of regular service, Casella emptied the Site owner's solid waste dumpsters into a Part 364 permitted Casella truck, which included the large pieces of visible solid waste greater than 6 inches in size (wood, plastic, concrete, asphalt, etc.) that were removed from the surface of the berm. Casella's truck then transported and dropped off the material at a regulated solid waste transfer station, which was later disposed at one of the following regulated landfill facilities: Mill Seat Landfill; Ontario County Landfill; or Highland Landfill.

3.4 DEVIATIONS FROM THE REMEDIAL ACTION WORK PLAN

The Berm Material Management Work Plan stated that the ten arborvitae trees would remain on the berm; however, they were removed in order to accommodate the excavator and were unable to be replanted. The NYSDEC was notified of this deviation on December 11, 2024 via email.

During a July 11, 2025 site visit, the NYSDEC noted that areas of the berm had not been stabilized, and that debris could be observed protruding from the berm soils. Some areas

of the berm surface, primarily under existing tree canopy, were noted to be sparsely vegetated. As a result, the initial April 2025 submission of this CCR was disapproved by the NYSDEC in a letter dated August 22, 2025. On October 9, 2025, a proposed scope of work and schedule were provided to the NYSDEC in an email from DAY. The proposed scope of berm stabilization work included the following:

- large pieces of visible solid waste greater than 6 inches in size (wood, plastic, etc.) on the surface of the berm will be removed by hand and disposed as a solid waste.
- In areas deemed necessary, imported commercially available bagged topsoil will be used to dress the ground surface over a sparsely vegetated area beneath an existing tree that was noted, and possibly at other similar areas deemed necessary by the QEP to supplement vegetative growth.
- A statement will be added to the revised CCR, such as the following: "The upper screened berm material is considered interim cover. If a cover system is being proposed as part of the final remedy, additional evaluation and measures will be needed in the area of the berm."

In an email dated October 9, 2025, the NYSDEC conditionally approved the proposed scope of berm stabilization work. This work was completed as described in Section 3.3.

No other major deviations were made from the work proposed in the Berm Material Management Work Plan.

Analytical Laboratory Packages

June 11, 2024 Service Request No:R2401914

Mr. Jeff Danzinger
Day Environmental, Inc.
1563 Lyell Avenue
Rochester, NY 14606

Laboratory Results for: Shumway Marina

Dear Mr.Danzinger,

Enclosed are the results of the sample(s) submitted to our laboratory March 08, 2024
For your reference, these analyses have been assigned our service request number **R2401914.**

All testing was performed according to our laboratory's quality assurance program and met the requirements of the TNI standards except as noted in the case narrative report. Any testing not included in the lab's accreditation is identified on a Non-Certified Analytes report. All results are intended to be considered in their entirety. ALS Environmental is not responsible for use of less than the complete report. Results apply only to the individual samples submitted to the lab for analysis, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s), and represented by Laboratory Control Sample control limits. Any events, such as QC failures or Holding Time exceedances, which may add to the uncertainty are explained in the report narrative or are flagged with qualifiers. The flags are explained in the Report Qualifiers and Definitions page of this report.

Please contact me if you have any questions. My extension is 7476. You may also contact me via email at Chris.Leavy@alsglobal.com.

Respectfully submitted,

Sample Matrix: Soil, Water

Service Request: R2401914
Date Received: 03/08/2024

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.
Manual Integrations may have been used in the quantitation of the results in this report. Manual Integrations are readily identified in the raw data on the Quantitation Reports (Organics) by the automatic placement of an “m” next to the sample result. For Ion Chromatography, the manual integrations are identified by the automatic placement of “manipulated” or "manually integrated" in the upper left corner of the chromatogram (Hexavalent Chromium) or “M” by the result in the “Type” column (anions). The reason for the manual integration is noted on the “after” chromatogram, which is found with the original chromatogram and quantitation report. All integrations follow the lab SOP ADM-INT “Manual Integration.”

Sample Receipt:

Fourteen soil, water samples were received for analysis at ALS Environmental on 03/08/2024. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivolatiles by GC/MS:

Method 8270D, 03/19/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8270D, 835431: The reporting limit is elevated for one or more analytes. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The extract was highly colored and viscous, which indicated the need to perform a dilution prior to injection into the instrument. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. The result(s) are flagged to indicate the matrix interference.

Semivoa GC:

Method 8081B, 03/26/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.
Method 8081B, 836187s: The control limits were exceeded for one or more surrogates due to matrix interferences. A re-extraction and reanalysis was performed, but produced similar results. The re-extraction was performed out of holding time. No further corrective action was required.

Method 8081B, 03/26/2024: The control limits were exceeded for analytes in the Continuing Calibration Verification (CCV). The QC failure was most likely due to the composition of the sample(s) immediately preceding the failing CCV. In order to protect the integrity of the instrument, no further corrective action was taken. Results should be considered estimated.

Method 8081B, 03/12/2024: The control limits for matrix spike recovery of one or more of the spiked analytes is not applicable. The analysis of this sample required a dilution such that the added spike concentration was diluted outside of a useable level. Matrix spikes which have been diluted have been flagged with a "D". No further corrective action was required.
Method 8081B, 03/12/2024: The control limit was exceeded for one or more surrogates in the Continuing Calibration Verification (CCV). The surrogates were within acceptance limits for the associated field samples. The data quality was not significantly affected and no further corrective action was taken.

Method 8081B, 03/12/2024: The control limits were exceeded for analytes in the Continuing Calibration Verification (CCV). The

Approved by _____ Date 03/29/2024

QC failure was most likely due to the composition of the sample(s) immediately preceding the failing CCV. In order to protect the integrity of the instrument, no further corrective action was taken. Results should be considered estimated.

Method 8081B, 834826: The reporting limit is elevated for one or more analytes. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The extract was highly colored and viscous, which indicated the need to perform a dilution prior to injection into the instrument. Clean-up of the extract was performed within the scope of the method, but did not eliminate enough of the background components to prevent dilution. The result(s) are flagged to indicate the matrix interference.

Method 8081B: The lower control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV) on one detector. All recoveries were acceptable on the secondary detector. Since there were no detections of the analyte(s) above the MRL in the associated field samples, the quantitation is not affected. The data quality was not significantly affected and no further corrective action was taken.

Method 8081B, 835457: The control limits were exceeded for one or more surrogates due to suspected matrix interferences. Sample is scheduled for re-extraction.
The RPD between the LCS and the LCSD was greater than the RPD limit. The percent recovery limit was met for both the LCS and the LCSD.

Method 8082A, 03/25/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Due to a limitation in LIMS, PCBs in this report are flagged for holding time. The holding time for PCB's is 1 year and the PCB results should not be flagged on the final report.

Method 8082A, 03/20/2024: The upper control limit was exceeded for one or more analytes in the Continuing Calibration Verification (CCV). The field samples analyzed in this sequence did not contain the analyte(s) in question above the Method Reporting Limit (MRL). Since the exceedance equates to a potential high bias, the data quality was not significantly affected and no further corrective action was taken.

Method 8082A, 835456: The control limits were exceeded for one or more surrogates due to suspected matrix interferences. Sample was scheduled for re-extraction.

Metals:

No significant anomalies were noted with this analysis.

General Chemistry:

No significant anomalies were noted with this analysis.

Subcontracted Analytical Parameters:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

No significant anomalies were noted with this analysis.

REPORT QUALIFIERS AND DEFINITIONS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.
MRL LOQ	Method Reporting Limit. Also known as: Limit of Quantitation (LOQ) The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
MDL	Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
LOD	Limit of Detection. A value at or above the MDL which has been verified to be detectable.
ND	Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Rochester Lab ID # for State Accreditations[1]

NELAP States
Florida ID # E87674
New Hampshire ID # 2941
New York ID # 10145
Pennsylvania ID# 68-786
Virginia #460167

Non-NELAP States
Connecticut ID #PH0556
Delaware Approved
Maine ID #NY01587
North Carolina #36701
North Carolina #676
Rhode Island LAO00333

[1] Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state or agency requirements. The test results meet requirements of the current NELAP/TNI standards or state or agency requirements, where applicable, except as noted in the case narrative. Since not all analyte/method/matrix combinations are offered for state/NELAC accreditation, this report may contain results which are not accredited. For a specific list of accredited analytes, contact the laboratory. To verify NH accredited analytes, go to https://www4.des.state.nh.us/CertifiedLabs/Certified-Method.aspx.

PREPARATION METHODS

The preparation methods associated with this report are found in these tables unless discussed in the case narrative.

INORGANIC

Water/Liquid Matrix

Analytical Method	Preparation Method
200.7	200.2
200.8	200.2
6010C or 6010D	3005A/3010A
6020A or 6020B	ILM05.3
9034 Sulfide Acid Soluble	9030B
SM 4500-CN-N-2016 Amenable and Residual Cyanide	SM 4500-CN-G and SM 4500-CN-B,C-2016
SM 4500-CN-E WAD Cyanide	SM 4500-CN-I

Solid/Soil/Non-Aqueous Matrix

Analytical Method	Preparation Method
6010C or 6010D	3050B
6020A or 6020B	3050B
6010C or 6010D TCLP (1311) extract	3005A/3010A
6010C or 6010D SPLP (1312) extract	3005A/3010A
7199	3060A
300.0 Anions/ 350.1/ 353.2/ SM 2320B/ SM 5210B/ 9056A Anions	DI extraction
For analytical methods not listed, the preparation method is the same as the analytical method reference.	

ORGANIC

Preparation Methods for Organic methods are listed in the header of the Results pages.

Regarding "Bulk/5035A":
For soil/solid samples submitted in soil jars for Volatiles analysis, the prep method is listed as "Bulk/5035A". The lab follows the closed-system EPA 5035A protocols once the sample is transferred to a sealed vial, but collection in bulk in soil jars does not follow the collection protocols listed in EPA 5035A. In accordance with the NYSDOH technical notice of October 2012, all results or reporting limits <200 ug/kg are to be considered estimated due to potential low bias.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Duplicate Matrix Spike Summary
Polychlorinated Biphenyls (PCBs) by GC using Microwave Extraction

Sample Name:	B-1,2,3	**Units:**	ug/Kg
Lab Code:	R2401914-005	**Basis:**	Dry
Analysis Method:	8082A		
Prep Method:	EPA 3546		

		Matrix Spike			Duplicate Matrix Spike					
		RQ2402543-06			RQ2402543-07					
Analyte Name	**Sample Result**	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
Aroclor 1016	21 U	140	197	71	142	198	72	26-137	2	30
Aroclor 1260	21 U	167	197	85	196	198	99	30-156	16	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Cyanide, Total	3.47	20.6	3.14	545 *	10.4	3.48	199 *	10-159	66*	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Matrix Spike and Matrix Spike Duplicate Data is presented for information purposes only. The matrix may or may not be relevant to samples reported in this report. The laboratory evaluates system performance based on the LCS and LCSD control limits.

Quant Method : I:\ACQUDATA\MSVOA14\Methods\S022624.M
Quant Title : MS#14 - 8260 SOILS 10ml PURGE
QLast Update : Fri Dec 29 10:04:46 2023
Response via : Initial Calibration

Compound	R.T.	QIon	Response	Conc	Units		Dev(Min)
Internal Standards							
1) Pentafluorobenzene	5.356	168	396735	50.00	ug/L		0.00
42) 1,4-Difluorobenzene	6.484	114	605987	50.00	ug/L		0.00
70) d5-Chlorobenzene	9.934	117	513022	50.00	ug/L		0.00
87) 1,4-Dichlorobenzene-d4	12.037	152	262709	50.00	ug/L		0.00
System Monitoring Compounds							
44) SURR4,Dibrflmethane	5.222	113	39249	10.78	ug/L		0.01
Spiked Amount 50.000	Range 63 - 138		Recovery = 21.56%#				
47) SURR1,1,2-dichloroetha...	5.770	65	46127	9.60	ug/L		0.00
Spiked Amount 50.000	Range 67 - 128		Recovery = 19.20%#				
64) SURR3,Toluene-d8	8.367	98	155963	10.55	ug/L		0.00
Spiked Amount 50.000	Range 66 - 138		Recovery = 21.10%#				
69) SURR2,BFB	11.044	95	52358	9.92	ug/L		0.00
Spiked Amount 50.000	Range 31 - 154		Recovery = 19.84%#				
Target Compounds							Qvalue
2) Dichlorodifluoromethane	1.119	85	16449m	3.206	ug/L		
3) Chloromethane	1.290	50	20150m	3.217	ug/L		
4) Vinyl Chloride	1.326	62	21712m	3.542	ug/L		
5) Bromomethane	1.564	94	14462	3.203	ug/L		99
6) Chloroethane	1.631	64	16881	3.536	ug/L		98
7) Freon 21	1.783	67	30943	3.155	ug/L		97
8) Trichlorofluoromethane	1.820	101	25835	3.295	ug/L		90
9) Diethyl Ether	2.058	59	12302	3.766	ug/L		88
10) Freon 123a	2.064	67	16988	3.784	ug/L		95
11) Freon 123	2.119	83	20132	4.137	ug/L		89
12) Acrolein	2.174	56	15760	17.783	ug/L		91
13) 1,1-Diclethene	2.241	96	13787	4.239	ug/L	#	84
14) Freon 113	2.241	101	14478	4.326	ug/L		83
15) Acetone	2.320	43	14263	6.154	ug/L		96
16) 2-Propanol	2.466	45	29630	60.244	ug/L		84
17) Iodomethane	2.381	142	18328	4.614	ug/L		90
18) Carbon Disulfide	2.430	76	40965	3.477	ug/L		97
19) Acetonitrile	2.576	41	12266m	13.311	ug/L		
20) Allyl Chloride	2.576	76	7150	3.255	ug/L	#	76
21) Methyl Acetate	2.612	43	19746	3.309	ug/L		91
22) Methylene Chloride	2.704	84	16299	3.954	ug/L	#	86
23) TBA	2.862	59	46365	62.364	ug/L		83
24) Acrylonitrile	2.984	53	35340	19.080	ug/L		98
25) Methyl-t-Butyl Ether	2.990	73	40099	3.716	ug/L		95
26) trans-1,2-Dichloroethene	2.984	96	15549	4.270	ug/L	#	87

QA/QC Report

Client: Day Environmental, Inc. **Service Request:** R2401914
Project: Shumway Marina **Calibration Date:** 2/2/2024

Initial Calibration Summary
Semivolatile Organic Compounds by GC/MS using Microwave Digestion

Calibration ID: RC2400028 **Signal ID:** 1
Instrument ID: R-MS-64

#	Lab Code	Sample Name	File Location	Acquisition Date
