Hazardous Waste Summary:

| | |
|---|---|
| Waste Code: | D000 |
| Waste Description: | Not Defined |

**RIVERDALE CLEANERS (Continued)** **1004760182**

Waste Code: D007
Waste Description: Chromium

Waste Code: D008
Waste Description: Lead

Waste Code: D039
Waste Description: Tetrachloroethylene

Waste Code: D040
Waste Description: Trichloroethylene

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Updated By: AMSERVIS
Site Description: Site Location: The site is located on the corner of Riverdale Avenue and St. Andrews Place in the City of Yonkers, Westchester County. The site is bordered to the south by St. Andrews Place, to the east by residential and commercial buildings, to the north by a mixed commercial and residential building, and to the west by Riverdale Ave. Site Features: The site is 0.2 acres in size and is located on a single tax lot (1.-132-14.16). The site has approximately 120 feet of road frontage along both Riverdale Avenue and St. Andrews Place. The site is developed with a commercial building currently occupied by a non-retail appliance storage space, a laundromat, nail spa, restaurant, deli, and a supermarket. Current Zoning and Land Use: The site is in a city restricted business zone (BR). The restricted business zone excludes residential land use. Past Use of the Site: A portion of the site historically operated as a full-service dry-cleaning facility from approximately 2000 through 2014. Site Geology and Hydrogeology: The site topography slopes to the west and groundwater flow in the area is anticipated to flow to the west towards the Hudson River. Shallow groundwater was encountered during a subsurface investigation beneath a neighboring structure to the north of the site.
Env Problem: Nature and Extent of Contamination: A subsurface soil vapor investigation was completed at the neighboring property to the north of the site (432 Riverdale Avenue) in April 2018. Elevated levels of volatile organic compounds (VOCs) were encountered during this

**RIVERDALE DRY CLEANERS (Continued)** **S125896311**

investigation in both indoor air and sub-slab soil vapor samples. Contaminants of concern include tetrachloroethene (PCE), trichloroethene (TCE), cis-1,2-dichloroethene (DCE), and methylene chloride. A sub-slab depressurization system (SSDS) was installed beneath the building at 432 Riverdale Avenue in March 2019. Environmental Assessment: A Site Characterization (SC) was performed at the site in the Spring of 2022. Soil, groundwater, and soil vapor were analyzed for VOCs. Based on the investigations completed to date, tetrachloroethene (PCE) and associated breakdown compounds are the primary contaminants of concern. Soil: No soil samples were detected above Unrestricted SCOs. Groundwater: Groundwater sample concentrations of PCE up to 32.1 parts per billion (ppb), trichloroethene (TCE) up to 7.38 ppb, and cis-1,2-dichloroethylene (DCE) up to 48.6 ppb were detected on-site. PCE, TCE, and DCE all exceeded their respective Ambient Water Quality Standards and Guidance Values of 5 ppb. Downgradient groundwater samples were not collected as part of previous sampling events for this site. All detections of PCE, TCE, and DEC were from the northwest portion of the site, in the furthest downgradient sample location. The nature and extent of off-site groundwater impacts will be further explored as part of upcoming remedial investigation work. Sub-slab Soil Vapor & Indoor Air: PCE, TCE, and/or DCE were detected in each sub-slab vapor sample and indoor air sample. The highest concentrations of PCE in the sub-slab and indoor air samples was 58.8 g/m3 and 5.93 g/m3, respectively. These concentrations were detected along Saint Andrews Place. PCE detections in the samples closest to the former dry cleaner were 3.58 g/m3 in sub-slab soil vapor and 1.35 g/m3 in indoor air. A comparison of these results to the New York State Department of Health Soil Vapor Matrices indicates no further action. The neighboring property to the north operates a sub-slab depressurization system, which was operating at the time of sampling and may be contributing to the soil vapor intrusion results for the former dry cleaner location. In November 2022 a follow up soil vapor intrusion investigation was completed following the shutdown of the neighboring sub-slab depressurization system. Samples were collected from inside the neighboring property to the north, 432 Riverdale Avenue, and detected PCE up to 8,100 g/m3, TCE up to 850 g/m3, and DCE up to 6,800 g/m3. These detections were all collected from the southern boundary of the property, closest to the former dry cleaners and indicate that further mitigation is necessary for 432 Riverdale Avenue.

Health Problem: Direct contact with contaminants in soil is unlikely because the majority of the site is covered with a building and asphalt pavement. Contaminated groundwater at the site is not used for drinking or other purposes, and the area is served by a public water supply that obtains water from a different source not affected by site-related contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts to indoor air quality within an adjacent, off-site building. A sub-slab depressurization system (a system ventilates/removes the air beneath a building) was installed in this off-site building to address exposure associated with soil vapor intrusion. Additional investigation is needed to evaluate whether actions are needed to address soil vapor intrusion on-site and in other off-site buildings.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | 4-15-15 Spoke to Kathy. Tank is 1500 gallon UST. Failed with loud hissing. She says that tank was just registered. Sent email to Chris Lalak, WCHD, to confirm. jc 4-23-15 Email response from Chris dates 4-21-15. He confirms registration of a 1500 gal tank installed in 1986. PBS 3-802006. Wayne Schneider to follow-up. jc 04/29/16 Northeast Environmental reported that they excavated and removed the 2000 g tank along with 25.81 tons of contaminated soil. Post excavation soil sample results were below DEC guidance values. NFA. TG |

| DEC Memo: | 06/14/07 Property owner Dennis Momaseviam called and stated that he will have Airtek send the report to T Ghiosay. TG 06/27/07 Subsurface Investigation Report submitted by Airtek. Report documents the installation of 3 boring in the basement floor where goundwater contamination was detected in a shallow water table less that 2 feet below. Report also concudes that visual evidence of some liquid has been forced up through cracks in the basement slab. 07/05/07 Mike Zouck of Airtek called to discuss the report and looking for DEC requirements. He was advised to locate the source of the conamination though addtional borings. He agreed and he also plans on doing some indoor air testing for the property owner. 08/07/07 Site meeting with Mike Zouck of Airtek and Dennis Momaseviam. GW contamination present in area right near oil stained floor. The building is presently on gas but two oil fired boilers were in the basement at some time in the past. Old oil lines were visable in the basement. The owner wants to resolve issue ASAP since a new tenant will not move into the sapce with this oil condition. Recommended breaking up the concrete floor and removing the impacted soil. TG 01/28/08 Subsurface remport submitted by Airtek. 18 test pits were dug throughout the basement. Twelve of 18 (12/18) contained free product in varying amounts. 02/25/08 Met with property owner , Dennis Monasaebian and Airtek geologist Vic Riccezza observe the conditions of the groundwater and discuss remedial options. D Monasebian proposed ORC but this idea was rejected due to the large amount of free product in many of the the pits. Advised him to install a pump and treat system. He agreed and will develop a plan. TG |
| Remarks: | SOIL BORINGS WERE TAKEN AND SENT FOR TESTING, HOWEVER VISUAL CONTAMINATION IS PRESENT: WATER SAMPLES WERE ALSO TAKEN: |

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Air Facility System (AFS) contains compliance and permit data for stationary sources of air pollution regulated by the EPA, state, and local air pollution agencies.
The New York Department of Environmental Conservation Facility Information System (FIS) database houses all information about facilities that are regulated or of environmental interest to the state of New York.
ICIS-Air (AIR) AIR is the modernization of the Air Facility System (AFS) into the Integrated Compliance Information System (ICIS). AIR contains enforcement, compliance, and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

| DEC Memo: | 4/9/21 tank test failure of a 2k #2 fuel oil UST for a small apartment building. Tank is an older tank and was never tested in the past. Tank was exhibiting a hissing sound and no oil has been identified as leaking from the tank at this time. BW 4/13/21: From |

**RESIDENTIAL PBS TTF (Continued)** **S127481839**

Chris Lalak at WCDOH: 2k #2 Heating oil underground tank from 1960. Spoke to owner today, Jack Otero. Planning on having NEE remove tank installing small tank in the basement. Sent him an email. Within two weeks replace or pump out(set up temp tank) or repair/retest. Update required by 4-26. jod 06-08-21 Tank has been pumped out waiting for permits from Yonkers. Tank is to be removed. BTR 09-17-21 Received TCR from NEE. BTR 09-20-21 Reviewed TCR. On August 11 NEE removed a 2,000 gallon UST registered as 3-802111. No soil contamination was observed in the excavation using a PID meter. Laboratoy results for six endpoint samples were non-detect for VOCs. Some SVOCs had slight exceedances of CP-52 guidelines. No Groundwater was observed in the excavation. NFA. BTR

Remarks: 2000 ust family owned facility tank test failure. pbs 3-802111. no product released.

| Site Description: | Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and |

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

| Site Description: | Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the |

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 615469
Site Description: Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.
Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals,

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 615469
Site Description: Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 615469
Site Description: Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Site Code: 615469
Site Description: Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Updated By: MSHUBICK
Site Code: 615469
Site Description: Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.
Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem: Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor intrusion is not a concern for off-site buildings.

April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem: Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

| Record Added Date: | 01/04/2021 |
| Record Updated Date: | 07/31/2025 |
| Update By: | KAMALONE |
| Site Description: | Site Location: The site is 0.87-acre corner lot located between two city parks, Leslie Sutherland Park to the North and Pelton Oval Park to the northeast. McLean Avenue runs along the southern border, and Van Cortlandt Park Avenue runs along the eastern border. Site Features: A vacant on-site building covers most of the site. The building interior has been demolished to allow for investigation, remediation as an Interim Remedial Measure (IRM), and stabilizing the exterior walls. The facade of the building and fencing remains around the site. The perimeter of the site is covered by a concrete and asphalt sidewalk and walkway. The building has been vacated since April 2022 by the previous tenants to allow investigation and demolition to begin. The first-floor slab and vapor barrier have been installed. A portion of the second floor is built into the hillside. The portion of the second floor built into the hillside requires a slab and a vapor barrier. Though not required by the Department, vapor extraction points were pre-emptively installed in the first floor of the partially constructed building and are proposed to be installed in the second floor upon completion of the building. Extraction points were installed instead of laterals due to the presence of shallow bedrock and perched groundwater beneath the building slab. A vapor barrier has also been installed beneath both floors of the building. Current Zoning and Land Use: The site is located in a Commercial District (CM) zoning district, which allows |

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

for commercial use. The CM is consistent with the proposed use as the CM permits use as a self-storage warehouse. Past Use of the Site: The site historically operated as an auto repair and service station from 1987 to April 2022 on the first level with various uses since the 1950 s (e.g., printing, metal manufacturing, sports manufacturer, laundry). The lower level of the site was separated into eight units in 1956. The second floor was used for heat sealing to customize jerseys, sweatshirts and performance wear. Previously, the area was predominantly inactive storage space which included collectible dolls and toys, frames, leather goods, office supplies, and antiquated printing machines. There was an inactive 5,000-gallon fuel oil underground storage tank in the southeastern portion of the site beneath a ramp. This tank was removed during the IRM conducted in October 2022 and properly closed out per local and state regulations. Documentation is provided in the IRM completion report. Site Geology and Hydrogeology: According to a 2018 Phase I and an April 2020 Phase II investigation, bedrock outcrops are located to the north of the site. Geotechnical and subsurface investigations have determined the building was constructed into bedrock, which is present 1 to 5 feet (ft.) below surface grade. Surface grade is 80 to 90 ft. above mean sea level. Groundwater depth varied across the site from approximately 1 ft. below ground surface (bgs.) at the northern/central portion to approximately 16 ft. bgs in the southeast corner of the site. Groundwater generally flows towards the southwest, to the Hudson River approximately one mile away west of the site.

Env Problem:

Soil and groundwater samples were analyzed for VOCs, SVOCs, PCBs, pesticides, metals, cyanide, and per-and poly fluoroalkyl substances (PFAS) and 1,4-dioxane. Soil vapor samples were analyzed for VOCs. The primary contaminants of concern at the site are petroleum-related VOCs and SVOCs in groundwater and VOCs in soil vapor. Metals, pesticides, and polychlorinated biphenyls (PCBs) are present in site-wide soils but not in groundwater. Soil - Following the completion of the on-site IRM several constituents in soil were identified at concentrations in the top 15 feet or just above bedrock but were below the intended Restricted Residential Use SCOs except for one exceedance of lead at 572 ppm. Excavation continued until it was determined unsafe, and this area could not beremoved due to the presence of the northern first floor retaining wall and abundance of bedrock. No VOCs were detected during the RI in soil investigation. The following is a list of those compounds and the maximum exceedances remaining following the excavation IRM: Trivalent chromium detected at 94 ppm versus UUSCO of 30 ppm and below the RRSCO of 180 ppm; nickel was detected at 59.8 ppm versus RRSCO of 310 ppm; lead was detected at 572 ppm versus UUSCO of 63 ppm and the RRSCO of 400 ppm; mercury was detected at 0.75 ppm versus UUSCO 0.18 ppm and below the RRSCO of 0.81 ppm. VOCs, SVOCs, pesticides and PCBs were not detected above the UUSCOs following the IRM activities. Data does not indicate any off-site impacts in soil related to this site. Groundwater Two rounds of groundwater were taken Pre-IRM and Post-IRM. No metals, PCBs or pesticides were detected in filtered or unfiltered groundwater samples in exceedance of groundwater standards except for iron, manganese, and sodium. Iron, manganese, and sodium appear to be background levels with no distinction between upgradient and downgradient monitoring wells. These are naturally occurring or attributable to road salt. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting

**46-70 MCLEAN AVENUE AUTO REPAIR LAUNDRY SITE (Continued)** **S127478130**

surrounding areas. VOCs and SVOCs were detected above the groundwater standards as noted: benzene was detected at 7.4 ppb and 4.6 ppb exceeding the standard of 1 ppb; toluene was detected at 48 ppb and 17 ppb exceeding the standard of 5 ppb; and ethylbenzene was detected at 300 ppb exceeding the standard of 5 ppb. Total xylenes were detected at 1400 ppb exceeding the standard of 5 ppb. 1,2,4-trimethlybenezene was detected up to 270 ppb and 1,3,5-trimethlybenezene was detected up to 110 ppb exceeding standards of 5 ppb for both. For SVOCs, naphthalene was detected at 83 ppb exceeding the standard of 10 ppb. These concentrations were detected post-IRM near the tank removal. Groundwater data collected along off-site boundary to date does not show migration of contamination affecting surrounding areas. For PFAS, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were reported at concentrations of up to 78.8 and 8.26 parts per trillion (ppt), respectively, exceeding the 6.7 ppt and 2.7 ppt groundwater quality guidance values. 1,4-dioxane was not detected. It is unlikely off-site migration of the groundwater contamination is affecting the surrounding area. There are several closed spills across McLean Ave. Groundwater wells installed in sidewalk off-site and downgradient of the IRM tank removal did not show any exceedances for VOCs or SVOCs, or any petroleum contamination. Sub-Slab Soil Vapor and Indoor Air - Prior to the IRM, a total of nine sub-slab vapor, four indoor air, and two ambient air samples were collected on-site from within the building and outside and analyzed for VOCs and SVOCs. Primarily petroleum related contaminants were detected in the sub-slab vapor samples. PCE was detected in all nine sub-slab vapor samples collected with a maximum detection of 368 micrograms per cubic meter (ug/m3). PCE was detected in all four indoor air samples collected with a maximum detection of 1.28 ug/m3. Other VOCs detected in sub-slab vapor samples collected included carbon tetrachloride at 10 ug/m3, cyclohexane at 190,000 ug/m3, ethylbenzene at 13,000 ug/m3, n-heptane at 300,000 ug/m3, n-hexane at 280,000 ug/m3, o-xylene at 4,300 ug/m3, m & p xylene at 22,000 ug/m3, and toluene at 4,500 ug/m3. Heptane was detected in the indoor air sample collected near the petroleum tank ramp at 1,320 ug/m3. Toluene was detected at 35.4 ug/m3 in indoor air Based on the concentrations in the soil vapor intrusion samples, a post remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected. As detailed in section 6.2, based on the concentrations in the soil vapor intrusion samples, a post-remediation soil vapor intrusion evaluation is required during site management. Based on the data obtained to date, no off-site soil vapor impacts are expected.

Health Problem:

Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater and/or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality in the on-site building. In addition, sampling indicates soil vapor

| Record Added Date: | 03/11/2005 |
| Record Updated Date: | 05/17/2023 |
| Update By: | KATHOMPS |
| Site Description: | Location: The Ludlow Commons site is a 0.6-acre site located in an urban area at 7 Ludlow Street in the City of Yonkers. Site Features: The site is redeveloped, and an 8-story, 71-unit affordable senior housing building occupies the site. In the past, the site contained two vacant, unoccupied buildings: a 2-story building in the northeast portion of the property and a 1-story building in the north-central portion. The remainder of the property was composed of paved parking or areas of low-growing vegetation. Current Zoning/Use(s): The site is currently active with an 8-story residential building, and is in an A-zone (high density residential apartments), a restricted residential use. Neighboring uses include two to four family buildings, multi-family residential apartment buildings, residential over retail buildings, and retail stores. A church borders the western edge of the site. There is a fuel oil truck maintenance facility diagonally across the street, to the southeast. Past Use of the Site: The property was comprised of four lots, described as Block 185 Lots 48, 50, 51 and 52. In June 1990, the four lots were combined as Block 185, Lot 50. Prior use of the property, per the prior owner, was a taxi dispatch/auto repair facility until approximately 2004 when the property became vacant. Site Geology and Hydrogeology: Soils on the property consist a layer of miscellaneous fill materials overlying glacial deposits that are underlain by weathered gneiss bedrock. Depth to bedrock ranges from 5 feet to 14 feet and deeper. Groundwater flow direction is towards the southwest. Depth to groundwater ranges from 8 feet to 10 feet. |
| Env Problem: | Nature and Extent of Contamination: Remediation at the site is complete. Remedial actions have successfully achieved Track 4 clean up objectives for restricted-residential use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan. Prior to remediation, the primary contaminants of concern were petroleum and its associated volatile organic compounds (VOCs) in soil and groundwater. |
| Health Problem: | Remedial actions are complete and measures are in place to control the potential for coming in contact with remaining residual contamination in soil, groundwater and soil vapor. |

| DEC Memo: | No one available for update. letter dated 1/12/2006 from Karen Magnuson, WDOH, to Louis Buoninfante 17 October 2006: Further ground water investigation required. WCDOH >>>>>>>>>>>> January 17, 2007 Louis Buoninfante Joe Buoninfante 7-17Ludlow Street Corp 2712 East Tremont Avenue Bronx, NY 10461 Re: PBS 3-801293, Spill # 0508586 7-17 Ludlow Street, Yonkers, NY To Whom It May Concern: This Department had reviewed the groundwater sample analysis report regarding the September 26 and October 31, 2006 sampling events at the above location submitted by Royal Environmental on January 17, 2007. Comparison of VOC and SVOC levels to TAGM guidelines indicates that no further sampling or remediation is necessary at this time. A request has been made to the NYSDEC to close the above spill #. Sincerely, Wayne Schneider Sanitarian Office of Environmental Health Risk Control 12/27/10: See Spill 10-10142. jod |

| Longitude: | Not reported |
| DEC Memo: | 12/27/10: I spoke with the caller, Richard Hooker of Eco-Systems. He states the free product found in a monitoring well was stale gasoline , and it was actually observed several months ago. He states he did not report a spill at that time because he was under the impression there was an existing open spill number assigned to the property. He discovered today the existing spill numbers are closed. Database indicates the former owner of the property was Louis Buoninfante. Spill 0142184 was reported Feb of 2005 when contamination was found in a soil boring near a gasoline dispenser. That spill was closed and referred to Spill 0508586. Spill 0508586 was reported Oct of 2005 when Royal Environmental was removing a gasoline tanks. (Mr Hooker states the information he has indicates a 4K tank was removed but there were possibly additional tanks on site) The site was PBS registered with WCDOH as 3-801293 at the time. Ground water contamination was evident and monitoring wells were installed as part of that remediation. Reports were being submitted to The Health Dept and the spill was closed in Jan of 2007. Eco-Systems was |

**17 LUDLOW STREET PROJECT (Continued)** **S107416993**

initially hired by West-Hab to
conduct a Phase I site assessment. Mr Hooker states the Phase I recommended further investigation
to determine if there was still contamination and/or USTs on the property. West-Hab reportedly
purchased the property, and then hired Eco-Systems for a Phase II. It was during this investigation
(at the end of the summer ) that the free product was observed. Mr Hooker states he located four
monitoring wells on the vacant property and the central well had the free product. Eco-Systems is
submitting a proposal to West-Hab for further investigation and remediation. jod 12/27/10: I spoke
with Richard Hooker at Eco-Systems. He will forward report to Todd Ghiosay in White Plains. jod
03/23/18 Cleanup completed under the Brownfields Cleanup Program C360079. NFA by spills. TG

Remarks: Caller reporting product in a monitoring well.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System

**ICON CONTRACTING GROUP INC. (Continued)** **1001405118**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

| DEC Memo: | 4/11/14 Spoke to Mr. Scorzelli, who said that several names of contractors have been given to the real estate agent, who will get it to the owner. Property is for sale. Not known if tank will be retested or pulled, as the tank test failure was an ullage failure. dw 1/11/19: Initial TTF report states this was an ullage failure, no evidence of a leak was found at that time. As per Homemetry.com: Pursuant to the sale history this possession was last sold in January 2015 for $420k to Lindsay Caprioni. Unknown at this time if UST was removed/replaced or retested. jod |

At this time, this Department requires no further action as per the Westchester County Sanitary Code. Information regarding this spill is being forwarded to NYSDEC for appropriate action. Please note that in order to address and resolve this open spill case: 1. This Department acts pursuant to the Westchester County Sanitary Code and 2. The NYSDEC will act pursuant to New York State Laws and regulations (Article 12 of the Navigation |

Update By: AMOMOROG

Site Description: Location The Site is located one-half mile west of the intersection of Ludlow Street and US Route 9 in the city of Yonkers and consists of four lots located at 150 Downing Street, 55 and 58 Knowles Street, and 1 Bridge Street. The Site is an irregular-shaped, 3.46-acre parcel, which has 273 feet of frontage on the southern side of Downing Street. Site Features A brief description of site features for each parcel comprising the Site is presented below: 150 Downing Street - A gravel lot and a one-story, concrete block structure are located in the southern portion of the parcel. The parcel is utilized by the City of Yonkers Department of Public Works (DPW) as a storage area, inclusive of salt, vehicle and equipment storage. The northern portion of the parcel is currently vacant. The northern and southern portions of the Site are separated by a concrete block retaining wall. The southern (lower) portion is approximately 16 feet above mean sea level (AMSL) and the northern (upper) portion is varies from 38 feet to 44 feet above sea level. 55 and 58 Knowles Street A two-story, metal commercial building is located in the northern portion of the parcel. A parking lot and metal salvage area are located in the southern portion of the parcel. 1 Bridge Street A two-story, concrete commercial building is located in the northern portion of the parcel and a parking lot is located in the southern portion of the parcel. Current Zoning and Land Use - The site is zoned for industrial and commercial use. Past Uses of the Site: 150 Downing Street Operation of a manufactured gas plant (MGP), gas holder station, lighting company, manufacturing of celluloid articles, cleaner and dyer facility, and bus storage and parking facility 55 Knowles Street Commercial facility for the Tide Water Oil Sales Corporation and metal manufacturing facility. 58 Knowles Street Coal bag and screen factory, gears manufacturer, and dress factory Note: Historical maps indicate that a small lake was present at the parcel circa 1886. 1 Bridge Street Operations involving wool extract from rags (per 1886 Sanborn map notation), plastic products manufacturing, and auto repair facility. Site Geology and Hydrogeology The Site is located in the Manhattan Prong section of the New England Uplands physiographic region of New York and is near a northeast-trending geologic contact between the Fordham Gneiss and the Inwood Marble. During the RI at the 150 Downing Street parcel, bedrock at the Site was encountered from approximately 39 to 50 feet below surface grade. The bedrock is overlain by glacial till deposits, alluvium, and fill material. The groundwater was typically encountered at 9 to 14 feet below ground surface in the southern area of the site and at 38 to 43 feet below ground surface in the northern area of the site. Based on previous environmental investigations, groundwater flow is to the west-northwest, towards the Hudson River.

Env Problem: The following is information gleaned from the ConEd Ludlow Street MGP site: Nature and Extent of Contamination: The primary contaminants of concern at the ConEd Ludlow Street MGP site are benzene, toluene, ethylbenzene and xylene (BTEX) and polycyclic aromatic hydrocarbons (PAHs). Non-aqueous phase liquid (NAPL) in the form of coal tar is present. Coal tar was found in the area of the former 22,800 cubic foot and 50,000 cubic foot gas holders, in an area of approximately 100 by 150 feet and at a depth of approximately 7 to 49 feet. Benzene was found in soil at concentrations up to 210 ppm, exceeding the commercial use SCO of 44 ppm. Total PAHs were found in soil at concentrations up to 13,460 ppm, exceeding the commercial use SCO of 500 ppm. The highest soil BTEX concentrations were found at the

**FORMER LUDLOW STREET WORKS (Continued)** **S120706220**

| | |
|---|---|
| | former 50,000 cubic foot gas holder location. Contaminants of concern were not detected in off-site groundwater. On-site groundwater exceeded groundwater standards in the central portion of the site. The highest levels of BTEX and PAHs were found in monitoring wells located adjacent to the 22,800 cubic foot and 50,000 cubic foot former gas holders. Benzene was found as high as 1,200 ppb, exceeding the groundwater standard of 1 ppb. |
| Health Problem: | Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available. |

| DEC Memo: | 02/08/06 DEC site inspection. Spill of approximately 50 gallons of #4 oil from 2K temporary AST.<br>Permanent tank in the basement of building failed last July; see spill |

**APT BLDG (Continued)** **S107522811**

| | |
|---|---|
| Remarks: | 05-04679. Tank needs to be filled every three to four days. Castle Oil completing clean up. Temp tank set-up is unacceptable. Remote fill port is more than 200 feet from tank behind the building. Tank and vent are not visible from fill port. Fill port is also down gradient from tank and signs of previous spills from fill are evident. jod 02/09/06 Chris Lalak of the Westchester County Health Dept inspected site late in the evening after anonomous complaint that clean up had not been completed. Castle Oil to meet with him on site tomorrow. jod 02/10/06 Castle Oil completing clean up. WCHD on site. jod 8/28/08 Clean up was completed by Castle Oil and AL Eastman. Letter dated 8-8-08 received from Castle requesting closure. Original closure letter was erroneously sent to Region 2 office. Based upon information received, NFA required. jod 10/14/16: Original report in DecDocs. jod gauge failed and is oil is contained and in process of cleaning up; |

| Site Description: | Location: The Site is located in an urban area at 70 Fernbrook Street, Yonkers, Westchester County, New York. The Site is identified |

**FERNBROOK PARK & COMMUTER PARKING (Continued)** **S129128548**

on local tax maps as: - Section 1; Block 615; Lots 1, 6, 10, 35, & 45 - Section 1; Block 622; Lots 1 & 8 - Section 1; Block 623; Lots 1 & 4 - Section 1; Block 600; Lot 1 (Portion of) Site Features: The current layout of the Site includes six structures. The northernmost structure at 102 Yerks Place (Block 622, Lot 8) is a two-story brick building, with an underground basement. 101 Pier Street (Block 622, Lot 1) contains a small one-story concrete building and a storage shed. 102 Pier Street (Block 615, Lot 10) contains a two-story office building with no basement, and two one-story trailers. 78 Pier Street (Block 615, Lot 35.45) contains a split-level building which is used both as offices and as a garage/vehicle maintenance building. The Site is paved throughout, except for the rear of the 102 Yerks Place building and the riverfront at Block 615, Lots 1 and 6. The Site is fenced on all sides, except along the Hudson River or where buildings are present. The northern portion of Block 600, Lot 1, which was formerly owned by Westchester County and is currently vacant, is fenced on all sides, except along the Hudson River. Current Zoning and Land Use: The northern portion of the Site is currently operated by All County Bus, a school bus depot, including parking, office space, and maintenance facilities for the buses. The southern portion of the Site is a parking lot that has remained vacant since the City of Yonkers acquired the lot in May of 2025. According to City of Yonkers public records, the area comprising and surrounding the Site is classified as Zoning Code I , or industrial properties, which includes commercial uses. One exception is 9 Water Grant Street (Block 623, Lot 4), which is waterfront and underwater property. Past Use of the Site: The Site has historically been developed for commercial/industrial use. Based upon a review of historical sources, the Site appears to have existed as a commercial ice-making facility in 1886, with further development noted by 1917, at which point the remainder of the subject property consisted of commercial/industrial properties for wood/coal storage, oil storage, and oil refining. These properties were identified in the Sanborn Maps as Pure Oil Co., Yonkers City Ice Co./Westchester Service Corporation, Hays & Randolph Co., and Gulf Refining Co, respectively. By 1971, the ice-making facility (Westchester Service Corporation) and wood/coal storage (Hays & Randolph Co.) were no longer present, and structures took their place in the southern properties comprising the Site. The Site was converted to its current state a parking lot for buses between 1991 and 1994. The Site is identified as Tarricone Terminal in the last available Sanborn Map in 2004. A. Tarricone Inc (ATI)/ATI Ludlow MOSF, was a major oil storage facility (MOSF) located in the northern limits of the Site, under the MOSF No. 3-2220. A foam house was constructed at the southeastern limits of 101 Pier Street for firefighting purposes, in the case of a petroleum release. Past remedial measures have not been identified for the Site. It is suspected that the sources of contamination on Site are to be related to the presence of historic petroleum bulk storage facilities mentioned above (Pure Oil Co. Tarricone Inc (ATI)/ATI Ludlow MOSF, Hays & Randolph Co., and Gulf Refining Co). It is also presumed that during redevelopment of the Site and the Yonkers waterfront, historic fill material was placed at the Site to bring the property to grade. Site Geology and Hydrogeology: The Site is located on the USGS 7.5-minute series topographic maps of Yonkers, NY. The Site grades towards the Hudson River to the west, staying generally flat. The site coordinates sit at an elevation of approximately 1 foot above mean sea level (msl). Groundwater depth was observed to be between

**FERNBROOK PARK & COMMUTER PARKING (Continued)** **S129128548**

| | |
|---|---|
| | approximately 5 to 8 feet below ground surface (bgs) and generally flows to the north. |
| Env Problem: | Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. |

| DEC Memo: | 12/27/22 Input spill based on findings in Phase II Site Assessment report submitted to Department by Gary Giglio on behalf of current property owner. Phase II was prepared for City of Yonkers, who is planning to purchase location. Current owner is Saviano Enterprises, who leases operation of most of the property to All County Bus. Based on discussion with All County Bus rep during 8/16/21 inspection, they do not have access to the northernmost building (12 Yerks). NOV was issued to Saviano Enterprises and Gary is their consultant. Phase II was performed in March 2022. Report offers that PID screening during borings ranged from 0.2 ppm to 500.8 ppm. Report also offers that numerous of the 14 borings exceeded CP-51 for SVOCs and VOCs. Metals |

**FERNBROOK PARK & COMMUTER PARKING (Continued)** **S129128548**

and total PCBs also found to
exceed unrestricted values. 2 wells sampled and results for VOCs and SVOCs above TOGS at both.
Spill not found consistent with the Phase II action and Gary did not provide a spill number. This
spill entered directly based on review of report. jc 6/8/23
Participated in Kilmer led call on BCP
pre-app. Follow-up email received from Kirsten Jedd-Barry/Alb DOW. She notes that if remediation
includes planned discharge of treated groundwater to either surface or groundwater a SPDES Permit
Equivalent (PEq) will be required. She notes that the process takes one to two months, and advises
an application would be needed to be submitted at least two months prior to remediation start. She
notes there is a fact sheet on Water Permits In-Site page. jc

Town: Yonkers (c)
Acres: 1.350
Date Record Added: 03/06/2002
Date Record Updated: 02/26/2019
Updated By: AMOMOROG

Site Description: This site has been reassigned site number 360171. Location: The site is located at the intersection of Knowles Street and Bridge Street, approximately 300 feet northeast of the Ludlow rail station in Yonkers, Westchester County. The site is 1.35 acres in size. Site Features: The site is an empty lot, with the exception of a small (less than 100 square feet) concrete block structure located at the southeastern corner. The site is rectangular, roughly 440 by 130 (feet), with approximately one-third of the site is covered with gravel. The remainder of the site is overgrown and is approximately 20 feet higher due to the placement of additional fill and debris. The active Metropolitan Transportation Authority railroad is adjacent to the site to the west. A metal fabrication shop lies east of the site. A Dunkin Donuts bakery is across the street to the south. A vacant parcel exists adjacent to the north end of the site. Current Zoning and Land Use: The site is currently zoned industrial and is used by the Yonkers Department of Public Works for salt and general storage in the southern portion of the site. Land use in the vicinity of the site is characterized as mixed use industrial district, containing residential and commercial use properties. Past Use of the Site: Prior uses that may have contaminated the site include the operation of a manufactured gas plant between 1880 and 1898. The site was used as a gas holder station from 1898 to 1936. Site Geology and Hydrogeology: Fill materials (sand, gravel, cobbles, cement, brick and wood) extend from the surface to approximately 10 feet below grade in the southern portion of the site and to approximately 30 feet below grade in the northern portion. An alluvium deposit exists below the fill, consisting predominantly of sand with occasional silt and clay lenses. A schist bedrock was encountered at approximately 39 to 50 feet below ground surface. Groundwater on-site flows to the west northwest towards the Hudson River. The groundwater was typically encountered at 9 to 14 feet below ground surface in the southern area of the site and at 38 to 43 feet below ground surface in the northern area of the site. The site will be tracked under site number 360171 as of April 1, 2018.

Env Problem: Nature and Extent of Contamination: The primary contaminants of concern at the ConEd Ludlow Street MGP site are benzene, toluene, ethylbenzene and xylene (BTEX) and polycyclic aromatic hydrocarbons (PAHs). Non-aqueous phase liquid (NAPL) in the form of coal tar is present. NAPL was found generally in the area of the former 22,800 cubic foot and 50,000 cubic foot gas holders, an area approximately 100 by 150 feet , encompassing the current concrete block retaining wall. The NAPL was typically found within the alluvial deposit at ten to minus ten feet msl elevation. This corresponds to a depth of approximately 7 to 24 feet below grade south of the retaining wall. However, due to the abrupt rise in fill deposit north of the retaining wall, NAPL depth ranges from about 28 to 49 feet north of the retaining wall. (see Fig) Benzene was found in soil at concentrations up to 210 ppm, exceeding the commercial use SCO of 44 ppm. Total PAHs were found in soil at concentrations up to 13,460 ppm, exceeding the commercial use SCO of 500 ppm. The highest soil BTEX concentrations were found at the former 50,000 cubic foot gas

**CE- LUDLOW ST-YONKERS MGP (Continued)** **S105684709**

| | |
|---|---|
| | holder location. Contaminants of concern were not detected in off-site groundwater. On-site groundwater exceeded groundwater standards in the central portion of the site. The highest levels of BTEX and PAHs were found in monitoring wells located adjacent to the 22,800 cubic foot and 50,000 cubic foot former gas holders. Benzene was found as high as 1,200 ppb, exceeding the groundwater standard of 1 ppb. |
| Health Problem: | Persons who dig below the ground surface may come into contact with contaminants in subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern. Furthermore, environmental sampling indicates soil vapor intrusion is not a concern for off-site buildings. |

| Class: | No Further Action at this Time: Sites are given a classification of "N" when: the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program; a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced; a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site. |

| DEC Memo: | 2/21/19 American Petroleum was called to pump out the interstitial space of tank 15 (6,000 gallon diesel). Space filled up with water again. American would pump it out, water would fill it. Water only, no product, no release to environment. American Petroleum believes the problem is the riser pipe. They plan to uncover riser pipe, attempt repairs, and retest. If fails test, tank to be removed and replaced. No waterways on property, but facility is waste water treatment plant on Hudson River. Plant is on municipal water. WCHD on route to site. GA 10/24/22 Received TCR and FIR from JC. Spill 1902502 assigned to BAG, work performed under this one. Reviewed TCR & FIR. BAG 10/26/22 No impact assessed. Spill closed. NFA BAG |

| DEC Memo: | 5/29/19 Left message for notifier to call duty desk. ga 5/29/19 Caller was digging trench for gas line across access road for Yonkers Joint Waste Water Treatment Plant and came across section of soil that smelled highly of petroleum. Soil was oily and black. Soil sample for analysis to be taken tomorrow. Trench is in middle of paved road, 'contaminated' area is 3 ft deep, 2 ft wide, and 75 ft long. Access road will be closed until soil testing results come back. Area is 250 ft from Hudson River - WWTP is on the river bank. ga 05/30/19 William Eilbacher from the WCHD emailedI spoke with Kyle Kennedy (516-492-9196) who is the engineer from CDM at the facility, and he said that the contractor that was digging the trench in the driveway of the Yonkers WWTP (PBS #3-018872) found petroleum contaminated soil while digging. The contractor placed |

**YONKERS WASTE WATER PLANT (Continued)** **S104191463**

| | |
|---|---|
| Remarks: | the contaminated soil on plastic sheeting. Sound Environmental will be taking soil samples of the contaminated soil to characterize the waste and determine how to dispose of it. Chris Lalak from the WCHD responded to William Eilbacher, They also need to investigate and remediate the spill. I understand it may be historic contamination and/or it may be from an off-site source, which may affect the project. TG 07/29/19 Carlos Torres reported that soil sample were collected and analyzed and the results were below DEC soil guidance values in CP-51. NFA TG company digging on site and believe they found soil with unknown petroleum |

| DEC Memo: | 4/13/12 - Left a message for a call back. KAB 9/28/12: I received a call from a Kelsey Martinez. She states she is a potential buyer of this Bank owned property. She had been informed the tank had failed a test, but the seller stated they were not going to address that and the property was for sale as is . She has many questions about DEC reporting requirements and regulations which I answered. She states she will attempt to contact the testing company ATS and get more information. jod 2/8/13: LUST and contaminated soil removed. Tank closure report from Advanced Environmental entered into eDocs. Based upon the information provided, no further action is required at this time. jod |

| Updated By: | ARMALAME |
| Site Description: | Location: The site is located in an urban and industrial portion of Westchester County, NY. The site is 0.850 acres and approximately one mile south from the downtown area of Yonkers. Site Features: The site is bordered to the north by an undeveloped property and Highland Avenue; to the east by Riverdale Avenue and residential apartment buildings; to the south by a commercial building and an auto body repair shop; and to the west by multi-family residences located along Hawthorne Avenue. Current Zoning and Land Use: The site has been developed as a multi-story senior housing complex, and zoned commercial. Past Use of the Site: Prior uses that led to site contamination include a former automobile dismantling yard, junkyard, machine shop, and commercial laundry service. Site Geology and Hydrogeology: Groundwater flow is towards the west. Depth to groundwater was approximately 6 feet below ground surface (bgs). Bedrock was encountered at 32 and 42.5 feet bgs. |
| Env Problem: | Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were naphthalene, fluoranthene, phenanthrene, chrysene, pyrene, PCBs, arsenic, barium, chromium, and lead in the soil and groundwater. Residual contamination in the soil and groundwater is being managed under a Site Managment Plan. |
| Health Problem: | Direct contact with residual contaminants in soil is not expected because the site has been covered with pavement, a building and two feet of clean soil in green areas. Exposure to site related contaminants in drinking water is not expected since homes and businesses near the site are connected to public water. Soil vapor intrusion in future buildings is not expected because volatile organic compounds are not a site related contaminant. An environmental easement will restrict the use of groundwater, require implementation of a site management plan and periodic certification that the remedy remains in place and is effective. |

**185 - 187 RIVERDALE AVE. (Continued)** **S106123955**

| | |
|---|---|
| Site Code: | 59028 |
| Site Description: | Location: The site is located in an urban and industrial portion of Westchester County, NY. The site is 0.850 acres and approximately one mile south from the downtown area of Yonkers. Site Features: The site is bordered to the north by an undeveloped property and Highland Avenue; to the east by Riverdale Avenue and residential apartment buildings; to the south by a commercial building and an auto body repair shop; and to the west by multi-family residences located along Hawthorne Avenue. Current Zoning and Land Use: The site has been developed as a multi-story senior housing complex, and zoned commercial. Past Use of the Site: Prior uses that led to site contamination include a former automobile dismantling yard, junkyard, machine shop, and commercial laundry service. Site Geology and Hydrogeology: Groundwater flow is towards the west. Depth to groundwater was approximately 6 feet below ground surface (bgs). Bedrock was encountered at 32 and 42.5 feet bgs. |
| Env Problem: | Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were naphthalene, fluoranthene, phenanthrene, chrysene, pyrene, PCBs, arsenic, barium, chromium, and lead in the soil and groundwater. Residual contamination in the soil and groundwater is being managed under a Site Managment Plan. |
| Health Problem: | Direct contact with residual contaminants in soil is not expected because the site has been covered with pavement, a building and two feet of clean soil in green areas. Exposure to site related contaminants in drinking water is not expected since homes and businesses near the site are connected to public water. Soil vapor intrusion in future buildings is not expected because volatile organic compounds are not a site related contaminant. An environmental easement will restrict the use of groundwater, require implementation of a site management plan and periodic certification that the remedy remains in place and is effective. |

Site Code: 59028
Site Description: Location: The site is located in an urban and industrial portion of Westchester County, NY. The site is 0.850 acres and approximately one mile south from the downtown area of Yonkers. Site Features: The site is bordered to the north by an undeveloped property and Highland Avenue; to the east by Riverdale Avenue and residential apartment buildings; to the south by a commercial building and an auto body repair shop; and to the west by multi-family residences located along Hawthorne Avenue. Current Zoning and Land Use: The site has been developed as a multi-story senior housing complex, and zoned commercial. Past Use of the Site: Prior uses that led to site contamination include a former automobile dismantling yard, junkyard, machine shop, and commercial laundry service. Site Geology and Hydrogeology: Groundwater flow is towards the west. Depth to groundwater was approximately 6 feet below ground surface (bgs).

**185 - 187 RIVERDALE AVE. (Continued)** **S106123955**

Bedrock was encountered at 32 and 42.5 feet bgs.
Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were naphthalene, fluoranthene, phenanthrene, chrysene, pyrene, PCBs, arsenic, barium, chromium, and lead in the soil and groundwater. Residual contamination in the soil and groundwater is being managed under a Site Managment Plan.
Health Problem: Direct contact with residual contaminants in soil is not expected because the site has been covered with pavement, a building and two feet of clean soil in green areas. Exposure to site related contaminants in drinking water is not expected since homes and businesses near the site are connected to public water. Soil vapor intrusion in future buildings is not expected because volatile organic compounds are not a site related contaminant. An environmental easement will restrict the use of groundwater, require implementation of a site management plan and periodic certification that the remedy remains in place and is effective.

| DEC Memo: | 12/21/18: Previously reported open TTF Spill on this property is 1609924. WCDoH will followup. jod 12/24/18: I spoke with Chris Lalak at WCDoH PBS. This is a 2k gallon UST under the sidewalk. Tank failed a tightness test performed by Paul Scorzelli of Accurate Tank testing on Dec 12th. Paul did not report the spill. Gerry McGwyne is the property owner. Mr Mcgwyne purchased the property about two years ago and registered the UST at that time. WCDoH PBS database shows passing tests 4-4-17 and 4-4-18. Chris states he sees no record of the former Jan 2017 TTF in PBS or in the County spills log. The owner currently wishes to investigate further and not replace the tank. WCDoH will follow up. jod 11/24/21 Chris Lalak requested closure of the spill based on the tank being removed by Castlton. NFA. TG |

| DEC Memo: | 6-29-09 Royal cleaned up on Saturday. School is closed down for the past couple of years. Sounds like there is a water problem as there was 4' of water in the basement and a few feet in the gym. Oil was from two five gallon buckets that had oil in them. They vac'ed out water and cleaned with absorbents. Arnie to submit a report. jc 9/10/09: Report received from Royal stating the clean up was completed. NFA required at this time. jod |
| Remarks: | Contained, sump pump not hooked up; 2 five gallons of heavy oil in 1 foot of water in boiler room and gym; clean up will take place tomorrow |

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 5/12/03 - Zhao/DO: TTF leter sent as well as expired PBS registration warning. 6/20/03 Veronica (Omega Environmental - 201 489 8700) Additional investigation is underway. Awaiting permit from buildings department. Second tightness test to be performed within 2 weeks. 7/7/03 TJD Omega Environmental sent letter documentinging all product has been removed from tanks. Contractor still awaiting permit from Buildings Department to open sidewalk. Subsurface investigation is required at site. 3/28/05 - Austin - Spill closed, and consoidated with #0485243, under Sharif Rahman from Tim DeMeo - end 8/29/03 TJD Omega sent tank testing results indicating tank 006 hass passes retest and no leak has been found associated with tank. Tank 006 still requires investigation and will be closed. Closure report to be submitted. 4/30/2004 SS sent new ttf ltr 5/18/2004 Sangesland received a letter from Omega Environmental stating that the tank still remains out of service. It was cleaned out and a temp tank was set up for fuel use. Plan is to removed and replace the tank within the next few months. A series of exploratory borings will be taken in the near future in order to determine the outer extent of potential contamination. The plan is to remove all contamination during the tank pull and to take end point samples at that time. 7/27/04 TJD Consolidation of open spills on property. Another Tank Test Failure reported (0303272). TTF on Tank #4 (10K). Spill will be closed and cross-referenced to be handled under existing open spill number. 11/23/04 - Austin - Closed and consolidated spill# 9312744 with this spill (0301515) - end |

| DEC Memo: | Site visit scheduled for 12/1/04 3/3/2005 Project transferred from DeMeo to Shariff Rahman. Fenley & Nichol called to say the tank was removed, area excavated, clean endpoints and a new tank installed. They will send a report to Shariff Rahman. 11.04.05 Sharif- Rec'd and reviewed the closure report prepared by Fenley and Nicol.More remedial effort should have been done to consider the closure request, specifically ground water delineation is required. Letter requiring additional remedial works was sent to RP couple of months ago which is on file, but no reply, as of now, received. 12/20/05 Case was transferred to Koon Tang for reassignment. 1/13/2006 - Feng - File reviewed by Feng: 1) 3 #2 fuel oil USTs were removed on 11/30/2004 (10,000-gallon), 12/2/2004 (1,200-gallon), and 12/6/2004 (7,500-gallon). All tanks appeared to be in poor to very poor condition. 2) When removing the tank #1, it was found that perched water tih a significant amount of product within the tank excavation, and was removed during the preparation for the tank installation. And when removing tank #2 and #3, product was also found in the excavation, the contaminated water was removed from the excavation. 3) 11 soil samples were taken, but only 10 sample analyticals were provided in the report. There 10 soil samples were collected from side walls of the excavation. And it shows that up to 500 ppb Benzene and some SVOCs exceedance, such as 17,130 ppb Naphthalene, 2,423 ppb Benzo(a)Anthracene, 1,038 ppb Benzo(b)Fluoranthene, 4,706 ppb Chrysene, and 2,175 ppb Benzo(a)Pyrene. 4) Request spill closure, but denied by DED Rahman (previous PM) and sent letter on 3/28/2005 requested the following: a) scaled site plan, b) samples results from north end of excavation at level of the perched water table, c) remediation for the remaining contaminated soil in south wall zone of tank #1, d) bottom sample result, e)samples from below the concrete |

**MOUNT SAINT VINCENT (Continued)** **U001835537**

slabs in each excavation, f) tank disposal receipt, non-hazardous waste manifest for both soil and tank contents. No response to this letter. Called Robert Furguson (Fenley and Nicol Environmental) and left a message to call back. 1/18/2006 - Feng - Spoke to Cheryl and Mark (F&N). F&N will take groundwater samples on 1/24,25/2006. And will fax the response to DEC Rahman's letter on 3/28/2005. (RJF) 02/09/06: This spill transferred from R.Feng to S.Kraszewski. 02/16/06: I spoke with Robert from F & N (631-586-4900) ext. 190 for an update. GW delineation is complete and the lab results will be in soon. The report should reach my desk by next week. - SK 03/02/06: No GW delineation report yet. SK spoke with Asima Jansveld (212-312-3781) from EDC. She was wondering about the status of this site and how close, if at all it was to an NFA. I told her that based on the information I have this site is nowhere close to an NFA. I'm still waiting to receive a report for review and I cannot give any reasonable estimate as to the degree or to a time-line for this site. When she receives the next report she will call me. - SK 03/06/06: Reviewed Soil Delineation Report submitted by Fenley & Nicol Environmental dated February 28, 2006. Six soil borings were taken just East of the tanks along Spellman Hall following North along the road for roughly 100 yards. This subsurface investigation was performed subsequent to the discovery of contaminated soils and GW during excavation of a 10K UST in December 2004. Only one soil boring, SB-6, the northern-most boring exhibited SVOC exceedances: Benzo(a)pyrene - 321 ppb, Benzo(a)anthracene - 310 ppb, Benzo(b)floranthene - 439 ppb. No VOCs were detected above TAGM RSCOs in any of the six boring samples. Only three of the boring results are given in the data tables, SB-3, SB-4 and SB-5. However, the lab data sheets indicate that SB-3, SB-4 and SB-5 were analyzed. Despite the discovery of GW contamination from Dec. 2004, no GW sampling was performed during this investigation. It appears that perched clay lens runs above bedrock begins from SB-4 and runs to SB-6, following possibly several clay layers ranging from 1 to 6 fbg that are confining the GW. However, no borings taken from East to West. The college is planning to construct a dorm in this area, which means that excavation of the area would take place. SK spoke with Marc Atamian from Fenley and Nicol, they feel that the contamination is isolated. I asked him to fax additional figures and lab data since the site plan showed additional borings not accounted for by the report. He will fax them to me this afternoon. Received boring locations and lab data for borings B-9 and B-12 from September 2005. Unsure who performed this work, it appears that the borings were done in accordance with a GeoTechincal survey. Spoke with Robert Furguson. The Site Delineation investigation was to basically establish the unknown boundary further from the tank area. The three samples thought to be clean (SB-3, SB-4, SB-5) were analyzed to check for additional contamination. Boring SB-1, and SB-2 were not analyzed because contamination is assumed to be there. No consistent perched GW encountered from borings. The excavation will mostly remediate the site but if it doesn't additional remedial work will be required, must also deal with any GW encountered. Robert will let me know where the proposed structure is to be placed, i.e. were they plan to excavate. - SK 03/07/06: SK spoke with Asima Jansveld from NYCEDC, she requests a copy of the approval letter when it is sent out (electronic and hardcopy). AJansveld@nycedc.com NYCEDC 110 William Street New York, NY 10038 - SK 03/09/06: Received Site Layout Plan from Fenley & Nicol for renovation activities to be conducted

**MOUNT SAINT VINCENT (Continued)** **U001835537**

on-site. Approval letter is prepared and will be sent out tomorrow, March 10, 2006. The letter approves F & N's recommendations for source removal. Report must include recommendations for remedial action/investigation for any remaining contamination. - SK 04/06/06: Called Rob Furguson, left a message to call back. - SK 09/29/06: Received email from Anthony Sigona at Fenley and Nicol Environmental. He attached the proposed work schedule for removal of any source of contamination from the site followed by necessary remedial intervention to address any remaining contamination. Work is stated to begin in the Summer of 2007. Sent email reminding him to submit a work plan for review before starting any work. - SK 02/15/2007: This spill case was transferred to Ainura Doronova. - AD. 02/27/2007: Reviewed site file. Spoke to Frank Gehrling (senior geologist)of Fenley&Nicol Environmental (FNE)regarding work plan for remedial soil excavation at the site. He said, that he will submit WP after its approval by college authority. AD 04/16/2007: Received a call from Frank Gehrling of FNE regarding start date of excavation and work plan. He will submit WP due May 2007. Excavation work will start June 4, 2007. AD 05/15/2007: Called and left a message to F. Gehrling regarding submittal of work plan. After about an hour received email from Austin Randall who copied to me a work plan for this site, which he received from Anthony Sigona (department manager)of FNE. In his email Mr. Sigona is asking, who is managing spill case for this site. It appears that F. Gehrling did not inform A. Sigona about my calls and my status. Reviewed and uploaded work plan to e-docs. F&NE propose to excavate remaining contamination and collect confirmatory endpoint soil samples from sidewalls of the excavation. Summary report will be submitted after work completion and obtaining analytical results. If removal of all contamination is not feasible, a recommendation will be made for additional remedial actions. AD 05/16/2007: Sent an email to Anthony Sigona asking for a diagram of the area of proposed excavation with indication of its approximate size. AD 05/17/2007: Received an email from Mr. Sigona. He will send the diagram in the beginning of the next week. AD 05/21/2007: Received via email a letter and a requested map of excavation area from Frank Gehrling of F&NE. The excavation will proceed along the road length. Approximately 1,000 ton of contaminated soil will be excavated. Issued and sent to Glen Barnstable of the College of Mount St. Vincent an approval letter for Remedial Work Plan with modification to collect also endpoint soil samples from the bottom of the excavation. If bottom of the excavation is below groundwater table, then groundwater grab samples should be taken. Planning to visit the site on June 5, 2007 with Jon Kolleeny. AD 06/05/2007: J. Kolleeny and I visited the site to observe soil excavation. The contractor (Fenley & Nicol)was only excavating to a depth of 2 feet, which did not address deeper soil contamination detected during earlier sampling in the area. Mr. Frank Gehrling said that soil under asphalt was saturated with product to the depth of two feet and they were removing this layer along the length of the road. He was taking soil samples to analyze with PID. Saturated soil showed 13ppm (v). We requested that a test pit be excavated deeper down-gradient of the former USTs to verify the presence of impacts at greater depth, and asked that soil borings also be advanced at several locations between former UST and the road to confirm deeper soil impacts and collect groundwater grab samples to evaluate impact to groundwater. AD 06/06/2007: Received call from F. Gehrling of FNE. They excavated the test pit till 6,5 feet and no contamination was detected. On 6.5 feet

**MOUNT SAINT VINCENT (Continued)** **U001835537**

depth groundwater was encountered and excavation was stopped. F. Gehrling did not collected groundwater grab sample as we requested saying that he prefer to collect it from borings they plan to advance according to our request. J. Kolleeny told him to submit brief work plan for soil borings locations in few weeks. AD 06/07/2007: Received a call from FNE. They said that excavation on one side of the road is completed and asked for permission to back fill the excavated area. PID readings did not detected presence of petroleum contamination in the unexcavated soil and endpoint soil samples were collected. They also told me that there was a mistake in the Soil Delineation Report submitted by FNE previously: the contamination was found in the depth 1,5 feet not 15 feet as was stated in said report. Based on this information, permission to backfill was given. AD 06/12/2007: Received a call from Frank Gehrling of FNE. He said that they have completed removal of contaminated soil and asked for further actions. Told him to advance three soil borings: first - near south wall of former 10,000 gallons UST; second - in the vicinity of test pit; third - in the area of electric cable, where some product was found. F. Gerling agreed to do it and will send us paper work. AD 07/30/2007: Spoke with Mr. A. Sigona of FNE. Frank Gehrling is no longer working for them. New project manager for this site is Mr. Brian McCabe (phone: (631)586-4900 ext. 191). Mr. Sigona told me that requested soil borings were done and they took groundwater samples. Report for additional investigation will be submitted shortly. AD 09/24/2007: After few phone conversations and requests to submit summary report, received Letter Report of Findings from FNE. Will review. AD 09/27/2007: FNE performed close-out subsurface investigation, which included the installation of three soil borings and three temporary groundwater points in the vicinity of former UST and along the roadway, where additional hot spot areas were identified. A total of three soil samples and three groundwater samples were obtained and analysed for VOCs and SVOCs. A review of labresults for soil, shows that samples from all three soil borings do not indicate any elevated concentrations of VOCs or SVOCs. Labdata for groundwater samples indicate in monitoring point GW-0703-1 elevated concentrations of total VOCs as 220 ppb, and total SVOCs - 1760 ppb. This point was installed in the vicinity of the former UST, downgradient of the tank. Monitoring points GW-0703-2 and GW-0703-3 do not indicate any elevated concentrations of VOCs and SVOCs. These poins were installed along the road down-gradient off the monitoring point GW-0703-1. Soil boring logs are abcent. Based on the analyzed data FNE states that concentrations of contamination on the investigated area have exeedances, however, nominal enough not to pose a treat to human health or the environment. FNE requests to close this spill case and to issue NFA letter. AD 09/28/2007: Called and left a message to Mr. McCabe and asked to submit soil boring logs. AD 10/02/2007: Spoke with Brian McCabe regarding boring logs. He promised to submit them in a few days. AD 10/16/2007: Received electronic version of Letter Report of Fidings together with the requested boring logs. Have to prepare a letter. AD 11/05/2007: Discussed the site situation with Jon Kolleeny and Vadim Brevdo. At this discussion it was agreed that elevated concentrations of SVOCs exist in a very limited area of the former UST field; migration of this remaining contamination was not detected in the downgradient monitoring points and that these levels of SVOCs concentrations do not present threat to public health or to the environment. AD 11/13/2007: Issued NFA letter addressed to Tim Drury (Facilities

**MOUNT SAINT VINCENT (Continued)** **U001835537**

Engineering Manager of College of Mount St. Vincent) with copies to J. Kolleeny - DEC and B. McCabe - FNE. Downloaded a copy to E-docs. AD

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO DeMeo responded to the site 2/12/04 TJD Site inspection 2/10/04. Spill of approximately 200 gallons #4 oil into tank room and boiler room. Deteriorated fill pipe is suspected cause. PTC retained for cleanup. Liquids removed with vacuum truck. Inside boiler room is a metal lined sump, which is rusted and open to sub-surface soils. Investigation of soils surrounding sump pit is required. Tank #10 is a 5,000 gallon AST which is rusted and flaking. Facility representatives were directed to either test tank or remove it from service. A plan to replace this tank has been accelerated. Facility representatives have agreed tank will not pass test and should be replaced. On or before Friday |

**MOUNT SAINT VINCENT (Continued)** **U001835537**

2/13/04 tank must be emptied of all product and must remain Out Of Service until either it is
replaced or it passes a system test. Soil contamination letter sent to facility. 3/4/04 tjd DAVID
EXTRAND (OMEGA) contacted Demeo to inform DEC tank has been removed. According to David the tank
room floor is in good shape to cracks, holes or drains and will be sealing with 2-part Epoxy
coating. David wanted further information regarding sampling requirements for area of sump pit. A
minimum of (3) samples are required (1) below sump bottom and (2) along exposed sides (pit is in a
corner of boiler room. PTC was contacted for pump-out volumes, a total of 600 gallons of oil/water
mixture was removed on 2/10 by PTC. 5/28/04 TJD Closure report submitted by Omega Environmental
Sevices. Minor SVOC contamination identified which exceeds TAGM allowable soil concentrations.
Property owner/management will seal sump pit with 2-part epoxy coating to prevent further migration
of contaminants. Site does not meet standards. No further action required. Spill closed.

Remarks: tank let go, truck on site cleaning up:

| DEC Memo: | Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 151692: 12-Jan-200 05:26 Troubleshooter H/V E.Carbonaro 42479 reports while on location for a hit pole and customer interuption discovered a New York City Fire truck had skidded on ice and snow and hit Pole 7093 causing the pole to split and the transformer to fall on the truck. The transformer fell on the truck and is leaking approximately 10 gallons of oil on the truck, asphalt, and soil. Two FDNY personnel werereported with minor injuries and the Police Dept was on location. DEP also on location. Clean Harbors was notified and ETA is 06:00, crane on location (05:30) to remove transformer off of truck. The oil is contained on asphalt, soil and snow. 12-Jan-2004 07:30 hrs Lab Sequence Number: 04-00213-001 Aroclor 1260 < 1.0 ppm 11:00 hrs. EH&S rep Ken Traeger reports NYC Fire-Engine #81 has been decontaminated. Vehicle is being taken from site. 14:00hrs. EH&S rep Ken Trager reports that Clean Harbor Environmental double washed 30' x 60' area of asphalt. The crews generated 10 55-gallon drums of nonhazardous solid waste. 100 gallons of waste water was also generated and put into the contractor's tanker truck. Overhead crews on location have removed the defective transformer. The overhead pole is being replaced. A new transformer is being installed. Clean up is complete. |
| Remarks: | VEHICLE ACCIDENT STRUCK UTILITY POLE CAUSING TRANSFORMER TO FALL TO GROUND RESULTING IN RELEASE OF TRANSFORMER OIL ON VEHICLE AND ASPHALT. CLEAN-UP PENDING. |

| DEC Memo: | Sangesland spoke to Sigona who was at the site. Building has 2 UST's registered (10,000 & 8,000) unknown which one has the problem. Basement area adjacent to one of the UST's has 100 gal of oil floating on 1000 gal of water in the vault area. Sump and basement floor are also impacted. This looks like a long term problem. Building Super is new on the job and |

**MOUNT SAINT VINCENT (Continued)** **U001835537**

had not been in this area of
the basment before. Fenley & Nicol will mobilize a vac truck and steam
cleaner early next week.
Sigona would like Jeff Vought to come to the site to inspect it before
the clean up is done. After
the cleanup, DEC may require boring/well installation adjacent to the
UST just outside the basement
wall/vault. 10/21/05-Vought-Spoke to Sigona and tanks were tested.
Free product in sump. Vought
will perform site visit after site is cleaned.
11/28/05-Vought-Received call from Mark (Fenley &
Nicol 631-586-4900x190 cell 516-769-1810) that work will be occurring
tomorrow. Vought returned
call and left message to return call. 12/5/05-Vought-Received message
from Mark. Vought returned
call and left message to return call. ========== NOTES ABOVE
BELONG TO SPILL CASE
#0485243 as per a conversation between Raphael Ketani, case manager,
and Steve Sangesland, Spills
Unit, on 4/18/07 - this was originally 2 cases and was later split
into a case for the two tanks in
the vault above, and a case for the 20,000 gal. tank and its boiler
room below
========== 02/28/06-Hiralkumar Patel.
Vought received Spill Cleanup
Report on Feb. 22 2006. Abstracts of report: - fiberglass insulation
was removed from the steam
pipe running along the western wall of the boiler room to properly
clean the oily sludge in the
trench beneath the pipe. all oil-stained fiberglass sealed in 55 gal
drum - oily sludge was
shoveled out of the trench - power washer was utilized to remove oil
staining from the bottom of
the trench as well as two pipes. - all buckets and containers filled
with oil was cleaned -
oil/water mixture was identified in the sump in the northwestern
corner of boiler room - sump was
frequently recharging with groundwater within an hour of removing the
liquid. hot water power
washer was brought in to successfully remove the oil staining from the
walls of the sump. - ALL
STANDING LIQUID WAS REMOVED TO THE BOTTOM, WHICH WAS A SOIL BOTTOM
WITH GROUNDWATER ENTERING. -
within coal storage room, behind 275 gal AST, was a standing pool of
oil/water mixture approx. four
feet deep with miscellaneous debris within the liquid. - after
draining the room, the walls were
cleaned utilizing a hot-water power washer - approx. 2009 gal of
liquid was removed. - approx. 13
drums of hydrocarbon impacted soil were removed. - usage of two
unknown pipe at the bottom of
trench is presently unknown. - part of cleanup, a 20,000 gal UST was
investigated - oil stain
adjcent to vent pipe 03/07/06-Hiralkumar Patel. Spoke with Mr. Robert
Ferguson at Fenley & Nicol.
but as somebody else worked on this case, he told me that the
geologist who worked will call back

**MOUNT SAINT VINCENT (Continued)** **U001835537**

tomorrow. 03/08/06-Hiralkumar Patel. call Fenley and operator transferred me to David. left message for David. **ask about sump. - ALL STANDING LIQUID WAS REMOVED TO THE BOTTOM, WHICH WAS A SOIL BOTTOM WITH GROUNDWATER ENTERING.** 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/22/06 - Raphael Ketani. PBS case #2-283886: all #2 fuel; tanks 1,2,5,6,8 to 12 in service; tanks 3,4,7 removed. The 275 gal. tank isn't registered. An 8000 gal. and a 10,000 gal. tank were installed as replacements on 12/1/04. I talked to Brian McCabe, the department head at Fenley & Nicol (631) 586-4900. He said the case manager for the site left the company. He said he wasn't completely familiar with the case. I told him that I had no documentation as to what happened, how things were cleaned up, how things were investigated and where things stand now. He said he will send me all of the documentation he currently has in the company files. 7/20/06 - Raphael Ketani. I spoke with Mr. McCabe and Anthony Sigona regarding the spill. Mr. McCabe referred me to Mr. Sigona as he was the one who was familiar with the spill. He explained that they did the cleanup by collecting the oil and water and cleaning everything. However, he said that there appeared to be a source present for the seeping oil. He said that his crew hadn't been back there, but he suspected the UST that was present. Mr. Sigona mentioned a report that was written regarding the spill and the cleanup. I told him I didn't have it. He said he will send it to me, along with some other paperwork. I told him that it sounded like the UST needed to be investigated and wells put in. He said that may be the answer. 7/21/06 - Raphael Ketani. I spoke to Mr. Sigona regarding the site. He said that his investigation and cleanup reached the point where he felt no further action was necessary. I told him that since the former coal storage pit had #6 oil on water and since the #6 oil tank hadn't recently been tested, the DEC believes that soil borings and well installations are necessary between the tanks and outside the building, and a tightness test is necessary. I told him that I will send a letter to Mr. Glen Barnstable instructing the College to do the additional investigation and testing. 7/25/06 - Raphael Ketani. I sent a letter to Mr. Glen Barnstable of the College at Mt. St. Vicent ordering the college to do a more extensive environmental investigation with #6 fuel oil tank and system testing, well installation around the tank and outside the building, oil and water sampling, checking the boilers for leaks, checking the pipes in the trench in the boiler room, cleaning drains and sumps, and removal of oil contaminated soil from the bottom of the former coal storage room. A Best

**MOUNT SAINT VINCENT (Continued)** **U001835537**

Management Plan will have to be set
up. They have one month from the date of completion of the
investigation to get me the report.
8/10/06 - Raphael Ketani. A meeting was held between Mr. Barnstable of the management company for
the College, Mr. Sigona of Fenley & Nicol, and myself. We discussed the conditions past and present
at the site, my 7/25/06 letter, and what DEC is requiring to
investigate the situation. Mr. Sigona
gave me a copy of the tank registration for Hayes Auditorium, which is served by the boiler room
and associated 20,000 gal. #4 fuel oil tank. He also gave me a copy of the successful tank and
system test from 2003 for the 20,000 gal. tank, and pictures that were taken 8/8/06 of the inside
of the second floor room and the boiler room below. The pictures showed that the sump, former coal
pit and pipe trench were all cleaned. They also showed oil staining on two adjacent walls in the
second floor room which are directly above the position of the sump pit in the boiler room. I was
told no one knows what failed and caused the staining. Mr. Barnstable said that this happened
before he came on board to manage things. He said he started work 9 months ago and had a service
person break open two sealed doors to the former coal storage room in order to see what was in
side. At that moment (fall 2005), he said, he saw the oil floating on the water in the coal room.
Mr. Barnstable said that the water may be condensation (excess heating system water) that is
normally discharged to the sump pit. However, the sump pump wasn't working at the time. He said
that with the combination of the leaked oil and the condensation, that's how the College had the
oil floating on the water. He added that the 275 gallon tank near the former coal storage room
contains heating system makeup water for the boilers, not oil. Mr. Sigona commented that the 20,000
gal. UST is outside the services/utility building where the site is contained. He added that the
sump pit, the floor drains, and the coal room are all connected as one drainage system. Mr. Sigona
said that there is no water or oil now. Subsequent to our meeting, I asked for 3 things to be done
as part of the investigation and Mr. Barnstable and Mr. Sigona agreed to these items: 1) perform
one soil boring between the tank and the building and send the most contaminated sample to the
laboratory for 8021 + MTBE analysis only 2) a current tank and system test 3) investigate sump pit
for soil in the bottom and if there is oily soil, then remove the soil; if the floor of the pit is
soil and not concrete or steel, then the floor must be sampled for contamination and if there is
contamination, then the soil has to be removed Mr. Sigona will send me a letter via e-mail

**MOUNT SAINT VINCENT (Continued)** **U001835537**

confirming our agreement. 8/15/06 - Raphael Ketani. I received a FAXed letter containing the minutes and points of agreement from the 8/10/06 meeting with Mr. Barnstable and Mr. Sigona. The points of agreement and minutes were the exact same ones as discussed during the meeting. I left a message for Mr. Sigona stating that the letter was fine and to start work as soon as possible. 9/28/06 - Raphael Ketani. Frank Gorling (631) 586-4900 of Fenley & Nicol left a message and said that he did the boring at the site. He said they went down 19 feet, but didn't hit water. There was refusal at 19 feet and they took a soil sample at 14 feet. His crew went and dug into the sump and hit concrete and there was nothing to clean out (no soil). 9/29/06 - Raphael Ketani. I spoke to Mr. Gorling today regarding the drilling. He said they got one out of the three samples DEC requested. He said the 14 foot sample was sent off to the lab. Mr. Gorling called me back and said that he drilled in the wrong place, at the north end of the tank. I told him DEC and Fenley & Nicol had agreed to have one boring done between the tank and the boiler room. He said he will go back and do the boring in the right place. 10/3/06 - Raphael Ketani. Mr. Gorling left a voice mail. He said that they did the boring between the tank and the wall of the boiler room. He said that there were no odors in the sample. He said that the tank test results came back with a tight tank. 11/10/06 - Raphael Ketani. I tried calling Mr. Gorling, but could only leave a voice mail. 4/5/07 - Raphael Ketani. I contacted Mr. Gorling and told him I hadn't received the closure report. He sounded surprised and apologized. He said he will send a report and I will receive it very soon. 4/16/07 - Raphael Ketani. Today, I received the 11/20/06 Site Investigation Report from Fenley & Nicol. 4/18/07 - Raphael Ketani. I reviewed the SIR and found it to be satisfactory. There was a passing tank tightness test and the soil analyticals showed no hits at all. A copy of the 12/29/05 Spill Cleanup Report was included describing the complete cleanup of the boiler room. They requested an NFA letter. I drafted an NFA for Randall Austin, Chief Spills Engineer Region 2 to review. Based upon my review of the 12/29/05 Spill Cleanup Report, 11/30/06 SIR, the and the other documents in the case file, I am closing the spill case. 5/1/07 - Raphael Ketani. I sent out the NFA letters to Mr. Barnstable and Mr. Sigona today.

| DEC Memo: | 1/5/06-Vought-Site visit by DEC Vought, DEC Patel and DEC Mohammed. Spill in George Hays Audotorium basement. Spill caused by broken petrometer which was already replaced. Spill on sealed concrete boiler room floor and sump pump and drain was affected. No cracks in concrete and Glenn Barnstable will call back DEC within one hour with contractor name. Vought notified DEP (#1262610) with possible impact to sump and drain. Vought received call from Barnstable that Castle Oil was going to clean spill by calling AL Eastmond for cleanup (718-378-3000). Vought called AL Eastmond (Issac |

| DEC Memo: | 8/12/16 Spoke to Mr. Scorzelli, who did the tank test for a prospective buyer, and has no idea who the property owner is. dw 8/19/16: Call to the dispatch desk from Elinne Dominguez. She states she is the owner's daughter. Property is for sale and she says she was informed by a prospective buyer that the UST is leaking. She states this is an apartment building - was reported as a residential home. She also states she believes the UST is 5K gallons in size, and is the original tank for this building. Contractor list sent. She will get estimates on retest/removal and update DEC at a later date. jod 9/08/16: Owner Elinne Dominguez sent me an email inquiring about soil sampling and in-place abandonment. DEC still awaiting confirmation on the tank size. jod 5/16/17: Email received from property owner, entered into DecDocs. Message sent requesting information on the work performed. jod *Owner Elinne Dominguez emailed DEC stating: The name of the contractor that performed the work is Castleton Enviornmental. It was completed a couple of weeks |

**APARTMENT BLDG - TTF (Continued)** **S118707862**

ago so will reach out to the buyer to see what's going on. I have not received a copy of the report but did get a verbal on this. **Email sent to Castlton requesting a copy of the tank report. jod 5/18/17: Castlton replied stating they have no record of performing any work at this address. jod 11/14/18: Email sent to Elinne Dominguez requesting a copy of the closure report, or any additional information. jod *Email to Elinne Dominguez returned as undeliverable. jod 3/07/19: This property was sold in Sept 2017. The UST was removed and replaced by an unknown contractor at some point between Sept 2016 and May of 2017. DEC was never able to confirm the UST size but it was never registered with Westchester County PBS. It was reported to DEC that when the tank was removed it was not leaking - no TCR was ever received. Spill administratively closed at this time. jod

Latitude: 40.9102198
Longitude: -73.9087510
DEC Memo: 12/05/18-Hiralkumar Patel. alternate address: 5941 Palisade Ave PBS #: 2-478873. as per PBS record, the site has/had following tanks: - one (1) 25,000 gal #2 oil UST, closed-in-place in June 1991 - one (1) 7,500 gal #2 oil UST, closed-in-place in June 1991 - one (1) 2,500 gal #2 oil UST, closed-in-place in June 1991 - one (1) 4,000 gal #2 oil UST, closed-in-place in June 1991 - one (1) 15,000 gal #2 oil UST, closed-in-place in June 1991 - one (1) 20,000 gal #2 oil AST in vault, in-service, installed in July 1991 - one (1) 7,500 gal #2 oil AST in vault, in-service, installed in July 1991 - one (1) 2,500 gal #2 oil AST in vault, in-service, installed in July 1991 - one (1) 275 gal #2 oil UST, in-service, installed in Jan. 1966 - one (1) 500 gal #2 oil UST, in-service, installed in Jan. 1986 - one (1) 275 gal #2 oil AST, in-service, installed in Jan. 2005 - one (1) 2,000 gal #2 oil AST, in-service, installed in Jan. 2005 other spills #: 8907376, 8907575, 8908038, 1411325, 1809325 spill #: 8907376 was reported on 10/25/1989 as 15,000 gal #2 oil tank failed a tightness test. case closed. spill #: 8907575 was reported on 10/30/1989 as 7,500 gal #2 oil tank failed a tightness test. case closed. spill #: 8908038 was reported on 11/13/1989 as 25,000 gal #2 oil tank failed a tightness test. case closed. spill #: 1411325 was reported on 03/02/2015 as contamination found during Phase II investigation. case closed based on results of soil and groundwater samples. spill #: 1809325 was reported on 12/05/2018 as 500 gal #2 oil UST failed a tightness test. 1:39 PM:- left message for John. 2:04 PM:- spoke with Darwin Aulestia at Hebrew Home. he mentioned that DEC PBS unit required tightness testing of two existing underground tank systems: one 275 gal (tank #: 004/5921) and one 500 gal (tank #: 005/5931). both tanks are used for emergency generator. the 275 gal tank is currently in use. technician believes that leak in 275 gal tank is due to loose connection. Mr. Aulestia is waiting for proposal for isolation test. informed Mr. Aulestia that the department requires immediate removal of remaining oil from the 275 gal tank unless no leak confirmed in wet portion of the tank. the 500 gal tank is currently out-of-service as that part of building is under renovation and not occupied. the tank was pumped out in summer of 2018. the 500 gal tank system will be removed. The Hebrew Home For The Aged At Riverdale **property owner** 5901 Palisade Avenue Bronx, NY 10471 Attn.: Darwin Aulestia Engineering Assistant Director Ph. (718) 581-1367/1369 email: Darwin.aulestia@hebrewhome.org based on discussion with Mr. Aulestia, spill #: 1809325 was closed administratively and merged with the subject spill case. 2:53 PM:- sent TTF letter to Mr. Aulestia for both tank systems. letter emailed to Mr. Aulestia and DEC Lakhani. case assigned to DEC Lakhani. 12/18/18 - Lakhani AARCO is removing the 275 gallons and 550 gallons USTs. 12/19/18 - Lakhani 30 day notification submitted to PBS to remove the two (2) USTs. 01/18/19 - Lakhani DEC Lakhani visited the site. AARCO was on site removing the 275 gallons and 550 gallons UST. The 275 gallon tank installed in 1966 was removed. There was a 1 diameter hole in the bottom of the tank. The excavation was dug to 10’bg. It is not feasible to go further due to the foundation of the building. DEC Lakhani advised that at least three (3) endpoint samples be collected: bottom and two (2) sidewalls. PID readings of the bottom of the excavation and sidewall were approx. 200 ppm and 140 ppm respectively. The 550 gallon tanks was not yet removed because it is buried deep. AARCO excavated to 6’bg and the tank top was not yet encountered. However,

**\\HEBREW HOME FOR THE AGED (Continued)** **S121988498**

soils at 6' began displaying evidence of impact. PID readings at this depth were approx. 200 ppm. Further investigation revealed that the return line for the 550 gallon tank has corroded leaving a hole in the pipe. AARCO will return on another day to remove the 550 gallon tank. 02/11/19-Hiralkumar Patel. 10:54 AM:- received call from Mallarie White from AARCO Env. requesting DEC presence during removal of 550 gal tank on 02/14/19. due to scheduling conflict, requested Mallarie to reschedule tank removal work. asked her to submit result of endpoint samples collected after removal of 275 gal tank. 11:35 AM:- received email from Mallarie including endpoint sample result for 275 gal tank excavation. three endpoint soil samples were collected: one bottom sample at 10 ft bg, one sidewall sample from south sidewall at 8 ft bg, and one sidewall sample from east sidewall at 8 ft bg. soil analyticals (in ppb):
----------Bottom-------South--------East 10 ft 8 ft 8 ft Toluene----------520-------4,700
Ethylbenzene----------7,700------11,000-------1,600
Xylene----------4,700------35,000-------5,000
1,2,4-Trimethylbenzene-------11,000------51,000------12,000
1,3,5-Trimethylbenzene--------1,300------11,000-------2,800
Naphthalene----------11,000------12,000-------4,400 Mallarie White AARCO Environmental Ph. (631) 586-5900 email: mwhite@aarcoenvironmental.com DEC Lakhani visited the site on 01/18/19 and noted no feasibility of further excavation at 275 gal tank location due to existing building foundation. 2:12 PM:- spoke with Mallarie. she mentioned that excavation of 275 gal tank has been backfilled as sidewalls were collapsing. 2:38 PM:- received call from Mallarie. she rescheduled 550 gal tank removal on 02/21/19. 02/15/19-Hiralkumar Patel. 12:02 PM:- received email from Mallarie stating that field work (tank removal and soil borings) has been rescheduled on 02/28/19. 02/28/19-Hiralkumar Patel. 8:30 AM:- visited site and witnessed installation of soil borings to delineate petroleum contamination noted at the former 275 gal UST location. total of five (5) soil borings (SB1 through SB5) were installed at/around former 275 gal UST location. borings SB1 and SB2 were installed at the former 275 gal tank location. as refusal encountered at 13 ft bg with petroleum odors from 10-13 ft interval during installation of boring SB1, an additional boring SB2 was installed in former tank location, to the north of SB1. boring SB2 was advanced to a depth of 23 ft bg where refusal encountered. some groundwater was noted at 23 ft depth in SB2. oil was noted (upto 349 ppm on PID) in soil column at 10-15 ft bg in SB2. based on field observations, no soil samples were collected from boring SB1, but two soil samples were collected from boring SB2: at 10-15 ft and 23 ft bg. boring SB3 was installed to the north of the former 275 gal tank location. refusal encountered at 16.5 ft bg. no petroleum odors were noted from surface to 14.5 bg, but some petroleum odors (with max. of 20 ppm on PID) were noted in 14.5-15 ft interval. based on field observations, no soil samples were collected from SB3. boring SB4 was installed in dirt slope area to the south of the former 275 gal tank location. refusal encountered at 16.5 ft bg. contamination was noted below 8 ft depth with over 400 ppm on PID near 10 ft depth. 243 ppm was recorded on PID at refusal depth. soil samples were collected at 10 and 15 ft depths. boring SB5 was installed to the east of the former 275 gal tank location. refusal was encountered at 15 ft bg. no signs of contamination were noted in boring SB5. no soil samples were collected from SB5. also observed removal of 550 gal UST, which was

**\\HEBREW HOME FOR THE AGED (Continued)** **S121988498**

also located adjacent to building's foundation wall. the tank top was noted below 6 ft depth. stained soil was noted near the tank top along the foundation wall. noted heavily corroded return line with multiple large holes. a concrete pad was noted beneath the tank. an I-beam was found at the north end of the tank. the beam was not supporting any structure overhead. approx. 15 inches wide gap was noted between the concrete pad and building foundation wall. noted heavily contaminated soil within this gap. based on field observations, it appears that any oil leaked from the corroded return line must have migrated downward along the building foundation wall through this gap. the building has two story sub-grade garage and the concrete pad beneath the 550 gal UST was near the base of the 1st level garage. 03/05/19-Hiralkumar Patel. 8:49 AM:- sent email to Mallarie. informed her that based on field observations, the Department requires further soil and groundwater investigation at the former 275 gal UST location via installation of at least one permanent monitoring well at the former tank location and additional soil borings/monitoring wells to the south of the tank location. also informed her that additional investigation/remediation may be required at the 550 gal UST location, upon review of endpoint samples collected after tank s removal. email copied to DEC Lakhani. 03/11/19 - Lakhani Sent the following email to AARCO Tara Boggs: In the location of the 275 gallon UST, further delineation is required. One (1) permanent monitoring well is required in the location of the former 275 gallon UST. A 4 well is preferred. Additional soil borings are also required to the south of the former tank location. Bedrock is rather shallow in the area and so there is no need to advance past the bedrock when encountered. Before borings are installed, please perform a mark out of the area to avoid damaging any pipes or lines. I do not want to require anything for the 550 gallon UST without reviewing the endpoint sample results from the excavation. However, from seeing the corroded return line I can only imagine that further delineation will be necessary. 05/06/19 - Lakhani Preferred Environmental will be working this project with AARCO. The two (2) tanks were removed and further delineation was required in the area of the 275 gallons UST. The mark-out has been completed. The 275 gallons tank was removed in January 2019. Based on the endpoint sample results, the further delineation was required. AARCO remobilized to the site to complete additional soil delineation. Based on those results DEC Lakhani required further delineation. On 05/09/19, one (1) 4 permanent monitoring well will be installed. Additional soil borings will also be installed to the south of the former 275 gallon tank. The 550 gallon UST was removed in February 2019. 28 cubic yards of impacted soil were removed. Excavation endpoint samples were collected and revealed that there is no need for additional delineation/remediation. 05/30/19 - Lakhani Borings SB-6 and SB-7 were installed south of the former 275 gallon UST. Samples were collected at 7'-8'bg and 10'-11'bg respectively. The samples were non-detect and for CP-51. PID readings were also between 0 ppm and 1 ppm for soils from grade to refusal. No groundwater was encountered in the excavation or in the borings. Therefore, no groundwater well could be installed. 06/27/19 - Lakhani Spill Closure Report (Preferred Environmental Services, 06/18/19) - In January and February of 2019 two USTs were removed from 5901 Palisades Avenue, Bronx. A NYSDEC Spill was assigned to the Subject Property due to observed impacted soils during the tank removals. Based on the visually impacted soils a total of 36 cubic yards of soil was removed

**\\HEBREW HOME FOR THE AGED (Continued)** **S121988498**

from the Subject Property. Soils were removed to the furthest extent possible. Confirmatory soil borings were installed in May of 2019 in the area where impacted soil was left in place. The results of the additional soil borings did not indicate evidence of a Spill additionally bedrock was encountered prior to groundwater. 07/18/19 - Lakhani DEC Lakhani asked for a bedrock well to be installed and sampled. 08/06/19 - Lakhani - Spill being transferred to Sekhon. 08/20/19 - Lakhani Preferred is scheduled to install the monitoring well on August 13th. They will sample two weeks after and submit a letter report summarizing the results. 10/4/19 - Sekhon Report DECDOCS. SVOC (Chrysene) slightly above the limits ( 0.0620ug/L _ CP 51 limit is 0.002ug/L) 10/16 - Sekhon Case discussed with DEC Piper & closed.

Remarks: tank test failure. two UST systems failed tightness test.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal NPL (Superfund) sites***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

NJ SPILLS 80: SPILLS80 data from FirstSearch

Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NY SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

**USGS TOPOGRAPHIC MAP**

| | |
|---|---|
| Target Property Map: | 50026538 YONKERS, NY |
| Version Date: | 2023 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

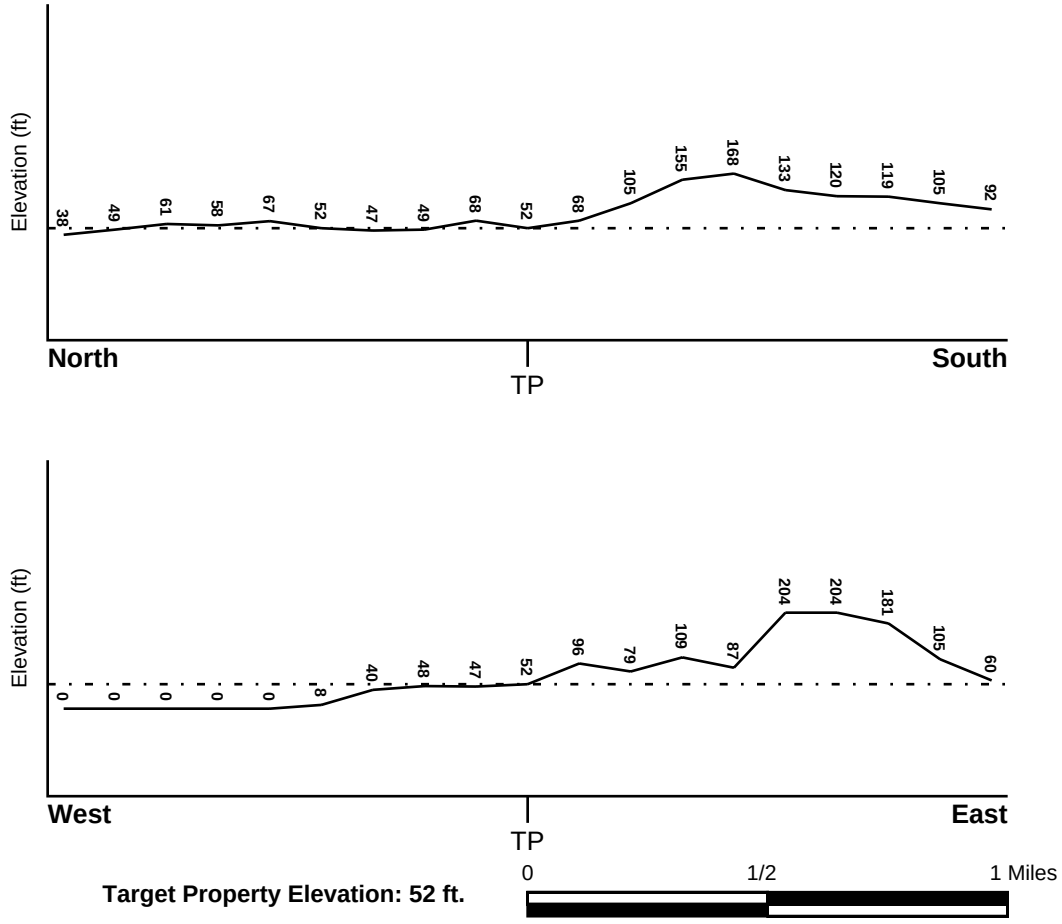
**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General NNW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**



**Target Property Elevation: 52 ft.**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE**

| Flood Plain Panel at Target Property | FEMA Source Type |
|---|---|
| 36119C0317F | FEMA FIRM Flood data |

| Additional Panels in search area: | FEMA Source Type |
|---|---|
| 36119C0316F | FEMA FIRM Flood data |
| 3604970018F | FEMA FIRM Flood data |
| 34003C0220G | FEMA FIRM Flood data |

**NATIONAL WETLAND INVENTORY**

| NWI Quad at Target Property | NWI Electronic Data Coverage |
|---|---|
| YONKERS | YES - refer to the Overview Map and Detail Map |

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

| | |
|---|---|
| Search Radius: | 1.25 miles |
| Status: | Not found |

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| MAP ID | LOCATION FROM TP | GENERAL DIRECTION GROUNDWATER FLOW |
|---|---|---|
| Not Reported | | |

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

**ROCK STRATIGRAPHIC UNIT** **GEOLOGIC AGE IDENTIFICATION**

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## SENIOR PROJECT SCIENTIST

## ENVIRONMENTAL SCIENTIST & REMEDIAL OVERSIGHT

Ms. Armstrong has experience working on environmental projects in New York. She has conducted Phase I and II Environmental Site Assessments, remedial investigations, soil vapor and indoor air quality surveys, and waste characterization investigations. She has also developed remedial investigation and remedial action work plans and managed groundwater monitoring programs. Her field experience includes soil, soil vapor, and groundwater sampling, indoor air investigations, remedial excavation oversight, and Community Air Monitoring Program (CAMP) management. Ms. Armstrong also has several years of experience in evaluating asbestos consultants and contractors.

# 1.0 INTRODUCTION

## 1.1 General

This HEALTH AND SAFETY PLAN (HASP) was developed to address disturbance of known and reasonably anticipated subsurface contaminants and comply with Occupational Safety and Health Administration (OSHA) Standard 29 Code of Federal Regulation (CFR) 1910.120(b)(4), Hazardous Waste Operations and Emergency Response during anticipated site work for the property defined as 13 Culver Street and 372 Riverdale Avenue, located in Yonkers, New York. The site is identified on Municipality of Yonkers Tax Map as Section 1, Block 129, Lots 26 and 30 (IDs 1-129-26 and 1-129-30).

This HASP provides the minimum requirements for implementing site operations during future remedial measures. All contractors performing work on this site must implement their own HASP that, at a minimum, adheres to this HASP. The contractor is responsible for their own health and safety and that of their subcontractors. Langan personnel will implement this HASP while onsite.

The content of this HASP may change or undergo revision based upon additional information made available to health and safety personnel, monitoring results, or changes in the work plan.

## 1.2 Site Location and Background

The site has a combined area of about 1.02 acres and includes 372 Riverdale Avenue (Yonkers Tax ID 1.-129-30) and 13 Culver Street (Yonkers Tax ID 1.-129-26) within an urban block setting. 372 Riverdale Avenue/Lot 30 is improved with a 1-story vacant auto repair building with asphalt paved parking areas. 13 Culver Street/Lot 26 is vacant following demolition of a residential building. Access is to 372 Riverdale Avenue/Lot 30 is provided from Riverdale Avenue and Culver Street and access to 13 Culver Street/Lot 26 is provided via a gate on Culver Street. The site sits at an elevation of about 50 feet above mean sea level and is generally flat with a gentle slope toward the Hudson River (west), the river is approximately 2,500 feet to the west of the site.

The site is vacant. The most recent tenant vacated 372 Riverdale Avenue/Lot 30 is apparently being evicted. The site was developed with several residential dwellings with detached garages or stables as early as 1897. By 1917, several store fronts were located along Riverdale Avenue, and a Cast Stone Products building was located at the east half of 13 Culver Street/Lot 26. The stone products business was no longer preset in 1951. Most of the residential structures at 372 Riverdale Avenue/Lot 30 were demolished between 1966 and 1974 and the current auto repair building was constructed by 1974 with only two remaining residences in the northwest part of the Lot. The two remaining residences on Lot 30 were demolished by 1984, and that portion of

the lot was paved with asphalt for additional parking. Auto garages on the east half of 13 Culver Street/Lot 26 were demolished by the 1970s and the remaining residence in the western part of the lot was demolished between 2017 and 2021. A site location map is provided as Figure 1.

## 1.3 Summary of Work Tasks

### 1.3.1 Geophysical Investigation - Underground Utility Clearance Policy

Prior to the commencement of intrusive field activities (i.e., all soil boreholes, test pits, or excavations); Langan field engineers will follow the Langan Underground Utility Clearance Policy including the retaining one or more geophysical consultants, if required, to conduct geophysical surveys using ground penetrating radar (GPR) and electromagnetic detection equipment. The application of the Langan Underground Utility Clearance policy is mandatory unless a site wide or a specific location exemption has been granted in writing by the principal-in-charge (PIC).

The objective of a geophysical survey is to identify any underground storage tank (UST) structures, drains, underground utilities, and other subsurface anomalies that may be encountered during an intrusive investigation. Langan personnel will observe the geophysical survey of each location and confirm the locations are both accessible and free of potential utility or other known or suspected subsurface structures. There will be no exemption to this section unless granted by written approval by the PIC.

### 1.3.2 "Soft-Dig" Clearance of Borehole Locations

In accordance with Langan's Underground Utility Clearance Policy, Langan will instruct the drilling or excavation contractor to "Soft-Dig" each target soil boring, test pit, or excavation location as specified in Section 1.3.1. Soft dig is defined as using a vacuum system (with or without an air knife) or hand auger to clear soil from the proposed soil boring location to a depth of 5-feet. When excavating a test pit or larger excavation, the exaction contractor will "peal" away thin layers of soil with their excavator or shovel to daylight potential underground structures until achieving the required 5-feet depth. If using an excavator, the contractor must have a worker observing the excavator bucket/shovel warning the operator when the bucket/shovel encounters a possible underground structure. At which point, the potential structure must be hand shoveled until it is fully daylighted. Langan personnel will confirm that the "soft dig" activities are completed to these specifications.

### 1.3.3 Day Lighting Excavation and Soil Screening

Langan may retain one or more excavation contractors to daylight buried unidentified structures. The purpose of the daylighting is to confirm if these structures are subsurface structures of

concern including USTs, utilities sewer lines, storm water drains, electrical, gas or other utility line as well as other artifacts pertinent to the work plan. The excavation contractors will contact the appropriate utility mark-out authority and make available to their staff the verification number and effective dates.

The excavation contractor will employ "soft dig" methods as defined in Section 1.3.2. Langan may screen excavated soil for visual, olfactory, and instrumental indicators suggestive of a potential chemical or petroleum release. Instrument screening for the presence of volatile organic compounds (VOC) may be performed with a duly calibrated photoionization detector (PID). Contractors will notify Langan personnel if they identify indications suggestive of a potential chemical or petroleum release. Contaminated material shall be handled, and property disposed in accordance with federal, state and city regulations, criteria, and guidelines.

### 1.3.4 Soil Investigation and Sampling

Langan may retain a drilling contractor to advance soil boreholes to a depth below grade surface (bgs) specified in the work plan. Borings will be installed at the approximate locations indicated in Langan's work plan but may be moved in the field based on utility clearance and accessibility. The drilling contractor will contact the appropriate utility mark-out authority and make available to their drilling staff the verification number and effective dates. Langan will record the verification number and effective dates from the drillers. Langan will also note the location of marked out utilities on the site plan and scan the data into the project folder.

Langan personnel will screen soil for visual, olfactory, and instrumental indicators suggestive of a potential petroleum release. Instrument screening for the presence of VOC may be performed with a duly field calibrated PID (or equivalent). Langan personnel will collect soil samples from the proposed locations following the sampling plan outlined in the work plan. The borings will be filled with clean soil cuttings, clean sand or bentonite grout and capped at grade to match the surrounding surface after samples are collected.

Soil samples will be submitted to a specific lab per the work plan or to a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP)-certified laboratory and analyzed in accordance with work plan specifications.

### 1.3.5 Groundwater Investigation and Sampling

Langan may complete a groundwater investigation. Langan may sample existing monitoring wells, or those soil investigation borings converted into groundwater monitoring wells. Groundwater samples will be collected from one or more of the new and if available, pre-existing monitoring wells in accordance with the Langan Low Flow Groundwater Sampling SOP (SOP

#12). Groundwater samples will be submitted to an approved laboratory and analyzed for constituents as specified in the work plan. Temporary monitoring wells will be plugged and abandoned during the investigation in the manner defined in the work plan. Permanent monitoring wells will be completed with a road box set in concrete. Permanent monitoring wells will be eventually backfilled and abandoned in accordance with State and Local regulations.

Groundwater samples will be submitted to a NYSDOH ELAP-certified laboratory and analyzed in accordance with work plan specifications.

### 1.3.6 Groundwater/Product Gauging

Langan may gauge one or more of the observation/monitoring wells to collect synoptic head data or determine the presence of product. When gauging, Langan may also survey head space VOCs within the well using a duly calibrated PID. When collected, gauging data will be based on the northernmost point at top of casing (TOC) using an interface probe (IP) capable of determining the presence of free product in the monitoring well as light non-aqueous phase liquid (LNAPL) at the top of the water column. If gauging for dense non-aqueous phase liquid (DNAPL) at the base of the monitoring well, the IP may not be appropriate. The field engineer will coordinate with the project team to devise an alternative method to gauge the thickness of DNAPL at base of the well. Langan will decontaminate gauging equipment between wells as required by the work plan.

### 1.3.7 Product Bailing

If free product is observed in any of the monitoring wells, Langan may bail or contract a 3$^{rd}$ part to remove free product from on-site monitoring wells as part of the work plan. Langan or its contractor may use a dedicated bailer or similar device, peristaltic pump or submersible to extract the observed free product. Langan will record the volume of product and groundwater recovered. Recovered free product and groundwater will be drummed and handled in accordance with procedures outlined in the work plan.

### 1.3.8 Sub Slab or Soil Vapor Point Installation and Sampling

Langan (or its contractor) may install one or more sub-slab or soil vapor points at selected locations. If installed, the sub-slab points will be set at or just below the bottom of the slab in accordance with the work plan. The sub-slab points may be installed using an electric hammer drill to advance small diameter boreholes through the concrete (or equivalent) slab as defined in the work plan. The borings will terminate in and sample from the gravel substrate below the slab. Conditions in the field may require adjustment of sampling locations.

Langan personnel (or contractor) may install VaporPin® vapor points (or equivalent) in accordance with the manufacturer's instructions. If no point is used, Langan (or contractor) will set a sampling tube defined as an open-ended Teflon™-lined polyethylene tubing (or equivalent tubing as approved by the project manager [PM]). The sampling tube will be set either within the base of the concrete slab or within the support gravel underlying the slab.

When using the VaporPin® or equivalent, the installation sleeve will provide the necessary annulus seal required for subsequent sampling. However, if a sampling tube as defined above is used, the annulus at the top of the concrete slab will be filled with bentonite or food grade clay to seal the slab. A sand pack is not required for sub-slab vapor sampling. Unless specified by the work plan, the sub slab points are temporary and will be pulled after the sampling event and the hole will be patched at grade with material like the surrounding surface.

Langan personnel will confirm that the soil vapor points (implants) are 2-inches in length constructed of polyethylene material and are connected to the surface by Teflon™-line polyethylene material (equivalent materials for the point and tubing are acceptable as approved by the PM). The annulus around the implant will be filled with clean sand to 6-inches above the implant. A 1-foot bentonite slurry will be applied to the top of the sand up to seal the sampling points. The remaining soil vapor point annulus may be backfilled with clean cuttings are sand to grade. Unless specified by the work plan, the vapor points are temporary and will be pulled after the sampling event and the hole will be patched at grade with material like the surrounding surface.

Vapor samples will be collected in accordance with following guidance including Final Guidance for Evaluating Soil Vapor Intrusion published by the New York State Department of Health (NYSDOH) in October 2006, Langan's Sub-Slab Vapor Sampling SOP (SOP #14) and as specified in the work plan. In addition, ambient air and indoor air samples may be collected for use as a comparison sample. As part of the indoor air sampling program, Langan personnel may complete a building inventory inspection. The inspection may take place prior to the commencement of actual field sampling. Vapor samples may be submitted to a NYSDOH ELAP-certified laboratory and analyzed in accordance with work plan specifications.

### 1.3.9 Observation/Monitoring Well Plugging and Abandonment

While not scheduled, existing observation/monitoring wells may be plugged or abandoned as specified in the work plan. Plugging and abandonment will be in accordance with federal and state requirements. Langan may retain a drilling contractor to complete the plugging and abandonment activities. The contractor will contact the appropriate utility mark-out authority and make available to their field staff the verification number and effective dates. Langan may observe the plugging and abandonment of one or more observation/monitoring wells to

document that the plugging and abandonment activities were completed in accordance with the work plan and regulations.

### 1.3.10 QA/QC Sampling

Samples for quality assurance/quality control [QA/QC] may also be collected and submitted to an approved laboratory and analyzed in accordance with work plan specifications. Information regarding the QA/QC samples including required method of analysis may be included in the same COC as the soil samples unless otherwise instructed by the work plan.

### 1.3.11 Equipment Decontamination

Before the start of the day's sampling and after sampling each run, sampling equipment will be decontaminated by the decontamination process outlined Attachment B - Decontamination Procedures. Decontamination waste and purge water will be temporarily stored on site pending analytical results.

### 1.3.12 Management of Investigative-Derived Waste

The investigative-derived waste (IDW) generated during this investigation will be contained in DOT-approved 55-gallon drums. The drums will be temporarily stored on the site or as directed by the client representative. All drums will be filled between two-thirds full to allow easy maneuvering during drum pickup and disposal. Drum labels are to be provided by Langan (Environmental Closet). All drums will be labeled as "IDW Pending Analysis" until sample data are reported from the laboratory. Drum labels will include date filled and locations where waste was generated along with the standard information required by the labels in accordance with the Langan SOP09, Drum Labeling.

Closed top drums are to be used to store liquids. Debris, including plastic sheeting, polyethylene tubing, personal protection equipment (PPE), decontamination debris, etc. will be segregated from and disposed of in large heavy duty garbage bags and disposed of at the site. Excess unused glassware should be returned to the lab along with the last day of collection samples.

### 1.3.13 Drum Sampling

Langan personnel may collect drum samples, as required, prior to off-site drum disposal. Samples will be placed into laboratory-supplied batch-certified clean glassware and submitted to an approved laboratory and analyzed in accordance with work plan specifications, if required.

### 1.3.14 Surveying

Surveying activities may be completed by Langan. Surveying will be conducted by licensed surveyors.

## 2.0 IDENTIFICATION OF KEY PERSONNEL/HEALTH AND SAFETY PERSONNEL

The following briefly describes the health and safety (H&S) designations and general responsibilities that may be employed for this site. The titles have been established to accommodate the project needs and requirements and ensure the safe conduct of site activities. The H&S personnel requirements for a given work location are based on the proposed site activities.

### 2.1 Langan Project Manager

The Langan Environmental Project Manager (PM) is Emily Butler, her responsibilities include:

- Ensuring that this HASP is developed, current, and approved prior to on-site activities.
- Ensuring that the tasks in the project are performed in a manner consistent with Langan's comprehensive *Health and Safety Program for Hazardous Waste Operations* and this HASP.

### 2.2 Langan Corporate Construction Health and Safety Manager

The Langan Corporate Construction Health and Safety Manager is Tony Moffa. His responsibilities include:

- Updating the *Health and Safety Program for Hazardous Waste Operations*.
- Assisting the site Construction Health and Safety Officer (HSO) with the development of the HASP, updating HASP as dictated by changing conditions, job site inspection results, etc., and approving changes to this HASP.
- Assisting the HSO in the implementation of this HASP and conducting Jobsite Safety Inspections and assisting with communication of results and correction of shortcomings found.
- Maintaining records on personnel (medical evaluation results, training and certifications, accident investigation results, etc.).

### 2.3 Langan Site Health & Safety Officer

The Langan site HSO is William Bohrer. His responsibilities include:

- Participating in the development and implementation of this HASP.
- When on-site, assisting the Langan Field Team Leader in conducting Tailgate Safety Meetings and Jobsite Safety Inspections and correcting any shortcomings in a timely manner.
- Ensuring that proper PPE is available, worn by employees, and properly stored and maintained.
- Controlling entry into and exit from the site contaminated areas or zones.
- Monitoring employees for signs of stress, such as heat stress, fatigue, and cold exposure.
- Monitoring site hazards and conditions.
- Knowing (and ensuring that all site personnel also know) emergency procedures, evacuation routes, and the telephone numbers of the ambulance, local hospital, poison control center, fire department, and police department.
- Resolving conflicts that may arise concerning safety requirements and working conditions.
- Reporting all incidents, injuries, and near misses to the Langan Incident/Injury Hotline immediately and the client representative.

## 2.4 Langan Field Team Leader Responsibilities

The Langan Field Team Leader (FTL) is to be determined prior to the start of field activities. The Field Team Leader's responsibilities include:

- The management of the day-to-day site activities and implementation of this HASP in the field.
- Participating in and/or conducting Tailgate Safety Meetings and Jobsite Safety Inspections and correcting any shortcomings in a timely manner.
- When a Community Air Monitoring Operating Program (CAMP) is part of the scope, the FTL will set up and maintain community air monitoring activities and instruct the responsible contractor to implement organic vapor or dust mitigation when necessary.

## 2.5 Contractor Responsibilities

## 2.5 Contractor Responsibilities

The contractor must develop and implement their own HASP for their employees, their subcontractors, and consultants. The contractor is responsible for their own health and safety and that of their subcontractors. Contractors operating on the site must designate their own FTL, HSO, and Health and Safety Manager (HSM). The contractor's HASP will be at least as stringent as this HASP. The contractor must be familiar with and abide by the requirements outlined in their own HASP. A contractor may elect to adopt Langan's HASP as its own if it has given written

notification to Langan, but where Langan's HASP excludes provisions pertinent to the contractor's work (i.e., confined space entry); the contractor must provide written addendums to this HASP. Additionally, the contractor must:

- Ensure their employees are trained in the use of all appropriate PPE for the tasks involved.
- Notify Langan of any hazardous material brought onto the job site or site-related area, the hazards associated with the material and must provide a safety data sheet (SDS) for the material.
- Have knowledge of, understand, and abide by all current federal, state, and local health and safety regulations pertaining to the work.
- Ensure their employees handling hazardous materials, if identified at the Site, have received current training at the appropriate levels of 29 CFR 1910.120, *Hazardous Waste Operations and Emergency Response* (HAZWOPER) if hazardous waste is identified at the Site,
- Ensure their employees handling hazardous materials, if identified at the Site, have been fit-tested within the year on the type of respirator they will wear.
- Ensure all air monitoring is in place pertaining to the health and safety of their employees as required by OSHA 1910.120; and
- All contractors must adhere to all federal, state, and local regulatory requirements.

## 3.0 TASK/OPERATION SAFETY AND HEALTH RISK ANALYSES

A Task-Hazard Analysis (Table 1) was completed for general hazards that may be encountered at the Site. The potential contaminants that might be encountered during the field activities and the exposure limits are listed in Table 2. The Safety Data Sheets for each potential contaminant listed in Table 2 are included in Attachment E.

### 3.1 Specific Task Safety Analysis

#### 3.1.1 Geophysical Survey

Langan personnel are not permitted to operate or otherwise handle geophysical equipment including GPR/electromagnetic detection equipment used for surface utility clearance. When conducting surface utility clearance surveys, the locations of the boreholes, test pits, and other excavations must be fully marked out. In addition, possible detections by the utility clearance contractor of utilities and other artifacts must also be marked out. Markings should include paint, flags, or color tape (when marking indoor locations that the client has specifically requested not be marked with paint). This information must also be added to the site map.

### 3.1.2 "Soft Dig" Clearance of Borehole Locations

"Soft-Dig" clearance will be completed by the contractors. Langan personnel are not permitted to operate or otherwise handle the contractor's equipment. Langan will update the site map to include the locations of the cleared borehole locations as well as utilities and other artifacts that may interfere with the subsurface investigation.

### 3.1.3 Daylighting Test Pit

Excavation daylighting must abide by OSHA excavation standards (Part 1926.651) and conform to the Langan Underground Utility Clearance Policy. Daily inspections of excavations, the adjacent areas, and protective systems shall be made by a competent person for evidence of a situation that could result in cave-ins, indications of failure of protective systems, hazardous atmospheres, or other hazardous conditions. An inspection shall be conducted by the competent person prior to the start of work and as needed throughout the shift. Inspections shall also be made after every rainstorm or other hazard increasing occurrence.

No one is to enter an excavation deeper than 5 feet unless the excavation walls are properly sloped in accordance with OSHA regulations. If sampling is required, the sample for excavations deeper than 5 feet without protective systems (sloping) as defined by OSHA are to be collected using suitable mechanical excavation equipment (backhoe or equivalent). When collecting soil samples, Langan will wear chemical resistant gloves in addition to the standard PPE. Langan personnel do not operate excavation equipment. This task is to be completed by an authorized operator approved by the contractor.

### 3.1.4 Indoor Drilling and Excavation

The work scope may require indoor excavation where there may not be adequate ventilation sufficient to safely operate any rig or excavation equipment powered by an internal combustion engine. Where possible, all such work should be done with equipment powered by electricity. If such equipment is used and must be directly connected to the building's electrical system or to an independent system, this work must be completed by a licensed electrician in accordance with all electrical codes applicable to the work.

Indoor work which is to be completed with equipment powered by an internal combustion engine must incorporate air monitoring for carbon monoxide (CO) using calibrated air monitoring equipment (MultiRAE or equivalent). In addition, the work plan should incorporate mitigation for venting engine exhaust fumes directly to the outdoors and for circulating fresh air into the work area.

The OSHA Time Weighted Average (TWA) Permissible Exposure Limit (PEL) for CO from 50 to 35 parts per million (ppm). Langan will monitor CO with a suitable monitoring device. If CO levels exceed 5 ppm, Langan will instruct contractors to begin mitigation measures. These measures are at a minimum:

- Increase air circulation using industrial size fans to bring additional fresh air into the building or vent exhaust to the outside.
- Modify the passive exhaust method being used to increase venting circulation by using wider diameter tubing or sealing tubing connections; or
- Modify the work schedule where the rig is turned off to allow time for CO levels to fall back to background.

All work must cease if CO levels reach 35 ppm. The Langan engineer is to report to the PM and H&S officer when an action level is reached.

### 1.3.5 Investigation and Sampling

Sampling groundwater requires the donning of chemical resistant gloves in addition to the standard PPE and cut resistant gloves when cutting sampling-tubing to length. Langan personnel are not to operate drilling equipment nor assemble or install monitoring well equipment. These tasks are to be completed by the driller contractor.

### 1.3.6 Groundwater/Product Gauging

Gauging products require additional safety considerations including the presence of VOCs and protection of both field cloths and property. Langan will monitor air for VOCs using a duly calibrated PID. Langan will wear protective clothing including Tyvek® over-cloths, as necessary. To protect property, Langan will set a plastic barrier to protect floors or protect landscape and use absorbent pads as necessary to collect pooled separate phase liquid. If sampling for PFAS from the same well, Langan will complete the product check first, if the well can be sampled without including product, Langan will remove the Tyvek® material from the well head vicinity.

### 3.1.7 Product Recovery Well Bailing

Langan may bail separate phase liquid from monitoring wells. Langan will wear Tyvek™ suits, Tyvek™ boots and chemical resistant gloves in addition to the standard PPE for bailing and cut resistant gloves when cutting sampling-tubing to length. In addition, Langan will place plastic sheeting around the recovery well head to control spillage during product recovery. Langan will also keep on hand and readily available absorbing pads to use as needed.

### 3.1.8 Electrical Pumps

Langan may use an electric pump to collect separate phase liquid from the recovery wells or to sample groundwater. Langan will inspect the electric pump and control box prior to use and specifically note the condition of the electrical connectors, pump, control box and the electrical cord. The electrical connection must be grounded and connected to the power source using a functional three prong grounded plug. The power source must be a Ground Fault Circuit Interrupter (GFI or GFCI) receptacle.

### 3.1.9 Vapor Investigation and Sampling

Sampling vapor requires the donning of work gloves in addition to the standard PPE when assembling the Summa™ canister with the regulator and cut resistant gloves when cutting sampling- or silicone-tubing to length. Langan personnel are not to operate contractor equipment nor assemble or install the contractor vapor point sampling equipment unless instructed by the work plan. When not instructed by the work plan, these tasks are to be completed by the contractor.

### 3.1.10 Additional Vapor Screening

Langan personnel may prescreen vapor samples for volatile organic compounds (VOCs), methane, hydrogen sulfide and lower explosion limit (LEL) conditions using duly calibrated devices design to screen vapor for these parameters. Langan personnel may also perform atmospheric screening for LEL. Results of the screening may be used in determining which soil vapor samples will be submitted for analysis.

Work activities will immediately cease, and the work area is to be evacuated if the MultiRAE returns a reading of 10% of the LEL (an alarm will sound). Langan personnel will contact the

### 3.1.11 Plugging and Abandonment of Observation/Monitoring Wells

Langan personnel are not to operate equipment nor assist in the plugging and abandonment of the observation/monitoring wells. These tasks are to be completed by the contractor.

### 3.1.12 Drum Sampling

Drilling fluid, rinse water, grossly contaminated soil samples, and cuttings will be containerized in 55-gallon drums for disposal off-site. Each drum must be labeled in accordance with the Langan Drum Labeling Standard Operating Procedure (SOP09). Sampling drums requires the donning of work gloves when opening the drums and chemical resistant gloves when sampling in addition

to standard PPE.

### 3.2 Radiation Hazards

No radiation hazards are known or expected at the site.

### 3.3 Physical Hazards

Physical hazards, which may be encountered during site operations for this project, are detailed in Table 1.

#### 3.3.1 Explosion

No explosion hazards are expected for the scope of work at this site.

#### 3.3.2 Heat Stress

The use of Level C protective equipment, or greater, may create heat stress. Monitoring of personnel wearing personal protective clothing should commence when the ambient temperature is 72$^{O}$F or above. Table 6 presents the suggested frequency for such monitoring. Monitoring frequency should increase as ambient temperature increases or as slow recovery rates are observed. Refer to Table 7 to assist in assessing when the risk for heat-related illness is likely. To use this table, the ambient temperature and relative humidity must be obtained (a regional weather report should suffice). Heat stress monitoring should be performed by the HSO or the FTL, who must be able to recognize symptoms related to heat stress.

To monitor the workers, be familiar with the following heat-related disorders and their symptoms:

- **Heat Cramps: Painful** spasms of arm, leg, or abdominal muscles, during or after work
- **Heat Exhaustion: Headache**, nausea, dizziness; cool, clammy, moist skin; heavy sweating; weak, fast pulse; shallow respiration, normal temperature
- **Heat Stroke**: Headache, nausea, weakness, hot dry skin, fever, rapid strong pulse, rapid deep respirations, loss of consciousness, convulsions, coma. *This is a life-threatening condition***.**

Do not permit a worker to wear a semi-permeable or impermeable garment when they are showing signs or symptoms of heat-related illness.

To monitor the worker, measure:

- **Heart rate: Count** the radial pulse during a 30-second period as early as possible in the rest period. If the heart rate exceeds 100 beats per minute at the beginning of the rest

period, shorten the next work cycle by one-third and keep the rest period the same. If the heart rate still exceeds 100 beats per minute at the next rest period, shorten the following work cycle by one-third. A worker cannot return to work after a rest period until their heart rate is below 100 beats per minute.

- **Oral temperature: Use** a clinical thermometer (3 minutes under the tongue) or a similar device to measure the oral temperature at the end of the work period (before drinking). If oral temperature exceeds 99.6$^{O}$F (37.6$^{O}$C), shorten the next work cycle by one-third without changing the rest period. A worker cannot return to work after a rest period until their oral temperature is below 99.6$^{O}$F. If oral temperature still exceeds 99.6$^{O}$F (37.6$^{O}$C) at the beginning of the next rest period, shorten the following cycle by one-third. Do <u>not</u> permit a worker to wear a semi-permeable or impermeable garment when oral temperature exceeds 100.6$^{O}$F (38.1$^{O}$C).

<u>Prevention</u> <u>of</u> <u>Heat</u> <u>Stress</u> - Proper training and preventative measures will aid in averting loss of worker productivity and serious illness. Heat stress prevention is particularly important because once a person suffers from heat stroke or heat exhaustion, that person may be predisposed to additional heat-related illnesses. To avoid heat-stress the following steps should be taken:

- Adjust work schedules.
- Mandate work slowdowns as needed.
- Perform work during cooler hours of the day if possible or at night if adequate lighting can be provided.
- Provide shelter (air-conditioned, if possible) or shaded areas to protect personnel during rest periods.
- Maintain worker's body fluids at normal levels. This is necessary to ensure that the cardiovascular system functions adequately. Daily fluid intake must equal the amount of water lost in sweat, i.e., eight fluid ounces (0.23 liters) of water must be ingested for every eight ounces (0.23 kilograms [kg]) of weight loss. The normal thirst mechanism is not sensitive enough to ensure that enough water will be drunk to replace lost sweat. When heavy sweating occurs, encourage the worker to drink more. The following strategies may be useful:
    - Maintain water temperature 50$^{O}$ to 60$^{O}$F (10$^{O}$ to 16.6$^{O}$C).
    - Provide small disposal cups that hold about four ounces (0.1 liters).
    - Have workers drink 16 ounces (0.5 liters) of fluid (preferably water or dilute drinks) before beginning work.
    - Urge workers to drink a cup or two every 15 to 20 minutes, or at each monitoring break. A total of 1 to 1.6 gallons (4 to 6 liters) of fluid per day are recommended, but more may be necessary to maintain body weight.
    - Train workers to recognize the symptoms of heat-related illness.

### 3.3.3 Cold-Related Illness

If work on this project begins in the winter months, thermal injury due to cold exposure can become a problem for field personnel. Systemic cold exposure is referred to as hypothermia. Local cold exposure is called frostbite.

- **Hypothermia -** Hypothermia is defined as a decrease in the patient's core temperature below 96$^{O}$F. The body temperature is normally maintained by a combination of central (brain and spinal cord) and peripheral (skin and muscle) activity. Interference with any of these mechanisms can result in hypothermia, even in the absence of what normally is considered a "cold" ambient temperature. Symptoms of hypothermia include shivering, apathy, listlessness, sleepiness, and unconsciousness.
- **Frostbite -** Frostbite is both a general and medical term given to areas of local cold injury. Unlike systemic hypothermia, frostbite rarely occurs unless the ambient temperatures are less than freezing and usually less than 20$^{O}$F. Symptoms of frostbite are sudden blanching or whitening of the skin; the skin has a waxy or white appearance and is firm to the touch; tissues are cold, pale, and solid.

Prevention of Cold-Related Illness - To prevent cold-related illness:

- Educate workers to recognize the symptoms of frostbite and hypothermia.
- Identify and limit known risk factors:
- Assure the availability of an enclosed, heated environment on or adjacent to the site.
- Assure the availability of dry changes of clothing.
- Assure the availability of warm drinks.
- Start (oral) temperature recording at the job site:
- At the FSO or Field Team Leader's discretion when suspicion is based on changes in a worker's performance or mental status.
- At a worker's request.
- As a screening measure, two times per shift, under unusually hazardous conditions (e.g., wind chill less than 20$^{O}$F, or wind-chill less than 30$^{O}$F with precipitation).
- As a screening measure whenever anyone worker on the site develops hypothermia.

Any person developing moderate hypothermia (a core temperature of 92$^{O}$F) cannot return to work for 48 hours.

### 3.3.4 Noise

Work during the proposed activities may be conducted at locations with high noise levels from the operation of equipment. Hearing protection will be used, as necessary.

### 3.3.5 Hand and Power Tools

The use of hand and power tools can present a variety of hazards, including physical harm from being struck by flying objects, being cut, or struck by the tool, fire, and electrocution. All hand and power tools should be inspected for health and safety hazards prior to use. If deemed unserviceable/un-operable, notify the supervisor and tag and remove equipment out of service. Ground Fault Circuit Interrupters (GFCIs) are required for all power tools requiring direct electrical service.

### 3.3.6 Slips, Trips, and Fall Hazards

Care should be exercised when walking at the site, especially when carrying equipment. The presence of surface debris, uneven surfaces, pits, facility equipment, and soil piles contribute to tripping hazards and fall hazards. To the extent possible, all hazards should be identified and marked on the site, with hazards communicated to all workers in the area.

### 3.3.7 Utilities (Electrocution and Fire Hazards)

*3.3.7.1 Utility Clearance*

The possibility of encountering underground utilities poses fire, explosion, and electrocution hazards. All excavation work will be preceded by a review of available utility drawings and by notification of the subsurface work to N.Y. One –Call--Center.

*3.3.7.2 Lockout-Tagout*

The potential adverse effects of electrical hazards include burns, arc flashes, and electrocution, which could result in serious injury including death. Therefore, there is a procedure that establishes the requirements for the lockout/tag out (LOTO) of energy isolating devices in accordance with the OSHA electrical lockout and tagging requirements as specified in 29CFR1910.147 and 29 CFR 1926.417. This procedure will be used to ensure that all machines and equipment are isolated from potentially hazardous energy. If possible, equipment that could cause injury due to unexpected energizing, start-up, or release of stored energy will be locked/tagged, before field personnel performs work activities.

The facility owner/operator/representative is to be the authorized person that will initiate and perform the LOTO in accordance with applicable rules and practices. Inerting of electrical power sources is to be completed by an authorized and licensed electrician. Langan personnel will follow LOTO protocols and practices including adding a separate lock/signature to the LOTO chain in accordance with said protocols and practices.

**SPECIAL NOTE: Project** personnel will assume that all electrical equipment at the surface, subsurface, and overhead locations are energized until equipment has been designated and

confirmed as de-energized by a utility company representative. Langan will notify the designated utility representative prior to working adjacent to this equipment and will verify that the equipment is energized or de-energized in the vicinity of the work location. No project work shall be performed by Langan personnel or subcontractors near energized electrical lines or equipment.

The FTL shall accompany the designated facility owner/operator/representative or authorized/licensed electrician in surveying to locate and identify all energy-isolating devices. Langan will note which switches, valves or other isolating devices are used for inerting the equipment and how they are set assuring LOTO. The lockout/tagout procedure involves, but is not limited to, electricity, motors, steam, natural gas, compressed air, hydraulic systems, digesters, sewers, etc.

### 3.3.8 Adequate Lighting

Indoor or night activities must be done under adequate lighting conditions. The Langan field engineer must be able to clearly see the equipment, all controls and have sufficient lighting to detail color labels. Battery operated lights are sufficient provided they cast a wide enough field to provide the required lighting and there are back-up batteries and emergency flashlights available. Electrically powered lights are suitable provided the electrical source is equipped with a ground fault interrupt circuit (GFIC) and the extensions cords are visually inspected prior to each use, and not used if they show cracked, damaged, or missing insulation. If a generator is supplying the electricity, it must be located outdoors and properly grounded and vented.

### 3.3.9 Physical Hazard Considerations for Material Handling

There are moderate to severe risks associated with moving heavy objects at the Site. The best method of reducing back injuries is to reduce or eliminate manual lifting. Mechanical lifting devices should be used whenever possible.

- Size up the load before attempting to lift it. Heavy objects will be lifted and moved by mechanical devices rather than manual effort whenever possible. Never overexert when lifting.
    - When using a mechanical device, the devices should be appropriate for the lifting of moving tasks and operated only by trained and authorized personnel.
    - Objects that require special handling or rigging will only be moved under the guidance of a person who has been specifically trained to move such objects.
    - Lifting devices will be inspected, certified, and labeled to confirm their weight capacities. Defective equipment will be taken out of service immediately and repaired or destroyed.
    - The wheels of any truck being loaded or unloaded will be choked to prevent movement. Outriggers will be fully extended to a flat, firm surface during

operation.
    - Personnel will not pass under a raised load, nor will a suspended load be left unattended.
    - Personnel will not be carried on lifting equipment unless it is specifically designed to carry passengers.
    - All reciprocating, rotating, or other moving parts will be always guarded.
    - Accessible fire extinguishers, currently (monthly) inspected, will be available in all mechanical lifting devices.
    - Verify all loads/materials are secure before transportation
- If manual lifting cannot be avoided the following lifting procedures are recommended.
    - If the load is thought to be more than one person can handle, get another person to help with the job.
    - Make sure you can carry the load where you need to go before attempting to lift it. Make sure your path is clear of equipment, materials, debris, holes, etc.
    - Place your feet close to the object, spread about 12 inches apart.
    - Bend your knees and get a good hand hold.
    - Lift straight up smoothly, allowing your legs not your back to do the work.
    - Keep the load close to the body with your elbows and arms tucked in.
    - Do not twist or turn your body once you have made the lift.
    - Set the load down properly:
        - Lower the load slowly by bending at your knees, letting your legs do most of the work.
        - Don't let go of the load until it's secure on the surface.

Material handling tasks that are unusual or require specific guidance will need a written addendum to this HASP. The addendum must identify the lifting protocols before the tasks are performed. Upon approval, the plan must be reviewed with all affected employees and documented. Any deviation from a written plan will require approval by the Langan HSM.

### 3.3.10 Hearing Conservation

Under the construction industry standard, the maximum permissible occupational noise exposure is 90 A-weighted decibels (dbA) (8-hour TWA), and noise levels more than 90 dbA must be reduced through feasible administrative and engineering controls (20 CFR 1926.52). Hearing protection is required when working within 15 feet of vacuum extraction equipment and drill rigs.

### 3.3.11 Open Water

Employees working over or near water, where the danger of drowning exists, must be provided with U.S. Coast Guard-approved life jackets or buoyant work vests. Prior to and after each use, the buoyant work vests or life preservers must be inspected for defects that would alter their strength or buoyancy. Defective units must not be used.

And should a worker fall into the water, OSHA requires (29 CFR 1926.106(c)) that ring-buoys with at least 90 feet of the line must be provided and ready for emergency rescue operations. The

distance between ring buoys must not exceed 200 feet. Another remedial action required by OSHA (29 CFR 1926.106(d)) is the use of lifesaving skiffs.

OSHA requires that at least one lifesaving skiff must be immediately available at locations where employees are working over or adjacent to water and must include the following provisions.

- The skiff must be in the water or capable of being quickly launched by one person.
- At least one person must be present and specifically designated to respond to water emergencies and always operate the skiff when there are employees above water.
- When the operator is on break another operator must be designated to provide requisite coverage when there are employees above water.
- The designated operator must either have the skiff always staffed or have someone remain in the immediate area such that the operator can quickly reach the skiff and perform rescue services.
- The skiff operator may be assigned other tasks provided the tasks do not interfere with the operator's ability to quickly reach the skiff.
- A communication system, such as a walkie-talkie, must be used to inform the skiff operator of an emergency and to inform the skiff operator where the skiff is needed.
- The skiff must be equipped with both a motor and oars.

Regarding the number of skiffs required and the appropriate maximum response time, the following factors must be evaluated:

- The number of work locations where there is a danger of falling into water.
- The distance to each of those locations.
- Water temperature and currents.
- Other hazards such as, but not limited to, rapids, dams, and water intakes.

Other regulations that present H&S practices and PPE for work on or near water include: 29 CFR 1910, Subpart T (401 – 440).

## 3.4 Biological Hazards

### 3.4.1 Animals

There is a possibility of encountering wildlife including reptiles, rodents, and other small and medium-sized mammals. Langan personnel are to avoid interacting with any wildlife.

### 3.4.2 Insects

Ticks and other biting or stinging insects may be encountered during site operations. Langan

personnel should take necessary precautions including wearing long sleeve shirts and insecticide to prevent bites and stings. After fieldwork, Langan personnel should perform a complete visual inspection of their clothing to ensure they are not inadvertently harboring ticks. If they do observe a tick bite, they are to contact the HSM or HSO and report the event.

### 3.4.3 Plants

Poisonous plants may be encountered during site operations. Langan personnel should take necessary precautions including donning long sleeve shirts and applying preventative poison Ivy/Sumac lotion to prevent or limit the effects of exposure. If after fieldwork, Langan employees do observe a reaction to poisonous plant exposure, they are to contact the HSM or HSO and report the event.

### 3.4.4 Mold

This section is restricted to subsurface investigations where sampling soil, groundwater, soil or sub-slab vapor or ambient air in an indoor environment with slight to moderate mold impact. Mold exposure symptoms include nasal stuffiness, eye irritation, or wheezing.

The Langan field engineer is required to don a ½ face respirator with a minimum p-100 particulate filter and Tyvek™ type overclothing before entering mold impacted indoor work area. The Langan field engineer must be medically cleared and have been properly fitted for a respirator before donning one.

## 3.5 Additional Safety Analysis

### 3.5.1 Presence of Non-Aqueous Phase Liquids (NAPL)

Special care and PPE should be considered when NAPL is observed as NAPL is a typically flammable fluid and releases VOCs known to be toxic and/or carcinogenic. If NAPL is present in a monitoring well, vapors from the well casing may contaminate the work area breathing zone with concentrations of VOCs potentially exceeding health and safety action levels. In addition, all equipment used to monitor or sample NAPL (or ground water from wells containing NAPL) must be intrinsically safe. Equipment that directly contacts NAPL must also be resistant to organic solvents.

At a minimum, a PID should be used to monitor VOCs when NAPL is observed. If NAPL is expected to be observed in an excavation or enclosed area, air monitoring must be started using calibrated air monitoring equipment designed to sound an audio alarm when atmospheric concentrations of VOC are within 10% of the LEL. In normal atmospheric oxygen concentrations, the LEL monitoring may be done with a Wheatstone bridge/catalytic bead type sensor (i.e.,

MultiRAE). However, in oxygen-depleted atmospheres (confined space), only an LEL designed to work in low-oxygen environments may be used. Best practices require that the LEL monitoring unit be equipped with a long sniffer tube to allow the LEL unit to remain outside the UST excavation.

When NAPL is present, Langan personnel are required to always use disposable nitrile gloves to prevent skin contact with contaminated materials. They should also consider having available respirators and protective clothing (Tyvek® overalls), especially if NAPL is in abundance and there are high concentrations of VOCs.

All contaminated disposables including PPE and sampling equipment must be properly disposed of in labeled 55-gallon drums.

### 3.6 Job Safety Analysis

A Job Safety Analysis (JSA) is a process to identify existing and potential hazards associated with each job or task so these hazards can be eliminated, controlled, or minimized. A JSA will be performed at the beginning of each workday, and additionally whenever an employee begins a new task or moves to a new location. All JSAs must be developed and reviewed by all parties involved. A blank JSA form and documentation of completed JSAs are in Attachment G.

## 4.0 PERSONNEL TRAINING

### 4.1 Basic Training

Completion of an initial 40-hour HAZWOPER training program as detailed in OSHA's 29 CFR 1910.120(e) is required for all employees working on a site engaged in hazardous substance removal or other activities which expose or potentially expose workers to hazardous substances, health hazards, or safety hazards as defined by 29 CFR 1910.120(a). Annual 8-hour refresher training is also required to maintain competencies to ensure a safe work environment. In addition to these training requirements, all employees must complete the OSHA 10-hour Construction Safety and Health training, and supervisory personnel must also receive eight additional hours of specialized management training. Training records are maintained by the HSM.

### 4.2 Initial Site-Specific Training

Training will be provided to specifically address the activities, procedures, monitoring, and equipment for site operations at the beginning of each field mobilization and the beginning of each discrete phase of work. The training will include the site and facility layout, hazards, and emergency services at the site, and will detail all the provisions contained within this HASP. For a HAZWOPER operation, training on the site must be for a minimum of 3 days. Specific issues that will be addressed include the hazards described in Section 3.0.

### 4.3 Tailgate Safety Briefings

Before starting work each day or as needed, the Langan HSO will conduct a brief tailgate safety meeting to assist site personnel in conducting their activities safely. Tailgate meetings will be documented in Attachment H. Briefings will include at a minimum the following:

- Work plan for the day.
- Review of safety information relevant to planned tasks and environmental conditions.
- New activities/tasks being conducted.
- Driving conditions/hazards/designated parking areas.
- Results of Jobsite Safety Inspection Checklist.
- Changes in work practices.
- Safe work practices; and
- Discussion and remedies for noted or observed deficiencies.

## 5.0 MEDICAL SURVEILLANCE

All personnel who will be performing fieldwork involving potential exposure to toxic and hazardous substances (defined by 29 CFR 1910.120(a)) will be required to have passed an initial baseline medical examination, with follow-up medical exams thereafter, consistent with 29 CFR 1910.120(f). Medical evaluations will be performed by, or under the direction of, a physician certified in occupational medicine.

Additionally, personnel who may be required to perform work while wearing a respirator must receive medical clearance as required under CFR 1910.134(e), *Respiratory Protection*. Medical evaluations will be performed by, or under the direction of, a physician certified in occupational medicine. Results of medical evaluations are maintained by the HSM.

### 5.1 Mercury Monitoring

Langan includes medical monitoring for mercury during the initial baseline and annual physical.

### 5.2 Coronavirus

**General Preventative Measures**

Field personnel must follow general proper hygiene measures while in the field including:

- Avoid touching eyes, nose, and mouth.
- Cover your mouth when you are about to cough or sneeze with tissue and throw in the trash.

- Wash hands often with soap and water for 20 seconds after going to the bathroom, before eating, after blowing nose, coughing, or sneezing.
- Use hand sanitizer with at least 60% alcohol if soap and water are not available.
- Avoid physical contact with other people (e.g., no handshakes).
- Maintain a safe distance of at least six feet from other people (social distancing).
- Wear face coverings when around other workers to minimize the spread of COVID-19. (May be required in certain states or locations.)

**Construction Trailers**

Employees should avoid the use of shared construction trailers or where employees cannot maintain a safe distance (minimum 6 feet) from other workers. If trailer use is needed, areas such as desks, phones, chairs, and other common areas, should be cleaned and disinfected before and after use. Protocols should be developed to minimize trailer use to essential personnel, restrict use from any workers who are ill or showing symptoms of being ill, use face coverings and ensure a safe distance of six feet can be established between workers.

**Communication**

Include Coronavirus topics and prevention topics in daily tailgate meetings to ensure Coronavirus awareness is communicated daily. Discussions can focus on general topics including social distancing, prevention measures for field personnel, signs and symptoms, and recent news on the Coronavirus. Site-specific topics should include minimizing face-to-face contact, disinfecting/sterilizing field equipment, use of PPE to reduce exposure, site security, use of face coverings, and other potential exposure issues/concerns.

**Sick/Ill Workers**

No Langan employee is permitted to be onsite when ill and/or showing potential symptoms of the Coronavirus. Symptoms of the Coronavirus may appear 2-14 days after exposure and can range from mild to severe. The most common symptoms include fever, fatigue, dry cough, shortness of breath chills, repeated shaking with chills, muscle pain, headache, sore throat, or new loss of taste or smell. If an employee or subcontractor is observed being ill or exhibiting symptoms of Coronavirus, employees must immediately utilize their Stop Work Authority and contact their project manager to address the situation. If an employee observes another worker onsite exhibiting symptoms of Coronavirus, immediately utilize Stop Work Authority, notify their project manager, and site manager or safety officer. Work should resume when the safety and health of Langan and subcontractors is adequately addressed.

# 6.0 PERSONAL PROTECTIVE EQUIPMENT

## 6.1 Levels of Protection

Langan will provide PPE to Langan employees to protect them from the specific hazards they are likely to encounter onsite. Directly hired contractors will provide their employees with equivalent PPE to protect them from the specific hazards likely to be encountered on-site. Selection of the appropriate PPE must take into consideration: (1) identification of the hazards or suspected hazards; (2) potential exposure routes; and (3) the performance of the PPE construction (materials and seams) in providing a barrier to these hazards.

Human exposure to contaminants found in the subsurface can occur through three primary routes:

- Inhalation of gases, vapors, dust, or mist is a common route of exposure. Chemicals can enter and irritate the airways and the lungs. They can become deposited in the airways or can be absorbed through the lungs into the bloodstream.
- Direct contact of contaminants with the skin or eyes is a common route of exposure. Some substances are absorbed through the skin and can enter the bloodstream. Broken, cut, or cracked skin will allow substances to enter the body more easily.
- Ingestion or swallowing of food, drink, or other substances is the third route of exposure. Chemicals that get in or on food, utensils, or hands can be ingested. Substances can be absorbed into the blood.

Based on anticipated site conditions and the proposed work activities to be performed at the site, Level D protection will be used. The upgrading/downgrading of the level of protection will be based on continuous air monitoring results as described in Section 6.0 (when applicable). The decision to modify standard PPE will be made by the site HSO or FTL after conferring with the PM. The levels of protection are described below.

**Level D Protection (as needed)**

- Safety glasses with side shields or chemical splash goggles
- Safety boots/shoes
- Coveralls (Tyvek® or equivalent)
- Hard hat
- Long sleeve work shirt and work pants
- Nitrile gloves
- Hearing protection
- Reflective safety vest

**Level D Protection (Modified, as needed)**

- Safety glasses with side shields or chemical splash goggles
- Safety boots/shoes (toe-protected)
- Disposable chemical-resistant boot covers.
- Coveralls (poly-coated Tyvek or equivalent to be worn when contact with wet contaminated soil, groundwater, or non-aqueous phase liquids is anticipated)
- Hard hat
- Long sleeve work shirt and work pants
- Nitrile gloves
- Hearing protection (as needed)
- Personal floatation device (for work within 5 ft of the water)
- Reflective traffic vest

**Level C Protection (as needed)**

- Full or Half face, air-purifying respirator, with NIOSH approved High-Efficiency Particulate Air (HEPA) filter.
- Inner (latex) and outer (nitrile) chemical-resistant gloves
- Safety glasses with side shields or chemical splash goggles
- Chemical-resistant safety boots/shoes
- Hard hat
- Long sleeve work shirt and work pants
- Coveralls (Tyvek® or equivalent)
- Hearing protection (as needed)
- Reflective safety vest

The action levels used in determining the necessary levels of respiratory protection and upgrading to Level C are summarized in Table 4. The written Respiratory Protection Program is maintained by HSM and is available if needed. The monitoring procedures and equipment are outlined in Section 6.0 (when applicable).

## 6.2 Respirator Fit-Test.

All Langan employees who may be exposed to hazardous substances at the work site must be in possession of a full or half face air-purifying respirator and have been successfully fitted within the past year. Fit-test records are maintained by the HSM.

### 6.3 Respirator Cartridge Change-Out Schedule

Respiratory protection is required to be worn when certain action levels (Table 2) are reached. A respirator cartridge change-out schedule has been developed to comply with 29 CFR 1910.134. The respirator cartridge change-out schedule for this project is as follows:

- Cartridges must be removed and disposed of at the end of each shift when cartridges become wet or the wearer experiences a breakthrough, whichever occurs first.
- If the humidity exceeds 85%, then cartridges must be removed and disposed of after 4 hours of use.

Respirators must not be stored at the end of the shift with contaminated cartridges left on. Cartridges must not be worn on the second day, no matter how short the time period was the previous day they were used.

## 7.0 AIR QUALITY MONITORING AND ACTIONS LEVELS

### 7.1 Monitoring During Site Operations

Atmospheric air monitoring results may be collected and used to provide data to determine when exclusion zones need to be established and when certain levels of personal protective equipment are required. For all instruments, there are Site-specific action-level criteria that are used in making field health and safety determinations. Other data, such as the visible presence of contamination or the steady state nature of air contaminant concentration, are also used in making field health and safety decisions. Therefore, the HSO may establish an exclusion zone or require a person to wear a respirator even though atmospheric air contaminant concentrations are below established HASP action levels.

During site work involving disturbance of petroleum-impacted or fill material, real-time air monitoring may be conducted for methane and VOCs. A MultiRAE LEL/Oxygen (O2) meter and FID will be used to monitor the LEL of methane, and a PID and/or FID will be used to monitor concentrations of VOCs at personnel breathing-zone height. Air monitoring will be the responsibility of the HSO or appointed substitute. Air monitoring may be conducted during intrusive activities associated with the completion of excavation, debris removal, and soil grading. All manufacturers' instructions for instrumentation and calibration will be available onsite.

Subcontractors' air monitoring plans must be equal to or more stringent than the Langan plan.

An air monitoring calibration log is provided in Attachment D of this HASP.

### 7.1.1 Volatile Organic Compounds

Monitoring with a PID, such as a MiniRAE 2000 (10.6v) or equivalent may occur during intrusive work in the Areas of Concern (AOCs). Colorimetric Indicator Tubes for benzene may be used as a backup for the PID if measurements remain above background monitor every 2 hours. The HSO will monitor the employee's breathing zone at least every 30 minutes, or whenever there is any indication that concentrations may have changed (odors, visible gases, etc.) since the last measurement. If VOC levels are observed above 5 ppm for longer than 5 minutes or if the site PPE is upgraded to Level C, the HSO will begin monitoring the site perimeter at a location downwind of the AOC every 30 minutes in addition to the employee breathing zone. Instrument action levels for monitored gases are provided in Table 4.

### 7.1.2 Metals

Based upon the site historic fill, there is a potential for the soils to contain Polycyclic Aromatic Hydrocarbons (PAHs) and metals. During invasive procedures which have the potential for creating airborne dust, such as excavation of dry soils, a real-time airborne dust monitor such as a Mini-Ram may be used to monitor for air particulates. The HSO will monitor the employee's breathing zone at least every 30 minutes, or whenever there is any indication that concentrations may have changed (appearance of visible dust) since the last measurement. If dust levels are observed to be greater than 0.100 milligrams per cubic meter ($mg/m^3$) or visible dust is observed for longer than 15 minutes or if the site PPE is upgraded to Level C, the HSO will begin monitoring the site perimeter at a location downwind of the AOC every 30 minutes in addition to the employee breathing zone. Instrument action levels for dust monitoring are provided in Table 4.

### 7.1.3 Methane

During soil excavation or other intrusive activities, direct reading air monitoring may be performed in the excavation area to determine exposure to workers. Monitoring an LEL/O2 meter and FID may occur during intrusive work in the AOCs. The HSO will monitor the employees' breathing zone at least hourly during intrusive activities. If LEL levels are observed above 20% the professional engineer (PE) or their designee will stop work and evacuate the area; warn others; and determine source of readings and take corrective actions. The Contractor will be responsible for mitigating explosive gas levels.

## 7.2 Monitoring Equipment Calibration and Maintenance

Instrument calibration must be documented and included in a dedicated safety and health logbook or on separate calibration pages of the field book. All instruments must be calibrated before and after each shift. Calibration checks may be used during the day to confirm instrument accuracy. Duplicate readings may be taken to confirm individual instrument responses.

All instruments must be operated in accordance with the manufacturers' specifications. Manufacturers' literature, including an operation manual for each piece of monitoring equipment, will be maintained on-site by the HSO for reference.

### 7.3 Determination of Background Levels

Background (BKD) levels for VOCs, dust and methane will be established prior to intrusive activities within the AOC at an upwind location. A notation of BKD levels will be referenced in the daily monitoring log. BKD levels are a function of prevailing conditions. BKD levels will be taken in an appropriate upwind location as determined by the HSO.

Table 4 lists the instrument action levels.

## 8.0 COMMUNITY AIR MONITORING PROGRAM

Community air monitoring may be conducted in compliance with local standards. If conducted, Langan will implement the generic CAMP outlined below amended to comply with local conditions or standards:

Monitoring for dust and odors will be conducted during all ground intrusive activities by the FTL. Continuous monitoring of the perimeter of the work zones for odor, VOCs, and dust may be required for all ground intrusive activities such as soil excavation and handling activities. The work zone is defined as the general area in which machinery is operating in support of remediation activities. A portable PID will be used to monitor the work zone and for periodic monitoring for VOCs during activities such as soil and groundwater sampling and soil excavation. The site perimeter will be monitored for fugitive dust emissions by visual observations as well as instrumentation measurements (if required). When required, particulate or dust will be monitored continuously with real-time field instrumentation that will meet, at a minimum, the local standards or, default to the performance standards below:

If VOC monitoring is required, the following actions will be taken based on VOC levels measured:

- If total VOC levels exceed 5 ppm above background for the 15-minute average at the perimeter, work activities will be temporarily halted and monitoring continued. If levels readily decrease (per instantaneous readings) below 5 ppm above background, work activities will resume with continued monitoring.
- If total VOC levels at the downwind perimeter of the hot zone persist at levels more than 5 ppm above background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps work activities will resume provided that the total organic vapor level is 200 feet downwind of the hot zone or half the distance to the nearest

potential receptor or residential/commercial structure, whichever is less – but in no case less than 20 feet, is below 5 ppm above background for the 15-minute average.
- If the total VOC level is above 25 ppm at the perimeter of the hot zone, activities will be shut down.

If dust monitoring with field instrumentation is required, the following actions will be taken based on instrumentation measurements:

- If the downwind particulate level is 100 micrograms per cubic meter (µg/m³) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression must be employed. Work may continue with dust suppression techniques provided that downwind particulate matter less than 10 microns (PM10) levels do not exceed 150 µg/m³ above the background level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM10 levels are greater than 150 µg/m³ above the background level, work must be stopped, and a re-evaluation of activities initiated. Work can resume if dust suppression measures and other controls are successful in reducing the downwind PM10 concentration to within 150 µg/m³ of the upwind level and in preventing visible dust migration.

## 8.1 Dust Suppression Techniques

Preventative measures for dust generation may include wetting site fill and soil, construction of an engineered construction entrance with a gravel pad, a truck wash area, covering soils with tarps, and limiting vehicle speeds to five miles per hour.

Work practices to minimize odors and vapors include limiting the time that the excavations remain open, minimizing stockpiling of contaminated-source soil, and minimizing the handling of contaminated material. Offending odor and organic vapor controls may include the application of foam suppressants or tarps over the odor or VOC source areas. Foam suppressants may include biodegradable foams applied over the source material for short-term control of the odor and VOCs.

If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include direct load-out of soils to trucks for off-site disposal; use of chemical odorants in spray or misting systems; and use of staff to monitor odors in surrounding neighborhoods.

Where odor nuisances have developed during remedial work and cannot be corrected, or where the release of nuisance odors cannot otherwise be avoided due to on-site conditions or proximity

to sensitive receptors, odor control will be achieved by sheltering excavation and handling areas under tented containment structures equipped with appropriate air venting/filtering systems.

## 9.0 WORK ZONES AND DECONTAMINATION

### 9.1 Site Control

Work zones are intended to control the potential spread of contamination throughout the site and to ensure that only authorized individuals are permitted into potentially hazardous areas. Specific zones will be established on the work site by the Contractor when operations begin for each task requiring such delineation. Maps depicting the zones will be available at the Site.

Any person working in an area where the potential for exposure to site contaminants exists will only be allowed access after providing the HSO with proper training and medical documentation.

**Exclusion Zone (EZ)** - All activities which may involve exposure to site contaminants, hazardous materials, and/or conditions should be considered an EZ. Decontamination of field equipment will also be conducted in the Contaminant Reduction Zone (CRZ) which will be located on the perimeter of the EZ. The EZ and the CRZ will be delineated by cones, tapes, or other means. The HSO may establish more than one EZ where different levels of protection may be employed, or different hazards exist. The size of the EZ must be determined by the HSO allowing adequate space for the activity to be completed, field members, and emergency equipment.

### 9.2 Contamination Zone

#### 9.2.1 Personnel Decontamination Station

Personal hygiene, coupled with diligent decontamination, will significantly reduce the potential for exposure.

#### 9.2.2 Minimization of Contact with Contaminants

During the completion of all site activities, personnel should attempt to minimize the chance of contact with contaminated materials. This involves a conscientious effort to keep "clean" during site activities. All personnel should minimize kneeling, splash generation, and another physical contact with contamination as PPE is intended to minimize accidental contact. This may minimize the degree of decontamination required and the generation of waste materials from site operations.

Field procedures will be developed to control spray and runoff and to ensure that unprotected personnel working nearby are not affected.

### 9.2.3 Personnel Decontamination Sequence

Decontamination may be performed by removing all PPE used in EZ and placing it in drums/trash cans at the CRZ. Baby wipes should be available for wiping hands and face. Drums/trash cans will be labeled by the field crews in accordance with all local, state, and federal requirements. Management plans for contaminated PPE, and tools are provided below.

### 9.2.4 Emergency Decontamination

If circumstances dictate that contaminated clothing cannot be readily removed, then remove gross contamination and wrap injured personnel with clean garments/blankets to avoid contaminating other personnel or transporting equipment. If the injured person can be moved, he/she will be decontaminated by site personnel as described above before emergency responders handle the victim. If the person cannot be moved because of the extent of the injury (a back or neck injury), provisions must be made to ensure that emergency response personnel will be able to respond to the victim without being exposed to potentially hazardous atmospheric conditions. If the potential for inhalation hazards exists, such as with open excavation, this area will be covered with polyethylene sheeting to eliminate any potential inhalation hazards. All emergency personnel should be immediately informed of the injured person's condition, and potential contaminants, and provided with all pertinent data.

### 9.2.5 Hand-Held Equipment Decontamination

Hand-held equipment includes all monitoring instruments as stated earlier, samples, hand tools, and notebooks. The hand-held equipment is dropped at the first decontamination station to be decontaminated by one of the decontamination team members. These items must be decontaminated or discarded as waste prior to removal from the CRZ.

To aid in decontamination, monitoring instruments can be sealed in plastic bags or wrapped in polyethylene. This will also protect the instruments against contaminants. The instruments will be wiped clean using wipes or paper towels if contamination is visually evident. Sampling equipment, hand tools, etc. will be cleaned with non-phosphorous soap to remove any potentially contaminated soil and rinsed with deionized water. All decontamination fluids will be containerized and stored on-site pending waste characterization sampling and appropriate off-site disposal.

### 9.2.6 Heavy Equipment Decontamination

All heavy equipment and vehicles arriving at the work site will be free from contamination from offsite sources. Any vehicles arriving at work that are suspected of being impacted will not be permitted on the work site. Potentially contaminated heavy equipment will not be permitted to

leave the EZ unless it has been thoroughly decontaminated and visually inspected by the HSO or his appointed substitute.

### 9.3 Support Zone

The support zone or cold zone will include the remaining areas of the job site. Break areas and support facilities (including equipment storage and maintenance areas) will be in this zone. No equipment or personnel will be permitted to enter the cold zone from the hot zone without passing through the decontamination station in the warm zone (if necessitated). Eating, smoking, and drinking will be allowed only in this area.

### 9.4 Communications

The following communications equipment will be utilized as appropriate.

- Telephones - A cellular telephone will be located with the HSO for communication with HSM and emergency support services/facilities.
- Hand Signals - Hand signals must be used by field teams, along with the buddy system. The entire field team must know them before operations commence and their use covered during site-specific training. Typical hand signals are the following:

| Hand Signal | Meaning |
|---|---|
| Hand gripping throat | Out of air, cannot breathe |
| Grip your partner's wrists or place both hands around the waist | Leave immediately without debate |
| Hands on top of head | Need assistance |
| Thumbs up | OK; I am all right; I understand |
| Thumbs down | No; negative |
| Simulated "stick" break with fists | Take a break; stop work |

### 9.5 The Buddy System

When working in teams of two or more, workers will use the "buddy system" for all work activities to ensure that rapid assistance can be provided in the event of an emergency. This requires work groups to be organized such that workers can remain close together and maintain visual contact with one another. Workers using the "buddy system" have the following responsibilities:

- Provide his/her partner with assistance.
- Observe his/her partner for signs of chemical or heat exposure.
- Periodically check the integrity of his/her partner's PPE.
- Notify the HSO or other site personnel if emergency service is needed.

## 10.0 NEAREST MEDICAL ASSISTANCE

The address and telephone number of the nearest hospital:

Saint Joseph's Medical Center
127 S Broadway
Yonkers, New York
914-378-7000

A map with directions to the hospital is shown in Figure 2. This information will either be posted prominently on the site or will be available to all personnel all the time. Further, all field personnel, including HSO & FTL, will know the directions to the hospital.

## 11.0 STANDING ORDERS/SAFE WORK PRACTICES

The standing orders, which consist of a description of safe work practices that must always be followed while on-site by Langan employees and contractors, are shown in Attachment A. The site HSO and FTL each have the responsibility for enforcing these practices. The standing orders will be posted prominently at the site or are always made available to all personnel. Those who do not abide by these safe work practices will be removed from the site.

## 12.0 SITE SECURITY

No unauthorized personnel must be permitted access to the work areas.

## 13.0 UNDERGROUND UTILITIES

As provided in Langan's Underground Utility Clearance Guidelines, the following safe work practices should be followed by Langan personnel and the contractor before and during subsurface work in accordance with federal, state, and local regulations:

- Obtain available utility drawings from the property owner/client or operator.
- Provide utility drawings to the project team.
- In the field, mark the proposed area of subsurface disturbance (when possible).
- Ensure that the utility clearance system has been notified.
- Ensure that utilities are marked before beginning subsurface work.
- Discuss subsurface work locations with the owner/client and contractors.
- Obtain approval from the owner/client and operators for proposed subsurface work locations.
- Use safe digging procedures when applicable.
- Stay at least ten feet from all equipment performing subsurface work.
- Ensure that the one-call (811) system or state utility hotline in your area has been

notified. Private mark-outs may require the use of ground penetrating radar (GPR).

- Attempt to stay at least 15 feet from subsurface electrical lines and at least 10 feet from all other utility lines or mark-outs. Minimum clearance distances may increase as per chart below.
- Hand auger subsurface boreholes and test pits to 5 feet below ground surface.

TABLE A—MINIMUM CLEARANCE DISTANCES

| Voltage (nominal, kV, alternating current) | Minimum clearance distance (feet) |
|---|---|
| up to 50 | 10 |
| over 50 to 200 | 15 |
| over 200 to 350 | 20 |
| over 350 to 500 | 25 |
| over 500 to 750 | 35 |
| over 750 to 1,000 | 45 |
| over 1,000 | (as established by the utility owner/operator or registered professional engineer who is a qualified person with respect to electrical power transmission and distribution). |

## 14.0 SITE SAFETY INSPECTION

The Langan HSO, or alternate, will check the work area daily, at the beginning and end of each work shift, or more frequently to ensure safe work conditions. The HSO or alternate must complete the Jobsite Safety Inspection Checklist, found in Attachment F. Any deficiencies must be shared with the FTL, HSM, and PM and will be discussed at the daily tailgate meeting.

## 15.0 HAND AND POWER TOOLS

All hand- and electric-power tools and similar equipment must be maintained in safe operating condition. All electric-power tools must be inspected before initial use. Damaged tools must be removed immediately from service or repaired. Tools must be used only for the purpose for which they were designed. All users must be properly trained in their safe operation.

## 16.0 EMERGENCY RESPONSE

### 16.1 General

This section establishes procedures and provides information for use during a project emergency. Emergencies happen unexpectedly and quickly and require an immediate response; therefore, contingency planning and advanced training of staff is essential. Specific elements of emergency support procedures that are addressed in the following subsections include communications, local emergency support units, and preparation for medical emergencies, first aid for injuries incurred on site, record keeping, and emergency site evacuation procedures. In case of emergency, in addition to 911, call *WorkCare - Incident Intervention®* at 1-888-479-7787 to report their injuries. For all other communications, contact the Langan Incident Hotline at **973-560-4699** as soon as possible.

Should outside assistance be needed for accidents, fire, or release of hazardous substances, the emergency numbers will be available and posted at the site (Table 5) where a readily accessible telephone is made available for emergency use.

Also, in the event of an incident where a team member becomes exposed or suffers from an acute symptom from contact with site materials and must be taken to a hospital, a short medical data sheet (Attachment C) for that individual will be made available to the attending physician. The medical data sheet will include the following:

- Name, address, home phone
- Age, height, weight
- Name of person to be notified in case of an accident.
- Allergies
- Sensitivities
- Does he/she wear contact lenses?
- Short checklist of previous illness
- Name of personal physician and phone
- Name of company physician and phone
- Prescription and non-prescription medications currently used.

An incident reporting form is included in Attachment C.

## 16.2 Responsibilities

### 16.2.1 Health and Safety Officer (HSO)

The HSO is responsible for ensuring that all personnel are evacuated safely, and that machinery and processes are shut down or stabilized in the event of a stop work order or evacuation. The HSO is responsible for ensuring the HSM is notified of all incidents, all injuries, near-misses, fires, spills, releases, or equipment damage. The HSO is required to immediately notify the HSM of any fatalities or catastrophes (three or more workers injured and hospitalized) so that the HSM can notify OSHA within the required time limit.

### 16.2.2 Emergency Coordinator

The HSO or their designated alternate will serve as the Emergency Coordinator. The Emergency Coordinator is responsible for ensuring that all personnel are evacuated safely, and that machinery and processes are shut down or stabilized in the event of a stop work order or evacuation. They are also responsible for ensuring HSM is notified of all incidents, all injuries, near misses, fires, spills, releases, or equipment damage. The Emergency Coordinator is

required to immediately notify the HSM of any fatalities or catastrophes (three or more workers injured and hospitalized.

The Emergency Coordinator must locate emergency phone numbers and identify hospital routes prior to beginning work on the sites. The Emergency Coordinator must make necessary arrangements to be prepared for any emergencies that could occur.

The Emergency Coordinator is responsible for implementing the Emergency Response Plan.

### 16.2.3 Site Personnel

Project site personnel are responsible for knowing the Emergency Response Plan and the procedures contained herein. All personnel are expected to notify the Emergency Coordinator of situations that could constitute a site emergency. Project site personnel, including all subcontractors, will be trained in the Emergency Response Plan.

## 16.3 Communications

Once an emergency has been stabilized, the injured Langan personnel should contact *WorkCare - Incident Intervention®* at 1-888-479-7787 to report their injuries. For all other communications, contact the Langan Incident Hotline at **973-560-4699** as soon as possible.

## 16.4 Local Emergency Support Units

To be able to deal with any emergency that might occur during investigative activities at the site, the Emergency Notification Numbers (Table 5) will be posted and provided to all personnel conducting work within the EZ.

Figure 2 shows the hospital route map. Outside emergency number 911 and local ambulances should be relied on for response to medical emergencies and transport to emergency rooms. Always contact first responders when there are serious or life-threatening emergencies on the site. Project personnel are instructed not to drive injured personnel to the Hospital. In the event of an injury, provide first aid and keep the injured party calm and protected from the elements, and treat for shock when necessary.

## 16.5 Pre-Emergency Planning

Langan will communicate directly with administrative personnel from the emergency room at the hospital to determine whether the hospital has the facilities and personnel needed to treat cases of trauma resulting from any of the contaminants expected to be found on the site. Instructions for finding the hospital will be posted conspicuously in the site office and each site vehicle.

## 16.6 Emergency Medical Treatment

The procedures and rules in this HASP are designed to prevent employee injury. However, if an injury occurs, no matter how slight, it will be reported to the HSO immediately. First-aid equipment will be available on-site at the following locations:

- First Aid Kit: Contractor Vehicles
- Emergency Eye Wash: Contractor Vehicles

During the site safety briefing, project personnel will be informed of the location of the first aid station(s) that has been set up. Some injuries, such as severe cuts and lacerations or burns, may require immediate treatment. First-aid instructions provided from off-site doctors or paramedics, before an emergency-response squad arrives at the site or before the injured person can be transported to the hospital, will be followed closely. Only in non-emergency situations may an injured person be transported to an urgent care facility. Due to hazards that may be present at the site and the conditions under which operations are conducted, an emergency may develop. Emergencies can be characterized by injury or acute chemical exposure to personnel, fire or explosion, environmental release, or hazardous weather conditions.

## 16.8 Emergency Site Evacuation Routes and Procedures

All project personnel will be instructed on proper emergency response procedures and locations of emergency telephone numbers during the initial site safety meeting. If an emergency occurs because of the site investigation activities, including but not limited to fire, explosion, or significant release of toxic gas into the atmosphere, the Langan Project Manager will be verbally notified immediately. All heavy equipment will be shut down, and all personnel will evacuate the work areas and assemble at the nearest intersection to be accounted for and to receive further instructions.

If an emergency arises, the FTL will implement an immediate evacuation of all project personnel due to immediate or impending danger. The FTL will also immediately communicate with the contractor to coordinate any needed evacuation of the property.

The FTL or Site Supervisor will give necessary instructions until the Designated Incident Commander (IC) assumes control. After the emergency has been resolved, the FTL or Site Supervisor will coordinate with the IC and indicate when staff should resume their normal duties. If dangers are present for those at the designated assembly point, another designated location of assembly will be established.

It will be the responsibility of the FTL or Site Supervisor to report a fire or emergency, assess the seriousness of the situation, and initiate emergency measures until the arrival of the local fire fighters or other first responders, should they be necessary. The FTL, working with emergency

responders, may also order the closure of the Site for an indefinite period if it is deemed necessary.

Under no circumstances will incoming visitors be allowed to proceed to the area of concern once an emergency evacuation has been carried out. Visitors or other people present in the emergency must be instructed to evacuate the area. The FTL will ensure that access roads are not obstructed and will remain on-site to provide stand-by assistance upon the arrival of emergency personnel.

If it is necessary to temporarily control traffic in the event of an emergency, those people controlling traffic will wear proper reflection warning vests until the arrival of police or fire personnel.

### 16.8.1 Designated Assembly Locations

All personnel will evacuate the site and assemble at a designated assembly location. The assembly location will be designated by Langan personnel and discussed during each shift's pre-job safety briefing.

### 16.8.2 Accounting for Personnel

All contractors and subcontractor supervisors are responsible for the accounting of all personnel assembled at the designed assembly area. The Designated Incident Commander must be notified if personnel are not found.

## 16.9 Fire Prevention and Protection

In the event of a fire or explosion, procedures will include immediately evacuating the site and notification of the Langan Project Manager of the investigation activities. Portable fire extinguishers will be provided at the work zone. The extinguishers located in the various locations should also be identified prior to the start of work. No personnel will fight a fire beyond the stage where it can be put out with a portable extinguisher (incipient stage).

### 16.9.1 Fire Prevention

Fires will be prevented by adhering to the following precautions:

- Good housekeeping and storage of materials.
- Storage of flammable liquids and gases away from oxidizers.
- Shutting off engines to refuel.
- Grounding and bonding metal containers during transfer of flammable liquids.
- Use of UL approved flammable storage cans.

- Fire extinguishers rated at least 10 pounds ABC located on all heavy equipment, in all trailers and near all hot work activities.

The person responsible for the control of fuel source hazards and the maintenance of fire prevention and/or control equipment is the HSO.

### 16.10 Significant Vapor Release

Based on the proposed tasks, the potential for significant vapor release is low. However, if a release occurs, the following steps will be taken:

- Move all personnel to an upwind location. All non-essential personnel must evacuate.
- Upgrade to Level C Respiratory Protection.
- Downwind perimeter locations must be monitored for volatile organics.
- If the release poses a potential threat to human health or the environment in the community, the Emergency Coordinator must notify the Langan Project Manager.
- Local emergency response coordinators will be notified.

### 16.11 Overt Chemical Exposure

The following are standard procedures to treat chemical exposures. Other, specific procedures detailed on the Material Safety Data Sheet (MSDS) will be followed, when necessary.

**SKIN AND EYE**: Use copious amounts of soap and water from eye-wash kits and portable hand-wash stations.

**CONTACT**: Wash/rinse affected areas thoroughly, then provide appropriate medical attention. Skin must also be rinsed for 15 minutes if contact with caustics, acids, or hydrogen peroxide occurs. Affected items of clothing must also be removed from contact with skin.

Providing wash water and soap will be the responsibility of each individual contractor or subcontractor on-site.

### 16.12 Decontamination during Medical Emergencies

If emergency lifesaving first aid and/or medical treatment is required, normal decontamination procedures may need to be abbreviated or omitted. The HSO or appointed substitute will accompany contaminated victims to the medical facility to advise on matters involving decontamination when necessary. The outer garments can be removed if they do not cause delays, interfere with treatment, or aggravate the problem. Respiratory equipment must always be removed. Protective clothing can be cut away. If the outer contaminated garments cannot be safely removed on site, a plastic barrier placed between the injured individual and clean surfaces should be used to help prevent contamination of the inside of ambulances and/or medical

personnel. Outer garments may then be removed at the medical facility. No attempt will be made to wash or rinse the victim if his/her injuries are life threatening unless it is known that the individual has been contaminated with extremely toxic or corrosive material which could also cause severe injury or loss of life to emergency response personnel. For minor medical problems or injuries, normal decontamination procedures will be followed.

### 16.13 Adverse Weather Conditions

In the event of adverse weather conditions, the HSO will determine if work continues without potentially risking the safety of all field workers. Some of the items to be considered prior to determining if work should continue are:

- Potential for heat stress and heat-related injuries.
- Potential for cold stress and cold-related injuries.
- Treacherous weather-related working conditions (hail, rain, snow, ice, high winds).
- Limited visibility (fog).
- Potential for electrical storms.
- Earthquakes.
- Other major incidents.

Site activities will be limited to daylight hours, or when suitable artificial light is provided, and acceptable weather conditions prevail. The HSO will determine the need to cease field operations or observe daily weather reports and evacuate, if necessary, in case of severe inclement weather conditions.

### 16.14 Spill Control and Response

All small spills/environmental releases must be contained as close to the source as possible. Whenever possible, the SDS will be consulted to assist in determining proper waste characterization and the best means of containment and cleanup. For small spills, sorbent materials such as sand, sawdust, or commercial sorbents should be placed directly on the substance to contain the spill and aid recovery. Any acid spills should be diluted or neutralized carefully prior to attempting recovery. Berms of earthen or sorbent materials can be used to contain the leading edge of the spills. All spill containment materials will be properly disposed of. An exclusion zone of 50 to 100 feet around the spill area should be established depending on the size of the spill.

All contractor vehicles must have spill kits on them with enough material to contain and absorb the worst-case spill from that vehicle. All vehicles and equipment must be inspected prior to being admitted on-site. Any vehicle or piece of equipment that develops a leak will be taken out of service and removed from the job site.

The following seven steps must be taken by the Emergency Coordinator:

1. Determine nature, identity, and amounts of major spills.
2. Make sure all unnecessary people are removed from the spill area.
3. Notify the HSO immediately.
4. Use proper PPE in consultation with the HSO.
5. If a flammable liquid, gas, or vapor is involved, remove all ignition sources, and use non-sparking and/or explosion-proof equipment to contain or clean up the spill (diesel-only vehicles, air-operated pumps, etc.)
6. If possible, try to stop the leak with the appropriate material.
7. Remove all surrounding materials that can react or compound with the spill.

In addition to the spill control and response procedures described in this HASP, Langan personnel will coordinate with the designated project manager relative to spill response and control actions. Notification to the Project Manager must be immediate and, to the extent possible, include the following information:

- Time and location of the spill.
- Type and nature of the material spilled.
- Amount spilled.
- Whether the spill has affected or has a potential to affect a waterway or sewer.
- A brief description of affected areas/equipment.
- Whether the spill has been contained.
- Expected time of cleanup completion. If spill cleanup cannot be handled by Langan's on-site personnel alone, such fact must be conveyed to the Project Manager immediately.

Langan field personnel must notify the project manager when they observe a spill or encounter conditions suggesting one might have occurred.

### 16.15 Emergency Equipment

The following minimum emergency equipment must be kept and maintained on site:

- Industrial first aid kit.
- Fire extinguishers (one per site).

### 16.16 Restoration and Salvage

After an emergency, prompt restoration of utilities, fire protection equipment, medical supplies, and other equipment will reduce the possibility of further losses. Some of the items that may need to be addressed are:

- Refilling fire extinguishers.
- Refilling medical supplies.
- Recharging eyewashes and/or showers.
- Replenishing spill control supplies.

### 16.17 Documentation

Immediately following an incident or near miss, unless emergency medical treatment is required, either the employee or a coworker must contact the Langan Incident/Injury Hotline at 1-(800)-9-LANGAN (extension 4699) and the client representative to report the incident or near miss. For emergencies involving personnel injury and/or exposure, the HSO and affected employee will complete and submit an Employee Exposure/Injury Incident Report (Attachment C) to the Langan Corporate Construction Health and Safety Manager as soon as possible following the incident.

## 17.0 SPECIAL CONDITIONS

This guideline contains information and requirements for special conditions that may not be routinely encountered.

### 17.1 Scope

The guideline applies to the specific projects identified within this document. Additional provisions will be addressed in each Site-Specific Construction Health and Safety Plan (HASP), as needed.

### 17.2 Responsibilities

Site Personnel - All site personnel must be alert to safety hazards on work sites and take action to minimize such hazards. Personnel must utilize the buddy system, watch for inappropriate behavior, and be alerted to changes in site conditions.

Construction Health and Safety Officer (HSO) - The HSO is responsible for considering these procedures in the development of site-specific HASPs. The HSO must schedule frequent "tail gate" safety briefings to enhance safety awareness and discuss potential problems.

### 17.3 Procedures

The procedures outlined below must be followed when such conditions are encountered.

#### 17.3.1 Ladders

Langan safety procedures must be used to ensure employee safety when using ladders in the office or work sites. All ladders must be coated or repaired to prevent injury to the employee

from punctures or lacerations and to prevent snagging or clothing. Any wood ladder used must have an opaque cover except for identification or warning labels, which may be placed on one face only of a side rail.

#### *17.3.1.1 Ladder Use*

Employees must only use ladders for the purposes they were designed for and must not be used as scaffolding. Ladders will be maintained and inspected prior to use for slip hazards including oil and grease. Employees must use ladders only on stable and level surfaces unless the ladder is secured to prevent displacement. Ladders should not be used on slippery surfaces unless secured or provided with slip-resistant feet to prevent accidental displacement. Ladders should not be used in locations where they could be displaced by workplace activities or traffic. Ladder rungs, cleats and steps must be parallel, level and uniformly spaced when the ladder is in the use position.

Employees should not be carrying anything, including equipment that could cause injury if there was a fall while utilizing the ladder. The top and bottom of the ladder area must remain clear while in use. When ascending and descending the ladder, employees must face the ladder.

Ladders must not be loaded beyond the maximum intended load for which they were built or the manufacturer's rated capacity.

#### *17.3.1.2 Portable Ladders*

Rungs, cleats, and steps for portable ladders and fixed ladders must be spaced not less than 10 inches apart, nor more than 14 inches apart, as measured between center lines of the rungs, cleats, and steps. When used to access an upper landing surface, the ladder side rails must extend at least three feet above the upper landing surface to which the ladder is used to gain access. If this is not possible, due to the length of the ladder, then the top of the ladder must be secured at its top to a rigid support.

#### *17.3.1.3 Step Stools*

Rungs, cleats, and steps of step stools must not be less than 8 inches apart, nor more than 12 inches apart, as measured between center lines of the rungs, cleats, and steps.

#### *17.3.1.4 Extension Ladders*

Rungs, cleats, and steps of the base section of extension trestle ladders must be spaced not less than 8 inches apart, nor more than 18 inches apart, as measured between center lines of the rungs, cleats, and steps. The rung spacing on the extension section of the extension trestle ladder must not be less than 6 inches nor more than 12 inches, as measured between the center

lines of the rungs, cleats and steps. Ladders must be used at an angle such that the horizontal distance from the top support to the foot of the ladder is approximately one-quarter of the working length of the ladder (the distance along the ladder between the foot and the top support).

#### *17.3.1.5 Inspection*

Ladders will be inspected for visible detects periodically, prior to utilization or after any occurrence that could have negatively affected the ladder. Portable ladders with defects including broken or missing rungs, cleats, or steps, broken or split rails, corroded components, or other faulty components must not be used. The ladder will be immediately marked as defective, tagged as "Do Not Use" or blocked from being used and removed from service until repaired.

### 17.3.2 First Aid/Cardiopulmonary Resuscitation (CPR)

Langan field and office personnel will be encouraged to be trained in First Aid and Cardiopulmonary Resuscitation (CPR). Training will be provided free of charge by Langan to all employees. Employees will receive a training certificate that will be kept with the Health & Safety Coordinator (HSC). Training and certification will be provided by a credited provider such as American Red Cross or equivalent.

#### *17.3.2.1 Emergency Procedures*

Prior to site work, the Langan employees certified in first aid and CPR will be identified in the site-specific HASP. Langan will endear having at least one employee at a job site trained and able to render first aid and CPR. The site-specific HASP will contain first aid information on both potential chemical and physical hazards. Emergency procedures to be followed in case of injury or illnesses are provided in HASP. The HASP will include emergency contact information including local police and fire departments, hospital emergency rooms, ambulance services, on-site medical personnel, and physicians. The HASP will also include directions and contact information for the nearest emergency facility in case immediate medical attention is required. The emergency contact information will be conspicuously posted at the worksite. Employees that are injured and require immediate medical attention must call either 911 or the local posted emergency contacts. Employees should use ambulatory services to transport injured workers to the nearest facility for emergency medical care. In areas where 911 is not available, the telephone numbers of physicians, hospitals, or ambulances must be conspicuously posted.

#### *17.3.2.2 First Aid Supplies*

First aid supplies are readily available to all Langan employees when required. First aid kits are in each Langan office. Portable first aid kits are available for employees to use at work sites. First aid kits should consist of items needed to treat employees for potential chemical and

physical injuries. At a minimum, first aid kits should contain items to allow basic first aid to be rendered. Where the eyes or body of an employee may be exposed to corrosive materials, suitable facilities for quick drenching or flushing of the eyes and body must be provided within the work area for immediate emergency use including eye wash solution.

First aid kits will be weatherproof with individually sealed packages of each item. All portable first aid kits must be inspected by Langan employees before and after use to ensure all used items are replaced. When out in the field, employees must check first aid kits weekly to ensure used items are replaced.

### 17.3.3 Hydrogen Sulfide

Langan employees with the potential to be exposed to hydrogen sulfide while at work sites must have training in hydrogen sulfide awareness. The training will include the identification of areas where employees could be exposed to hydrogen sulfide, health effects, permissible exposure limits, first aid procedures, and personnel protective equipment. Langan employees could be exposed to hydrogen sulfide while at job sites including petroleum refineries, hazardous waste treatment, storage and disposal facilities, uncontrolled hazardous waste sites, and remediation projects.

#### *17.3.3.1 Characteristics*

Hydrogen sulfide is a colorless gas with a strong odor of rotten eggs that is soluble in water. Hydrogen sulfide is used to test and make other chemicals. It is also found as a by-product of chemical reactions, such as in sewer treatment. It is a highly flammable gas and a dangerous fire hazard. Poisonous gases are produced in fires including sulfur oxides. Hydrogen sulfide is not listed as a carcinogen.

#### *17.3.3.2 Health Effects*

Hydrogen Sulfide can affect employees if inhaled or through contact with skin or eyes. Acute (or short-term) health effects of hydrogen sulfide exposure include irritation of the nose and throat, dizziness, confusion, headache, and trouble sleeping. Inhalation of hydrogen sulfide can irritate the lungs causing coughing and/or shortness of breath. Higher levels of exposure can cause a build-up of fluids in the lungs (pulmonary edema), a medical emergency, with severe shortness of breath.

Chronic (or long-term) health effects of low levels of exposure to hydrogen sulfide can cause pain and redness of the eyes with blurred vision. Repeated exposure may cause bronchitis with cough, phlegm, and shortness of breath.

*17.3.3.3 Protective Clothing and Equipment*

Respirators are required for those operations in which employees will be exposed to hydrogen sulfide above OSHA permissible exposure level. The maximum OSHA permissible exposure limit (PEL) for hydrogen sulfide is 20 parts of hydrogen sulfide vapor per million parts of air (20 ppm) for an 8-hour workday, and the maximum short-term exposure limit (STEL) is 10 ppm for any 10-minute period.

Where employees are exposed to levels up to 100 parts of hydrogen sulfide vapor per million parts of air (100 ppm), the following types of respiratory protection are allowed:

- Any powered, air-purifying respirator with cartridge(s).
- Any air-purifying, full-facepiece respirator (gas mask) with a chin style, front- or back-mounted canister.
- Any supplied air system with escape self-contained breathing apparatus, if applicable; and,
- Any self-contained breathing apparatus with a full facepiece.

Respirators used by employees must have Mine Safety and Health Administration and the National Institute for Occupational Safety and Health (NIOSH) with approval. Cartridges or canisters must be replaced before the end of their service life, or the end of the shift, whichever occurs first. Langan employees that have the potential to be exposed to hydrogen sulfide will be trained in the proper use of respirators. Respirator training is discussed under– Langan's Respiratory Protection Program.

Employees with potential exposure to hydrogen sulfide, or when required by the client, will wear a portable hydrogen sulfide gas detector. The detector should have an audible, visual, and vibrating alarm. The detector may also provide detection for carbon monoxide, sulfur dioxide, and oxygen-deficient atmospheres. The hydrogen sulfide monitor will, at a minimum, be calibrated to detect hydrogen sulfide at a level of 20 parts of hydrogen sulfide vapor per million parts of air (20 ppm). Many portable gas detectors will have factory settings with a low-level alarm at 10 ppm and a high-level alarm at 15 ppm. Langan employees must consult clients to determine if any site-specific threshold levels exist.

If the hydrogen sulfide gas detector sounds and employees are not wearing appropriate respiratory protection, employees must immediately vacate the area and meet at the assigned emergency location. Langan employees may not re- enter the site without proper respiratory protection and approval from the client or property owner if needed.

Employees must wear PPE to prevent eye and skin contact with hydrogen sulfide. Employees must wear appropriate protective clothing including boots, gloves, sleeves, and aprons, over any

parts of their body that could be exposed to hydrogen sulfide. Non-vented, impact-resistant goggles should be worn when working with or exposed to hydrogen sulfide.

*17.3.3.4 Emergency and First Aid Procedures*

**Eye and Face Exposure**

If hydrogen sulfide encounters eyes, it should be washed out immediately with large amounts of water for 30 minutes, occasionally lifting the lower and upper eye lids. Seek medical attention immediately.

**Skin Exposure**

If hydrogen sulfide contaminates clothing or skin, remove the contaminated clothing immediately and wash the exposed skin with large amounts of water and soap. Seek medical attention immediately. Contaminated clothing should either be disposed of or washed before wearing again.

**Breathing**

If a Langan employee or other personnel breathe in hydrogen sulfide, immediately get the person exposed to fresh air. If breathing has stopped, artificial respiration should be started. Call for medical assistance or a doctor as soon as possible.

**Safety Precautions**

Hydrogen sulfide is a highly flammable gas and a dangerous fire hazard. Containers of hydrogen sulfide may explode in a fire situation. Poisonous gases are produced during fires.

Langan employees should contact property owners and operators prior to conducting work onsite to be aware of any site-specific contingency plans, identify where hydrogen sulfide is used at the facility, and be informed about additional safety rules or procedures.

### 17.3.4 Fire Protection/Extinguishers

Langan field personnel that have been provided with portable fire extinguishers for use at worksites will be trained to familiarize employees with general principles of fire extinguisher use and hazards associated with the incipient stage of firefighting. Training will be provided prior to the initial assignment for field work and annually thereafter.

Portable fire extinguishers must be visually inspected monthly and subjected to an annual maintenance check. Langan will retain records of the annual maintenance date.

### 17.3.5 Overhead lines

When field work is performed near overhead lines, the lines must be de-energized and grounded, or other protective measures must be provided before the work commences. If overhead lines are to be de-energized, arrangements must be made with the client, property owner, or organization that operates or controls the electric circuits involved to de-energize and ground them. If protective measures, such as guarding, isolating, or insulating, are provided, these precautions must prevent employees from contacting such lines directly with any part of their body or indirectly through conductive materials, tools, or equipment.

When unqualified Langan personnel are working in an elevated position near overhead lines, the location must be such that the person and the longest conductive object they may contact cannot come closer to any unguarded, energized overhead line than the following distances:

1. For voltages to ground 50 kilovolts (kV) or below - 10 feet; and
2. For voltages to ground over 50kV - 10 feet, plus 4 inches for every 10kV over 50kV.

As previously indicated, Langan does not retain qualified employees to perform work on energized equipment.

#### *17.3.5.1 Vehicle and Equipment Clearance*

Any vehicle or mechanical equipment capable of having parts of its structure elevated near energized overhead lines must be operated so that a clearance of 10 feet is maintained. If the voltage of the overhead lines is higher than 50kV, the clearance must be increased by 4 inches for every 10kV over that voltage.

If any of the following conditions discussed occur, the clearance may be reduced.

- If the vehicle is in transit with its structure lowered, the clearance may be reduced to 4 ft. If the voltage is higher than 50kV, the clearance must be increased to 4 inches for every 10 kV over that voltage.
- If insulating barriers are installed to prevent contact with the lines, and if the barriers are rated for the voltage of the line being guarded and are not a part of or an attachment to the vehicle or its raised structure, the clearance may be reduced to a distance within the designed working dimensions of the insulating barrier.

Employees standing on the ground may not contact the vehicle or mechanical equipment or any of its attachments unless the employee is using protective equipment rated for the voltage, or the equipment is located so that no uninsulated part of its structure (that portion of the structure that provides a conductive path to employees on the ground) can come closer to the overhead line than permitted.

If any vehicle or mechanical equipment capable of having parts of its structure elevated near energized overhead lines is intentionally grounded, employees working on the ground near the point of grounding may not stand at the grounding location whenever there is a possibility of overhead line contact. Additional precautions, such as the use of barricades or insulation, must be taken to protect employees from hazardous ground potential, depending on earth resistivity and fault currents, which can develop within the first few feet or more outward from the grounding point.

### 17.3.6 Trade Secret

Langan employees could potentially be provided with secret trade information by the client or property owner when site-specific information is provided about highly hazardous chemicals. Trade secret means any confidential formula, pattern, process, device, information, or compilation of information that is used in an employer's business, and that allows the employer to obtain an advantage over competitors who do not know or use it. Langan employees understand that this information should be kept confident and if required, may enter into a confidentiality agreement with the client.

### 17.3.7 Bloodborne Pathogens

Langan employees that can anticipate exposure to blood or other potentially infectious material while at work sites must have training in bloodborne pathogens. Applicable employees would include those trained in first aid and serving a designated role as an emergency medical care provider. Bloodborne pathogens are pathogenic microorganisms that are present in human blood and can cause disease in humans. These pathogens include but are not limited to hepatitis B virus and human immunodeficiency virus.

#### *17.3.7.1 Training*

Langan employees with potential occupational exposure to blood or other potentially infectious material must participate in a training program. Training must be conducted prior to the initial assignment where there would be potential for exposure and annually thereafter within one year of previous training. The training program will be provided to Langan employees at no cost to them and during working hours.

Langan will ensure the training program must consist of the following:

- An accessible copy of the regulatory text of 29 CFR 1910.1030 and an explanation of its contents.
- A general explanation of the epidemiology and symptoms of bloodborne diseases.
- An explanation of the modes of transmission of bloodborne pathogens.

- An explanation of Langan's exposure control plan and how the employee can obtain a copy of the written plan.
- An explanation of the appropriate methods for recognizing tasks and other activities that may involve exposure to blood and other potentially infectious materials.
- An explanation of the use and limitations of personal protective equipment (PPE) to prevent and reduce exposure.
- Information on the types, proper use, location, removal, handling, and disposal of PPE.
- An explanation of the basis for the selection of PPE.
- Information on the hepatitis B vaccine, including information on its efficacy, safety, method of administration, the benefits of being vaccinated, and that the vaccine and vaccination will be offered free of charge.
- Information on the appropriate actions to take and people to contact in an emergency involving blood or other potentially infectious materials.
- An explanation of the procedure to follow if an exposure incident occurs, including the method of reporting the incident and the medical follow-up that will be made available.
- Information on the post-exposure evaluation and determining whether the employer is required to provide for the employee following an exposure incident.
- An explanation of the signs and labels and/or color coding required by paragraph 29 CFR 1910.1030(g)(1); and
- An opportunity for interactive questions and answers with the person conducting the training session.

Langan will develop and implement a written Exposure Control Plan, which will be designed to eliminate or minimize employee exposure to bloodborne pathogens. The Exposure Control Plan will contain the following elements:

- An exposure determination for employees.
- The schedule and method of implementation for Methods of Compliance (29 CFR 191.1030(d)), Hepatitis B Vaccination and Post-Exposure Evaluation and Follow-up (29 CFR 1910.1030(f)), Communication of Hazards to Employees (29 CFR 1910.1030(g)) and (h) Recordkeeping (29 CFR 1910.1030(h)).
- The procedure for the evaluation of circumstances surrounding exposure incidents.
- Ensure a copy of the Exposure Control Plan will be accessible to employees; and,
- The Exposure Control Plan must be reviewed and updated at least annually.

Langan employees with occupational exposure to bloodborne pathogens include any employees trained in first aid that would be expected to provide emergency medical care. This determination is made without regard to the use of PPE, which could eliminate or minimize exposure.

Universal precautions must be observed to prevent contact with blood or other potentially infectious materials. According to the concept of Universal Precautions, all human blood and certain human body fluids are treated as if known to be infectious for bloodborne pathogens. When differentiation between body fluid types is difficult or impossible, all body fluids must be considered potentially infectious materials.

Work practice controls must be used to eliminate or minimize employee exposure, if applicable. Since Langan employees will have occupational exposure only during the rendering of first aid, personnel protective equipment will be utilized to reduce or minimize exposure. PPE that could be available to Langan personnel when administering first aid includes safety glasses, gloves, and Tyvek suits or sleeves. PPE and first aid kits will be provided to employees at no cost to them.

Langan employees that render first aid in office areas will have access to hand-washing facilities or restrooms. For first aid rendered at field locations, first aid kits will contain an appropriate antiseptic hand cleanser and clean cloth/paper towels or antiseptic towelettes. After using antiseptic hand cleansers or towelettes, employees must wash their hands with soap and running water as soon as feasible.

After administering first aid, potentially infectious materials, including towels, personnel protective equipment, clothes, and bandages, must be placed in a container, which prevents leakage during collection, handling, processing, storage, transport, or shipping. All PPE will be disposed of after use. Any equipment or working surfaces which were exposed to blood or potentially infectious materials due to an injury will be decontaminated prior to reuse.

Langan will make available the hepatitis B vaccine and vaccination series to all employees who have occupational exposure, and post-exposure evaluation and follow-up to all employees who have had an exposure incident. These services will be available to the employee at no cost to them through a medical provider.

#### *17.3.7.2 Recordkeeping*

Langan will maintain training and medical records for each employee with occupational exposure to blood or potentially infectious materials. Medical and training records will be maintained by Langan's H&S Department.

Training records will include the following:

- Dates of the training sessions.
- Contents or a summary of the training sessions.
- Names and qualifications of people conducting the training; and
- Names and job titles of all people attending the training sessions.

Training records must be maintained for 3 years from the date on which the training occurred. Medical records will be preserved and maintained for the duration of employment plus 30 years.

All records will be made available upon request to employees, the Assistant Secretary of Labor for Occupational Safety and Health, and the Director of the National Institute for Occupational Safety and Health Director of OSHA for examination and copying. Medical records must have written consent from the employee before releasing.

If Langan ceases to do business, all records must be transferred to the successor employer. The successor employer must receive and maintain these records.

If there is no successor, Langan will notify current employees of their rights to access records at least three months prior to the cessation of business.

## 18.0 RECORDKEEPING

The following is a summary of required health and safety logs, reports, and recordkeeping.

### 18.1 Field Change Authorization Request

Any changes to the work to be performed that are not included in the HASP will require an addendum that is approved by the Langan project manager and Langan HSM to be prepared. Approved changes will be reviewed with all field personnel at a safety briefing.

### 18.2 Medical and Training Records

Copies or verification of training (40-hour, 8-hour, supervisor, site-specific training, documentation of three-day on-the-job training (OJT), and respirator fit-test records) and medical clearance for site work and respirator use will be maintained in the office and available upon request. Records for all subcontractor employees must also be available upon request. All employee medical records will be maintained by HSM.

### 18.3 Onsite Log

A log of personnel on-site each day will be kept by the HSO or appointed substitute.

### 18.4 Daily Safety Meetings (“Tailgate Talks”)

Completed safety briefing forms (Attachment H) will be maintained by the HSO or FTL.

## 18.5 Exposure Records

All personal monitoring results, laboratory reports, calculations, and air sampling data sheets are part of an employee exposure record. These records will be maintained by the HSO during site work. At the end of the project, they will be maintained according to 29 CFR 1910.1020.

## 18.6 Hazard Communication Program - SDS

Safety Data Sheets (SDS) have been obtained for applicable substances and are included in this HASP (Attachment D). Langan's written hazard communication program, in compliance with 29 CFR 1910.1200, is maintained by the HSM.

## 18.7 Documentation

Immediately following an incident or near miss, unless emergency medical treatment is required, either the employee or a coworker must contact the Langan incident/injury hotline at 973-560-4699, and the Project Manager to report the incident or near miss. The Project Manager will contact the client or client representative. A written report must be completed and submitted HSM within 24 hours of the incident. For emergencies involving personnel injury and/or exposure, the employee will complete and submit the Langan incident/injury report to the Langan corporate health and safety manager as soon as possible following the incident. Accidents will be investigated in-depth to identify all causes and to recommend hazard control measures.

### 18.7.1 Accident and Injury Report Forms

#### *18.7.1.1 Accident/Incident Report*

All injuries, no matter how slight, must be reported to the FTL and the PM immediately. The accident/incident report forms, attached to Attachment C, will be filled out on all accidents by the applicable contractor supervision personnel, the FTL, or the HSO. Copies of all accident/incident reports must be kept on-site and available for review. Project personnel will be instructed on the location of the first aid station, hospital, and doctor and ambulance service near the job. The emergency telephone numbers will be conspicuously posted in site vehicles near the work zone. First aid supplies will be centrally located and conspicuously posted between restricted and nonrestricted areas to be readily accessible to all on the site.

#### *18.7.1.2 First Aid Treatment Record*

The forms will be used for recording all non-lost time injuries treated by the project first-aid attendant, the local physician or hospital will be entered in detail on this record. "Minor" treatment of scratches, cuts, etc. will receive the same recording attention as treatment of more severe injuries.

*18.7.1.3 OSHA Form 300*

An OSHA Form 300 will be kept at the Langan Corporate Office in Parsippany, New Jersey. All recordable injuries or illnesses will be recorded on this form. Subcontractor employers must also meet the requirements of maintaining an OSHA 300 form. The Incident Report form used to capture the details of work-related injuries/illnesses meets the requirements of the OSHA Form 301 (supplemental record) and must be maintained with the OSHA Form 300 for all recordable injuries or illnesses. Forms for recording OSHA work-related injuries and illnesses are included in Attachment C.

## 19.0 CONFINED SPACE ENTRY

Confined spaces are not anticipated at the Site during planned activities. If confined spaces are identified, the contractor must implement their own confined space program that are applicable to federal, state, and local regulations. Confined spaces **will not** be entered by Langan personnel.

## 20.0 HASP ACKNOWLEDGEMENT FORM

All Langan personnel and contractors will sign this HASP Compliance Agreement indicating that they have become familiar with this HASP and that they understand it and agree to abide by it.

# TABLES

# TABLE 1
# TASK HAZARD ANALYSES

| Task | Hazard | Description | Control Measures | First Aid |
|---|---|---|---|---|
| 1.3.1 – 1.3.14 | Contaminated Soil or Groundwater- Dermal Contact | Contaminated water spills on skin, splashes in eyes; contact with contaminated soil/fill during activities or sampling. | Wear proper PPE; follow safe practices, maintain safe distance from activities | See Table 2, seek medical attention as required |
| 1.3.1 – 1.3.14 | Lacerations, abrasions, punctures | Cutting bailer twine, pump tubing, acetate liners, etc. with knife; cuts from sharp site objects or previously cut piles, tanks, etc.; Using tools in tight spaces | Wear proper PPE; follow safe practices | Clean wound, apply pressure and/or bandages; seek medical attention as required. |
| 1.3.1 – 1.3.14 | Contaminated Media Inhalation | Opening drums, tanks, wells; vapors for non-aqueous phase liquids or other contaminated site media; dust inhalation during excavation; vapor accumulation in excavation | Follow air monitoring plan; have quick access to respirator, do not move or open unlabeled drums found at the site, maintain safe distance from activities | See Table 2, seek medical attention as required |
| 1.3.1 – 1.3.14 | Lifting | Improper lifting/carrying of equipment and materials causing strains | Follow safe lifting techniques.<br>Langan employees are not to carry contractor equipment or materials | Rest, ice, compression, elevation; seek medical attention as required |
| 1.3.1 – 1.3.14 | Slips, trips, and falls | Slips, trips, and falls due to uneven surfaces, cords, steep slopes, debris, and equipment in work areas | Good housekeeping at site; constant awareness and focus on the task; avoid climbing on stockpiles; maintain safe distance from activities and excavations; avoid elevated areas over six feet unless fully accredited in fall protection and wearing an approved fall protection safety apparatus | Rest, ice, compression, elevation; seek medical attention as required |
| 1.3.1 – 1.3.14 | Noise | Excavation equipment, hand tools, drilling equipment. | Wear hearing protection; maintain safe distance from activities | Seek medical attention as required |
| 1.3.1 – 1.3.14 | Falling objects | Soil material, tools, etc. dropping from drill rigs, front-end loaders, etc. | Hard hats to be worn at all times while in work zones; maintain safe distance from activities and excavations | Seek medical attention as required |
| 1.3.1 – 1.3.14 | Underground/ overhead utilities | Excavation equipment, drill rig auger contacts underground object; boom touches overhead utility | "One Call" before dig; follow safe practices; confirm utility locations with contractor; wear proper PPE; maintain safe distance from activities and excavations | Seek medical attention as required |
| 1.3.1 – 1.3.14 | Insects (bees, wasps, hornet, mosquitoes, and spider) | Sings, bites | Insect Repellent; wear proper protective clothing (work boots, socks, and light-colored pants); field personnel who may have insect allergies (e.g., bee sting) should provide this information to the HSO or FSO prior to commencing work and will have allergy medication on site. | Seek medical attention as required |
| 1.3.1 – 1.3.14 | Vehicle traffic / Heavy Equipment Operation | Vehicles unable to see workers on site, operation of heavy equipment in tight spaces, equipment failure, malfunctioning alarms | Wear proper PPE, especially visibility vest; use a buddy system to look for traffic; rope off area of work with cones and caution tape or devices at points of hazard, maintain safe distance from activities and equipment | Seek medical attention as required |

**EXPLANATION OF ABBREVIATIONS**

PID = Photoionization Detector
PEL = Permissible Exposure Limit (8-hour Time Weighted Average)
IDLH = Immediately Dangerous to Life and Health
ppm = part per million
$mg/m^3$ = milligrams per cubic meter
500 $mg/m^3$

# TABLE 3
# SUMMARY OF MONITORING EQUIPMENT

| Instrument | Operation Parameters |
|---|---|
| Photoionization Detector (PID) | **Hazard Monitored:** Many organic and some inorganic gases and vapors.<br>**Application:** Detects total concentration of many organic and some inorganic gases and vapors. Some identification of compounds is possible if more than one probe is measured.<br>**Detection Method:** Ionizes molecules using UV radiation; produces a current that is proportional to the number of ions.<br>**General Care/Maintenance:** Recharge or replace battery. Regularly clean lamp window. Regularly clean and maintain the instrument and accessories.<br>**Typical Operating Time:** 10 hours. 5 hours with strip chart recorder. |
| Oxygen Meter | **Hazard Monitored:** Oxygen ($O_2$).<br>**Application:** Measures the percentage of $O_2$ in the air.<br>**Detection Method:** Uses an electrochemical sensor to measure the partial pressure of $O_2$ in the air and converts the reading to $O_2$ concentration.<br>**General Care/Maintenance:** Replace detector cell according to manufacturer's recommendations. Recharge or replace batteries prior to explanation of the specified interval. If the ambient air is less than 0.5% C $O_2$, replace the detector cell frequently.<br>**Typical Operating Time:** 8 – 12 hours. |
| Additional equipment (if needed, based on site conditions) | |
| Combustible Gas Indicator (CGI) | **Hazard Monitored:** Combustible gases and vapors.<br>**Application:** Measures the concentration of combustible gas or vapor.<br>**Detection Method:** A filament, usually made of platinum, is heated by burning the combustible gas or vapor. The increase in heat is measured. Gases and vapors are ionized in a flame. A current is produced in proportion to the number of carbon atoms present.<br>**General Care/Maintenance:** Recharge or replace battery. Calibrate immediately before use.<br>**Typical Operating Time:** Can be used for as long as the battery lasts, or for the recommended interval between calibrations, whichever is less. |
| Flame Ionization Detector (FID) with Gas Chromatography Option *(i.e., Foxboro Organic Vapor Analyzer (OVA))* | **Hazard Monitored:** Many organic gases and vapors (approved areas only).<br>**Application:** In survey mode, detects the concentration of many organic gases and vapors. In gas chromatography (GC) mode, identifies and measures specific compounds. In survey mode, all the organic compounds are ionized and detected at the same time. In GC mode, volatile species are separated.<br>**General Care/Maintenance:** Recharge or replace battery. Monitor fuel and/or combustion air supply gauges. Perform routine maintenance as described in the manual. Check for leaks.<br>**Typical Operating Time:** 8 hours; 3 hours with strip chart recorder. |
| Potable Infrared (IR) Spectrophotometer | **Hazard Monitored:** Many gases and vapors.<br>**Application:** Measures concentration of many gases and vapors in air. Designed to quantify one or two component mixtures.<br>**Detection Method:** Passes different frequencies of IR through the sample. The frequencies absorbed are specific for each compound.<br>**General Care/Maintenance:** As specified by the manufacturer. |

| Instrument | Operation Parameters |
|---|---|
| Direct Reading Colorimetric Indicator Tube | **Hazard Monitored:** Specific gas and vapors.<br>**Application:** Measures concentration of specific gases and vapors.<br>**Detection Method:** The compound reacts with the indicator chemical in the tube, producing a stain whose length or color change is proportional to the compound's concentration.<br>**General Care/Maintenance:** Do not use a previously opened tube even if the indicator chemical is not stained. Check pump for leaks before and after use. Refrigerate before use to maintain a shelf life of about 2 years. Check expiration dates of tubes. Calibrate pump volume at least quarterly. Avoid rough handling which may cause channeling. |
| Aerosol Monitor | **Hazard Monitored:** Airborne particulate (dust, mist, fume) concentrations.<br>**Application:** Measures total concentration of semi-volatile organic compounds, PCBs, and metals.<br>**Detection Method:** Based on light-scattering properties of particulate matter. Using an internal pump, air sample is drawn into the sensing volume where near infrared light scattering is used to detect particles.<br>**General Care/Maintenance:** As specified by the mfr. Also, the instrument must be calibrated with particulates of a size and refractive index similar to those to be measured in the ambient air. |
| Monitox | **Hazard Monitored:** Gases and vapors.<br>**Application:** Measures specific gases and vapors.<br>**Detection Method:** Electrochemical sensor specific for the chemical species in question.<br>**General Care/Maintenance:** Moisten sponge before use; check the function switch; change the battery when needed. |
| Gamma Radiation Survey Instrument | **Hazard Monitored:** Gamma Radiation.<br>**Application:** Environmental radiation monitor.<br>**Detection Method:** Scintillation detector.<br>**General Care/Maintenance:** Must be calibrated annually at a specialized facility.<br>**Typical Operating Time:** Can be used for as long as the battery lasts, or for the recommended interval between calibrations, whichever is less. |

# TABLE 4
# INSTRUMENTATION ACTION LEVELS

| **Photoionization Detector Action Levels** | **Action Required** |
|---|---|
| Background to 5 parts per million (ppm)[1] | No respirator needed; no further action |
| >5ppm but </= 15 ppm at the perimeter of the work area | • Work temporarily halted and monitoring continues.<br>• If instantaneous readings decrease below 5 ppm above background, work activities will resume with continued monitoring |
| >5ppm but </= 25 ppm at the downwind perimeter of the hot zone | • Work activities will be halted.<br>• Source of vapors identified.<br>• Corrective actions taken to abate emissions.<br>• Continued monitoring.<br>• Workers will don appropriate respirators and work can resume if vapor levels 200 feet downwind or the hot zone or half the distance to the nearest potential receptor or residential or commercial structure, whichever is less – but in no case less than 20 feet – is below 5 ppm above background for the 15-minute average |
| >25ppm at the parameter of the hot zone | Activities will shut down |

| **Particulate Monitoring Action Levels** | **Action Required** |
|---|---|
| Background to 100 micrograms per cubic meter (µg/m³)[2], no dust observed | No further action |
| Background to 100 µg/m³, dust observed leaving the work area | Dust suppression must be employed. |
| 100 to 150 µg/m³ at the downwind parameter of the hot zone | • Work activities will be halted.<br>• Source of dust identified.<br>• Dust suppression activities initiated.<br>• Corrective actions taken to abate emissions.<br>• Continued monitoring.<br>• Workers will don appropriate respirators.<br>• Work can resume provided that dust suppression measures and other controls are successful in reducing the downwind PM10 concentration to within 150 µg/m³ of the upwind level and in preventing visible dust migration. |
| >150 µg/m³ at the parameter of the hot zone | Activities will shut down |

[1] VOC concentrations are 15-minute averages above site background (upwind parameter)
[2] Particulate concentrations are 15-minute averages above site background (upwind parameter)

# TABLE 6
# SUGGESTED FREQUENCY OF PHYSIOLOGICAL MONITORINGFOR FIT AND ACCLIMATED WORKERS[A]

| Adjusted Temperature[b] | Normal Work Ensemble[c] | Impermeable Ensemble |
|---|---|---|
| 90°F or above (32.2°C) or above | After each 45 min. of work | After each 15 min. of work |
| 87.5°F (30.8°-32.2°C) | After each 60 min. of work | After each 30 min. of work |
| 82.5°-87.5°F (28.1°-30.8°C) | After each 90 min. of work | After each 60 min. of work |
| 77.5°-82.5°F (25.3°-28.1°C) | After each 120 min. of work | After each 90 min. of work |
| 72.5°-77.5°F (22.5°-25.3°C) | After each 150 min. of work | After each 120 min. of work |

a For work levels of 250 kilocalories/hour.

b Calculate the adjusted air temperature (ta adj) by using this equation: ta adj $^{o}$F = ta $^{o}$F + (13 x % sunshine). Measure air temperature (ta) with a standard mercury-in-glass thermometer, with the bulb shielded from radiant heat. Estimate percent sunshine by judging what percent time the sun is not covered by clouds that are thick enough to produce a shadow. (100 percent sunshine = no cloud cover and a sharp, distinct shadow; 0 percent sunshine = no shadows.)

c A normal work ensemble consists of cotton coveralls or other cotton clothing with long sleeves and pants.

# TABLE 7
# HEAT INDEX

| | ENVIRONMENTAL TEMPERATURE (Fahrenheit) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | **70** | **75** | **80** | **85** | **90** | **95** | **100** | **105** | **110** | **115** | **120** |
| **RELATIVE HUMIDITY** | **APPARENT TEMPERATURE*** | | | | | | | | | | |
| **0%** | 64 | 69 | 73 | 78 | 83 | 87 | 91 | 95 | 99 | 103 | 107 |
| **10%** | 65 | 70 | 75 | 80 | 85 | 90 | 95 | 100 | 105 | 111 | 116 |
| **20%** | 66 | 72 | 77 | 82 | 87 | 93 | 99 | 105 | 112 | 120 | **130** |
| **30%** | 67 | 73 | 78 | 84 | 90 | 96 | 104 | 113 | 123 | **135** | **148** |
| **40%** | 68 | 74 | 79 | 86 | 93 | 101 | 110 | 123 | **137** | **151** | |
| **50%** | 69 | 75 | 81 | 88 | 96 | 107 | 120 | **135** | **150** | | |
| **60%** | 70 | 76 | 82 | 90 | 100 | 114 | **132** | **149** | | | |
| **70%** | 70 | 77 | 85 | 93 | 106 | 124 | **144** | | | | |
| **80%** | 71 | 78 | 86 | 97 | 113 | **136** | | | | | |
| **90%** | 71 | 79 | 88 | 102 | 122 | | | | | | |
| **100%** | 72 | 80 | 91 | 108 | | | | | | | |

*Combined Index of Heat and Humidity...what it "feels like" to the body

Source: National Oceanic and Atmospheric Administration

How to use Heat Index:

1. Across top locate Environmental Temperature
2. Down left side locate Relative Humidity
3. Follow across and down to find Apparent Temperature
4. Determine Heat Stress Risk on chart at right

Note: Exposure to full sunshine can increase Heat Index values by up to 15 degrees F.

| **Apparent Temperature** | **Heat Stress Risk with Physical Activity and/or Prolonged Exposure** |
|---|---|
| 90-105 | Heat Cramps or Heat Exhaustion Possible |
| 105-130 | Heat Cramps or Heat Exhaustion Likely, Heat Stroke Possible |
| **>130** | Heatstroke Highly Likely |

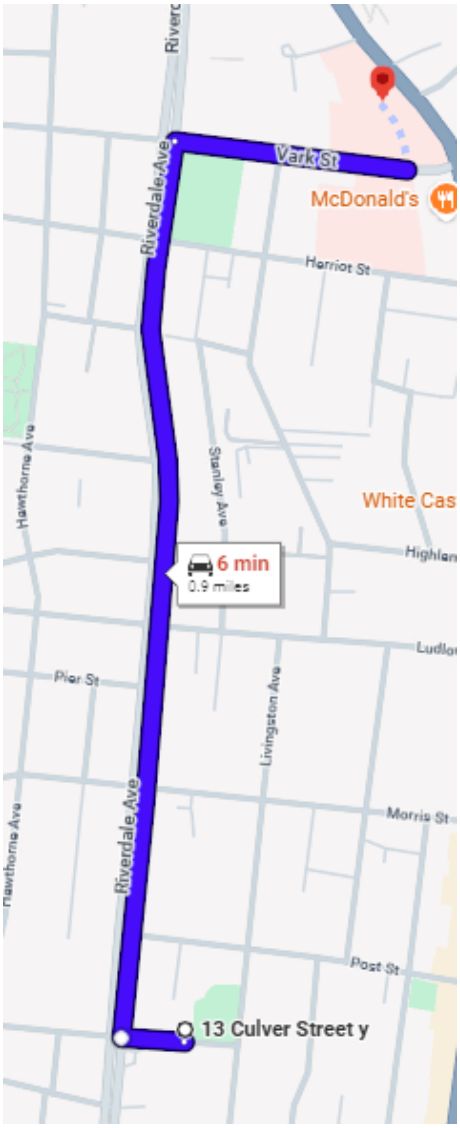
**Hospital Location:** **Saint Joseph's Medical Center**
**127 S Broadway**
**Yonkers, New York**
**914-378-7000**

***START: 13 Culver Street, Yonkers, New York***

1. Head toward Riverdale Ave
2. Turn right onto Riverdale Ave
3. Tur right onto Vark St, destination is on the left.

***END: Saint Joseph's Medical Center, 127 S Broadway, Yonkers, New York***



# ATTACHMENTS

# ATTACHMENT A

# STANDING ORDERS

# STANDING ORDERS

## GENERAL

- No smoking, eating, or drinking in this work zone.
- Upon leaving the work zone, personnel will thoroughly wash their hands and face.
- Minimize contact with contaminated materials through proper planning of work areas and decontamination areas, and by following proper procedures. Do not place equipment on the ground. Do not sit on contaminated materials.
- No open flames in the work zone.
- Only properly trained and equipped personnel are permitted to work in potentially contaminated areas.
- Always use the appropriate level of personal protective equipment (PPE).
- Maintain close contact with your buddy in the work zone.
- Contaminated material will be contained in the Exclusion Zone (EZ).
- Report any unusual conditions.
- Work areas will be kept clear and uncluttered. Debris and other slip, trip, and fall hazards will be removed as frequently as possible.
- The number of personnel and equipment in the work zone will be kept to an essential minimum.
- Be alert to the symptoms of fatigue and heat/cold stress, and their effects on the normal caution and judgment of personnel.
- Conflicting situations which may arise concerning safety requirements and working conditions must be addressed and resolved quickly by the site HSO.

## TOOLS AND HEAVY EQUIPMENT

- Do not, under any circumstances, enter or ride in or on any backhoe bucket, materials hoist, or any other device not specifically designed to carry passengers.
- Loose-fitting clothing or loose long hair is prohibited around moving machinery.
- Ensure that heavy equipment operators and all other personnel in the work zone are using the same hand signals to communicate.
- Drilling/excavating within 10 feet in any direction of overhead power lines is prohibited.
- The locations of all underground utilities must be identified and marked out prior to initiating any subsurface activities.
- Check to ensure that the equipment operator has lowered all blades and buckets to the ground before shutting off the vehicle.
- If the equipment has an emergency stop device, have the operator show all personnel its location and how to activate it.
- Help the operator ensure adequate clearances when the equipment must negotiate in tight quarters; serve as a signal operator to direct backing, as necessary.
- Ensure that all heavy equipment that is used in the Exclusion Zone is kept in that zone until the job is done and that such equipment is completely decontaminated before moving it into the clean area of the work zone.
- Samplers must not reach into or get near rotating equipment such as the drill rig. If personnel must work near any tools that could rotate, the equipment operator must completely shut down the rig prior to initiating such work. It may be necessary to use a remote sampling device.

# ATTACHMENT B

# DECONTAMINATION PROCEDURES

# PERSONNEL DECONTAMINATION

## LEVEL C DECONTAMINATION

| | | |
|---|---|---|
| Station 1: | Equipment Drop | 1. Deposit equipment used on-site (tools, sampling devices and containers, monitoring instruments, radios, clipboards, etc.) on plastic drop cloths. Segregation at the drop reduces the probability of cross-contamination. During hot weather operations, cool down stations may be set up within this area. |
| Station 2: | Outer Garment, Boots, and Gloves Wash and Rinse | 2. Scrub outer boots, outer gloves, and chemical-resistant splash suit with decon solution or detergent and water. Rinse off using copious amounts of water. |
| Station 3: | Outer Boot and Glove Removal | 3. Remove outer boots and gloves. Deposit in container with plastic liner. |
| Station 4: | Canister or Mask Change | 4. If worker leaves Exclusion Zone to change canister (or mask), this is the last step in the decontamination procedure. Worker's canister is exchanged, new outer gloves and boot covers donned, joints taped, and worker returns to duty. |
| Station 5: | Boot, Gloves and Outer Garment Removal | 5. Boots, chemical-resistant splash suit, inner gloves removed and deposited in separate containers lined with plastic. |
| Station 6: | Face piece Removal | 6. Face piece is removed (avoid touching face with fingers). Face piece deposited on plastic sheets. |
| Station 7: | Field Wash | 7. Hands and face are thoroughly washed. Shower as soon as possible. |

## LEVEL D DECONTAMINATION

| | | |
|---|---|---|
| Station 1: | Equipment Drop | 1. Deposit equipment used on-site (tools, sampling devices and containers, monitoring instruments, radios, clipboards, etc.) on plastic drop cloths. Segregation at the drop reduces the probability of cross contamination. During hot weather operations, cool down stations may be set up within this area. |
| Station 2: | Outer Garment, Boots, and Gloves Wash and Rinse | 2. Scrub outer boots, outer gloves and chemical-resistant splash suit with decon solution or detergent and water. Rinse off using copious amounts of water. |
| Station 3: | Outer Boot and Glove Removal | 3. Remove outer boots and gloves. Deposit in container with plastic liner. |
| Station 4: | Boot, Gloves and Outer Garment Removal | 4. Boots, chemical-resistant splash suit, inner gloves removed and deposited in separate containers lined with plastic. |
| Station 5: | Field Wash | 5. Hands and face are thoroughly washed. Shower as soon as possible. |

# EQUIPMENT DECONTAMINATION

## GENERAL:

Equipment to be decontaminated during the project may include tools, monitoring equipment, respirators, sampling containers, laboratory equipment, and drilling equipment.

All decontamination will be done by personnel in protective gear, appropriate for the level of decontamination, as determined by the site HSO. The decontamination work tasks will be split or rotated among support and work crews.

Depending on site conditions, backhoes and pumps may be decontaminated over a portable decontamination pad to contain wash water; or wash water may be allowed to run off into a storm sewer system. Equipment needed may include a steam generator with high-pressure water, empty drums, screens, screen support structures, and shovels. Drums will be used to hold contaminated wash water pumped from the lined pit. These drums will be labeled as such.

Miscellaneous tools and equipment will be dropped into a plastic bucket, tub, or other containers. They will be brushed off and rinsed with a detergent solution, and finally rinsed with clean water.

## MONITORING EQUIPMENT:

Monitoring equipment will be protected as much as possible from contamination by draping, masking, or otherwise covering as many of the instruments as possible with plastic without hindering the operation of the unit. The PID, HNu, or OVA meter, for example, can be placed in a clear plastic bag, which allows reading of the scale and operation of knobs. The probes can be partially wrapped keeping the sensor tip and discharge port clear.

The contaminated equipment will be taken from the drop area and the protective coverings removed and disposed of in the appropriate containers. Any dirt or obvious contamination will be brushed or wiped with a disposable paper wipe.

## RESPIRATORS:

Respirators will be cleaned and disinfected after every use. Taken from the drop area, the masks (with the cartridges removed and disposed of with other used disposable gear) will be immersed in a cleaning solution and scrubbed gently with a soft brush, followed by a rinse in plain warm water, and then allowed to air dry. In the morning, new cartridges will be installed. Personnel will inspect their own masks for serviceability prior to donning them. And, once the mask is on, the wearer will check the respirator for leakage using the negative and positive pressure fit check techniques.

_____

_____

Describe in detail how the incident occurred:

_____

_____

_____

_____

Nature of the incident (List the parts of the body affected):

_____

_____

_____

_____

Person(s) to whom the incident was reported (Time and Date):

_____

_____

List the names of other persons affected during this incident:

_____

_____

Possible causes of the incident (equipment, unsafe work practices, lack of PPE, etc.):

Weather conditions during incident:

**MEDICAL CARE INFORMATION**

Did affected employee receive medical care? Yes ☐ No ☐

If Yes, when, and where was medical care received:

Provide name of facility (hospital, clinic, etc.):

Length of stay at the facility.

Did the employee miss any work time? Yes ☐ No ☐ Undetermined ☐

Date employee last worked: _____ Date employee returned to work:

Has the employee returned to work? Yes ☐ No ☐

Does the employee have any work limitations or restrictions from the injury? : Yes ☐ No ☐

If Yes, please describe:

Did the exposure/injury result in permanent disability? Yes ☐ No ☐ Unknown ☐

If Yes, please describe:

**HEALTH & SAFETY INFORMATION**

Was the operation being conducted under an established site-specific Construction Health and Safety Plan?
Yes ☐ No ☐ Not Applicable: ☐

Describe protective equipment and clothing used by the employee:

_____

_____

_____

Did any limitations in safety equipment or protective clothing contribute to or affect exposure/injury? If so, explain:

# SAFETY DATA SHEETS

# SAFETY DATA SHEET

Version 5.3
Revision Date 12/29/2015
Print Date 04/11/2016

## 1. PRODUCT AND COMPANY IDENTIFICATION

### 1.1 Product identifiers

Product name : 1,1-Dichloroethane

Product Number : 48512
Brand : Supelco
Index-No. : 602-011-00-1

CAS-No. : 75-34-3

### 1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

### 1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich
3050 Spruce Street
SAINT LOUIS MO 63103
USA

Telephone : +1 800-325-5832
Fax : +1 800-325-5052

### 1.4 Emergency telephone number

Emergency Phone # : (314) 776-6555

## 2. HAZARDS IDENTIFICATION

### 2.1 Classification of the substance or mixture

**GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)**
Flammable liquids (Category 2), H225
Acute toxicity, Oral (Category 4), H302
Eye irritation (Category 2A), H319
Specific target organ toxicity - single exposure (Category 3), Respiratory system, H335
Acute aquatic toxicity (Category 3), H402
Chronic aquatic toxicity (Category 3), H412

For the full text of the H-Statements mentioned in this Section, see Section 16.

### 2.2 GHS Label elements, including precautionary statements

Pictogram

Signal word Danger

Hazard statement(s)
H225 Highly flammable liquid and vapour.
H302 Harmful if swallowed.
H319 Causes serious eye irritation.
H335 May cause respiratory irritation.
H412 Harmful to aquatic life with long lasting effects.

Precautionary statement(s)
P210 Keep away from heat/sparks/open flames/hot surfaces. No smoking.

| | |
|---|---|
| P233 | Keep container tightly closed. |
| P240 | Ground/bond container and receiving equipment. |
| P241 | Use explosion-proof electrical/ ventilating/ lighting/ equipment. |
| P242 | Use only non-sparking tools. |
| P243 | Take precautionary measures against static discharge. |
| P261 | Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray. |
| P264 | Wash skin thoroughly after handling. |
| P270 | Do not eat, drink or smoke when using this product. |
| P271 | Use only outdoors or in a well-ventilated area. |
| P273 | Avoid release to the environment. |
| P280 | Wear protective gloves/ eye protection/ face protection. |
| P301 + P312 + P330 | IF SWALLOWED: Call a POISON CENTER or doctor/ physician if you feel unwell. Rinse mouth. |
| P303 + P361 + P353 | IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. |
| P304 + P340 + P312 | IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/ physician if you feel unwell. |
| P305 + P351 + P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |
| P337 + P313 | If eye irritation persists: Get medical advice/ attention. |
| P370 + P378 | In case of fire: Use dry sand, dry chemical or alcohol-resistant foam to extinguish. |
| P403 + P233 | Store in a well-ventilated place. Keep container tightly closed. |
| P403 + P235 | Store in a well-ventilated place. Keep cool. |
| P405 | Store locked up. |
| P501 | Dispose of contents/ container to an approved waste disposal plant. |

**2.3 Hazards not otherwise classified (HNOC) or not covered by GHS** - none

## 3. COMPOSITION/INFORMATION ON INGREDIENTS

**3.1 Substances**

| | | |
|---|---|---|
| Synonyms | : | Ethylidene chloride |
| Formula | : | $C_2H_4Cl_2$ |
| Molecular weight | : | 98.96 g/mol |
| CAS-No. | : | 75-34-3 |
| EC-No. | : | 200-863-5 |
| Index-No. | : | 602-011-00-1 |

**Hazardous components**

| Component | Classification | Concentration |
|---|---|---|
| **1,1-Dichloroethane** | | |
| | Flam. Liq. 2; Acute Tox. 4; Eye Irrit. 2A; STOT SE 3; Aquatic Acute 3; Aquatic Chronic 3; H225, H302, H319, H335, H412 | <= 100 % |

For the full text of the H-Statements mentioned in this Section, see Section 16.

## 4. FIRST AID MEASURES

**4.1 Description of first aid measures**

**General advice**
Consult a physician. Show this safety data sheet to the doctor in attendance.Move out of dangerous area.

**If inhaled**
If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

**In case of skin contact**
Wash off with soap and plenty of water. Consult a physician.

**In case of eye contact**
Rinse thoroughly with plenty of water for at least 15 minutes and consult a physician.

**If swallowed**
Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

**4.2 Most important symptoms and effects, both acute and delayed**
The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

**4.3 Indication of any immediate medical attention and special treatment needed**
No data available

## 5. FIREFIGHTING MEASURES

**5.1 Extinguishing media**

**Suitable extinguishing media**
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

**5.2 Special hazards arising from the substance or mixture**
Carbon oxides, Hydrogen chloride gas

**5.3 Advice for firefighters**
Wear self-contained breathing apparatus for firefighting if necessary.

**5.4 Further information**
Use water spray to cool unopened containers.

## 6. ACCIDENTAL RELEASE MEASURES

**6.1 Personal precautions, protective equipment and emergency procedures**
Use personal protective equipment. Avoid breathing vapours, mist or gas. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Beware of vapours accumulating to form explosive concentrations. Vapours can accumulate in low areas.
For personal protection see section 8.

**6.2 Environmental precautions**
Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

**6.3 Methods and materials for containment and cleaning up**
Contain spillage, and then collect with an electrically protected vacuum cleaner or by wet-brushing and place in container for disposal according to local regulations (see section 13).

**6.4 Reference to other sections**
For disposal see section 13.

## 7. HANDLING AND STORAGE

**7.1 Precautions for safe handling**
Avoid contact with skin and eyes. Avoid inhalation of vapour or mist.
Use explosion-proof equipment.Keep away from sources of ignition - No smoking.Take measures to prevent the build up of electrostatic charge.
For precautions see section 2.2.

**7.2 Conditions for safe storage, including any incompatibilities**
Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage.
Storage class (TRGS 510): Flammable liquids

**7.3 Specific end use(s)**
Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

## 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

**8.1 Control parameters**

**Components with workplace control parameters**

| Component | CAS-No. | Value | Control parameters | Basis |
|---|---|---|---|---|
| 1,1-Dichloroethane | 75-34-3 | TWA | 100.000000 ppm | USA. ACGIH Threshold Limit Values (TLV) |
| | Remarks | Upper Respiratory Tract irritation<br>Eye irritation<br>Liver damage<br>Kidney damage<br>Not classifiable as a human carcinogen | | |
| | | TWA | 100.000000 ppm<br>400.000000 mg/m3 | USA. NIOSH Recommended Exposure Limits |
| | | See Appendix C | | |
| | | TWA | 100.000000 ppm<br>400.000000 mg/m3 | USA. Occupational Exposure Limits (OSHA) - Table Z-1 Limits for Air Contaminants |
| | | The value in mg/m3 is approximate. | | |

## 8.2 Exposure controls

**Appropriate engineering controls**
Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

**Personal protective equipment**

**Eye/face protection**
Face shield and safety glasses Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

**Skin protection**
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Full contact
Material: Fluorinated rubber
Minimum layer thickness: 0.7 mm
Break through time: 480 min
Material tested:Vitoject® (KCL 890 / Aldrich Z677698, Size M)

Splash contact
Material: butyl-rubber
Minimum layer thickness: 0.3 mm
Break through time: 60 min
Material tested:Butoject® (KCL 897 / Aldrich Z677647, Size M)

data source: KCL GmbH, D-36124 Eichenzell, phone +49 (0)6659 87300, e-mail sales@kcl.de, test method: EN374
If used in solution, or mixed with other substances, and under conditions which differ from EN 374, contact the supplier of the CE approved gloves. This recommendation is advisory only and must be evaluated by an industrial hygienist and safety officer familiar with the specific situation of anticipated use by our customers. It should not be construed as offering an approval for any specific use scenario.

**Body Protection**
Complete suit protecting against chemicals, Flame retardant antistatic protective clothing., The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

**Respiratory protection**
Where risk assessment shows air-purifying respirators are appropriate use a full-face respirator with multi-purpose combination (US) or type AXBEK (EN 14387) respirator cartridges as a backup to engineering

controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

**Control of environmental exposure**
Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

## 9. PHYSICAL AND CHEMICAL PROPERTIES

### 9.1 Information on basic physical and chemical properties

| | | |
|---|---|---|
| a) | Appearance | Form: liquid |
| b) | Odour | No data available |
| c) | Odour Threshold | No data available |
| d) | pH | No data available |
| e) | Melting point/freezing point | -97.99 °C (-144.38 °F) |
| f) | Initial boiling point and boiling range | 55.0 - 58.0 °C (131.0 - 136.4 °F) |
| g) | Flash point | -9.99 °C (14.02 °F) - closed cup |
| h) | Evaporation rate | No data available |
| i) | Flammability (solid, gas) | No data available |
| j) | Upper/lower flammability or explosive limits | No data available |
| k) | Vapour pressure | No data available |
| l) | Vapour density | No data available |
| m) | Relative density | 1.17 g/cm3 |
| n) | Water solubility | No data available |
| o) | Partition coefficient: n-octanol/water | No data available |
| p) | Auto-ignition temperature | No data available |
| q) | Decomposition temperature | No data available |
| r) | Viscosity | No data available |
| s) | Explosive properties | No data available |
| t) | Oxidizing properties | No data available |

### 9.2 Other safety information
No data available

## 10. STABILITY AND REACTIVITY

### 10.1 Reactivity
No data available

### 10.2 Chemical stability
Stable under recommended storage conditions.

### 10.3 Possibility of hazardous reactions
Vapours may form explosive mixture with air.

### 10.4 Conditions to avoid
Heat, flames and sparks.

**10.5 Incompatible materials**
Oxidizing agents

**10.6 Hazardous decomposition products**
Other decomposition products - No data available
In the event of fire: see section 5

## 11. TOXICOLOGICAL INFORMATION

**11.1 Information on toxicological effects**

**Acute toxicity**
LD50 Oral - Rat - 725.0 mg/kg

LC50 Inhalation - Rat - 4 h - 13000 ppm

Dermal: No data available

No data available

**Skin corrosion/irritation**
No data available

**Serious eye damage/eye irritation**
No data available

**Respiratory or skin sensitisation**
Chronic exposure may cause dermatitis.

**Germ cell mutagenicity**
No data available

**Carcinogenicity**

This product is or contains a component that is not classifiable as to its carcinogenicity based on its IARC, ACGIH, NTP, or EPA classification.

| | |
|---|---|
| IARC: | No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC. |
| NTP: | No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP. |
| OSHA: | No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA. |

**Reproductive toxicity**
No data available

No data available

**Specific target organ toxicity - single exposure**
May cause respiratory irritation.

**Specific target organ toxicity - repeated exposure**
No data available

**Aspiration hazard**
No data available

**Additional Information**
RTECS: KI0175000

Liver injury may occur., Kidney injury may occur., narcosis, To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

Central nervous system -

## 12. ECOLOGICAL INFORMATION

**12.1 Toxicity**
No data available

**12.2 Persistence and degradability**
No data available

**12.3 Bioaccumulative potential**
No data available

**12.4 Mobility in soil**
No data available

**12.5 Results of PBT and vPvB assessment**
PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

**12.6 Other adverse effects**
An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.
Harmful to aquatic life.

## 13. DISPOSAL CONSIDERATIONS

**13.1 Waste treatment methods**

**Product**
Burn in a chemical incinerator equipped with an afterburner and scrubber but exert extra care in igniting as this material is highly flammable. Offer surplus and non-recyclable solutions to a licensed disposal company. Contact a licensed professional waste disposal service to dispose of this material.

**Contaminated packaging**
Dispose of as unused product.

## 14. TRANSPORT INFORMATION

**DOT (US)**
UN number: 2362 Class: 3 Packing group: II
Proper shipping name: 1,1-Dichloroethane
Reportable Quantity (RQ): 1000 lbs

Poison Inhalation Hazard: No

**IMDG**
UN number: 2362 Class: 3 Packing group: II EMS-No: F-E, S-D
Proper shipping name: 1,1-DICHLOROETHANE

**IATA**
UN number: 2362 Class: 3 Packing group: II
Proper shipping name: 1,1-Dichloroethane

## 15. REGULATORY INFORMATION

**SARA 302 Components**
No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

**SARA 313 Components**
The following components are subject to reporting levels established by SARA Title III, Section 313:

| | CAS-No. | Revision Date |
|---|---|---|
| 1,1-Dichloroethane | 75-34-3 | 2007-07-01 |

**SARA 311/312 Hazards**
Fire Hazard, Acute Health Hazard

**Massachusetts Right To Know Components**

| | CAS-No. | Revision Date |
|---|---|---|
| 1,1-Dichloroethane | 75-34-3 | 2007-07-01 |

**Pennsylvania Right To Know Components**

| | CAS-No. | Revision Date |
|---|---|---|
| 1,1-Dichloroethane | 75-34-3 | 2007-07-01 |

**New Jersey Right To Know Components**

| | CAS-No. | Revision Date |
|---|---|---|
| 1,1-Dichloroethane | 75-34-3 | 2007-07-01 |

**California Prop. 65 Components**

| WARNING! This product contains a chemical known to the State of California to cause cancer. | CAS-No. | Revision Date |
|---|---|---|
| 1,1-Dichloroethane | 75-34-3 | 2007-09-28 |

## 16. OTHER INFORMATION

**Full text of H-Statements referred to under sections 2 and 3.**

| | |
|---|---|
| Acute Tox. | Acute toxicity |
| Aquatic Acute | Acute aquatic toxicity |
| Aquatic Chronic | Chronic aquatic toxicity |
| Eye Irrit. | Eye irritation |
| Flam. Liq. | Flammable liquids |
| H225 | Highly flammable liquid and vapour. |
| H302 | Harmful if swallowed. |
| H319 | Causes serious eye irritation. |
| H335 | May cause respiratory irritation. |

**HMIS Rating**

| | |
|---|---|
| Health hazard: | 2 |
| Chronic Health Hazard: | * |
| Flammability: | 3 |
| Physical Hazard | 0 |

**NFPA Rating**

| | |
|---|---|
| Health hazard: | 2 |
| Fire Hazard: | 3 |
| Reactivity Hazard: | 0 |

## SECTION 1 - PRODUCT AND COMPANY IDENTIFICATION

Company: AccuStandard, Inc.
125 Market Street
New Haven, CT 06513

Date MSDS Printed: 4/21/2006
Preparation Date: 4/21/2006
Information Phone Number: 203-786-5290
Emergency Phone Number: 203-786-5290
Hours: Mon. to Fri. 8am-5pm EDT

MSDS Number: V-029
Product Name: 1,2,4-Trimethylbenzene
Synonyms: 1,2,4-Trimethylbenzene; Pseudocumene; psi-Cumene; Assymetrical trimethylbenzene
Formula: $C_9H_{12}$ Molecular Weight: 120.19

## SECTION 2 - COMPOSITION / INFORMATION ON INGREDIENTS

| Component(s) ( 1 ) | CAS # | Appr. % | ACGIH-TLV (mg/m3) TWA | ACGIH-TLV (mg/m3) STEL skin | OSHA-PEL (mg/m3) TWA | OSHA-PEL (mg/m3) STEL skin |
|---|---|---|---|---|---|---|
| 1,2,4-Trimethylbenzene | 95-63-6 | 100 | 123 | | | |

## SECTION 3 - HAZARDS IDENTIFICATION

**Symptoms of Exposure:**

Irritating to eyes, skin, mucous membranes and upper respiratory system.

Narcotic in high concentrations.

May cause headache, dizziness, nausea, and narcosis.

May cause stomach cramps and gastro-intestinal disturbances.

To the best of our knowledge the chemical, physical and toxicological properties of the component ingredients have not been thoroughly investigated.

**Potential Health Effects:**

Harmful if inhaled.

May be harmful if absorbed through skin or swallowed

May cause central nervous system damage.

**Routes of Entry:**

Inhalation, ingestion or skin contact.

**Carcinogenicity:**

This product is or contains a component that is not listed (ACGIH, IARC, NTP, OSHA) as a cancer causing agent.

Alteration of any information contained herein without written permission from AccuStandard strictly prohibited.

## SECTION 4 - FIRST AID MEASURES

**Emergency First Aid:**

Get medical assistance for all cases of overexposure.

Skin contact: Immediately wash skin with soap and plenty of water. Remove contaminated clothing. Get medical attention if symptoms occur. Wash clothing before reuse.

Eye contact: Immediately flush with plenty of water. After initial flushing, remove and contact lenses and continue flushing for at least 15 minutes. Assure adequate flushing by separating the eyelids with fingers.

Inhalation: Remove to fresh air. If not breathing, give artificial respiration or give oxygen by trained personnel. Seek immediate medical attention.

Ingestion: Call a physician or poison control center immediately. ONLY induce vomiting at the instructions of a physician. Never give anything by mouth to an unconscious person.

## SECTION 5 - FIRE FIGHTING MEASURES

**Flammable Properties:**

Flash Point: 118.4 °F (48 °C) (cc)

Flammable Limits LEL (%): 0.9

Flammable Limits UEL (%): 6.4

Autoignition Temperature: 515 °C

Flammable liquid and vapor.

Vapors can travel to a source of ignition and flash back.

Containers can build up pressure if exposed to heat.

During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion.

**Extinguishing Media:**

Use alcohol foam, carbon dioxide, dry chemical, or water spray when fighting fires involving this material.

**Fire Fighting Procedures:**

As in any fire, wear self-contained breathing apparatus pressure demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

## SECTION 6 - ACCIDENTAL RELEASE MEASURES

**Spill Response:**

Wear a self-contained breathing apparatus and appropriate Personal protection. Stop leak if you can do so without risk. Ventilate area. Neutralize spill with soda ash or lime. Take up and containerize for proper disposal. Flush spill area with water. Keep combustibles away from spilled material. Comply with Federal, State, and local regulations.

## SECTION 7 - HANDLING AND STORAGE

Store in a tighly closed container.

Store in a cool area away from ignition sources and oxidizers.

Do not breathe vapor.

Do not get in eyes, on skin or clothing.

Avoid prolonged or repeated exposure.

This product should only by used by persons trained in the safe handling of hazardous chemicals.

## SECTION 8 - EXPOSURE CONTROLS / PERSONAL PROTECTION

**Engineering Controls and Personal Protection Equipment (PPE):**

Respiratory Protection: If workplace exposure limit(s) of product or any component is exceeded (see TLV/PEL), a NIOSH/MSHA approved air supplied respirator is advised in absence of proper environmental control. OSHA regulations also permit other

Alteration of any information contained herein without written permission from AccuStandard strictly prohibited.

NIOSH/MSHA respirators (negative pressure type) under specified conditions (see your safety equipment supplier). Engineering and/or administrative controls should be implemented to reduce exposure.

Material should be handled or transferred in an approved fume hood or with adequate ventilation.

Compatible chemical-resistant protective gloves must be worn to prevent skin contact.

Safety glasses with side shields must be worn at all times.

**General Hygiene Considerations:**

Wash thoroughly after handling. Do not take internally. Eye wash and safety equipment should be readily available.

## SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Appearance: Clear, colorless liquid
Odor: Aromatic
pH: N/A
Vapor Pressure: 7 mmHg (44.4 °C)
Vapor Density (Air = 1): 4.2 g/l
Boiling Point: 168 - 169 °C
Melting Point: -43.7 °C
Solubility in Water (%): Insoluble
Specific Gravity ($H_2O$ = 1): 0.876 g/cm3
Flash Point: 118.4 °F (48 °C) (cc)
Explosion Limits (%): 0.9 to 6.4
Autoignition Temperature: 515 °C
Percent Volatile: N/A
Evaporation Rate (BuAc = 1): N/A
Molecular Weight: 120.19
Molecular Formula: $C_9H_{12}$

## SECTION 10 - STABILITY AND REACTIVITY

Stability: Stable
Conditions To Avoid: Heat; Contact with ignition sources
Materials To Avoid: Oxidizers

Hazardous Decomposition: Carbon oxides
Hazardous Polymerization: Will not occur

## SECTION 11 - TOXICOLOGICAL INFORMATION

See section 3 for specific toxicological information for the ingredients of this product.

## SECTION 12 - ECOLOGICAL INFORMATION

By complying with sections 6 and 7 there will be no release to the environment.

Alteration of any information contained herein without written permission from AccuStandard strictly prohibited.

## SECTION 13 - DISPOSAL CONSIDERATIONS

Recycle or incinerate at any EPA approved facility or dispose in compliance with Federal, State and local regulations. Empty containers must be triple-rinsed prior to disposal.

## SECTION 14 - TRANSPORT INFORMATION

**DOT** UN Number: UN3295 Shipping Class: 3 Packing Group: III FLAMMABLE

## SECTION 15 - REGULATORY INFORMATION

In addition to Federal and state regulations, local regulations may apply. Check with your local regulatory authorities.

## SECTION 16 - OTHER INFORMATION

This document has been designed to meet the requirements of OSHA, ANSI and CHIPs regulations.

The statements contained herein are offered for informational purposes only and are based on technical data that we believe to be accurate. It is intended for use only by persons having the necessary technical skill and at their own discretion and risk. Since conditions and manner of use are outside our control, we make

# SAFETY DATA SHEET

Version 4.7
Revision Date 11/26/2015
Print Date 02/11/2016

## 1. PRODUCT AND COMPANY IDENTIFICATION

### 1.1 Product identifiers

Product name : 1,2-Dichlorobenzene

Product Number : 240664
Brand : Sigma-Aldrich
Index-No. : 602-034-00-7

CAS-No. : 95-50-1

### 1.2 Relevant identified uses of the substance or mixture and uses advised against

Identified uses : Laboratory chemicals, Synthesis of substances

### 1.3 Details of the supplier of the safety data sheet

Company : Sigma-Aldrich
3050 Spruce Street
SAINT LOUIS MO 63103
USA

Telephone : +1 800-325-5832
Fax : +1 800-325-5052

### 1.4 Emergency telephone number

Emergency Phone # : (314) 776-6555

## 2. HAZARDS IDENTIFICATION

### 2.1 Classification of the substance or mixture

**GHS Classification in accordance with 29 CFR 1910 (OSHA HCS)**
Flammable liquids (Category 4), H227
Acute toxicity, Oral (Category 4), H302
Acute toxicity, Inhalation (Category 4), H332
Skin irritation (Category 2), H315
Eye irritation (Category 2A), H319
Skin sensitisation (Category 1), H317
Specific target organ toxicity - single exposure (Category 3), Respiratory system, H335
Acute aquatic toxicity (Category 1), H400
Chronic aquatic toxicity (Category 1), H410

For the full text of the H-Statements mentioned in this Section, see Section 16.

### 2.2 GHS Label elements, including precautionary statements

Pictogram

Signal word Warning

Hazard statement(s)
H227 Combustible liquid.
H302 + H332 Harmful if swallowed or if inhaled
H315 Causes skin irritation.
H317 May cause an allergic skin reaction.
H319 Causes serious eye irritation.

| | |
|---|---|
| H335 | May cause respiratory irritation. |
| H410 | Very toxic to aquatic life with long lasting effects. |

Precautionary statement(s)

| | |
|---|---|
| P210 | Keep away from heat/sparks/open flames/hot surfaces. No smoking. |
| P261 | Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray. |
| P264 | Wash skin thoroughly after handling. |
| P270 | Do not eat, drink or smoke when using this product. |
| P271 | Use only outdoors or in a well-ventilated area. |
| P272 | Contaminated work clothing should not be allowed out of the workplace. |
| P273 | Avoid release to the environment. |
| P280 | Wear protective gloves/ eye protection/ face protection. |
| P301 + P312 + P330 | IF SWALLOWED: Call a POISON CENTER or doctor/ physician if you feel unwell. Rinse mouth. |
| P302 + P352 | IF ON SKIN: Wash with plenty of soap and water. |
| P304 + P340 + P312 | IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/ physician if you feel unwell. |
| P305 + P351 + P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |
| P333 + P313 | If skin irritation or rash occurs: Get medical advice/ attention. |
| P337 + P313 | If eye irritation persists: Get medical advice/ attention. |
| P362 | Take off contaminated clothing and wash before reuse. |
| P370 + P378 | In case of fire: Use dry sand, dry chemical or alcohol-resistant foam to extinguish. |
| P391 | Collect spillage. |
| P403 + P233 | Store in a well-ventilated place. Keep container tightly closed. |
| P403 + P235 | Store in a well-ventilated place. Keep cool. |
| P405 | Store locked up. |
| P501 | Dispose of contents/ container to an approved waste disposal plant. |

**2.3 Hazards not otherwise classified (HNOC) or not covered by GHS** - none

## 3. COMPOSITION/INFORMATION ON INGREDIENTS

**3.1 Substances**

| | | |
|---|---|---|
| Formula | : | $C_6H_4Cl_2$ |
| Molecular weight | : | 147.00 g/mol |
| CAS-No. | : | 95-50-1 |
| EC-No. | : | 202-425-9 |
| Index-No. | : | 602-034-00-7 |

**Hazardous components**

| Component | Classification | Concentration |
|---|---|---|
| **1,2-Dichlorobenzene** | | |
| | Flam. Liq. 4; Acute Tox. 4; Skin Irrit. 2; Eye Irrit. 2A; Skin Sens. 1; STOT SE 3; Aquatic Acute 1; Aquatic Chronic 1; H227, H302 + H332, H315, H317, H319, H335, H410 | <= 100 % |

For the full text of the H-Statements mentioned in this Section, see Section 16.

## 4. FIRST AID MEASURES

**4.1 Description of first aid measures**

**General advice**
Consult a physician. Show this safety data sheet to the doctor in attendance.Move out of dangerous area.

**If inhaled**
If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

**In case of skin contact**
Wash off with soap and plenty of water. Consult a physician.

**In case of eye contact**
Rinse thoroughly with plenty of water for at least 15 minutes and consult a physician.

**If swallowed**
Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

**4.2 Most important symptoms and effects, both acute and delayed**
The most important known symptoms and effects are described in the labelling (see section 2.2) and/or in section 11

**4.3 Indication of any immediate medical attention and special treatment needed**
No data available

## 5. FIREFIGHTING MEASURES

**5.1 Extinguishing media**

**Suitable extinguishing media**
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

**5.2 Special hazards arising from the substance or mixture**
Carbon oxides, Hydrogen chloride gas

**5.3 Advice for firefighters**
Wear self-contained breathing apparatus for firefighting if necessary.

**5.4 Further information**
Use water spray to cool unopened containers.

## 6. ACCIDENTAL RELEASE MEASURES

**6.1 Personal precautions, protective equipment and emergency procedures**
Use personal protective equipment. Avoid breathing vapours, mist or gas. Ensure adequate ventilation. Remove all sources of ignition. Evacuate personnel to safe areas. Beware of vapours accumulating to form explosive concentrations. Vapours can accumulate in low areas.
For personal protection see section 8.

**6.2 Environmental precautions**
Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

**6.3 Methods and materials for containment and cleaning up**
Contain spillage, and then collect with an electrically protected vacuum cleaner or by wet-brushing and place in container for disposal according to local regulations (see section 13). Keep in suitable, closed containers for disposal.

**6.4 Reference to other sections**
For disposal see section 13.

## 7. HANDLING AND STORAGE

**7.1 Precautions for safe handling**
Avoid contact with skin and eyes. Avoid inhalation of vapour or mist.
Keep away from sources of ignition - No smoking.Take measures to prevent the build up of electrostatic charge.
For precautions see section 2.2.

**7.2 Conditions for safe storage, including any incompatibilities**
Keep container tightly closed in a dry and well-ventilated place. Containers which are opened must be carefully resealed and kept upright to prevent leakage.

Light sensitive.
Storage class (TRGS 510): Non-combustible, acute toxic Cat.3 / toxic hazardous materials or hazardous materials causing chronic effects

**7.3 Specific end use(s)**
Apart from the uses mentioned in section 1.2 no other specific uses are stipulated

## 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

### 8.1 Control parameters

**Components with workplace control parameters**

| Component | CAS-No. | Value | Control parameters | Basis |
|---|---|---|---|---|
| 1,2-Dichlorobenzene | 95-50-1 | TWA | 25.000000 ppm | USA. ACGIH Threshold Limit Values (TLV) |
| | Remarks | Upper Respiratory Tract irritation<br>Eye irritation<br>Liver damage<br>Not classifiable as a human carcinogen | | |
| | | TWA | 25 ppm | USA. ACGIH Threshold Limit Values (TLV) |
| | | Upper Respiratory Tract irritation<br>Eye irritation<br>Liver damage<br>Not classifiable as a human carcinogen | | |
| | | STEL | 50.000000 ppm | USA. ACGIH Threshold Limit Values (TLV) |
| | | Upper Respiratory Tract irritation<br>Eye irritation<br>Liver damage<br>Not classifiable as a human carcinogen | | |
| | | STEL | 50 ppm | USA. ACGIH Threshold Limit Values (TLV) |
| | | Upper Respiratory Tract irritation<br>Eye irritation<br>Liver damage<br>Not classifiable as a human carcinogen | | |
| | | C | 50.000000 ppm<br>300.000000 mg/m3 | USA. Occupational Exposure Limits (OSHA) - Table Z-1 Limits for Air Contaminants |
| | | The value in mg/m3 is approximate.<br>Ceiling limit is to be determined from breathing-zone air samples. | | |
| | | C | 50.000000 ppm<br>300.000000 mg/m3 | USA. NIOSH Recommended Exposure Limits |

### 8.2 Exposure controls

**Appropriate engineering controls**
Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

**Personal protective equipment**

**Eye/face protection**
Face shield and safety glasses Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

**Skin protection**
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Full contact
Material: Fluorinated rubber
Minimum layer thickness: 0.7 mm
Break through time: 480 min
Material tested:Vitoject® (KCL 890 / Aldrich Z677698, Size M)

Splash contact
Material: Nitrile rubber
Minimum layer thickness: 0.4 mm
Break through time: 38 min
Material tested:Camatril® (KCL 730 / Aldrich Z677442, Size M)

data source: KCL GmbH, D-36124 Eichenzell, phone +49 (0)6659 87300, e-mail sales@kcl.de, test method: EN374
If used in solution, or mixed with other substances, and under conditions which differ from EN 374, contact the supplier of the CE approved gloves. This recommendation is advisory only and must be evaluated by an industrial hygienist and safety officer familiar with the specific situation of anticipated use by our customers. It should not be construed as offering an approval for any specific use scenario.

**Body Protection**
Complete suit protecting against chemicals, The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

**Respiratory protection**
Where risk assessment shows air-purifying respirators are appropriate use a full-face respirator with multi-purpose combination (US) or type ABEK (EN 14387) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

**Control of environmental exposure**
Prevent further leakage or spillage if safe to do so. Do not let product enter drains. Discharge into the environment must be avoided.

## 9. PHYSICAL AND CHEMICAL PROPERTIES

### 9.1 Information on basic physical and chemical properties

| | | |
|---|---|---|
| a) | Appearance | Form: liquid, clear<br>Colour: colourless |
| b) | Odour | No data available |
| c) | Odour Threshold | No data available |
| d) | pH | No data available |
| e) | Melting point/freezing point | Melting point/range: -18 - -17 °C (0 - 1 °F) - lit. |
| f) | Initial boiling point and boiling range | 178 - 180 °C (352 - 356 °F) - lit. |
| g) | Flash point | 66.0 °C (150.8 °F) - closed cup |
| h) | Evaporation rate | No data available |
| i) | Flammability (solid, gas) | No data available |
| j) | Upper/lower flammability or explosive limits | Upper explosion limit: 9.2 %(V)<br>Lower explosion limit: 2.2 %(V) |
| k) | Vapour pressure | 2.1 hPa (1.6 mmHg) at 35.0 °C (95.0 °F)<br>1.6 hPa (1.2 mmHg) at 20.0 °C (68.0 °F) |
| l) | Vapour density | No data available |
| m) | Relative density | 1.306 g/cm3 at 25 °C (77 °F) |
| n) | Water solubility | ca.0.1558 g/l at 25 °C (77 °F) - partly soluble |
| o) | Partition coefficient: n-octanol/water | log Pow: ca.3.433 at 25 °C (77 °F) |
| p) | Auto-ignition temperature | 648.0 °C (1,198.4 °F) |
| q) | Decomposition | No data available |

temperature

| | | |
|---|---|---|
| r) | Viscosity | No data available |
| s) | Explosive properties | No data available |
| t) | Oxidizing properties | No data available |

**9.2 Other safety information**

| | |
|---|---|
| Surface tension | ca.36.61 mN/m |

## 10. STABILITY AND REACTIVITY

**10.1 Reactivity**
No data available

**10.2 Chemical stability**
Stable under recommended storage conditions.

**10.3 Possibility of hazardous reactions**
No data available

**10.4 Conditions to avoid**
Heat, flames and sparks.

**10.5 Incompatible materials**
Strong oxidizing agents

**10.6 Hazardous decomposition products**
Other decomposition products - No data available
In the event of fire: see section 5

## 11. TOXICOLOGICAL INFORMATION

**11.1 Information on toxicological effects**

**Acute toxicity**
LD50 Oral - Rat - 500.0 mg/kg

Inhalation: No data available

LD50 Dermal - Rabbit - > 10,000 mg/kg

No data available

**Skin corrosion/irritation**
Skin - Rabbit
(OECD Test Guideline 404)

**Serious eye damage/eye irritation**
No data available

**Respiratory or skin sensitisation**
in vivo assay - Mouse
May cause sensitisation by skin contact.
(OECD Test Guideline 429)

**Germ cell mutagenicity**
No data available

Ames test
Salmonella typhimurium
Result: negative

OECD Test Guideline 474
Mouse - male - Bone marrow
Result: negative

**Carcinogenicity**

IARC: 3 - Group 3: Not classifiable as to its carcinogenicity to humans (1,2-Dichlorobenzene)

NTP: No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

OSHA: No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.

**Reproductive toxicity**

No data available

**Specific target organ toxicity - single exposure**
No data available

**Specific target organ toxicity - repeated exposure**

**Aspiration hazard**
No data available

**Additional Information**

| | |
|---|---|
| Repeated dose toxicity | Rat - male and female - Oral - 24 h - NOAEL : 60 mg/kg - LOAEL : 125 mg/kg - OECD Test Guideline 408 |

RTECS: CZ4500000

To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.

Stomach - Irregularities - Based on Human Evidence
Stomach - Irregularities - Based on Human Evidence

## 12. ECOLOGICAL INFORMATION

### 12.1 Toxicity

| | |
|---|---|
| Toxicity to fish | flow-through test LC50 - Oncorhynchus mykiss (rainbow trout) - 1.58 mg/l - 96 h |
| Toxicity to daphnia and other aquatic invertebrates | static test EC50 - Ceriodaphnia dubia (water flea) - 0.66 mg/l - 48 h |
| Toxicity to algae | Growth inhibition EC50 - Pseudokirchneriella subcapitata - 2.2 mg/l - 96 h |

### 12.2 Persistence and degradability

| | |
|---|---|
| Biodegradability | aerobic - Exposure time 28 d<br>Result: 0 % - Not readily biodegradable.<br>(OECD Test Guideline 301C) |

### 12.3 Bioaccumulative potential

| | |
|---|---|
| Bioaccumulation | Cyprinus carpio (Carp) - 56 d<br>- 0.01 mg/l<br><br>Bioconcentration factor (BCF): 90 - 260<br>(OECD Test Guideline 305C) |

### 12.4 Mobility in soil
No data available

### 12.5 Results of PBT and vPvB assessment
PBT/vPvB assessment not available as chemical safety assessment not required/not conducted

### 12.6 Other adverse effects
An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.
Very toxic to aquatic life with long lasting effects.

## 13. DISPOSAL CONSIDERATIONS

### 13.1 Waste treatment methods

**Product**
This combustible material may be burned in a chemical incinerator equipped with an afterburner and scrubber. Offer surplus and non-recyclable solutions to a licensed disposal company. Contact a licensed professional waste disposal service to dispose of this material.

**Contaminated packaging**
Dispose of as unused product.

## 14. TRANSPORT INFORMATION

**DOT (US)**
UN number: 1591 Class: 6.1 Packing group: III
Proper shipping name: o-Dichlorobenzene
Reportable Quantity (RQ): 100 lbs

Poison Inhalation Hazard: No

**IMDG**
UN number: 1591 Class: 6.1 Packing group: III EMS-No: F-A, S-A
Proper shipping name: ortho-DICHLOROBENZENE
Marine pollutant:yes

**IATA**
UN number: 1591 Class: 6.1 Packing group: III
Proper shipping name: o-Dichlorobenzene

## 15. REGULATORY INFORMATION

**SARA 302 Components**
No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

**SARA 313 Components**
The following components are subject to reporting levels established by SARA Title III, Section 313:

| | CAS-No. | Revision Date |
|---|---|---|
| 1,2-Dichlorobenzene | 95-50-1 | 2007-07-01 |

**SARA 311/312 Hazards**
Fire Hazard, Acute Health Hazard, Chronic Health Hazard

**Massachusetts Right To Know Components**

| | CAS-No. | Revision Date |
|---|---|---|
| 1,2-Dichlorobenzene | 95-50-1 | 2007-07-01 |

**Pennsylvania Right To Know Components**

| | CAS-No. | Revision Date |
|---|---|---|
| 1,2-Dichlorobenzene | 95-50-1 | 2007-07-01 |

**New Jersey Right To Know Components**

| | CAS-No. | Revision Date |
|---|---|---|
| 1,2-Dichlorobenzene | 95-50-1 | 2007-07-01 |

**California Prop. 65 Components**
This product does not contain any chemicals known to State of California to cause cancer, birth defects, or any other reproductive harm.

## 16. OTHER INFORMATION

**Full text of H-Statements referred to under sections 2 and 3.**

Acute Tox. Acute toxicity

| | |
|---|---|
| Aquatic Acute | Acute aquatic toxicity |
| Aquatic Chronic | Chronic aquatic toxicity |
| Eye Irrit. | Eye irritation |
| Flam. Liq. | Flammable liquids |
| H227 | Combustible liquid. |
| H302 | Harmful if swallowed. |
| H302 + H332 | Harmful if swallowed or if inhaled |
| H315 | Causes skin irritation. |
| H317 | May cause an allergic skin reaction. |
| H319 | Causes serious eye irritation. |

**HMIS Rating**

| | |
|---|---|
| Health hazard: | 2 |
| Chronic Health Hazard: | * |
| Flammability: | 2 |
| Physical Hazard | 1 |

**NFPA Rating**

| | |
|---|---|
| Health hazard: | 2 |
| Fire Hazard: | 2 |
| Reactivity Hazard: | 0 |

# SAFETY DATA SHEET

**Creation Date** 04-Feb-2010 **Revision Date** 18-Jan-2018 **Revision Number** 6

## 1. Identification

**Product Name** **1,2-Dichloroethane**

**Cat No. :** **E175-4; E175-20; E175-500; E175RS-19; E175RS-50; E190-4**

**CAS-No** 107-06-2
**Synonyms** Ethylene dichloride; Ethylene chloride (Certified ACS/Spectranalyzed)

**Recommended Use** Laboratory chemicals.
**Uses advised against** Not for food, drug, pesticide or biocidal product use

**Details of the supplier of the safety data sheet**

**Company**
Fisher Scientific
One Reagent Lane
Fair Lawn, NJ 07410
Tel: (201) 796-7100

**Emergency Telephone Number**
CHEMTREC®, Inside the USA: 800-424-9300
CHEMTREC®, Outside the USA: 001-703-527-3887

## 2. Hazard(s) identification

**Classification**
This chemical is considered hazardous by the 2012 OSHA Hazard Communication Standard (29 CFR 1910.1200)

| | |
|---|---|
| Flammable liquids | Category 2 |
| Acute oral toxicity | Category 4 |
| Acute Inhalation Toxicity - Vapors | Category 3 |
| Skin Corrosion/irritation | Category 2 |
| Serious Eye Damage/Eye Irritation | Category 2 |
| Carcinogenicity | Category 1B |
| Specific target organ toxicity (single exposure) | Category 3 |
| Target Organs - Respiratory system, Central nervous system (CNS). | |
| Specific target organ toxicity - (repeated exposure) | Category 2 |
| Target Organs - Kidney, Liver, Heart, Blood. | |

**Label Elements**

**Signal Word**
Danger

**Hazard Statements**
Highly flammable liquid and vapor
Harmful if swallowed
Causes skin irritation
Causes serious eye irritation

Toxic if inhaled
May cause respiratory irritation
May cause drowsiness or dizziness
May cause cancer
May cause damage to organs through prolonged or repeated exposure

**Precautionary Statements**
**Prevention**
Obtain special instructions before use
Do not handle until all safety precautions have been read and understood
Use personal protective equipment as required
Wash face, hands and any exposed skin thoroughly after handling
Do not eat, drink or smoke when using this product
Use only outdoors or in a well-ventilated area
Wear eye/face protection
Do not breathe dust/fume/gas/mist/vapors/spray
Keep away from heat/sparks/open flames/hot surfaces. - No smoking
Keep container tightly closed
Ground/bond container and receiving equipment
Use explosion-proof electrical/ventilating/lighting/equipment
Use only non-sparking tools
Take precautionary measures against static discharge
Keep cool
**Response**
IF exposed or concerned: Get medical attention/advice
**Inhalation**
IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing
Call a POISON CENTER or doctor/physician
**Skin**
If skin irritation occurs: Get medical advice/attention
IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower
Wash contaminated clothing before reuse
**Eyes**
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing
If eye irritation persists: Get medical advice/attention
**Ingestion**
IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell
Rinse mouth
**Fire**
In case of fire: Use CO2, dry chemical, or foam for extinction
**Storage**
Store locked up
Store in a well-ventilated place. Keep container tightly closed
**Disposal**
Dispose of contents/container to an approved waste disposal plant
**Hazards not otherwise classified (HNOC)**

**WARNING.** Cancer - https://www.p65warnings.ca.gov/.

## 3. Composition/Information on Ingredients

| Component | CAS-No | Weight % |
|---|---|---|
| Ethylene dichloride | 107-06-2 | >95 |

## 4. First-aid measures

**General Advice** Show this safety data sheet to the doctor in attendance. Immediate medical attention is required.

**Eye Contact** Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Immediate medical attention is required.

**Skin Contact** Wash off immediately with plenty of water for at least 15 minutes. Immediate medical attention is required.

**Inhalation** Move to fresh air. If breathing is difficult, give oxygen. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Immediate medical attention is required.

**Ingestion** Do not induce vomiting. Call a physician or Poison Control Center immediately.

**Most important symptoms and effects** Breathing difficulties. May cause cardiac arrhythmia. May cause central nervous system depression: Symptoms may include tightness in the chest, flushing, headache, nausea, vomiting, respiratory depression, weakness, irregular heartbeat, abdominal pain, convulsions, and shock

**Notes to Physician** Treat symptomatically

## 5. Fire-fighting measures

**Suitable Extinguishing Media** Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide. Cool closed containers exposed to fire with water spray.

**Unsuitable Extinguishing Media** Water may be ineffective

**Flash Point** 13 °C / 55.4 °F

**Method -** No information available

**Autoignition Temperature** 440 °C / 824 °F

**Explosion Limits**

**Upper** 15.9 vol %
**Lower** 6.2 vol %
**Sensitivity to Mechanical Impact** No information available
**Sensitivity to Static Discharge** No information available

**Specific Hazards Arising from the Chemical**
Flammable. Containers may explode when heated. Vapors may form explosive mixtures with air. Vapors may travel to source of ignition and flash back. Keep product and empty container away from heat and sources of ignition. Thermal decomposition can lead to release of irritating gases and vapors.

**Hazardous Combustion Products**
Carbon monoxide (CO) Carbon dioxide ($CO_2$) Hydrogen chloride gas Phosgene
**Protective Equipment and Precautions for Firefighters**
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear. Thermal decomposition can lead to release of irritating gases and vapors.

**NFPA**

| Health | Flammability | Instability | Physical hazards |
|---|---|---|---|
| 3 | 3 | 0 | N/A |

## 6. Accidental release measures

**Personal Precautions** Use personal protective equipment. Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak. Ensure adequate ventilation. Remove all sources of ignition. Take precautionary measures against static discharges.

**Environmental Precautions** Should not be released into the environment. See Section 12 for additional ecological information.

**Methods for Containment and Clean Up** Soak up with inert absorbent material. Keep in suitable, closed containers for disposal. Remove all sources of ignition. Use spark-proof tools and explosion-proof equipment.

## 7. Handling and storage

**Handling** Wear personal protective equipment. Do not get in eyes, on skin, or on clothing. Do not ingest. Use only under a chemical fume hood. Do not breathe vapors or spray mist. Keep away from open flames, hot surfaces and sources of ignition. Use only non-sparking tools. To avoid ignition of vapors by static electricity discharge, all metal parts of the equipment must be grounded. Take precautionary measures against static discharges.
