

PROJECT FACT SHEET

Groundwater Investigation • Bethpage Community Park • Bethpage, New York

July 2005

We will be working in your neighborhood and we want you to know what we are doing...

This fact sheet provides interested citizens with information about the groundwater investigation project that will begin this summer at locations south of the Bethpage Community Park (Park). This subject groundwater investigation will be performed by ARCADIS of Melville, New York, for Northrop Grumman Corporation. Information obtained from this work will help to assess the groundwater quality south of the Park.

This work is being conducted under the oversight of and in accordance with methods approved by the New York State Department of Environmental Conservation (NYSDEC).

WHAT ARE WE DOING? We will be drilling borings and installing and sampling temporary wells at approximately fourteen locations on rights-of-ways of the Town of Oyster Bay. This study will help us gather additional information regarding groundwater quality.

One soil boring will be drilled and one temporary well will be installed and sampled at each location. The well depths will be in excess of 300 feet below the land surface. The temporary wells will be removed following collection of groundwater samples from different depths. Permanent wells will be installed later at some locations which will require a second mobilization of the drilling equipment.

WHEN WILL THIS WORK BEGIN? We expect the drilling and installation will start on July 5, 2005 and the first 5 borings/wells will be completed by approximately August 12.

HOW LONG WILL THIS WORK TAKE? The work at each location will take about two weeks per location to complete. To complete the work as quickly as possible two to three rigs will be used but no more than one at a time at any location.

WHAT SCHEDULE WILL WE FOLLOW? We will work Monday to Friday between the hours of 8 a.m. and 5 p.m.

WHAT TYPE OF EQUIPMENT WILL WE USE? Trucks and equipment will be used at each site, including drilling rig, water truck, drums, pump rig, and pump. The drilling rig will remain at the location until its work is complete. Drill cuttings will be moved back to a staging area on Northrop Grumman property each day. Materials will be secured at the drill site, or brought back to the on-site staging area. The work is being conducted by trained personnel in accordance with an approved Health and Safety Plan.

WHAT WILL WE DO TO ENSURE THE SITE IS SECURE AND SAFE? There will be a temporary construction fence installed around each drilling site at the end of each day.

ANY QUESTIONS OR COMMENTS? If you have any questions about this work, or if you experience problems as a result of this work, please call Steve Scharf of the New York State Department of Environmental Conservation, Michael Wolfert of ARCADIS or John Vosilla or Larry Leskovjan of Northrop Grumman using the contact information provided below. Your comments or concerns will be addressed as quickly as possible.
