PROJECT FACT SHEET
Soil Gas Interim Remedial Measure
Operable Unit 3
Bethpage, New York
November 2007

Work will be going on nearby in your neighborhood and the Department of Environmental Conservation wants you to know that...

The Interim Remedial Measure (IRM) construction activities associated with soil gas remediation at the former Grumman Plant 24 Access Road Site will be initiated in November 2007. The IRM, as discussed at the June 27, 2007 public meeting, has been designed to address volatile organic compounds in subsurface soil gas near the Bethpage Community Park (Park). The IRM construction will be performed by ARCADIS of Melville, New York on behalf of Northrop Grumman.

This work is being conducted according to plans and design reports that have been approved by the New York State Department of Environmental Conservation (NYSDEC). All work will be performed under the oversight of, and in accordance with methods approved by, the NYSDEC.

WHAT ACTIVITIES ARE BEING DONE? ARCADIS will be performing all IRM construction activities on Grumman-owned property immediately south and west of the Town of Oyster Bay Bethpage Community Park. IRM Construction activities will include: surveying, sampling, trenching, back-filling, and compaction of soil, installation of subsurface bundles of high-density polyethylene (HDPE) pipe, installation of a treatment building, asphalt paving, and startup testing.

HOW LONG WILL THIS WORK TAKE? The work is expected to begin in early November 2007 and be completed by January 2008. During this time, the former Grumman Plant 24 Access Road will experience periodic closures to vehicle and pedestrian traffic.

WHAT SCHEDULE WILL BE FOLLOWED? To minimize inconvenience to residents, activities will be conducted Monday to Friday between the hours of 7 a.m. and 5 p.m. There will be no work on weekends or on Town holidays without prior approval from Northrop Grumman and/or the Town.

WHAT TYPE OF EQUIPMENT WILL BE USED? Equipment used will include: trucks, backhoes, front-end loaders, dump trucks, cranes, and excavators, as well as jackhammers and welding equipment. The work is being conducted by trained personnel in accordance with an approved Health and Safety Plan (HASP).

WHAT WILL BE DONE TO ENSURE THE WORK SITE IS SECURE AND SAFE? Air quality will be monitored continuously during construction activities and dust suppression methods will be used, as necessary. Construction fencing will be installed around construction areas and open trenches will be covered at the end of each day.

ANY QUESTIONS OR COMMENTS? If you have any questions about this work, or if you experience problems as a result of this work, please call Mr. Steven Scharf or Mr. William Fonda of the NYSDEC using the contact information provided below.
