

PROJECT FACT SHEET

Remedial Investigation Bethpage Community Park and Surrounding Area Bethpage, New York Updated: February 2008

Work will be going on nearby in your neighborhood and the Department of Environmental Conservation wants you to know that...

Remedial Investigation (RI) activities associated with the remediation of the former Northrop Grumman site are scheduled to resume in 2008. Information obtained will help assess the groundwater quality south of the Bethpage Community Park (Park). The RI will be performed by ARCADIS of Melville, New York, on behalf of Northrop Grumman Systems Corporation.

This work is being conducted according to plans that have been approved by the New York State Department of Environmental Conservation (NYSDEC). All work will be performed under the oversight of, and in accordance with methods approved by, the NYSDEC.

WHAT ACTIVITIES ARE BEING DONE? ARCADIS will be installing and sampling temporary wells/borings and permanent monitoring wells at locations on roadways and rights-of-ways of the Town of Oyster Bay (Town), in the area south of the Park. Wells will be installed with manholes flush to the ground.

HOW LONG WILL THIS WORK TAKE? The work south of the Park (temporary borings, and permanent wells) is scheduled to commence on February 26, 2008 and is expected to and be completed by the fall of 2008.

WHAT SCHEDULE WILL BE FOLLOWED? Depending on the type of work the work at each location south of the Park may require several days to three to four weeks to complete. To complete the work as quickly as possible, two rigs will be used, but no more than one at a time at any location.

To minimize inconvenience to residents, the Town has approved and currently restricted our activities to Monday to Friday between the hours of 7 a.m. and 5 p.m. We will not work on weekends or on town holidays, without prior notice to the Town.

WHAT TYPE OF EQUIPMENT WILL BE USED? Equipment used at each site will include trucks, drilling rig, water truck, portable water containers, pump rig, and pump. The drilling rig will remain at the location until its work is complete. Soil, water, and incidental waste generated from the work will be transported daily to a staging area on Northrop Grumman property. Equipment will be secured at the drill site or brought back to the staging area. The work is being conducted by trained personnel in accordance with an approved Health and Safety Plan (HASP). The HASP can be found within the approved RI/FS Work Plan, on file at the site repository (Bethpage Library, located on Powell Avenue in Bethpage) and at the site.

WHAT WILL WE DO TO ENSURE THE WORK SITE IS SECURE AND SAFE? Air quality will be monitored continuously during construction activities and dust suppression methods will be used, as necessary. There will be a temporary construction fence installed around each drilling site at the end of each day. In addition, the equipment will be shut down and materials will be removed at the end of each day.

ANY QUESTIONS OR COMMENTS? If you have any questions about this work, or if you experience problems as a result of this work, please call Mr. Steven Scharf or Mr. William Fonda of the NYSDEC using the contact information provided below.
