# 1. Introduction

On behalf of Coram Materials Corp. (Coram Materials), Roux Environmental Engineering and Geology, D.P.C. (Roux) has prepared this Quarterly Groundwater Monitoring Report (Report) to summarize the groundwater monitoring activities completed during the third quarter of 2025 at the Coram Materials site, located at 416 Miller Place-Yaphank Road, Miller Place, New York (Site). The Site is currently owned and operated by Coram Materials, and the groundwater monitoring activities described in this Report were completed in accordance with the Groundwater Study at Long Island Mines Work Plan, prepared by the New York State Department of Environmental Conservation (NYSDEC), dated June 2022 (Work Plan), and in accordance with the Site-Specific Work Plan, Prepared by Roux, dated July 3, 2023, for the Site. The Groundwater Study is a three-year program monitored by the NYSDEC providing quarterly groundwater sampling of select parameters at volunteer mine sites across Long Island. Coram Materials has agreed to voluntarily participate in this program.

This Report summarizes the monitoring that occurred during the third quarter of 2025 and provides a brief description of Site background information, a description of the field activities and methodologies, and a discussion of the groundwater analytical results and conclusions. The Report is organized as follows:

- Section 1: Introduction;
- Section 2: Site Overview;
- Section 3: Quarterly Groundwater Sampling Methods and Results; and
- Section 4: Conclusions and Schedule for Future Monitoring Activities.

As required by the NYSDEC Guidance, Roux has submitted the latest analytical results Electronic Data Deliverable (EDD) for this sampling event to NYSDEC using the Environmental Information Management System (EIMS).

Per NYSDEC requirements and as specified in the Work Plan, this quarterly groundwater monitoring event included submitting groundwater samples for analysis for a shortened list of parameters compared to prior quarters. Details on the analytical parameters included in this monitoring event are provided below in Section 3.2.2.

# 2. Site Overview

This section includes a brief description of the Site and its history.

## 2.1 Site Description

The Site is located at 416 Miller Place-Yaphank Road, Miller Place, New York (see Site Location Map provided as Figure 1). It is bordered to the west by residential properties and the Washington Memorial Park cemetery, to the south by Whiskey Road, to the east by Miller Place-Yaphank Road, and to the north by a vacant wooded property.

The Site is approximately 392 acres and currently operates as a sand and gravel mine in accordance with the existing MLRL Permit (NYSDEC Permit ID No. 1-4722-00795/00005). Two wet dredging setups are utilized for mining operations. A Site Plan is provided as Figure 2.

## 2.2 Groundwater Study at Long Island Mines Work Plan

The groundwater monitoring activities described in this Report were completed in accordance with the Groundwater Study at Long Island Mines Work Plan, prepared by the New York State Department of Environmental Conservation (NYSDEC), dated June 2022 (Work Plan), and in accordance with the Site-Specific Work Plan, Prepared by Roux, dated July 3, 2023, for the Site. Starting in the 3rd Quarter of 2023, Coram Materials entered into the three-year Groundwater Study as a volunteer. NYSDEC, in consultation with the New York State Department of Health (NYSDOH), prepared the Work Plan to study the potential impact, if any, to groundwater quality from sand and gravel mining on Long Island.

In accordance with the Work Plan, a Site-Specific Work Plan was prepared by Roux, to supplement the NYSDEC Work Plan. The Site-Specific Work Plan provides a comprehensive scope and methodology to be followed throughout the Groundwater Study period.

# 3. Quarterly Groundwater Sampling Methods and Results

This section details the groundwater gauging and sampling activities implemented at the Site as part of the monitoring events that took place in the third quarter of 2025.

## 3.1 Groundwater Gauging

In accordance with the Work Plan, Roux conducted a complete water level gauging round on September 2, 2025, to determine the depth to water (DTW) and the current depth to bottom (DTB) in each well within the Site's monitoring well network prior to the sampling event. All measurements were collected from a consistent measuring point elevation on the well casing. The DTW and DTB in each well was measured using an electronic water level meter with an accuracy of +/- 0.01 feet.

All monitoring wells within the monitoring well network were previously surveyed on June 9, 2021, by Mega Engineering and Land Surveying, P.C. (Mega), a New York State licensed surveyor, to obtain horizontal and vertical coordinates. Horizontal coordinates were based upon New York State Plane Coordinates System North American Datum of 1983 (NAD 83) in US Survey Feet. Vertical elevations were measured for grade and top-of-casing (measuring point) elevations at all monitoring well locations referenced to North American Vertical Datum of 1988 (NAVD 88). The DTW, DTB, and calculated water table elevations from September 2, 2025, gauging round are included as Table 2, and all groundwater elevations were calculated relative to mean sea level (MSL).

### 3.1.1 Shallow Zone

On September 2, 2025, shallow groundwater elevations ranged from 45.86 feet above mean sea level (ft amsl) in monitoring well MP-2 to 49.09 ft amsl in monitoring well PZ-5. Shallow groundwater flow direction is generally to the north northeast, with a north northwest component in the southern part of the Site (south of the surface water body), as shown on Figure 3.

### 3.1.2 Deep Zone

On September 2, 2025, deep groundwater elevations ranged from 42.58 ft amsl in monitoring well MW-6D to 48.85 ft amsl in monitoring well MW-4D. Deep groundwater flow is generally to the northeast, as shown on Figure 4.

## 3.2 Groundwater Sampling

Following the completion of the comprehensive groundwater gauging round, Roux collected groundwater samples from all 21 groundwater monitoring wells required in the Work Plan from September 2 – 5, 2025. Each monitoring well was purged and sampled with new dedicated tubing that was disposed of following sample collection. Monitoring wells were purged and sampled using a Grundfos Rediflo2 variable speed submersible pump, in accordance with USEPA low-flow sampling requirements. Field instrument calibration information is included in Appendix A. Field parameters (i.e., pH, temperature, dissolved oxygen, oxidation-reduction potential, and turbidity) were collected while purging each well using a water quality meter with a flow-through cell until parameters stabilized. The purge logs detailing flow rates, field parameter measurements, field observations, and sample information for each quarterly event are included as

Appendix B. Once the groundwater parameters stabilized, one groundwater sample was collected from each of the available monitoring wells. Groundwater samples were collected directly into laboratory-supplied sample bottles (that contained the proper preservative, if required) that were then sealed, labeled with all relevant information, and immediately placed in an ice-filled cooler. The samples to be submitted for analysis for dissolved iron and manganese were filtered in the field prior to being collected in preserved bottleware. All samples were then sent via courier under chain-of-custody procedures to Pace Analytical Services, LLC, a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program-certified laboratory located at 8 Walkup Drive Westborough, Massachusetts (Pace Analytical).

Following sample collection at each monitoring well, all non-dedicated sampling equipment was properly decontaminated using Alconox® Powdered Precision Cleaner diluted as per manufacturing specifications. Decontamination procedures were documented in the Site-specific field logbook. As per the NYSDEC Guidance, purged water from the sampling activities was discharged back to the ground surface as light non-aqueous phase liquids (LNAPL)/dense non-aqueous phase liquids (DNAPL) impacted groundwater was not encountered.

### 3.2.1 Quality Assurance/Quality Control (QA/QC)

Field and laboratory QA/QC procedures were used to ensure field sampling and analytical procedures were consistent and to evaluate the usability of the data. In accordance with the Work Plan, four trip blanks, two equipment blanks, two field duplicates, and two matrix spike/matrix spike duplicates (MS/MSD) were collected and analyzed.

One MS/MSD was collected from MW-1DR2 on September 3rd 2025. The other MS/MSD was collected from MW-8D on September 4th 2025.

One duplicate sample was collected from MW-11D on September 2nd 2025. The other duplicate sample was collected from MP-1 on September 3rd 2025.

The eight samples collected on September 4, 2025, were analyzed for sulfide outside of their hold time by Pace Melville. This should not have significantly impacted the sulfide results, which are reported below. Details for these samples can be found under laboratory number L2555605 in Appendix C.

### 3.2.2 Laboratory Analysis

In general accordance with the Work Plan, groundwater samples were analyzed for the following list of compounds:

- Target Compound List (TCL) Volatile Organic Compounds (VOCs) via USEPA Method 8260B
- TCL semi-volatile organic compounds (SVOCs) via USEPA Method 8270E

The samples analyzed for dissolved metals were filtered in the field using in-line, 0.45 micrometer field filters.

## 3.3 Groundwater Analytical Results

Groundwater sample results were compared to the NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs). Analytical results are presented in Tables 3 through 6. Category B analytical data packages provided by Pace Analytical are included as Appendix C.

### 3.3.1 Volatile Organic Compounds

There were no detections of VOCs exceeding AWQSGVs in any of the samples.

### 3.3.2 Semivolatile Organic Compounds

A summary of detections of SVOCs with concentrations exceeding AWQSGVs is provided below:

| Compound | AWQSGV (µg/L) | Detections above AWQSGV | Range in Concentrations above AWQSGV (µg/L) | Sample with Maximum Concentration |
|---|---|---|---|---|
| Bis(2-Ethylhexyl) Phthalate | 5 | 1 | 23.0 | MP-1 |
| Phenol | 1 | 1 | 3.6 J | MW-1DR2 |

"J" indicates an estimated value.

Bis(2-Ethylhexyl) Phthalate was detected at a concentration of 23 µg/L, above its AWQSGV of 5 µg/L in MP-1. Bis(2-Ethylhexyl) Phthalate has historically been undetected or below AWQSGVs at this site, so this detection is anomalous compared to previous quarters.

Phenol was detected at a concentration of 3.6 J µg/L above its AWQSGV of 1 µg/L in MW-1DR2, and this detection was flagged with a "J" qualifier. Phenol has historically been detected at this site at similar low concentrations.

### 3.3.3 Metals

A summary of detections of metals with concentrations exceeding AWQSGVs is provided below:

| Elements | | AWQSGV (µg/L) | Detections above AWQSGV | Range in Concentrations above AWQSGV (µg/L) | Sample with Maximum Concentration |
|---|---|---|---|---|---|
| Antimony | Total | 3 | 3 | 7.1 J – 13 J | MW-4S |

| Elements | | AWQSGV (µg/L) | Detections above AWQSGV | Range in Concentrations above AWQSGV (µg/L) | Sample with Maximum Concentration |
|---|---|---|---|---|---|
| | Dissolved | | 2 | 14.5 J – 14.6 J | MP-1 |
| Iron | Total | 300 | 5 | 324 – 3,320 | MW-11D |
| | Dissolved | | 3 | 2,030 – 3,100 | DUP of MW-11D |
| Mercury | Total | 0.7 | 1 | 1.75 | MP-1D |
| Sodium | Total | 20,000 | 3 | 23,300 – 46,300 | MW-4S |
| | Dissolved | | 3 | 23,700 – 44,800 | MW-4S |
| Thallium | Total | 0.5 | 1 | 2.8 J | MW-10S |
| | Dissolved | | 1 | 3.9 J | MW-10S |

"J" indicates an estimated value.

Detections above AWQGVs include duplicate results.

There were five metals detected at concentrations above their AWQSGVs in the Q3 2025 sampling event. Iron and sodium have historically been detected at concentrations above their AWQSGVs since the beginning of the groundwater study at this site. The monitoring well with the maximum concentration for total and dissolved iron, MW-11D, is unchanged from last quarter. Total and dissolved sodium detections are comparable to concentrations observed in previous quarters. Iron and sodium detections above AWQSGVs are naturally occurring and not indicative of a source of contamination, and the detections are consistent with historical detections on Site.

Total mercury was detected above its AWQSGV in one monitoring well, MP-1D, at a concentration of 1.75 µg/L, exceeding its AWQSGV of 0.7 µg/L. Total mercury has historically been detected at MP-1D, and was last detected at similar, low concentrations in this well in the 1st quarter of 2025.

Total thallium was detected above its AWQSGV in one monitoring well, MW-10S, at an estimated concentration of 2.8 J µg/L, and dissolved thallium was detected above its AWQSGV in the same monitoring well, MW-10S, at an estimated concentration of 3.9 J µg/L, exceeding its AWQSGV of 0.5 µg/L. Thallium has historically been detected at the site, and was last observed in the 1st quarter of 2025.

All detections of antimony above its AWQSGV were estimated values given a "J" qualifier. Concentrations of dissolved antimony are generally consistent with those concentrations detected in previous groundwater sampling events. Dissolved antimony was last observed above its AWQSGV at the site in the 2nd quarter of 2024. Total antimony has not been historically detected at the site and is an anomalous result.

Metals in groundwater will continue to be monitored in future groundwater sampling events.

### 3.3.4 General Chemistry

A summary of detections of general chemistry compounds with concentrations exceeding AWQSGVs is provided below:

| Compound | AWQSGV (µg/L) | Detections above AWQSGV | Range in Concentrations above AWQSGV (µg/L) | Sample with Maximum Concentration |
|---|---|---|---|---|
| Sulfide | 0.05 | 1 | 2.0 | MP-1 |

Sulfide was the only general chemistry compound detected above its AWQSGV in the Q3 sampling event. Sulfide was detected at a concentration of 2.0 µg/L in the parent sample at MP-1, but was not detected in the duplicate sample of MP-1. Sulfide was last detected at this site in the same well (MP-1) at the same concentration in the 1st Quarter of 2025. The sulfide results are consistent with historic detections and can be attributed to background conditions. The inconsistent result between the parent and duplicate sample could be attributed to a possible laboratory error.

General Chemistry compounds will continue to be monitored in future groundwater sampling events.

# 4. Conclusions and Schedule for Future Monitoring Activities

The following sections present conclusions from the monitoring activities that occurred in the third quarter of 2025 and a description of the work that is scheduled to occur in the fourth quarter of 2025.

## 4.1 Conclusions

VOCs were not detected at concentrations exceeding AWQSGVs during this quarter's sampling event. VOCs will continue to be monitored in future quarterly groundwater sampling events.

The SVOC results showed detections of two SVOCs, bis(2-Ethylhexyl) phthalate and phenol, at concentrations exceeding AWQSGVs during this quarters groundwater sampling event. Bis(2-Ethylhexyl) Phthalate was detected at a concentration above its AWQSGV in MP-1and has not been detected at this site above its AWQSGV in previous sampling events. This detection is an anomalous result and will continue to be monitored in future sampling events.

The phenol detection this quarter was given a "J" qualifier, meaning the result is an estimation and may not reflect actual conditions. Phenol has historically been detected at this site at similar low concentrations and is not believed to be a result of mining operations. SVOCs in groundwater will continue to be monitored in future sampling events.

The metal concentrations detected are generally consistent with concentrations detected in the past groundwater sampling events at the Site. The metal results showed detections of five metals, antimony, iron, mercury, sodium, and thallium, at concentrations exceeding AWQSGVs. The exceedance of total mercury in monitoring well MP-1D is low-level and consistent with historical results. Total and dissolved thallium were detected above its AWQSGV in one well, MW-10S, and has historically been detected at the site at similar concentrations. The total and dissolved thallium and antimony detections this quarter were given a "J" qualifier, meaning the result is an estimation and may not reflect actual conditions. The low levels of mercury and thallium are commonly found in soil and can be attributed to background conditions, not believed to be attributed to mining practices. Iron and sodium detections above AWQSGVs are naturally occurring and not indicative of a source of contamination, and the detections are consistent with historical detections on Site. The presence of metals in groundwater will continue to be monitored in future quarterly sampling events.

The general chemistry results showed one detection of sulfide exceeding the AWQSGV in monitoring well MP-1. Sulfide was detected above its AWQSGV in the parent sample at MP-1, but was not detected in the duplicate sample of MP-1. The sulfide results are consistent with historic detections and can be attributed to background conditions. The inconsistent result between the parent and duplicate sample could be attributed to a possible laboratory error.The presence of sulfide and other general chemistry compounds will continue to be monitored in future quarterly sampling events.

## 4.2 Schedule

The next quarterly groundwater sampling event will occur in December 2025 and will be performed in accordance with the Work Plan. A summary report and data deliverable will be submitted to the NYSDEC within 45 days of sample collection.

## Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Pace Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Pace's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Pace to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

**Case Narrative (continued)**

Report Submission

September 17, 2025: This final report includes the results of all requested analyses.

September 15, 2025: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

The analyses of Ammonium, Iodide, and Sulfide were subcontracted. Copies of the laboratory reports are included as an addendum. Please note: This data is only available in PDF format and is not available on Data Merger.

Dissolved Metals

The WG2110450-3 MS recovery performed on L2554996-01 does not apply for calcium (73%) because the sample concentration is greater than four times the spike amount added.

Solids, Total Suspended

L2554996-01 through -04: The sample has an elevated detection limit due to limited sample volume available for analysis.

Solids, Total Dissolved

The WG2110459-3 Laboratory Duplicate RPD performed on L2554996-02 is outside the acceptance criteria for solids, total dissolved (17%) due to the non-homogeneous nature of the native sample.

The WG2110459-4 Laboratory Duplicate RPD performed on L2554996-03 is outside the acceptance criteria for solids, total dissolved (82%) due to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

***Data Qualifiers***

**A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

**B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

**C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

**D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

**E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

**F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

**G** - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

**H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

**I** - The lower value for the two columns has been reported due to obvious interference.

**M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

**NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

*Report Format:* DU Report with 'J' Qualifiers

***Data Qualifiers***

the identification is based on a mass spectral library search.

**P** - The RPD between the results for the two columns exceeds the method-specified criteria.

**Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

**R** - Analytical results are from sample re-analysis.

**RE** - Analytical results are from sample re-extraction.

**S** - Analytical results are from modified screening analysis.

**V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

**J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

**ND or U** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
