Re: Deed Restriction Information
Plant 1 Facility
Bethpage, New York
D&B No. 801/98-Z

Dear Mr. Leskovjan:

As requested by Northrop Grumman Corporation (NGC), Dvirka and Bartilucci Consulting Engineers (D&B) has prepared this letter report for the Plant 1 site to identify the areas on the property where the concentrations of constituents remaining in the soil exceed the recommended soil cleanup objectives (RSCOs) provided in Appendix A of the New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum (TAGM) Number 4046.

Introduction

Northrop Grumman Corporation is planning to deactivate and sell the Plant 1 facility as part of its overall Bethpage consolidation program. As previously implemented for other properties at the Bethpage facility, NGC has conducted several Environmental Site Assessments and remediation programs to facilitate the transfer of the property. A site location map of the Plant 1 facility located in Bethpage, New York, is presented as **Attachment 1**. Similarly, a site plan of Plant 1 is provided as **Attachment 2**.

As part of the environmental site assessment process, soil sample results for areas of concern (AOCs) associated with Underground Injection Control (UIC) structures were screened against the RSCO's contained in TAGM 4046 (consistent with protocol utilized by the United States Environmental Protection

Agency and Nassau County Department of Health). However, AOCs not associated with UIC structures were screened against NYSDEC-approved comparison values based on site-specific considerations such as the intended future site use, and the fate and transport of chemical constituents detected in the soil. The NYSDEC-approved site-specific comparison values for Plant 1 were utilized to determine the scope of environmental remediation for the AOCs not associated with UIC structures at the Plant 1 facility, as documented in the report entitled, "Remediation Plan – Plant 1," dated July 2001. Since the Plant 1 site-specific comparison values are higher than the more conservative NYSDEC RSCOs, in some instances, there are several AOCs that have concentrations of constituents in the soil at the Plant 1 site that have not been excavated and exceed the NYSDEC RSCOs. Certain other AOCs have exceedances of RSCOs remaining due to the impracticality of attempting to excavate soil at substantial depth in areas beneath or adjacent to existing structures and/or retaining walls.

Exceedances of NYSDEC RSCOs

Constituents that exceeded the NYSDEC RSCOs (prior to remediation) are provided in **Table 1** of **Attachment 3**. The Plant 1 soil sample results were evaluated with the remediated AOCs to determine the locations and concentration of constituents in the soil at the Plant 1 site that have not been excavated and exceed the NYSDEC RSCOs. **Table 2** of **Attachment 4** summarizes the NYSDEC RSCOs exceedances in soil at the Plant 1 facility that still remain in-place (subsequent to remediation). **Attachment 5** presents several figures that collectively depict the locations of all soil borings/samples at the Plant 1 site.

If you have any questions or comments, please do not hesitate to contact Mr. Adam S. Postyn or me at (516) 364-9890.

Very truly yours,

Richard M. Walka
