SUBJECT: **GM-38 GROUNDWATER REMEDIATION AT NWIRP BETHPAGE, NY**
QUARTERLY OPERATIONS REPORT
FOR DER SITE # 1-30-003B-OU 2

Dear Mr. Scharf:

In accordance with groundwater treatment system operational requirements for DER Site # 1-30-003B-OU 2, ECOR Federal Services, LLC. (ECOR) on behalf of the United States Department of the Navy (Navy) is submitting this quarterly operations report for the GM-38 system.

Please do not hesitate contact me with any questions regarding this report at office phone # 610-840-9200 or via email at torres@ecor-solutions.com

Sincerely,
ECOR Federal Service, LLC.

1.0 INTRODUCTION

ECOR Federal Services, LLC (ECOR) has prepared this Quarterly Operations Report for the GM-38 Area Groundwater Treatment Plant (GWTP) at the Naval Weapons Industrial Reserve Plant (NWIRP) in Bethpage, New York, for the United States Department of the Navy (Navy), Naval Facilities Engineering Command (NAVFAC), Atlantic, under Contract No. N62472-05-D-0031Contract Task Order No. 003.

1.1 Background

NWIRP Bethpage is located in east central Nassau County, Long Island, New York, approximately 30 miles east of New York City (**Figure 1**) and is currently listed by NYSDEC as an "inactive hazardous waste site" (#1-30-003B). Historically, the Navy's property totaled approximately 109.5 acres and was a Government Owned Contractor-Operated (GOCO) facility that was operated by the Northrop Grumman Corporation (NGC) until September 1998. NWIRP Bethpage is bordered on the north, west, and south by property owned, or formerly owned, by NGC that covered approximately 605 acres, and, on the east, by a residential neighborhood.

The GM-38 Area refers to a cluster of monitoring wells that were installed in the 1990s by NGC. The GM-38 Area is approximately 8,500 feet south southeast and hydraulically down-gradient of NWIRP Bethpage. The GWTP is located within a utility easement with a street address of 100 Broadway.

The "hot spot" cleanup remedy for the GM-38 Area groundwater was originally set forth in Record of Decision (ROD) documents for Operable Unit 2 (OU 2) Groundwater for the Northrop Grumman Corporation (NGC) and NWIRP Sites (New York State Registry Site Numbers 1-30-003A & 1-30-003B, respectively) issued by NYSDEC Division of Environmental Remediation in March 2001 and for the NWIRP Bethpage Site by NAVFAC in April 2003 (Revision 1). The selected remedy was chosen in accordance with the New York State Environmental Conservation Law (ECL) and the Navy's Installation Restoration Program (IRP). It is also consistent with the Comprehensive Environmental Response Compensation and Liability Act (CERCLA), as amended, 42 U.S.C. §§ 9601-9675.

1.2 GWTP Overview

Groundwater is extracted from recovery wells RW-1 and RW-3 and treated in the GWTP. The treatment process consists of flow equalization, air stripping and vapor-phase carbon treatment, bag filtration, liquid-phase carbon treatment and pH adjustment as needed. A process flow diagram is presented as **Figure 2**. The treated water is either re-injected into injection well IW-1 or discharged into the Nassau County Recharge Basin #495. Under CERCLA, the Navy is required to meet the effluent requirement in the NYSDEC's Storm Pollution Discharge Elimination System Permit as an ARAR.

The GWTP was designed to operate at an average flow rate of 1,100 gallons per minute (gpm) (800 gpm from RW-1 and 300 gpm from RW-3) with a maximum flow rate of 1,375 gpm, as measured by totaling the recovery wells or by the average discharge flow rate. It was determined that this flow rate would be necessary to effectively contain the limits of the higher concentration of contamination in the GM-38 Area groundwater. The average concentration of VOCs in the influent groundwater consists of 3,400 µg/l

of trichloroethene, 900 µg/l of tetrachloroethene, 300 µg/l of vinyl chloride, 1,100 µg/l of cis-1,2-dichloroethene, and smaller concentrations of 1,2-dichloroethane, benzene, toluene, and total xylenes.

The air stripper (AS) is structural aluminum tower that is packed with 3.5 inch diameter polypropylene Jaeger Tripack. Groundwater is pumped to the air stripper distribution port and sprayed over the column of Jaeger Tripack at a flow rate of approximately 1,200 gpm. This includes approximately 1,100 gpm of raw groundwater and 100 gpm of recirculation water. An induced draft countercurrent flow of air enters the air stripper below the base of the packing material at a rate of 8,000 scfm. The large surface area of the packing material allows for a mass transfer of the VOCs from the groundwater into the air stream. All of the VOCs in the off-gas, except for vinyl chloride, are removed via two 20,000 lb vapor phase granular activated carbon (VGAC) units (VGAC-1 and VGAC-2). Vinyl chloride is oxidized by a 20,000 lb potassium permanganate vessel (VGAC-3) into potassium chloride and carbon dioxide. The potassium chloride remains in the pore structure of the zeolite substrate. The treated off-gas is discharged out of the stack.

Water treated by the air stripper is passed through three 8,000 liquid phase granular activated carbon (LGAC) units in parallel prior to discharge in the recovery basin (and injection well, if necessary).

The GWTP is controlled by a PLC-based digital and analog control system, with monitoring instrumentation, such as pH, pressure, level, and flow transmitters, differential pressure transmitters, and pump signals that communicate with a PLC. In turn, the information in the PLC is made available to an operator via a human-machine interface (HMI) program. By using this program, the status of the GWTP can be displayed in real time and adjusted, if necessary, by the operator.

2.0 GWTP OPERATION AND MAINTENANCE

While designed to run completely automated, the GWTP requires regular weekly visits by an operator to record and adjust operational parameters and to perform scheduled maintenance.

2.1 Routine Maintenance Activities

Routine maintenance activities at the GWTP during the quarter were performed during the operator's weekly visits (generally; Monday, Wednesday and Friday averaging 20 hours a week). These activities include general site inspections, collection of operational data (water and vapor flowrates, pressures, tank levels and totalizer readings), measurement of depth to water in the recovery wells, adjustment of pump signal settings, collection of vapor and process water samples, changing out of bag filters, switching of lead/lag pump assignments, and preventive maintenance of system equipment.

2.2 Non-routine Maintenance Activities

The following non-routine activities were performed during the Second Quarter 2010:

- On March 24, 2010 the backflow preventer was inspected and the proper paperwork was submitted to the New York State Department of Health, Bureau of Public Water Supply Protection

- On April 2, the LGAC units were back washed because the differential pressure was approaching 15 psi.

- On April 13-16, 2010, the plant was shutdown to changeout the liquid phase carbon in all three 8,000 LGAC units. The gasket on the second LGAC unit was damaged during the changeout and the system flow was reduced to operate on only two vessels until a replacement gasket could be procured.

- On April 21, a replacement gasket was installed in the second LGAC unit and system flow was increased.

- On May 7, the building security system was repaired following damage to the key pad as a result of a power surge..

- On June 14 -19, an instrumentation subcontractor was onsite to troubleshoot deficiencies with the GWTP that were leading to repeated high air stripper alarms/shutdowns as described in the following section

2.3 Alarm Responses

The following alarms that occurred during the Second Quarter 2010 and there respective responses are listed below:

- On May 9, 2010 at 0000 hrs the operator received an alarm for Blower-1, RW-1 and RW-3 failure. The GWTP PC was off line running on battery backup due to a power failure. The PLC program and the GWTP were restarted and the system was equalized.

- On May 11, at 1000 hrs the operator received an alarm for Blower-1 failure. RW-1 and RW-3 were offline. The operator attempted to restart GWTP Pumps 3A and 3B, however, they would not operate in manual or auto positions. The Variable Frequency Drives (VFDs) were locked in override and would not operate. They were reset and the plant was restarted.

- On May 14, at 2200 hrs the operator received an alarm for Blower-1, RW-1 and RW-3 failure. The cause of the alarm was high level in the stripper tower which caused a high level in the Equalization Tank (EQ Tank) and the shutdown of RW-1 and RW-3. All vessels were drained and the system was restarted.

- On May 15, at 0000 hrs the operator received another alarm for Blower-1, RW-1 and RW-3 failure. Again the cause of the alarm was high level in the stripper tower which caused a high level in the EQ Tank and the shutdown of RW-1 and RW-3. All vessels were drained and the system was restarted.

- On May 15, at 1800 hrs the operator received another alarm for Blower-1, RW-1 and RW-3 failure. Again the cause of the alarm was high level in the stripper tower which caused a high

level in the EQ Tank and the shutdown of RW-1 and RW-3. All vessels were drained and the system was restarted.

- On May 16, at 0500 hrs the operator received another alarm for Blower-1, RW-1 and RW-3 failure. Again the cause of the alarm was high level in the stripper tower which caused a high level in the EQ Tank and the shutdown of RW-1 and RW-3. All vessels were drained and the system was restarted.

- On May 18 at 2400 hrs the operator received another alarm for Blower-1, RW-1 and RW-3 failure. Again the cause of the alarm was high level in the stripper tower which caused a high level in the EQ Tank and the shutdown of RW-1 and RW-3. All vessels were drained and the system was restarted.

3.0 GWTP MONITORING

The GWTP is not intended to remediate groundwater contamination in the local aquifer to non-detectable levels. Rather, the intent of the system is to remove mass and reduce elevated VOC levels to levels similar to those in the surrounding aquifer. Doing so will minimize the impacts on water supply wells and currently unaffected portions of the aquifer. To monitor GWTP effectiveness and for compliance with Federal and State requirements, several process (water and vapor) samples are collected on a monthly basis. In addition, groundwater samples are collected quarterly to monitor water quality and hydraulic containment.

3.1 Process Water Quality Monitoring

Processed groundwater is tested to meet the effluent limitations and monitoring requirements of the New York State Storm Pollution Discharge Elimination System (SPDES) permit. These results are also submitted to the NYSDEC on a monthly basis in the form of a Discharge Monitoring Report (DMR). A copy of the permit and submitted DMRs are included as **Appendix A**.

Samples are collected from each recovery well (RW-1 and RW-3), as well as, the effluent water discharge line. It has been decided to also sample the water exiting the air stripper to better monitor the efficiency, however, no samples were collected during this reporting period. The analytical results of monthly process water sampling performed during the Second Quarter 2010 are presented in **Table 1**. The data demonstrates that all permitted constituents were in compliance for the quarter. **Table 1** also summarizes the average monthly flowrates in gallons per minute along with the total volume of water processed.

3.2 Air Quality Monitoring

Treated off-gas discharged at the stack of the GWTP is subject to emissions limitations as described by the NYSDEC Division of Air Resources (DAR) air permit equivalent issued in July 2009. A copy of the permit equivalent is included as **Appendix B**.

While only sampling of the stack is required for NYSDEC compliance, vapor samples are also collected using 6L summa canisters at various locations to monitor for breakthrough of the VGAC units. The analytical results of monthly influent and effluent vapor samples collected during the Second Quarter 2010 are presented in **Table 2**. Air emissions calculations using the stack vapor concentrations along with discharge flowrates are presented in **Table 3**. The calculations demonstrate that all permitted constituents were in compliance.

3.3 Groundwater Quality Monitoring

The groundwater monitoring well system at the GM-38 Groundwater Remediation Area consists of 14 monitoring wells, as summarized in **Table 4**. On a quarterly basis, depth to water (DTW) measurements are performed in 12 monitoring wells while samples for water quality monitoring are collected from seven wells.

Two wells, GM-38D and GM-38D2, located at the corner of Aurthur Avenue and Broadway, are not accessible at this time and are being monitored by others.

The monitoring system includes clusters of wells located in proximity to the recovery and injection wells as described below.

Recovery Well 1(RW-1)

The RW-1 cluster consists of three monitoring wells screened between 395 and 435 feet below ground surface (bgs). RW-1 MW-1 is located approximately 140 feet northwest of RW-1 and RW-1 MW-2 is located approximately 50 feet north of RW-1. RW-1 MW-3 is located approximately 400 feet northeast of RW-1, on the eastern side of Seaford Oyster Bay Expressway. All three wells are hydraulically monitored while only RW-1MW1 and RW-1MW-3 are monitored for water quality.

Recovery Well 2(RW-2)

The RW-2 cluster consists of three monitoring wells screened between 470 and 510 feet bgs. RW-2 MW-1 is located approximately 60 feet northwest of RW-2, RW-2 MW-2 is located approximately 20 feet west of RW-2, and RW-2 MW-3 is located approximately 100 feet west of RW-2. All three wells are hydraulically monitored while only RW-2 MW1 is monitored for water quality.

Recovery Well 3(RW-3)

The RW-3 cluster consists of four monitoring wells RW-3 MW-1 and RW-3 MW-3 are screened between 320 and 340 ft bgs, RW-3 MW-2 and RW-3 MW-4 are screened between 475 and 495 feet bgs. RW-3 MW-1 and RW-3 MW-2 are located approximately 500 feet west of the GM-38 cluster, at the intersection of Arthur Avenue and Leroy Avenue. RW-3 MW-3 and RW-3 MW-4 are located approximately 400 feet north of the intersection of Arthur Avenue and Broadway. All four wells are both hydraulically monitored and monitored for water quality.

Injection Well 3(IW-1)

There is one monitoring well associated with injection well IW-1. IW-1 MW-1 is screened between 130 and 150 feet bgs and is located approximately 20 feet south of IW-1. It is only hydraulically monitored.

TP-1

TP-1 is screened between 450 and 470 feet bgs and is located approximately 25 feet north of the GWTP building, inside the fenced area. It is hydraulically monitored to observe the change in water levels due to the influence from the pumping rates at the neighboring public water supply well field near the hot spot area.

3.3.1 Groundwater Quality Results

ECOR collected groundwater samples from seven (7) monitoring wells (RW1-MW1, RW1-MW3, RW2-MW1, RW3-MW1, RW3-MW2, RW3-MW3, RW3-MW4). Samples were collected using bladder pumps following the United States Environmental Protection Agency (USEPA) micropurge and low-flow sampling methodologies. Field parameters measured during well purging included pH, specific conductance (S.C.), temperature, oxidation-reduction potential (ORP) and dissolved oxygen (DO). The results are summarized in **Table 5**. Copies of the field notes are presented in **Appendix C**. Following stabilization of field parameters, samples were collected from the pump discharge.

Groundwater samples collected were submitted to a National Environmental Laboratory Accreditation Conference (NELAC) accredited laboratory (Accutest Laboratories located in Dayton NJ) for the analysis of Target Compound List (TCL) VOCs using USEPA Method 624, Mercury using USEPA Method SW846 7470A, and TSS using USEPA Method SM20 2540D. Validated analytical results of samples collected during the monitoring event are summarized in **Table 6** along with data collected by ARCADIS in 2005 and by Tetra Tech EC in 2009 and January of 2010. The data validation report is presented in **Appendix D**. Analytical data is presented on **Appendix E**.

3.3.2 Quality Assurance/Quality Control Sampling

Additionally, the following quality assurance/quality control (QA/QC) samples were also collected: blind field duplicate (collected from RW3-MW3), field blank (FB), trip blank (TB), and matrix spike/matrix spike duplicate (MS/MSD). The results of the FB and TB samples indicate that only chloroform at an estimated concentration of 0.66J µg/L in the FB was detected above laboratory method detection limits (MDL). This shows that there was most likely no cross-contamination of samples during sample collection or transport.

For duplicate (DUP) samples, the precision between the original sample and its duplicate is evaluated by calculating the relative percent difference (RPD). ECOR has evaluated DUP samples using an acceptance criterion of twenty percent (20%) for detected primary COC. **Table 7** presents the RPDs for the groundwater. If the sample results are below MDLs a RPD cannot be calculated for that sample. As shown on **Table 7**, none of the calculated RPDs were above the 20% criteria. The overall consistency between the samples indicates that proper sample collection methods were followed.

MEMORANDUM

TO: Steven Scharf, DER

FROM: Jean Occidental, DOW, Bureau of Water Permits JO

SUBJECT: Naval Weapons Industrial Reserve Plant (NWIRP); DER Site # 1-01-001

DRAINAGE BASIN: na

DATE: June 6, 2008

In response to your request and the permittee's SPDES Permit Equivalent Application dated April 27, 2008, attached is the effluent criteria for the above noted groundwater remediation discharge.

The Division of Water does not have any regulatory authority over a discharge from a State, PRP, or Federal Superfund Site. The Division of Environmental Remediation will be responsible for ensuring compliance with the attached effluent criteria and approval of all engineering submissions. Additional Condition (1) identifies the contact to send all effluent results, engineering submissions, and modification requests. The Regional Water Engineer should be kept appraised of the status of these discharges and, in accordance with the attached criteria, receive a copy of the effluent results for informational purposes.

If you have any questions, please call me at (518) 402-8116.

EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

During the period beginning: April 1, 2009

and lasting until: April 1, 2014

the discharges from the treatment facility to Groundwater shall be limited and monitored by the operator as specified below:

Outfall and Parameters	Limitations		Units	Minimum Monitoring Requirements	
	Daily Avg.	Daily Max.		Measurement Frequency	Sample Type
Treated Groundwater Remediation Discharge from: Recovery Wells 1, 2, and 3					
Flow	Monitor	1100	GPM	Continuous	Recorder
pH (range)	5.5 - 8.5		SU	Weekly	Grab
1,1-Dichloroethane	NA	5	µg/l	Monthly [1]	Grab
1,2-Dichloroethane	NA	0.6	µg/l	Monthly [1]	Grab
1,1-Dichloroethene	NA	5	µg/l	Monthly [1]	Grab
cis-1,2-Dichloroethene	NA	5	µg/l	Monthly [1]	Grab
trans-1,2-Dichloroethene	NA	5	µg/l	Monthly [1]	Grab
Tetrachloroethene	NA	5	µg/l	Monthly [1]	Grab
1,1,1-Trichloroethane	NA	5	µg/l	Monthly [1]	Grab
Trichloroethene	NA	5	µg/l	Monthly [1]	Grab
Vinyl chloride	NA	2	µg/l	Monthly [1]	Grab
Mercury	NA	0.25	µg/l	Monthly [1]	Grab

Footnotes:

(1) The minimum measurement frequency shall be monthly following a period of 24 consecutive weekly sampling events showing no exceedances of the stated discharge limitations.

Naval Weapons Industrial Reserve Plant

DER site # 1-01-001
Page 1 of 2

Additional Conditions:

(1) Discharge is not authorized until such time as an engineering submission showing the method of treatment is approved by the Department. The discharge rate may not exceed the effective or design treatment system capacity. All monitoring data, engineering submissions and modification requests must be submitted to:

Steven Scharf
Division of Environmental Remediation
NYSDEC, 625 Broadway
Albany, NY 12233-7015
Phone: (518) 402-9620

With a copy sent to:

Regional Water Engineer
NYSDEC - Region 1
Building 40, SUNY Campus
Stony Brook, New York 11790-2356
Phone: (631) 444-0354

(2) Only site generated wastewater is authorized for treatment and discharge.

(3) Authorization to discharge is valid only for the period noted above but may be renewed if appropriate. A request for renewal must be received 6 months prior to the expiration date to allow for a review of monitoring data and reassessment of monitoring requirements.

(4) Any use of corrosion/scale inhibitors, biocidal-type compounds, or other water treatment chemicals used in the treatment process must be approved by the department prior to use.

(5) This discharge and administration of this discharge must comply with the substantive requirements of 6NYCRR Part 750.

SUBJECT: **GM-38 GROUNDWATER REMEDIATION AT NWIRP BETHPAGE, NY MONTHLY REPORT ON GROUNDWATER AND AIR DISCHARGE FOR DER SITE # 1-30-003B-OU 2**

Dear Mr. Scharf:

In accordance with groundwater treatment system operational requirements for DER Site # 1-30-003B-OU 2, ECOR Solutions, Inc. (ECOR) on behalf of the United State Department of the Navy is submitting this monthly report of the groundwater and air discharge results for the GM-38 system.

Continuous plant operations began on September 14, 2009 by Tetra Tech EC, Inc. (TtEC's). TtEC's period of performance to operate and maintain (O&M) the GM-38 system expired on March 14, 2010 at which time ECOR assumed O&M responsibilities. Sampling requirements have been reduced from weekly during the 6 month prove-out period to monthly for the remainder of ECOR's period of performance thru March 2011. The enclosed data is for treatment system operations from April 1 thru April 30, 2010.

The SPDES discharge criteria and air permit equivalent permit with application are also included for your reference as Attachments 2 and 3, respectively. All constituents were within permit limitations.

Please do not hesitate contact me with any questions regarding this letter or report at office phone # 610-840-9200 or via email at lapp@ecor-solutions.com

Sincerely,
ECOR Solutions, Inc.

Matthew Lapp
Project Engineer

SUBJECT: **GM-38 GROUNDWATER REMEDIATION AT NWIRP BETHPAGE, NY MONTHLY REPORT ON GROUNDWATER AND AIR DISCHARGE FOR DER SITE # 1-30-003B-OU 2**

Dear Mr. Scharf:

In accordance with groundwater treatment system operational requirements for DER Site # 1-30-003B-OU 2, ECOR Solutions, Inc. (ECOR) on behalf of the United States Department of the Navy is submitting this monthly report of the groundwater and air discharge results for the GM-38 system. The enclosed data, presented as Attachment 1, is for treatment system operations from May 1 thru May 31, 2010.

The SPDES discharge criteria and air permit equivalent permit are also included for your reference as Attachments 2 and 3, respectively. All constituents were within permit limitations.

Please do not hesitate contact me with any questions regarding this letter or report at office phone # 610-840-9200 or via email at lapp@ecor-solutions.com

Sincerely,
ECOR Solutions, Inc.

Matthew Lapp
Project Engineer

RE: Naval Weapons Industrial Research Plant(NWIRP)
Site-Bethpage, NYSDEC No. 1-30-003B.
Grumman Aerospace Site, NYSDEC Site No. 1-30-003A

Dear Ms. Fly:

Tetra Tech FW, on behalf of the Department of the Navy (Navy), has submitted the enclosed New York State Department of Environmental Conservation (NYSDEC) Division of Air Resources (DAR) Air Permit Application as a permit equivalent. This DAR Air permit equivalent is for the air stripper discharge at the GM 38 Area groundwater remediation system, Near Broadway and North Herman Avenue in Bethpage, NY. The NYSDEC Division of Environmental Remediation (DER) has reviewed the permit equivalent and, by means of this letter approves the GM 38 Area remedy air discharge for immediate operation.

The GM 38 Area remedial system utilizes the best available control technology (BACT) with activated carbon followed by potassium permanganate impregnated xeolite resin. The air discharge will be periodically monitored at start up and will be added for routine monitoring in the operation, maintenance and monitoring (OMM) plan, to be submitted shortly for Departmental review.

If you have any questions, please contact me at your earliest convenience at (518)402-9620.

Sincerely,

Steven M. Scharf, P.E.
Project Engineer
Division of Environmental Remediation
Bureau of Remedial Action A

Groundwater Remediation by Air Stripping followed by Vapor-Phase GAC for emission control

Compliance Statements (Title V Only) N/A

I certify that as of the date of this application the facility is in compliance with all applicable requirements: ☐ YES ☐ NO

If one or more emission units at the facility are not in compliance with all applicable requirements at the time of signing this application (the 'NO' box must be checked), the noncomplying units must be identified in the "Compliance Plan" block on page 8 of this form along with the compliance plan information required. For all emission units at this facility that are operating in compliance with all applicable requirements complete the following:

- ☐ This facility will continue to be operated and maintained in such a manner as to assure compliance for the duration of the permit, except those units referenced in the compliance plan portion of Section IV of this application.
- ☐ For all emission units, subject to any applicable requirements that will become effective during the term of the permit, this facility will meet all such requirements on a timely basis.
- ☐ Compliance certification reports will be submitted at least once a year. Each report will certify compliance status with respect to each requirement, and the method used to determine the status.

Process Information

☐ Continuation Sheet(s)

EMISSION UNIT [0 - 0 0 E U 1] PROCESS [P R 1]

Description

The remedial system is air stripping, using a packed column at a groundwater flow rate of 1,100 gpm (plus 100 gpm recycle, for a total of 1,200 gpm). Vapor phase treatment includes the use of 3 vessels, a 2-stage GAC unit, followed by a 3rd vessel containing a potassium permanganate impregnated zeolite for increased VC capacity. Prior to entering the vapor-phase GAC adsorption system, the humidity of the air stripper exhaust is reduced to approximately 50 percent or less to optimize the efficiency of the vapor-phase GAC.

Air Stripper AS-1: Existing. Type: Vertical, Cylindrical Construction: Aluminum

Packing: 25-foot Jaeger Tripack. Dimensions: 10.0 ft. Dia x 47 ft. H

APPENDIX D
Validation Report

VOLATILE ORGANIC COMPOUNDS
USEPA Region II – Tier II Data Validation

Project Name:	Naval Weapons Industrial Reserve Plant, GM-38 Area
Location:	100 Broadway, Bethpage, NY
Project Number:	EF032.300
SDG #:	JA44897
Client:	ECOR Solutions, Inc.
Date:	05/27/2010
Laboratory:	Accutest Laboratories, Dayton, NJ
Reviewer:	Samir A. Naguib

Summary:

1. Tier II data validation was performed on the data for eight (8) water samples, one (1) trip blank and one (1) field blank analyzed for Volatiles by EPA624.

2. The samples were collected on 04/21 and 22/2010. The samples were submitted to Accutest Laboratories, Dayton, NJ on 04/23/2010 for analysis.

3. The USEPA Region II SOP HW-24, Revision No.: 2, October 2006: Validating Volatile Organic Compounds by SW-846 Method 8260B, EPA Method 624 and Quality Assurance Project Plan for GM-38 Area, Naval Weapons Industrial Reserve Plant, Bethpage, NY; September 3, 2009 were used in evaluating the Volatiles data in this summary report.

4. In general, the data are valid as reported and may be used for decision making purposes. Selected data points were qualified due to nonconformance of certain Quality Control criteria (See discussion below).

Samples:

The samples included in this review are listed below:

Client Sample ID	Laboratory Sample ID	Collection Date	Matrix	Sample Status
NWIRP-GM-38-RW1-MW1-04212010	JA44897-1	04/21/10	Water

NWIRP-GM-38-GW-FB-04222010	JA44897-9	04/22/10	Water	Field Blank
NWIRP-GM-38-GW-TB-04222010	JA44897-10	04/22/10	Water	Trip Blank

Sample Conditions/Problems:

1. The Traffic Reports/Chain-of-Custody Records, Sampling Report and/or Laboratory Case Narrative did not indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data. No qualifications were required.

Holding Times:

1. All water samples were analyzed within 14days from sample collection. No qualifications were required.

2. All water samples were properly preserved (pH<2.0). No qualifications were required.

GC/MS Tuning:

1. All of the BFB tunes in the initial and continuing calibrations met the percent relative abundance criteria. No qualifications were required.

Initial Calibration:

1. Initial calibration curve analyzed on 03/22/2010 (GCMS2E) exhibited acceptable %RSD and average RRF values for all compounds. No qualifications were required.

Initial Calibration Verification (ICV):

1. Initial calibration verification analyzed on 03/23/2010 (GCMS3E) exhibited acceptable %D's (≤25.0%). No qualifications were required.

Continuing Calibration Verification (CCV):

1. CCV analyzed on 04/26/2010 @09:40AM (GCMS2E) exhibited acceptable %D's (≤20.0%) for CCC compounds and RRF values for SPCC compounds. Also %D's for all other compounds were ≤15.0% with the following exception(s):

Compound	%D
Carbon disulfide	18.3
Methylene chloride	26.7
Carbon tetrachloride	-25.3
Bromoform	-18.5

Client Sample ID	Laboratory Sample ID	Compound	Action
NWIRP-GM-38-RW1-MW1-04212010	JA44897-1	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW1-MW3-04212010	JA44897-2	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW2-MW1-04212010	JA44897-3	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW3-MW1-04222010	JA44897-4	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW3-MW2-04222010	JA44897-5	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW3-MW3-04222010	JA44897-6	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW3-MW3-04222010DUP	JA44897-7	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-RW3-MW4-04222010	JA44897-8	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-GW-FB-04222010	JA44897-9	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ
NWIRP-GM-38-GW-TB-04222010	JA44897-10	Carbon disulfide, Methylene chloride, Carbon tetrachloride, Bromoform	UJ UJ

2. CCV analyzed on 04/27/2010 @09:28AM (GCMS2E) exhibited acceptable %D's (≤20.0%) for CCC compounds and RRF values for SPCC compounds. Also %D for Trichloroethene was ≤20.0%. No qualifications were required.

Surrogates:

1. All surrogates %REC's values for all water samples and associated QC were within the laboratory control limits. No qualifications were required.

Internal Standard (IS) Area Performance:

1. All samples exhibited acceptable area count for all five internal standards. No qualifications were required.

Method Blank (MB), Storage Blank (SB), Trip Blank (TB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB):

1. Method Blank (V2E2292-MB) analyzed on 04/27/2010 was free of contaminations. No qualifications were required.

2. Method Blank (V2E2293-MB) analyzed on 04/27/2010 was free of contaminations. No qualifications were required.

3. Field Blank (NWIRP-GM-38-FB-0422010) was analyzed on 04/27/2010.

Compound	Results (µg/L)	Action Level (CRQL)* (µg/L)	Sample Affected	Action
Chloroform	0.66	1.0	NWIRP-GM-38-RW1-MW1-04212010 NWIRP-GM-38-RW1-MW3-04212010 NWIRP-GM-38-RW3-MW3-04222010DUP	U U U

*= If sample concentration less than the Action Level (AL), then sample result qualified as non-detect (U). If sample concentration greater than the Action Level (AL) or sample result was not detected, no qualifications/action required

4. Trip Blank (NWIRP-GM-38-GW-TB-0422010) analyzed on 04/27/2010 was free of contaminations. No qualifications were required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD):

1. Laboratory Control Sample (V2E2292-BS) was analyzed on 04/27/2010. All %REC's were within the laboratory control limits. No qualifications were required.

2. Laboratory Control Sample (V2E2293-BS) was analyzed on 04/27/2010. Trichloroethene %REC was within the laboratory control limits. No qualifications were required.

Field Duplicate:

1. Sample NWIRP-GM-38-GW-RW3-MW3-0422010DUP (JA44897-7) was collected as field duplicate for sample NWIRP-GM-38-GW-RW3-MW3-0422010 (JA44897-6). All RPD's were <50%. No qualifications were required.

Field Sample	Analyte	Analytical Method	Result	Units	Field Duplicate	Result	Units	RPD	Qualifier
NWIRP-GM-38-RW3-MW3-0422010	1,1-Dichloroethane	EPA 624	1.6	µg/L	NWIRP-GM-38-RW3-MW3-0422010DUP	1.6	µg/L	0.0	None

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD):

1. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were performed on sample NWIRP-GM-38-GW-RW3-MW3-0422010 (JA44897-6). All %REC's and RPD's were within the laboratory control limits with the following exception(s):

Compound	%R/%R/RPD	Action
Bromoform	138/148/A	None
Dibromochloromethane	A/141/A	None
Trans-1,3-Dichloropropene	A/129/A	None

A= Acceptable

Compound Quantitation and Reported Contract Required Quantitation Limits (CRQLs):

1. All results were within the linear calibration range. No qualifications were required.

Target Compound Identification:

1. All Relative Retention Times (RRTs) of the reported compounds were within ± 0.06 RRT units of the standard (opening CCV).
2. Sample compound spectra were compared against the laboratory standard spectra.
3. No QC deviations were observed.

Comments:

1. Validation qualifiers (if required) were entered into the EDD for SDG: JA44897.

TRACE METALS
USEPA Region II – Tier II Data Validation

Project Name:	Naval Weapons Industrial Reserve Plant, GM-38 Area
Location:	100 Broadway, Bethpage, NY
Project Number:	EF032.300
SDG #:	JA44897
Client:	ECOR Solutions, Inc.
Date:	05/27/2010
Laboratory:	Accutest Laboratories, Dayton, NJ
Reviewer:	Samir A. Naguib

Summary:

1. Tier II data validation was performed on the data for eight (8) water samples and one (1) field blank analyzed for Mercury by SW-846 Method 7470A.

2. The samples were collected on 04/21 and 22/2010. The samples were submitted to Accutest Laboratories, Dayton, NJ on 04/23/2010 for analysis.

3. The USEPA Region II SOP No. HW-2, Revision 13, September 2006, for Evaluation of Metals Data for Contract Laboratory Program (CLP), based on SOW-ILM05.3 (SOP Revision 13) and Quality Assurance Project Plan for GM-38 Area, Naval Weapons Industrial Reserve Plant, Bethpage, NY; September 3, 2009 were used in evaluating the Mercury data in this summary report.

4. In general, the data are valid as reported and may be used for decision making purposes. Selected data points were qualified due to nonconformance of certain Quality Control criteria (See discussion below).

Samples:

The samples included in this review are listed below:

Client Sample ID	Laboratory Sample ID	Collection Date	Matrix	Sample Status
NWIRP-GM-38-RW1-MW1-04212010	JA44897-1	04/21/10	Water	
NWIRP-GM-38-RW1-MW3-04212010	JA44897-2	04/21/10	Water	
NWIRP-GM-38-RW2-MW1-04212010	JA44897-3	04/21/10	Water	
NWIRP-GM-38-RW3-MW1-04222010	JA44897-4	04/22/10	Water

NWIRP-GM-38-RW3-MW3-04222010DUP	JA44897-7	04/21/10	Water	Field Duplicate of sample NWIRP-GM-38-RW3-MW3-04222010
NWIRP-GM-38-RW3-MW4-04222010	JA44897-8	04/22/10	Water	
NWIRP-GM-38-GW-FB-04222010	JA44897-9	04/22/10	Water	Field Blank

Sample Conditions/Problems:

1. The Traffic Reports/Chain-of-Custody Records, Sampling Report and/or Laboratory Case Narrative did not indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data. No qualifications were required.

Holding Times:

1. All water samples were digested and analyzed within the 28days holding times for Mercury. No qualifications were required.

Initial and Continuing Calibration Verification (ICV and CCV):

Mercury:

1 All correlation coefficient for Mercury calibration curve analyzed were ≥0.995. No qualifications were required.

2. All ICV's and CCV's %REC values were within the QC limits (80-120%). No qualifications were required.

CROL Check Standard (CRI):

1. All CRI %REC's were within the control limits (70-130%). No qualifications were required.

Blanks (Method Blank, ICB and CCB):

1. All ICB's and CCB's were free of contaminations. No qualifications were required.

2. Method Blank (MP52521) digested on 05/03/2010 was free of contaminations. No qualifications were required.

Field Blank (FB) and Equipment Blank (EB):

1. Field Blank (NWIRP-GM-38-FB-0422010) analyzed on 05/04/2010 was free of contaminations. No qualifications were required.

Laboratory Control Sample (LCS)/ Laboratory Control Sample Duplicate (LCSD):

1. Mercury %REC in Laboratory Control Sample was within the laboratory control limits. No qualifications were required.

Field Duplicate:

1. Sample NWIRP-GM-38-GW-RW3-MW3-0422010DUP (JA44897-7) was collected as field duplicate for sample NWIRP-GM-38-GW-RW3-MW3-0422010 (JA44897-6). Both samples were reported as non-detects. No qualifications were required.

Matrix Spike (MS)/ Matrix Spike Duplicate (MSD):

1. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were performed on sample NWIRP-GM-38-GW-RW3-MW3-0422010 (JA44897-6). All %REC's and RPD were within the laboratory control limits with the following exception(s):

		NWIRP-GM-38-GW-FB-04222010	

A=Acceptable

Laboratory Duplicate:

1. MS and MSD were performed instead to calculate RPD.

Compound Quantitation and Reported Detection Limits:

1. All sample results were reported within the linear calibration range.

Comments:

1. Validation qualifiers (if required) were entered into the EDD for SDG: JA44897.

GENERAL CHEMISTRY
USEPA Region II – Tier II Data Validation

Project Name:	Naval Weapons Industrial Reserve Plant, GM-38 Area
Location:	100 Broadway, Bethpage, NY
Project Number:	EF032.300
SDG #:	JA44897
Client:	ECOR Solutions, Inc.
Date:	05/27/2010
Laboratory:	Accutest Laboratories, Dayton, NJ
Reviewer:	Samir A. Naguib

Summary:

1. Tier II data validation was performed on the data for eight (8) water samples analyzed for Solids, Total Suspended (TSS) by SM20th 2540D.

2. The samples were collected on 04/21 and 22/2010. The samples were submitted to Accutest Laboratories, Dayton, NJ on 04/23/2010 for analysis.

3. The USEPA Region II SOP No. HW-2, Revision 13, September 2006, for Evaluation of Metals Data for Contract Laboratory Program (CLP), based on SOW-ILM05.3 (SOP Revision 13) was used in evaluating the Solids, Total Suspended data in this summary report.

4. In general, the data are valid as reported and may be used for decision making purposes. Selected data points were qualified due to nonconformance of certain Quality Control criteria (See discussion below).

Samples:

The samples included in this review are listed below:

Client Sample ID	Laboratory Sample ID	Collection Date	Matrix	Sample Status
NWIRP-GM-38-RW1-MW1-04212010	JA44897-1	04/21/10	Water	
NWIRP-GM-38-RW1-MW3-04212010	JA44897-2	04/21/10	Water	
NWIRP-GM-38-RW2-MW1-04212010	JA44897-3	04/21/10	Water	
NWIRP-GM-38-RW3-MW1-04222010	JA44897-4	04/22/10	Water	
NWIRP-GM-38-RW3-MW2-04222010	JA44897-5	04/22/10	Water	
NWIRP-GM-38-RW3-MW3-04222010	JA44897-6	04/22/10	Water	
NWIRP-GM-38-RW3-MW3-04222010DUP	JA44897-7	04/21/10	Water	Field Duplicate of sample NWIRP-GM-38-RW3-MW3-04222010
NWIRP-GM-38-RW3-MW4-04222010	JA44897-8	04/22/10	Water	

Sample Conditions/Problems:

1. The Traffic Reports/Chain-of-Custody Records, Sampling Report and/or Laboratory Case Narrative did not indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data. No qualifications were required.

Holding Times:

1. All water samples were analyzed within the 7days holding times for solids, Total Suspended. No qualifications were required.

Method Blank (MB), Storage Blank (SB), Field Blank (FB), Rinsate Blank (RB) and Equipment Blank (EB):

1. Method Blank associated with Batch ID: GN36817 was free of contaminations. No qualifications were required.

2. Field Blanks were not submitted for this analysis.

Field Duplicate:

1. Sample NWIRP-GM-38-GW-RW3-MW3-0422010DUP (JA44897-7) was collected as field duplicate for sample NWIRP-GM-38-GW-RW3-MW3-0422010 (JA44897-6). RPD was <50%. No qualifications were required.

Field Sample	Analyte	Analytical Method	Result	Units	Field Duplicate	Result	Units	RPD	Qualifier
NWIRP-GM-38-RW3-MW3-0422010	TSS	SM20 2540D	4.0	mg/L	NWIRP-GM-38-RW3-MW3-0422010DUP	5.0	mg/L	22.2	None

Laboratory Duplicate:

1. Laboratory duplicate was performed on sample NWIRP-GM-38-RW1-MW1-04212010 (JA44897-1). RPD was within the QC limits (<10%). No qualifications were required.

Compound Quantitation and Reported Detection Limits:

1. All sample results were reported within the linear calibration range.

Comments:

1. Validation qualifiers (if required) were entered into the EDD for SDG: JA44897.

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: JA44897 Client: Immediate Client Services Action Required: No

Date / Time Received: 4/23/2010 Delivery Method: Client Service Action Required at Login: No

Project: No. Coolers: 2 Airbill #'s:

Cooler Security	Y	or	N		Y	or	N
1. Custody Seals Present:	☑		☐	3. COC Present:	☑		☐
2. Custody Seals Intact:	☑		☐	4. Smpl Dates/Time OK	☑		☐

Cooler Temperature	Y	or	N
1. Temp criteria achieved:	☑		☐
2. Cooler temp verification:	Infared gun		
3. Cooler media:	Ice (bag)		

Quality Control Preservatio	Y	or	N	N/A
1. Trip Blank present / cooler:	☐		☐	☑
2. Trip Blank listed on COC:	☐		☐	☑
3. Samples preserved properly:	☑		☐	
4. VOCs headspace free:	☐		☐	☑

Sample Integrity - Documentation	Y	or	N
1. Sample labels present on bottles:	☑		☐
2. Container labeling complete:	☑		☐
3. Sample container label / COC agree:	☑		☐

Sample Integrity - Condition	Y	or	N
1. Sample recvd within HT:	☑		☐
2. All containers accounted for:	☑		☐
3. Condition of sample:	Intact		

Sample Integrity - Instructions	Y	or	N	N/A
1. Analysis requested is clear:	☑		☐	
2. Bottles received for unspecified tests	☐		☑	
3. Sufficient volume recvd for analysis:	☑		☐	
4. Compositing instructions clear:	☐		☐	☑
5. Filtering instructions clear:	☐		☐	☑
