Mr. David Brayack

Tetra Tech

Twin Oaks I, Suite 309

5700 Lake Wright Drive

Norfolk VA 23502

Project Name: Bethpage OU2 CTO 066

Project #: 112G00622

Workorder #: 1110243

Dear Mr. David Brayack

The following report includes the data for the above referenced project for sample(s) received on 10/13/2011 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15/TICS are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Air Toxics Ltd. for your air analysis needs. Air Toxics Ltd. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Ausha Scott at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Ausha Scott

Project Manager

**LABORATORY NARRATIVE
Modified TO-15
Tetra Tech
Workorder# 1110243**

One 6 Liter Summa Canister (100% Certified) sample was received on October 13, 2011. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
ICAL %RSD acceptance criteria	+/- 30% RSD with 2 compounds allowed out to < 40% RSD	30% RSD with 4 compounds allowed out to < 40% RSD
Daily Calibration	+/- 30% Difference	<= 30% Difference with four allowed out up to <=40%.; flag and narrate outliers
Blank and standards	Zero air	Nitrogen
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

As per project specific client request the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. All The canisters used for this project have been certified to the Reporting Limit for the target analytes included in this workorder. Concentrations that are below the level at which the canister was certified may be false positives.

Freon 12 was manually integrated in the initial calibration.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV and/or LCS.

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

VPB 129 Validation Letter and Table

EXECUTIVE SUMMARY

Laboratory Performance Issues: Continuing calibration percent difference was greater than the quality control limit for acetone and 1,1,1-trichloroethane.

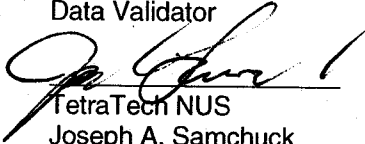

Other Factors Affecting Data Quality: None.

The data for these analyses were reviewed with reference to the EPA National Functional Guidelines for Organic Data Validation (10/99) and USEPA Region II Standard Operating Procedures for Validating Volatile Organic Compounds by SW-846 Method 8260B HW-24 Revision 2 (August 2008).

The text of this report has been formulated to address only those problem areas affecting data quality.

Tetra Tech NUS
Leanne Ganser
Data Validator

Tetra Tech NUS
Joseph A. Samchuck
Data Validation Quality Assurance Officer

Attachments:

1. Appendix A - Qualified Analytical Results
2. Appendix B - Results as Reported by the Laboratory
3. Appendix C - Region II Data Validation Forms
4. Appendix D - Support Documentation

Appendix A

Qualified Analytical Results

Data Validation Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (e.g. % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = GFAA PDS-GFAA MSA's $r < 0.995$ / ICP PDS Recovery Noncompliance
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (e.g. base-line drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; e.g. chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = % Difference between columns/detectors $>25\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is greater than sample activity

Volatile Organic Compounds

Continuing calibration percent drift (%D) was greater than the 20% quality control limit for acetone on instrument MSVOA_G, on 09/06/11 at 12:49. The nondetected results reported for acetone were qualified as estimated (UJ), in all samples.

Sample BP-VPB129-GW-228 was analyzed at a 20 times dilution due to a concentration for trichloroethene greater than the linear range of the instrument. Trichloroethene was reported from diluted analysis and all other results were reported from the undiluted analysis.

Additional Comments

The results were reported to the limit of detection (LOD). Positive results below the limit of quantitation (LOQ) and above the detection limit (DL) were qualified as estimated, (J), due to uncertainty near the detection limit.

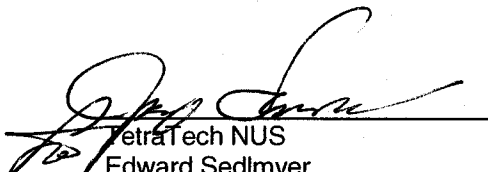

EXECUTIVE SUMMARY

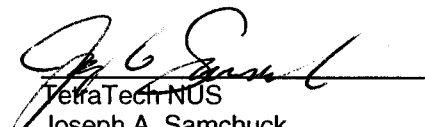

Laboratory Performance Issues: Continuing calibration %D noncompliance for acetone resulted in the qualification of data.

Other Factors Affecting Data Quality: Positive results below the limit of quantitation (LOQ) and above the detection limit (DL) were qualified as estimated, (J), due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to the USEPA Region II Standard Operating Procedures for Validating Volatile Organic Compounds by SW-846 Method 8260B HW-24 Revision #2 (August 2008) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009).

The text of this report has been formulated to address only those problem areas affecting data quality.

Appendix A

Qualified Analytical Results

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed

SUBJECT: ORGANIC DATA VALIDATION – VOC
NWIRP BETHPAGE CTO 066
SDG C3574

SAMPLES: 5 / Aqueous / VOC

BP-VPB-TB-083111	BP-VPB129-GW-328	BP-VPB129-GW-348
BP-VPB129-GW-368	BP-VPB129-GW-388	

Overview

The sample set for NWIRP Bethpage, CTO 066, SDG C3574 consists of four (4) aqueous environmental samples and one (1) trip blank. The samples were analyzed for volatile organic compounds (VOC).

The samples were collected by Tetra Tech on August 31 and September 1, 2011 and analyzed by CHEMTECH. All analyses were conducted in accordance with EPA Method SW-846 8260B analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data completeness
- * • Holding times
- Initial/continuing calibrations
- * • GC/MS Tuning
- * • Laboratory Method Blank Results
- * • Surrogate Recoveries
- * • Matrix Spike / Matrix Spike Duplicate Recoveries
- * • Laboratory Control Sample Recoveries
- * • Internal Standard Recoveries
- * • Compound Quantitation
- * • Compound Identification
- * • Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Qualified analytical results are presented in Appendix A, results as reported by the laboratory are presented in Appendix B, Region II data validation forms are presented in Appendix C, and documentation supporting these findings is presented in Appendix D.

Volatile Organic Compounds

Continuing calibration percent difference for cis-1,3-dichloropropene and the percent drift for 2-hexanone were greater than the 20% quality control limit on instrument MSVOA_G, on 09/07/11 at 11:37. The nondetected results reported for cis-1,3-dichloropropene and 2-hexanone were qualified as estimated (UJ), in all samples.

Additional Comments

The results were reported to the limit of detection (LOD). Positive results below the limit of quantitation (LOQ) and above the detection limit (DL) were qualified as estimated, (J), due to uncertainty near the detection limit.

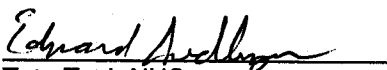

EXECUTIVE SUMMARY

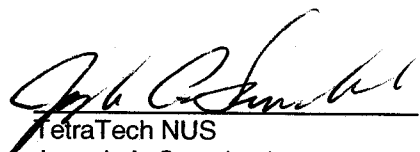

Laboratory Performance Issues: Continuing calibration %D noncompliance for cis-1,3-dichloropropene and 2-hexanone resulted in the qualification of data.

Other Factors Affecting Data Quality: Positive results below the limit of quantitation (LOQ) and above the detection limit (DL) were qualified as estimated, (J), due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to the USEPA Region II Standard Operating Procedures for Validating Volatile Organic Compounds by SW-846 Method 8260B HW-24 Revision #2 (August 2008) and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009).

The text of this report has been formulated to address only those problem areas affecting data quality.

Overview

The sample set for NWIRP Bethpage, CTO 066, SDG C3640 consisted of fourteen (14) aqueous samples including two (2) aqueous QC trip blank samples. Six (6) groundwater samples were analyzed as soil samples due to significant sediment content. The eight (8) aqueous samples and six (6) groundwater-sediment samples were analyzed for volatile organic compounds (VOC) as listed above. One (1) field duplicate sample pair was included with this Sample Delivery Group (SDG): BP-ANY-DUP-090811 / BP-ANY-N08480_C3640. The six (6) groundwater samples analyzed as soils by the laboratory had results reported in soil units of µg/kg corrected for percent solids/moisture content to a dry weight basis.

The samples were collected by Tetra Tech on September 6, 7, and 8, 2011 and analyzed by ChemTech laboratory. All analyses were conducted in accordance with EPA Methods SW-846 8260B VOC method analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data completeness
- * • Hold times
- * • GC/MS System Tuning and Performance
- Initial/continuing Calibrations
- * • Blank Results
- * • Laboratory Control Sample Recovery
- * • Matrix Spike/Matrix Spike Duplicate Recoveries
- Surrogate Spike Recoveries
- Internal Standard Recoveries
- * • Compound Identification
- * • Compound Quantitation
- * • Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Qualified analytical results are presented in Appendix A, results as reported by the laboratory are presented in Appendix B, Region II data validation forms are presented in Appendix C, and documentation supporting these findings is

presented in Appendix D.

VOC

The surrogate %Rs were less than the quality control limit for 4-bromofluorobenzene for the samples as listed below.

Affecting samples: BP-VPB129-GW-448, BP-VPB129-GW-468, BP-VPB129-GW-488, BP-VPB129-GW-528, and BP-VPB129-GW-548, and the re-analysis of these samples

Action: The samples were re-analyzed with similar surrogate %Rs less than the quality control limit. As the sample re-analyses had no improvement in the surrogate %Rs, the initial sample analysis results were reported. The positive and non-detected analyte results for the samples were qualified estimated, (J) and (UJ), respectively.

The continuing calibration verification (CCV) percent difference (%D) was greater than the 20% quality control limit for 2-hexanone for instrument MSVOAF on 09/14/11 @ 10:49.

Affecting samples: The re-analysis of samples - BP-VPB129-GW-468, BP-VPB129-GW-488, BP-VPB129-GW-528, and BP-VPB129-GW-548

Action: No validation action was taken as the re-analysis results for the samples were not reported.

The surrogate %Rs were greater than the quality control limit for 1,2-dichloroethane-d4 and dibromofluoromethane for the sample as listed below. Insufficient sample volume was available for sample re-analysis.

Affecting sample: BP-VPB129-GW-408

Action: The sample positive analyte results were qualified estimated, (J). The non-detected VOC results were not qualified.

The internal standard recoveries were less than the quality control limit for pentafluorobenzene and 1,4-dichlorobenzene-d4 for the soil sample as listed below. Insufficient sample volume was available for sample re-analysis.

Affecting samples: BP-VPB129-GW-408

Action: The positive and non-detected VOC results associated with the internal standards for the sample were qualified estimated, (J) and (UJ), respectively.

Additional Comments

Sample VOC analyte results were reported to the LOD.

Positive results below the limit of quantitation (LOQ) and above the detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

Sample BP-VPB129-GW-508 was analyzed both undiluted and diluted 10X. Only the trichloroethene result was reported from the 10X dilution.

EXECUTIVE SUMMARY

Laboratory Performance Issues: VOC sample analyte results were qualified for internal standard and surrogate %R quality control limit non-compliances.

Other Factors Affecting Data Quality: Positive results below the limit of quantitation (LOQ) and above the detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

Attachments:

- Appendix A - Qualified Analytical Results
- Appendix B - Results as Reported by the Laboratory
- Appendix C - Region II Data Validation Forms
- Appendix D - Support Documentation

Appendix A

Qualified Analytical Results

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
Other problems (can encompass a number of issues;
- Q = i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed

VOC

The initial calibration average relative response factor (RRF) was less than the 0.05 quality control limit for acetone for instrument MSVOAD on 09/08/11. Additionally, the continuing calibration verification (CCV) RF was less than the 0.05 quality control limit for acetone.

Affected sample: BP-VPB129-GW-588

Action: Sample BP-VPB129-GW-588 acetone positive result was qualified estimated, (J).

The CCV percent drift (%D) was greater than the 20% quality control limit for acetone, bromomethane, chloroethane, trichlorofluoromethane, 1,1,1-trichloroethane, carbon tetrachloride, and 1,2-dichloroethane for instrument MSVOAD on 09/16/11 @ 14:04.

Affected sample: BP-VPB129-GW-588

Action: The non-detected results for the aforementioned analytes were qualified estimated, (UJ), except for the acetone result which was qualified rejected for the previously discussed RRF quality control limit non-compliance.

The initial calibration average RRF was less than the 0.05 quality control limit for acetone for instrument MSVOAK on 09/13/11. Additionally, the CCV RF was less than the 0.05 quality control limit for acetone.

Affected samples: BP-VPB129-DM-140, OU2-IDW-BX10-091511, OU2-IDW-BX4-091511

Action: Sample acetone non-detected results were qualified rejected, (UR).

The CCV %D was greater than the 20% quality control limit for dichlorodifluoromethane and carbon tetrachloride for instrument MSVOAK on 09/19/11 @ 12:00.

Affected samples: BP-VPB129-DM-140, OU2-IDW-BX10-091511, OU2-IDW-BX4-091511

Action: The non-detected results for the aforementioned analytes were qualified estimated, (UJ).

The CCV %D was greater than the 20% quality control limit for bromomethane and acetone for instrument MSVOAG on 09/20/11 @ 10:17.

Affected sample: BP-VPB129-GW-608 dilution re-analysis

Action: No validation action was necessary as only the trichloroethene result was reported from the sample dilution re-analysis.

The laboratory control sample (LCS) percent recovery (%R) was greater than the quality control limit for trichlorofluoromethane, 1,2-dichloroethane, and bromodichloromethane for LCS BSD0916W2.

Affected sample: BP-VPB129-GW-588

Action: No validation action was taken as all aforementioned analytes were non-detected for the sample BP-VPB129-GW-588.

Several matrix spike (MS) and MS duplicate (MSD) analyte %Rs and two MS/MSD relative percent differences (RPDs) for analytes were above the quality control limits for the MS and MSD included in the SDG. No validation action was taken as the spiked sample was not a sample from this SDG.

The %Rs were less than the quality control limit for the surrogate dibromofluoromethane for the samples as listed below.

Affected sample: OU2-IDW-BX10-091511 and OU2-IDW-BX10-091511 re-analysis

Action: Only the initial analytical results for sample OU2-IDW-BX10-091511 were reported as the sample re-analysis had a similar surrogate %R quality control limit non-compliance. The non-detected analyte results for the initial sample analysis were qualified estimated, (UJ).

The %Rs were greater than the quality control limit for the surrogates dibromofluoromethane and 4-fluorobenzene for the sample as listed below.

Affected sample: BP-VPB129-GW-588

Action: The sample was re-analyzed with slightly improved surrogate %Rs but still with a surrogate %R for dibromofluoromethane quality control limit non-compliant. The original sample results were reported. The positive and non-detected results were qualified estimated, (J) and (UJ), respectively.

The %R was greater than the quality control limit for the surrogate dibromofluoromethane for the sample as listed below.

Affected sample: BP-VPB129-GW-588 re-analysis

Action: The initial sample analysis results were reported and no further action was necessary.

The internal standard recoveries were less than the quality control limit for the matrix spike duplicate (MSD) sample SB-6B-02-18.5-09092011. As only the MSD was affected no validation action was taken for samples.

Additional Comments

Sample VOC analyte results were reported to the LOD.

Positive results below the limit of quantitation (LOQ) and above the detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

Sample BP-VPB129-GW-608 was analyzed both undiluted and diluted 10X. Only the trichloroethene result was reported from the 10X dilution.

EXECUTIVE SUMMARY

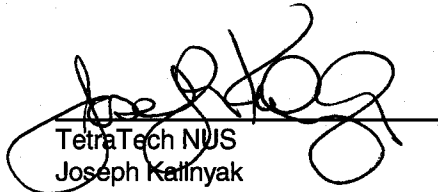

Laboratory Performance Issues: VOC results were qualified for RRF and CCV %D quality control limit non-compliances. VOC sample results were qualified for surrogate %R quality control limit non-compliances.

Other Factors Affecting Data Quality: Positive results below the limit of quantitation (LOQ) and above the detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

Appendix A

Qualified Analytical Results

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
Other problems (can encompass a number of issues;
- Q = i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed

Volatiles (VOC)

Due to the nature of the matrices, the environmental groundwater samples in this SDG, with the exception of samples, BP-VPB129-GW-628 and BP-VPB129-GW-668, were analyzed as soils. The sample results were reported in $\mu\text{g}/\text{Kg}$ based on the dry weight of the sample.

The continuing calibration performed on instrument MSVOAG on 09/26/11 @ 10:55 had a Percent Drift (%Drift) for bromomethane above the 20% quality control limit. The non-detected results reported for this compound in the affected samples, BP-VPB-TB-091911, BP-VPB129-GW-628, and BP-VPB129-GW-668, were qualified as estimated, (UJ).

The Percent Recovery (%R) for the surrogate spike compound, 4-bromofluorobenzene, was below the lower quality control limit in sample, BP-VPB129-GW-688. The sample was reanalyzed with a similar result. The initial analysis of this sample was used in the data validation. The positive and non-detected results reported from the reanalyses were qualified as estimated, (J) and (UJ), respectively.

The %R for the surrogate spike compound, 4-bromofluorobenzene, was below the lower quality control limit in sample BP-VPB129-GW-628. The %R for the surrogate dibromofluoromethane was above the upper quality control limit in the reanalysis of this sample. In conjunction with calibration data, the data validator used the results from the initial analysis in the data validation. The positive and non-detected results reported for the target compounds in the affected sample were qualified as estimated, (J) and (UJ), respectively.

Positive results reported below the LOQ but above the Method Detection Limit (MDL) were qualified as estimated, (J).

TOC

No issues were identified.

Additional Comments

The continuing calibration performed on instrument MSVOAG on 09/27/11 @ 10:55 had %Drifts for bromomethane, acetone, and 1,2-dibromo-3-chloropropane above the 20% quality control limit. No action was necessary because the results of the affected sample were not used in the data validation.

The Laboratory Control Sample (LCS), BSG0927W1, %Rs for acetone, methyl tert-butyl ether, and 1,2-dichlorobenzene above the upper quality control limits. No action necessary in the affected sample because the results from this sample were not used in the data validation.

Non-detected results are reported to the Limit of Detection (LOD).

The Region II Data Validation Standard Operating Procedures (SOPs) for TOC analysis were not present on the EPA Region II internet site; therefore, EPA Region II worksheets are not included for this fraction in the data validation letter.

EXECUTIVE SUMMARY

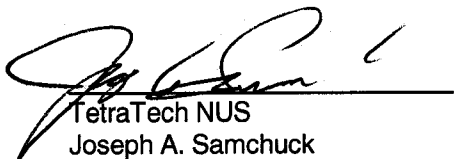

Laboratory Performance Issues: Continuing calibration %Drifts exceeded the 20% quality control limit. A LCS had high %Rs for some target compounds.

Other Factors Affecting Data Quality: Two samples had noncompliant surrogate %Rs. Positive results reported below the LOQ but above the MDL were qualified as estimated.

The data for these analyses were reviewed with reference to the SOP #HW-24 Revision #2, USEPA Region II Hazardous Waste Support Branch Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry SW-846 Method 8260B (August 2008), EPA Method SW-846 8260B and 9060 analytical and reporting protocols, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009).

3. Appendix C - Region II Data Validation Forms
4. Appendix D - Support Documentation

Appendix A

Qualified Analytical Results

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed

FROM: JOSEPH KALINYAK **COPIES:** DV FILE
SUBJECT: ORGANIC DATA VALIDATION – VOC
NWIRP BETHPAGE CTO 066
SDG 1110243
SAMPLES: 1 / Air / VOC
BP-VPB129-AIR-101111

OVERVIEW

The sample set for NWIRP Bethpage, CTO 066, SDG 1110243 consisted of one (1) air sample. The one (1) air sample was analyzed for volatile organic compounds (VOC) as listed above. No field duplicate samples were included with this Sample Delivery Group (SDG).

The sample was collected by Tetra Tech on October 11 and 12, 2011 and analyzed by Air Toxics Ltd. laboratory. The sample was collected at two different dates and times as noted on the Chain of Custody (COC), 1st on 10/11/11 from 12:00-15:00 and 2nd on 10/12/11 from 09:00-14:00. The analysis was conducted in accordance with EPA Method TO-15 using simultaneous Full Scan and Single Ion Monitoring (SIM) analytical and reporting protocols. The data contained in this SDG was validated with regard to the following parameters:

- * • Data completeness
- * • Hold times
- * • GCMS System Tuning and Performance
- Initial/continuing calibrations
- * • Laboratory Control Sample Recoveries
- Laboratory Method Blank Results
- * • Surrogate Spike Recoveries
- * • Internal Standard Recoveries
- * • Compound Identification
- * • Compound Quantitation
- * • Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Qualified analytical results are presented in Appendix A, results as reported by the laboratory are presented in Appendix B, Region II data validation forms are presented in Appendix C, and documentation supporting these findings is presented in Appendix D.

VOC

The following compounds were detected in the associated method blank #1110243-02A at the maximum concentration as indicated below affecting the sample:

<u>Compound</u>	<u>Maximum Conc. ($\mu\text{g}/\text{m}^3$)</u>	<u>Action Level ($\mu\text{g}/\text{m}^3$)</u>
1,4-Dichlorobenzene	0.14	0.70
1,2,4-Trichlorobenzene	0.64	3.20

An action level of 5X the maximum contaminant concentration was established to evaluate laboratory contamination for the aforementioned compounds. Dilution factors and sample aliquots were taken into consideration during the application of all action levels. The sample positive result for 1,2,4-trichlorobenzene was qualified non-detected, (U), due to the method blank contamination.

The initial calibration percent relative standard deviation (%RSD) was greater than the 30% quality control limit for ethanol for instrument MSD-E on 09/08/11 affecting the SDG sample. The positive ethanol result was qualified estimated, (J).

Positive results below the Reporting Limit (RL) and above the method detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

ADDITIONAL COMMENTS

The laboratory reported the VOC air result concentrations in units of both ppbv and $\mu\text{g}/\text{m}^3$ on the sample forms. The results in the database and the qualified analytical result concentrations are reported as $\mu\text{g}/\text{m}^3$ only.

The laboratory performed a duplicate analysis for sample BP-VPB129-AIR-101111. All positive analyte concentrations were <5X the RL. The quality control limit of 20% for the relative percent differences (RPD) for positive analytes was not applicable.

Sample VOC analyte results were reported to the RL.

EXECUTIVE SUMMARY

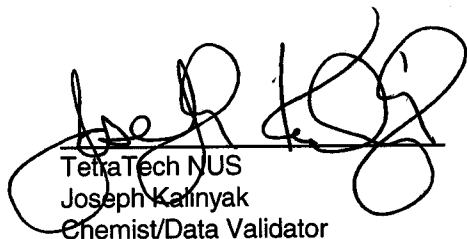

Laboratory Performance Issues: The sample was qualified for 1,2,4-trichlorobenzene method blank contamination. The sample positive ethanol result was qualified for a initial calibration %RSD quality control limit non-compliance.

Other Factors Affecting Data Quality: Positive results below the Reporting Limit (RL) and above the method detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

PAGE: 3

The data for these analyses were reviewed with reference to the EPA Method TO-15, SOP HW-31 Revision #4, October 2006, USEPA Region II Hazardous Waste Support Branch Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry, and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009).

Appendix A

Qualified Analytical Results

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
Other problems (can encompass a number of issues;
- Q = i.e.chromatography,interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed

SAMPLES: 6 / Aqueous / VOC

BP-TB-120611	BP-TT101D-120711	BP-TT101D1-120811
BP-TT101D2-120611	OU2-FRAC1-120811	OU2-FRAC3-120811

1 / Aqueous / pH

OU2-FRAC3-120811

Overview

The sample set for NWIRP Bethpage, CTO 066, SDG C4911 consisted of six (6) aqueous samples including one (1) aqueous trip blank sample. All aqueous samples were analyzed for a select list of volatile organic compounds (VOC) and one (1) sample was analyzed for pH. No field duplicate sample pairs were included in this Sample Delivery Group (SDG).

The samples were collected by Tetra Tech on December 6, 7, and 8, 2011 and analyzed by ChemTech laboratory. Three sample VOC analyses (samples BP-TT101D1-120811, BP-TT101D-120711, and BP-TT101D2-120611) were conducted in accordance with EPA Method SW-846 8260B and three sample VOC analyses (samples BP-TB-120611, OU2-FRAC1-120811, and OU2-FRAC3-120811) were conducted in accordance with EPA Method 624, analytical and reporting protocols. One (1) sample was analyzed for pH by EPA SW-846 Method 9040C analytical and reporting protocols. The data contained in this SDG were validated with regard to the following parameters:

- * • Data completeness
- * • Hold times
- * • GC/MS System Tuning and Performance
- Initial/continuing calibrations
- Blank Results
- * • Laboratory Control Sample/Laboratory Control Sample Duplicate Recoveries
- * • Matrix Spike/Matrix Spike Duplicate Recoveries
- * • Surrogate Spike Recoveries
- * • Internal Standard Recoveries
- * • Compound Identification
- * • Compound Quantitation
- * • Detection Limits

The symbol (*) indicates that all quality control criteria were met for this parameter. Qualified analytical results are presented in Appendix A, results as reported by the laboratory are presented in Appendix B, Region II data validation forms are presented in Appendix C, and documentation supporting these findings is presented in Appendix D.

VOC – Method 624

No issues were identified.

VOC – Method 8260B

The CCV percent differences (%D) were greater than the 20% quality control limit for acetone for instrument MSVOAG on 12/09/11 @ 23:40.

Affected samples: BP-TT101D-120711, BP-TT101D1-120811, and BP-TT101D2-120611

Action: The aforementioned sample non-detected results for acetone were qualified estimated, (UJ).

Positive results below the limit of quantitation (LOQ) and above the method detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

pH – Method 9040

No issues were identified.

Additional Comments

The following common laboratory contaminant was detected in the trip blank BP-TB-120611.

<u>Compound</u>	<u>Maximum Conc. µg/L</u>	<u>Action Level µg/L</u>
Acetone	28	280

An action level of 10X the maximum concentration for the common laboratory contaminant acetone was established to evaluate laboratory contamination. Dilution factors and sample aliquots, if applicable, were taken into consideration during the application of all action levels. All samples had non-detected acetone results and no validation action was necessary.

The initial calibration relative standard deviation (RSD) was greater than the 15% quality control limit for bromodichloromethane and 1,2,4-trichlorobenzene for instrument MSVOA_R on 11/30/11.

Affected samples: BP-TT101D1-120811 dilution analysis and BP-TT101D2-120611 dilution analysis

Action: No validation action was necessary as the bromodichloromethane and 1,2,4-trichlorobenzene results were reported from the undiluted sample analysis.

The CCV %Ds were greater than the 20% quality control limit for 2-butanone and carbon tetrachloride for instrument MSVOA_R on 12/12/11 @ 17:19.

Affected samples: BP-TT101D1-120811 dilution analysis and BP-TT101D2-120611 dilution analysis

Action: No validation action was necessary as the 2-butanone and carbon tetrachloride results were reported from the undiluted sample analysis.

Samples were analyzed both undiluted and diluted as listed below. Only the analytes which exceeded the highest calibration level in the undiluted analysis were reported from the sample dilution analyses.

<u>Sample</u>	<u>Dilutions</u>
BP-TT101D1-120811	1X, 5X
BP-TT101D2-120611	1X, 10X
OU2-FRAC1-120811	1X, 5X

TO: D. BRAYACK
SDG: C4911

PAGE: 3

Forty-nine (49) analytes were reported for VOCs.

The pH for sample OU2-FRAC3-120811 was performed within 24 hours of the sampling and no validation action was taken for the sample to analysis hold time requirement of Method 9040C of "as soon as possible".

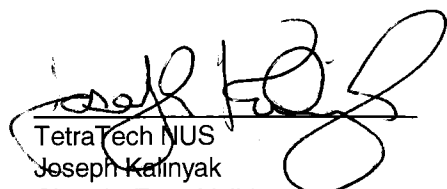

Non-detected sample results were reported to the LOD.

EXECUTIVE SUMMARY

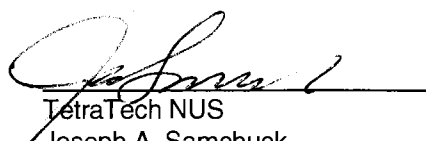

Laboratory Performance Issues: Sample VOC acetone results were qualified for CCV %D quality control limit non-compliances.

Other Factors Affecting Data Quality: Positive results below the Limit of Detection (LOD) and above the method detection limit were qualified as estimated, (J), due to uncertainty near the detection limit.

The data for these analyses were reviewed with reference to the USEPA Method 624, USEPA SW-846 Method 8260B, USEPA Method 9040C, USEPA Region II Hazardous Waste Support Branch Validating Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry SW-846 Method 8260B SOP #HW-24 Revision #2 August 2008 and the Department of Defense (DoD) document entitled "Quality Systems Manual (QSM) for Environmental Laboratories" (April 2009).

Appendix A

Qualified Analytical Results

Value Qualifier Key (Val Qual)

J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ – The result is an estimated non-detected quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

U - Value is a non-detect as reported by the laboratory.

UR – Non-detected result is considered rejected, (UR), as a result of technical non-compliances.

DATA QUALIFICATION CODE (QUAL CODE)

Qualifier Codes:

- A = Lab Blank Contamination
- B = Field Blank Contamination
- C = Calibration Noncompliance (i.e., % RSDs, %Ds, ICVs, CCVs, RRFs, etc.)
- C01 = GC/MS Tuning Noncompliance
- D = MS/MSD Recovery Noncompliance
- E = LCS/LCSD Recovery Noncompliance
- F = Lab Duplicate Imprecision
- G = Field Duplicate Imprecision
- H = Holding Time Exceedance
- I = ICP Serial Dilution Noncompliance
- J = ICP PDS Recovery Noncompliance; MSA's $r < 0.995$
- K = ICP Interference - includes ICS % R Noncompliance
- L = Instrument Calibration Range Exceedance
- M = Sample Preservation Noncompliance
- N = Internal Standard Noncompliance
- N01 = Internal Standard Recovery Noncompliance Dioxins
- N02 = Recovery Standard Noncompliance Dioxins
- N03 = Clean-up Standard Noncompliance Dioxins
- O = Poor Instrument Performance (i.e., base-time drifting)
- P = Uncertainty near detection limit ($< 2 \times$ IDL for inorganics and $<$ CRQL for organics)
- Q = Other problems (can encompass a number of issues; i.e. chromatography, interferences, etc.)
- R = Surrogates Recovery Noncompliance
- S = Pesticide/PCB Resolution
- T = % Breakdown Noncompliance for DDT and Endrin
- U = RPD between columns/detectors $>40\%$ for positive results determined via GC/HPLC
- V = Non-linear calibrations; correlation coefficient $r < 0.995$
- W = EMPC result
- X = Signal to noise response drop
- Y = Percent solids $<30\%$
- Z = Uncertainty at 2 sigma deviation is less than sample activity
- Z1 = Tentatively Identified Compound considered presumptively present
- Z2 = Tentatively Identified Compound column bleed
