ENVIRONMENT

Subject:
Interim Data Report for On-Site Containment System Hydraulic Effectiveness Program, Operable Unit 2, Northrop Grumman Systems Corporation, Bethpage, New York (NYSDEC Site #1-30-003A).

Date:
September 4, 2012

Dear Mr. Scharf:

Contact:
David E. Stern

On behalf of Northrop Grumman Systems Corporation (Northrop Grumman), ARCADIS has prepared this interim data report summarizing drilling, well installation, and groundwater sampling activities performed at the Northrop Grumman facility in Bethpage, New York. This work was performed pursuant to the On-Site Containment System (ONCT) Hydraulic Effectiveness Work Plan, dated December 6, 2011. The work plan was approved by NYSDEC in a letter, dated January 12, 2012.

Background

Our ref:
NY001496.0212.ONCB6

Pursuant to the Operable Unit 2 (OU2) Record of Decision (ROD) issued by the New York State Department of Environmental Conservation (NYSDEC), Northrop Grumman designed, constructed, and operates the ONCT pump and treat system (ONCT system) that consists of five deep remedial wells (Wells 1, 3, 17, 18, and 19 - see **Figure 1**) that pump continuously at a combined rate of approximately 3,800 gallons per minute (gpm), equivalent to approximately 5.5 million gallons per day (MGD). Water from the wells is treated by two air strippers. Treated effluent is discharged to the Northrop Grumman south and west basins, with a portion consumed by the Calpine Energy generating facility. The remedial objective of the ONCT system is to prevent the off-site migration of volatile organic compound (VOC)-impacted groundwater and data collected during routine groundwater monitoring rounds indicate that the ONCT system is meeting this objective. The "Operable Unit 2 Groundwater Remedial System Hydraulic Effectiveness Evaluation" (2003) carried out jointly by Navy and Northrop Grumman pursuant to the OU 2 ROD provided additional data that supported the conclusion that the ONCT system is meeting its remedial objective. Northrop Grumman voluntarily collected the additional data included in this current report to supplement the 2003 report and ongoing monitoring of the ONCT system.

Imagine the result

Summary of Work

The field work was performed from December 6, 2011 through March 14, 2012 and consisted of drilling and sampling three vertical profile boring (VPBs) (VP-3-1, VP-33 and VP-73R) (**Figure 1**). VPBs were drilled into the Raritan Confining Unit (RCU), in accordance with the protocols described in the work plan, with VPB terminal depths as follows: VP-3-1 (766 ft bls) VP-33 (680 ft bls) and VP-73R (682 ft bls). Two monitoring wells (MW3-1 and GM-73D3) were installed in the boreholes of VP3-1 and VP73R, respectively, and developed (**Figure 1**). Groundwater samples were collected from Wells MW-3-1 and GM-73D3 following completion of well development.

Sample collection and laboratory analytical protocols for water samples followed procedures detailed in the NYSDEC-approved OU2 Groundwater Monitoring Plan (ARCADIS 2001; 2006). Groundwater samples collected from VPBs and monitoring wells were submitted for laboratory analysis for the Target Compound List VOCs. **Table 1** provides the validated analytical results for groundwater samples collected from VPBs VP-3-1, VP-33, and VP-73R. **Table 2** provides the validated analytical results for the groundwater samples collected from Wells MW3-1 and GM-73D3. **Appendix A** provides the construction logs for Wells MW3-1 and GM-73D3.

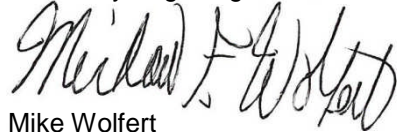

As always, if you have any questions or comments, please feel free to contact us.

Sincerely,

ARCADIS of New York, Inc.

David E. Stern
Senior Hydrogeologist

Table 1. Concentrations of Volatile Organic Compounds in Groundwater Samples Collected from Vertical Profile Borings,
On-Site Containment System Hydraulic Effectiveness Program, Operable Unit 2, Northrop Grumman Systems Corporation, Bethpage, New York.

Notes and Abbreviations:

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2001; 2006).

Samples analyzed for the TCL VOCs using NYSDEC ASP 2000 Method OLM4.3.

TVOCs are rounded to two significant figures.

Bold value indicates a detection.

NYSDEC New York State Department of Environmental Conservation

TCL Target compound list

VOC Volatile Organic Compound

TVOC Total Volatile Organic Compounds

ASP Analytical services protocol

ug/L Micrograms per liter

ft bls feet below land surface

J Value is estimated

B Compound detected in associated blank sample

D Secondary dilution

| Xylene-o | < 10 | < 50 |
| Xylenes - m,p | < 10 | < 50 |
| TVOCs | 0 | 1700 |

Notes and Abbreviations:

Results validated following protocols specified in OU2 Groundwater Monitoring Plan (ARCADIS 2001; 2006).

Samples analyzed for the TCL VOCs using NYSDEC ASP 2000 Method OLM4.3.

TVOCs are rounded to two significant figures.

Bold value indicates a detection.

NYSDEC New York State Department of Environmental Conservation

TCL Target compound list

VOC Volatile Organic Compound

TVOC Total Volatile Organic Compounds

WELL CONSTRUCTION LOGS

MW3-1

GM73-D3

Well Construction Log
(Unconsolidated)

Project Name and No. ARC GP3R / NY001496.0312.OMM-14
 Well MW3-1 Town/City Bethpage
 County Nassau State NY
 Permit No. N-14026

Land-Surface Elevation and Datum:
120 feet Surveyed Estimated

Installation Date(s) 3/20 - 3/22/12
 Drilling Method mud-rotary
 Drilling Contractor Delta Well & pump Co.
 Drilling Fluid mud / Bentonite + water

Development Technique(s) and Date(s)
air-lifting / water jetting & pumping / pump & surge
3/26/12 - 3/27/12

Fluid Loss During Drilling _____ gallons
 Water Removed During Development 15000 gallons
 Static Depth to Water 55.75 feet below M.P.**
 Pumping Depth to Water 57.34 feet below M.P.**
 Pumping Duration 3/4 hours
 Yield 10 gpm Date 3/27/12
 Specific Capacity 7.3 gpm/ft

Well Purpose monitoring well

Remarks 5ft stainless steel sump

* Depth Below Land Surface

**Measuring Point is Top of Well Casing Unless Otherwise Noted.
