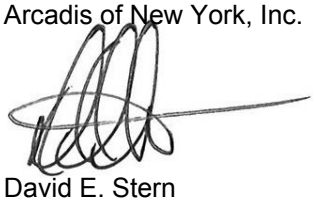
Dear Jason:

Enclosed is one electronic PDF copy of the second quarter results of the OU3 BPGWCS operation and monitoring, performed in accordance with the NYSDEC-approved OU3 Groundwater IRM OM&M Manual (Arcadis 2009) and the NYSDEC-approved Sampling and Analysis Plan (SAP; Arcadis 2009). As we have transitioned to electronic submittals (via PDF) in line with NYSDEC's paper reduction program. Hard copies of the report can be provided upon receipt of a written request.

If you have any questions, please do not hesitate to contact us.

Sincerely,

Arcadis of New York, Inc.



David E. Stern
Senior Hydrogeologist

TABLES

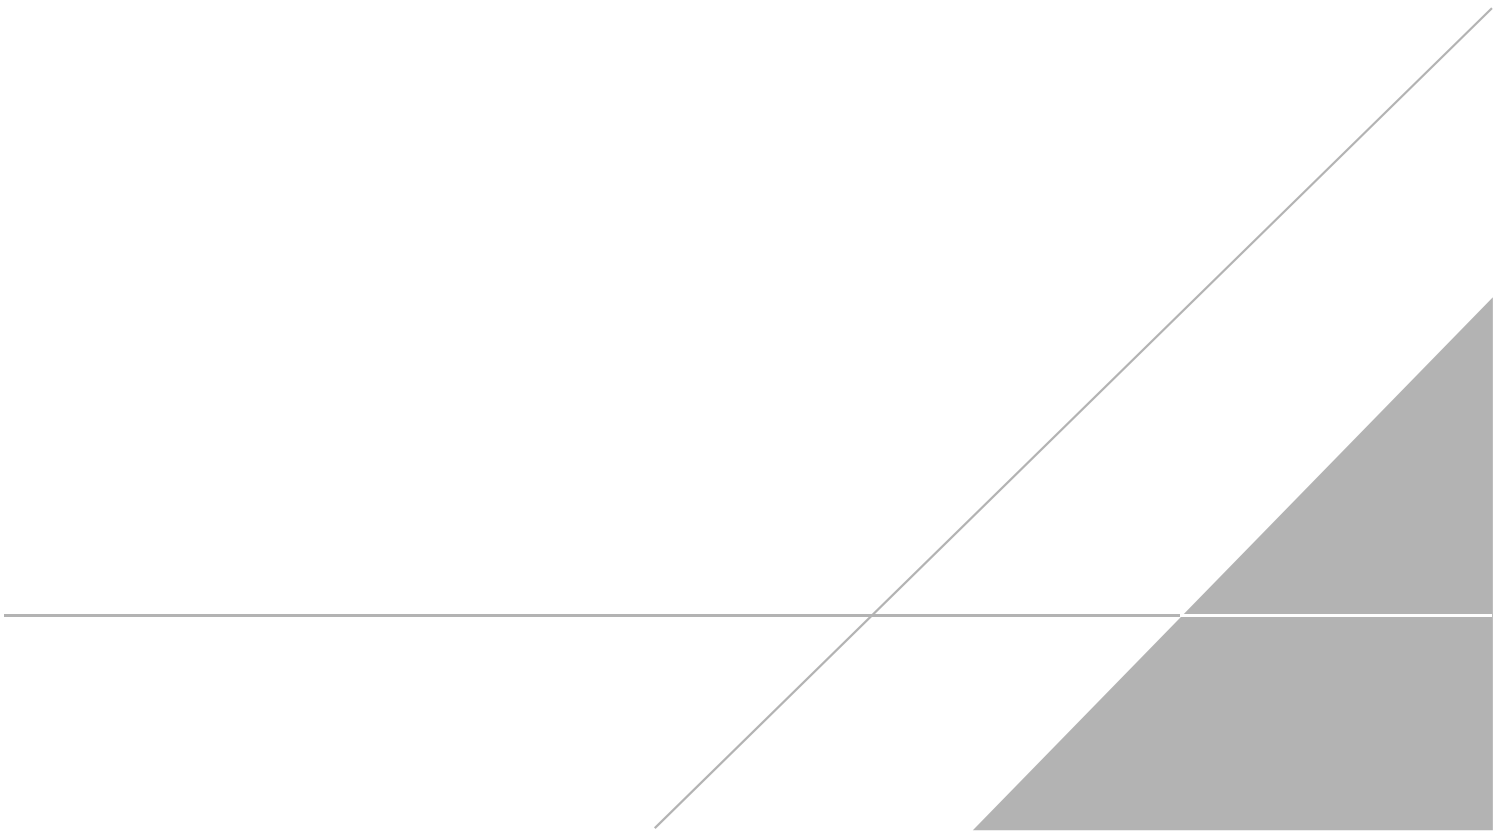

Table 1
Operational Summary
Bethpage Park Groundwater Containment System
Operable Unit 3 (Former Grumman Settling Ponds)
Bethpage, New York

ARCADIS Design & Consultancy for natural and built assets

MONTH	DAY																													Days Operational (1)
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	
2009 Total																																160
2010 Total																																352
2011 Total																																351
2012 Total																																353
2013 Total																																354
2014 Total																																349
2015 Total																																348
2016 Total																																351
1 Q 2017																																88
Apr-17																																30
May-17																																31
Jun-17													(2)							(3)												29
2 Q 2017																																90
2017 Total																																178
TOTAL																																**2,796**

Legend:

	Indicates system online for at least the majority of the day.
	Indicates system operated with reduced flow rates.
	Indicates system off-line for at least the majority of the day.
K	Indicates PPZ change-out.
C	Indicates carbon change-out.

Acronyms\Key:

2Q	second quarter
ECU	emission control unit
VPGAC	vapor phase granular activated carbon
PPZ	potassium permanganate-impregnated zeolite
RW	recovery well
LOTO	Lock out tag out
GPM	Gallons per minute

Notes:

(1) Days in which the system was operational for the majority of the day are counted as one day.

Second Quarter 2017

(2) RW-2 flow less than 60 GPM due to pump fouling and motor issues. Pump fouling is attributed to iron buildup from high influent iron concentrations. A new pump and motor were installed on June 27, 2017

(3) The system was offline for approximately 26 hours due to LOTO procedures to accommodate relocation of an electrical box during excavation and paving.

Notes and Abbreviations:

(1) "Total VOCs" represents the sum of individual concentrations of the compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.

(2) Samples collected during the Third Quarter 2016 were analyzed for 1,4-Dioxane using USEPA Method 8270D SIM. Samples collected during Fourth Quarter 2016, First Quarter 2017, and Second Quarter 2017 were analyzed for 1,4-Dioxane using USEPA Method 522.

(3) Influent pH samples collected and measured in the field by Arcadis personnel on the dates listed using an Oakton Model 300 pH/conductivity meter. pH units are standard units.

700 Bold value indicates a detection.
-- not analyzed
J Compound detected below its reporting limit; value is estimated.
NA not analyzed
SIM selected ion monitoring
USEPA United States Environmental Protection Agency
VOC volatile organic compound
µg/L micrograms per liter
< 5 Compound not detected above its laboratory quantification limit.

Notes and Abbreviations:

(1) Discharge limits per the interim SPDES equivalency program or Division of Water Technical and Operational Guidance Series (TOGS 1.1.1) Quality Standards and Guidance Values and Groundwater Effluent Limitations, if the compound is not part of the interim SPDES equivalency program.

(2) "Total VOCs" represents the sum of individual concentrations of compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.

(3) Treatment efficiency was calculated by dividing the difference between the influent and effluent total VOC concentrations by the influent total VOC concentration.

(4) Effluent pH samples collected and measured in the field by Arcadis personnel on the dates listed using an Oakton Model 300 pH/conductivity meter. pH units are standard units.

(5) pHs not recorded due to technician error.

(6) Samples collected during Second and Third Quarters 2016 were analyzed for 1,4-Dioxane using USEPA Method 8270D SIM. Samples collected during Fourth Quarter 2016, First Quarter 2017, and Second Quarter 2017 were analyzed for 1,4-Dioxane using USEPA Method 522.

(7) The December 16, 2016 and February 22, 2017 iron concentrations exceeded their discharge limit of 600 µg/l. The exceedances are suspected to be the result of iron precipitates in the effluent sample line, and it was cleaned prior to the next sampling event.

(8) The anomalous pH value in January 2017 is suspected to be the result of an equipment calibration issue. The pH returned to typical values in subsequent sampling events.

(9) Discharge limit per Department of Environmental Conservation Chapter X- Division of Water Part 703

700 Bold value indicates a detection.
J Compound detected below its reporting limit; value is estimated
NA Not analyzed
SIM selected ion monitoring
SPDES State Pollutant Discharge Elimination System
USEPA United States Environmental Protection Agency
VOC volatile organic compound
µg/L micrograms per liter
-- not analyzed
< 5 Compound not detected above its laboratory quantification limit.

Table 7
Summary of System Parameters
Bethpage Park Groundwater Containment System
Operable Unit 3 (Former Grumman Settling Ponds)
Bethpage, New York

Notes and Abbreviations:

(1) Operational data collected by Arcadis on days noted. Parameters listed were typically recorded during compliance monitoring events. Data in this table correspond to approximately the past year of system operation.

(2) Instantaneous parameters obtained from the SCADA HMI: Water Flow Rate, Water Pressure, Air Flow Rate.

(3) Combined influent water-flow rate is the sum of individual well flow rates via the SCADA System.

(4) Remedial Well effluent pressure readings measured at the influent manifold within the treatment system building.

(5) Instantaneous values from field-mounted instruments

(6) Values collected on May 16, 2016 during the weekly site visit. No values collected on day of sampling.

(7) Values collected on June 6, 2016 during the weekly site visit. No values collected on day of sampling.

(8) Values collected on July 11, 2016 during the weekly site visit. No values collected on day of sampling.

(9) Values collected on August 22, 2016 during the weekly site visit. No values collected on day of sampling.

(10) Values collected on September 13, 2016 during the weekly site visit. No values collected on day of sampling.

(11) Values collected on December 19, 2016 during the weekly site visit. No values collected on day of sampling.

(12) Values collected on January 16, 2017 during the weekly site visit. No values collected on day of sampling.

(13) Values collected on February 20, 2017 during the weekly site visit. No values collected on day of sampling.

(14) Values collected on March 20, 2017 during the weekly site visit. No values collected on day of sampling.

(15) Values collected on April 24, 2017 during the weekly site visit. No values collected on day of sampling.

(16) Values collected on May 15, 2017 during the weekly site visit. No values collected on day of sampling.

(17) Values collected on June 26, 2017 during the weekly site visit. No values collected on day of sampling.

ECU	emission control unit
gpm	gallons per minute
HMI	human-machine interface
iwc	inches of water column
psi	pounds per square inch
^{o}R	degrees Rankine
SCADA	Supervisory Control and Data Acquisition
scfm	standard cubic feet per minute
Temp.	temperature

Notes and Abbreviations:

(1) Represents operating period between consecutive monitoring events.
(2) Volume of groundwater recovered is based on individual local well totalized flow readings. Listed value is the difference between totalized flow values recorded between consecutive monitoring events. The total groundwater recovered during a given operating period is the sum of the individual well flow totals. Values shown are rounded to the nearest gallon, but should only be considered accurate to two significant figures to account for error associated with field measurements.
(3) Mass recovered per well was calculated by multiplying the Total VOC concentration from the most recent sampling event by the number of gallons extracted during the reporting period. The total amount recovered during a given operating period is the sum of masses recovered from each of the individual wells. Values less than ten pounds are presented using two significant figures and values greater than ten pounds have been rounded to the nearest whole number; however, these values should only be considered accurate to two significant figures to account for error associated with field measurements and analytical data.
(4) Mass recovery rates were calculated by dividing the total mass recovered for each well and for the system by the number of days in the respective operating period. Values are presented using two significant figures.
(5) "Total VOCs" represents the sum of individual concentrations of the VOCs detected.
(6) "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethelyene; vinyl chloride; cis-1,2-dichloroethene; trans-1,2-dichloroethene; benzene; toluene; and xylenes-o,m, p.
(7) "Non-Project VOCs" represents the difference between Total VOCs and Project VOCs.
(8) Values based on operational data recorded prior to system startup on July 21, 2009.
(9) The volume of groundwater recovered and mass recovered calculations represent the operational period between January 1, 2017 and April 1, 2017.
(10) The volume of groundwater recovered and mass recovered calculations represent the operational period between April 1, 2017 and July 1, 2017.
(11) "Total" refers to the amounts removed by the Operable Unit 3 Bethpage Park Groundwater Containment System.

Notes and Abbreviations:

--	none specified
AGC	annual guideline concentration
CAS#	Chemical Abstracts Service Registry Number
cfm	cubic feet per minute
DAR-1	Division of Air Resources-1
g/s	grams per second
lb/hr	pounds per hour
lb/yr	pounds per year
NYSDEC	New York State Department of Environmental Conservation
SGC	short-term guideline concentration
VSP	vapor sampling point
$\mu g/m^3$	micrograms per cubic meter

(1) Emission rate calculated based on an exit air flow rate of 1,726 ft^3/min.
1,1,1-Trichloroethane (lb/hr) = TCE [$\mu g/m^3$] x Air Flow Rate [ft^3/min] x (1 m^3/35 ft^3) x (60 min/hr) x (0.000001 g/1 µg) x (0.0022 lb/g)
lb/yr = lb/hr x 8,760 hrs/yr
g/s = lb/hr x hr/3,600 sec x 453.59 g/lb

(2) Ambient impact based on AERMOD modeling using normalized rate of 1 g/s is scaled to the actual emission rate of the pollutant. Modeling was performed using the representative meteorological data from the nearest station (Brookhaven/Farmingdale) for the years 2011 through 2015. The maximum impact from all the years was used for the calculations.
Scaled hourly impact ($\mu g/m^3$) = AERMOD predicted hourly ambient impact at 1 g/s ([$\mu g/m^3$]/[g/s]) x Actual emission rate
Scaled annual impact ($\mu g/m^3$) = AERMOD predicted annual ambient impact at 1 g/s ([$\mu g/m^3$]/[g/s]) x Actual emission rate

AERMOD Normalized Ambient Impact at 1 g/s	
Hourly ([$\mu g/m^3$]/[g/s])	Annual ([$\mu g/m^3$]/[g/s])
3,153.03	96.49

(3) Short-term and annual guideline concentrations specified in the NYSDEC DAR-1 AGC/SGC tables revised August 10,

Table 10
Concentrations of Volatile Organic Compounds in Groundwater Samples Collected from Remedial Wells
Bethpage Park Groundwater Containment System
Operable Unit 3 (Former Grumman Settling Ponds)
Bethpage, New York

Notes and Abbreviations:

(1) Water samples collected by Arcadis on the dates shown and submitted to a NYSDOH ELAP certified laboratory for VOC analyses per NYSDEC ASP 2005, Method OLM 4.3 (prior to September 1, 2014) and per USEPA Method 8260C (after September 1, 2014). Results validated following protocols specified in Sampling and Analysis Plan in the DRAFT Bethpage Park Groundwater Containment System OM&M Manual (Arcadis 2016). See previous quarterly reports for historical analytical results.

(2) "Total VOCs" represents the sum of individual concentrations of the VOCs detected.

(3) "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethene; vinyl chloride; cis-1,2-dichloroethene; trans-1,2-dichloroethene; benzene; toluene; and xylenes-o,m, and p.

(4) Samples collected during Second and Third Quarters 2016 were analyzed for 1,4-Dioxane using USEPA Method 8270D SIM. Samples collected during Fourth Quarter 2016, First Quarter 2017 and Second Quarter 2017 were analyzed for 1,4-Dioxane using USEPA Method 522.

	Indicates an exceedance of an SCG.
700	Bold data indicates a detection.
ASP	analytical services protocol
ELAP	Environmental Laboratory Approval Program
NYSDEC	New York State Department of Environmental Conservation.
NYSDOH	New York State Department of Health
SCGs	standards, criteria, and guidance values
SIM	selected ion monitoring
VOC	volatile organic compound
µg/L	micrograms per liter
--	not analyzed
NE	not established
J	Compound detected below its reporting limit; value is estimated.
< 5	Compound not detected above its laboratory quantification limit.
