

DRILLING NOTICE

Elm Drive and Elbow Lane

June 10, 2014

Please be advised that the Navy, in conjunction with the New York State Department of Environmental Conservation, will be conducting drilling activities in your area. The work will be conducted on Town of Hempstead Right-of-Way to test groundwater at depths of 200 to 800 feet below ground surface. Volatile organic compounds (VOCs) have been detected in groundwater in the general area and this work is part of a continuing investigation of potential migration of these compounds.

The work will involve drilling to depths of approximately 800 feet. During the drilling, soil mixed with a natural drilling fluid (bentonite) will be removed from the borings. The removed materials will be containerized and transported to Navy Property off of South Oyster Bay Road. Groundwater samples will be collected and submitted to a certified laboratory to test for the presence of VOCs.

Because of the depth of the work and the need to install multiple wells in this general vicinity, the drill rig and support vehicles will be present at this specific location for approximately six to ten weeks. Once the work is completed, the area will be returned to current conditions.

Work hours will be Monday through Friday from 8:00 AM to 4:30 PM. However, periodically during drilling operations extended work hours and weekend activities will be required. If it is necessary to visit the drill site during other hours or on the weekends, the operation of the drill rig will not occur before 8AM.

The onsite contractors for the Navy will be Delta Drilling who will be conducting the drilling operations, and Resolution Consultants who will provide oversight.

If you require additional information, please contact:
