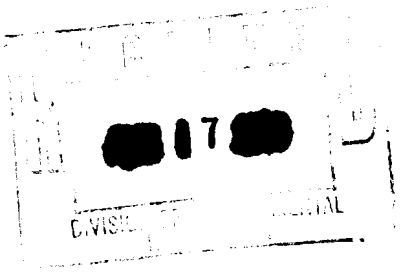
Mr. Steve Lehman, P.E. (Code 4022)
U.S. Navy Northern Division
Naval Facilities Engineering Command
10 Industrial Highway, Mail Stop #82
Lester, PA 19113-2090



SUBJECT: U.S. NAVY CONTRACT N62472-94-D-0398
DELIVERY ORDER NO. 0004
NAVAL WEAPONS INDUSTRIAL RESERVE PLANT
BETHPAGE, NEW YORK
JUNE 2000 MONTHLY OPERATIONS SUMMARY

Dear Mr. Lehman:

This letter and its attachments document the operational activities performed during the period of 1 June 2000 through 30 June 2000 at the Bethpage NWIRP Soil Vapor Extraction/Air Sparging System and presents the results of the associated sampling events. Attachment 1 contains the Monthly Operations Summary, Attachment 2 summarizes Monthly Monitoring Data, and Attachment 3 contains a plot of the influent concentrations of the four constituents and total VOCs of concern over time.

The soil vapor extraction (SVE) system operated for approximately 720 hours. The average system extraction-rate at the blower was 266 scfm at a vacuum of 1.64 inches of water. An average influent VOC level of 2.72 ppm was drawn into the treatment system. No changes were made to the valve positions at any of the wellheads. Extraction well EW-16 had very low flow rates. This is most likely due to the wells close proximity to EW-17 and the fact that EW-16 is a deep screened well and that EW-17 is a shallow screened well.

The air sparging system (AS) operated for approximately 720 hours. The average injection rate for the system at the blower was 110 scfm @ 3.82 psig. The flow rates at the injection wells at the southern portion of the site continue to be much lower than the injection wells at the northern portion of the site. The reason for this is unknown.

The maintenance activities performed for the month of June are documented in Attachment 1. Such maintenance activities include preventive maintenance of the blowers, changing of the air filters, and aesthetic maintenance of the site grounds. No moisture was detected in the extraction or injection system piping.

The results of the extracted vapor sampling, which is conducted every other week, are presented in the Vapor Monitoring Table in Attachment 2. The data includes the list of contaminants and

1000 The American Road, Morris Plains, NJ 07950
Tel: 973-630-8000 Fax: 973-630-8025

concentrations in the air stream. The concentrations of the four primary constituents of concern and the total quantity removed for the month of June 2000 and the total quantity removed are listed below:

Contaminant	June 2000 Average Daily Concentration (ppbv)	June 2000 Total Influent Flow (scfm)	June 2000 Removal (pounds)	Previous Removal (pounds)	Cumulative Removal (pounds)
1,1-Dichloroethane	0.00	266	0.00	3.35	3.35
Trichloroethene	845.0	266	3.35	70.85	74.20
Trichloroethane	510.0	266	1.99	119.79	121.79
Tetrachloroethene	1,986.0	266	9.54	298.74	308.28
Total VOCs	3,341.0		14.88	492.73	507.61

Attachment 2 also provides the total VOC concentrations from screenings at three sample locations using a photoionization detector. The pressure and vacuum readings at both the injection and extraction wells, the vacuum readings and smoke test results at the soil vapor pressure monitors, and the laboratory results of biweekly extracted vapor samples collected prior to the carbon units.

The results of the extracted vapor sampling are shown over time in Attachment 3. This graph shows that the concentrations of volatile organic compounds being pulled into the system have been fluctuating, with most of the concentrations of contaminants remaining lower than the levels at start-up for this year.

Sincerely,

Marlene Lindhardt, CHMM
Delivery Order Manager

ATTACHMENT 1
MONTHLY OPERATIONS SUMMARY
BETHPAGE NWIRP SOIL VAPOR EXTRACTION/ AIR SPARGING SYSTEM

June 2000

Bethpage NWIRP Soil Vapor Extraction and Air Sparging System
Monthly Operations Summary

Month: June 2000

Hours Operational	
Extraction System	720 hours
Injection System	720 hours
Average Extraction Rate (at blower)	266 scfm @ 1.64" Hg
Average Injection Rate (at blower)	110 scfm @ 3.82 psig
Average Influent VOC Level	2.72 ppm
Average Effluent VOC Level	0.76 ppm
Carbon Changeout	No
Condensate Volume Discharged	0 gallons
Vacuum Capture Confirmation	Yes
LEL% and O_2%	Normal

Operational Notes:

1) The soil vapor extraction system operated continuously though out the month with the exception of minor shutdowns due to maintenance activities.

2) Maintenance was performed on the blowers where the oil and filters were changed.

3) Repaired wheel on 55 gallon drum dolly.

ACTION ITEMS FOR NEXT MONTH

1) Observe vegetative growth and determine if it needs to be cut.

2) Replace ¼" plugs in extraction-system, as required.

3) Arrange for the return of the activated carbon unit that was determined to be leaking.
