1.0 INTRODUCTION

1.1 PURPOSE AND OBJECTIVE

On behalf of Steel One, LLC, (the Owner), Edgewater Environmental, Inc. (Edgewater) has prepared this Site Investigation Report to support the change of use of the south-east portion of the former Northrop-Grumman Plant 1 property adjacent to Grumman Road East. The site is located at 1-15 Grumman Road West and is identified as Tax Lots – Sect. 46, Block 323, Lots 248 & 249.

Steel One, LLC (Steel One) is contemplating recording a perpetual easement for a portion of the above-referenced property to Nassau County to be used as a recreational walking area. The deeds for the property contain a Use Restriction that can be lifted by New York State Department of Environmental Conservation (NYSDEC) (in conjunction with New York State Department of Health (NYSDOH) and Nassau County Department of Health (NCDOH)) that would permit the site to be used for this purpose. Steel One hereby requests that NYSDEC approve the use of a specific portion of the property as a recreational walking area.

The proposed recreational area is located on the southeast corner of the property. A site plan showing the proposed recreational area is provided as Figure 1. The total area of the proposed recreational area is approximately 2 acres including parking. The recreational area would be designed as a recreational walking area and consist of paved trails surrounded by landscaping. The proposed use does not contemplate direct contact with site soil or groundwater. The proposed location currently consists of parking lot and overgrown landscaping. A Northrop Grumman on-site containment (ONCT) well is located near the recreational area's footprint. Prior to 1980, the southeastern corner of Plant 1 was developed as the end of the runway adjacent to the residential dwellings on North Sheridan Avenue (see Figure 2).

Dvirka & Bartilucci Consulting Engineers (D&B) performed several rounds of environmental investigation and remediation at the Plant 1 property. D&B did not identify an Area of Concern (AOC) within or adjacent to the proposed recreational walking area location during their investigation activities. Edgewater conducted sampling in this area at the request of Steel One, which demonstrated that there are no hazardous substances or constituents of concern at the recreational walking area location and that soil samples demonstrated that the soil is below the NYSDEC's unrestricted use standards.

Based on the findings of the investigation, Steel One is respectfully petitioning the NYSDEC to approve the use of the indicated portion of the former Grumman Plant 1 property as a recreational walking area. This proposed use will not involve direct contact with site soil and groundwater. Furthermore, the proposed location of the walking area is currently used as an asphalt-paved parking lot with no evidence of former use involving hazardous waste, as has been confirmed by D&B's extensive investigation of the property. Finally, the proposed recreational walking area will provide a beneficial use to the Bethpage residents.

1.2 BACKGROUND INFORMATION AND PRIOR INVESTIGATIONS

Dvirka & Bartilucci Consulting Engineers (D&B) performed several rounds of environmental investigation and remediation at the property. D&B did not identify any Area of Concern (AOC) within or adjacent to the proposed location during their investigation activities. D&B, as part of their May 2001 Phase II Site Assessment, did advance two soil borings (E37B01 and E37B02) in a former area of stained parking lot asphalt in the vicinity but outside the footprint of the proposed recreational walking area. The approximate location of the borings is shown on Figure 1. No contaminants were detected above the then-applicable NYSDEC Recommended Soil Cleanup Objectives (RSCOs) set forth in *Technical and Administrative Guidance Memorandum (TAGM) 4046: Determination of Soil Cleanup Objectives and Cleanup Levels*. The D&B Deed Restriction letter report prepared on November 20, 2002 is provided as Appendix A.

2.0 SCOPE OF THE INVESTIGATION

2.1 AREAS AND COMPOUNDS OF CONCERNS

No areas or compounds of concern have been identified within the footprint of the proposed recreational walking area.

Edgewater recently conducted additional sampling within the proposed footprint of the recreational walking area. Six soil borings were advanced across the recreational walking area's footprint to provide general coverage of the site with no bias towards any given area since there are no known areas of environmental concern. The samples were analyzed for the NYSDEC Part 375 list of compounds.

Two soil samples were collected from each boring at depths of 1-2 feet below grade and 8-10 feet below grade. Soil samples were collected from the shallow interval, since this is the anticipated depth of disturbance from general site construction. The borings were then advanced to 10 feet below grade and samples collected at 8-10 feet, which is the anticipated maximum depth needed for installation of utilities. The borings were drilled by Laurel Environmental Associates/EPhase2 using a track-mounted *GeoProbe*. The samples were field characterized and placed in laboratory-provided sample containers by the field geologist. The samples were placed on ice and transported to the laboratory for analysis.

The samples were analyzed for the Part 375 list of compounds by American Analytical Laboratories. The samples were compared to the NYSDEC Part 375 Unrestricted Use SCOs (Soil Cleanup Objectives).

The soil samples were analyzed for the following compounds:

Compound	EPA Method
Volatile Organic Compounds (TCL + 10)	8260
Semi-Organic Compounds (TCL + 20)	8270
Polychlorinated Biphenyls	8082

Compound	EPA Method
Pesticides	8081A
2,4,5-TP (Silvex)	8151A
Metals (except mercury + hex chromium)	6010B
Hexavalent chromium	3060A
Mercury	7471
Total cyanide	9014

One QA/QC soil sample was collected per 20 soil samples for field duplicate. The laboratory analyzed the matrix spikes and duplicates samples.

Even though this investigation was performed voluntarily by the Owner, the analytical reporting was provided with ASP Category B deliverables and EQuIS Electronic Data Deliverables (EDD), which will be presented if requested.

2.2 GEOPHYSICAL SURVEY

On April 10, 2015, Laurel Environmental Associates/EPHASE2 (EP2) staff conducted the geophysical survey, which included marking clear boring locations for six proposed soil borings, marking on-site utilities, and scanning for any sub-surface anomalies.

A GSSI model Utility Scan DF with dual 300 and 800 MHz antennae Ground Penetrating Radar (GPR) system was used for the survey and consisted of a control unit, control cable, and a transducer. In the subsurface, reflections of the pulse occur at boundaries where there is a dielectric contrast (void, steel, soil type). The reflected portion of the signal travels back to the antenna and control unit and is subsequently shown on the display of the computers color video monitor for interpolation. The scan was completed from zero to 10 feet below grade over searched areas. A Radiodetection Model RD8000 Receiver and Tx10 transmitter were used in conjunction with the GPR equipment to locate and mark utilities.

2.3 SOIL

On April 13, 2015, soil samples were collected from the six borings identified on the site sketch (Figure 2). The soils samples were collected continuously from grade to 10 feet deep with samples collected at 1-2 feet below grade (beneath the asphalt pavement, where present) and at 8-10 feet deep with a *GeoProbe* operated by EP2. The duplicate sample was collected from the Boring B-2/1-2' soil sample and was designated as DUP-1.

The VOC samples were collected with a *TerraCore* sampler and placed in pre-weighed preserved vials. The samples for all other compounds were placed in two 8-ounce glass containers. All sample containers were placed on ice in a cooler, along with a trip blank. After the sampling work was completed the samples were transported to American Analytical Laboratories for analysis. EP2's geologist characterized the soil collected in the *GeoProbe* sleeves.

3.0 INVESTIGATION RESULTS

3.1 GEOPHYSICAL SURVEY

On April 10, 2015, EP2 staff conducted the geophysical survey, which included marking clear boring locations for six proposed soil borings, marking on-site utilities, and scanning for any sub-surface anomalies.

Based upon data collected during the survey, EP2 determined that the proposed boring locations were clear for drilling. Underground electric lines and storm water sewer pipes were identified in the proposed recreational walking area. Several anomalies were detected, but none were indicative of a tank or septic system; anomalies were small and non-continuous. GPR images also depicted a few areas of disturbed soil. EP2's findings are provided in Appendix B.

3.2 SOIL

None of the samples collected from the six boring locations exceeded the Part 375 Unrestricted Soil Cleanup Objectives (SCOs) for VOCs, SVOCs, Metal, Pesticides, Herbicides and PCBs. Summary tables of the analytical results are shown in Tables 1 through 4. The soil collected in the borings did not indicate any other characteristics of concern. The boring logs are provided in Appendix B and the laboratory report is in Appendix C.

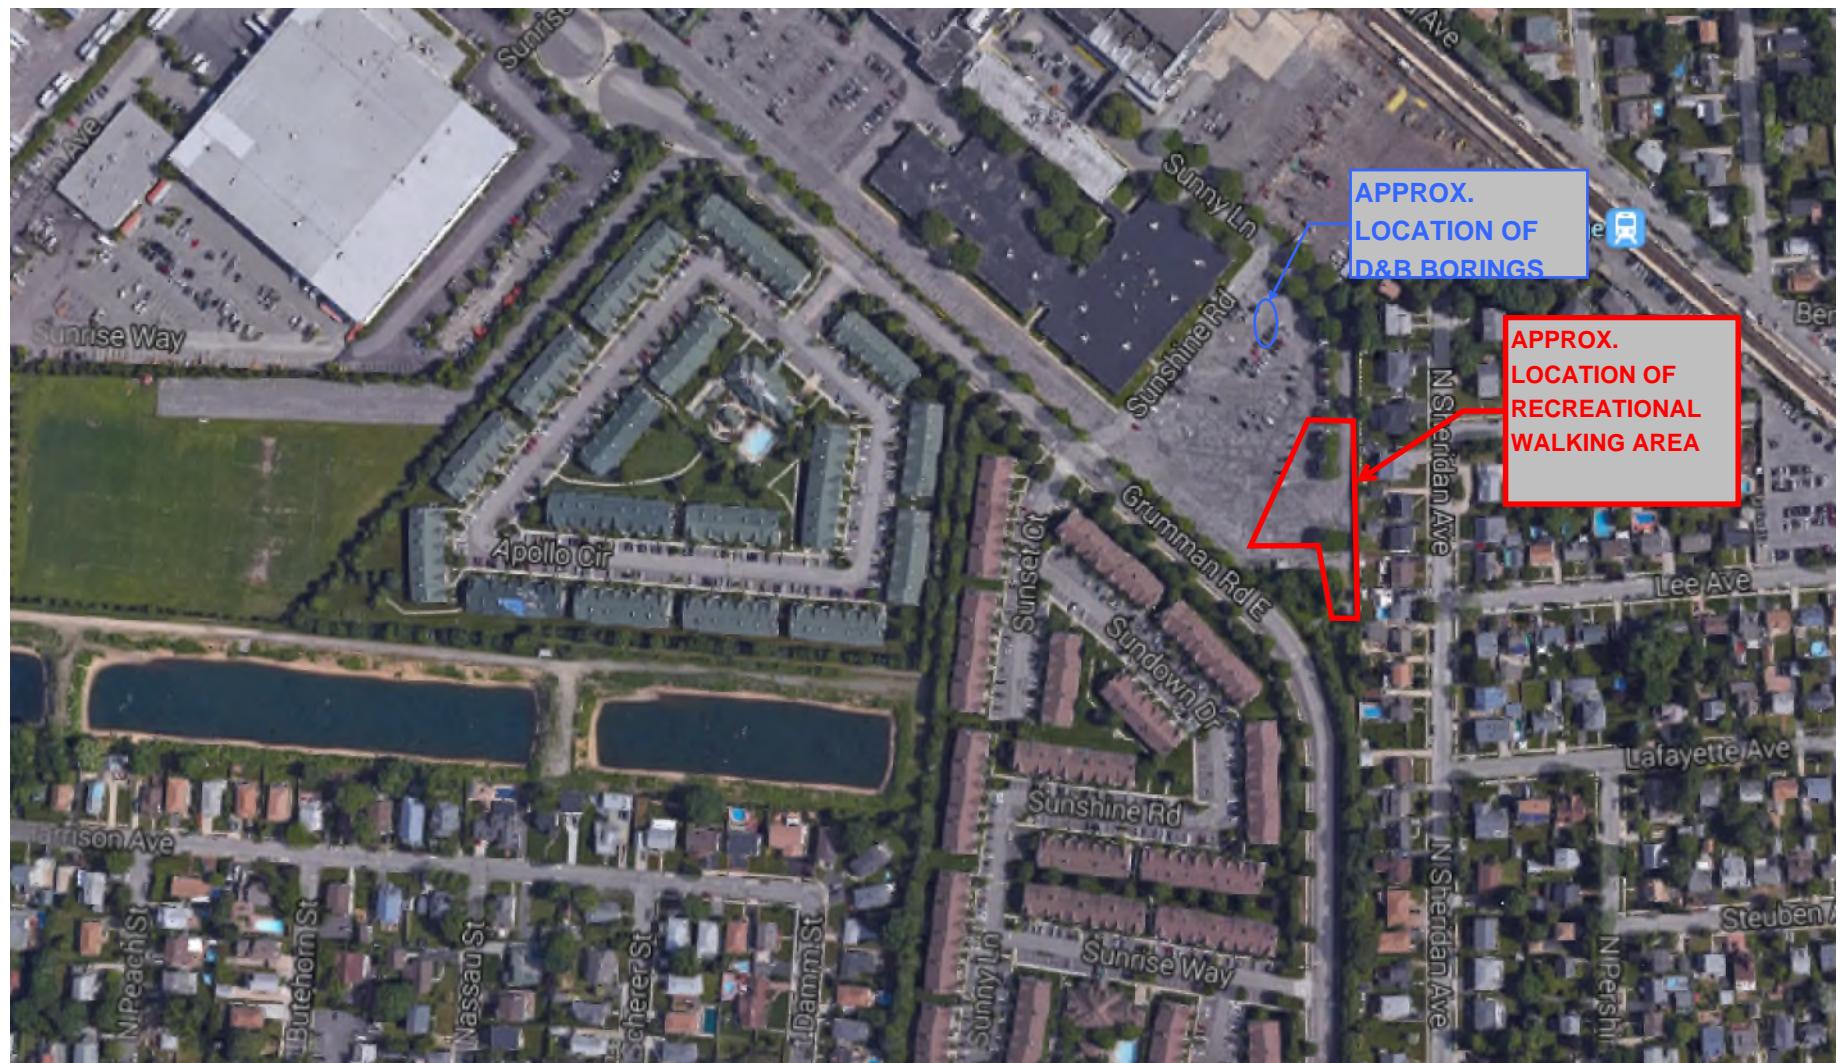

4.0 CONCLUSIONS

Based on the findings of the Site Investigation, no contamination or evidence of a release or spill was found, therefore no use restriction is warranted on the proposed recreational walking area.

Steel One LLC respectfully petitions the NYSDEC to approve use of the indicated portion of the former Grumman Plant 1 property as a recreational walking area. Upon the NYSDEC's approval and certification, the necessary documents will be prepared and executed for filing with the Nassau County Clerk to remove the Use Restriction for the area of the recreational walking area.

Re: Deed Restriction Information
Plant 1 Facility
Bethpage, New York
D&B No. 801/98-Z

Dear Mr. Leskovjan:

As requested by Northrop Grumman Corporation (NGC), Dvirka and Bartilucci Consulting Engineers (D&B) has prepared this letter report for the Plant 1 site to identify the areas on the property where the concentrations of constituents remaining in the soil exceed the recommended soil cleanup objectives (RSCOs) provided in Appendix A of the New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum (TAGM) Number 4046.

Introduction

Northrop Grumman Corporation is planning to deactivate and sell the Plant 1 facility as part of its overall Bethpage consolidation program. As previously implemented for other properties at the Bethpage facility, NGC has conducted several Environmental Site Assessments and remediation programs to facilitate the transfer of the property. A site location map of the Plant 1 facility located in Bethpage, New York, is presented as **Attachment 1**. Similarly, a site plan of Plant 1 is provided as **Attachment 2**.

As part of the environmental site assessment process, soil sample results for areas of concern (AOCs) associated with Underground Injection Control (UIC) structures were screened against the RSCO's contained in TAGM 4046 (consistent with protocol utilized by the United States Environmental Protection

Dvirka and Bartilucci

Page Two

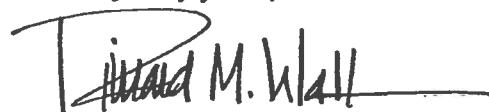

Agency and Nassau County Department of Health). However, AOCs not associated with UIC structures were screened against NYSDEC-approved comparison values based on site-specific considerations such as the intended future site use, and the fate and transport of chemical constituents detected in the soil. The NYSDEC-approved site-specific comparison values for Plant 1 were utilized to determine the scope of environmental remediation for the AOCs not associated with UIC structures at the Plant 1 facility, as documented in the report entitled, "Remediation Plan – Plant 1," dated July 2001. Since the Plant 1 site-specific comparison values are higher than the more conservative NYSDEC RSCOs, in some instances, there are several AOCs that have concentrations of constituents in the soil at the Plant 1 site that have not been excavated and exceed the NYSDEC RSCOs. Certain other AOCs have exceedances of RSCOs remaining due to the impracticality of attempting to excavate soil at substantial depth in areas beneath or adjacent to existing structures and/or retaining walls.

Exceedances of NYSDEC RSCOs

Constituents that exceeded the NYSDEC RSCOs (prior to remediation) are provided in **Table 1 of Attachment 3**. The Plant 1 soil sample results were evaluated with the remediated AOCs to determine the locations and concentration of constituents in the soil at the Plant 1 site that have not been excavated and exceed the NYSDEC RSCOs. **Table 2 of Attachment 4** summarizes the NYSDEC RSCOs exceedances in soil at the Plant 1 facility that still remain in-place (subsequent to remediation). **Attachment 5** presents several figures that collectively depict the locations of all soil borings/samples at the Plant 1 site.

If you have any questions or comments, please do not hesitate to contact Mr. Adam S. Postyn or me at (516) 364-9890.

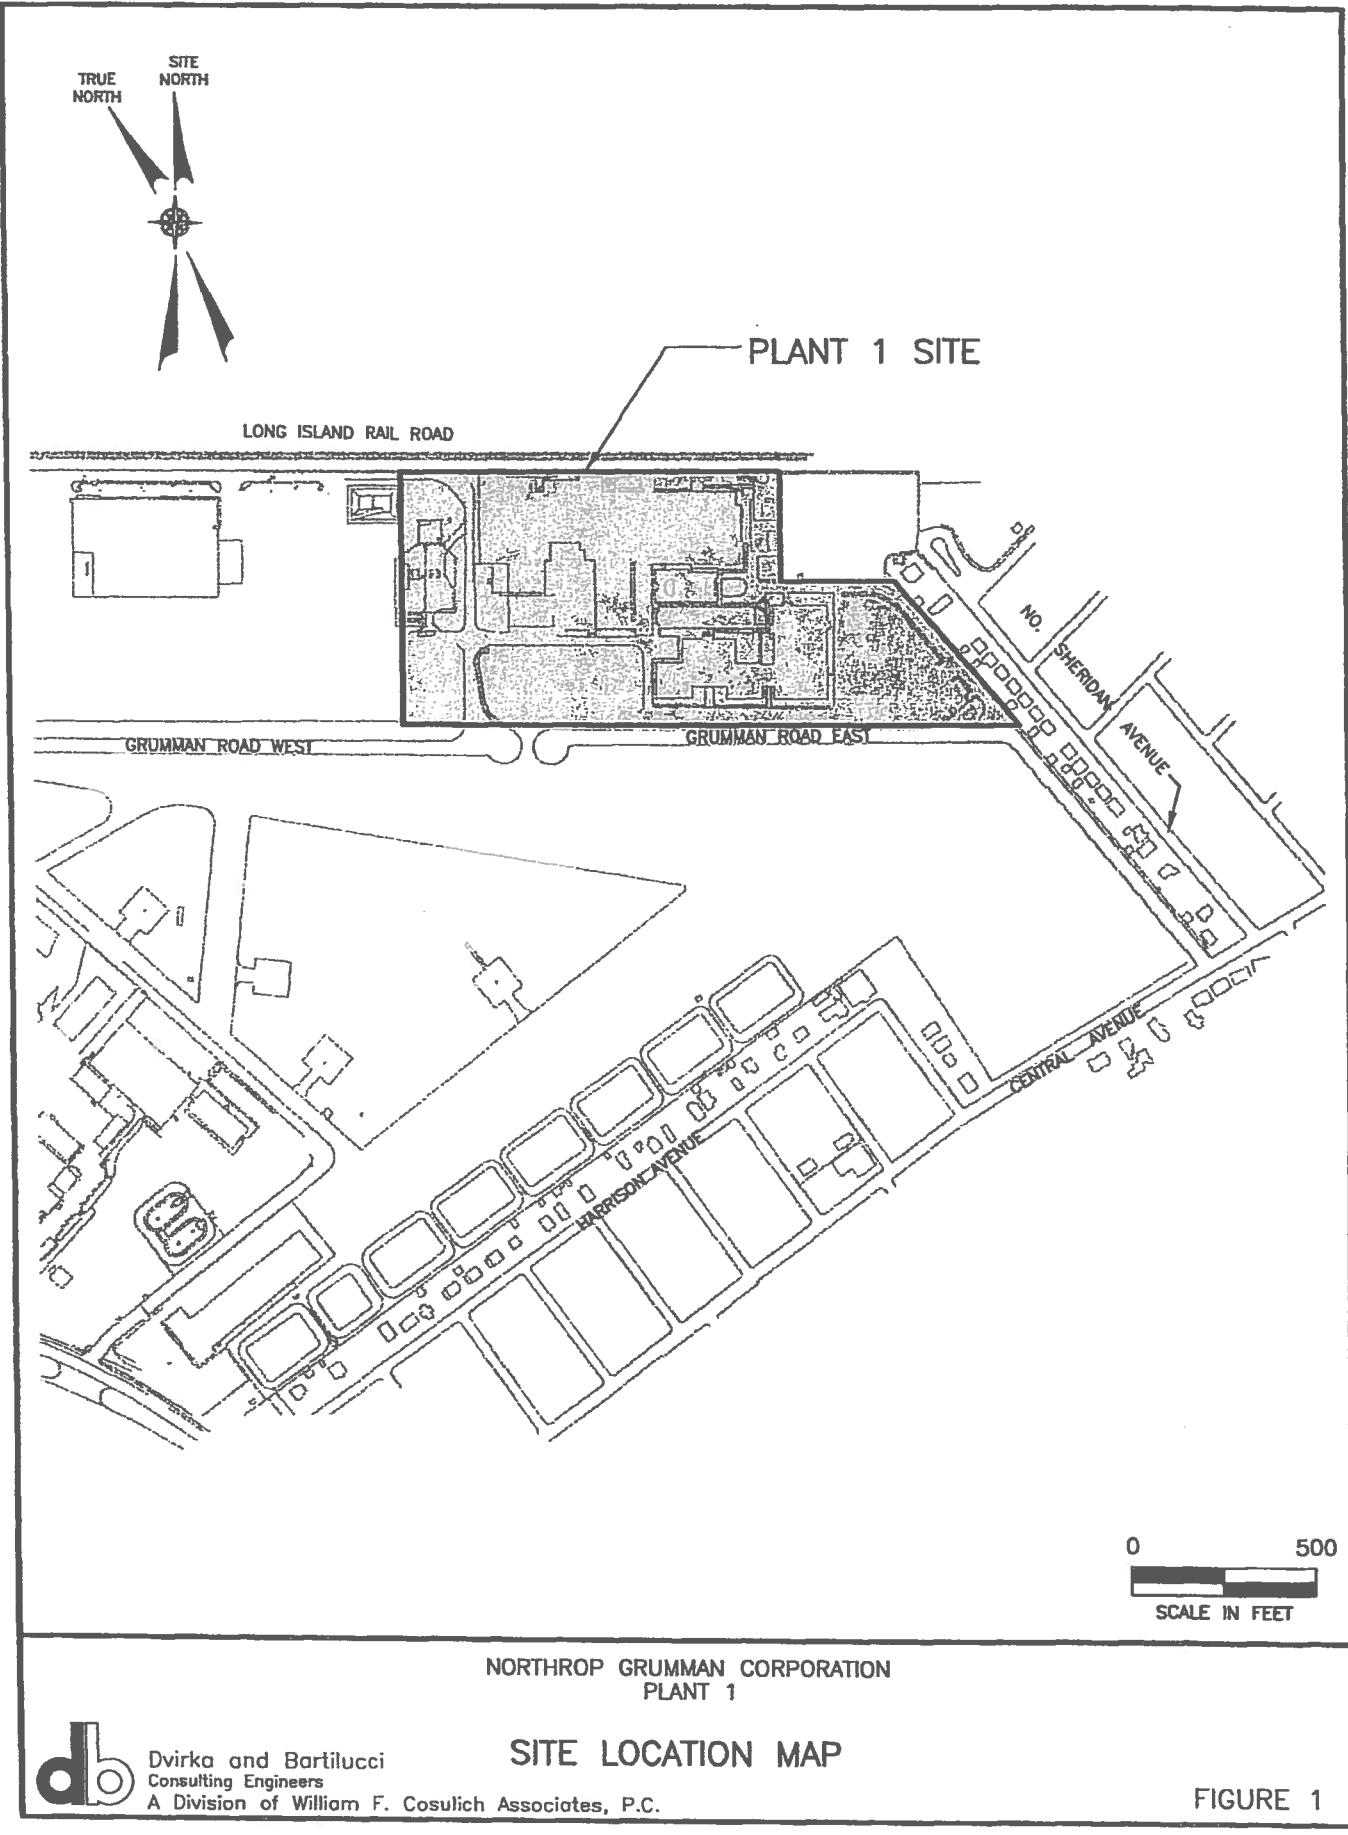

Very truly yours,

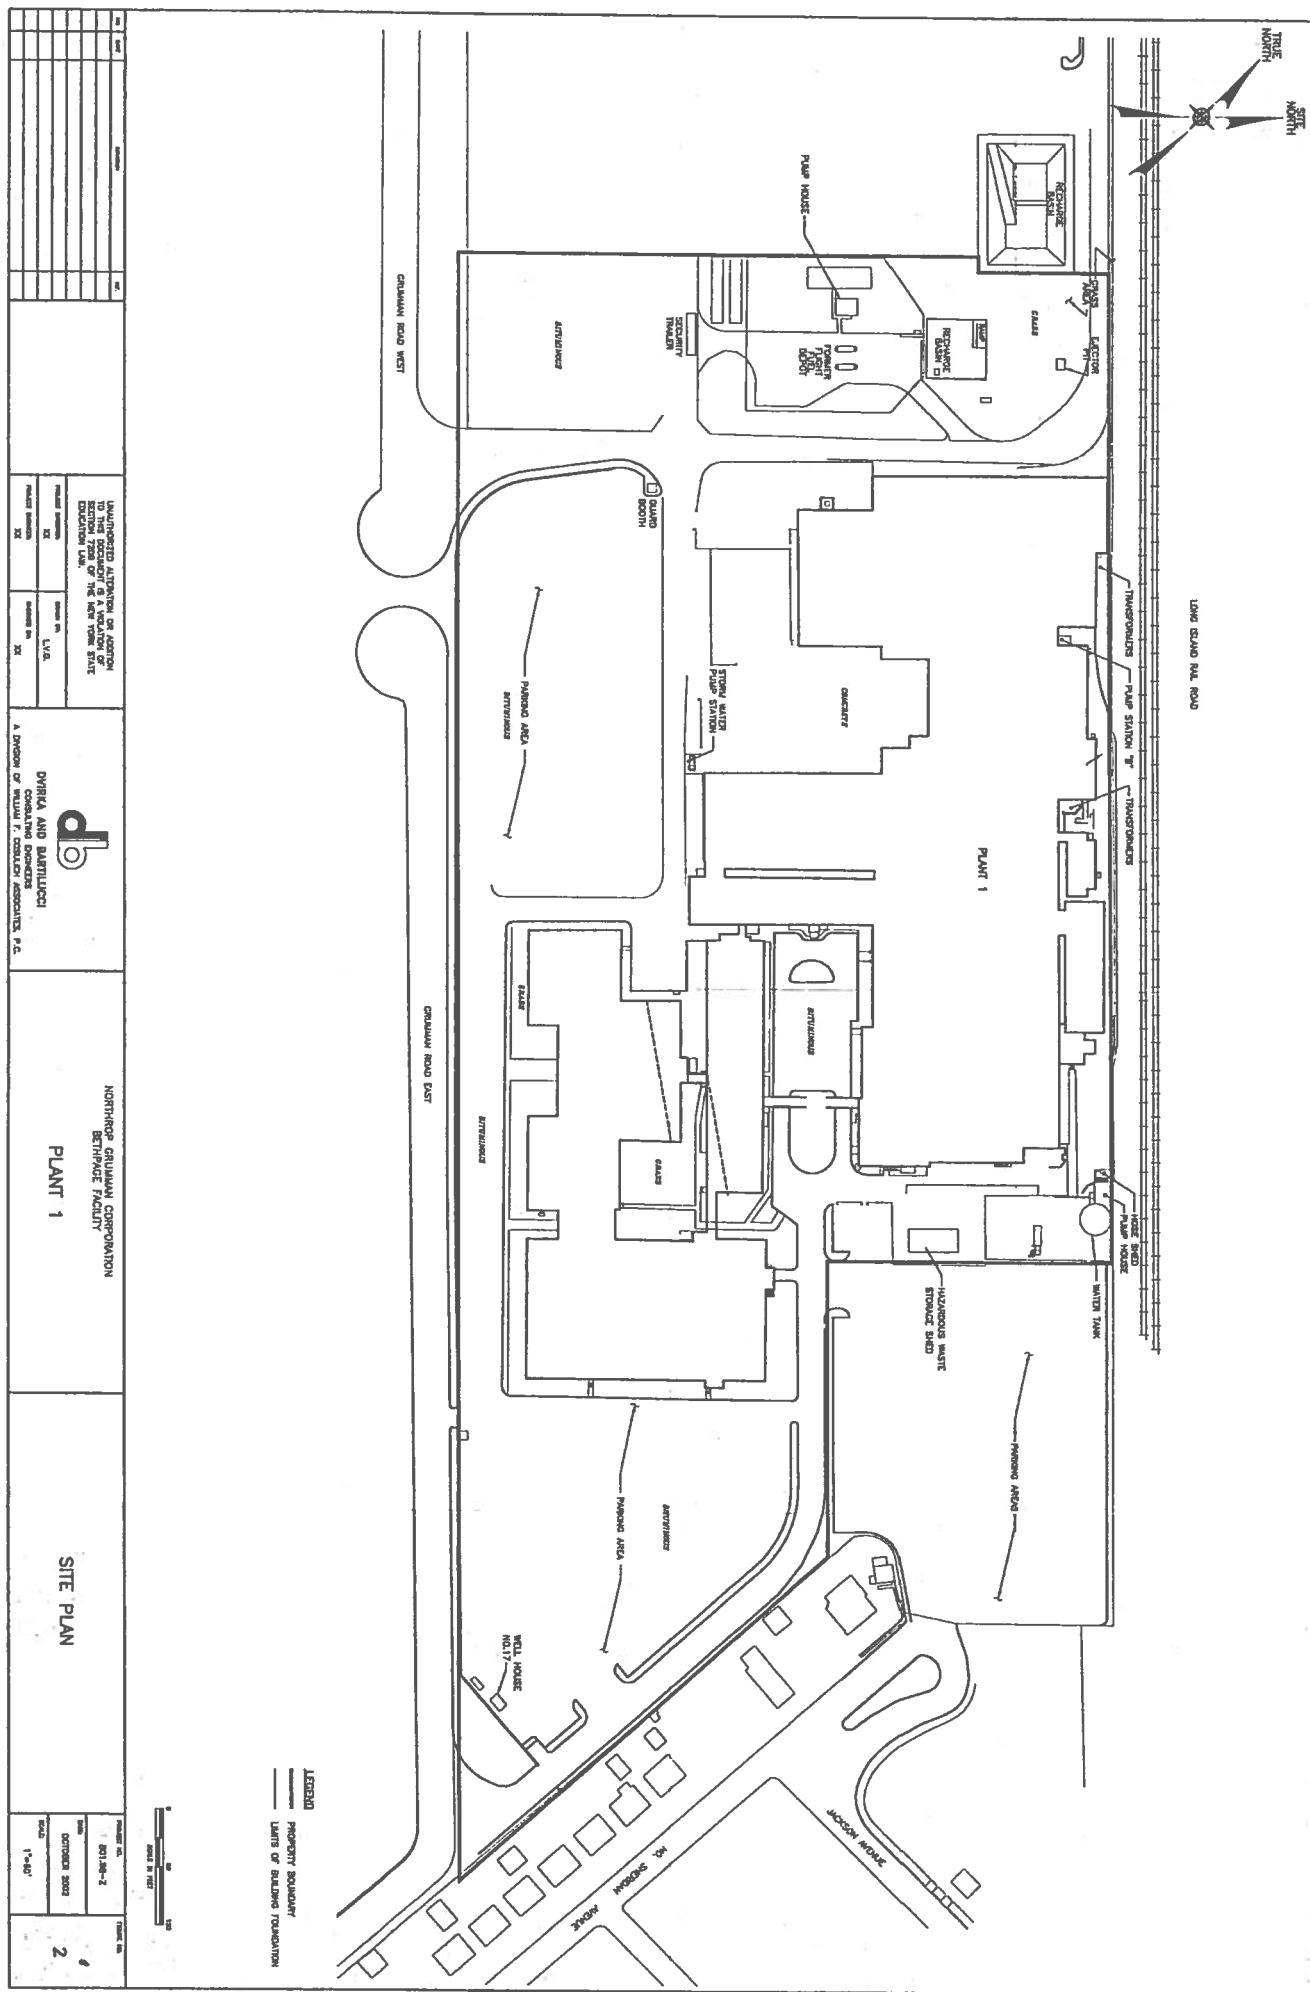

Richard M. Walka
Vice President

This detailed architectural floor plan illustrates a complex building structure, likely a university or institutional facility. The plan features numerous interconnected rooms, wings, and courtyards. Key areas include:

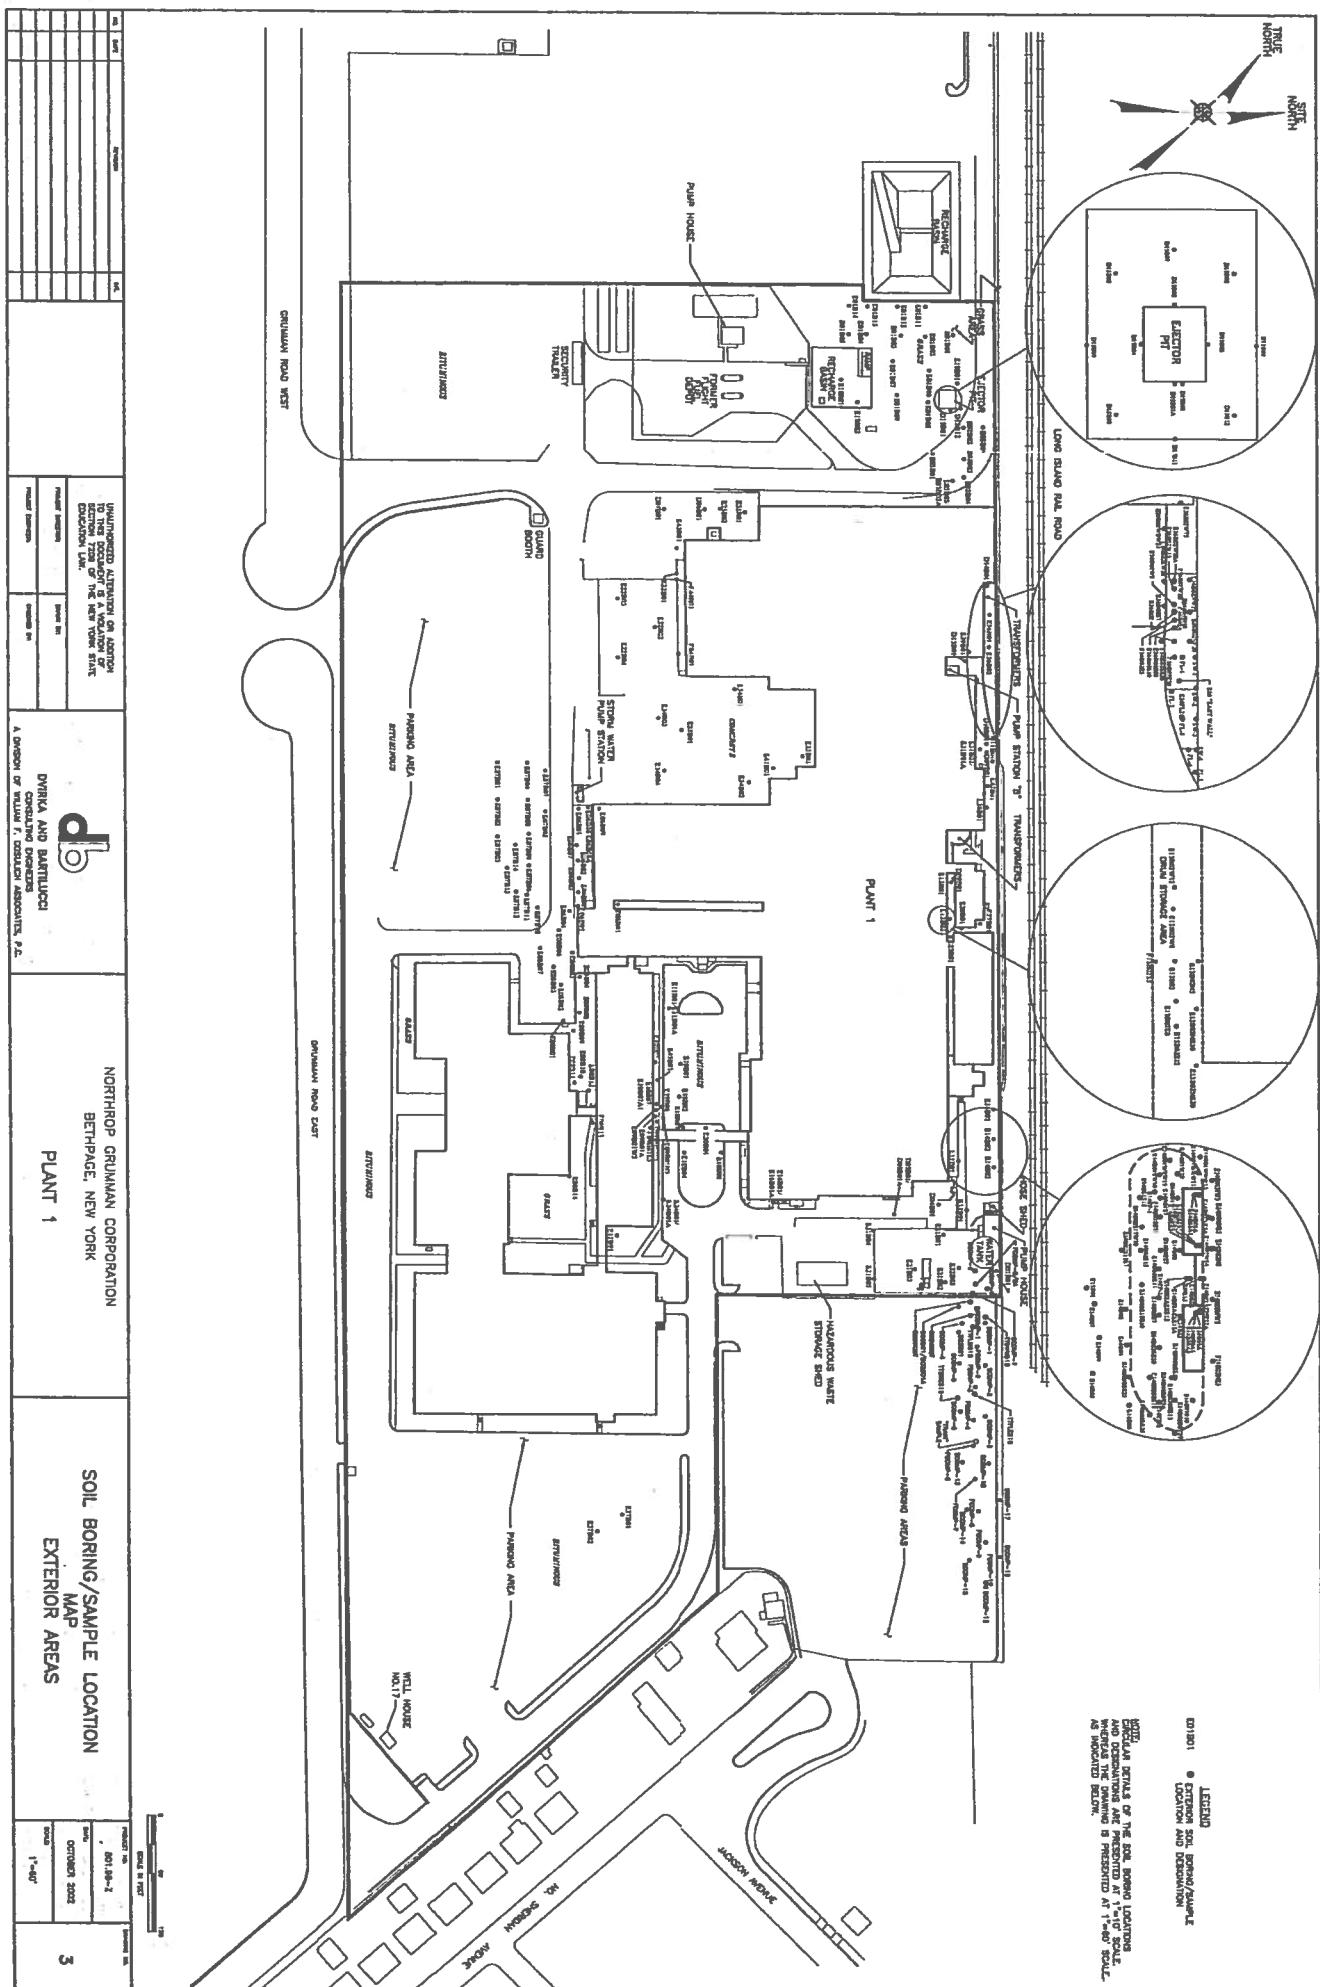

- Top Left Wing:** Contains a large lecture hall (Aula), several classrooms (e.g., Aule 1-4), and administrative offices.
- Central Courtyard:** A large open space with a fountain (Fontana).
- Bottom Left Wing:** Includes a library (Biblioteca) and various study and research facilities.
- Bottom Right Wing:** Features a large lecture hall (Aula), classrooms (e.g., Aule 1-4), and administrative offices.
- Right Side:** Shows a long corridor (Corridoio) leading to additional rooms and a staircase.
- Top Right Wing:** Includes a lecture hall (Aula), classrooms (e.g., Aule 1-4), and administrative offices.
- Bottom Right Wing:** Features a large lecture hall (Aula), classrooms (e.g., Aule 1-4), and administrative offices.

The plan also includes several circular insets providing detailed views of specific sections:

- Inset 1:** Located in the top left corner, showing a detailed view of a classroom (Aula) and surrounding rooms.
- Inset 2:** Located in the center, showing a detailed view of the central courtyard area.
- Inset 3:** Located in the bottom right corner, showing a detailed view of a lecture hall (Aula) and its adjacent rooms.
- Inset 4:** Located in the top right corner, showing a detailed view of a classroom (Aula) and surrounding rooms.

Rooms are labeled with Italian names such as Aula, Aule, Cappella, Corridoio, Biblioteca, Camera, Stanza, and various offices (Ufficio, Uffici). The plan uses dashed lines to indicate walls that are not visible from the main vantage point or to show internal room partitions.

Huntington Station, New York 11746

Re: Geophysical Survey to Clear Boring Locations, Mark Utilities, and Geoprobe to Conduct Soil Borings.
LEA Project ID# 15-175

Dear Mr. Hix,

EPHASE2, LLC was retained by Edgewater Environmental, Inc., to conduct a geophysical survey and geoprobe at 1-15 Gruman Road West, Bethpage, New York for the proposed Bethpage Walking Park. **EP2**'s objective was to markout any utilities wihtin the designated area of concern and provide one clear boring loction within each said location, as well as conduct soil borings for each said location. Clear boring locations are designated by a white circle with an 'X' through the center.

A GSSI model Utility Scan DF with dual 300 and 800 MHz antennae Ground Penetrating Radar (GPR) system was used for the survey and consisted of a control unit, control cable, and a transducer. In the subsurface, reflections of the pulse occur at boundaries where there is a dielectric contrast (void, steel, soil type). The reflected portion of the signal travels back to the antenna and control unit and is subsequently shown on the display of the computers color video monitor for interpolation. The scan was completed from zero to 10 feet below grade over searched areas. A Radiodetection Model RD8000 Receiver and Tx10 transmitter were used in conjunction with the GPR equipment to locate and mark utilities.

On April 10, 2015, **EP2** staff conducted the geophysical survey, which included marking clear boring locations for six proposed soil borings, marking on-site utilities, and scanning for any sub-surface anomalies.

Based upon data collected during the scan, **EP2** has determined that the proposed boring locations are clear for drilling. Several anomalies were detected, but none were indicative of a tank or septic system; anomalies were small and non-continuous. GPR images also depicted a few areas of disturbed soil. Utility mark outs are plotted on the site sketch attached.

On April 13, 2015, **EP2** staff conducted soil borings at six (6) exterior locations throughout the proposed Bethpage Walking Park. Sample locations were based upon **EP2's** GPR Survey and designated soil boring locations by Edgewater Environmental, Inc. Using a model 67120DT Geoprobe®, continuous soil borings were advanced from zero to ten feet below grade at boring locations designated SB-1 through SB-6. Please refer to the Site Sketch for **EP2's** GPR Survey Anomaly Locations and Soil Boring Locations.

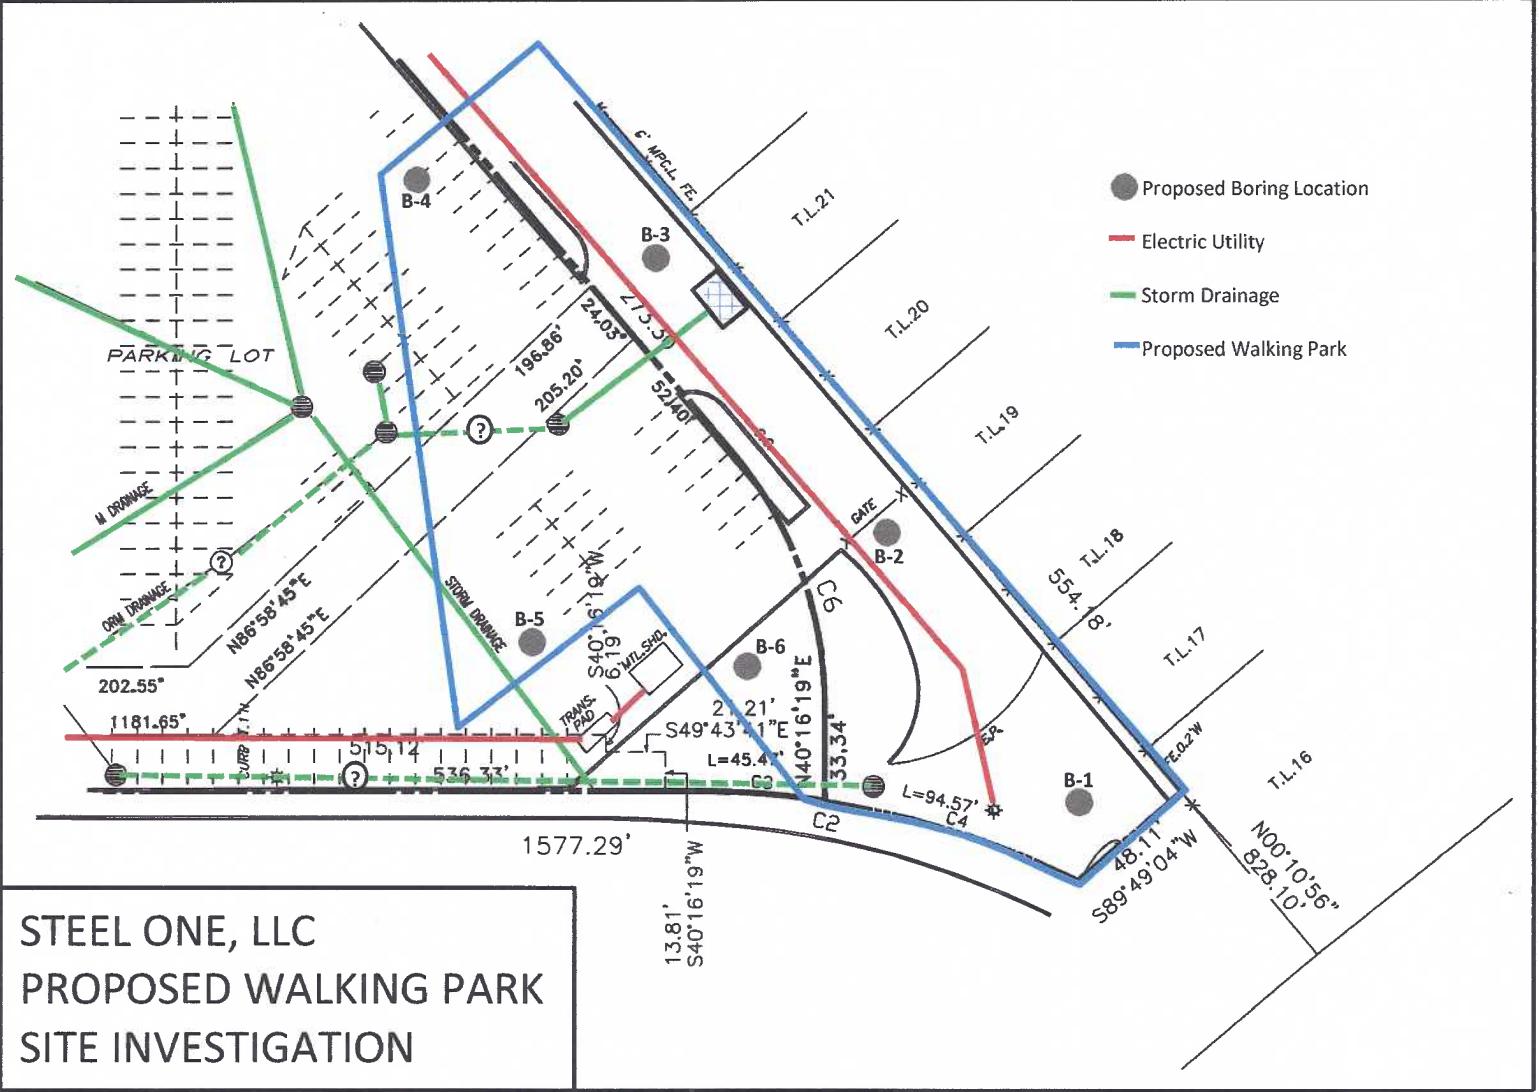

EP2 inspected the soil cores to characterize soil stratigraphy. Sample intervals are described in the attached boring logs. Generally, the on-site soils appeared to be tan to dark brown in color, poorly graded sands with gravel throughout and with a grayish tan clay layer around 7 feet below grade. Please refer to the Soil Boring Log attachment for a detailed description. Please do not hesitate to contact the undersigned should you have any questions or require anything further.

Respectfully submitted,

Albert Kim
Geologist
EPhase2, LLC.

RE: Bethpage Walking Park, Grumman Road W Order No.: 1504111

Dear Stephen R. Hix:

American Analytical Laboratories, LLC. received 15 sample(s) on 4/13/2015 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director
American Analytical Laboratories, LLC.

Sample Log-In Check List

Client Name: EDGEWATER ENVIRON Work Order Number: 1504111 RcptNo: 1

Logged by:	Lori Beyer	4/13/2015 1:30:00 PM	
Completed By:	Lori Beyer	4/13/2015 4:45:59 PM	
Reviewed By:	Karen Kelly	4/14/2015	

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition?
Custody seals intact on shipping container/cooler?
Yes No Not Present
No. Seal Date: Signed By:
5. Was an attempt made to cool the samples? Yes No NA
6. Were all samples received at a temperature of >0° C to 6.0°C? Yes No NA
7. Sample(s) in proper container(s)? Yes No
8. Sufficient sample volume for indicated test(s)? Yes No
9. Are samples (except VOA and ONG) properly preserved? Yes No
10. Was preservative added to bottles? Yes No NA
11. Is the headspace in the VOA vials less than 1/4 inch or 6 mm? Yes No No VOA Vials
12. Were any sample containers received broken? Yes No
13. Does paperwork match bottle labels?
(Note discrepancies on chain of custody)
Yes No
14. Are matrices correctly identified on Chain of Custody? Yes No
15. Is it clear what analyses were requested? Yes No
16. Were all holding times able to be met?
(If no, notify customer for authorization.) Yes No

Special Handling (if applicable)

17. Was client notified of all discrepancies with this order? Yes No NA

Case Narrative

WO#: 1504111
Date: 4/16/2015

CLIENT: Edgewater Environmental, Inc.
Project: Bethpage Walking Park, Grumman Road West,

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions noted in this Narrative discussion and/or in the QC Summary Section of the lab report with appropriate qualifiers. Additional quality control information such as surrogate recovery values for organic testing is provided as part of the analytical results. Batch MS/MSD results are provided in the QC section of the lab report unless the MS/MSD summary forms indicate one of your sample identifications. MS/MSD results relate only to the parent sample that was spiked. B-1 (1-2') was selected for MS/MSD analysis.

Soil sample results analyzed for Volatile Organics were collected using terracore samplers via SW846 Method 5035A. Volatile LCS are analyzed with preservatives - HCL/NaHSO₄/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Pesticide/PCB/Herbicide analysis are analyzed on two distinct columns. Once a target compound is qualitatively confirmed by detection on both columns and quantitation is determined to be >40% between the two columns, AAL's policy is to report the lower of the values as suggested by SW846 Method 8000C in cases where no interference exists. If in the professional judgment of the laboratory, the higher value must be utilized this is explained in the lab report.

The following parameters (if included in this report) are not offered by NY ELAP: VOA 8260 Soil; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Diisopropyl ether, Ethanol, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Isopropyl Acetate, n-Amyl Acetate, n-Butyl Acetate, n-Propyl Acetate. VOA 8260 Liquid; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Isopropyl Acetate, n-Amyl acetate, n-Butyl Acetate, n-Propyl Acetate. Pesticides 8081 Soil; DBCP. Herbicides 8151 Soil; 3,5-Dichlorobenzoic Acid, 4-Nitrophenol, Acifluorfen, Bentazon, Chloramben, DCPA, Picloram .Lachat 10-107-6-1B Ammonia in Soil, SM 2540G Total Volatile Solids, Soil TKN, Soil Organic Nitrogen, Percent Moisture, pH in non-potable water and temperature at which pH is measured, SM 4500-SO₃ B Sulfite in Liquid, Total Sulfur in Soil, Acid Soluble Chloride by ASTMC1152, Water Soluble Chloride by ASTMC1218, Chlorine Demand by SM 2350 B, Total Residual Chlorine in Liquid and Nitrate-Nitrite, Nitrogen in non-potable water and Reactivity to

Definition Only

WO#: 1504111
Date: 4/16/2015

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports

ND - Not detected at the reporting limit/Limit of Quantitation

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <5x the blank value as artifact.

E - The value is above the quantitation range

D - Analyte concentration was obtained from diluted analysis or from analysis using reduced sample volume.

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.

LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.

LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accuracy.

m - Analyte was manually integrated for GC/MS.

+ - Concentration exceeds regulatory level for TCLP
