Bayer MaterialScience LLC
125 New South Road, Hicksville, New York
Phase 2 Operable Unit 4 Remedial Activities
December 16, 2014 Weekly Construction Coordination Meeting Summary
Weekly Progress Report #15 (December 8, 2014 – December 12, 2014)

This memorandum summarizes items discussed during the December 16, 2014 weekly construction coordination meeting, including work performed during the previous week, in connection with the Phase 2 Operable Unit 4 (OU4) remedial activities at the above-referenced Site. The remedial activities are being implemented by Bayer MaterialScience LLC's (Bayer's) remedial contractor (Posillico) with onsite construction/engineering oversight provided by ARCADIS. The work activities during the reporting period were as observed by Gregory McDermott of ACRADIS.

MEETING ATTENDEES

The following personnel attended the weekly construction coordination meeting:

- Steven Scharf – NYSDEC
- Julia Schneider – Cashin Spinelli & Ferretti, LLC (CSF)(representing the Town of Oyster Bay)
- Scott Krall – Bayer
- John Brussel – ARCADIS
- Gregory McDermott – ARCADIS
- Chris Hurst – Posillico

- Lee Kaplan – Posillico

HEALTH AND SAFETY MOMENT

- While onsite for the meeting, ARCADIS observed the clean fill truck drivers opening their box roll tarps immediately upon entering the site, which was in close proximity to overhead power and telecommunication lines. The tarps were fully retracted by the time the drivers passed under the overhead lines, but the potential existed for the drivers to contact the lines if they opened the tarps slightly later or diverted somewhat to avoid trucks parked waiting to pick up manifests before site departure. The potential "near miss" was discussed with the entire project team during the meeting. Posillico agreed to notify the drivers that they must cover/uncover their loads while in safe range from (i.e., after passing beyond) the overhead lines.

SAFETY/SAFE WORK PRACTICES

- Posillico indicated that no incidents have occurred this week and that work has proceeded safely.

AIR MONITORING

- PES continued community air monitoring in accordance with the project-specific Community Air Monitoring Plan (CAMP) during this monitoring period. No exceedances of air monitoring action levels were recorded during this monitoring period.

ACTION ITEMS OUTSTANDING FROM PREVIOUS MEETING

- There are no outstanding action items from previous meetings.

COMPLETED WORK / WORK-IN-PROGRESS

Work activities performed by Posillico and its subcontractors during this period consisted of the following:

- Completed removal of Administration Building slab and footers on December 9, 2014.
- Completing test pits within the Administration Building footprint for ARCADIS to collect sub-slab soil samples for laboratory analysis for polychlorinated biphenyls (PCBs), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and inorganic constituents listed in 6 NYCRR Part 375-6.8(b) as described in the *Remedial Design Addendum* (ARCADIS, August 2014)(RDA). ARCADIS collected soil samples from the 0-0.2 foot interval at sampling locations SB-337 through SB-342 on December 10, 2014. ARCADIS collected subsurface soil samples (0.5-2 foot interval) from sampling locations SB-337 through SB-342 on December 12, 2014 when 2-foot deep test pits were

excavated by Posillico. The samples were submitted to Pace Analytical Services located in Melville, New York for analysis (for samples from the 0-0.2 foot interval) or archive (for samples from the 0.5-2 foot interval).

- Collecting samples to characterize an additional 2,000 cubic yards (CY) of general fill (run-of-bank sand/gravel) from the offsite clean fill source (Beth Moses Cemetery [BMC] located in West Babylon, New York) on December 12, 2014. Posillico collected two sample sets (each set representing 1,000 CY of backfill), with each set including one composite sample for SVOCs, inorganics, PCBs, and pesticides, and two discrete samples for volatile organic compounds (VOCs) in accordance with the sampling requirements in Table 5.4(e)10 of the NYSDEC document titled, "DER-10 Technical Guidance for Site Investigation and Remediation" (DER-10). ARCADIS observed the sampling activities at the fill source. Posillico submitted the fill samples to York Analytical Laboratories, Inc. for analysis. These new samples and previous samples provide characterization data for up to 21,000 CY of general fill.
- Collecting samples on December 12, 2014 to characterize topsoil from the source proposed by Posillico (Pinelawn Cemetery located in West Babylon, New York). Posillico collected one sample set representing the first 1,000 CY of topsoil to be imported. This included two composite samples for SVOCs, inorganics, PCBs, pesticides, and total organic carbon (TOC), and seven discrete samples for VOCs. Sampling was performed in accordance with the requirements in Table 5.4(e)10 of DER-10. ARCADIS observed the sampling activities at the topsoil source.
- Completing test pits at two sampling locations within the eastern portion of Excavation Area 7C (sampling locations V-RD-276 and V-RD-279, which are within the eastern portion of the material staging area footprint) on December 12, 2014. The test pits were excavated through native soil that was exposed following removal of that portion of the staging area liner system, including the underlying cushioning sand layer. ARCADIS collected verification soil samples from the 1-2 foot and 2-4 foot depth intervals of each test pit. The soil samples were submitted to Pace Analytical Services located in Melville, New York for laboratory analysis for PCBs.
- Continuing to perform pre-excavation, post-excavation, post-backfill, and soil cover system topographic survey activities.
- Continuing removal of soil from Phase 2 OU4 "B" and "C" Group excavation areas with PCB concentrations between 10 parts per million (ppm) and 50 ppm or arsenic at concentrations >16 ppm for offsite disposal as a non-hazardous waste. Approximately 733 cubic yards (CY) of soil were removed from Areas 17B-2, 24C, and 27C during this reporting period. Approximately 58% of these areas have been excavated as of the end of this reporting period, and the soil from these areas has been stockpiled onsite.

- Completing the removal of soil from Phase 2 OU4 “C” Group excavation areas with PCB concentrations ≥ 50 ppm for offsite disposal as a Toxic Substances Control Act- (TSCA-) regulated PCB waste/New York State (NYS) listed hazardous waste. Approximately 33 CY of soil were removed from Area 6C and stockpiled in the material staging area during this reporting period. This completed the removal of soil containing PCBs at concentrations > 50 ppm. The soil from these areas was stockpiled onsite awaiting offsite transportation and disposal.
- Continuing to load and transport non-hazardous waste soil for offsite disposal at the Gloucester County Landfill (GCL) located in Swedesboro, New Jersey. Approximately 1,746 tons of non-hazardous waste soils were transported to GCL for disposal during this reporting period. Approximately 80% of the total estimated volume of non-hazardous waste soil for this project had been transported to GCL by the end of this reporting period.
- Continuing loading of TSCA-regulated PCB waste/NYS listed hazardous waste soil offsite for disposal at the Chemical Waste Management (CWM) Chemical Services LLC landfill located in Model City, New York. Approximately 211 tons of TSCA-regulated PCB waste/NYS hazardous waste soil were transported to CWM for disposal during this reporting period. Approximately 75% of the total estimated volume of TSCA-regulated PCB waste/NYS hazardous waste soil for this project had been transported to CWM for disposal by the end of this reporting period.
- Continuing to backfill Phase 1 OU4 “B” Group and Phase 2 OU4 “C” Group excavation areas using approximately 536 CY of imported clean backfill from BMC during this period. The imported clean backfill was placed in approximately one-foot loose lifts and compacted. In-place compaction testing was performed on each lift at a minimum frequency of one sample per 2,500 square feet (SF), as required by the RDA, by Posillico’s compaction testing subcontractor, MT Group.
- Continuing installation of the site-wide soil cover system and demarcation layer below the system. Approximately 400 CY of imported clean backfill from BMC were placed and compacted during this reporting period to establish the 8-inch base of the soil cover system. Compaction testing was performed in accordance with the RDA, by MT Group. Approximately 28% of the 8-inch cap base had been completed by the end of this reporting period.
- Continuing erosion/sedimentation control measures inspection, maintenance, and documentation.
- Continuing routine air monitoring in accordance with the project-specific CAMP. The air monitoring was performed by PES.

PROPOSED WORK ACTIVITIES

Posillico’s two-week “look ahead” schedule is included as Attachment A and summarized below:

- Mobilize additional equipment, as needed, for project earthwork.
- Remove additional soil from the non-hazardous Phase 2 OU4 “C” Group excavation areas. Soil from these areas will be staged within the excavation footprints pending offsite transportation and disposal at GCL.
- Continue loading and transporting existing non-hazardous waste soil piles for disposal at GCL.
- Continue loading and transporting TSCA-regulated PCB waste/NYS hazardous waste soil piles for disposal at the CWM Model City landfill.
- Continue collecting samples from the BMC in accordance with DER-10, and continue importing clean fill material pending receipt of acceptable sample results.
- Continue backfilling and in-place compaction testing of the existing Phase 1 and Phase 2 OU4 excavation areas.
- Continue installation of site-wide soil cover system.
- Continue erosion and sedimentation control measures inspection, maintenance, and documentation.
- Continue air monitoring in accordance with the CAMP.

OPEN DISCUSSION

- ARCADIS notified the meeting participants that a resident contacted the NYSDEC on December 12, 2014 stating that trucks leaving the site were tracking soil onto New South Road. ARCADIS and Posillico indicated that the soil tracked offsite was from trucks hauling clean fill material (not from the trucks transporting waste for offsite disposal). It was discussed that the trucks hauling impacted soil passed through a decontamination pad where tires were washed prior to the trucks departing the site. It was also discussed that trucks delivering clean fill to the site were not subject to the tire washing in the decontamination pad because the trucks were only travelling over clean material. The tires of those trucks were rinsed, as needed, on the site driveway near the decontamination pad. In response to the resident’s telephone call, Posillico started street sweeping the site entrance and New South Road on a daily basis.
- ARCADIS discussed the removal of soil from Excavation Area 13A-1 to depths below the target removal depth presented in the RDA. ARCADIS indicated that visually discolored/stained soil exhibiting an odor was noticed in part of the excavation bottom at 12 feet below ground surface. The

meeting participants discussed removing the visually discolored/stained soil and stockpiling it separately (in a rolloff waste container or on polyethylene sheeting) for waste characterization sampling. The post-excavation waste characterization samples would be used to determine the nature/chemical composition of the impacted soil and to profile the soil for offsite disposal. It was discussed that no additional confirmation samples were needed because the additional excavation would result in the removal of the impacted material and the excavation had already been extended below the 10-foot cut-off depth specified in the Record of Decision. The NYSDEC acknowledged the proposed approach and provided verbal approval to proceed.

- The call participants discussed the laboratory analytical results for the PCB soil delineation/confirmation samples collected in the Long Island Railroad (LIRR) corridor. The results were as summarized in a December 12, 2014 letter to the NYSDEC. Posillico indicated that it would coordinate, as needed, with LIRR for the proposed soil excavation activities extending beyond the fence line.
- ARCADIS discussed the laboratory analytical results for the soil samples that were collected from within the Administration Building footprint (below the concrete slab on grade) after the building was demolished and the slab was removed. ARCADIS commented that lead was identified in the blind duplicate sample collected from sampling location SB-341(0-0.2') at a concentration of 1,100 ppm, which slightly exceeds the 1,000 ppm NYSDEC commercial use soil cleanup objective (SCO), but that lead was only identified at a concentration of 116 ppm in the parent sample. Based on the difference between these results, ARCADIS requested that the laboratory re-analyze the blind duplicate sample using the remaining soil sample volume retained at the laboratory. All other analytical results for the sub-slab soil samples collected with the Administration Building footprint were below project soil cleanup levels.
- ARCADIS informed the NYSDEC that the Administration Building demolition permit was closed out by the Town of Oyster Bay Building Department on December 15, 2014.
- ARCADIS informed the NYSDEC that a truck (dump trailer) loaded with TSCA-regulated PCB waste/NYS hazardous waste was rejected by the CWM-Model City landfill because the soil within the trailer was too wet for landfill acceptance. The truck returned to the site with the soil after being rejected. Based on the landfill rejection, Posillico directed two additional trucks that were enroute and loaded with TSCA-regulated PCB waste/NYS hazardous waste soil return to the site and offload into the material staging area. ARCADIS and Posillico informed the NYSDEC that cement kiln dust would be mixed in to solidify the soil prior to further shipments from the site.
- ARCADIS notified the NYSDEC that a grading plan would be prepared for the southeastern section of the site to: (1) facilitate backfilling by Posillico by providing grade control points; (2) promote drainage

by providing a gentle slope toward the sumps (to prevent water ponding); and (3) save on the amount of imported fill necessary to backfill excavations and construct the soil cover system.

- ARCADIS and Posillico discussed with the NYSDEC an alternative to placing and compacting clean run-of-bank fill material from BMC into the bottom of the existing rainwater runoff sumps along the eastern site boundary (Sumps 1 through 4 as shown in the RDA). The imported fill is slightly less permeable than the existing soil at the site and may limit infiltration. ARCADIS indicated that it would evaluate alternatives for modifying the soil cover system within the bottom portion of the sumps (e.g., potentially provide a minimum 1-foot thick layer of washed stone) to promote drainage. ARCADIS indicated that the proposed soil cover system modification for the sump bottom would be provided to the NYSDEC once the plan is developed.
- ARCADIS discussed plans for decommissioning three subsurface “vaults” that were identified earlier in the project during brush/vegetation clearing. These include a 9.5-foot deep water valve pit (located mid-way between former Plant 2 and 3 buildings) and two 4-foot deep former pull boxes for electrical cable (one located east of Excavation Area 3B and one located west of Excavation Area 11C). The plans involve removing steel plates covering the vaults and recycling the steel, removing the steel water pipes/valves from the water valve pit and recycling the steel, removing the switches from the water valve pit and managing them accordingly, backfilling the vaults with either washed stone or imported clean soil, removing the concrete/block walls to a depth of 2 feet below the surrounding ground surface, and extending the soil cover system over the vaults.
- ARCADIS discussed that two small soil/construction debris mounds (containing approximately 6 CY of material combined) were identified during site clearing. ARCADIS commented that Posillico collected a composite sample (sample SM-SC-1C) to characterize the mounds. The sample was submitted for laboratory analysis for the same suite of constituents analyzed earlier in the Phase 2 OU4 remedial project to pre-characterize soil for offsite disposal at the GCL. This suite of constituents was selected because it would allow for: (1) evaluation of potential onsite re-use of the materials as subsurface fill (i.e., if concentrations were less than site-specific action levels [SSALs]); or (2) characterization for offsite disposal at GCL. Based on review of the laboratory analytical results, the concentrations of PCBs (0.43 ppm) and arsenic (15.4 ppm) were below the respective SSALs (10 ppm and 16 ppm). However, cadmium was identified in the composite sample at a concentration of 64.3 ppm, which exceeds the 60 ppm SSAL. Therefore, the materials in the mounds will be transported to GCL for disposal.

ACTION ITEMS

- Bayer and ARCADIS will prepare a letter or e-mail correspondence to the NYSDEC that summarizes the sub-slab soil sampling performed within the footprint of the Administration Building and presents a plan for restoring the area.

- Posillico will coordinate with LIRR (as needed) for soil removal to be performed beyond the fence line near the property boundary shared by Bayer and LIRR.

ATTACHMENTS

Weekly Air Monitoring Report

**COMMUNITY AIR MONITORING WEEKLY REPORT
(WEEK ENDING 12/12/14)**

**BAYER MATERIALSCIENCE LLC.
OU4 REMEDIAL ACTION – NYSDEC SITE #130004
125 NEW SOUTH ROAD, HICKSVILLE, NEW YORK**

This report summarizes the results of the community air monitoring performed by Preferred Environmental Services (PES) from December 8, 2014 to December 12, 2014 in connection with the implementation of the OU4 remedial action by Posillico Environmental (Posillico) and its subcontractors, on behalf of Bayer MaterialScience LLC. (Bayer) at the Bayer site in Hicksville, New York (the "site").

A. AIR MONITORING ACTIVITIES

Air monitoring activities were performed in accordance with the Community Air Monitoring Plan (CAMP) included as Appendix D to the New York State Department of Environmental Conservation (NYSDEC) approved Remedial Design (ARCADIS, February 2013) for the above referenced site. Air Monitoring was performed at stations that were labeled with the following IDs:

- UP = Upwind
- DN1 = Downwind 1
- DN2 = Downwind 2
- DN3 = Downwind 3

The daily locations of the air monitoring stations are shown on the site maps included in Attachment 1. CAMP monitoring during intrusive activities commenced on December 8, 2014 and continued through December 12, 2014. Please note that no CAMP activities were conducted on December 9, 2014 or December 10, 2014 due to rain and snow.

B. AIR MONITORING RESULTS

No volatile organic compounds (VOCs) or particulates (PM-10) were measured above the action levels in the CAMP for the above-referenced monitoring period. The action levels are 5 parts per million (PPM) above background for VOCs and .150 milligrams per cubic meter (mg/m³) above background for PM-10. The range of VOCs and PM-10 concentrations measured during this monitoring period (15 minute time-weighted averages) are summarized below.

Monitoring Station	VOC Results (PPM)		PM-10 (mg/m ³)	
	Minimum	Maximum	Minimum	Maximum
UP	0.0	0.2	0.002	0.022
DN1	0.0	0.1	0.007	0.021
DN2	0.0	0.0	0.000	0.025
DN3	0.0	0.0	0.000	0.030

The VOC and PM-10 data collected for the week are plotted on the graphs included in Attachment 2. A separate graph is provided for each monitoring station and each graph presents the full set of 15 minute time-weighted averages (TWA) for VOCs and PM-10 for that station. The raw data files from the individual monitors and meteorological data from the weather station are included in Attachment 3.

Please do not hesitate to contact Daniel Prisco-Buxbaum (PES CAMP Monitor) at 516-987-2472, Gregory McDermott (ARCADIS Onsite Construction Oversight) at 516-993-1995 or Andrew Enigk (ARCADIS Assistant Project Manager) at 315-671-9548 if you have any questions or need additional information regarding this report.
