Bayer MaterialScience LLC
125 New South Road, Hicksville, New York
Phase 2 Operable Unit 4 Remedial Activities
January 7, 2015 Weekly Construction Coordination Meeting Summary
Progress Report #17 (December 22, 2014 – January 2, 2015)

This memorandum summarizes items discussed during the January 7, 2015 weekly construction coordination meeting and summarizes work performed during the two preceding weeks (December 22, 2014 through January 2, 2015) in connection with the Phase 2 Operable Unit 4 (OU4) remedial activities at the above-referenced Site. No remedial construction was performed on December 25 to 26, 2014 or on January 1, 2015 in observance of the Christmas and New Year's holidays.

The remedial activities are being implemented by Bayer MaterialScience LLC's (Bayer's) remedial contractor (Posillico) with onsite construction/engineering oversight provided by ARCADIS. The work activities during the reporting period were as observed by Gregory McDermott of ARCADIS.

MEETING ATTENDEES

The following personnel attended the weekly construction coordination meeting:

- Steven Scharf – NYSDEC (call-in)
- Renata Ockerby – NYSDOH (call-in)

- Julia Schneider – Cashin Spinelli & Ferretti, LLC (CSF)(representing the Town of Oyster Bay) (call-in)
- Scott Krall – Bayer (call-in)
- David Paule – Bayer (call-in)
- John Brussel – ARCADIS (call-in)
- David Kingsley – ARCADIS (call-in)
- Andrew Enigk – ARCADIS (call-in)
- Gregory McDermott – ARCADIS
- Marc Atamian – Posillico
- Daniel Prisco-Buxbaum – Preferred Environmental Services (PES)

HEALTH AND SAFETY MOMENT

- ARCADIS discussed ice and snow hazards associated with the winter season. All personnel (both field and office based), should be cautious when walking on snow-covered surfaces to avoid potential slips, trips, and falls. Site personnel should be especially careful of changing conditions and stop work if necessary to address the changing condition. An example of a changing condition in the winter would be fresh snow accumulation that covers already icy conditions.

SAFETY/SAFE WORK PRACTICES

- Posillico indicated that no incidents have occurred this week and that work has proceeded safely.

AIR MONITORING

- PES continued community air monitoring in accordance with the project-specific Community Air Monitoring Plan (CAMP) during this monitoring period. No exceedances of air monitoring action levels were recorded during this monitoring period.

ACTION ITEMS OUTSTANDING FROM PREVIOUS MEETING

- There are no outstanding action items from previous meetings.

COMPLETED WORK / WORK-IN-PROGRESS

Work activities performed by Posillico and its subcontractors during this period consisted of the following:

- Collecting samples to characterize an additional 5,000 cubic yards (CY) of general fill (run-of-bank sand/gravel) from the offsite clean fill source (Beth Moses Cemetery [BMC] located in West Babylon, New York) on December 23 and 31, 2014. Posillico collected five sample sets (each set representing 1,000 CY of backfill) with each set including one composite sample for semi-volatile organic

compounds (SVOCs), inorganics, polychlorinated biphenyls (PCBs), and pesticides, and two discrete samples for volatile organic compounds (VOCs) in accordance with the sampling requirements in Table 5.4(e)10 of the NYSDEC document titled, "DER-10 Technical Guidance for Site Investigation and Remediation" (DER-10). ARCADIS observed the sampling activities at the fill source. Posillico submitted the fill samples to York Analytical Laboratories, Inc. for analysis. These new samples and previous samples provide characterization data for up to 26,000 CY of general fill.

- Collecting samples to characterize an additional 3,000 CY of topsoil from the offsite topsoil source (Pinelawn Cemetery located in Farmingdale, New York) on December 31, 2014. Posillico collected three sample sets (each set representing 1,000 CY of topsoil) with each set including one composite sample for SVOCs, inorganics, PCBs, and pesticides, and total organic carbon (TOC), and two discrete samples for VOCs in accordance with the sampling requirements in Table 5.4(e)10 of DER-10. ARCADIS observed the sampling activities at the fill source. Posillico submitted the fill samples to York Analytical Laboratories, Inc. for analysis. These new samples and previous samples provide characterization data for up to 4,000 CY of topsoil.
- Completing test pits at two sampling locations within the western portion of Excavation Area 7C (sampling locations V-RD-274 and V-RD-277, which are within the western portion of the material staging area footprint) on January 2, 2015. The test pits were excavated through native soil that was exposed following removal of that portion of the staging area liner system, including the underlying cushioning layer of "concrete sand". ARCADIS collected verification soil samples from the 1-2 foot and 2-4 foot depth intervals of each test pit. The soil samples were submitted to Pace Analytical Services, Inc. (PAS) located in Melville, New York for laboratory analysis for PCBs.
- Continuing to perform pre-excavation, post-excavation, post-backfill, and soil cover system topographic survey activities.
- Continuing removal of soil from Phase 2 OU4 "C" Group excavation areas with PCB concentrations between 10 parts per million (ppm) and 50 ppm or arsenic at concentrations >16 ppm for offsite disposal as a non-hazardous waste. Approximately 772 CY of soil were removed from Areas 7C and 24C during this reporting period. Approximately 81% of these areas have been excavated as of the end of this reporting period, and the soil from these areas has been stockpiled onsite.
- Continuing to load and transport non-hazardous waste soil for offsite disposal at the Gloucester County Landfill (GCL) located in Swedesboro, New Jersey. Approximately 1,456 tons of non-hazardous waste soils were transported to GCL for disposal during this reporting period. Approximately 95% of the total estimated volume of non-hazardous waste soil for this project had been transported to GCL for disposal by the end of this reporting period.

- Continuing to load Toxic Substances Control Act- (TSCA-) regulated PCB waste/New York State (NYS) listed hazardous waste soil offsite for disposal at the Chemical Waste Management (CWM) Chemical Services LLC landfill located in Model City, New York. Approximately 475 tons of TSCA-regulated PCB waste/NYS hazardous waste soil were transported to CWM for disposal during this reporting period. Approximately 89% of the total estimated volume of TSCA-regulated PCB waste/NYS hazardous waste soil for this project had been transported to CWM for disposal by the end of this reporting period.
- Continuing to backfill Phase 1 OU4 "A" Group and Phase 2 OU4 "A" and "B" Group excavation areas using approximately 1,006 CY of imported clean backfill from BMC during this period. The imported clean backfill was placed in approximately one-foot loose lifts and compacted. In-place compaction testing was performed on each lift at a minimum frequency of one sample per 2,500 square feet (SF), as required by the *Remedial Design Addendum* (ARCADIS, August 2014)(RDA), by Posillico's compaction testing subcontractor, MT Group.
- Continuing installation of the site-wide soil cover system and demarcation layer below the system. Approximately 1,000 CY of imported clean backfill from BMC were placed and compacted during this reporting period to establish the 8-inch base of the soil cover system. Compaction testing was performed in accordance with the RDA, by MT Group. Approximately 37% of the 8-inch cap base had been completed by the end of this reporting period.
- Continuing erosion/sedimentation control measures inspection, maintenance, and documentation.
- Continuing routine air monitoring in accordance with the project-specific CAMP. The air monitoring was performed by PES.

PROPOSED WORK ACTIVITIES

Posillico's two-week "look ahead" schedule is included as Attachment A and summarized below:

- Continue collecting samples from the BMC in accordance with DER-10, and continue importing clean fill material pending receipt of acceptable sample results.
- Continue backfilling and in-place compaction testing of the existing Phase 1 and Phase 2 OU4 excavation areas.
- Continue installation of site-wide soil cover system.
- Continue erosion and sedimentation control measures inspection, maintenance, and documentation.

- Continue air monitoring in accordance with the CAMP.

OPEN DISCUSSION

- The NYSDEC inquired when topsoil and seeding would be completed. ARCADIS and Posillico informed call participants that the 8-inch base portion of the soil cover system is scheduled to be completed by the end of January 2015 and topsoil and seeding would be completed in early spring 2015. Erosion and sediment controls would remain in place until vegetative growth is established (with a minimum 80% density over the entire disturbed area).
- The NYSDEC inquired about the status of the Site Environmental Easement and Bayer indicated it had started preparing it.
- ARCADIS and Posillico informed call participants that loading of the TSCA-regulated PCB waste/NYS listed hazardous waste soil for offsite disposal at the CWM Chemical Services LLC landfill was completed on January 6, 2015 and loading of non-hazardous waste soil for offsite disposal at GCL was completed just prior to the weekly meeting on January 7, 2015.
- Posillico requested that community air monitoring be discontinued on January 9, 2015 because the excavation activities and loading of all waste materials for offsite transportation and disposal were complete. The NYSDOH provided verbal approval during the meeting to discontinue the community air monitoring as of January 9, 2015. ARCADIS noted that it would send a follow-up e-mail correspondence to the NYSDEC and NYSDOH documenting the approval.
- ARCADIS notified the meeting participants that Posillico has continued sweeping the site access road on a daily basis to minimize the potential for offsite tracking of soil. Posillico also continued sweeping along New South Road near the site to remove clean soil tracked from the site.
- ARCADIS discussed the work performed and results of the sub-slab soil sampling performed within the Administration Building footprint to characterize soil that was exposed following the building demolition and removal of the concrete slab-on-grade. ARCADIS indicated that Accutest Laboratories provided the lead analytical result for the second analysis of a duplicate sub-slab soil sample (i.e., 474 ppm), and that result was well-below the 1,000 ppm commercial SCO and aligned more closely with the parent sample result. Recall that the 1,100 ppm lead result for the initial duplicate sample was slightly greater than the 1,000 commercial SCO as summarized in Weekly Construction Report #15. Based on the findings, Bayer and ARCADIS proposed to restore the Administration Building footprint as described in Section 3.9 of the RDA, by placing 4-inches of topsoil over the building footprint, seeding, and mulching. ARCADIS indicated it would follow-up with an e-mail to the NYSDEC formally presenting the data and requesting approval.

- ARCADIS discussed the PCB laboratory analytical results for the soil samples that were collected from test pits excavated in the material staging area footprint (Excavation Area 7C) during sequential dismantling of the staging area. ARCADIS commented that PCBs were either not detected or were identified at concentrations well-below the 10 ppm subsurface soil cleanup level (with a maximum concentration of 0.17 ppm). Based on the results, ARCADIS indicated Excavation Area 7C only needed to be excavated to 1 foot below ground surface (bgs) instead of the 2-foot bgs “placeholder” excavation depth provided in the RDA.
- ARCADIS discussed the laboratory analytical results for the samples collected from the Pinelawn Cemetery to characterize an additional 3,000 CY of topsoil. Based on the favorable results, ARCADIS indicated it would send follow-up e-mail correspondence to the NYSDEC requesting approval to use the topsoil.
- ARCADIS discussed the laboratory analytical results for the samples collected from BMC on December 31, 2014 to characterize an additional 3,000 CY of general fill. Based on the results, ARCADIS provided Posillico with approval to import 1,000 CY of the fill characterized by samples with the sample pre-fix “BMC-CF-24”. The analytical results for the two sets of samples characterizing the remaining 2,000 CY of fill were well-below the corresponding SCOs, with two minor exceptions (with acetone or lead at concentrations well-below commercial SCOs, but above groundwater protection SCOs). ARCADIS indicated it would summarize the data in e-mail correspondence to the NYSDEC for an NYSDEC determination of whether the 2,000 CY of fill could be used onsite.
- ARCADIS discussed that it was revising a grading plan for the southeastern portion of the site and that it would distribute the plan to the NYSDEC after it is completed.
- The group discussed that there would likely be a temporary winter shutdown of site remedial activities once the weather turns and snow/freezing temperatures would otherwise limit progress. The NYSDEC inquired about planned erosion and sedimentation (E&S) control measures at the site during the shutdown. ARCADIS indicated the current E&S control measures would remain in place and they would be inspected by Posillico during the shutdown.
- The NYSDEC suggested reducing the weekly progress meeting frequency from weekly to bi-weekly due to the remaining site activities being primarily restoration and in anticipation of the upcoming shutdown. It was announced that the next meeting would be held on January 21, 2015.

ACTION ITEMS

- The action items from this meeting centered around ARCADIS preparing e-mail correspondence to the NYSDEC that presents: (1) a formal request, including rationale, for discontinuing the community air monitoring; (2) a summary of the Administration Building sub-slab soil sampling activities and findings; (3) a summary of the laboratory analytical results for samples identified by the pre-fix “BMC-

CF-25” and “BMC-CF-26” to characterize 2,000 CY of general fill at the BMC; and (4) the grading plan for the southeastern portion of the site.

ATTACHMENTS

- Attachment A: Posillico’s Two-Week “Look Ahead” Schedule

Weekly Air Monitoring Report

**COMMUNITY AIR MONITORING WEEKLY REPORT
(WEEK ENDING 12/26/14)**

**BAYER MATERIALSCIENCE LLC.
OU4 REMEDIAL ACTION – NYSDEC SITE #130004
125 NEW SOUTH ROAD, HICKSVILLE, NEW YORK**

This report summarizes the results of the community air monitoring performed by Preferred Environmental Services (PES) from December 22, 2014 to December 26, 2014 in connection with the implementation of the OU4 remedial action by Posillico Environmental (Posillico) and its subcontractors, on behalf of Bayer MaterialScience LLC. (Bayer) at the Bayer site in Hicksville, New York (the "site").

A. AIR MONITORING ACTIVITIES

Air monitoring activities were performed in accordance with the Community Air Monitoring Plan (CAMP) included as Appendix D to the New York State Department of Environmental Conservation (NYSDEC) approved Remedial Design (ARCADIS, February 2013) for the above referenced site. Air Monitoring was performed at stations that were labeled with the following IDs:

- UP = Upwind
- DN1 = Downwind 1
- DN2 = Downwind 2
- DN3 = Downwind 3

The daily locations of the air monitoring stations are shown on the site maps included in Attachment 1. CAMP monitoring during intrusive activities commenced on December 22, 2014 and continued through December 23, 2014. Please note that no monitoring occurred on December 24, 2014 due to rain. No monitoring or work occurred on December 25, 2014 or December 26, 2014 due to the holiday.

B. AIR MONITORING RESULTS

No volatile organic compounds (VOCs) or particulates (PM-10) were measured above the action levels in the CAMP for the above-referenced monitoring period. The action levels are 5 parts per million (PPM) above background for VOCs and .150 milligrams per cubic meter (mg/m³) above background for PM-10. The range of VOCs and PM-10 concentrations measured during this monitoring period (15 minute time-weighted averages) are summarized below.

Monitoring Station	VOC Results (PPM)		PM-10 (mg/m ³)	
	Minimum	Maximum	Minimum	Maximum
UP	0.0	0.2	0.004	0.065
DN1	0.0	0.1	0.002	0.054
DN2	0.0	0.1	0.001	0.048
DN3	0.0	1.3	0.001	0.052

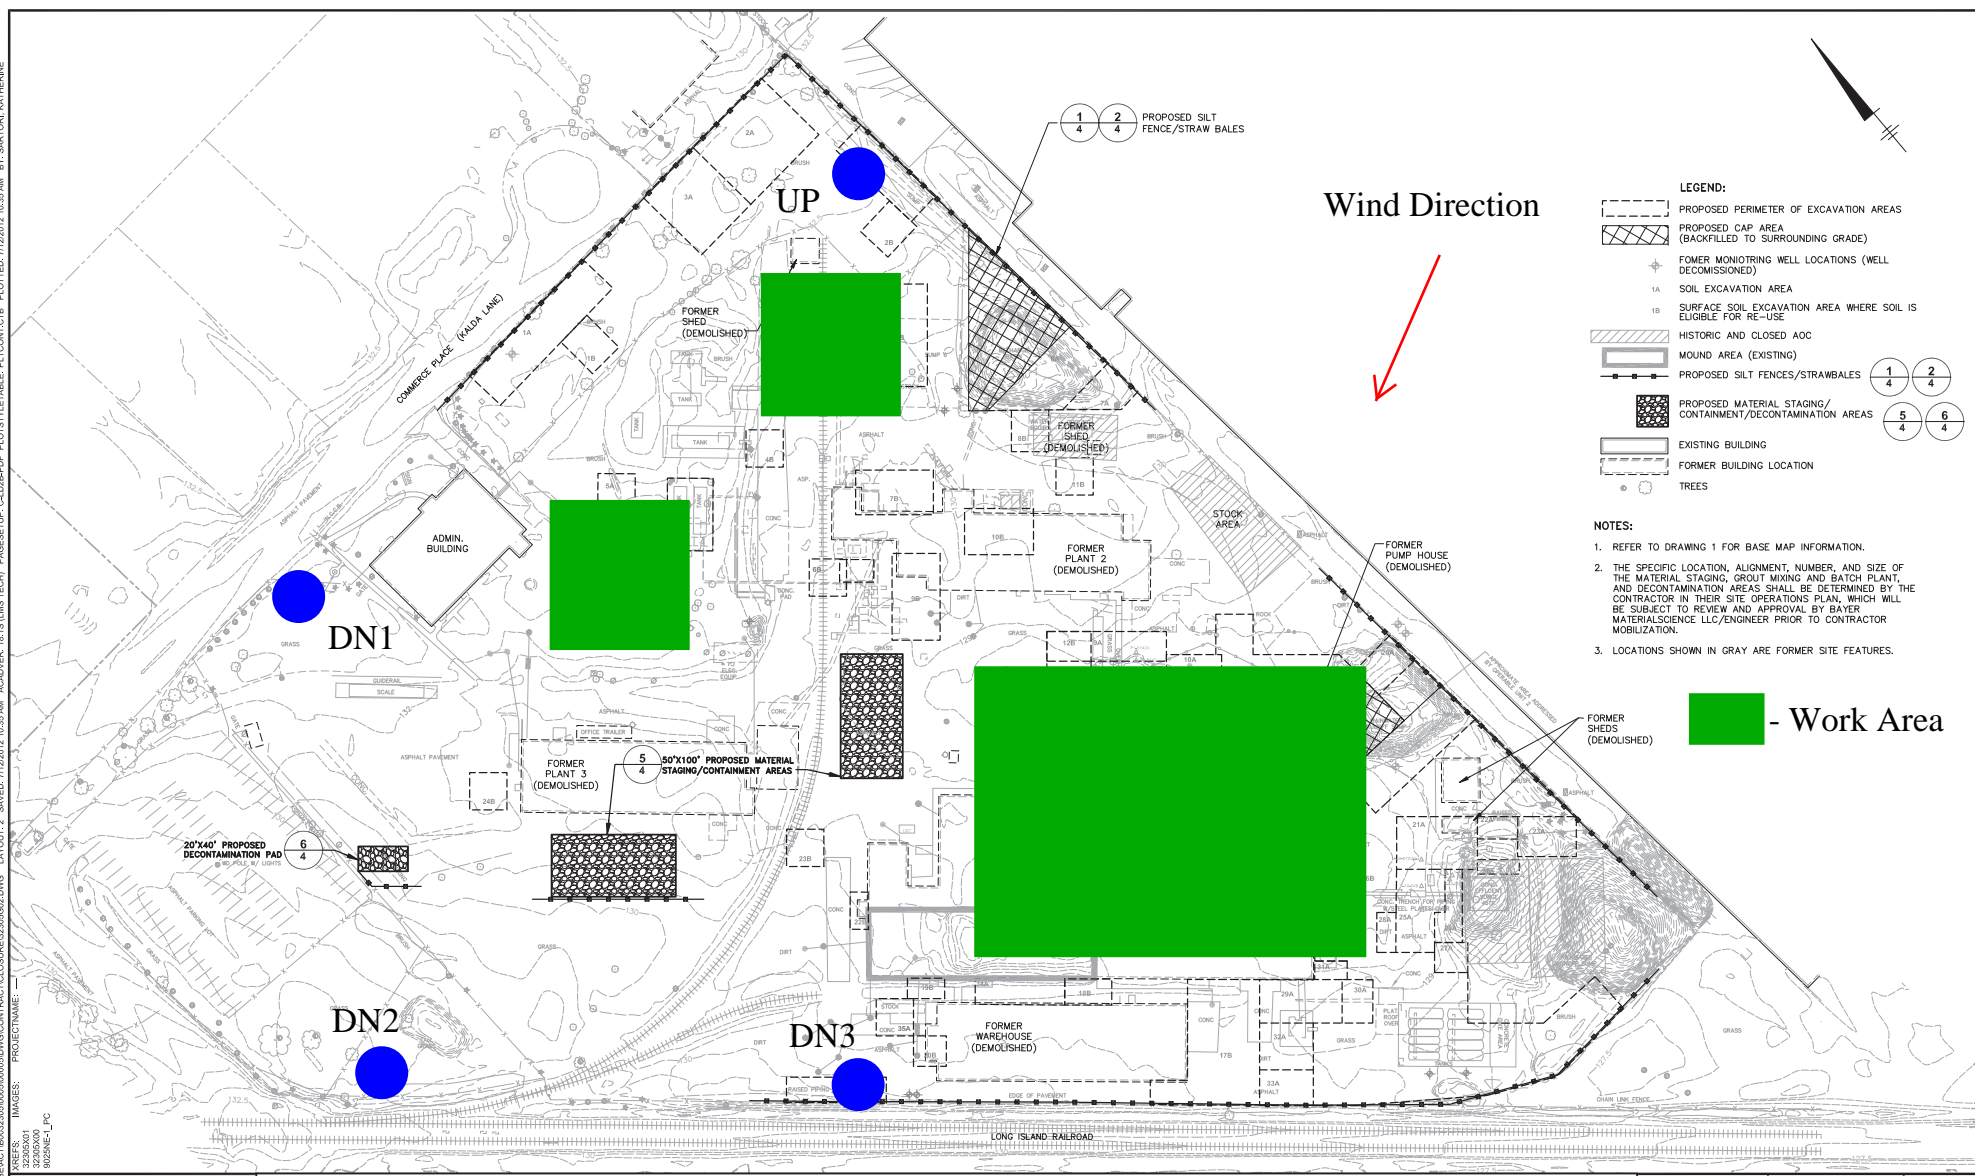

The VOC and PM-10 data collected for the week are plotted on the graphs included in Attachment 2. A separate graph is provided for each monitoring station and each graph presents the full set of 15 minute time-weighted averages (TWA) for VOCs and PM-10 for that station. The raw data files from the individual monitors and meteorological data from the weather station are included in Attachment 3.

Please do not hesitate to contact Daniel Prisco-Buxbaum (PES CAMP Monitor) at 516-987-2472, Gregory McDermott (ARCADIS Onsite Construction Oversight) at 516-993-1995 or Andrew Enigk (ARCADIS Assistant Project Manager) at 315-671-9548 if you have any questions or need additional information regarding this report.

**COMMUNITY AIR MONITORING WEEKLY REPORT
(WEEK ENDING 1/2/15)**

**BAYER MATERIALSCIENCE LLC.
OU4 REMEDIAL ACTION – NYSDEC SITE #130004
125 NEW SOUTH ROAD, HICKSVILLE, NEW YORK**

This report summarizes the results of the community air monitoring performed by Preferred Environmental Services (PES) from December 29, 2014 to January 2, 2015 in connection with the implementation of the OU4 remedial action by Posillico Environmental (Posillico) and its subcontractors, on behalf of Bayer MaterialScience LLC. (Bayer) at the Bayer site in Hicksville, New York (the "site").

A. AIR MONITORING ACTIVITIES

Air monitoring activities were performed in accordance with the Community Air Monitoring Plan (CAMP) included as Appendix D to the New York State Department of Environmental Conservation (NYSDEC) approved Remedial Design (ARCADIS, February 2013) for the above referenced site. Air Monitoring was performed at stations that were labeled with the following IDs:

- UP = Upwind
- DN1 = Downwind 1
- DN2 = Downwind 2
- DN3 = Downwind 3

The daily locations of the air monitoring stations are shown on the site maps included in Attachment 1. CAMP monitoring during intrusive activities commenced on December 29, 2014 and continued through January 2, 2015. Please note that no monitoring or work occurred on January 1, 2015 due to the holiday.

B. AIR MONITORING RESULTS

No volatile organic compounds (VOCs) or particulates (PM-10) were measured above the action levels in the CAMP for the above-referenced monitoring period. The action levels are 5 parts per million (PPM) above background for VOCs and .150 milligrams per cubic meter (mg/m³) above background for PM-10. The range of VOCs and PM-10 concentrations measured during this monitoring period (15 minute time-weighted averages) are summarized below.

Monitoring Station	VOC Results (PPM)		PM-10 (mg/m ³)	
	Minimum	Maximum	Minimum	Maximum
UP	0.0	0.1	0.005	0.031
DN1	0.0	0.1	0.001	0.031
DN2	0.0	0.0	0.002	0.058
DN3	0.0	0.2	0.000	0.034

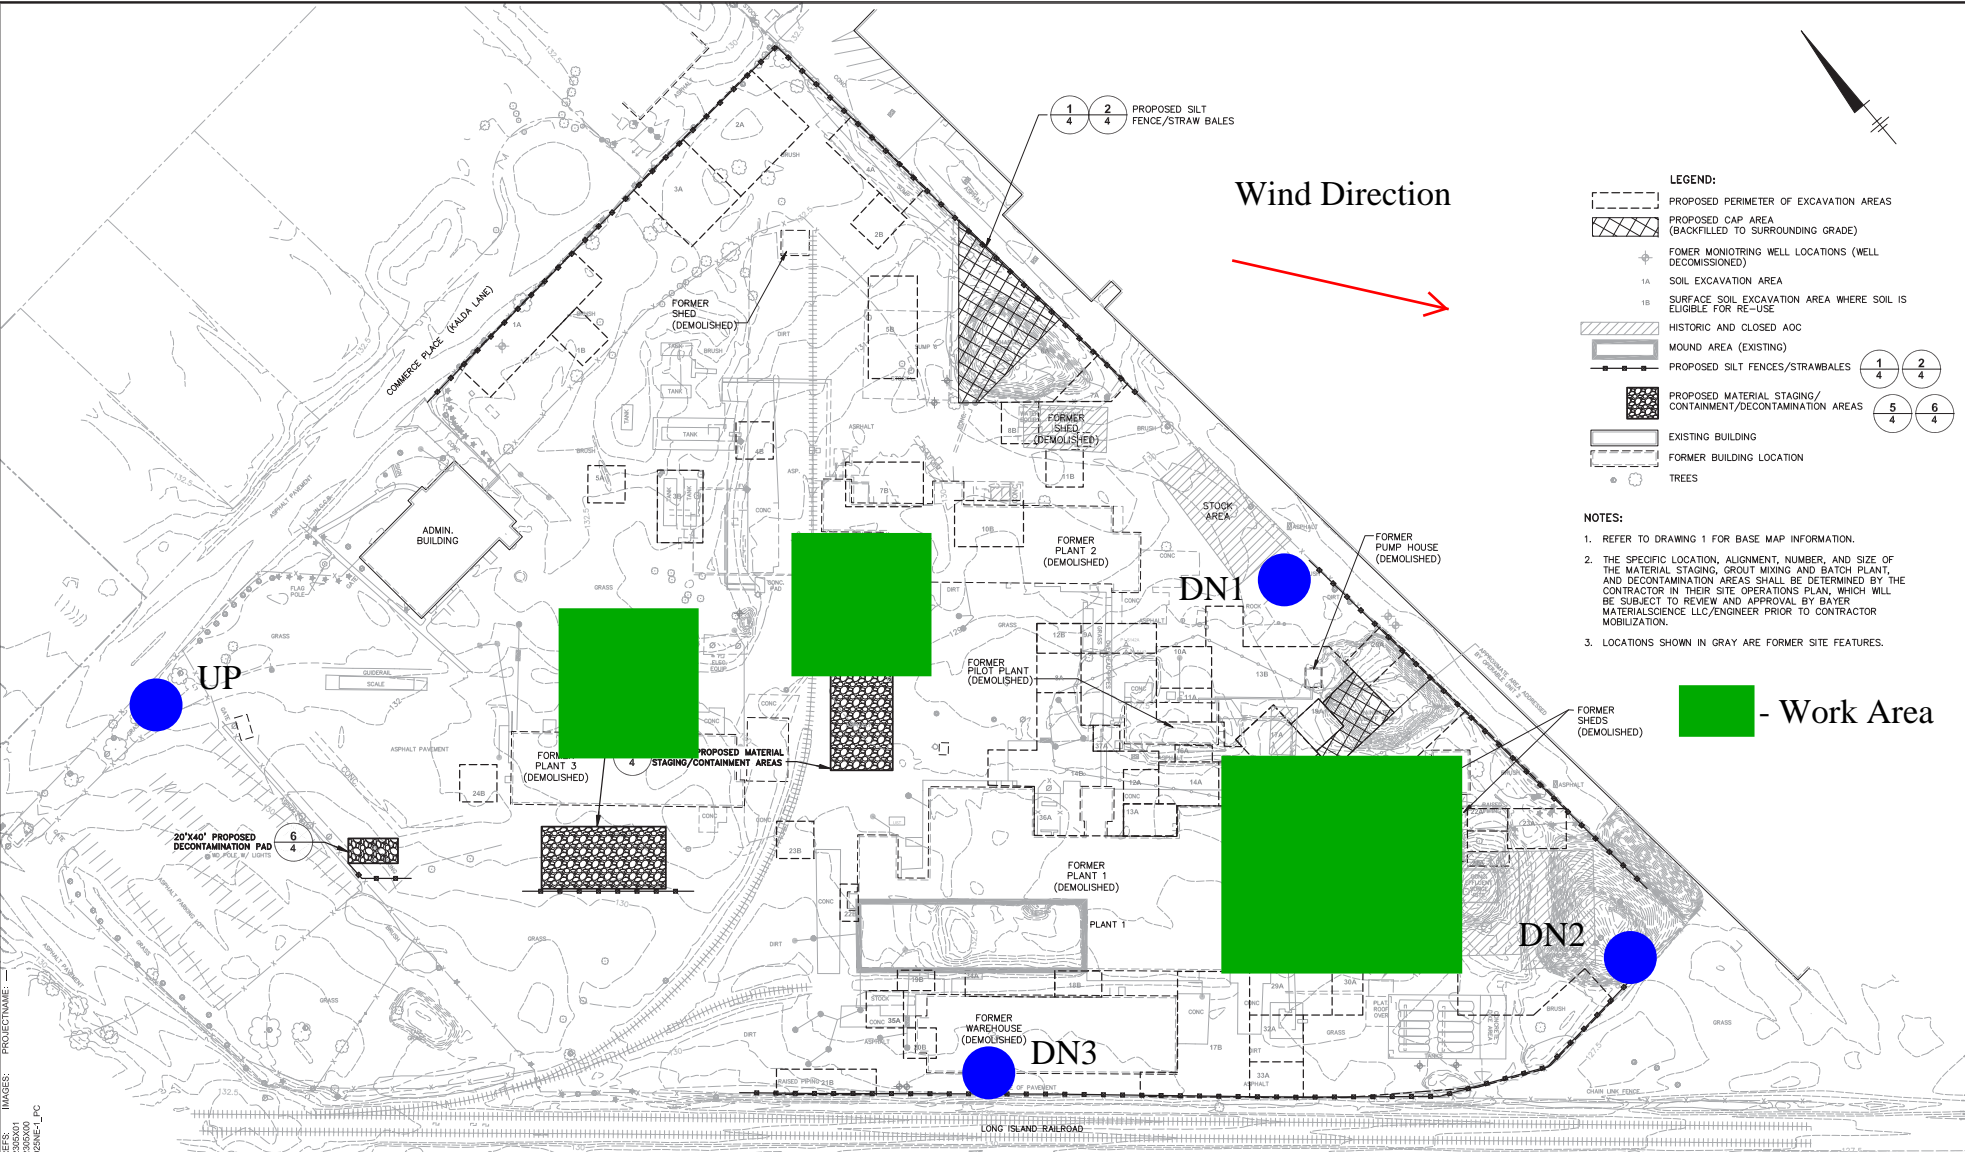

The VOC and PM-10 data collected for the week are plotted on the graphs included in Attachment 2. A separate graph is provided for each monitoring station and each graph presents the full set of 15 minute time-weighted averages (TWA) for VOCs and PM-10 for that station. The raw data files from the individual monitors and meteorological data from the weather station are included in Attachment 3.

Please do not hesitate to contact Daniel Prisco-Buxbaum (PES CAMP Monitor) at 516-987-2472, Gregory McDermott (ARCADIS Onsite Construction Oversight) at 516-993-1995 or Andrew Enigk (ARCADIS Assistant Project Manager) at 315-671-9548 if you have any questions or need additional information regarding this report.
