Re: Progress Report: December 2020
Frost Street Sites: Site ID#s 1-30043 I, L, M
New Cassel Industrial Area, Westbury, New York

Dear Ms. Maloney:

EnSafe Inc. is pleased to submit this Progress Report for the Frost Street Sites (Site ID Nos. 1-30043 I, L, M) for operation, maintenance, and monitoring (OM&M) activities completed in December 2020 for the onsite air sparge/soil vapor extraction (AS/SVE) and groundwater extraction systems.

Air Sparge/Soil Vapor Extraction System – Operable Unit 1

- AS/SVE system operations continued this month, per the OM&M Manual. During periodic visits, system parameters were logged on dedicated forms (Appendix A).
 - Two alarm calls were received in December 2020. One was due to high temperature of the AS compressor which was addressed by adding oil and restarting the system. The other was due to high water in the storage tank; the water was sampled and the tank was emptied to the sewer in accordance with the discharge authorization.
 - The new compressor is being installed the week of January 5 and 11, 2021, as described in the November Progress Report. The downtime anticipated for this work is approximately 1 week.
- Quantitative sampling of the SVE system granular activated carbon influent and effluent air flow was conducted on December 29, using Summa canisters. These samples were obtained by EnviroTrac, submitted to Phoenix Environmental Laboratories, and analyzed by Method TO-15. Results are included in Appendix B.

- Photoionization detector (PID) readings and influent concentrations of Frost Street-related contaminants of concern (tetrachloroethene, trichloroethene, and cis-1,2-dichloroethene [64,520 $\mu\text{g}/\text{m}^3$]) continue to indicate significant mass extraction, which is expected since the AS portion of the system resumed operation in November.
- Effluent concentrations are below the carbon exchange indicator concentrations, as shown below. Because effluent concentrations are higher than influent concentrations for these compounds in prior samples and PID readings indicated breakthrough had occurred, a carbon exchange was performed on January 5, 2021.

Frost Street Sites Effluent Compliance			
System Flow Rate =		800 ft^3/min	
Compound	Annual Mass Emission Limit ¹ (lbs/year)	Carbon Exchange Required Indicator Concentration ($\mu\text{g}/\text{m}^3$) ²	December 2020 Effluent Concentration ($\mu\text{g}/\text{m}^3$)
Trichloroethene	500	19,000	2,590
Tetrachloroethene	1,000	38,000	18,000
Vinyl Chloride	100	3,800	ND
Cis-1,2-Dichloroethene ³	100	3,800	1,560

Notes:

ft/min cubic feet per minute

lbs/year pounds per year

 $\mu\text{g}/\text{m}^3$ micrograms per cubic meter

1 Source of Mass Emission Limit: Part 212-2.2 Table 2 — High Toxicity Air Contaminant List

2 These limits were calculated based on Frost Street-specific system operations (i.e., flow rate) in order to remain below the annual HTAC emissions listed in Part 212-2.2 Table 2. Remaining below these concentrations ensures that annual emissions will not exceed the limit which demonstrates compliance with Part 212 without having to perform compound-specific analyses.

3 Cis-1,2-dichloroethene is not a listed HTAC, so the default is 100 lbs/year.

Groundwater Extraction System – Operable Unit 2

The pumps in EX-1A, EX-1B, EX-1C, and EX-1D operated near design flow rates (30, 30, 48, and 48 gallons per minute, respectively) for all of December.

Quarterly samples were collected from each extraction well on December 29 and analyzed for VOCs; a summary of the detected values is provided below. This data continues to indicate significant mass extraction. Full results for these events are provided in Appendix C; historical data is graphed in Appendix D.

Groundwater Extraction System Individual Extraction Well Data – Volatile Organic Compounds (ppb)				
Analyte	EX-1A	EX-1B	EX-1C	EX-1D
1,1,1-Trichloroethane	ND	ND	ND	0.33
1,1-Dichloroethane	ND	ND	ND	0.35
1,1-Dichloroethene	ND	ND	0.4	2.8
Chloroform	ND	ND	ND	0.84
cis-1,2-Dichloroethene	2.8	8.5	1.2	4.2
Tetrachloroethene	53	290	73	98
Trichloroethene	4.2	14	5.5	25
Total VOCs	60	312.5	80.1	131.52

EnSafe collected and prepared the additional information requested by NYSDEC on February 21, 2019, (additional pressure transducer data and groundwater elevation maps) to facilitate review and comment on the *Expanded Pumping Test Summary, Findings, and Recommendations*, submitted on August 10, 2018. This information was transmitted to NYSDEC on March 22, 2019.

Groundwater Monitoring

The third quarter 2020 groundwater sampling event was completed the week of September 21; analytical data was submitted to NYSDEC on October 30 and the report was submitted on December 31.

If you have any questions or require additional information, please do not hesitate to contact me at 860-665-1140 or astark@ensafe.com.

Sincerely,

EnSafe, Inc., by

Alexandra Stark, P.E.

Sample ID#s: CH38183

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".
