Re: Site Numbers 1-30-009 and 1-30-053A  
First Quarter 2003 Progress Report

File: 643.001

Dear Mr. Jones:

Enclosed please find three copies of the First Quarter 2003 Progress Report for the subject sites.

Should you have any questions regarding the enclosed, please feel free to contact Charlie Nehrig at 516-609-1052. Thank you.

Very truly yours,

BARTON & LOGUIDICE, P. C.

## **1.0      Introduction**

This First Quarter 2003 Progress Report (1Q03) is being submitted pursuant to the 1997 Order on Consent between Photocircuits Corporation and the New York State Department of Environmental Conservation (NYSDEC).

During the First Quarter of 2003, the following was accomplished:

- One groundwater sampling event was conducted for monitoring wells located on both the 31 and 45A Sea Cliff Avenue sites during the period of January 13-15.
- The Soil Vapor Extraction (SVE) and Air Sparging (AS) system at the 45A Sea Cliff Avenue site was continued through the first quarter of 2003.
- Four recovery wells for the hydraulic control program at the 31 Sea Cliff Avenue site were installed in mid-January.

## **2.0      Discussion of Results**

### **2.1      SVE System at 31 Sea Cliff Avenue**

The SVE system at the 31 Sea Cliff Avenue site was installed as an Interim Remedial Measure (IRM), and started operation in April 2000. The SVE system, equipped with the CatOx/scrubber for extracted vapor treatment, was restarted on July 21, 2000 and was operated continuously until August 2001(except for a few brief periods for maintenance activities, and in March to mid-May, 2001 because of high water-table conditions. As discussed in the 2Q01 report, the results of vapor sample analyses and the photoionization detector (PID) readings demonstrate that contaminant mass removal versus time has clearly become asymptotic. We conclude that we have demonstrated that there is little or no residual contamination in the unsaturated zone, and that further contaminant removal from the unsaturated zone is infeasible. The SVE system is in the process of being decommissioned.

### **2.2      Bioremediation Pilot Test**

The bioremediation pilot test was started during the week of August 28, 2000 when Terra Systems conducted the injection of a nutrient solution (substrate) into the subsurface at the 31 Sea Cliff Avenue site. Following the injection, groundwater samples were collected from the following monitoring wells/points: MW-7, MW-14, SMP-1, DMP-1, SMP-3, DMP-3, SMP-4 and DMP-4. These wells/points were sampled again on October 18-19, December 20, 2000, March 27-28, 2001 and July 11-12, 2001; the March and July

sampling events included several wells located along Sea Cliff Avenue (MW-8, MW-9, MW-12 and MW-13) along with the wells sampled during the previous events. By letter dated October 25, 2001, NYSDEC authorized an additional injection of substrate that had been recommended by Photocircuits. A first phase of additional substrate injection was conducted during the period of February 25 to March 3, 2002; during this period, slightly over 5,000 gallons of substrate was injected (as reported in the 1Q 02 report). On April 29, 2002, an additional injection of 5,777 gallons of substrate was injected using the injection points that had been installed during the February-March injection event. Sampling events conducted in 2002 were January 8-10, April 2-4, June 25-26 and October 2-3.

Sampling in 2003 was conducted on January 13-15; the results from the January 2003 sampling event are provided in Appendix A of this report (Note: well MW-7 was not sampled during this event as it was filled with oil substrate).

A status report on the pilot test (including the data from the samples collected in January 2003) was prepared by Terra Systems and is included as Appendix B of this report. The main conclusion of the report are as follows

- The addition of the edible oil substrate has enhanced the extent and rate of chlorinated solvent biodegradation at the site; degradation rates as high as 268 ug/L per day of total volatile organic compounds (TVOCs) have been observed in areas of higher concentration.
- A first order degradation half life of 462 days was calculated for the average total VOC concentration within the pilot cell area (January 2003 data); this degradation rate suggests that 90% of the total VOC mass within the pilot test cell will be removed within 43 months.
- The newly injected edible oil substrate appears to be adequately distributed.
- Bioremediation will be the primary treatment technology for contaminant destruction at the site.

### **2.3     IRM at 45 Sea Cliff Avenue**

As discussed in the 4Q 2000 report, SVE/AS equipment was procured and delivered to the site. The SVE/AS system consists of a 10 horsepower (hp) regenerative blower and 5 hp compressor, along with electrical controls, filters, moisture separators, and valves; the system is contained within an insulated trailer, which has been located just outside of Building 7. Following delivery, the system components were connected to the piping networks for the AS and SVE wells. Two 1200 lb activated carbon adsorbers were attached in series to the blower outlet to treat recovered vapors. The SVE system was started on November 1, 2000; because the initial contaminant concentrations were

relatively high, the AS portion of the system was not started. The AS component of this system was started on March 28, 2001. The system was down from April 20-24 due to an electrical problem. The system was down most of June and July due to equipment overheating; the system was re-started on July 30 and shut down on September 20.

Monitoring data was presented in the 2Q01 report, including data from sampling of individual SVE wells (March 2001) and sampling of total SVE system effluent over time. Prior to the start of the AS component, the relationship of total contaminant mass removal versus time was clearly becoming asymptotic. The start of the AS component increased contaminant mass recovery somewhat (see the April 2001 sample results). However, the results of the May vapor sample indicate that mass removal versus time relationship became asymptotic. We concluded at that time that we demonstrated that there is little or no residual contamination at that location, and that further contaminant removal is infeasible.

Monitoring wells located on the 45A Sea Cliff Avenue site (MW-1S, MW-2S, MW-3S and MW-4S) and near the 45A Sea Cliff Avenue site (MW-9, MW-10 and MW-11) were sampled in January 2002, and the results are attached. Based on results from the January sampling event, Photocircuits proposed extending the SVE/AS system at the 45A Sea Cliff Avenue site from the west side to the east side of Building 7. The basis for the extension of the system and the proposed piping and equipment layout were provided in the February 13 letter to NYSDEC.

The SVE wells and AS points were installed at the proposed locations on the east side of Building 7 in late February, 2002 in preparation for the extension of the system. After field evaluation, it was decided that it would be more efficient to move the aboveground portions of the system (equipment trailer, carbon vessels) to the east side of Building 7 rather than to extend their operation by piping from the west side to the east side of Building 7, as originally proposed. The trailer and carbon vessels were moved in April, and electrical service was also provided to the new location April. Piping and mechanical connections were completed in early May; the original blower malfunctioned and a smaller replacement blower was installed.

The SVE portion system was started on May 8, 2002, and a sample of the total system effluent, prior to treatment, was collected; tetrachloroethene was detected at a concentration of 5.3 ppmv. Another effluent sample was collected on June 26; tetrachloroethene was detected at a concentration of 142 ppmv and trichloroethene was detected at a concentration of 2 ppmv. Further sampling in 2002 was conducted on October 3, December 12 (tetrachloroethene was detected at 1.2 and 1.1 ppmv in these two samples, respectively). The AS portion of the system was started on December 11, 2002. A sample was collected on January 15, 2003, with tetrachloroethene detected at 1.0 ppmv; analytical results for this recent sample are provided in Appendix A of this report

## **2.4      Hydraulic Control along Sea Cliff Avenue**

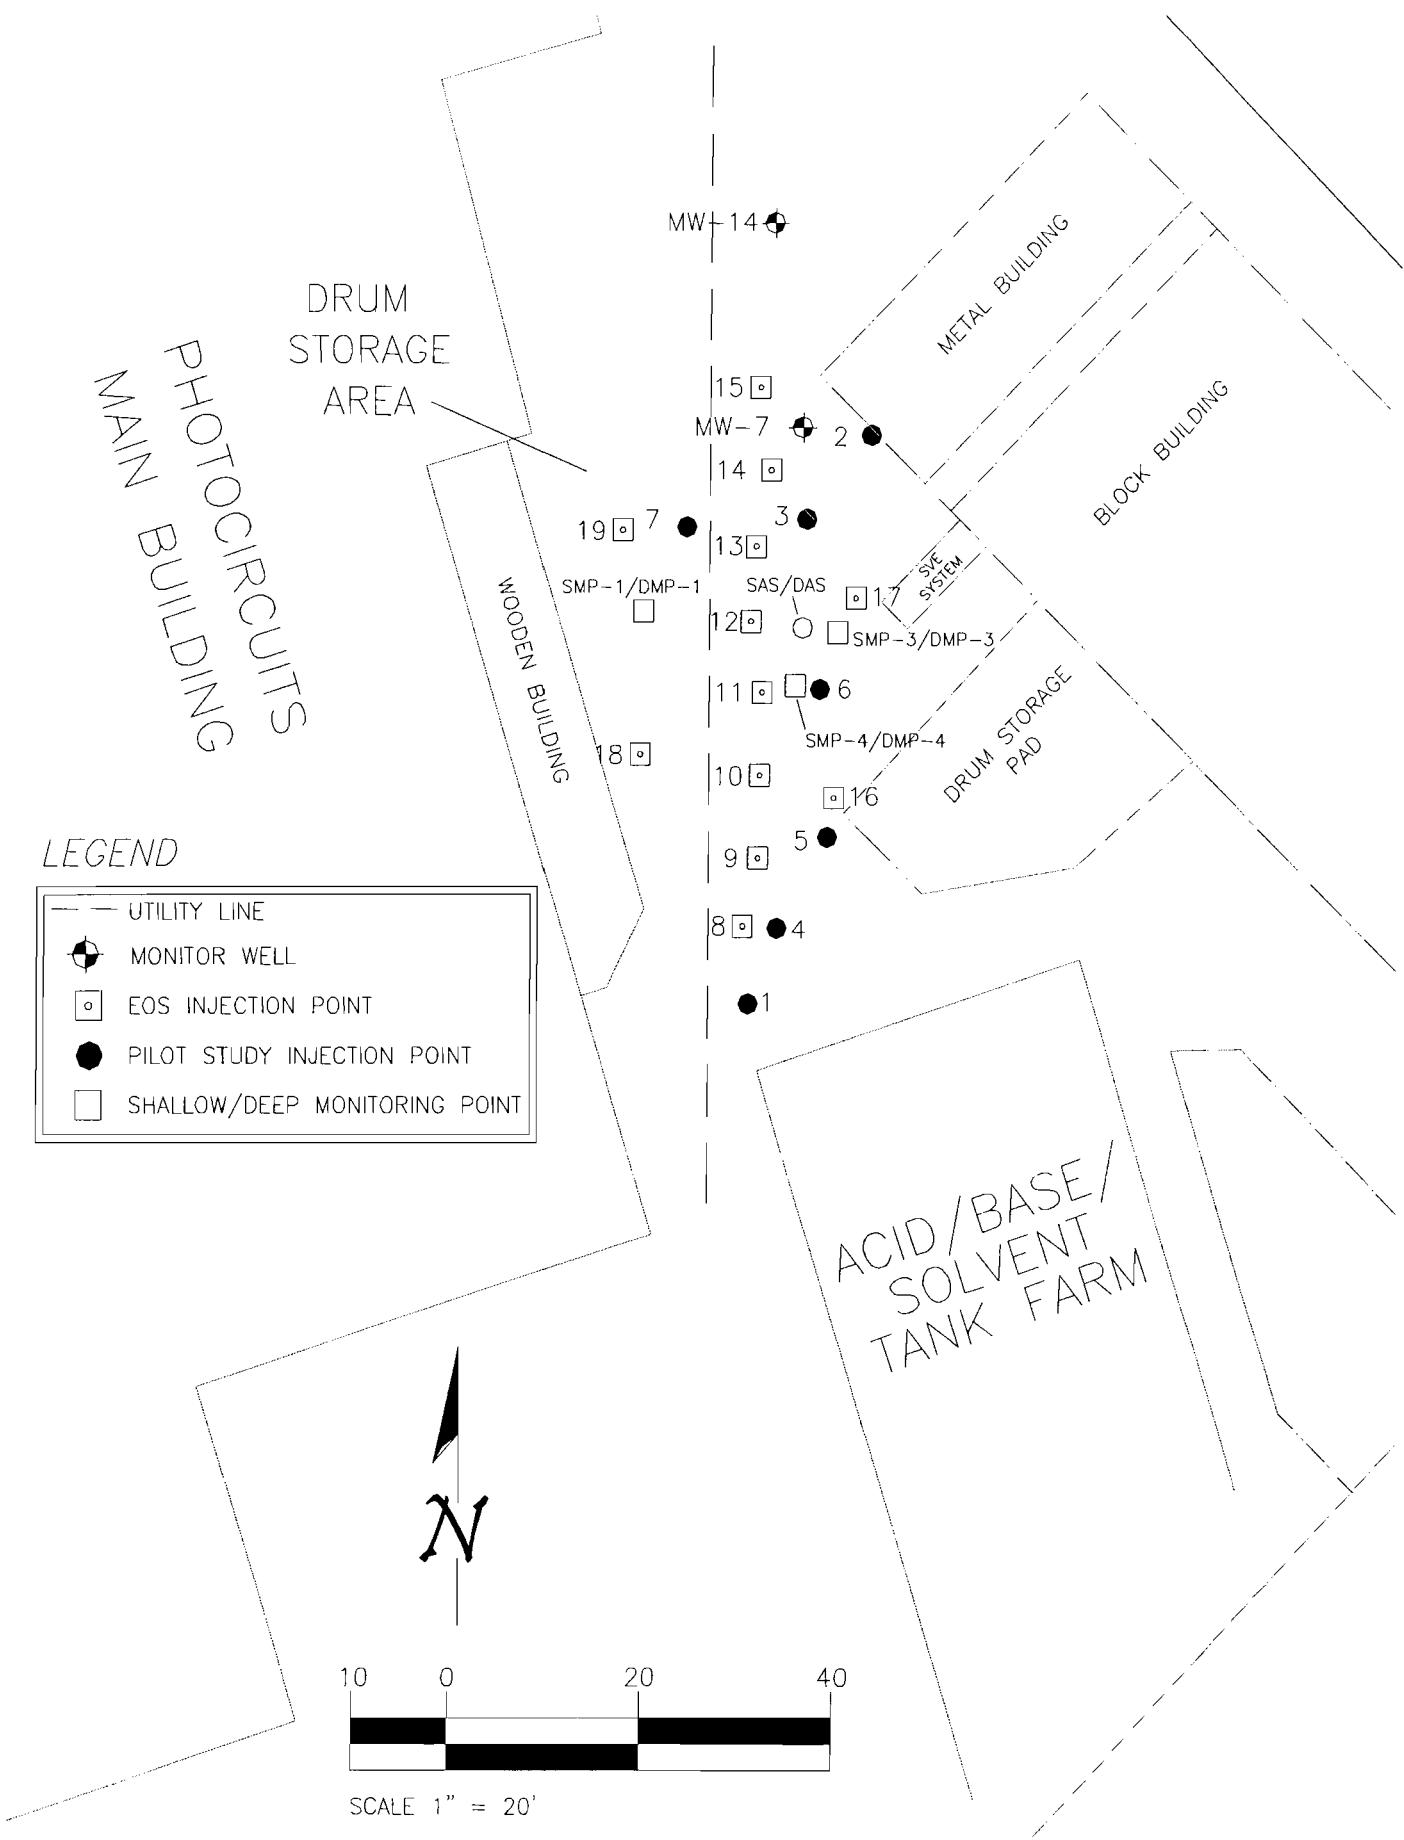

A meeting was held with NYSDEC on October 11, 2001 to discuss the progress of the bioremediation pilot test. Although there was substantial disagreement between Photocircuits and the NYSDEC over the progress of the bioremediation pilot test and the need for groundwater remediation, Photocircuits agreed to review available options for containment of groundwater along the northern boundary of the Photocircuits site (31 Sea Cliff Avenue). Photocircuits conducted the review of remedial options, and by letter dated October 26, 2001, Photocircuits presented the results of the review. The recommended approach for the conditions at the Photocircuits site is the use of hydraulic control. Photocircuits submitted a work plan for the performance of pumping tests necessary for the design of a hydraulic control system on November 13, 2001; following receipt of verbal comments from NYSDEC, Photocircuits submitted a revised work plan on December 7, 2001. Approval for implementation of the work plan was received from NYSDEC by letter dated December 19, 2001. The pumping tests were performed in January, 2002 and the remedial design report was submitted to NYSDEC on April 11, 2002. NYSDEC approval of the remedial design was received in a letter dated September 19, 2002.

Four recovery wells were installed in January, 2003. The fifth recovery well could not be installed due to the proximity of numerous underground utility lines. Groundwater modeling conducted for the design of the hydraulic control system (appended to the remedial design report/work plan) indicates that configuration of the four wells is also capable of providing hydraulic control in the subject area. The wells were installed to depths of 80 feet below grade and were constructed as described in the work plan. The pumps, piping and control systems will be installed in the second quarter 2003, after which the system will be started.

## **3.0      Schedule**

The planned schedule of activities for the next few months is attached.

## **Photocircuits - Updated Schedule of Remedial Activities**

31 & 45 Sea Cliff Avenue Sites

RE: January 2003 Status Report Photocircuits Accelerated Anaerobic Bioremediation Pilot

Dear Charlie:

Attached is the January 2003 Status Report for the Photocircuits Accelerated Anaerobic Bioremediation Project. Data from the beginning of the project in August 2000 through January 2003 is provided and discussed. Please let me know if you have any questions.

Sincerely,

**TERRA SYSTEMS, INC.**

## **Case Narrative**

**VOLATILES by EPA 8260:**

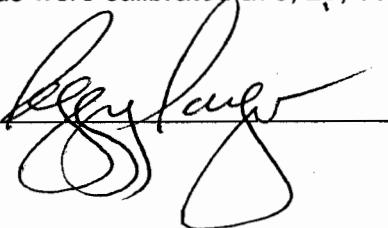

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:

Acetone  
2-Butanone  
4-Methyl-2-pentanone  
2-Hexanone

M&P-Xylenes were calibrated at 10, 40, 100, 200 and 300 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

## **ORGANIC METHOD QUALIFIERS**

**Q** - Qualifier - specified entries and their meanings are as follows:

- U** - The analytical result is a non-detect.
- J** - Indicates an estimated value. The concentration reported was detected below the Method Detection Limit.
- B** - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.
- E** - The concentration of the analyte exceeded the calibration range of the instrument.
- D** - This flag identifies all compounds identified in an analysis at a secondary dilution. In the case of a surrogate this flag indicates a system monitoring compound diluted out.

## **INORGANIC METHOD QUALIFIERS**

**C** - (Concentration) qualifiers are as follows:

- B** - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).

**U** - Entered when the analyte was analyzed for, but not detected.

**Q** - Qualifier specific entries and their meanings are as follows:

- E** - Reported value is estimated because of the presence of interferences.

**M** - (Method) qualifiers are as follows:

- A** - Flame AA
- AS** - Semi-automated Spectrophotometric
- AV** - Automated Cold Vapor AA
- C** - Manual Spectrophotometric
- F** - Furnace AA
- P** - ICP
- T** - Titrimetric

## **OTHER QUALIFIERS**

**ND** - Not Detected

**NA** - Not Applicable

**NR** - Not Required

\* - Outside Expected Range (NYCDEP Table I/II or Surrogate Limits)

## **OTHER**

- All soil and sediment samples are reported on a dry weight basis.

## Sulfate - EPA 375.4

### Sample: P7334-1

Client Sample ID: SMP-1

Collected: 01/13/2003 15:00

Matrix: Liquid

Type: Grab

Remarks:

Analyzed Date: 01/22/2003

### Analytical Results

Cas No	Analyte	MDL	Result	Units	Q
14808-79-8	Sulfate	0.56	60.4	ppm	

### Sample: P7334-2

Client Sample ID: DMP-1

Collected: 01/13/2003 14:30

Matrix: Liquid

Type: Grab

Remarks:

Analyzed Date: 01/22/2003

### Analytical Results

Cas No	Analyte	MDL	Result	Units	Q
14808-79-8	Sulfate	5.58	1020	ppm	

### Sample: P7334-3

Client Sample ID: SMP-3

Collected: 01/13/2003 16:00

Matrix: Liquid

Type: Grab

Remarks:

Analyzed Date: 01/22/2003

### Analytical Results

Cas No	Analyte	MDL	Result	Units	Q
14808-79-8	Sulfate	0.56	14.1	ppm

## **Case Narrative**

EPA 8260:

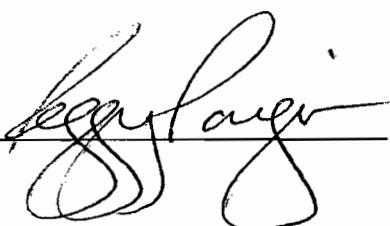

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:

Acetone  
2-Butanone  
4-Methyl-2-pentanone  
2-Hexanone

M&P-Xylenes and 2-Chloro ethyl vinyl ether were calibrated at 10, 40, 100, 200 and 300 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

## **ORGANIC METHOD QUALIFIERS**

Q - Qualifier - specified entries and their meanings are as follows:

U - The analytical result is a non-detect.

J - Indicates an estimated value. The concentration reported was detected below the Method Detection Limit.

B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.

E - The concentration of the analyte exceeded the calibration range of the instrument.

D - This flag identifies all compounds identified in an analysis at a secondary dilution. In the case of a surrogate this flag indicates a system monitoring compound diluted out.

## **INORGANIC METHOD QUALIFIERS**

C - (Concentration) qualifiers are as follows:

B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).

U - Entered when the analyte was analyzed for, but not detected.

Q - Qualifier specific entries and their meanings are as follows:

E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

A - Flame AA

AS - Semi-automated Spectrophotometric

AV - Automated Cold Vapor AA

C - Manual Spectrophotometric

F - Furnace AA

P - ICP

T - Titrimetric

## **OTHER QUALIFIERS**

ND - Not Detected

NA - Not Applicable

NR - Not Required

\* - Outside Expected Range (NYCDEP Table I/II or Surrogate Limits)

## **OTHER**

- All soil and sediment samples are reported on a dry weight basis.
