#### 1.0 INTRODUCTION

As part of New York State's program to investigate potential hazardous waste sites, the New York State Department of Environmental Conservation (NYSDEC) has entered into a contract with the firm of Dvirka and Bartilucci Consulting Engineers of Syosset, New York to conduct a preliminary site assessment (PSA) for the Garden City Park Industrial Area located in the Town of North Hempstead, Nassau County, New York. The PSA for this site is being performed with funds allocated under the New York State Superfund program.

This document, entitled "Preliminary Site Assessment Work Plan for Garden City Park Industrial Area," has been prepared in accordance with NYSDEC Technical and Administrative Guidance Memoranda and contains a site-specific field operation and investigation plan, quality assurance/quality control (QA/QC) plan, and health and safety plan necessary to carry out all phases of the preliminary site assessment. Each of these subplans are prepared essentially as "stand-alone" documents.

The work plan also includes the rationale for the design of the field program including the selection of sampling locations, the chemical constituents of concern, the procedures to assure the technical quality of the samples and safety procedures to protect worker health.

#### 2.0 SUMMARY OF EXISTING INFORMATION

#### 2.1 Site Description

The Garden City Park Industrial Area (GCPIA) is located in the Town of North Hempstead, Nassau County, New York (see Figure 2-1). The site is approximately 65 acres in size and is bordered by the Long Island Railroad (LIRR) on the south and Herricks Road on the east. Park Avenue between Herricks Road and Armstrong Road, and Broadway between Armstrong Road and Court House Road forms the northern boundary. Nassau Boulevard and Court House Road form the western boundary (see Figure 2-2).

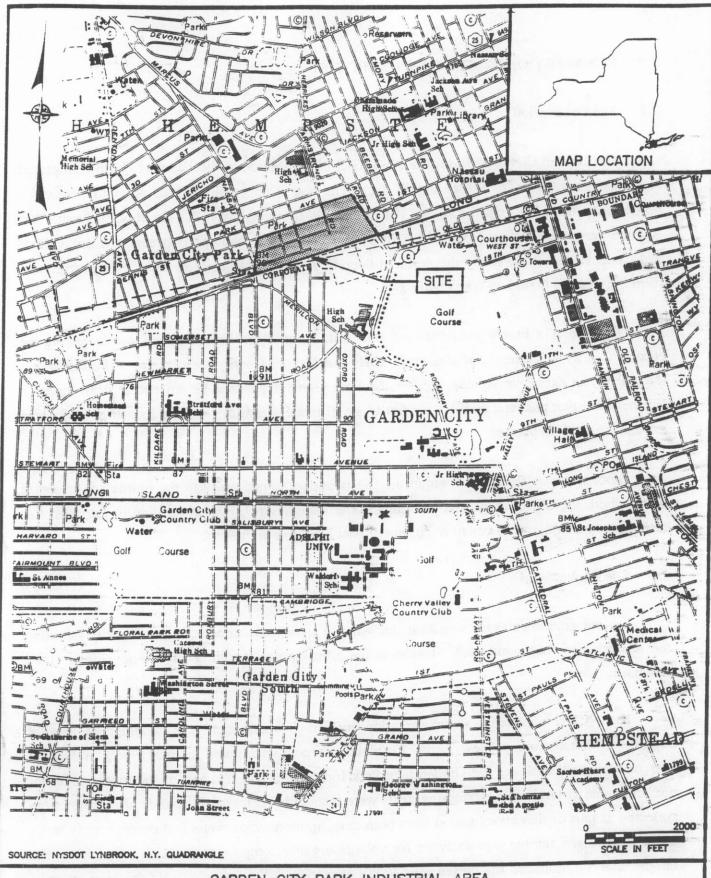

The site is a highly industrialized area and, based upon investigations conducted by the Nassau County Department of Health (NCDH) and Nassau County Department of Public Works (NCDPW), an extensive volatile organic chemical plume appears to be emanating from the area. It is believed that past and possibly current waste disposal activities from the industries in the area are the cause of the plume.

Since the specific sources within the site boundary contributing to the plume are presently unidentified, the objective of this preliminary site assessment (PSA) is to identify the source(s) causing the contamination as part of current or past activities at the site.

#### 2.2 Site Background

Several groundwater investigations including a significant amount of groundwater sampling and analysis has been conducted. Results of the groundwater sampling will be developed into a data base.

The NCDH conducted an investigation entitled "Investigation of Contaminated Aquifer Segments, Nassau County, New York," for which a report was issued in June 1986. One of the five areas investigated was the Garden City Park Industrial Area. As part of the investigation of this area, nine groundwater monitoring wells were installed. At least two rounds of samples were collected as part of this investigation from both existing monitoring wells and public supply wells in the area. Each sample was analyzed for volatile organic compounds (VOCs). Results of the sample analysis indicated the presence of VOCs exceeding NYS guidelines for drinking water in nine of the 17 wells sampled. The primary contaminant detected was tetrachloroethylene. The

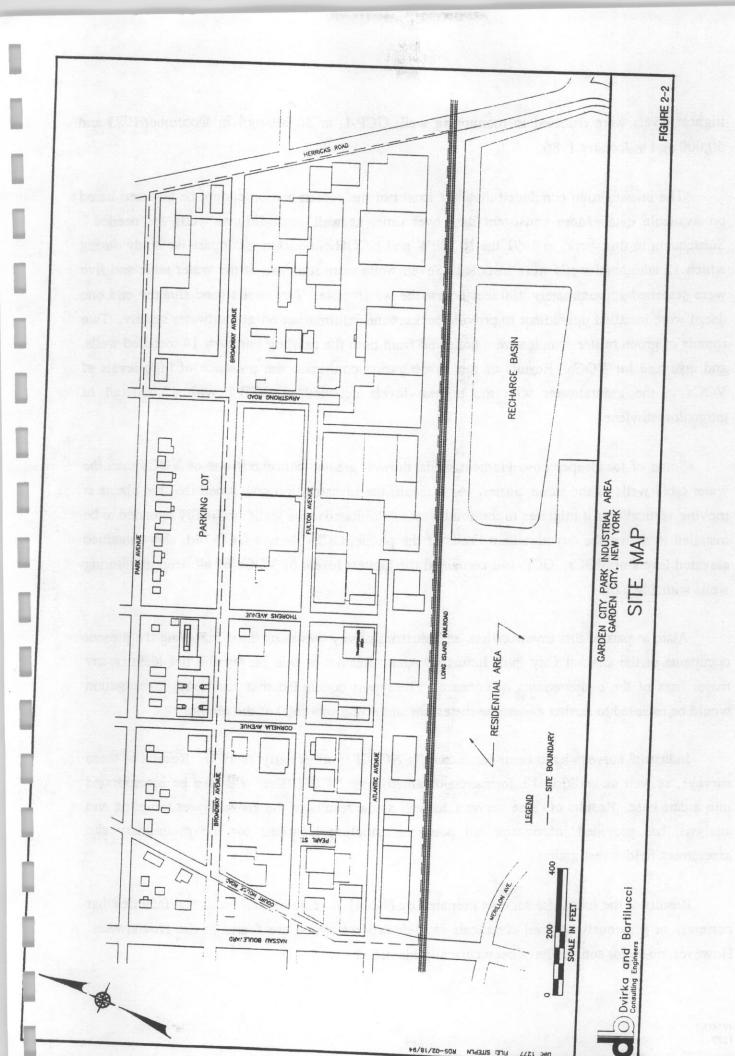

GARDEN CITY PARK INDUSTRIAL AREA GARDEN CITY, NEW YORK

Dvirka and Bartilucci Consulting Engineers

SITE LOCATION MAP

FIGURE 2 - I

highest levels were detected in monitoring well, GCP-1, at 36,000 ug/l in December 1985 and 50,000 ug/l in January 1986.

The investigation concluded that "the extent of the contamination cannot be assessed based on available data. More consistent data over time, as well as additional wells are needed." Subsequent to this work, in 1991 the NCDPW and NCDH conducted a cooperative study during which 12 additional wells were installed. Seven wells were screened at the water table and five were screened approximately 100 feet below the water table. Two wells (one shallow and one deep) were installed upgradient to provide background information on groundwater quality. Two rounds of groundwater samples were collected from both the existing and new 14 installed wells, and analyzed for VOCs. Results of this investigation confirmed the presence of high levels of VOCs in the groundwater with the highest levels detected at GCP-1 with 13,000 ug/l of tetrachloroethylene.

Some of the deeper downgradient wells showed greater concentrations of VOCs than the water table wells in the same cluster. As a result, the investigation concluded that the plume is moving vertically as it migrates to the southwest. Additionally, the wells originally intended to be installed to define the downgradient limits of the plume, GCP-14s and GCP-14d, also contained elevated levels of VOCs. GCP-14d contained the highest levels of VOCs of all deep monitoring wells with 744 ug/l.

Also, as part of this investigation, an industrial survey was performed involving the present occupants of the Garden City Park Industrial Area. Results of this survey did not identify any major uses of the contaminants of concern. The report concluded that additional investigation would be required to further determine the extent and actual source(s) of the plume.

Industrial surveys have been conducted by NCDH from as early as 1977. Results of these surveys, as well as additional information obtained from NCDH files, will also be incorporated into a data base. Results of these surveys, as well as the results of the groundwater sampling and analysis, has provided information on potential sampling locations for the preliminary site assessment field investigation.

Results of the industrial surveys prepared by NCDH indicate several industrial facilities that currently or previously utilized chemicals in their process which are found in the groundwater. However, no major sources have been currently identified.

#### 3.0 SCOPING OF THE PRELIMINARY SITE ASSESSMENT

#### 3.1 Approach and Objectives

The approach to this preliminary site assessment for the Garden City Park Industrial Area is to conduct a review of existing information and field investigation in an attempt to identify the source or sources contributing to groundwater contamination. The information provided in this document is structured in order to describe the scope of work to be conducted during this PSA.

#### 3.2 Project Description

#### 3.2.1 Task A - Scoping Plan

Prior to conducting a file review or site visit, a scoping plan was prepared and submitted to NYSDEC for review and approval of a preliminary budget. This plan, dated October 1993, contained a project schedule, staffing plan, estimated budget, M/WBE Utilization Plan and a list of proposed subcontractors.

#### 3.2.2 Task 1 - Project Scoping

The initial phase of this project included data collection and review of existing information, meetings and interviews with key project personnel and a site visit.

Files from Nassau County Department of Health, Nassau County Department of Public Works and New York State Department of Environmental Conservation, including groundwater and water supply data, and industrial chemical use and disposal information, were obtained and reviewed. This data aided in the development of this detailed field investigation work plan.

A scoping meeting with NYSDEC personnel was held to discuss the project objectives, including site specific quality assurance and quality control objectives, sampling locations and procedures. An additional meeting was held with the Long Island Water Conference an August 25, 1993, to discuss their concerns regarding groundwater quality in the Garden City Park Industrial Area and scope of work for this PSA.

A site visit of the study area was also conducted on November 23, 1993, to familiarize key project personnel with the area and to assess the proposed field investigation strategy. The site visit was conducted in order to supplement the evaluations made during data collection.

#### 3.2.3 Task 2 Work Plan Development

The second phase of this project includes development of a detailed work plan. This work plan, as represented by this document, utilizes all information obtained during the first phase of the project to modify, if necessary, the proposed sampling strategy. If modified, sufficient documentation is provided to justify the changes. This work plan includes the following site specific subplans:

- o Field Operations/Sampling Plan
- o Quality Assurance/Quality Control Plan
- o Health and Safety Plan

This document presents the detailed activities comprising the components of this PSA, including sampling and analytical procedures, data validation and report preparation, and is prepared in accordance with NYSDEC Technical and Administrative Guidance Memoranda.

As part of work plan development, a site base map was prepared at a scale of 1"-200'. A recent aerial photograph of the site was obtained and utilized to prepare this base map.

#### 3.2.3.1 - Subcontractor Procurement

Conducted concurrently with the development of this work plan was the procurement of subcontractors for this PSA. Subcontractors will be utilized to conduct the following work:

- o Groundwater and soil probe survey
- o Field sample analysis
- o Laboratory sample analysis
- o Monitoring well installation

Site specific specifications, where applicable, were developed and provided to NYSDEC for review and approval prior to solicitation of bids. Bids were solicited from an appropriate number of subcontractors as required by NYSDEC. Bids that were received were reviewed and a summary of the bids were provided to NYSDEC for review prior to selection of the subcontractor. Subcontractor costs are provided as part of this work plan.

#### 3.2.3.2 - Data Base Development

Also conducted concurrently with work plan development will be development of a computer data base to analyze and compile existing data and information, including building address, type of business, survey data, chemical usage, disposal method and comments for the industrial facilities in the study area. A separate data base will include the results of groundwater sampling. The data gathered during the first phase of this project will be tabulated in various forms for analysis.

#### 3.2.4 Task 3 Implementation of the Field Investigation

The third phase of the project will consist of implementation of the field investigation. The field investigation for the Garden City Park Industrial Area will include the following:

- o Groundwater probe survey
- o Subsurface soil sampling
- o Groundwater sampling
- o Industrial facility inspections (if required)
- o Dry well sampling (if required)
- o Monitoring well installation (if required)

Groundwater samples will be collected from groundwater probes and samples will be analyzed in the mobile field laboratory utilizing a gas chromatograph (GC) equipped with a purge and trap for select compounds (tetrachloroethene [PCE], trichloroethene [TCE] and 1,1,1-trichloroethane [TCA]). Approximately three subsurface soil samples will be collected from soil probe locations in the vicinity of the potential sources to be identified in the field. The soil samples will also be analyzed in the field for the select compounds. Drainage water and sediment samples may also be collected from dry wells associated with potential sources of contamination.

Further description of sampling procedures, frequency of sampling and sample locations are described in detail in the Field Activities Plan in Section 5.0 of this document. A summary of the field investigation program is provided in Table 3-1.

#### 3.2.5 Task 4 Report Preparation

At the conclusion of the field investigation, a PSA report will be prepared. The report will present the information and data obtained during the scoping of the project, and the analytical results and information obtained during the field investigation.

#### Table 3-1

#### GARDEN CITY PARK INDUSTRIAL AREA PRELIMINARY SITE ASSESSMENT FIELD INVESTIGATION SUMMARY

#### Program Element

Groundwater Probe Survey

Surface/Subsurface Soil Sampling (Soil Probe)

Groundwater Sampling (Groundwater Probe)

Soil Gas (Soil Gas Probe)

Industrial Facility Inspections

Approximately 30 groundwater probe locations will be installed based on a grid on public right-of-way. Ten additional locations, based upon the results of the initial 30, will be installed to further isolate/confirm potential sources. Five locations may also be installed on-site at potential source facilities.

Approximately 20 surface and/or subsurface soil samples will be collected from the groundwater probe locations near potential sources. The samples will be analyzed for select compounds (PCE, TCE and TCA) in the mobile field laboratory utilizing a portable gas chromatograph (GC) equipped with a purge and trap. Three of the 20 samples will be sent to an off-site laboratory for confirmatory volatile organic, TCL metals and conventional parameter analysis.

Two representative soil samples will be collected from the unsaturated zone just above the water table and will be analyzed for grain size analysis. Two additional soil samples will be collected from the saturated zone for grain size analysis.

Two groundwater samples, one at the water table and one with depth will be collected from each of the groundwater probe locations. Each sample will be analyzed for select compounds (PCE, TCE and TCA) in the field laboratory. Approximately five samples exhibiting elevated levels of these compounds will be sent to an outside laboratory for volatile organics, TCL metals and conventional parameter analysis.

Five soil gas samples will be collected from the same locations that elevated levels of subsurface soil are detected. Soil gas samples will be analyzed for PCE, TCE and TCA in the field laboratory.

Based on the results of the groundwater probe sampling, detailed on-site inspections of approximately five potential source facilities may be conducted. The inspection would include obtaining information on dry wells, chemical usage, and current and past storage and disposal practices.

#### Table 3-1 (continued)

#### GARDEN CITY PARK INDUSTRIAL AREA PRELIMINARY SITE ASSESSMENT FIELD INVESTIGATION SUMMARY

#### Program Element

Dry Well Sampling

Based on the results of the groundwater probe sampling and on-site inspections, provision will be made to sample five dry wells at industrial facilities determined to be potential sources. All samples will be analyzed for Target Compound List (TCL) +30 VOCs at a laboratory.

Monitoring Well Installation

Once a potential source(s) is identified, approximately three monitoring wells will be installed to confirm the presence of the source.

Groundwater Sampling (Monitoring Well)

One groundwater sample will be collected from each of the monitoring wells installed. Each sample will be analyzed for full TCL +30 parameters.

Subsurface Soil Sampling (Monitoring Wells)

As part of the installation of the monitoring wells, three subsurface soil samples will be collected and analyzed for full TCL +30 parameters.

#### 4.0 PROJECT MANAGEMENT

#### 4.1 Project Schedule and Key Milestones/Reports

The Project Schedule for the Garden City Park Industrial Area Preliminary Site Assessment is provided in Table 4-1. Key milestones are identified in order to monitor work progress. Specific deadlines for completion of tasks and subtasks are established throughout the project schedule to ensure timely completion of work. The following is the list of milestones proposed for this project:

Milestone 1: Submittal of the Draft Scoping Plan for the Preliminary Site Assessment

Milestone 2: Submittal of the Draft Preliminary Site Assessment Work Plan, including the Field Operations/Sampling Plan, Quality Assurance/Quality Control

Plan, and Health and Safety Plan

Milestone 3: Submittal of the Draft Field Investigation/PSA Report

#### 4.2 Project Management, Organization and Key Technical Personnel

Dvirka and Bartilucci Consulting Engineers will be the prime consultant responsible for the PSA.

The Project Organization Chart for this PSA, illustrating both management and project responsibility functions for the project team and key personnel, is provided in Table 4-2.

Monthly Work Assignment Progress Reports will be prepared and submitted with the monthly invoice. Progress reports will provide technical information by task, compliance with the project schedule, accomplishments, problems and projected changes in project scope, as well as utilization of Minority and Women Business Enterprises.
