1.0 INTRODUCTION

This report presents the results of the Remedial Investigation (RI) for the Gem Cleaners Site located at 84 North Village Avenue, Rockville Centre, New York 11570 (referred to as the "Site"). The RI was completed in accordance with the New York State Department of Environmental Conservation (NYSDEC or the "Department") Division of Environmental Remediation (DER) Work Assignment (WA) No. D007620-36 Notice to Proceed dated May 1, 2017, the NYSDEC-approved Scope of Work dated January 17, 2018 and NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation.

The Gem Cleaners Site has been assigned NYSDEC Site No. 130082 and is located on North Village Avenue approximately 175 feet north of Washington Street (refer to *Figure 1* for the location of the Gem Cleaners building). The Gem Cleaners building consists of a one-story building with a basement and encompasses a portion of a 0.2-acre parcel. The remainder of the parcel is improved with a two-story building with a basement adjacent to the south side of the Gem Cleaners building, a driveway south of the two-story building, and a parking lot with a two-car detached garage west and southwest of the Gem Cleaners building. The Gem Cleaners building was formerly occupied by a dry cleaner, between at least 1994 and 2006, and is currently vacant. The Site Investigation Area associated with the Gem Cleaners Site encompasses the Gem Cleaners building and adjacent and nearby commercial properties and a residential property southwest of the Gem Cleaners building.

Previous investigations associated with the Gem Cleaners Site indicate the primary contaminant of concern (COC) at the Site is tetrachloroethene (PCE), primarily in groundwater. Additionally, PCE was identified in subsurface soil in one location (beneath the exterior drain inlet west of the Gem Cleaners building). The impacted soils were excavated and transported off-Site for disposal in 1997. In May 2017, the Department issued an RI/Feasibility Study (FS) work assignment to TRC Engineers, Inc. (TRC) to further characterize soil and groundwater at and associated with the Gem Cleaners Site. The scope of the RI also included vapor intrusion sampling in the Gem Cleaners building and in three structures near the Gem Cleaners building, collection and laboratory analysis of sediment and water from a drain inlet and sump in the basement of the Gem Cleaners building, and laboratory analysis of samples of tracer dye, used during a previous investigation, in the Gem Cleaners building. The RI field investigation activities were implemented between March 2018 and March 2019.

2.0 SITE DESCRIPTION AND HISTORY

2.1 Site Location and Setting

The Gem Cleaners building was constructed circa 1951 and consists of a one-story building with a basement. The building encompasses a portion of a 0.2-acre parcel and the remainder of the parcel is improved with a two-story building with a basement adjacent to the south side of the Gem Cleaners building (Promise Nails and Spa), a driveway south of the two-story building, and a parking lot with a two-car detached garage west and southwest of the Gem Cleaners building. The Site Investigation Area includes the Gem Cleaners building at 82 North Village Avenue and the area bounded by a public parking lot to the west, Washington Street to the south, North Village Avenue to the east, and a parking lot north of the Site building. Additional features and buildings in the Site Investigation Area include a one-story commercial building with multiple tenants north of the Gem Cleaners Site at 86 to 96 North Village Avenue and landscaped areas/walkways west of the one-story commercial building, a two-story building with a first floor commercial tenant (Promise Nails and Spa) and a second floor residential apartment under renovation adjacent to and south of the Gem Cleaners building at 82 North Village Avenue, a one-story commercial building (Georgette & Co. Hair Salon) at 78 North Village Avenue and a two story commercial building at 70 to 76 North Village Avenue both further south of the Gem Cleaners building, and a two-story residential building southwest of the Gem Cleaners Site at 23 Washington Street. As noted above, west and southwest of the Gem Cleaners building there is a two-car detached garage and a parking lot for the south-adjacent nail salon. The Site Investigation Area is located in a moderately developed urban area primarily consisting of low-rise commercial, residential, and institutional buildings. A Site Location Map is presented in *Figure 1* and current features in the Site Investigation Area are shown on *Figure 2*.

2.2 Current and Historic Site Uses

The Gem Cleaners building is currently vacant and consists of a one-story structure with a basement. According to the Village of Rockville Centre Department of Public Works Amended Building Zoning Map, the Gem Cleaners Site is zoned for business (B-C).

The Gem Cleaners building historically operated as a dry cleaner and tailor shop (Gem Cleaners) between at least 1994 and 2006. The exact dates of operation and use of the Site building prior to the operation as a dry cleaner are unknown. During operation, Gem Cleaners reportedly used early generation dry cleaning equipment including a washer, drier, cooker, sniffer, filters, air compressor, press, spotting board and vacuum system. With the exception of the vacuum system and air compressor, which were located in the southwest corner of the basement, the equipment was located on the first floor. All dry-cleaning equipment has been removed from the building. A small diameter floor drain, which was reportedly connected to a waste sink in the basement, was located on the first floor along with a conventional washing machine (also reportedly

connected to the basement waste sink). Based on prior reports, Gem Cleaners used up to 200 gallons of PCE per year.

The basement of the Gem Cleaners building contains two inactive boilers (i.e., new boiler and old boiler), a boiler feedwater tank and condenser, two inactive 275-gallon fuel oil aboveground storage tanks (ASTs), a waste sink, and a sump. A storage area, containing approximately five empty 55-gallon drums is located in the northwest portion of the basement (refer to Section 4.4). Additionally, there is a 5 foot by 5 foot by 8-inch deep depression (5' by 5' depression) in the basement floor near the old boiler and there is a floor drain (stairwell drain) located at the bottom of the exterior basement stairwell on the west side of the Gem Cleaners building. The drain is connected to a 5-gallon bucket (drain inlet) below the basement floor of the Gem Cleaners building via a pipe that runs under the exterior basement door saddle. The layout of the basement of the Gem Cleaners building is presented on *Figure 3B.* A photographic log, identifying relevant Site and building features, is presented as *Appendix A.*

The sump reportedly received boiler condensate and was fitted with a sump pump and hose that discharged to the waste sink. The purpose of the 5' by 5' depression in the concrete floor is unknown, but it appears to be associated with the old boiler (possibly remnants of a former equipment pad or a cut-out for equipment clearance), based on its proximity to the old boiler and associated piping. The bottom of the 5' by 5' depression is primarily concrete; however, the central portion of depression was cracked, and a portion of the concrete can be removed, which permitted sampling of soil beneath the depression (refer to Section 4.5.3). Additional information regarding the building features and layout and historic Site use is presented in Section 3.0.

3.0 PREVIOUS INVESTIGATIONS

Presented in this section are summaries of the results of previous investigations conducted for the Gem Cleaners Site. The prior reports associated with the Gem Cleaners Site described below include a Phase II Environmental Subsurface Investigation (ESI) Report prepared by Energy & Environmental Analysts, Inc. (EEA) in 1997, a Site Assessment & Remediation Report prepared by P.W. Grosser Consulting Engineer & Hydrogeologist, P.C., (PWGC) in 1997, a Preliminary Site Characterization Report prepared by O'Brien & Gere Engineers, Inc. (OBG) in 2006 and a Phase II Subsurface Investigation Report prepared by General Consolidated Industries, Inc. (GCI) in 2018.

3.1 Summary of Prior Reports

3.1.1 *Phase II Environmental Subsurface Investigation - EEA*

A Phase II ESI was conducted by EEA between 1994 and 1995 following the completion of a Phase I Environmental Site Assessment (ESA). The scope of the Phase II ESI included the advancement of a soil boring through a dry well located in the parking area southwest of the Gem Cleaners building and collection of soil samples at discrete intervals; installation of four monitoring wells (one upgradient and two downgradient of the dry well and one downgradient of the sump in the basement of the Site building); and three rounds of groundwater sampling. At the time of the Phase II ESI, the Site was occupied by Gem Cleaners, a dry cleaning facility which used PCE according to information in the Phase II Environmental Subsurface Investigation Report.

The results of the Phase II ESI identified PCE in one soil sample collected from 2 to 4 feet below ground surface (bgs) in the boring advanced through the dry well) at a concentration of 7 micrograms per kilogram (µg/kg), which was below the NYSDEC Technical and Administrative Guidance Memorandum (TAGM) 4046 Recommended Soil Cleanup Objective (SCO) of 1,400 µg/kg (the applicable criteria at the time of the sampling) and is below the Unrestricted Use SCO of 1,300 µg/kg and the Commercial Use SCO of 150,000 µg/kg. PCE was not detected in deeper soil samples selected for analysis from the boring advanced through the dry well (i.e., soil samples collected from 8 to 10 feet bgs, 13 to 15 feet bgs and 18 to 20 feet bgs). Groundwater was encountered at approximately 19 feet bgs in the soil boring advanced through the dry well. The results of the analysis of soil samples collected during the Phase II ESI are provided on Table 1 of the Phase II ESI Report (refer to *Appendix B)* and historic soil sampling results for PCE are shown on *Figure 4* of this RI Report.

PCE was detected in one monitoring well (MW-1A) located south of the exterior stairwell drain inlet, at concentrations above the Class GA Value of 5 micrograms per liter (µg/L) during each sampling event. The concentrations of PCE detected in MW-1A ranged from 26 to 56 µg/L. With the exception of one compound, 1,1,2-dichlchloroethene, detected in MW-1A at a concentration of 47 µg/L (above the Class GA Value of 5

µg/L) during the September 1994 sampling event, there were no other compounds detected above Class GA Values, and the results of analysis of the groundwater samples collected from the remaining monitoring wells during each sampling event were below Class GA Values. The results of the analysis of groundwater samples collected during the Phase II ESI are provided on Table 2 of the Phase II ESI Report (refer to *Appendix B)* and historic groundwater sampling results for PCE are shown on *Figure 5* of this RI Report.

3.1.2 *Site Assessment & Remediation Report - PWGC*

PWGC prepared a Site Assessment & Remediation Report in 1997 to document the findings of a Site inspection, and investigation and remediation consisting of excavation of the soil below the exterior stairwell adjacent to and west of the Gem Cleaners building. The objective of the Site inspection was to evaluate the potential for an on-Site source area that may have contributed to groundwater contamination.

PWGC completed the inspection of the Gem Cleaners Site building in January 1997. The inspection focused on the operations of the facility and the generation of liquid waste. Based on the findings of the Site inspection, PWGC concluded that the exterior stairwell drain inlet, which historically received waste from the Site's vacuum system vent, was likely the potential source of groundwater contamination. Note that based on the results of the RI, there does not appear to be an existing significant source of chlorinated volatile organic compounds (VOCs) impacting the Site Investigation Area. Additionally, since wastewater was reportedly disposed of in the toilet on the ground floor, dye testing was performed by PWGC to document discharge to the sanitary sewer. As part of the dye testing, water soluble tablets were placed in the toilet and the manhole in the sidewalk east of the building was inspected. PWGC noted the presence of the dye in the manhole.

PWGC collected a soil sample from 12 to 18 inches below the bottom of the exterior stairwell drain inlet for analysis for PCE, trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE), and vinyl chloride. PCE, TCE, and 1,2-DCE were detected in the soil samples above the TAGM 4046 Recommended Soil Cleanup Objectives and Unrestricted Use SCOs but below the Commercial Use SCOs. Vinyl chloride was not detected above the reporting limit. A soil boring was advanced through the exterior drain inlet and PCE-impacted soil was identified beneath the drain to approximately 8 feet bgs. The drain inlet at the bottom of the exterior stairwell was removed and surrounding impacted soil was excavated to approximately 8.5 feet bgs and transported to LWD, Inc. of Calvert City, Kentucky for disposal. The excavation was backfilled with clean sand and a new drain inlet was installed to prevent flooding. The location of the exterior stairwell and drain are shown on *Figure 3B*.

After implementation of the remedial action, PWGC concluded that the potential source of elevated PCE in groundwater had been removed; and therefore, the concentrations of PCE in MW-1A were expected to return to background levels through natural attenuation. There was no additional investigation recommended by PWGC.

3.1.3 *Preliminary Site Characterization – Gem Cleaners - OBG*

O'Brien & Gere Engineers, Inc. completed a Preliminary Site Characterization (PSC) for the Gem Cleaners Site in 2006. The scope of the PSC consisted of advancement of eight soil borings in the parking area southwest of the Gem Cleaners building to a maximum depth of 44 feet bgs (where refusal was encountered), submittal of nine soil samples for laboratory analysis, collection for laboratory analysis of 15 groundwater samples from the eight borings using a discrete screen point groundwater sampler, collection of a soil and water sample from the dry well (DW-1) in the parking lot for laboratory analysis, and collection of groundwater samples from two existing monitoring wells (MW-1B[1] and MW-2). Soil and groundwater samples and the water sample collected from the dry well were analyzed for VOCs. Note that existing monitoring wells MW-1A and MW-3 could not be found during the PSC.

VOCs were not detected at concentrations above the TAGM 4046 Recommended Soil Cleanup Objectives, Unrestricted Use SCOs or Commercial Use SCOs in the soil samples. PCE was detected in groundwater at three locations above the Class GA Value of 5 µg/L, at concentrations ranging from 11.2 to 313 µg/L. Cis-1,2-dichloroethene was detected in groundwater at one location at a concentration of 5.11 µg/L, which is above the Class GA Value of 5 µg/L. The highest concentrations of PCE and 1,2-DCE were detected in the groundwater sample collected at a depth of 21 feet bgs from SB-6/GWS-6 located in the southwest corner of the parking lot, southwest of the Gem Cleaners building. In deeper samples, collected at depths of 34 feet and 44 feet bgs from SB-6/GWS-6, concentrations of PCE and cis-1,2-DCE were lower. There were no other VOCs detected in groundwater at concentrations above the Class GA Values and VOCs were not detected above Class GA Values in the water sample collected from the dry well. Groundwater flow direction could not be calculated during the performance of the PSC due to the limited number of permanent monitoring wells in the Site Investigation Area, however, the reported direction of regional groundwater flow was from north to south. The results of the analysis of soil and groundwater samples collected during the PSC are shown on Tables 1 and 2 of the PSC Report included in *Appendix B.* Groundwater sampling results above Class GA Values are shown on Figure 3 of the PSC Report (refer to *Appendix B)* and historic soil and groundwater sampling results for PCE are shown on *Figures 4* and *5* of this RI Report.

[1] Note that the PSC Report indicates groundwater samples were collected from monitoring well MW-1A (a shallow well); however, based on the reported total depth of the well (60 feet bgs), groundwater samples were likely collected from monitoring well MW-1B.

3.1.4 *Phase II Subsurface Investigation Report - GCI*

A Phase II Subsurface Investigation was conducted by GCI on February 7 and 8, 2018. The scope of the Phase II Subsurface Investigation included the performance of dye tests to confirm the discharge points of several drains in the Site building; the collection of soil samples from the dry well in the parking lot, the exterior stairwell floor drain, the sump, and from beneath the bottom slab of the 5' by 5' depression in the basement of the Gem Cleaners building ("Boiler Pit"); and collection of one groundwater sample from one existing well (MW-2). The soil samples were submitted to Long Island Analytical Laboratories for analysis for VOCs, semivolatile organic compounds (SVOCs), and metals and the groundwater sample collected from MW-2 was submitted to Long Island Analytical Laboratories for analysis for VOCs.

Dye testing was completed by mixing a fluorescent tracer dye with water and introducing the solution to the interior drain points. The results of the dye test indicate the following:

- Interior discharge points of the Site building (including bathrooms in the Site building and the wastewater sink located in the basement) were confirmed to discharge to the municipal sewer system located on North Village Avenue.

- The drywell located in the parking lot is a leaching structure, and also contains a 6-inch diameter overflow pipe. The overflow pipe leads to the western property line and discharges to the adjacent parking lot.

- The floor drain located at the base of the exterior stairwell on the west side of the Site building is a leaching structure. The drain contains a pipe which traverses under the door saddle to a 5-gallon bucket, below the building basement floor, acting as an interior floor drain. A photograph of the exterior stairwell drain and interior drain inlet is presented below:

- The sump and 5' by 5' depression located in the basement of the Site building were inspected and found to each be non-leaching structures.

The results of analysis of the soil samples collected during the Phase II Subsurface Investigation revealed that with the exception of acetone detected in the soil samples collected from the floor drain located at the bottom of the exterior staircase on the west side of the Gem Cleaners building and in the drywell, there were no VOCs detected above the Unrestricted Use SCOs. In the soil sample collected from the drywell located in the parking lot, two metals (lead and zinc), and two SVOCs (benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene) were detected at concentrations above the Unrestricted Use SCOs, but below the Commercial Use SCOs. In the soil sample collected from the floor drain located at the bottom of the exterior staircase on the west side of the Gem Cleaners building, five SVOCs (benzo(a)pyrene, benzo(b)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene) and four (4) metals (chromium[2], copper, lead, and zinc) were detected at concentrations above the Unrestricted Use SCOs; however, only one SVOC, benzo(a)pyrene, was detected marginally above the Commercial Use SCO. In the soil sample collected from the sump located in the basement of the Site building, six metals (chromium[2], copper, lead, manganese, nickel, and zinc) were detected at concentrations above the Unrestricted Use SCOs and one metal (copper) was detected above the Commercial Use SCO. Finally, in the soil sample collected from beneath the bottom slab of the 5' by 5' depression in the basement of the Gem Cleaners building ("Boiler Pit"), one metal (zinc) was detected at a concentration above the Unrestricted Use SCO, but below the Commercial Use SCO.

[2] Based on the SCO for trivalent chromium.

No VOCs were detected in the groundwater sample from MW-2 at concentrations above laboratory reporting limits. GCI concluded that based on the analytical data, the drywell, exterior stairwell floor drain, 5' by 5' depression, and sump have been impacted and will require remediation.

4.0 REMEDIAL INVESTIGATION SCOPE AND METHODS

The RI field activities described in this section were completed by TRC between March 2018 and March 2019. The RI was completed in accordance with the NYSDEC DER WA No. D007620-36 Notice to Proceed dated May 1, 2017, the NYSDEC-approved Scope of Work dated January 17, 2018, and DER-10, Technical Guidance for Site Investigation and Remediation. The project included adherence to a Health and Safety Plan (HASP), a Community Air Monitoring Plan (CAMP), a Field Activities Plan (FAP), and a Quality Assurance Project Plan (QAPP) for sample collection and analysis and validation of laboratory data.

4.1 Remedial Investigation Scope

The RI field activities consisted of:

- Implementation of a CAMP, which included real-time monitoring for VOCs and particulates at the downwind perimeter of the work area during intrusive work.
- An inspection of the storage area and 55-gallon drums in the closet in the northwest portion of the basement of the Gem Cleaners building.
- A utility survey using geophysical techniques at proposed sub-slab vapor sampling locations, soil boring and monitoring well locations prior to the start of intrusive work. Note that a sidewalk opening permit was obtained from the Village of Rockville Centre prior to the start of intrusive work.
- Advancement, using a direct-push drill rig, of three soil borings in the basement of the Site building (MW-103, MW-104, and MW-105); one soil boring at through bottom of the exterior stairwell, directly south of the drain inlet (MW-102); and one soil boring in the parking lot directly south of the dry well (SB-101). Soil samples were collected continuously during advancement of the direct push borings and 11 soil samples were selected for laboratory analysis from the direct-push soil borings.
- Installation of 10 shallow overburden groundwater monitoring wells (MW-101 through MW-110), one intermediate depth monitoring well (MW-109M), and three deep overburden groundwater monitoring wells (MW-101D, MW-107D, and MW-110D). The groundwater monitoring wells were installed using a track-mounted hollow-stem auger drill rig, with the exception of monitoring wells MW-102 through MW-105, which were installed using a vacuum excavator. During well installation soil samples were collected continuously from the boreholes for each of the deep and intermediate-depth wells and from the boreholes for MW-106 and MW-108, and a total of 12 soil samples were selected for laboratory analysis.
- Collection and laboratory analysis of one sediment sample from the sump located in the basement of the Gem Cleaners building and one soil sample from beneath the bottom slab of the 5’ by 5’ depression in the basement of the Gem Cleaners building.

- Collection and laboratory analysis of one sediment sample from the bottom of the drain inlet located in the western portion of the Gem Cleaners building basement, adjacent to MW-103. Additionally, two rounds of samples of the standing liquid in the drain inlet were collected for laboratory analysis.
- Development of the 14 newly installed groundwater monitoring wells.
- Collection and analysis of two rounds of groundwater samples. During the first round, groundwater samples were collected from the 14 newly installed shallow, intermediate-depth and deep monitoring wells and three existing monitoring wells[3]. The second round consisted of the collection and analysis of groundwater samples from 12 groundwater monitoring wells. All 17 monitoring wells were gauged during each groundwater sampling event to obtain data for preparation of groundwater surface elevation contour maps.
- Collection and laboratory analysis of two samples of tracer dye previously utilized in the Gem Cleaners building.
- Vapor intrusion sampling in the Gem Cleaners building and in three adjacent/nearby structures in the Site Investigation Area. Two sets of co-located sub-slab vapor and indoor air samples were collected in the Gem Cleaners building and one set of co-located sub-slab vapor and indoor air samples was collected in each of the three adjacent/nearby structures. An additional indoor air sample was also collected on the first floor of the building located directly south of the Gem Cleaners building. Additionally, one outdoor ambient air sample was collected for laboratory analysis.
- A survey of physical features, known utilities, and property boundaries. Additionally, the locations and elevations (ground surface and top of well casing) of the existing and new monitoring wells and the locations and ground surface elevations of the interior and exterior drain inlets and the dry well were surveyed.
- Purge water, decontamination fluids and soil cuttings were containerized in 55-gallon drums for transport and off-Site disposal by Innovative Recycling Technologies, Inc. (IRT).

The sampling locations are shown on *Figures 3A* and *3B*. The scope of the field activities and methods are described further below.

[3] Groundwater samples were collected from existing monitoring wells MW-1B, MW-2, and MW-3. Monitoring well MW-1A could not be found during the RI and was likely destroyed/damaged.

4.2 Implementation of CAMP

TRC implemented a CAMP during investigation activities. The CAMP was implemented in accordance with NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation, Appendix 1A - Generic Community Air Monitoring Plan. A DustTRAK™ II aerosol monitor and a photoionization detector (PID) were positioned at the downwind location of the work area. The CAMP was implemented during advancement of soil borings and monitoring well installation, but not during vapor intrusion sampling or monitoring well development or sampling. The purpose of the CAMP was to monitor air downwind of the work area for potential impacts associated with the investigation activities. There were no exceedances of the CAMP action levels during the performance of the RI. The CAMP results are provided in *Appendix C.*

4.3 Utility Survey

A geophysical survey was performed on March 19, 2018 by Nova Geophysical Services (Nova) of Douglaston, New York, under subcontract to TRC, to verify that proposed monitoring well and soil boring locations, and sub-slab vapor sample locations in the Gem Cleaners building were clear of subsurface structures and utilities. After access was granted for vapor intrusion sampling in three adjacent/nearby structures in the Site Investigation Area, an additional geophysical survey was performed on March 28, 2018 by Nova, under subcontract to TRC, to verify that proposed sub-slab vapor sample locations were clear of subsurface structures and utilities. The geophysical survey equipment consisted of a Noggin 250 MHz ground-penetrating radar (GPR) unit and a utility locator (3M DYNATL). The location of each proposed monitoring well, soil boring and sub-slab vapor sampling point was screened using the GPR unit and the utility locator. Sample locations were established in areas that did not conflict with subsurface structures or utilities. Generally, adjustment from the proposed sampling locations was not required. The Geophysical Survey Report is provided as *Appendix D*.

4.4 Inspection of Storage Area

The storage area in the northwest portion of the basement of the Gem Cleaners building was inspected as part of the RI. Approximately five 55-gallon drums, which appeared to be empty, were identified in the storage area. The majority of the drums were rusted with perforations and several of the drums were missing lids. The historic contents of the majority of the drums could not be confirmed since the labels were not legible; however, the label on one drum indicated that the former contents were boiler-related fluids. Staining was identified on the concrete floor; however, there was no evidence of significant cracks in the concrete floor slab or floor drains in the vicinity of the drums; therefore, further investigation in this area was not warranted.

4.5 Soil and Sediment Sampling

4.5.1 *Direct-Push Soil Sampling*

Subsurface soil sampling was conducted on March 19 and March 20, 2018 to further characterize soil in the Site Investigation Area. Land, Air, Water Environmental Services, Inc. (LAWES) was retained as a subcontractor by TRC for drilling services. Direct-push methods were used to retrieve soil samples at boring locations where access was limited (at locations MW-102 through MW-105) and at the soil boring location south of the dry well in the parking lot (SB-101). Soil samples were collected continuously from the ground surface to the termination depth of each boring using dedicated sampling equipment. Each soil sample was visually examined and screened for VOCs with a PID equipped with an 11.7 eV lamp. Geologic descriptions of the soil samples collected and field screening results were recorded on soil boring log forms. Soil boring logs, including the PID responses for each sample, are presented in *Appendix E*. Refer to *Figures 3A* and *3B* for direct-push sampling locations.

The proposed scope of work included selection from each boring of one soil sample from the interval exhibiting the most evidence of potential impacts (based on field screening) and one soil sample from the first underlying apparent clean interval for laboratory analysis. Evidence of potential contamination (i.e., elevated PID readings, staining, and odor) was identified in one soil boring, MW-103, from 10 to 14 feet below the top of the floor slab (btos); therefore, one soil sample was selected from the most impacted interval from this boring (from 12 to 14 feet btos) and the apparent underlying clean interval (from 15 to 17 feet btos). Note also selected for analysis was a third soil sample from MW-103, collected directly below the invert of the adjacent drainage structure (from 3 to 5 feet btos).

Since there was no evidence of potential contamination identified in the remaining direct-push borings, generally one soil sample from 0 to 2 feet below the basement slab/ground surface and a second soil sample from the two-foot interval directly above groundwater were selected for analysis. The exception to this was borings adjacent to the drainage structures (SB-101 and MW-102). At these locations, the samples collected directly below the inverts of the drainage structures were the shallowest samples selected from each boring for laboratory analysis.

The completion depth of each direct-push boring, depths at which groundwater was encountered, depths of samples selected for laboratory analysis, PID screening results, and the laboratory analyses performed on the selected sample intervals are summarized in the table below.

Summary of Direct-Push Boring Depths, Depths to Groundwater, Depths of Soil Samples Selected for Analysis, PID Screening Results and Soil Sample Analytical Plan

Soil Boring Identification Number	Boring Depth (feet bgs/btos*)	Depth of Saturated Soil Encountered During Sampling (feet bgs/btos*)	Depth of Sample Interval Selected for Analysis (feet bgs/btos*)	Max. PID Reading (ppm)	TCL VOCs+10 including 1,4-Dioxane
SB-101	18.5	17.5	3-5	0.0	X
			15.5-17.5	0.5	X
MW-102	11.25	11	3-5	0.0	X
			9-11	0.0	X
MW-103	18	9.75	3-5	0.1	X
			12-14	350	X
			15-17	1.2	X
MW-104	10.5	8.75	0.5-2.5	0.0	X
			7-9	0.0	X
MW-105	11.25	9	0.5-2.25	0.0	X
			7-9	0.0	X

Notes:

Btos – Below top of slab
Bgs – Below ground surface
ppm – Parts per million
TCL – Target Compound List
VOCs – Volatile Organic Compounds

The soil samples were collected in accordance with NYSDEC/USEPA protocols, containerized in laboratory supplied jars, labeled, sealed, entered onto a chain-of-custody and placed in chilled coolers for shipment to TestAmerica, in Edison, New Jersey.

Following drilling activities, locations MW-102 through MW-105 were converted into permanent monitoring wells as described in Section 4.6. At soil boring location SB-101, drill cuttings were returned to the borehole, the borehole was filled with clean sand to grade, and the ground surface was restored (i.e., patched with asphalt).

Drill cuttings generated during sampling activities were containerized in 55-gallon drums and staged on-Site. Investigation derived waste (IDW) disposal is discussed in Section 4.13.

4.5.2 *Hollow-Stem Auger Soil Sampling*

Hollow-stem auger drilling was conducted between March 21, 2018 and April 14, 2018. AARCO Environmental Services, Corp. (AARCO) was retained as a subcontractor to TRC for drilling services. Hollow-stem auger drilling methods were used to advance borings for well installation and collect soil samples. Soil samples were collected continuously from the ground surface to the termination depth of each deep/intermediate depth boring and the borings for shallow wells MW-106 and MW-108 using split-spoon samplers[4]. The proposed scope of work included the advancement of the boreholes for the shallow wells to approximately 10 feet below the groundwater surface, and advancement of the boreholes for the deep wells[5] to the top of a clay layer (originally estimated to be between 55 and 80 feet bgs). However, a clay layer was encountered only in the boreholes for MW-109M, from 36 to 40 feet bgs, and MW-110D, from 70 to 81 feet bgs. Therefore, the boreholes for MW-109M and MW-110D were advanced to approximately 41 feet and 81 feet bgs, respectively. The boreholes for the remaining deep wells, MW-101D and MW-107D, were advanced to a maximum depth of 101 feet bgs following consultation with the NYSDEC.

Each soil sample was visually examined and screened for VOCs with a PID equipped with an 11.7 eV lamp. Geologic descriptions of the soil samples collected and field screening results were recorded on soil boring log forms. No evidence of potential contamination (i.e., elevated PID readings, staining, or odor) was identified in the soil borings. Soil boring logs, including the PID responses for each sample, are provided in *Appendix E*.

Since apparent impacted soils were not identified in any soil boring, generally one shallow soil sample from the one to two-foot interval directly above groundwater was selected for laboratory analysis. Additionally, a second soil sample from the two-foot interval directly above the clay layer (if identified) or the soil sample from the terminal depth of the soil boring were selected for analysis. The completion depth of each boring, depths at which groundwater was encountered, depths of samples selected for laboratory analysis, PID screening results, and the laboratory analyses performed on the selected sample intervals are summarized in the table below.

[4] Note that a deep monitoring well was initially proposed at monitoring well location MW-108; however, since the existing adjacent well (MW-1B) was constructed to approximately 60 feet bgs a shallow well was installed at this location.

[5] A deep monitoring well was initially proposed at well location MW-109M; however, due to the apparent clay layer identified from 36 to 40 feet bgs, an intermediate-depth well was installed at this location.

Summary of Boring Depths, Depths to Groundwater, Depths of Soil Samples Selected for Analysis, PID Screening Results and Soil Sample Analytical Plan

Soil Boring Identification Number	Boring Completion Depth (feet bgs)	Depth of Saturated Soil (feet bgs)	Depth of Sample Interval Selected for Analysis (feet bgs)	Max. PID Reading (ppm)	TCL VOCs+10 including 1,4-Dioxane
MW-101	27	17	NA	NA	NA
MW-101D	100	16	14-15	0.0	X
			99.2-100	0.0	X
MW-106	27	17	15-17	0.0	X
MW-107	27	17	NA	NA	NA
MW-107D	101	17	15-17	0.0	X
			97-99	0.0	X
MW-108	60.5	17	15-17	0.0	X
			59-60.5	0.0	X
MW-109	27	18	NA	NA	NA
MW-109M	41	17	15-17	0.0	X
			33-35	0.0	X
MW-110	27	16	NA	NA	X
MW-110D	81	17	15-17	0.0	X
			69-70	0.0	X

Notes:

bgs – Below ground surface
NA – Not Applicable
ppm – Parts per million
VOCs – Volatile Organic Compounds
TCL – Target Compound List

The soil samples were collected in accordance with NYSDEC/USEPA protocols, containerized in laboratory supplied jars, labeled, sealed, entered onto a chain-of-custody and placed in chilled coolers for shipment to TestAmerica, in Edison, New Jersey.

Following drilling activities, soil boring locations were converted into permanent monitoring wells as described in Section 4.6. Drill cuttings generated during boring activities were containerized in 55-gallon drums and staged on Site. IDW disposal is discussed in Section 4.13.

4.5.3 *Grab Soil/Sediment Sampling*

On April 26, 2018, TRC collected one sediment sample (TRC-Sump(SO)) from within the sump located in the basement of the Gem Cleaners building and one soil sample (TRC-SO-101(SO)) from beneath the bottom slab of the 5' by 5' depression in the basement of the Gem Cleaners building (refer to *Figure 3B)*. Since a small portion of the floor slab in the depression was cracked and the concrete could be removed to expose the underlying soil, use of a jackhammer or heavy equipment was not required to collect the soil sample. The sediment and soil samples were collected as "grab" type samples using dedicated sampling equipment. Note that the sump has a solid bottom and the grab sample (TRC-Sump(SO)) consisted of dark brown silty sediment from the bottom of the sump. Soil from beneath the bottom of the slab of the 5' by 5' depression consisted of yellow-gold fine to medium sand. There was no odor, staining, or elevated PID readings identified in the sediment/soil samples. The samples were analyzed for TCL VOCs+10 including 1,4-dioxane. The locations of the soil/sediment samples collected during the RI are presented on *Figure 3B.* Refer to Section 5.3 for a discussion of the results of analyses of the soil/sediment samples.

The sediment/soil samples were collected in accordance with NYSDEC/USEPA protocols, containerized in laboratory supplied jars, labeled, sealed, entered onto a chain-of-custody and placed in chilled coolers for shipment to TestAmerica, in Edison, New Jersey.

4.6 Monitoring Well Installation and Development

Ten two-inch diameter shallow overburden groundwater monitoring wells (MW-101 through MW-110), one intermediate-depth groundwater monitoring well (MW-109M), and three two-inch diameter deep groundwater monitoring wells (MW-101D, MW-107D, and MW-110D) were installed between March 22 and April 17, 2018 (refer to *Figures 3A* and *3B)*. AARCO was retained as a subcontractor by TRC to install the groundwater monitoring wells using a vacuum excavator or 4.25-inch inside diameter hollow stem augers.

Intermediate-Depth and Deep Overburden Wells

Two deep overburden wells (MW-101D and MW-107D) were completed at approximately 97 and 98 feet bgs, one deep overburden well (MW-110D) was completed at 70 feet bgs, and the intermediate-depth overburden monitoring well, MW-109M, was completed at 36 feet bgs. The two-inch diameter intermediate-depth and deep monitoring wells were constructed with 10-foot screen lengths.

As described above, during installation of MW-109M a clay layer was encountered from approximately 36 to 40 feet bgs. Additionally, a clay layer was encountered during installation of MW-110D from 70 to 81 feet bgs. Clay layers were not encountered during the installation of the remaining deep monitoring wells or during installation of any shallow wells. Monitoring wells MW-109M and MW-110D were screened from 10 feet above the top of the clay layer to the top of the clay layer.

Shallow Overburden Wells

The shallow monitoring wells (MW-101, MW-102, MW-103, MW-104, MW-105, MW-106, MW-107, MW-108, MW-109, and MW-110) were completed at approximately 14.5 to 27 feet bgs/btos. The two-inch diameter shallow overburden monitoring wells were constructed with 10 or 15-foot screen lengths. The approximately upper five feet of screen was installed above the water table, where feasible.

As noted above, each shallow, intermediate-depth and deep monitoring well was constructed with 2-inch diameter PVC casing and 10 to 15-foot length PVC well screens. A clean silica sand pack was installed in the annular space around each monitoring well screen and extended approximately two-feet above the top of each well screen. A two-foot thick hydrated bentonite seal was placed above the sand pack and the remaining annular space was filled with bentonite/cement grout to approximately one-foot below the ground surface (to allow for placement of the concrete collar). Monitoring well construction logs for the new monitoring wells are presented in *Appendix E*.

Following installation, the fourteen newly installed groundwater monitoring wells were developed using standard surging and pumping techniques, using dedicated tubing and a submersible pump. Depth to groundwater was measured using an oil/water interface probe prior to well development activities. Conductivity, pH, oxidation-reduction potential (ORP), turbidity, temperature, and dissolved oxygen (DO) were monitored using a Horiba™ water quality meter during well development. Light non-aqueous phase liquid (LNAPL) and evidence of contamination (sheens, odors, etc.) were not observed during development of the monitoring wells. Development water was containerized for off-site disposal.

4.7 Groundwater Sampling and Gauging

Groundwater samples were collected from the 17 monitoring wells (three existing monitoring wells and fourteen newly installed monitoring wells) in April 2018. Prior to the start of field activities, the 17 monitoring wells were gauged.

Prior to purging, a PID was used to screen the head space of each monitoring well. The monitoring wells were purged utilizing a submersible pump or a peristaltic pump and dedicated tubing connected to a Horiba groundwater parameter meter with a flow-through cell for monitoring water quality parameters. Low-flow purging rates were used to minimize suspension of particulate matter in the well. Field parameters, including temperature, conductivity, pH, ORP, turbidity and DO were recorded prior to and during purging and sample collection. Groundwater samples were collected after field parameters stabilized within targeted ranges. Groundwater samples were submitted for analysis for TCL VOCs+10 including 1,4-dioxane (via USEPA Method 8270 with selective ion monitoring) and per- and polyfluoroalkyl substances (PFAS).

Supplemental groundwater samples were collected from 12 groundwater monitoring wells in July 2018 following review of the April 2018 groundwater sampling results. Prior to the start of field activities, the water levels in all 17 monitoring wells were gauged.

Groundwater samples were collected in July 2018 using the same methods as the April 2018 sampling event, described above. Groundwater samples collected from monitoring wells MW-101, MW-102, MW-103, MW-104, MW-105, MW-106, MW-107, MW-108, MW-109, MW-109M and MW-110 were analyzed for TCL VOCs +10 TICs and samples collected from MW-101, MW-104, MW-107, MW-108, MW-109 and MW-109M were additionally analyzed for natural attenuation parameters including alkalinity, sulfate, total dissolved solids, and total organic carbon. Additionally, groundwater samples collected from monitoring wells MW-104, MW-105, MW-107, MW-108, MW-109, MW-109M and MW-2 were analyzed for PFAS.

A summary of the total depth of each monitoring well, the approximate screen interval depths, maximum PID readings recorded at each well head prior to purging, and laboratory analyses performed on the groundwater samples is presented in the table below. Groundwater sampling logs are presented in *Appendix F*.

Summary of Depths of Monitoring Wells, Monitoring Well Screened Interval Depths, Head Space Maximum PID Readings, and Groundwater Sample Analytical Plan

Monitoring Well Identification Number	Total Depth of Well (feet bgs)	Approximate Depth of Screened Interval (feet bgs)	Maximum PID Reading Prior to Purging – April 2018 (ppm)	TCL VOCs+ 10 including 1,4-dioxane and PFAS (April 2018)	TCL VOCs+ 10 (July 2018)	Natural Attenuation Parameters[1] (July 2018)	PFAS (July 2018)
MW-1B	60	50 - 60	10.6	X			
MW-2	26	Unknown[2]	0.3	X			X
MW-3	24	14 – 24	0.0	X			
MW-101	27	12 - 27	21.9	X	X	X	
MW-101D	97	87 - 97	59.2	X			
MW-102	15	5 - 15	5.5	X	X		
MW-103	15	5 - 15	11.1	X	X		
MW-104	14.5	4.5 – 14.5	1.3	X	X	X	X
MW-105	14.5	4.5 – 14.5	3.0	X	X		X
MW-106	27	12 - 27	13.5	X	X		
MW-107	27	12 – 27	11.1	X	X	X	X
MW-107D	98	88 - 98	11.4	X			
MW-108	27	12 - 27	13.1	X	X	X	X
MW-109	27	12 - 27	22.7	X	X	X	X

Summary of Depths of Monitoring Wells, Monitoring Well Screened Interval Depths, Head Space Maximum PID Readings, and Groundwater Sample Analytical Plan							
Monitoring Well Identification Number	**Total Depth of Well (feet bgs)**	**Approximate Depth of Screened Interval (feet bgs)**	**Maximum PID Reading Prior to Purging – April 2018 (ppm)**	**TCL VOCs+ 10 including 1,4-dioxane and PFAS (April 2018)**	**TCL VOCs+ 10 (July 2018)**	**Natural Attenuation Parameters[1] (July 2018)**	**PFAS (July 2018)**
MW-109M	36	26 - 36	13.9	X	X	X	X
MW-110	27	12 - 27	13.4	X	X		
MW-110D	70	60 - 70	35.7	X			

Notes:
bgs – below ground surface
ppm – parts per million
[1] – July 2018 natural attenuation parameters include alkalinity, sulfate, total dissolved solids, and total organic carbon.
[2] – Monitoring well MW-2 was installed in 1995 and the well construction log was not included in prior reports.

Groundwater samples were collected in accordance with NYSDEC/USEPA protocols, containerized in laboratory supplied jars, labeled, sealed, and placed in chilled coolers for shipment to TestAmerica. Standard chain-of-custody procedures were followed. Purge water was containerized for off-site disposal.

4.8 Drain Inlet Sampling

As part of the RI, the drain inlet within the Gem Cleaners building (adjacent to and north of monitoring well MW-103), was further investigated. Based on prior investigations, the stairwell drain located at the bottom of the exterior staircase on the west side of the Site building is a leaching structure. The drain contains a pipe which traverses under the door saddle to a 5-gallon bucket (drain inlet), below the Gem Cleaners building basement floor, acting as an interior floor drain. Standing water was identified in the drain inlet in March 2018 at the start of the RI field activities. Samples of the sediment at the bottom of the drain inlet and standing water were collected for laboratory analysis as described below. Note that additional drainage structures in the Site Investigation Area, including the dry well in the parking lot and the stairwell drain (adjacent to MW-102) were previously investigated and based on the results of the sampling and/or completed remediation additional soil or water sampling in connection with these structures was not warranted.

Sediment Sampling

On March 20, 2018, TRC purged the standing water within the drain inlet located in the western portion of the basement adjacent to MW-103. The standing water appeared to have a green tint potentially due to previous dye testing. Following purging, TRC collected a sediment sample (TRC-Drain-02(SO)) from the bottom of the drain inlet (approximately 15 inches btos). The sediment sample was collected as a "grab" type sample using dedicated sampling equipment. Sediment consisted of black fines and organics and there was

a sanitary/sewer odor identified in the sediment sample. The sample was analyzed for TCL VOCs +10 including 1,4-dioxane.

Water Sampling

On April 25, 2018, standing liquid was observed within the drain inlet located in the western portion of the basement adjacent to MW-103. Similar to the March 20, 2018 sampling event described above, the standing water appeared to have a green tint potentially due to previous dye testing. At the request of the NYSDEC, one sample of the standing liquid in the drain inlet was collected and analyzed for TCL VOCs+10 including 1,4-dioxane and PFAS. Additionally, again on July 23, 2018, standing liquid was observed within the drain inlet and at the request of the NYSDEC, an additional sample of the standing liquid was collected and analyzed for PFAS.

The sediment and water samples were collected in accordance with NYSDEC/USEPA protocols, containerized in laboratory supplied jars, labeled, sealed, entered onto a chain-of-custody and placed in chilled coolers for shipment to TestAmerica, in Edison, New Jersey.

4.9 Tracer Dye Sampling

Since the standing water in the drain inlet appeared to have a green tint potentially due to previous dye testing completed by GCI in 2018, samples of the tracer dye previously utilized at the Site were analyzed to determine if the dye was a potential source of PFAS detected in the standing liquid within the drain inlet. Two separate dyes including the Eco-Clean Water Tracing Dye and Bright Dyes Tracer Dye Tablet, which were reportedly used at the Gem Cleaners site in 2018, were each mixed and diluted in accordance with the manufacturer's guidelines with potable water in a clean high-density polyethylene lined bucket. The solutions were transferred to laboratory supplied bottles, packaged in a cooler with ice, and submitted to TestAmerica in Sacramento, CA under standard chain-of-custody procedures for analysis for PFAS.

4.10 Vapor Intrusion Sampling

Sub-slab vapor and indoor air samples were collected between March 28 and 29, 2018 in the Gem Cleaners building and three nearby/adjacent structures as follows: a two-story building with a first-floor commercial tenant (Promise Nails and Spa); a commercial building (Georgette & Co. Hair Salon) located at 78 North Village Avenue; and a residential building located at 23 Washington Street. In addition, one indoor air sample was collected on the first floor of Promise Nails and Spa. Note that following consultation with NYSDEC, an indoor air sample was not collected in the second floor residential space at 82 North Village Avenue (above Promise Nails and Spa) as requested by NYSDOH since the second floor was vacant and under renovation. Additionally, one ambient air sample was collected to determine outdoor air background concentrations.

Vapor intrusion sampling in the commercial building north of the Gem Cleaners Site building (86 to 90 North Village Avenue) and in the commercial building south of the Site (76 North Village Avenue) was additionally proposed; however, access to these structures was not granted by the property owners. Sub-slab vapor and indoor air samples were collected in accordance with NYSDOH protocols. A NYSDOH Indoor Air Quality Questionnaire and Building Inventory form were completed for each structure and are presented in *Appendix G* of this RI Report. The results of the vapor intrusion sampling are provided in Section 5.7 of this RI Report.

4.10.1 *Sub-Slab Vapor Sampling*

Penetrations for sub-slab vapor samples were created using a hammer drill. Each sub-slab vapor sample was collected approximately 0.5 feet below the bottom of the lowest level floor slab in each structure by installing Teflon® tubing in the penetration and sealing the annular space with sand and bentonite at the surface. In each structure, the lowest floor slab consisted of concrete.

Prior to sampling, a tracer gas test was performed (using helium gas) at each sub-slab vapor sample location to confirm minimal infiltration of indoor ambient air to the sub-slab vapor sampling train. The adequacy of each seal was tested using a 5-gallon bucket placed over the sample probe, sealed from the ambient air using bentonite. Helium tracer gas was then pumped into the bucket. The above grade end of the tubing, which is the sample collection point, was then attached to a helium gas detector. The adequacy of the seal was verified by confirming a concentration of helium of less than 10 percent. After an adequate seal was confirmed, each temporary sub-slab vapor point was purged to evacuate three volumes of soil vapor. Purged air was screened for VOCs using a parts per billion (ppb) PID. There were no elevated PID readings detected during purging.

Sub-slab vapor samples were collected in laboratory supplied 6-liter "batch-certified" SUMMA canisters. Immediately after opening each SUMMA canister, the initial vacuum (inches of mercury) was recorded on the chain-of-custody. The samples from Promise Nails and Spa (82 North Village Avenue) and the residential building (23 Washington Street) were collected for a 24-hour duration. All other samples were collected for an 8-hour duration. Following the duration of the sampling period, a final vacuum reading (inches of mercury) was recorded on the chain-of-custody and each SUMMA canister was closed. Following collection, the sub-slab vapor samples were labeled, sealed and shipped to TestAmerica for analysis for VOCs by USEPA Method TO-15. Standard chain-of-custody procedures were followed.

4.10.2 *Indoor Air Sampling*

A pre-sampling building inspection of each structure was performed in accordance with the NYSDOH Vapor Intrusion Guidance Document. During the inspections, a PID was utilized to screen indoor air for the presence of organic vapors, and interferences from stored materials or existing operations. Background PID readings above 0 ppb were identified in Georgette & Co. Hair Salon (up to 443 ppb) located at 78 North Village Avenue (sample location SV/IA-105), however, there were no interfering conditions identified (i.e., odors,

open containers). Elevated background PID readings were identified in Promise Nails and Spa located at 82 North Village Avenue (location of SV/IA-104 and IA-108). Specifically, a PID reading of 700 ppb was recorded in the basement (at sample location SV/IA-104) and a PID reading of 5,200 ppb was recorded at sample location IA-108 on the first floor (in a storage/employee work room). There were no cleaning products/open containers of chemical identified in the vicinity of the sample locations. The elevated readings are likely attributable to activities associated with the renovation of the second floor residence, and activities associated with the active nail salon (note – a maximum PID reading of 9,000 ppb was recorded in the first floor nail salon).

Additionally, the portions of each structure in direct contact with the subsurface were inspected for cracks, penetrations and other potential preferential pathways for vapor intrusion, such as floor drains and sumps. A drain inlet and sump were identified in the Gem Cleaners building, as documented above. There were no preferential pathways for vapor intrusion noted in the remaining structures.

Six indoor air samples were collected utilizing 6-liter "batch-certified" SUMMA canisters. The samples collected in the residential building located at 23 Washington Street and the commercial building located at 82 North Village Avenue (Promise Nails and Spa) were collected for a 24-hour duration. The remaining samples were collected for an 8-hour duration. The indoor air samples were collected concurrently with and adjacent to the sub-slab vapor samples, except for the indoor air sample collected on the first floor of the 82 North Village Avenue (Promise Nails and Spa) commercial building (a sub-slab vapor sample was not collected adjacent to this indoor air sample). Indoor air samples were collected at a height of approximately 3 to 5 feet above floor surface, to simulate a typical breathing zone. Immediately after opening each SUMMA canister, the initial vacuum (inches of mercury) was recorded on the chain-of-custody. Following the duration of the sampling period, a final vacuum reading (inches of mercury) was recorded on the chain-of-custody and each SUMMA canister was closed. The chain of custody forms are included with the laboratory analytical data reports presented in *Appendix H.*

Following collection, the indoor air samples were labeled, sealed and shipped to TestAmerica for analysis for VOCs by USEPA Method TO-15. Standard chain-of-custody procedures were followed.

4.10.3 *Ambient Air Sampling*

One ambient air sample was collected on March 28, 2018 to determine outdoor air background concentrations. The ambient air sample was collected near the southwestern corner of the Gem Cleaners building at 84 North Village Avenue, at a height of 3 to 5 feet above ground surface utilizing a 6-liter "batch-certified" SUMMA canister. The sample was collected for approximately 8 hours. Immediately after opening the SUMMA canister, the initial vacuum (inches of mercury) was recorded on the chain-of-custody. After approximately 8 hours, a final vacuum reading (inches of mercury) was recorded on the chain-of-custody and the SUMMA canister was

closed. Following collection, the ambient air sample was labeled, sealed and shipped to TestAmerica for analysis for VOCs by USEPA Method TO-15. Standard chain-of-custody procedures were followed.

4.11 Site Survey

Perfect Point Land Surveying (Perfect Point), a New York State licensed surveyor, under contract with TRC, completed a survey of physical features, property boundaries, and known utilities at the Site Investigation Area on April 17, 2018. The survey included locations and elevations (ground surface and top of PVC casing) of the existing and new monitoring wells. Additionally, the Site survey included the locations and elevations of the exterior stairwell drain, interior drain inlet and 5' by 5' depression in the Gem Cleaners building. The survey map prepared by Perfect Point is in *Appendix I.*

Presented in the table below are the elevations of the groundwater monitoring well casings, ground surface elevations, depths to water, and calculated groundwater surface elevations, based on measurements collected in April and July 2018.

Summary of Monitoring Well Tops of Casings and Adjacent Surface Elevations, Depth to Water Measurements, and Groundwater Surface Elevations

Monitoring Well Identification Number	Ground Surface Elevation (feet)	Top of Riser Elevation (feet)	Depth to Water (feet below top of riser) April 2018	Groundwater Surface Elevation (feet) April 2018	Depth to Water (feet below top of riser) July 2018	Groundwater Surface Elevation (feet) July 2018
MW-1B	25.90	25.61	16.70	8.91	17.98	7.63
MW-2	26.41	26.07	16.67	9.4	17.32	8.75
MW-3	22.37	22.09	12.78	9.31	13.35	8.74
MW-101	25.46	25.18	15.28	9.9	15.87	9.31
MW-101D	25.46	24.86	15.73	9.13	17.32	7.54
MW-102	18.24	18.03	8.72	9.31	9.25	8.78
MW-103	18.25	17.95	8.82	9.13	9.22	8.73
MW-104	18.27	17.8	8.37	9.43	9.00	8.8
MW-105	18.29	18.07	8.55	9.52	9.22	8.85
MW-106	25.83	25.55	16.02	9.53	16.68	8.87
MW-107	25.56	25.56	16.18	9.38	16.82	8.74
MW-107D	25.82	25.35	16.12	9.23	17.67	7.68
MW-108	25.84	25.63	16.32	9.31	16.91	8.72
MW-109	25.85	25.04	15.87	9.17	16.48	8.56
MW-109M	25.86	25.58	16.46	9.12	17.14	8.44
MW-110	25.08	24.64	15.15	9.49	15.8	8.84
MW-110D	25.04	24.29	15.96	8.33	17.16	7.13

Based on gauging of the monitoring wells:

- In April 2018, groundwater surface elevations in the shallow monitoring wells ranged from approximately 9.13 feet in monitoring well MW-103 (located in the western side of the Gem Cleaners building) to 9.9 feet in monitoring well MW-101 (located in the sidewalk along North Village Avenue). Groundwater surface elevations in the intermediate-depth and deep monitoring wells ranged from approximately 8.33 feet in monitoring well MW-110D (located in the sidewalk along Washington Street) to 9.23 feet in MW-107D (located west of the commercial building at 82 North Village Avenue).

- In July 2018, the groundwater surface elevations in the shallow monitoring wells ranged from approximately 8.56 feet in monitoring well MW-109 (located in parking lot west of the Gem Cleaners building) to 9.31 feet in monitoring well MW-101. Groundwater surface elevations in the intermediate-depth and deep monitoring wells ranged from approximately 7.13 feet in monitoring well MW-110D to 8.44 in MW-109M.

4.12 Quality Assurance and Quality Control

Eight quality control samples were submitted for laboratory analysis. The quality control samples consisted of two soil matrix spike and matrix spike duplicates (MS/MSDs), two groundwater MS/MSDs, four trip blanks, and four equipment blank samples. In accordance with the NYSDEC guidance, one equipment blank was collected daily during each sampling event. MS/MSDs were collected by alternately filling sample bottles from the source being sampled. MS/MSDs were collected at a minimum frequency of one per twenty investigation samples per matrix (soil and groundwater) per analytical parameter. Equipment blank samples were collected for analysis for PFAS and VOCs at a frequency of one per sample batch submitted to the laboratory. Trip blanks were submitted to the laboratory at a frequency of one per cooler which contained groundwater samples to be analyzed for VOCs.

Soil MS/MSD samples were analyzed for TCL VOCs+10 including 1,4-dioxane. Groundwater MS/MD samples and equipment blank samples were analyzed for TCL VOCs+10 and for PFAS; and samples submitted for analysis in April 2018 were additionally analyzed for 1,4-dioxane via USEPA Method 8270 with selective ion monitoring. Trip blanks were analyzed for TCL VOCs+10 including 1,4-dioxane. Low-level VOCs, including m&p-xylenes, o-xylene, ethylbenzene and 2-butanone, were detected in the trip blank samples submitted to the laboratory on July 23 and 24, 2018; however, these compounds were not detected in the groundwater samples. The quality control samples were collected and containerized in accordance with NYSDEC/USEPA protocols, in laboratory supplied containers, labeled, sealed, and placed in a chilled cooler for shipment to TestAmerica. Standard chain-of-custody procedures were followed.

4.13 Investigation Derived Waste (IDW)

IDW generated during the investigation included soil from drilling activities, and wastewater from well development, well purging, and decontamination of sampling equipment. The IDW was placed in U.S. Department of Transportation (DOT) approved 55-gallon drums and transported as non-DOT regulated material by IRT for disposal off-Site. The soil and wastewater drums were transported to Republic Environmental Systems, LLC in Hatfield, Pennsylvania. The signed waste disposal manifest forms are included in *Appendix J.*

5.0 DISCUSSION OF RESULTS

This section presents a discussion of the results of the RI. The results of laboratory analyses are summarized in *Tables 1* through *6*. The results of validation of the laboratory analytical data are summarized in the Data Usability Summary Reports (DUSRs). The data validation was performed in accordance with NYSDEC requirements, including the requirements for development of DUSRs listed in Appendix 2B of DER-10, Technical Guidance for Site Investigation and Remediation. The complete Analytical Services Protocol (ASP) Laboratory Analytical Data Reports and DUSRs are included in *Appendices H* and *K*, respectively. Additionally, electronic data deliverable packages have been uploaded to the NYSDEC EQuIS database.

5.1 Site Geology and Hydrogeology

Based on the information gathered during the RI and previous investigations, the subsurface geology consists primarily of intermixed layers of sand and silty sand extending to a maximum depth of approximately 100 feet bgs (MW-101D and MW-107D). A clay layer was encountered in two borings advanced during the RI, MW-109M and MW-110D, at depths ranging from approximately 36 to 40 feet in MW-109M and from approximately 70 to 81 feet in MW-110D. Bedrock was not encountered during the RI drilling program or during prior Site investigations but is expected to be at depths greater than 700 feet bgs. Bedrock was not encountered to the terminal depth (approximately 562 feet bgs) during installation of a well owned by the Village of Rockville Centre (Well No. N-9792) located approximately 1,200 feet east of the Site near Maple Avenue. Boring logs are presented in *Appendix E* and cross-sections A-A' and B-B' (*Figures 6A and 6B*) show the geology in the Site Investigation Area based on the boring logs completed for the RI.

According to the Surficial Geology Map of New York – Lower Hudson Sheet (1989), the material underlying the Site Investigation Area is classified as outwash sand and gravel. The material is described as: coarse to fine gravel with sand, proglacial fluvial deposition, well round and stratified, generally finer texture away from the ice border with a variable thickness (2 – 20 meters). According to the United States Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS), subsurface soils in the Site Investigation Area are classified as Urban Land. According to the Bedrock Geology Map of New York State – Lower Hudson (1970, reprinted 1995), bedrock underlying the Site and surrounding area is classified as Monmouth Group, Matawan Group, and Magothy Formation of the Upper Cretaceous age.

During the April 2018 sampling event, groundwater surface elevations in the shallow monitoring wells ranged from approximately 9.13 feet in monitoring well MW-103 (located on the western side of the Gem Cleaners Site building) to 9.9 feet in monitoring well MW-101 (located in the sidewalk along North Village Avenue). Groundwater surface elevations in the intermediate-depth and deep monitoring wells ranged from approximately 8.33 feet in monitoring well MW-110D (located in the sidewalk along Washington Street) to

9.23 feet in MW-107D (located west of the commercial building at 82 North Village Avenue). The apparent predominant groundwater flow direction in shallow overburden was towards the west-southwest in April 2018. The inferred predominant groundwater flow direction in deep overburden was towards the south in April 2018.

During the July 2018 sampling event, groundwater surface elevations in the shallow monitoring wells ranged from approximately 8.56 feet in monitoring well MW-109 (located in parking lot west of the Gem Cleaners Site building) to 9.31 feet in monitoring well MW-101. Groundwater surface elevations in the intermediate-depth and deep monitoring wells ranged from approximately 7.13 feet in monitoring well MW-110D to 8.44 in MW-109M. The inferred predominant groundwater flow direction in shallow overburden was towards the west-southwest in July 2018, which is consistent with the results of the April 2018 gauging event. The inferred predominant groundwater flow direction in deep overburden was towards the south in July 2018, which is also consistent with the results of the April 2018 gauging event. Groundwater surface elevation measurements and inferred groundwater surface elevation contours, based on measurements in April and July 2018, are shown on *Figures 7* through *10*.

5.2 Applicable Regulatory Standards and Guidance

This subsection identifies the regulatory standards and guidelines used to evaluate the results of the analyses of soil/sediment, groundwater/water, indoor air and sub-slab vapor samples. The standards and guidelines used to evaluate the data associated with each specific media are described individually below.

5.2.1 *Soil Cleanup Objectives*

Soil and sediment sampling results were evaluated by comparison to the Unrestricted Use Soil Cleanup Objectives (SCOs) in Table 375-6.8(a) of 6 NYCRR 375 and Commercial Use and Industrial Use SCOs in Table 375-6.8(b) of 6 NYCRR 375.

5.2.2 *Groundwater Quality Standards and Guidance Values*

Groundwater and water sampling results were evaluated by comparison to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Class GA Standards and Guidance Values ("Class GA Values"). Additionally, groundwater samples and samples collected from the drain inlet in the Gem Cleaners building were analyzed for PFAS as requested by the NYSDEC. There are no Class GA Values for PFAS or other New York State standards, criteria, or guidance values (SCGs) for PFAS in groundwater. Therefore, the results of analysis for PFAS of the groundwater and water samples were compared to the New York State Drinking Water Quality Council recommended maximum contaminant levels (MCLs) of 10 nanograms per liter (ng/L) for perfluorooctanoic acid (PFOA) and 10 ng/L for perfluorooctanesulfonic acid (PFOS).

5.2.3 *Indoor Air and Sub-Slab Vapor*

The results of analyses of the indoor air samples were compared to the Air Guideline Values (AGVs) in the NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (SVI Guidance Document). Additionally, the sub-slab vapor and indoor air sampling results were compared to the Decision Matrices in the SVI Guidance Document. The results of the analyses of the sub-slab vapor, indoor air, and ambient air samples are described in Section 5.7.

5.3 Soil and Sediment Sampling

Field observations recorded during direct-push, hollow-stem auger, and grab soil sampling are discussed in Sections 4.5, 4.6 and 5.1. Summaries of the results of the analyses of the soil samples are presented in *Table 1*. The complete laboratory reports are presented in *Appendix H. Figures 3A* and *3B* show the soil sampling and soil boring locations. A review of the results of the analyses of the soil samples is presented below.

5.3.1 *VOCs in Subsurface Soil*

Twenty-three subsurface soil samples selected from five direct-push soil borings (SB-101 and MW-102 through MW-105) and six borings advanced via hollow-stem auger (MW-101D, MW-106, MW-107D, MW-108, MW-109M, and MW-110D) were analyzed for TCL VOCs+10. There were no VOCs detected at concentrations exceeding the Unrestricted Use SCOs (the most stringent SCOs). The complete results of the analyses of subsurface soil samples for VOCs are presented in *Table 1*.

5.3.2 *VOCs in Grab Soil/Sediment Samples*

One sediment sample was collected from the bottom of the sump located in the basement (TRC-Sump(SO)) and one soil sample was collected from beneath the bottom slab of the 5' by 5' depression in the basement (TRC-SO-101(SO)). There were no VOCs detected at concentrations exceeding the Unrestricted Use SCOs. The complete results of the analyses of soil/sediment samples for VOCs are presented in *Table 1*.

5.4 Groundwater Sampling

Field observations recorded during groundwater sampling are discussed in Sections 4.7 and 5.1. Summaries of the results of the analyses of the groundwater samples are presented in *Tables 2* through *4*. The complete laboratory analytical data reports are presented in *Appendix H. Figure 11* presents a summary of the results of the analyses of the groundwater samples for VOCs. *Figure 12* presents a summary of the results of the analyses of the groundwater samples for PFOA and PFOS. A discussion of the results of the analyses of the groundwater samples is presented below. Groundwater samples collected in April and July 2018 were labeled with the prefix "GC" (Gem Cleaners) and the suffix "WG" (groundwater) in accordance with the QAPP.

5.4.1 *VOCs in Groundwater*

April 2018

The groundwater samples collected from 17 monitoring wells in April 2018 were analyzed for TCL VOCs. The results of analysis for the 10 tentatively identified compounds (TICs) detected at the highest concentrations were also reported. PCE was detected at concentrations above the Class GA Value of 5 µg/L in four (4) groundwater samples. Presented in the table below is a summary of the concentrations of PCE detected above the Class GA Value. The complete results of the analyses for VOCs of the groundwater samples are presented in *Table 2*. In addition, a summary of the results of analysis of the groundwater samples for VOCs is shown on *Figure 11*.

VOC Detected Above Class GA Values in Groundwater
April 2018

Groundwater Sample Identification No. / **Units**	**GC-MW-107 (WG)** / **µg/L**	**GC-MW-108 (WG)** / **µg/L**	**GC-MW-109 (WG)** / **µg/L**	**GC-MW-109M (WG)** / **µg/L**	**Class GA Value** / **µg/L**
Tetrachloroethene (PCE)	**8.8**	**35**	**12**	**52**	5

Notes:
µg/L – Micrograms per liter

July 2018

Groundwater samples collected from 11 monitoring wells in July 2018 were analyzed for TCL VOCs+10. PCE was the only VOC detected at concentrations above Class GA Value in the July 2018 groundwater samples. Presented in the table below is a summary of the concentrations of PCE detected above the Class GA Value. The complete results of the analyses for VOCs of the groundwater samples are presented in *Table 2*. In addition, a summary of the results of analysis of the groundwater samples for VOCs is shown on *Figure 11*.

VOC Detected Above Class GA Values in Groundwater
July 2018

Groundwater Sample Identification No. / **Units**	**GC-MW-107 (WG)** / **µg/L**	**GC-MW-108 (WG)** / **µg/L**	**GC-MW-109M (WG)** / **µg/L**	**Class GA Value** / **µg/L**
Tetrachloroethene (PCE)	**9.2**	**6.0**	**16**	5

Notes:
µg/L – Micrograms per liter

PCE was not detected at a concentration above the Class GA Value in any of the deep groundwater monitoring wells during the RI.

5.4.2 *PFAS in Groundwater*

April 2018

Groundwater samples collected from 17 monitoring wells in April 2018 were analyzed for PFAS. PFOA was detected above the recommended MCL (10 ng/L) in all groundwater samples at concentrations between 14 and 64 ng/L and PFOS was detected above the recommended MCL (10 ng/L) in 11 of the 17 groundwater samples at concentrations between 12 and 22 ng/L. The complete results of the analyses of groundwater for PFAS are presented in *Table 3.* In addition, the groundwater sampling results for PFOA and PFOS are summarized on *Figure 12*.

July 2018

Groundwater samples collected from seven monitoring wells in July 2018 were analyzed for PFAS. PFOA was detected above the recommended MCL (10 ng/L) in all groundwater samples at concentrations between 24 and 43 ng/L and PFOS was detected above the recommended MCL (10 ng/L) in all groundwater samples at concentrations between 13 and 23 ng/L. The complete results of the analyses of groundwater for PFAS are presented in *Table 3.* In addition, the groundwater sampling results for PFOA and PFOS are summarized on *Figure 12*.

5.4.3 *Natural Attenuation Parameters in Groundwater*

Groundwater samples collected from six (6) monitoring wells in July 2018 were analyzed for natural attenuation parameters, including alkalinity, sulfate, total dissolved solids, and total organic carbon. The range of results for the natural attenuation parameters are as follows: alkalinity: 40.3 to 67.7 mg/L; sulfate: 10.3 mg/L to 22 mg/L; total dissolved solids: 300 to 908 mg/L; and total organic carbon: 0.35 to 0.86 mg/L. The complete results of the analyses of groundwater for natural attenuation parameters are presented in *Table 4.*

5.5 Drain Inlet Sampling

5.5.1 *VOCs in Sediment*

The sample of sediment collected in April 2018 from the drain inlet located in the western portion of the basement adjacent to monitoring well MW-103 was analyzed for TCL VOCs+10 including 1,4-dioxane. Two VOCs, acetone and 2-butanone, which are common laboratory contaminants, were detected at concentrations above Unrestricted Use SCOs but below Commercial and Industrial Use SCOs. No other VOCs were detected

in the sediment sample at concentrations above the Unrestricted Use SCOs. The complete results of the analyses for VOCs of the sediment sample are presented in *Table 1*.

5.5.2 *VOCs in Standing Liquid*

The sample of standing liquid collected in April 2018 from the drain inlet located in the western portion of the basement adjacent to MW-103 was analyzed for TCL VOCs+10 including 1,4-dioxane. There were no VOCs detected at concentrations exceeding the Class GA Values. The complete results of the analyses for VOCs of the sample of standing liquid are presented in *Table 2*.

5.5.3 *PFAS in Standing Liquid*

April 2018

The sample of standing liquid collected in April 2018 from the drain inlet located in the western portion of the basement adjacent to MW-103 was analyzed for PFAS. PFOA was detected at a concentration of 100 ng/L and PFOS was detected at a concentration of 130 ng/L , which are above the recommended MCL of 10 ng/L. The complete results of the analyses of the sample of standing liquid for PFAS are presented in *Table 3*. In addition, the standing liquid sampling results for PFOA and PFOS are summarized on *Figure 12*.

July 2018

A sample of the standing liquid in the drain located in the western portion of the basement was collected again in July 2018 and analyzed for PFAS. PFOA was detected at a concentration of 210 ng/L and PFOS was detected at a concentration of 230 ng/L, which are above the recommended MCL of 10 ng/L. The complete results of the analyses of the sample of standing liquid for PFAS are presented in *Table 3*. In addition, the standing liquid sampling results for PFOA and PFOS are summarized on *Figure 12*.

5.6 Tracer Dye Sampling

Samples of the tracer dye previously used at the Site during implementation of the Phase II Subsurface Investigation completed in 2018 by GCI were analyzed for PFAS. The results of the analysis revealed that PFAS were either not detected or detected at estimated concentrations below the reporting limits. Based on the results, it appears that the tracer dye is not a source of PFAS detected in the standing water in the drain inlet in the Gem Cleaners building basement. The complete results of the analyses for PFAS of the tracer dye samples are presented in *Table 6*.

5.7 Vapor Intrusion Sampling

Field observations recorded during collection of sub-slab vapor, indoor air, and ambient air samples are discussed in Section 4.10. A summary of the results of the analyses of the sub-slab vapor, indoor air, and ambient air samples is presented in *Table 5*. The complete laboratory analytical data reports are presented in *Appendix H*. *Figure 3A* shows the locations of the four (4) structures sampled during the vapor intrusion assessment, and the ambient air sample location. The results of the sub-slab vapor, indoor air, and ambient air sampling are discussed below.

5.7.1 *VOCs in Sub-Slab Vapor, Indoor Air, and Ambient Air Samples*

As discussed in Section 4.10, co-located sub-slab vapor and indoor air samples were collected in the Gem Cleaners building and in three adjacent/nearby structures in March 2018 as follows: a two-story building with first floor commercial tenant (Promise Nails and Spa) and second floor apartment located at 82 North Village Avenue, a commercial building (Georgette & Co. Hair Salon) located at 78 North Village Avenue, and a residential building located at 23 Washington Street. One additional indoor air sample was collected on the first floor of Promise Nails and Spa. Note that following consultation with NYSDEC, an indoor air sample was not collected from the second floor residential space at 82 North Village Avenue (above Promise Nails and Spa) since the second floor was under renovation. One ambient air sample was collected in the parking lot, south of the two-car garage adjacent to the Gem Cleaners building. The sub-slab vapor, indoor air and ambient air samples collected at each location were submitted for analysis for VOCs. The sub-slab vapor and indoor air sampling results were compared to the Decision Matrices in the SVI Guidance Document.

The primary contaminant of concern (COC) at the Site Investigation Area is PCE. A brief discussion of the sampling results for this COC is presented below.

- PCE was detected in sub-slab vapor at concentrations of 99 micrograms per cubic meter (µg/m³) in SV-102 and 170 µg/m³ in SV-103 collected in the basement of the Gem Cleaners building; at a concentration of 100 µg/m³ in SV-104 collected in the basement of Promise Nails Salon and Spa; and at a concentration of 43 µg/m³ in SV-105 collected in the basement of Georgette & Co. Hair Salon. PCE was not detected in the sub-slab vapor sample (SV-106) collected in the basement of the residential building.
- PCE was detected in each indoor air sample at concentrations between 0.37 µg/m³ (IA-105) and 1.1 µg/m³ (IA-108).
- PCE was detected at an estimated concentration of 0.17 µg/m³ in the ambient air sample.

There were no compounds detected in indoor air at a concentration above the NYSDOH AGVs. Elevated concentrations of acetone were detected in indoor air in Georgette & Co. Hair Salon (IA-105) and Promise

Nails and Spa (IA-104 and IA-108), which can be attributed to business operations based on the chemical inventory completed prior to the sampling event.

Additionally, mixed xylenes (i.e., m-, p-, and o-xylene) and ethylbenzene were detected in the sub-slab vapor and indoor air samples collected in the Gem Cleaners building, Promise Nails and Spa and Georgette Hair & Co. Nail Salon, and in the indoor air sample collected in the residential building. Detected concentrations were generally higher in the sub-slab vapor samples than the indoor air samples and the concentrations in indoor air are within the range of published background levels. Xylenes and ethylbenzene were not detected in groundwater and were either not detected or detected at low levels (below the Unrestricted Use SCOs) in the soil samples collected in the Site Investigation Area. Considering that xylenes and ethylbenzene are found in common household and commercial products, including cleaning products, plastics, paints and coatings, adhesives, fragrances, etc., it is likely that the presence of these compounds in the sub-slab vapor and indoor air samples is related to background concentrations from household and/or commercial products and/or a non-Site related source.

The results of analyses of sub-slab vapor and indoor air samples were evaluated with respect to the updated May 2017 NYSDOH Decision Matrices. The guidance from the matrices indicates that no further action is recommended for the Gem Cleaners Site building, Georgette & Co. Hair Salon and the residential building. Based on the concentration of carbon tetrachloride detected in the indoor air sample collected in the basement of the Promise Nails and Spa building (1.3 µg/m³) the recommended action is "identify source(s) and resample or mitigate". Since carbon tetrachloride was not detected in the sub-slab vapor sample collected beneath this structure, the indications are that carbon tetrachloride detected in the indoor air sample may be attributable to indoor and/or outdoor air sources rather than soil vapor intrusion.

5.8 Data Usability

The results of the data validation are summarized in Data Usability Summary Reports (DUSRs). The DUSRs are provided in *Appendix K* and include a discussion on each qualified result, the potential bias and the effects on data usability. The results of the analyses of soil, groundwater, sediment and water samples collected from the drain inlet, and the vapor intrusion data were found to be valid and usable for decision-making purposes. Results of the analysis of the tracer dye samples for PFAS were not validated. Note that low-level VOCs, including m&p-xylenes, o-xylene, ethylbenzene and 2-butanone, were detected in the trip blank samples submitted to the laboratory on July 23 and 24, 2018; however, these compounds were not detected in the groundwater samples.

6.0 QUALITATIVE EXPOSURE ASSESSMENT

An exposure pathway consists of five elements: (1) a contaminant source, (2) a contaminant release, and transport mechanism, (3) a point of exposure, (4) a route of exposure, and (5) a receptor population. An exposure pathway is complete when all five elements of an exposure pathway are complete.

Based on the findings of the RI and prior investigations by others, the principal compound of concern in the Site Investigation Area has been identified as PCE, primarily in groundwater. During prior investigations, PCE was additionally detected at elevated concentrations in subsurface soil beneath the exterior stairwell drain (west of the Gem Cleaners building); however, the impacted soils were excavated and transported off-Site for disposal, a new drain was installed, and the area was backfilled with clean sand in 1997. Additionally, PFAS were detected in groundwater and in the standing liquid in the interior drain inlet in the western portion of the basement of the Gem Cleaners building. A qualitative assessment was prepared to evaluate and document the potential for exposure to Site-related contaminants.

Dermal contact, ingestion of soil or groundwater, or inhalation of vapors or dust represent the potential routes of exposure. Potential receptors include construction workers during demolition and redevelopment, future on-Site occupants and visitors, future on-Site maintenance workers, and off-Site residents.

Considering the current conditions at the Site, the following exposure pathways are considered incomplete:

- **Groundwater ingestion:** Use of groundwater in the area of the Site is prohibited as a source of potable water; therefore, this exposure pathway is not complete for potential on-Site and off-Site visitors, building occupants and residents.
- **Soil dermal contact by Site visitors, building occupants and off-Site residents:** The majority of the Site and surrounding area is covered by buildings, asphalt pavement or landscaped areas, thereby minimizing the potential for exposure of occupants to the subsurface soil.
- **Inhalation of vapors by Site visitors, building occupants and off-Site residents:** Site contaminants of concern were detected in soil vapor and/or indoor air; however, based on comparison to the updated May 2017 NYSDOH Decision Matrices, vapor intrusion is not a concern in the four structures sampled. Note that non-Site related contaminants, including xylenes and ethylbenzene, were detected in sub-slab vapor and/or indoor air in the four structures sampled; however, there is no known source of these compounds in soil and groundwater and considering ethylbenzene, o-xylene and m,p-xylenes were not detected in groundwater and were either not detected or detected at low levels below the Unrestricted Use SCOs in soil in the Site Investigation Area, the presence of these compounds in sub-slab vapor and indoor air may be attributed to background concentrations and/or a non-Site related source.

The following exposure pathways are considered potentially complete:

- **Dermal contact with soil by construction workers and maintenance workers:** Potential future construction and maintenance activities (e.g., utility repairs) could result in contact with Site impacted soil (i.e., historic sampling results showed limited SVOCs and metals above Unrestricted Use and/or Commercial Use SCOs in subsurface soil).
- **Dermal contact with groundwater or drain inlet liquid by construction workers and maintenance workers:** The groundwater table is at depths greater than 8 feet below the top of the basement slab (in the Gem Cleaners building) or 15 feet below ground surface in the Site Investigation Area, therefore contact with groundwater is generally unlikely. The potential for exposure of workers to contaminated groundwater via contact exists if soil excavation is required at depths below the water table. Additionally, there is potential for exposure to contaminated standing water in the drain inlet in the Gem Cleaners building.
- **Inhalation of dust by construction workers and maintenance workers:** Potential future construction and maintenance activities (e.g., utility repairs) could result in the generation of and exposure to impacted dust (i.e., historic sampling results showed limited SVOCs and metals above Unrestricted Use and/or Commercial Use SCOs in subsurface soil).

7.0 CONCEPTUAL SITE MODEL

The following conceptual site model explains the nature and extent of the contaminants known to be present at the Site, the dominant fate and transport characteristics, potential exposure pathways, and potential impacts to receptors. The urban Site is not located in close proximity to a surface water body, wetland, or other ecologically significant area.

Based on the results of the RI and prior investigations, the primary contaminant of concern at the Site is PCE in groundwater. Additionally, PFAS was detected in groundwater samples collected across the Site and in the standing liquid in the drain inlet in the basement of the Gem Cleaners building adjacent to MW-103.

PCE was not detected in the soil or sediment samples collected in the Site Investigation Area; however, physical evidence of contamination (staining, odor and elevated PID readings) was identified in one soil boring, MW-103, at depths from approximately 10 to 14 feet below the top of the basement slab in the Gem Cleaners building. Analysis of soil samples collected from MW-103 did not reveal impacts. However, historic sampling results showed limited SVOCs and metals above Unrestricted Use and/or Commercial Use SCOs in subsurface soil. Under current conditions, exposure to subsurface soil is not likely since the building is unoccupied and there are no exposed soil areas. Potential exposure could occur during soil disturbing activities (e.g., utility maintenance, or future redevelopment); however, the frequency and duration of exposure is expected to be low and would be mitigated by appropriate health and safety procedures.

PCE was detected in shallow groundwater at concentrations above Class GA Values. However, there does not appear to be a remaining on-Site source that would warrant remediation based on the detected maximum concentrations and considering that PCE was not detected in soil samples at concentrations above the Unrestricted Use SCOs. Further, the soil beneath the exterior stairwell drain (potential source of VOCs in groundwater) was remediated in 1997. Additionally, of note is that the July 2018 groundwater sampling results show only slight exceedances of the Class GA Value for PCE in the shallow monitoring wells downgradient of the Gem Cleaners building and PCE was not detected above the Class GA Value in the shallow wells furthest downgradient from the Gem Cleaners building (MW-109 and MW-110). The highest concentrations of PCE was detected in MW-109M (52 µg/L in April 2018 [later decreasing to 16 µg/L in July 2018]). MW-109M is screened between 10 and 20 feet below the water table and partially extends into an apparent fine grained silty/clay layer, and, therefore, the conditions found in the adjacent shallow well (MW-109) are more representative of shallow groundwater (compared to MW-109M, which is partially screened in a more stagnant [i.e., less permeable] portion of the formation). Additionally, in April 2018, PCE concentrations showed a decrease in the downgradient direction from 35 µg/L in MW-108 to 12 µg/L in MW-109, and in July 2018, the concentration of PCE showed a decrease from 6 µg/L in MW-108 to 3.1 µg/L in MW-109. Therefore, it is expected that reductions in PCE concentration continue further downgradient, to the southwest of MW-109, and the potential for migration of elevated concentrations of PCE in groundwater beyond the Site Investigation Area is considered low. PCE was not detected at a concentration above the Class GA Value in any of the deep groundwater monitoring wells during the RI.

Additionally, PFOA and PFOS were detected in groundwater at concentrations above the recommended MCL; however, the concentrations of PFOA and PFOS in groundwater were relatively consistent across the Site during both sampling events which is an indication that the PFAS concentrations may be representative of background concentrations in the area of the Site. Elevated concentrations of PFOA and PFOS were detected in the standing liquid in the drain inlet adjacent to MW-103; however, it is unlikely that the drain inlet is the source of PFAS in groundwater since the ratios of specific PFAS (i.e., PFOA/PFBA) are different. The higher concentrations of the more mobile PFBA in the drain inlet sample versus the groundwater is a strong indication that the PFAS identified in the drain inlet sample are not impacting the groundwater. Further, concentrations of PFOA and PFOS detected in the groundwater sample collected from MW-103, the monitoring well closest to the drain inlet, are not higher than the concentrations detected in monitoring wells further from the drain inlet.

Groundwater was encountered at depths greater than 8 feet below the top of the basement slab (in the Gem Cleaners building) or 15 feet below ground surface in the Site Investigation Area, therefore contact with groundwater is generally unlikely, minimizing the potential for exposure to groundwater at the Site. Groundwater at the Site is not utilized for potable or non-potable purposes and ingestion and absorption of contaminated groundwater do not represent significant potential exposure pathways. There is a potential for exposure to contaminated groundwater during redevelopment and any associated dewatering activities; however, the frequency and duration of potential exposure to contaminated groundwater is expected to be low and would be mitigated by appropriate health and safety procedures. There is potential for exposure to contaminated standing water in the drain inlet in the Gem Cleaners building; however, currently the potential for exposure is minimal since the building is unoccupied.

The results of indoor air sampling in the Gem Cleaners building and the three nearby and adjacent structures did not exceed NYSDOH AGVs. Based on comparison of the vapor intrusion sampling results to the NYSDOH Vapor Intrusion Matrices, no further action is recommended for the Gem Cleaners Site building, Georgette & Co. Hair Salon, and the residential building. Further action (i.e., identifying the source(s) and resampling or mitigation) is recommended to address carbon tetrachloride in the indoor air sample collected in the basement of the Promise Nails and Spa building. Xylenes and ethylbenzene were detected in indoor air and/or sub-slab vapor samples in the Gem Cleaners building, Georgette & Co. Hair Salon, and the Promise Nails and Spa and in the indoor air sample collected in the residential building; however, these compounds were not detected in groundwater and were either not detected or detected at low levels below the Unrestricted Use SCOs in soil in the Site Investigation Area. Further, concentrations of xylenes and ethylbenzene detected in indoor air are within the range of published background levels. As a result, the presence of these compounds in sub-slab vapor and indoor air may be attributed to background concentrations (e.g., from household and/or commercial products) and/or a non-Site related source.

8.0 SUMMARY OF FINDINGS

The RI was completed in accordance with the NYSDEC DER WA No. D007620-36 Notice to Proceed dated May 1, 2017, the NYSDEC-approved Scope of Work dated January 17, 2018, and DER-10, Technical Guidance for Site Investigation and Remediation. A summary of the important findings is presented below.

8.1 Soil and Sediment Sampling Results

Twenty-three subsurface soil samples collected during advancement of borings were submitted for laboratory analysis. Additionally, one sediment sample collected from bottom of the sump located in the Gem Cleaners building basement, one soil sample collected from beneath the bottom slab of the 5' by 5' depression in basement, and one sediment sample collected from the bottom of the drain inlet located in the western portion of the basement were submitted for laboratory analysis. All samples were analyzed for TCL VOCs+10 including 1,4-dioxane. In the sediment sample collected from the bottom of the drain inlet, two VOCs (acetone and 2-butanone) were detected at concentrations above Unrestricted Use SCOs but below Commercial and Industrial Use SCOs. These compounds are common laboratory contaminants and are not COCs associated with the Gem Cleaners Site. There were no VOCs detected in the remaining soil and sediment samples at concentrations exceeding the Unrestricted Use SCOs. Based on the above, and that physical evidence of contamination was identified in only one soil boring (in MW-103 from 10 to 14 feet btos), it can be concluded that subsurface soil contamination at the Site is limited.

8.2 Groundwater Gauging Results and VOCs in Groundwater

Below is a summary of the findings from RI groundwater gauging and sampling events completed in April and July 2018. The groundwater sampling results for VOCs are presented in *Table 2.* Compounds detected at concentrations above the Class GA Values are shown on *Figure 11.*

Groundwater Gauging and Sampling Results – Deep Monitoring Wells

The results of the gauging events completed in April and July 2018 indicated that the predominant groundwater flow direction in the deep overburden was towards the south. One upgradient deep monitoring well (MW-101D) and two downgradient deep monitoring wells (MW-107D and MW-110D) were installed during the RI and sampled in April 2018, for analysis for VOCs. Additionally, a groundwater sample was collected from an existing deep well (MW-1B) for analysis for VOCs in April 2018. Since there were no VOCs detected at concentrations above the Class GA Values in the deep monitoring wells MW-1B, MW-101D, MW-107D and MW-110D, collection of a second round of groundwater samples in July 2018 from these wells was not warranted.

Groundwater Gauging and Sampling Results – Shallow and Intermediate-Depth Monitoring Wells

The results of the gauging events completed in April and July 2018 indicate the inferred predominant groundwater flow direction in the shallow overburden was generally towards the west-southwest.

Key findings from the results of the sampling are presented below.

- During the April 2018 sampling event, PCE was detected above Class GA Values in four monitoring wells (MW-107, -108, -109, and -109M) at concentrations ranging from 8.8 to 52 µg/L, and during the July 2018 sampling event, PCE was detected above Class GA Values in three monitoring wells (MW-107, MW-108, and MW-109M) at concentrations ranging from 6 to 16 µg/L. Each of the wells with PCE at a concentration above the Class GA Value are located in the parking lot directly south and southwest of the Gem Cleaners building.

- The highest concentrations of PCE in the April and July 2018 groundwater samples were detected in monitoring well MW-109M (52 µg/L in April 2018 and 16 µg/L in July 2018). MW-109M is screened between 10 and 20 feet below the water table and partially extends into an apparent fine grained silty/clay layer. Fine-grained soils (fine sand and clayey silt) were identified in samples recovered from the lower half of the well screen interval, in contrast to sandy soils that extend from the water table to the fine-grained unit. In monitoring well MW-109, which is screened within the sand unit above the fine-grained unit, PCE was detected at a concentration of 12 µg/L in April 2018 and a concentration of 3.1 µg/L in July 2018. The conditions found in MW-109M may be more representative of groundwater quality directly above the lower permeability layer found in the shallow aquifer south and southwest of the Gem Cleaners building (i.e., not representative of conditions in the sandy upper part of the aquifer).

- The July 2018 groundwater sampling results show only slight exceedances of the Class GA Value for PCE in the monitoring wells downgradient of the Gem Cleaners building. Specifically, PCE was detected above the Class GA Value of 5 µg/L in two shallow wells, MW-107 at a concentration of 9.2 µg/L and MW-108 at a concentration of 6 µg/L, and in one intermediate-depth monitoring well, MW-109M at a concentration of 16 µg/L. PCE was not detected above the Class GA Value in the shallow wells furthest downgradient from the Gem Cleaners building (MW-109 and MW-110).

- Water quality parameter measurements collected during sampling of monitoring wells in April and July 2018 showed positive ORP values, which is not favorable for degradation of PCE. Breakdown products of PCE (i.e., TCE, cis-1,2-DCE, and vinyl chloride) were not detected in groundwater during the RI.

- The results of sampling for natural attenuation parameters were relatively consistent among the six wells sampled. Concentrations of sulfate ranged between 10.3 and 22 mg/L and concentrations of total organic carbon (TOC) ranged between 0.35 and 0.86 mg/L, which are not favorable for the degradation of PCE.

8.3 PFAS in Groundwater and Standing Water from Drain Inlet

Groundwater and the standing liquid in the drain inlet adjacent to MW-103 were sampled on two occasions and analyzed for PFAS over the course of the RI. Below is a summary of the key findings of the PFAS sampling. The sampling results are presented in *Table 3* and are shown on *Figure 12.*

During the April 2018 sampling event, PFOA was detected above the recommended MCL (10 ng/L) in all groundwater samples at concentrations between 14 and 64 ng/L and PFOS was detected above the recommended MCL (10 ng/L) in 11 of the 17 groundwater samples at concentrations between 12 and 22 ng/L. During the July 2018 sampling event, PFOA was detected above the recommended MCL in all groundwater samples at concentrations between 24 and 43 ng/L and PFOS was detected above the recommended MCL (10 ng/L) in all groundwater samples at concentrations between 13 and 23 ng/L. Additionally, PFOA was detected in the standing water in the drain inlet in the basement of the Gem Cleaners building at concentrations of 100 ng/L in April 2018 and 210 ng/L in July 2018; and PFOS was detected in the standing water in the drain inlet at concentrations of 130 ng/L in April 2018 and 230 ng/L in July 2018. Although the standing liquid was tinted green during both sampling events, apparently due to tracer dye previously utilized at the Site, the results of the analysis of the tracer dye samples revealed that PFOA and PFOS were either not detected or detected at estimated concentrations below the reporting limits.

Based on the review of the PFAS data, the compounds detected in the drain inlet samples have a different fingerprint than compounds detected in groundwater. Specifically, PFBA was detected at higher concentrations than PFOA in the drain inlet samples in comparison to the ratio of PFBA to PFOA detected in groundwater. If the drain inlet was the source of PFAS in groundwater, the PFOA/PFBA ratio would be similar or decrease between the drain sample and the groundwater samples since PFBA is more soluble/mobile than PFOA and would migrate at a faster rate into groundwater in comparison to PFOA. It is unlikely that the drain inlet is the source of PFAS in groundwater since the PFOA/PFBA ratio in groundwater is higher in comparison to the PFOA/PFBA ratio in the drain sample. Further, concentrations of PFOA and PFOS detected in the groundwater sample collected from MW-103, the monitoring well closest to the drain inlet, are not higher than the concentrations detected in monitoring wells further from the drain inlet. Concentrations of PFAS detected in the liquid in the drain inlet may be associated with cleaning solutions or floor coatings utilized in the Gem Cleaners building.

The concentrations and mixture of PFAS in groundwater were relatively consistent across the Site during both sampling events which is an indication that the PFAS concentrations may be representative of background concentrations in the area of the Site.

8.4 Vapor Intrusion

Co-located sub-slab vapor and indoor air samples were collected from four structures located in the Site Investigation Area, including the Gem Cleaners Site building. One additional indoor air sample was collected on the first floor of one structure (Promise Nails and Spa), and one ambient air sample was collected during the vapor intrusion sampling. Results of the analyses of the indoor air samples were compared to the AGVs in the NYSDOH Vapor Intrusion Guidance Document. There were no VOCs detected in indoor air at concentrations above the NYSDOH AGVs.

Xylenes and ethylbenzene were detected in sub-slab vapor and/or indoor air in the Gem Cleaners building, Promise Nails and Spa, residential building, and Georgette Hair & Co. Nail Salon. In the residential building, ethylbenzene, o-xylene and m,p-xylenes were detected in the indoor air sample at estimated concentrations below the reporting limits and were not detected in the sub-slab vapor sample. The highest concentrations of these compounds in sub-slab vapor and indoor air were detected in the Promise Nails and Spa. The concentrations of xylenes and ethylbenzene detected in indoor air in the Site Investigation Area are within the range of published background levels. There is no known source of the elevated concentrations of these compounds in groundwater and soil since ethylbenzene, o-xylene and m,p-xylenes were not detected in groundwater and were either not detected or detected at low levels below the Unrestricted Use SCOs in the soil samples collected in the Site Investigation Area; however, considering that the highest concentrations of these compounds were detected in the Promise Nails and Spa building, it is unlikely that Gem Cleaners is the source.

The results of analyses of the sub-slab vapor and indoor air samples were also evaluated with respect to the matrices in the NYSDOH Vapor Intrusion Guidance Document. The comparison to the matrices indicates that no further action is recommended for the Gem Cleaners building (84 North Village Avenue), Georgette & Co. Hair Salon (78 North Village Avenue), and the residential building (23 Washington Street). Further action including identifying the source(s) and resampling or mitigation is recommended to address carbon tetrachloride in the indoor air sample collected from the basement of the Promise Nails and Spa building. Since carbon tetrachloride was not detected in the sub-slab vapor sample collected beneath the structure, the indications are that carbon tetrachloride detected in the indoor air sample may be attributable to indoor and/or outdoor air sources rather than vapor intrusion. The results indicate that vapor intrusion is not a concern in the four structures.

9.0 CONCLUSIONS AND RECOMMENDATIONS

The purpose of the RI was to further characterize soil and groundwater at and associated with the Gem Cleaners Site. The scope of the RI also included vapor intrusion sampling in the Gem Cleaners building and in three off-site structures near the Gem Cleaners building; and collection and laboratory analysis of sediment and water from a drain inlet and sump in the basement of the Gem Cleaners building. The RI field investigation activities were implemented between March 2018 and March 2019. The following conclusions and recommendations are based on the findings of the RI, as well as information obtained from prior investigations at the Site.

CONCLUSIONS

- **Surface and Subsurface Characteristics:** Based on the information gathered during the RI and previous investigations, the subsurface geology consists primarily of intermixed layers of sand and silty sand extending to a maximum depth of approximately 100 feet bgs. A clay layer was encountered in two borings advanced during the RI at depths ranging from approximately 36 to 40 feet and from approximately 70 to 81 feet. Bedrock is expected to be at depths greater than 700 feet bgs. The results of the gauging events completed in April and July 2018 indicated that in the Site Investigation Area, groundwater surface elevations in the shallow monitoring wells varied from approximately 8.56 to 9.9 feet and the inferred predominant groundwater flow direction in the shallow overburden was generally towards the west-southwest.
- **Contaminants of Concern**: The primary contaminant of concern for the Site was identified as PCE. PCE was detected in shallow and intermediate-depth groundwater downgradient of the Gem Cleaners building at concentrations of up to 52 µg/L. PCE was not detected at a concentration above the Class GA Value in any of the deep groundwater monitoring wells during the RI. Also note that PCE was not detected at elevated concentrations in soil samples collected at the Site and based on comparison to the matrices in the SVI Guidance Document, vapor intrusion is not a concern in the four structures sampled. PFAS were detected in groundwater and in the standing liquid in the drain inlet in the Gem Cleaners building at concentrations above the recommended MCL.
- **Extent of Contamination:** As stated above, PCE was not detected in subsurface soil at concentrations above the Unrestricted Use SCO during the RI. During prior investigations, PCE was detected at elevated concentrations in subsurface soil at one location, the exterior stairwell drain; however, in 1997 the drain was remediated and soil containing elevated PCE was excavated and disposed of off-Site. PCE was detected in groundwater in wells directly south and southwest of the Gem Cleaners building, which is consistent with inferred predominant shallow groundwater flow direction (generally towards the west-southwest). PCE was not detected at elevated concentrations

in deep groundwater monitoring wells MW-1B, MW-101D, MW-107D and MW-110D. The results of the analysis of natural attenuation parameters indicates that the conditions in the Site Investigation area are not favorable for the degradation of PCE. However, indications are that elevated concentrations of PCE in groundwater are likely not migrating beyond the Site Investigation Area.

- **Contaminant Sources:** Based on the findings of the RI, PCE detected in groundwater in the Site Investigation Area is likely attributable to historic dry cleaner operations. A prior investigation concluded that the exterior stairwell drain inlet, which historically received waste from the Gem Cleaners vacuum system vent, was likely the potential source of groundwater contamination. Based on the results of the RI, there does not appear to be an existing significant source of chlorinated volatile organic compounds (VOCs) impacting the Site Investigation Area. There is no known source of the PFAS detected in the sample collected from the standing water in the drain inlet; however, it is unlikely that the drain inlet is the source of PFAS in groundwater since the compounds detected in the drain inlet samples have a different fingerprint than compounds detected in groundwater and the concentrations of PFAS detected in the monitoring well closest to the drain inlet are consistent with the concentrations of PFAS detected in monitoring wells throughout the Site Investigation Area. PFAS concentrations in groundwater may be representative of background concentrations in the area of the Site.
- **Exposure Pathways:** The qualitative human health exposure assessment indicates that the exposure pathways for groundwater ingestion by Site occupants are incomplete. However, there is a potential for exposure pathways to become complete based on possible dermal contact with soil or groundwater, or inhalation of dust, if construction or maintenance activities occur at the Site. Additionally, there is potential for exposure to contaminated standing liquid in the drain inlet in the Gem Cleaners building; however, the building is currently unoccupied. Potential exposure to contaminated standing liquid in the drain inlet may be reduced by disposing of the standing water and closure/decommissioning of the drainage structure.

RECOMMENDATIONS

Based on the results of the RI, there does not appear to be an existing significant source of chlorinated VOCs impacting the Site Investigation Area. Closure of the drainage structure in the basement of the Gem Cleaners building, to eliminate the potential for exposure to PFAS, and periodic monitoring of groundwater for VOCs should be considered as well as implementation of institutional controls to minimize the potential for exposure to groundwater and subsurface soil.

10.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

TRC Engineers, Inc. (TRC) completed a Remedial Investigation (RI) for the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER). The focus of the RI was impacts from the Gem Cleaners Site located in Rockville Centre, New York. The RI was performed in accordance with the Work Assignment No. D007620-36 Notice to Proceed dated December May 1, 2017, and the Department-approved Scope of Work dated January 17, 2018.

TRC Engineers, Inc.

Prepared By:

Notes:
mg/kg - milligrams per kilogram (dry weight).
B - Compound was found in the blank and sample.
BGS - Below ground surface
BTOS - Below top of floor slab
FT - Feet
H - Sample was prepared or analyzed beyond the specified holding time
ID - Identification
N - Indicates the presumptive evidence of a compound
J - Estimated value
J- - The result is an estimated quantity, but the result may be biased low.
J+ - The result is an estimated quantity, but the result may be biased high.
NC - No criterion
ND - Not detected
NYSDEC - New York State Department of Environmental Conservation
Q - Qualifier
RL - Reporting Limit
SCO - Soil Cleanup Objective
TICs - Tentatively Identified Compounds
U - Compound was not detected at specified quantitation limit
Bold text and green shading indicates result above Unrestricted Use SCO
(1) - There are no SCOs for m/p xylene or o-xylene. The SCOs for total xylenes are shown.

Table 1
New York State Department of Environmental Conservation
Gem Cleaners Site - 84 North Village Avenue, Rockville Centre, New York
Summary of Results of Analysis of Soil/Sediment for Volatile Organic Compounds

TICs	NC	ND		ND		ND		ND		ND		ND		ND		ND	

Notes:
µg/L - micrograms per liter
ID - Identification
J - Estimated value
NC - No criterion
ND - Not detected
U - Compound was not detected at specified quantitation limit
TICs - Tentatively Identified Compounds
Bold text and green shading indicates result above Class GA Value
* - NYSDEC Ambient Water Quality Standards and Guidance Values for Class GA water

(a) 0.4 µg/L applies to the sum of cis- and trans-1,3-dichloropropene
(b) There is no Standard or Guidance Value for total xylenes. The Standard for o-xylene, m-xylene, and p-xylene is 5 µg/L

Bold text and green shading indicates result above Class GA Value
* - NYSDEC Ambient Water Quality Standards and Guidance Values for Class GA water

(a) 0.4 µg/L applies to the sum of cis- and trans-1,3-dichloropropene
(b) There is no Standard or Guidance Value for total xylenes. The Standard for o-xylene, m-xylene, and p-xylene is 5 µg/L

Notes:
ng/L - nanograms per liter
ID - Identification
J - Estimated value
MCL - Maximum Contaminant Level
NC - No criterion
ND - Not detected
U - Compound was not detected at specified quantitation limit.
Bold text and green shading indicates result above the recommended MCL
* - The NewYork State Drinking Water Council has recommended an MCL of 10 ng/L for PFOA and PFOS (individual concentrations).

Notes:
µg/m³ = micrograms per cubic meter
B - Compound also detected in laboratory blank sample.
D - Sample results obtained through dilution of original sample.
ID - Identification
J - Estimated value.
NS - No standard
NYSDOH AGV - New York State Department of Health Air Guideline Value
U - Compound was not detected at specified quantitation limit.
NYSDOH Soil Vapor Intrusion Matrices apply to compounds on shaded rows (Matrix A - Blue, Matrix B - Yellow, Matrix C - Green)
(1) - Multiple dilutions performed on sample; highest concentration is listed.

Perfluorotetradecanoic acid (PFTeA)	NC	0.28	J B	0.29	J B
Perfluorotridecanoic acid (PFTriA)	NC	1.7	U	1.8	U
Perfluoroundecanoic acid (PFUnA)	NC	1.7	U	1.8	U

Notes:
Ng/L - Nanograms per liter
B : Compound was found in the blank and sample
I : Value is estimated maximum possible concentration.
ID - Identification.
G : The reported quantitation limit was raised due to an exhibited elevated noise or matrix interference.
J - Estimated value.
MCL - Maximum Contaminant Leve
NC - No criterion.
ND - Not detected.
U - Compound was not detected at specified quantitation limit

* - The NewYork State Drinking Water Council has recommended an MCL of 10 ng/L for PFOA and PFOS (individual concentrations).

LEGEND (SYMBOLS NOT TO SCALE):

- GEM CLEANERS BUILDING
- DRAIN INLET
- DW-1 — DRYWELL LOCATION AND IDENTIFICATION NUMBER
- SB-1 — SOIL BORING LOCATION AND IDENTIFICATION NUMBER (INSTALLED BY EEA IN SEPTEMBER 1994 AND APRIL 1995)
- SB-X/GWS-X — SOIL BORING AND TEMPORARY WELL LOCATION AND IDENTIFICATION NUMBER (INSTALLED BY O'BRIEN & GERE IN 2006)
- MW-X — MONITORING WELL LOCATION AND IDENTIFICATION NUMBER (INSTALLED BY EAA CIRCA 1994)

Comparison Criteria			
VOLATILE ORGANIC COMPOUND (VOC)	Unrestricted Use SCO (mg/kg)	TAGM 4046 Recommended SCO (mg/kg)	Commercial Use SCO (mg/kg)
TETRACHLOROETHENE (PCE)	1.3	1.4	150

NOTES:

1. LOCATIONS AND DIMENSIONS OF PHYSICAL FEATURES AND PROPERTY BOUNDARIES ARE APPROXIMATE.
2. HISTORIC SOIL BORING AND LOCATIONS ARE APPROXIMATE. THE SOIL SAMPLE COLLECTED FROM THE EXTERIOR STAIRWELL DRAIN ON 3/21/1997 WAS COLLECTED 1-1.5 FEET BELOW THE BOTTOM OF THE STRUCTURE.
3. SAMPLES COLLECTED PRIOR TO 2010 WERE COMPARED TO THE NYSDEC TECHNICAL AND ADMINISTRATIVE GUIDANCE MEMORANDUM (TAGM) 4046 RECOMMENDED SOIL CLEANUP OBJECTIVES (THE APPLICABLE CRITERIA AT THE TIME OF THE SAMPLING).
4. BOLD AND SHADED RESULTS ARE ABOVE NYSDEC TAGM 4046 RECOMMENDED SOIL CLEANUP OBJECTIVE FOR PCE.
5. ND = NON-DETECT
6. J = ESTIMATED VALUE

NOTES (CONTINUED):

7. SAMPLES COLLECTED FROM EXTERIOR STAIRWELL DRAIN, SUMP PIT, AND BOILER PIT BY GCI IN 2018 ARE ASSUMED TO HAVE BEEN COLLECTED 0-0.5 FEET BELOW THE STRUCTURE SINCE SAMPLE DEPTHS WERE NOT PROVIDED IN THE 2018 GCI SUBSURFACE INVESTIGATON REPORT.
8. OBG = O'BRIEN & GERE, PWGC = P.W. GROSSER CONSULTING, EEA = ENERGY & ENVIRONMENTAL ANALYSTS, INC., GCI = GENERAL CONSOLIDATED INDUSTRIES, INC.
9. ALL RESULTS ARE IN MILLIGRAMS PER KILOGRAM (mg/kg).
10. FT BGS = FEET BELOW GROUND SURFACE
11. N/A = NOT AVAILABLE. INFORMATION REGARDING THE DRYWELL SAMPLE DEPTH INTERVALS WAS NOT AVAILABLE.

August 21, 1997

Chris Lafemina
NYSDEC
SUNY, Bldg. 40
Stony Brook, New York 11790-2356

Re: Site Assessment & Remediation Report
Gem Cleaners
84 N. Village Ave.
Rockville Centre, NY

Dear Mr. LaFemina

Enclosed is a copy of the document *Site Assessment & Remediation Report for the Property at 84 North Village Avenue, Rockville Centre, New York, August, 1997.*

The report documents the findings of a site inspection, investigation and identification of a potential source of groundwater contamination at the site. After successful remediation of the potential source area, it is believed that no further action is warranted and referral of the site for the NYSDEC Registry of Inactive Hazardous Waste Sites is not appropriate.

We request that your Department acknowledge receipt of the enclosed and your concurrence that this concludes our clients obligations with respect to environmental action at the site.

Should you have any questions or require further information, please do not hesitate to contact this office.

Very truly yours
P.W. GROSSER CONSULTING
ENGINEER & HYDROGEOLOGIST, P.C.

APPENDIX B: LABORATORY REPORTS

APPENDIX C: HAZARDOUS WASTE MANIFEST

1.0 INTRODUCTION

P.W. Grosser Consulting Engineer & Hydrogeologist, P.C. (PWGC) has prepared this report to document the findings of a site inspection, investigation and remediation of an exterior stairwell drain at the property located at 84 North Village Avenue, Rockville Centre, New York. The property is currently occupied by a dry cleaning facility known as Gem Cleaners. The objective of the site inspection was to evaluate the potential for the existence of on-site source areas that may be contributing to groundwater contamination detected beneath the site. The findings of the inspection led to the sampling of bottom deposits within a small diameter exterior stairwell drain located adjacent to the basement door in the rear of the facility. After initial sample results indicated concentrations of tetrachloroethene (PCE) above New York State Department of Environmental Conservation (NYSDEC) soil cleanup objectives contained in their Technical and Administrative Guidance Memorandum (TAGM HWR-94-4046), a boring was performed through the drain to define the vertical extent of contamination. Subsequently, the drain was excavated and impacted soils above TAGM soil cleanup objectives were removed and properly disposed. The former drain was backfilled with clean material and a new structure was constructed.

After the identification and successful remediation of the potential source area, no further work at the site is warranted and referral of the site for the NYSDEC Registry of Inactive Hazardous Waste Sites is not appropriate. The basis of these conclusions are set forth below.

2.0 SITE BACKGROUND

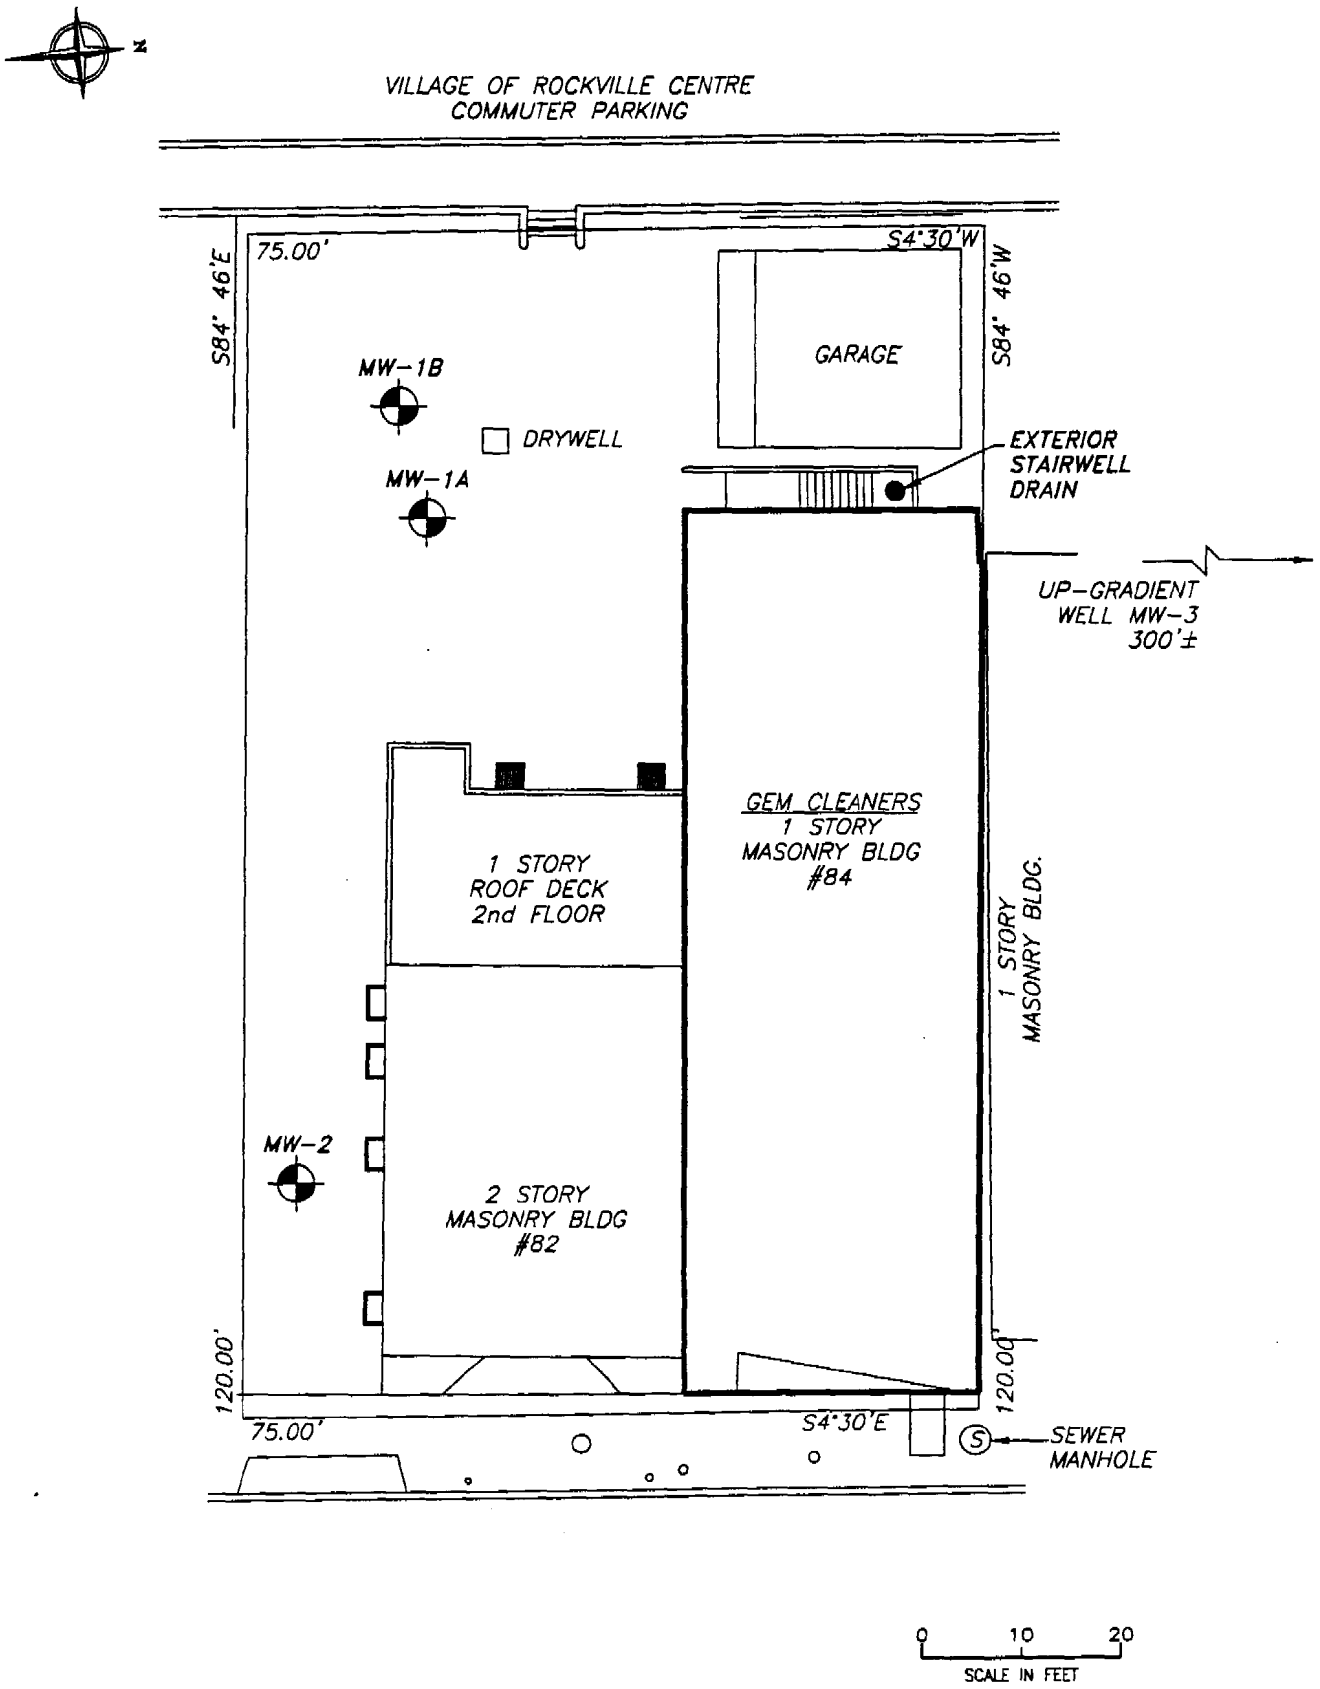
Energy & Environmental Analysts, Inc. (EEA) conducted a Phase I Environmental Site Assessment at the facility in July, 1994. The Phase I identified the use of the site as a dry cleaning facility, which uses and stores chemical products. The main chemical noted in use, as in most dry cleaning facilities, was PCE. Also noted during the Phase I was the existence of a floor drain on the first floor of the subject building, a sump pit in the basement for the discharge of boiler condensate, and an exterior drainage structure located in the paved parking area behind the facility. EEA indicated that a pipe was noted within the exterior structure from an unknown source.

Based on the information obtained during the Phase I, EEA performed a Phase II Environmental Subsurface Investigation. Phase II work was completed in May, 1995. The scope of work for the Phase II included a soil boring conducted through the exterior drainage structure. Multiple soil samples were collected from within the structure and analyzed from various depths (2-4', 8-10', 13 -15', and 18-20') to provide a vertical profile of soil quality. Depth to water beneath the site is approximately 18 feet below grade. In addition, a total of four groundwater monitoring wells (three water table and one deep) were installed and sampled. One well was located approximately 300 feet north (up-gradient) of the site, two wells (one water table and one deep) were installed directly down-gradient from the exterior drainage structure, and one well was located down-gradient of the sump pit located in the basement of the subject building. Since no water table elevation contours are presented in EEA's report, it is assumed EEA used regional groundwater flow patterns to determine up-gradient and down-gradient positions relative to the site (see Figure 1).

The results of the Phase II investigation indicated that PCE was detected at 7 ug/kg, well below the NYSDEC TAGM soil cleanup objective, in the 0-2' foot soil sample collected within the exterior drainage structure. PCE was below detectable levels in subsequent soil samples collected within the structure. The results of the groundwater samples collected from the monitoring wells indicated relatively low concentrations of PCE in the groundwater beneath the property, in addition to well MW-3 installed up-gradient of the site. The highest concentrations of PCE were detected in water table monitoring well MW-1A (26 ug/l -56 ug/l), which is located adjacent to the exterior drainage structure (see Figure 1).

EEA's report, detailing the above findings was submitted to the NYSDEC for their review. The report recommendations indicated that no additional testing or remediation would likely be required as PCE concentrations in MW-1A would diminish over time to background levels. A copy of EEA's May, 1995 Phase II report is included in Appendix A.

Subsequently, the NYSDEC contacted the property owner and indicated that in order for the NYSDEC to consider a "no action" position, the potential for additional source areas needed to be



P.W. Grosser Consulting Engineer & Hydrogeologist, P.C. Village Ave. Rockville Centre, N.Y.	Figure No: 1

evaluated. After an initial site inspection was conducted, Mr. Lafemina of the NYSDEC was contacted by this office to discuss an appropriate scope of work related to the this project. The initial inspection revealed an additional potential source area to be an exterior basement stairwell drain. Mr. Lefemina informally indicated in a January 27, 1997 telephone conversation that a detailed discussion of the site inspection results and the sampling of the stairwell drain would be sufficient to satisfied the Department's requirements.

3.0 SITE INSPECTION

The initial site inspection was conducted on January 22, 1997 and focused on the current operations of the facility and the generation of liquid waste. During the site inspection, it was noted that early generation (transfer machine) equipment is still being utilized and the facility consumes approximately 200 gallons of PCE per year. Early generation machines do not employ many of the waste reduction and recovery technologies that are inherent in the later generation equipment, such as refrigerator condensers. Therefore, these operations tend to use more PCE throughout the year and generate greater volumes of liquid waste. Equipment used during the process includes the following; a Washex washing machine, Solve Miser dryer, Sniff-O-Miser sniffer, Filter King filters, Per Corporation cooker, and Remi-Dri vacuum system. With the exception of the vacuum system, the dry cleaning equipment is utilized on the first floor of the subject building. Figure 2 shows a general layout of the first floor.

As part of the process, PCE is stored at the base of the washer. Prior to washing, the PCE is pumped through the filters, which are designed to remove fatty acids, water and migrant dyes from the PCE. To further remove impurities from the PCE, the PCE is routed to the cooker every other day. The employee at the site indicated that both the muck generated by the cooking process and the spent filters are placed in 30 gallon drums and disposed of by Saftey Kleen. Saftey Kleen drums were observed at the site.

Once the washing operation is complete and the PCE drained, the clothes are transferred to the dryer. The sniffer is connected to both the washer and dryer and is designed to capture vapors from these

Village Ave. Rockville Centre, N.Y.	Figure No: 2

processes. Captured liquids and condensed vapors processed by the sniffer are separated into PCE/ water and are contained in pans located at the base of the unit. The employee indicated that the PCE is reused and the water is disposed of in the buildings toilet. Coolant water generated by the dryer is also disposed of in this manner. Also noted on the first floor of the building was a small diameter floor drain, located immediately adjacent to the dryer (see Figure 2). This floor drain, originally discussed in EEA's Phase I, was clogged at the time of inspection. However, tracing of the piping appeared to be associated with the floor drain, discharge to a waste sink located in the basement of the facility.

Figure 3 shows the general layout of the basement. As described in EEA's Phase I report, a sump pit is located off the northwest corner of the active fuel oil fired boiler. The sump pit consists of a pre-fabricated metal receptacle fitted into the basement floor which is currently receiving boiler condensate. No piping was noted in the sump pit and probing with a steel bar revealed it contained a solid bottom. The sump did contain a float activated sump pump, which turns on the pump when liquids reach a designated level. The sump pump discharged, via flex hose, to the waste sink also located in the basement. Numerous other pipes were also routed to the waste sink. One appeared to be from the floor drain located on the first floor, while another appeared to be an abandoned washing machine used for typical wet cleaning also located on the first floor.

The vacuum unit and associated equipment are located in the southwest corner of the basement. The system is designed to pull vapor and residual water from the press and spotting board operations located on the first floor. This vapor and water contains PCE released from the clothes. Water collected during the process is drained through the bottom of the unit when the system is shut down, while the vapor is typically released through a vent routed to the outside of the building. The vacuum vent at Gem Cleaners, constructed of PVC, was routed along the basement's west wall and horizontally out through a hole cut in the wooden basement door. Since the vent pipe was not routed vertically up, small quantities of water drawn into the system are released. The majority of liquid appeared to drain on the inside of the basement door, where a six inch concrete curb exists preventing water from entering or leaving the basement. Some liquid did appear to drain on the outside of the

door to the exterior stairwell, where a small diameter drain (approximately 6 inches) is located. This stairwell drain is located directly up-gradient (north) of monitoring well MW-1A. Additional liquid generated by the vacuum system is drained at the base of the unit and contained in a small pail. The employee at the facility indicated that this liquid was also disposed of in the building's toilet. The operator was made aware of the condition of the vacuum system vent and has since extended it vertically up to the roof and capped it with a "T", thereby, eliminating the discharge.

Since the employee working at the facility indicated that waste water generated at the facility was disposed of in the buildings's toilet, dye testing was performed to document discharge to the municipal sanitary sewer. This area of Nassau County is located in sewered District 2. Sanitary sewer connections began as early as 1953 in this District. Dye testing was performed by placing water soluble dye tablets in the facilities toilet and inducing flow. The closest access to the municipal sewer system is located in the sidewalk (via a steel manhole cover) directly in front of the building. This manhole cover was opened and the dye placed in the facilities toilet was observed. In addition, since it was observed that the sump pit and likely the floor drain discharges to the waste sink, this structure was dye tested. A 5 gallon mixture of dye and potable water was placed in the waste sink and observed in the municipal sewer system. After unclogging of the floor drain located on the first floor, discharge to the waste sink was confirmed.

The site inspection also included a survey of the area surrounding the building. The area around the site is almost entirely paved, with the exception of the exterior drainage structure identified by EEA, several basement window boxes associated with the adjacent building, and a small patch of exposed soil located along the western side of the garage (see Figure 1). The property appeared to be filled, as grade of a Village of Rockville Centre Parking lot adjacent to the site was approximately 3 feet lower.

The cover of the exterior drainage structure was removed so that the structure could be inspected. The structure was approximately four feet in diameter, with depth to bottom sediments estimated to be 3 feet. Unlike the observations made in the EEA report, no piping was noted within the structure.

Additionally, the detached garage located directly behind the Gem Cleaners building was inspected for floor drains and no structures were noted.

The results of the site inspection only identified the exterior stairwell drain as a potential source of groundwater contamination. Though waste water containing PCE is generated at the site, it appears most of it is discharged to the municipal sanitary sewer via the facilities toilet. The sump pit and floor drain identified by EEA both discharge to the waste sink, which was also confirmed to discharge to the sewer system.

The stairwell drain is subject to discharge of small quantities of liquid from the vacuum system. In addition, this drain represents the most likely receptacle for inadvertent manual discharge of waste water. Therefore, the sampling of bottom deposits within this structure was performed.

4.0 INITIAL SAMPLING OF EXTERIOR STAIRWELL DRAIN

A sample of bottom deposits within the exterior stairwell drain was collected on March 21, 1997, by a representative of PWGC. The sample was collected using a stainless steel hand auger that was properly decontaminated prior to use with a non-phosphate detergent scrub and distilled water rinse. To document the effectiveness of decontamination procedures, a rinsate field blank from the hand auger was also collected.

The sample was collected from 12 to 18 inches below the bottom of the drain. Upon collection, the appropriate laboratory supplied glassware was immediately filled with sample material, while the remaining portion was placed in a baggie for headspace screening with a photoionizatrion detector (PID). A PID response of greater than 200 calibration gas equilvalents (cge) was noted. The sample was delivered to Ecotest Laboratories, Inc. (Ecotest), a New York State Certified laboratory and analyzed for PCE, trichloroethylene (TCE), 1,2 dichloroethene (DCE), and vinyl chloride by EPA Method 8010. These compounds represent the contaminant of concern and its common associated breakdown products.

The analytical results for the initial sample were as follows:

Parameter	Concentration(ug/kg)	TAGM Soil Cleanup Objective (ug/kg)
PCE	12,000	1,400
TCE	2,600	700
DCE	4,400	300
Vinyl Chloride	BDL	200

As shown above, PCE, TCE and DCE were detected in excess of their respective TAGM soil cleanup objectives. Compounds analyzed for were below detectable levels in the field blank sample. Analytical results for the initial sampling are contained in Appendix B.

5.0 SOIL BORING RESULTS

A soil boring through the exterior stairwell drain was conducted on May 16, 1997. The objectives of the soil boring were to vertically define the extent of PCE impacted soil within the exterior stairwell drain and to document soil conditions above the water table, prior to remediation. The boring was performed by Advanced Cleanup Technologies, Inc., Farmindale , N.Y., under the field observation of a representative of PWGC.

The borings were advanced using a remote hydraulically driven probing unit capable of collecting soil samples at discreet depths. Soil samples were collected utilizing a 1 1/4-inch diameter by 2 foot long sampling tube lined with a dedicated acetate liner. Continuous soil samples were collected from two feet below the bottom of the drain to the water table, which was encountered at 10.5 feet below the surface of the structure. Upon retrieval, the sample was immediately screened for VOC's through a slit cut in the acetate liner. The section of the core exhibiting the highest PID response was then transferred to appropriate laboratory supplied glassware. A soil boring log, containing soil descriptions and PID response is shown on Table 1.

A total of three samples (4'-6', 6'-8', and 8'-10') were retained from the soil boring for laboratory

TABLE 1

Depth ft.	Rec. ft.	PID cge	Odor	Visual Description/Comments
2-4	0	NA	NA	No Recovery- sample moist and too soft
4-6A	.25	25	yes	Black medium sands and muck, wet. Rock blocked sampler. Not enough recovery for sample analysis.
4-6B*	2	5	no	Brown medium sands, trace gravel
6-8*	1.5	37	yes	Brown medium sands, some gray staining near top of sample.
8-10*	1.5	2	no	Brown medium sands, trace gravel. Sample dry at the top, moist towards the bottom.
10-12	2	0	no	Brown fine to medium sands, trace gravel. Entire sample saturated.

* = Sample Submitted for laboratory analysis.
PID response was taken directly from the acetate liners.

analysis. No recovery was obtained from the 2'-4' sample interval as the material near the top of the drain was moist and extremely soft. The 4'-6' sample was collected off-center, near the side of the drain, due to a small cobble encountered at this depth. However, the results of this sample can be used to represent soil quality near the sides of the structure. The bottom portion of the 8'-10' sample interval was slightly moist, indicating the bottom of the sample was in close proximity to the water table. To confirm the depth of the water table, a sample from the 10' -12' depth was collected. The sample was completely saturated, confirming the existence of the water table within the 10'-10.5' foot depth range. Since this sample was saturated and not representative of soil conditions above the water table, it was not retained for laboratory analysis. The samples were delivered to Ecotest and analyzed for PCE, TCE, DCE, and vinyl chloride by EPA Method 8010.

Table 2 contains the compounds quantified in the samples collected at the above referenced depths (copies of the analytical results are included in Appendix B). Compounds quantified in these samples are compared to their respective soil clean-up objectives. As presented in Table 1, PCE and TCE in the 4'-6' sample were detected below their TAGM soil cleanup objectives indicating the contamination is primarily confined to the center of the structure. The PCE concentration in the 6'-8' foot sample was the same as in the initial sample however, concentrations of TCE and DCE were an order of magnitude lower. As can be seen in Table 1, the concentrations of PCE and TCE drop well below their respective soil cleanup objectives, directly above the water table. As noted on the soil boring log, the 8'-10' sample interval represents the first depth at which no staining of the soils were noted. Prior to this depth, black staining was noted within the first six feet, which lessened to greyish in the 6'-8' sample interval.

6.0 REMEDIATION OF EXTERIOR STAIRWELL DRAIN

Initial sampling of the stairwell drain and soil boring results, indicate that remediation of the structure down to 8 feet is appropriate to remove the potential source of groundwater contamination at the site. Remediation of the structure was performed on July 31, 1997 by Trade-Winds Environmental Restoration Inc.(Trade-Winds), under the field observation of a representative of PWGC.

BDL = Below Detectable Levels

^ - Sample was collected off-center towards the side of the drain.

* = New York State Department of Environmental Conservation, Technical and Administrative Guidance Memorandum, Revised 1/24/94 (HWR-94-4046).

The scope of the remediation included the excavation of the existing drain and impacted soil to 8 feet below grade, documented as exceeding TAGM soil cleanup objectives. The previously collected 8-10 foot soil boring sample is considered the "clean" endpoint. This information, along with soil removal methods were presented to the NYSDEC in a June 11, 1997 letter, prior to initiating remediation. The NYSDEC, through informal conversation, indicated that the scope of work presented was adequate to address the concerns documented at the site.

Prior to the removal of impacted soil, the drain and the majority of surrounding concrete making up the stairwell floor were removed. Once the concrete was removed, it was apparent the drain was of block construction. The diameter of the drain ranged from 2.0 feet near the surface to 1.5 feet at approximately 3.0 feet below grade, where the blocks were supported by native soil.

The soil within the blocks were removed using a trailer mounted Vector, which utilizes a vacuum to extract soil and is equipped to discharge directly into drums. After removing the soil within the drain, the majority of blocks were removed to facilitate the placement of a 5 foot section of 2 foot diameter, 3/4 inch thick PVC well screen. Soils immediately adjacent to the outside of the former blocks were excavated to remove material potentially impacted through the blocks. Therefore, the top portion of the excavation was approximately 3 feet wide.

Starting at 3 feet below grade, the well screen was advanced within the excavation to prevent collapse and undermining of the adjacent structure. Soils within the excavation were removed, in a two foot diameter down to 8.5 feet below grade. An additional 1.5 feet of material was excavated in the center of the well screen to provide a greater level of confidence of clean out and at approximately 10 feet soils remained dry. However, following setting of the well screen, water was visible seeping into the deepest portion of the excavation. Additionally, remaining soils within the top 3 feet and bottom 3 feet of the excavation were screened for VOC's with a PID, and no reponse was noted. A total of six 55-gallon drums of soil were removed during remediation procedures.

After removal of the soil was complete, the well screen and excavation was backfilled with clean sand

and on a the following day a new drain was constructed to prevent flooding. New concrete was poured around the drain to secure it into place. Photos depicting the remediation of the drain, newly installed drain, and rerouted PVC vacuum vent, immediately follow this report.

7.0 SOIL DISPOSAL

During remediation of the stairwell drain, impacted soils were placed directly into DOT certified 55-gallon drums. A total of six 55-gallon drums were generated from the clean out. Due to the nature of the waste, the soils were handled as hazardous to be destroyed by incineration. Soil disposal was coordinated by Trade-Winds. The soils were transported by Bechem Transport, Inc. (USEPA ID # CYD982191942) and the designated disposal facility is LWD, Inc., Calvert City KY, (USEPA ID # KYD088438817). The generator copy of the hazardous waste manifests is contained in Appendix C. A signed copy of the manifest by the disposal facility and certificate of destruction will be forwarded upon receipt.

8.0 SUMMARY & CONCLUSIONS

A Phase II investigation performed by EEA as a follow-up to their Phase I Site Assessment performed at the subject site, documented relatively low concentrations of PCE in the groundwater beneath, as well as up-gradient of the site. The highest concentrations of PCE were detected in water table monitoring well MW-1A (26 ug/l -56 ug/l), located adjacent to an exterior drywell believed by EEA to be the most likely source of groundwater contamination. However, results of soil samples collected within the structure indicated that PCE was only detected at 7 ug/kg in the 0-2' foot soil sample. PCE was below detectable levels in subsequent deeper soil samples collected within the structure down to the water table.

A detailed site inspection was performed by PWGC to evaluate the potential for the existence of other on-site source areas that may be contributing to groundwater contamination detected beneath the site. The site inspection focused on the current operations of the facility and the generation of liquid waste. The results of the site inspection indicated that liquid waste is currently being discharged via the toilet or waste sink to the municipal sewer system as documented through dye testing. The floor drain and

basement sump identified as concerns by EEA, were documented as discharging to the waste sink which discharges to the sanitary sewer rather than to the exterior drywell sampled as part of their investigation.

During the site inspection, an exterior basement stairwell drain located directly outside the basement door, was identified as a potentially receiving discharge of waste water containing PCE. The drain is located up-gradient relative to monitoring well MW-1A. During the time of the inspection, the drain was documented as receiving waste from the site's vacuum system vent and also represents the most likely structure to receive inadvertent manual disposal of waste water. Subsequently, the vent was re-routed directly to the roof of the building and capped with a "T" to prevent discharge.

Through sampling of the stairwell drain, impacted soils (in excess of TAGM soil cleanup objectives) were documented as existing to 8 feet beneath the surface of the drain, which was approximately 2 feet above the current water table at the drain's location. Subsequently, the impacted soil was removed and properly disposed.

Though the stairwell drain may have contributed to the low levels of PCE documented in the MW-1A, up-gradient sources apparently exist as documented by the detection of PCE in a well up-gradient of the site. Though up-gradient concentrations were lower, the well was installed approximately 300 feet away and on-site well MW-1A may be installed in a more contaminated portion of the plume. However, if the soils within the drain did contribute to groundwater contamination, they have effectively been removed, and concentrations in the well will return to background levels through natural attenuation.

Therefore, no further work in relation to the site is warranted and that the site should not be referred to the NYSDEC list of Inactive Hazardous Waste Sites in any Classification form. This is based on the following:

- EEA sampled the only drywell located on the property and eliminated the structure as a

potential source of groundwater contamination.

- A detailed site inspection only identified an exterior stairwell drain as potentially being an alternate on-site source of contamination.

- The stairwell drain was confirmed to be impacted by PCE and subsequently, effectively remediated.

- Only relatively low levels of PCE were documented in on-site wells, while also being detected in an up-gradient well.

- If the impacted soil with the stairwell drain contributed to groundwater contamination in the past, the concentrations should lessen to background levels through natural attenuation within a short period of time.

PHASE II ENVIRONMENTAL SUBSURFACE INVESTIGATION
GEM CLEANERS
84 NORTH VILLAGE AVENUE
ROCKVILLE CENTRE, NEW YORK

INTRODUCTION

EEA, Inc. has completed a Phase II Environmental Subsurface Investigation of the property located at 84 North Village Avenue, Rockville Centre, New York. A Phase I Environmental Site Assessment (ESA-94196) was also completed by EEA for this property in July 1994.

EEA's research into the history of site use indicates that the property had been occupied by Gem Cleaners, which operates a dry cleaning facility and tailor shop. This operation uses and stores significant amounts of toxic and hazardous materials and chemical products, and generates toxic or hazardous wastes. Various aboveground and belowground tanks, drums, and containers containing a variety of materials, such as Tetrachloroethene (PCE) were noted.

One floor drain was noted on the first floor of the subject building. In addition, a sump pit was noted in the basement of the subject building. This pit appears to be used for the discharge of boiler condensate.

One exterior drainage structure (possibly a drywell or leaching pool) was observed in the rear paved section of the property. In addition, a pipe was noted extending inside this drainage structure from an unknown source, possibly from drains within the building.

From the information gathered during EEA's Phase I investigation, the following Phase II Scope of Work was developed and performed at the subject property.

SCOPE OF WORK

- Collect several soil samples within the rear drywell structure at various depth intervals above the water table. The samples were analyzed for volatile organic chemicals including Perchloroethylene (PCE), using United States Environmental Protection Agency (USEPA) Method 8010.

- Construct and sample a total of four (4) groundwater monitoring wells. Two wells (MW-1A and MW-1B) are located adjacent to the exterior drainage structure, and monitor groundwater quality in shallow and deep groundwater environments. Monitoring Well MW-2 is located

downgradient of the sump pit which is found in the building's basement. An upgradient monitoring well (MW-4) was placed approximately 300 feet north of the property in the Village of Rockville Centre parking field.

- The groundwater collected from the monitoring wells was analyzed for volatile organic chemicals which include Tetrachloroethene (PCE) using USEPA Method 8010.

- Soil Sampling Protocol

The soil borings were performed by continuous split spoon sampling. Soil samples were obtained every two feet. Each split spoon sample was screened in the field by utilizing an OVA portable gas analyzer. The sample exhibiting the highest non-methane organic vapor reading was sent to the laboratory for analysis, as stated above.

- Groundwater Sampling

The groundwater samples were obtained by installing a permanent monitoring well. The water samples were obtained by placing a 2-inch ID PVC casing in a 6-inch augered hole at each location. The PVC screen was installed above the level of the perched groundwater.

The wells were developed on the same day, drilled, and hand bailed until visually free of suspended materials or sediments. A dedicated teflon bailer was used for each well. The groundwater samples were sent to the laboratory for the stated analyses.

- Laboratory Testing

New York State Department of Environmental Conservation (NYSDEC) approved laboratories were used for all laboratory analyses. The laboratory operates a Quality Assurance/Quality Control (QA/QC) program that consists of proper laboratory practices (including the required chain-of-custody), an internal quality control program, and external quality control audits by New York State.

All work performed was completed following United States Environmental Protection Agency (Region II) and NYSDEC protocols and guidelines.

- Field Decontamination

To avoid contamination and cross-contamination of samples, all sampling equipment was cleaned prior to collection of each sample. All sampling equipment was decontaminated using the attached decontamination procedure.

RESULTS OF LABORATORY ANALYSES

The results of soil and groundwater samples were prepared by EcoTest Laboratories, Inc. (New York State certified laboratory). The tables below present a summary of the results. The chain-of-custody records, as well as the analytical laboratory data sheets, are presented in the Appendix to this report. The sample collection locations are shown on Figures 1 and 2.

DISCUSSION OF FINDINGS AND CONCLUSIONS

Rear Drywell Structure

Results of soil sampling within this drywell structure show low concentration levels of Tetrachloroethene (PCE) (7µg/kg) in the soil sample collected in September 1994. Subsequent sampling conducted in April 1995 at depth ranges of 8 to 10 feet, 13 to 15 feet, and 18 to 20 feet did not detect PCE in any of the samples tested. Table 1 shows a summary of the laboratory results.

Groundwater Monitoring Wells

Four permanent groundwater monitoring wells were installed on the subject property in locations upgradient and downgradient of the subject building. Table 2 shows a summary of the laboratory results.

Results of groundwater testing show a low concentration of PCE in MW-1A. This well monitors the water table in the vicinity of the drywell. MW-1B, which monitors the deeper groundwater environment, did not show any detectable concentrations of PCE.

Upgradient Monitor Well (MW-3) and sidegradient Monitor Well (MW-2) did show low concentrations of PCE; however, the concentrations are below NYSDEC Groundwater Standards (5 µg/L).

From the information collected during this investigation, there is no indication of soil contamination present in the drywell sampled. Low levels of PCE exist in the shallow groundwater, but not in the deeper zone. This indicates that significant contamination of the groundwater has not occurred from operations at this property. Low concentrations of PCE were also found in groundwater upgradient and sidegradient of the property, and is likely derived from another off-site source.

RECOMMENDATIONS

No additional testing or remediation is anticipated to be required. It is expected that, over time, the concentration of PCE in MW-1A will diminish to background levels.

SAMPLING METHODOLOGY

a. Soil Borings

At each on-site sampling location, soil samples were obtained by utilizing a steel, 24-inch, split spoon sampler, which was driven through the subsurface levels ahead of a hollow stem (6-inch) auger, which bores into the soil to the desired sampling depth. The split-spoon sampler was driven through the top two feet of soil to obtain the surface sample, which was composted and placed in the properly refrigerated containers.

The auger then bored down to a depth of two feet. A split-spoon sampler was then inserted in the hollow stem and driven to a depth of four feet to obtain the first intermediate sample. Next, the auger bore down to four feet and the split-spoon sampler driven to six feet, to obtain the second intermediate sample. This procedure was repeated until the end of the boring.

An organic vapor analysis (OVA) was performed on all soil samples using a Thermo Environmental 580 B Photoionization Detector with headspace adaptor. The sample producing the highest organic vapor reading was sent to the laboratory for analysis.

b. Ground Water Monitor Wells

The water samples were obtained by installing a 2-inch ID PVC casing in a 6-inch augured hole. The PVC screen was installed with the top two feet above the level of the ground water. The total screen length was 10 feet. The well screen slot size was 0.10. A filter pack of sand was placed in the annular space around the screens and extended above the screen.

The well was developed on the same day, drilled, and hand bailed until visually free of suspected materials or sediments. A dedicated teflon bailer was used for each well.

c. Quality Assurance and Control

To avoid contamination and cross-contamination of samples, all sampling equipment was cleaned before each sample was collected. The split-spoon and hollow-stem auger were first steam cleaned. The following procedures were followed:

Step 1: Steam clean equipment.

Step 2: Scrub with a bristle brush using a non-phosphate detergent (such as Alconox) in hot tap water.

Step 3: Rinse with hot tap water.

Step 4: Rinse twice with deionized water.

Step 5: Air dry.

Step 6: Rinse twice with deionized water.

Step 7: Air dry.

Step 8: Keep in clean unused aluminum foil.

This decontamination procedure was used for all borings.

A chain-of-custody record is kept at all times with the samples. This record documents sample collection date/time and collector. The sample possession record begins at sample collection and ends at delivery to the laboratory.

Re: Preliminary Site Characterization –
Gem Cleaners
84 North Village Avenue
Rockville Centre, New York
Site No. 1-30-082

File: 10653/36447 #5

Dear Ms. Maloney:

This letter report serves to summarize the Preliminary Site Characterization (PSC) activities conducted at the Gem Cleaners site located at 84 North Village Avenue, Rockville Centre, New York. Refer to Figure 1 for the site location.

Site Description

Gem Cleaners is an active dry cleaning facility, which has used and stored chemicals on site. The main chemical used is tetrachloroethene, also known as perchloroethylene or PCE. The facility is located on an approximately 0.25-acre lot in a one-story masonry building. A two-story frame and stucco building is attached to the south side of the building. Refer to Figure 2. The site has one dry well (DW-1) and two existing monitoring wells (MW-1A and MW-2), located in the paved lot and driveway south of the building. From previous site assessment reports provided by NYSDEC, there are two additional monitoring wells, MW-1B (located in the proximity of MW-1A and DW-1) and MW-3 (located approximately 300 ft north of the site). However, MW-1B and MW-3 could not be located during the PSC activities.

The site borders North Village Avenue on the east and a municipal parking lot on the west. Neighboring buildings border the site on the north and south.

Previous Investigations/History

Energy & Environmental Analysts, Inc. (EEA) completed a Phase I Environmental Assessment in July 1994 at the site. In May 1995, EEA also conducted a Phase II Environmental Subsurface Investigation which included a soil boring through the dry well and the installation and sampling of four groundwater monitoring wells. Refer to Attachment 1. PCE was present in all four monitoring wells, ranging from 2 micrograms/liter (µg/L) to 56 µg/L in MW-1A.

In August 1997, P.W. Grosser Consulting conducted additional activities at the site and prepared a Site Assessment and Remediation Report. Refer to Attachment 1. Dye testing was performed to confirm the discharge of interior drains to the municipal sewer system. A vent pipe, which discharged small amounts of PCE/water condensate into a stairwell drain, was also identified and relocated to the roof. The stairwell drain, located on the west side of the building, was investigated and the soil was sampled. PCE levels were observed in the soil (6 to 8 ft) at 12,000 µg/Kg, which is well above the TAGM Soil Cleanup Objectives of 1,400 µg/Kg. The drain area was excavated to 8 ft below grade (the identified cleanup endpoint), a new drain was installed, and the excavation was backfilled.

Site Geology and Hydrology

The site appears to be filled, as the grade of the Village of Rockville Center parking lot near the site is approximately 3 feet lower. The site is underlain by the Upper Glacial Aquifer. This unit, which underlies most of Long Island, is composed of glacial outwash (unconsolidated mixture of sand and gravel) deposited during the Pleistocene ice ages. The Upper Glacial Aquifer has an average thickness of approximately 100 feet in the vicinity of the site. As indicated during previous drilling events, there is fine sand with trace of gravel to 20 feet below grade.

The Upper Glacial Aquifer is an unconfined aquifer recharging from rainfall that falls on Long Island. The water table is highest along the center of the island. This is also where the greatest rainfall occurs. Groundwater tends to flow from recharge areas in the center of the island to discharge areas along the north and south shores. At the site, depth to groundwater is approximately 19 feet below grade. The estimated average hydraulic conductivity of the Upper Glacial Aquifer is 270 feet/day horizontally and 27 ft/day vertically. The ground water flow direction could not be calculated due to the limited number of monitoring wells at the site. However, in the Phase II Environmental Subsurface Investigation Report, dated May 1995 and prepared by EEA, the regional ground water flow pattern was reportedly from north to south.

Field Activities

Field activities consisting of soil borings, subsurface soil sampling, ground water sampling, and residual sampling were performed on-site from January 17 through January 20, January 30, and March 2 through March 3, 2006. Environmental Probing Investigations, Inc. (EPI) located in Cream Ridge, New Jersey, performed the drilling activities. A representative from YEC located in Valley Cottage, New York provided the drilling oversight and sample collection.

Soil borings were conducted at eight locations (SB-1 through SB-8) as shown on Figures 2 and 3. For borings located outside the property (SB-7/GWS-7 and SB-8/GWS-8), the Village of Rockville was contacted and a permit was obtained prior to drilling.

The borings were performed using a Geoprobe® direct push probe (6600 unit). The scope of the PSC was to advance the borings to 90 feet or refusal. None of the borings were advanced to 90 ft due to subsurface conditions. Refusal occurred at depths presented in Table A below. Four-foot long core samples were retrieved from the borings and screened via a headspace method using a photo ionization detector (PID). Refer to boring logs in Attachment 2. Soil samples with the highest PID reading were collected and submitted for analysis. The PID readings ranged from non-detect to 34.8 ppm. The depths and PID readings for the soil samples collected are presented in Table A below. At SB-3, two soil samples were collected and submitted for analysis. In addition to the soil samples, a residual sample was

collected from the dry well (DW-1). Duplicate samples were also collected and submitted for analysis for SB-5 and DW-1.

Table A: *Depth to refusal, depth of soil samples, and PID readings.*

Location	Depth to Refusal (ft)	Depth of Soil Samples (ft)	PID Reading (ppm)
SB-1	44	24-28	17.8
SB-2	40	36-40	7.4
SB-3	40	28-32 & 36-40	5.0 & 5.3
SB-4	40	24-28	3.7
SB-5	40	28-32 (plus field duplicate at 28-32 ft)	34.8
SB-6	40	16-20	6.6
SB-7	40	36-40	6.1
SB-8	36	20-24	2.0

Groundwater samples were collected from each of the eight boring locations (GWS-1 through GWS-8). The samples were collected using the Geoprobe® discrete screen point groundwater sampling method. Groundwater samples were collected at the depths presented in Table B below. In addition, water samples were collected from the dry well (DW-1) and the existing monitoring wells (MW-1A and MW-2) on site.

Table B: *Depth of groundwater samples.*

Location	Depth to Groundwater Samples (ft)
GWS-1	29
GWS -2	29
GWS -3	29
GWS -4	20, 34, &49
GWS -5	29 (plus field duplicate at 29 ft)
GWS -6	21, 34, &44
GWS -7	17, 28, &43
GWS -8	24
MW – 1A	59
MW - 2	20

Following the boring and sampling activities YEC performed an instrument survey of the site that included the sample locations, dry well, monitoring wells, and other prominent structures.

The soil samples and the groundwater samples along with matrix spike/matrix spike duplicate (MS/MSD) samples, and equipment blank samples were sent via overnight delivery to Life Science Laboratories in Syracuse, New York for analysis. The samples were analyzed for volatile organic compounds.

Analytical Results

Data Quality

The samples were analyzed for volatile organic compounds according to the Standby QAPP and project specific DER-10 QAPP using USEPA Method 8260B.

The analytical data packages from Life Science Laboratories were validated by an independent data validation contractor, Nancy Potak of Greensboro, Vermont, and the results were reported in a data

usability summary report (DUSR). Refer to Attachment 3 (separately bound). The validated soil and residual analytical results are summarized in Table 1. The validated groundwater analytical results are summarized in Table 2.

The data quality for soil, residual and groundwater were generally acceptable for intended uses. The DUSR noted that there were problems with the system monitoring and internal standard recoveries in the initial analysis of the residual samples from DW-1. The samples were reanalyzed and the data from the reanalysis were not significantly different. As recommended by the validator, the data from the original analysis was used for reporting, as presented in Table 1. In addition, the DUSR noted that there was minor acetone and methylene chloride contamination in the method and storage blanks, and the data is flagged by the "B" data qualifier in Table 1.

Minor acetone and methylene chloride contamination was also found in the trip blanks for the groundwater samples. In three groundwater samples, GWS-1(29), GWS-6(21), GWS-6(34), the samples had to be reanalyzed due to the high concentrations of PCE exceeding instrument calibration range. As recommended by the validator, the data for this compound was reported from the diluted analysis.

Data Evaluation
The analytical results were compared to the following New York State screening values:

- Soil and residual results are compared to applicable screening values provided in TAGM #4046, 1994.
- Groundwater results are compared to applicable screening values provided in TOGS 1.1.1, 1998.

The validated analytical results for the soil, residual and groundwater samples are summarized in Tables 1 and 2. In addition, the analytical results, which exceed the applicable screening values, are highlighted with boxes in the tables and presented on Figure 3.

For the soil and residual samples, no compounds exceeded their applicable screening values. Compounds that were detected include acetone, 2-butanone, toluene, and PCE as shown in Table 1.

For the groundwater samples, only PCE and cis-1,2-dichloroethene exceeded their applicable screening values. This occurred at three locations as shown below in Table C. Other compounds that were detected included trichlorofluoromethane, acetone, carbon disulfide, methylene chloride, methyl tert-butyl ether, 2-butanone, chloroform, benzene, trichloroethene, toluene, ethylbenzene, xylenes and 1,2,4-trichlorobenzene as shown in Table 2. PCE was present in GWS-1, 3, 4, 5, 6, 7, and 8, MW-1A and MW-2.

Table C: *Groundwater samples with compounds that exceed their applicable screening values.*

Compound	Screening Values	GWS-1 (29')	GWS-4 (20')	GWS-4 (34')	GWS-6 (21')	GWS-6 (34')	GWS-6 (44')
cis-1,2-dichloroethene	5	ND	ND	ND	5.11	ND	ND
PCE	5	303	20.2	12.4	313	109	11.2

ND = Not detected. Concentrations are in µg/L.

Summary

PCE was the contaminant of concern based on the site history. Based on the analytical results of the soil and residual samples collected during the PSC, no compounds exceeded their applicable screening values.

Several volatile organic compounds were present in the ground water, however, only PCE and cis-1,2-dichloroethene exceeded the applicable screening values. This occurred at three locations (GWS-1, GWS-4 and GWS-6) with PCE concentrations ranging from 11.2 to 303 µg/L.

If you have any questions or comments regarding this information, please contact me at (315) 437-6100, extension 2258.

Very truly yours,

Notes:

Analytical Data Qualifiers:

B = Detected in method blank at concentrations less than contract required detection limit (CRDL)

J = Estimated

U = Not detected at or above method detection limit (MDL) or practical quantitation limit (PQL)

FD = Field Duplicate

NA = Not Available

[ ] = Exceeds Screening Value

[1] Table 5 of NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1, ***Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations*** , June 1998.

[2] Non-detect limits are MDLs.

[3] TOGS April 2000 Addendum.

[4] The TOGS value is for the sum of cis-1,3-Dichloropropene and trans-1,3-Dichloropropene.

[5] The TOGS value for total xylenes is assumed to be equal to the TOGS value for 1,2-xylene, 1,3-xylene, or 1,4-xylene.

Notes:

Analytical Data Qualifiers:
- B = Detected in method blank at concentrations less than contract required detection limit (CRDL)
- J = Estimated
- U = Not detected at or above method detection limit (MDL) or practical quantitation limit (PQL)

FD = Field Duplicate
NA = Not Available
bold = Exceeds Screening Value

[1] Table 5 of NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1, ***Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations*** , June 1998.
[2] Non-detect limits are MDLs.
[3] TOGS April 2000 Addendum.
[4] The TOGS value is for the sum of cis-1,3-Dichloropropene and trans-1,3-Dichloropropene.
[5] The TOGS value for total xylenes is assumed to be equal to the TOGS value for 1,2-xylene, 1,3-xylene, or 1,4

PHASE II SUBSURFACE INVESTIGATION

84 NORTH VILLAGE AVENUE
ROCKVILLE CENTRE, NEW YORK 11570

GCI Project No. 2017199

Prepared For:

Law Office of Roy A. List
109 Newbridge Road
Hicksville, New York 11801

Field Subsurface Investigation Dates: February 6 and 7, 2018

Report Date: February 28, 2018

Prepared by:

General Consolidated Industries, Inc. (GCI)
Environmental and Engineering Consultants
1092 Motor Parkway
Hauppauge, New York 11788-5228

EXECUTIVE SUMMARY

A Phase I Environmental Site Assessment (ESA) report, dated February 22, 2018, was prepared for the subject site by GCI. The Phase II Subsurface Investigation was conducted in order to address the Recognized Environmental Conditions (RECs) as noted in the Phase I ESA. The RECs addressed by the Phase II investigation activities are summarized as follows:

- Confirmation of the municipal sewer connection to the on-site drainage structures.
- Possible impact to the one (1) on-site leaching drywell.
- Possible impact to the subsurface soils from historical site operations.
- Possible impact to the groundwater from the historical site operations.

Dye Testing / Line Tracing

It was confirmed that the interior discharge points of the subject building are currently discharging to municipal sewer system located in North Village Avenue. These discharge points include the bathrooms of the buildings and the wastewater sink located in the basement of the former dry cleaner space.

There is one (1) leaching drywell located in the rear / west parking lot. The drywell is a leaching structure, but has a 6" diameter overflow pipe which leads to the western property line and discharges to the adjacent rail road parking lot.

There is one (1) floor drain located in the base of the rear stairs on the west side of the subject building. The floor drain is a leaching structure. The drain also has a pipe running under the saddle of the door to a buried five (5) gallon bucket which was acting as an interior floor drain.

There is a boiler pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be associated with a former boiler based on the proximity to the former feed and return lines for the fuel oil UST. The boiler pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete blocks and concrete.

There is a sump pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be a sump for former boiler or former mechanical equipment. The sump pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete block and concrete.

Drywell System Sampling

There is one (1) storm water leaching drywell located at the rear / west parking area. The drywell was accessed, inspected and sampled. The drywell was noted to be either partially filled in and/or have a large build up of sediment. A representative of the soil within drywell DW-1 was obtained at the bottom invert level. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from drywell DW-1 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from drywell DW-1 indicated that there were no elevated VOCs, SVOCs or metals detected above the NYS DEC Commercial SCOs. There were two (2) metals, one (1) VOC, and two (2) SVOCs detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, drywell DW-1 has been slightly impacted and will require remediation. In addition, the overflow pipe within the drywell appears to be an illegal discharge to a neighboring parcel and should be removed.

Stairwell Floor Drain System Sampling

There is one (1) floor drain located in the base of the rear stairs on the west side of the subject building. The drain was accessed, inspected and sampled. A representative of the soil within floor drain FD-1 was obtained. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from floor drain FD-1 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from floor drain FD-1 indicated that there were no elevated VOCs or metals detected above the NYS DEC Commercial SCOs. There was one (1) SVOC detected above the NYS DEC Commercial SCOs. There were four (4) metals, one (1) VOC, and five (5) SVOCs detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the stairwell floor drain FD-1 has been impacted and will require remediation. In addition, the pipe within the drain leading to the interior buried five (5) gallon bucket appears to be an illegal discharge and should be removed.

Basement Boiler Pit System Sampling

There is one (1) boiler pit located in the basement of the subject building. A soil boring was installed through the concrete floor of the pit. The boiler pit was accessed, inspected and sampled. A representative of the soil from below the boiler pit was obtained. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from boiler pit would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from the boiler pit indicated that there were no elevated VOCs, SVOCs, or metals detected above the NYS DEC Commercial SCOs. There was one (1) metal detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the boiler pit has been slightly impacted and will require limited remediation of the shallow subsurface soils directly below the pit area.

Basement Sump Pit System Sampling

There is one (1) sump pit located in the basement of the subject building. A soil boring was installed through the concrete floor of the pit. The sump pit was accessed, inspected and sampled. A representative of the soil from below the sump pit was obtained. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from boiler pit would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from the sump pit indicated that there were no elevated VOCs or SVOCs detected above the NYS DEC Commercial SCOs. There was one (1) metal detected above the NYS DEC Commercial SCOs. There were six (6) metals detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the sump pit has been impacted and will require remediation of the shallow subsurface soils directly below the pit area.

Groundwater Sampling

There are two (2) groundwater monitoring wells located on the south and west side of the subject site. The wells were accessed and sampled. Groundwater was encountered at 18 feet below grade. Based upon the field data collected, as well as the visual inspection of the samples, it was determined that the groundwater sample from the down-gradient well to the south MW-2 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260. The results of the analysis were compared to the standards listed in the New York State Department of Environmental Conservation (NYS DEC) "Water Quality Regulations - Surface Water and Groundwater Classifications and Standards NYCRR Title 6, Chapter X, Parts 700-706."

The analytical results for the groundwater sample obtained from the monitoring well MW-2 indicated that there were no elevated VOCs detected above the NYS DEC standards. Based upon the analytical data, the groundwater has not been impacted.

The work conducted satisfies Recognized Environmental Condition (REC) No. 1 of the Phase I Environmental Site Assessment (ESA) report, February 22, 2018.

REPORT SPECIFICATIONS

Copies and circulation of this report are as follows:

Two (2)	Original bound reports and one (1) electronic copy of the report via electronic mail to Mr. Roy A. List, Esq. and Mr. Gary Goldtsein.
One (1)	Bound original report in the confidential client file at General Consolidated Industries, Inc. (GCI).
One (1)	Copy on security protected computer disk at General Consolidated Industries, Inc. (GCI).

This report is prepared for the exclusive use of parties noted above and is considered private and strictly confidential. General Consolidated Industries, Inc. (GCI) shall not release this report or any of the findings of this report to any person or agency except with the authorization of the principal parties noted above.

1.0 INTRODUCTION

General Consolidated Industries, Inc. (GCI) has been retained to prepare a Phase II Subsurface Investigation for the subject site located at 84 North Village Avenue, Rockville Centre, Incorporated Village of Rockville Centre, Nassau County, Long Island, New York, identified on the tax map as Section 38, Block 153, Lot 49.

The subject property is depicted on Figure 1.0 - Subject Site Location Map.

This investigation is predicated upon the findings of the Phase I Environmental Site Assessment (ESA) report, dated February 22, 20198, prepared for the subject site by GCI.

1.1 Objectives / Methodology

The objectives of this investigation as well as the methods employed during the field activities are summarized as follows:

1. To perform a series of dye tests on the interior drainage points. An approved biodegradable fluorescent dye was mixed with water and introduced in to the interior drainage points. The on-site sanitary system and subsurface drainage structures, were subsequently inspected for the presence of the dye.

2. To collect representative soil samples from the active on-site drywell system, as well as the other UICs, in order to characterize the subsurface soil. The soil samples were visually inspected for the presence of contamination, as well as being field screened with the photo-ionization detector (PID). All field data was recorded. A representative soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) “Division of Environmental Remediation 6 NYCRR Part 375".

3. To collect representative groundwater samples in order to assess the groundwater at the subject site. The depth to groundwater at the subject site is estimated to be approximately eighteen (18) feet below grade. One (1) groundwater sample from MW-2 was submitted to the laboratory for analysis of Part 375 VOCs utilizing EPA Method 8260. The results of the analysis were compared to the standards listed in the New York State Department of Environmental Conservation (NYS DEC) “Water Quality Regulations - Surface Water and Groundwater Classifications and Standards NYCRR Title 6, Chapter X, Parts 700-706."

The locations of the above noted concerns are depicted on Figure 6.0 - Site Diagram.

The scope of work was designed in accordance with all applicable regulatory and industry standards regarding subsurface investigations. The scope of work performed at the site will provide the necessary information to determine whether or not there has been an impact to the subject property as a result of the operations conducted at the site.

Conclusions and recommendations are submitted based on the careful consideration of the results of the above work. Recommendations are formulated with respect for maintaining the collateral value of the property. This report is intended to assess the threat to human health or collateral value of the property.

The accuracy of presenting the findings of this investigation was considered of paramount importance during the formulation of this report. The report's accuracy is limited to the information available from interviews, records, files and plans released by the property owner and/or his representatives and/or the respective regulatory agencies, their attorneys and information officers. The above mentioned parties interest in issues presented herein is unknown to GCI.

GCI expressly reserves its common law copyright and other property rights in this report. This report is not to be reproduced, changed or copied in any form or manner whatsoever, nor is it to be assigned to any third party without first obtaining the express written permission and consent of GCI.

Tom P. Smyth
President
General Consolidated Industries, Inc.

2.0 SITE CHARACTERIZATION

2.1 Site Description

The subject site is a single lot parcel, which is presently improved by a two (2) story commercial and residential building, with a detached garage and a basement. The first floor consists of a vacant space to the north, which was previously occupied by "Gem Cleaners". The first floor also consists of a nail salon space to the south. The second floor consists of a three (3) bedroom residential apartment, with a kitchen and a bathroom. The basement spaces are unfinished and utilized for storage.

The first floor tenant space to the north was previously occupied by "Gem Cleaners"; specifically as a dry cleaning operation. The operation used and stored dry cleaning chemicals on site.

The Nassau County Tax Assessor reported that the building was constructed in 1951. The site measures 0.2617 acres. The building measures 9,024 square feet.

2.2 Site Hydrology and Geology

Surface Water Characteristics

A majority of the site is covered by the subject building and paved driveways/parking areas. The surface topography at the site is nearly level throughout. Storm water runoff is directed to the on-site drywells. The up-gradient drainage area within 1,000 feet of the subject site is improved with residential houses.

Groundwater Characteristics

The subject site is in the Upper Glacial aquifer. The Upper Glacial consists of Pleistocene moraine and outwash deposits. The water table is located primarily in the glacial aquifer which underlies a majority of Long Island. In general, the upper glacial is thickest near the north shore and eastern Nassau County. Hydraulic conductivity is greatest along the southern part of the island, where the outwash deposits consist mainly of well draining coarse sand and gravel.

Fresh groundwater originates in the form of precipitation, which on Long Island, averages approximately 44 inches per year. This precipitation will infiltrate into the subsurface and act as the sole recharge mechanism for replenishing water in the upper glacial aquifer system. Under the present conditions of infiltration, groundwater is recharging at a rate of approximately 350 billion gallons of water per year. The Upper Glacial has been designated a sole source aquifer by the US EPA, and as such is protected by US EPA mandated remediation legislation.

According to groundwater contour maps provided by the Nassau County Department of Public Works (NCDPW) and the United States Geological Survey (USGS), groundwater is located at approximately eighteen (18) feet below ground surface at the subject site. Groundwater generally flows south in the area of the subject site.

Groundwater beneath the site is classified as GA, as per the New York State Department of Environmental Conservation (NYS DEC) "Water Quality Regulations - Surface Water and Groundwater Classifications and Standards". This classification is assigned to all of the groundwater of New York State. The best usage of class GA groundwater is as a source of potable water supply. Class GA groundwater are fresh groundwater.

Geological Characteristics

According to a soil survey of Nassau County, Long Island, New York, the subject site is located in the Atlantic Coastal Plain physiographic province which is characterized by low hills of unconsolidated sands, gravel and silt. According to Franke (1972), regionally, the subsurface deposits consist of the Upper Glacial deposits that are characterized by southward sloping deposits of sand, gravel and silt. The Upper Glacial deposits have a maximum thickness of 600 feet. They are underlain by the Magothy, Raritan and Lloyd Formations. The Gardiners clay and the Jameco gravel separate the Upper Glacial deposits and the Magothy Formation along the south west portion of Long Island.

3.0 SUBSURFACE INVESTIGATION

The Phase II Subsurface Investigation activities were conducted at the subject site on February 6 and 7, 2018. The following sections summarize the work conducted, the field observations and data collected, as well as any other pertinent site information which may have been obtained during the performance of the investigative activities.

3.1 Dye Testing / Line Tracing

There are typical sinks located within the bathrooms of the building. There is a waste water sink located in the basment. There is a floor drain at the rear stairwell. The interior discharge points within the subject building were dye tested utilizing an approved biodegradable dye in order to determine the respective discharge locations. The dye tablets were mixed with water and introduced to the interior discharge points. The municipal sewer system was subsequently inspected for the presence of the tracer dye.

It was confirmed that the interior discharge points of the subject building are currently discharging to municipal sewer system located in North Village Avenue. These discharge points include the bathrooms of the buildings and the wastewater sink located in the basement of the former dry cleaner space.

There is one (1) leaching drywell located in the rear / west parking lot. The drywell is a leaching structure, but has a 6" diameter overflow pipe which leads to the western property line and discharges to the adjacent rail road parking lot.

There is one (1) floor drain located in the base of the rear stairs on the west side of the subject building. The floor drain is a leaching structure. The drain also has a pipe running under the saddle of the door to a buried five (5) gallon bucket which was acting as an interior floor drain.

There is a boiler pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be associated with a former boiler based on the proximity to the former feed and return lines for the fuel oil UST. The boiler pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete blocks and concrete.

There is a sump pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be a sump for former boiler or former mechanical equipment. The sump pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete block and concrete.

The location of the relevant site features are depicted on Figure 6.0 - Site Diagram.

3.2 Drywell System Characterization

There is one (1) storm water leaching drywell located at the rear / west parking area. The drywell was accessed, inspected and sampled. The drywell was noted to be either partially filled in and/or have a large build up of sediment.

The manhole cover for the drywell located at grade was removed so as to allow for an interior inspection of the structure. A decontaminated stainless steel hand auger was utilized to retrieve representative soil samples from the bottom invert level of the drywell. A representative of the soil within drywell DW-1 was obtained at the bottom invert level.

Please note that there may be buried overflow drywells associated with the primary drywells at the subject site. Piping was visible within the drywell which may connect to a buried drywell. The information contained in this report is based on the building systems which were readily visible during the site inspection, as well as information obtained from interviews and records researched. A thorough inspection of the interior of the drywells would need to be conducted via confined space entry in order to confirm the presence of additional associated overflow leaching pools and/or additional piping.

The samples were visually inspected for evidence of possible contamination, such as staining, sheen, product, etc. In addition, the collected samples were field screened with a Perkin-Elmer Model 2020 PID for the presence of VOCs. A representative portion of the collected sample is stored in an air-tight medium and agitated for a period of sixty (60) seconds in order to allow for volatilization of any organic vapors which may be present in the samples. A positive air flow sampling probe is then inserted into the medium and the PID readings are recorded. The results are reported in parts per million (ppm).

Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from drywell DW-1 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) “Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results are summarized in Section 4.1. The location of the relevant site features are depicted on Figure 6.0 - Site Diagram.

TABLE 1 Drywell System Field Data					
Sample Location	**Depth to Bottom Sediment**	**Liquid Volume Depth**	**Construction**	**Sample Lithology**	**PID Reading**
DW-1	3' 0"	N/A (dry)	- Slotted cover. - Flat concrete slab under the cover. - Five (5) foot diameter. - Leaching side rings. - Natural earth bottom.	Brown and black coarse sand andsediment. No odor or staining noted.	0.0 ppm

3.3 UIC Assessment

Stairwell Floor Drain

There is one (1) floor drain located in the base of the rear stairs on the west side of the subject building. The floor drain is a leaching structure. The drain also has a pipe running under the saddle of the door to a buried five (5) gallon bucket which was acting as an interior floor drain.

The drain was accessed, inspected and sampled. A representative of the soil within floor drain FD-1 was obtained.

The samples were visually inspected for evidence of possible contamination, such as staining, sheen, product, etc. In addition, the collected samples were field screened with a Perkin-Elmer Model 2020 PID for the presence of VOCs. A representative portion of the collected sample is stored in an air-tight medium and agitated for a period of sixty (60) seconds in order to allow for volatilization of any organic vapors which may be present in the samples. A positive air flow sampling probe is then inserted into the medium and the PID readings are recorded. The results are reported in parts per million (ppm).

Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from floor drain FD-1 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) “Division of Environmental Remediation 6 NYCRR Part 375".

Basement Boiler Pit

There is a boiler pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be associated with a former boiler based on the proximity to the former feed and return lines for the fuel oil UST. The boiler pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete blocks and concrete.

A soil boring was installed through the concrete floor of the pit. The boiler pit was accessed, inspected and sampled. A representative of the soil from below the boiler pit was obtained.

The samples were visually inspected for evidence of possible contamination, such as staining, sheen, product, etc. In addition, the collected samples were field screened with a Perkin-Elmer Model 2020 PID for the presence of VOCs. A representative portion of the collected sample is stored in an air-tight medium and agitated for a period of sixty (60) seconds in order to allow for volatilization of any organic vapors which may be present in the samples. A positive air flow sampling probe is then inserted into the medium and the PID readings are recorded. The results are reported in parts per million (ppm).

Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from boiler pit would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

Basement Sump Pit

There is a sump pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be a sump for former boiler or former mechanical equipment. The sump pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete block and concrete.

A soil boring was installed through the concrete floor of the pit. The sump pit was accessed, inspected and sampled.

The samples were visually inspected for evidence of possible contamination, such as staining, sheen, product, etc. In addition, the collected samples were field screened with a Perkin-Elmer Model 2020 PID for the presence of VOCs. A representative portion of the collected sample is stored in an air-tight medium and agitated for a period of sixty (60) seconds in order to allow for volatilization of any organic vapors which may be present in the samples. A positive air flow sampling probe is then inserted into the medium and the PID readings are recorded. The results are reported in parts per million (ppm).

Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from boiler pit would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results are summarized in Section 4.2. The location of the relevant site features are depicted on Figure 6.0 - Site Diagram.

3.4 Groundwater Assessment

There are two (2) groundwater monitoring wells located on the south and west side of the subject site. The wells were accessed and sampled. Groundwater was encountered at 18 feet below grade.

The groundwater samples were obtained via a disposable sampler. The collected groundwater samples were field screened for any evidence of contamination such as odors and/or sheening. The samples were also be physically inspected for any evidence of contamination such as odors or staining. All field screening results and boring logs were recorded.

Based upon the field data collected, as well as the visual inspection of the samples, it was determined that the groundwater sample from the down-gradient well to the south MW-2 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260. The results of the analysis were compared to the standards listed in the New York State Department of Environmental Conservation (NYS DEC) "Water Quality Regulations - Surface Water and Groundwater Classifications and Standards NYCRR Title 6, Chapter X, Parts 700-706."

The analytical results are summarized in Section 4.3. The location of the relevant site features are depicted on Figure 6.0 - Site Diagram.

3.5 Quality Assurance and Control

To avoid contamination and cross-contamination of soil samples, all sampling equipment was cleaned before each sample was collected. The following procedures were followed in decontaminating the sampling equipment:

- Scrub all parts with a bristle brush using Alconox detergent and water.
- Rinse with water.
- Let all equipment air dry.
- Rinse with water and let air dry.

A chain-of-custody record is kept for the samples at all times. This record documents the location, sampler, time and date of each sample.

4.0 ANALYTICAL RESULTS

All samples were immediately stored on ice and delivered to a National Environmental Laboratory Approval Program (NELAP) certified laboratory for analysis. The laboratory chosen for this investigation was Long Island Analytical Laboratories Inc., which is located in Holbrook, Long Island, New York. The NELAP certification number for the laboratory is NY01273.

4.1 Drywell System Analytical Data

The analytical results for the soil samples obtained were compared to the NYS DEC Restricted Use Soil Cleanup Objectives (SCO) - Protection of Groundwater listed in the NYS DEC "Division of Environmental Remediation 6 NYCRR Part 375".

DW-2

The analytical results for the sample obtained from drywell DW-1 indicated that there were no elevated VOCs, SVOCs or metals detected above the NYS DEC Commercial SCOs. There were two (2) metals, one (1) VOC, and two (2) SVOCs detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, drywell DW-1 has been slightly impacted and will require remediation. In addition, the overflow pipe within the drywell appear to be an illegal discharge to a neighboring parcel and should be removed.

Complete laboratory analytical reports and chain of custody forms are included with this report as Appendix A - Laboratory Analytical Results.

4.2 UIC Analytical Data

The analytical results for the soil samples obtained were compared to the NYS DEC Restricted Use Soil Cleanup Objectives (SCO) - Protection of Groundwater listed in the NYS DEC "Division of Environmental Remediation 6 NYCRR Part 375".

Stairwell Floor Drain

The analytical results for the sample obtained from floor drain FD-1 indicated that there were no elevated VOCs or metals detected above the NYS DEC Commercial SCOs. There was one (1) SVOC detected above the NYS DEC Commercial SCOs. There were four (4) metals, one (1) VOC, and five (5) SVOCs detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the stairwell floor drain FD-1 has been impacted and will require remediation. In addition, the pipe within the drain leading to the interior buried five (5) gallon bucket appears to be an illegal discharge and should be removed.

Basement Boiler Pit

The analytical results for the sample obtained from the boiler pit indicated that there were no elevated VOCs, SVOCs, or metals detected above the NYS DEC Commercial SCOs. There was one (1) metal detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the boiler pit has been slightly impacted and will require limited remediation of the shallow subsurface soils directly below the pit area.

Basement Sump Pit

The analytical results for the sample obtained from the sump pit indicated that there were no elevated VOCs or SVOCs detected above the NYS DEC Commercial SCOs. There was one (1) metal detected above the NYS DEC Commercial SCOs. There were six (6) metals detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the sump pit has been impacted and will require remediation of the shallow subsurface soils directly below the pit area.

Complete laboratory analytical reports and chain of custody forms are included with this report as Appendix A - Laboratory Analytical Results.

4.3 Groundwater Analytical Data

The analytical results for the groundwater samples obtained were compared to the standards listed in the New York State Department of Environmental Conservation (NYS DEC) “Water Quality Regulations - Surface Water and Groundwater Classifications and Standards NYCRR Title 6, Chapter X, Parts 700-706."

MW-2

he analytical results for the groundwater sample obtained from the monitoring well MW-2 indicated that there were no elevated VOCs detected above the NYS DEC standards. Based upon the analytical data, the groundwater has not been impacted.

Complete laboratory analytical reports and chain of custody forms are included with this report as Appendix A - Laboratory Analytical Results.

5.0 CONCLUSIONS and RECOMMENDATIONS

5.1 Conclusions

Based on the completion of the expanded Phase II Subsurface Investigation of the subject site, GCI provides the following conclusions:

A Phase I Environmental Site Assessment (ESA) report, dated February 22, 2018, was prepared for the subject site by GCI. The Phase II Subsurface Investigation was conducted in order to address the Recognized Environmental Conditions (RECs) as noted in the Phase I ESA. The RECs addressed by the Phase II investigation activities are summarized as follows:

- Confirmation of the municipal sewer connection to the on-site drainage structures.
- Possible impact to the one (1) on-site leaching drywell.
- Possible impact to the subsurface soils from historical site operations.
- Possible impact to the groundwater from the historical site operations.

Dye Testing / Line Tracing

It was confirmed that the interior discharge points of the subject building are currently discharging to municipal sewer system located in North Village Avenue. These discharge points include the bathrooms of the buildings and the wastewater sink located in the basement of the former dry cleaner space.

There is one (1) leaching drywell located in the rear / west parking lot. The drywell is a leaching structure, but has a 6" diameter overflow pipe which leads to the western property line and discharges to the adjacent rail road parking lot.

There is one (1) floor drain located in the base of the rear stairs on the west side of the subject building. The floor drain is a leaching structure. The drain also has a pipe running under the saddle of the door to a buried five (5) gallon bucket which was acting as an interior floor drain.

There is a boiler pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be associated with a former boiler based on the proximity to the former feed and return lines for the fuel oil UST. The boiler pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete blocks and concrete.

There is a sump pit located in the basement of 84 North Village Avenue, the former Gem Cleaners space. The exact use was not known, but it appears to be a sump for former boiler or former mechanical equipment. The sump pit was inspected and found to be non-leaching, but not water tight. The pit was constructed of concrete block and concrete.

Drywell System Sampling

There is one (1) storm water leaching drywell located at the rear / west parking area. The drywell was accessed, inspected and sampled. The drywell was noted to be either partially filled in and/or have a large build up of sediment. A representative of the soil within drywell DW-1 was obtained at the bottom invert level. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from drywell DW-1 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) “Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from drywell DW-1 indicated that there were no elevated VOCs, SVOCs or metals detected above the NYS DEC Commercial SCOs. There were two (2) metals, one (1) VOC, and two (2) SVOCs detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, drywell DW-1 has been slightly impacted and will require remediation. In addition, the overflow pipe within the drywell appear to be an illegal discharge to a neighboring parcel and should be removed.

Stairwell Floor Drain System Sampling

There is one (1) floor drain located in the base of the rear stairs on the west side of the subject building. The drain was accessed, inspected and sampled. A representative of the soil within floor drain FD-1 was obtained. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from floor drain FD-1 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) “Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from floor drain FD-1 indicated that there were no elevated VOCs or metals detected above the NYS DEC Commercial SCOs. There was one (1) SVOC detected above the NYS DEC Commercial SCOs. There were four (4) metals, one (1) VOC, and five (5) SVOCs detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the stairwell floor drain FD-1 has been impacted and will require remediation. In addition, the pipe within the drain leading to the interior buried five (5) gallon bucket appears to be an illegal discharge and should be removed.

Basement Boiler Pit System Sampling

There is one (1) boiler pit located in the basement of the subject building. A soil boring was installed through the concrete floor of the pit. The boiler pit was accessed, inspected and sampled. A representative of the soil from below the boiler pit was obtained. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from boiler pit would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270, and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from the boiler pit indicated that there were no elevated VOCs, SVOCs, or metals detected above the NYS DEC Commercial SCOs. There was one (1) metal detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the boiler pit has been slightly impacted and will require limited remediation of the shallow subsurface soils directly below the pit area.

Basement Sump Pit System Sampling

There is one (1) sump pit located in the basement of the subject building. A soil boring was installed through the concrete floor of the pit. The sump pit was accessed, inspected and sampled. A representative of the soil from below the sump pit was obtained. Based upon the field data collected, as well as the visual inspection of the sample, it was determined that the soil sample obtained from boiler pit would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260, Part 375 SVOCs via EPA 8270,

and for Part 375 metals via EPA Method 6010. The results of the analysis were reviewed and compared to the Soil Cleanup Objectives (SCOs) listed in the New York State Department of Environmental Conservation (NYS DEC) "Division of Environmental Remediation 6 NYCRR Part 375".

The analytical results for the sample obtained from the sump pit indicated that there were no elevated VOCs or SVOCs detected above the NYS DEC Commercial SCOs. There was one (1) metal detected above the NYS DEC Commercial SCOs. There were six (6) metals detected above the NYS DEC Unrestricted SCOs.

Based upon the analytical data, the sump pit has been impacted and will require remediation of the shallow subsurface soils directly below the pit area.

Groundwater Sampling

There are two (2) groundwater monitoring wells located on the south and west side of the subject site. The wells were accessed and sampled. Groundwater was encountered at 18 feet below grade. Based upon the field data collected, as well as the visual inspection of the samples, it was determined that the groundwater sample from the down-gradient well to the south MW-2 would be submitted to the laboratory for analysis. The soil sample was submitted to the laboratory for analysis of Part 375 VOCs via EPA Method 8260. The results of the analysis were compared to the standards listed in the New York State Department of Environmental Conservation (NYS DEC) "Water Quality Regulations - Surface Water and Groundwater Classifications and Standards NYCRR Title 6, Chapter X, Parts 700-706."

The analytical results for the groundwater sample obtained from the monitoring well MW-2 indicated that there were no elevated VOCs detected above the NYS DEC standards. Based upon the analytical data, the groundwater has not been impacted.

The work conducted satisfies Recognized Environmental Condition (REC) No. 1 of the Phase I Environmental Site Assessment (ESA) report, February 22, 2018.

5.2 Recommendations

Based on the above conclusions, the following actions are recommended:

1. **Drywell System and UIC Remediation**

   The analytical results for the samples obtained from the one (1) drywells DW-1, as well as the stairwell floor drain, the boiler pit, and the sump pit indicated that there were elevated levels detected above the NYS DEC SCOs. Based upon the analytical data, these four (4) structures have been impacted and will require remediation. As part of the remediation, the overflow pipe within the drywell appears to be an illegal discharge to a neighboring parcel and should be removed. In addition, the pipe within the drain leading to the interior buried five (5) gallon bucket appears to be an illegal discharge and should be removed.

   The structures represent Class 5D-2 Underground Injection Wells (UIWs), and as such are subject to the requirements of the United States Environmental Protection Agency (US EPA) Underground Injection Control (UIC) program. The US EPA administers the UIC program as mandated by Part C of the Safe Drinking Water Act (SDWA), 42 U.S.C. Section 300 f. The US EPA administers the UIC program as mandated by Part C of the Safe Drinking Water Act (SDWA), 42 U.S.C. Section 300 f. Section 1422 of the SDWA, 42 U.S.C. Section 300 h-1, requires that the US EPA administer the UIC program in areas that do not have state approved programs, as is the case for Nassau County, Long Island, New York. The US EPA administers the UIC program in conjunction with the Nassau County Department of Health (NCDH).

   Upon successful remediation of the subject site, end-point samples will be obtained and analyzed. A Remedial Action Report (RAR) / closure report will be submitted to the NCDH and the US EPA.

Limitations

The purpose of this investigation was to identify potential sources of contamination. The findings and conclusions set forth in this report are based upon information that was available to GCI, during its inspection of the property and after review of selected records and documents. If new information becomes available concerning the property after this date, or if the property is used in a manner other than that which is identified in this report, the findings and conclusions contained herein may have to be modified. Additionally, while this investigation was performed in accordance with good commercial and customary practice and generally accepted protocols within the consulting industry, GCI can not guarantee that the property is completely free of hazardous substances or other materials or conditions that could subject the owner and/or operator to potential liability. Future events and/or investigation could change the findings stated herein. Should additional investigations encounter differing conditions, sections of this report may require modification.

The preceding Environmental Assessment is subject to the following conditions and to such other conditions and limiting conditions as are set forth in the report.

1. GCI assumes no responsibility for hidden or latent conditions or misrepresentation by the property owner, his/her representatives, public information officials or any authority consulted in connection with the compilation of this report.

2. This report is prepared for the sole and explicit purpose for assessing the potential liability with respect to the presence of hazardous materials that may pose a potential health or environmental threat and for evaluating collateral risk associated with the same. This report is not intended to have any direct bearing on the value of the property.

3. The Environmental Assessment is for the sole use of the principal parties. No disclosure or reproduction shall be made of the preceding report without the prior written consent of GCI.

4. GCI or any representative of GCI is not required to give testimony with reference to the opinions expressed herein without prior written arrangement.

Disclaimer

This report is for the use by the client as a guide in determining the possible presence of toxic materials on the subject property at the time of the inspection. This report is based on the review of historic records (which may be incomplete), relating to past occupants, and upon a visual inspection of the surrounding properties at the time of inspection, and makes no determinations with respect to portions of the surrounding properties which were not inspected.

Any and all liability on the part of GCI shall be limited solely to the cost of this environmental assessment. GCI shall have no liability for any damages, whether consequential, compensatory, punitive, or special, arising out of, incidental to, or as a result of, this assessment and report. GCI shall have no liability for any cleanup and/or response costs, or any other incidental, or consequential, punitive, or special costs arising out of, incidental to, or as a result of any action against the client brought by any federal, state, or local government agency. GCI assumes no liability for the use of this assessment and report by any person or entity other than the client for whom it has been prepared.

Re: 84 N. Village Ave. Rockville Centre

Dear Tom Smyth,

Enclosed please find the laboratory Analysis Report(s) for sample(s) received on February 06, 2018. Long Island Analytical laboratories analyzed the samples on February 12, 2018 for the following:

SAMPLE ID	ANALYSIS
DW-1	NYC Part 375 (Semi-Volatile), NYC Part 375 (Volatile), NYC Part 375 Metals
Stairwell Drain	NYC Part 375 (Semi-Volatile), NYC Part 375 (Volatile), NYC Part 375 Metals
Boiler Pit	NYC Part 375 (Semi-Volatile), NYC Part 375 (Volatile), NYC Part 375 Metals

Samples received at 1.0 ° C

5.L Results may be biased low due to the sample not being collected according to 5035A-L/5035A-H low level specifications.

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories Inc. is a NELAP accredited laboratory. All reported results meet the requirements of the NELAP standards unless noted. Report shall not be reproduced except in full without the written approval of the laboratory. Results related only to items tested. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.

Michael Veraldi - Laboratory Director

Re: 84 N. Village Ave Rockville Centre

Dear Tom Smyth,

Enclosed please find the laboratory Analysis Report(s) for sample(s) received on February 07, 2018. Long Island Analytical laboratories analyzed the samples on February 12, 2018 for the following:

SAMPLE ID	ANALYSIS
Sump Pit	NYC Part 375 (Semi-Volatile), NYC Part 375 (Volatile), NYC Part 375 Metals

Samples received at 1.1 ° C

5.L Results may be biased low due to the sample not being collected according to 5035A-L/5035A-H low level specifications.

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories Inc. is a NELAP accredited laboratory. All reported results meet the requirements of the NELAP standards unless noted. Report shall not be reproduced except in full without the written approval of the laboratory. Results related only to items tested. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.

Date Prepared: 02/07/2018

Preparation Method: EPA 5035A-H

Date Analyzed: 02/07/2018

Analytical Method: EPA 8260 C

Data Qualifiers Key Reference:

4.K Continuing Calibration Verification (CCV) quality control levels failed high, values are considered to be estimated.

4.M LCS recovery was above QC acceptance limit.

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-919932
Unit Firmware Ver	V2.14

Running Mode	Hygiene Mode
Datalog Mode	Manual
Diagnostic Mode	No
Stop Reason	Stop by User

Site ID	RAE00000
User ID	USER0000

Begin	4/6/2018 6:55
End	4/6/2018 13:41
Sample Period(s)	900
Number of Records	27

Sensor	PID(ppm)
Sensor SN	S023030028M7
Measure Type	Min; Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	100
TWA Alarm	50
Measurement Gas	Isobutylene
Calibration Time	4/6/2018 5:56
Peak	2.1
Min	0.6
Average	1.5

AIR MONITORING FORM

Project Name: Gem Cleaners RI/FS

Project Number: 279191.0000

Instrument: Dustrak II and Minirae 3000

Recorded by: ~~James Robinson~~ S Sharma

Calibration Date: 4/9/18

Weather Conditions: Sunny

Time	Location	Wind Speed and Direction	Reading	Observations
0705	Dnwind of workzone MW-110(S)	NW-9mph	0.011mg/m3 0.5 ppm	Started CAMP
1100	Dn Wind of MW-101 on N. Village Ave.	NW-NW 6-7mph	0.010/0.0	Contd CAMP @ new location
1415	Booke CAMP			
			SS	

Recording Procedures/Remarks:

Instrument Name	DustTrak II
Model Number	8530
Serial Number	8530113202
Firmware Version	3.7

Re: Geophysical Engineering Survey (GES) Report
Gem Cleaners
84 North Village Avenue,
Rockville Centre, New York 11570

Dear Ms. Ebert:

Nova Geophysical Services (NOVA) is pleased to provide the findings of the geophysical engineering survey (GES) at the above referenced project site: 84 North Village Avenue, Rockville Centre, New York 11570 (the "Site").

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a geophysical engineering survey (GES) consisting of a Ground Penetrating Radar (GPR) and Electromagnetic (EM) survey at the site. The purpose of this survey is to locate and identify underground utilities, storage tanks, and clear and mark proposed environmental boring areas on March 19th & 28th, 2018.

The equipment selected for this investigation was a Sensors and Software Noggin 250 MHz ground penetrating radar (GPR) with a shielded antenna and a Radio Detection RD7100 Electromagnetic utility locator.

A GPR system consists of a radar control unit, control cable, and transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transduce via the control cable. The transmitter

electronics amplify the trigger pulse into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

A typical electromagnetic (EM) utility locating system consists of a transmitter unit and a receiver unit. The receiver unit can be used independently of the transmitter unit in order to detect utility lines with an inherent EM signature (electric utility lines, water lines, etc.). If needed a current at a specific frequency can also be placed on a utility that is being located. This can be done via the transmitter unit by either direct connection or induction via an EM field varying at specific frequency. The receiver unit is then set to the selected frequency and the electromagnetic field created by the current running through the utility can be located allowing the utility to be marked.

GEOPHYSICAL METHODS

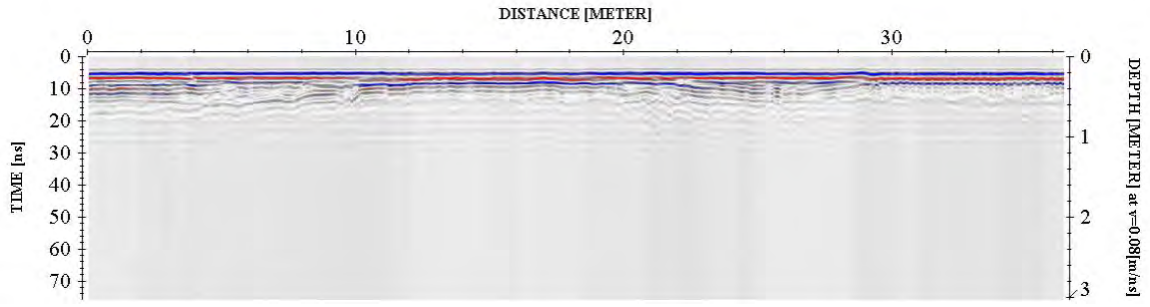
The project site was screened using GPR to search the specified area and inspected for reflections, which could be indicative of substructures and utilities within the subsurface. An EM utility locator was also used to help determine the locations of utilities within the survey area.

EM data was collected and interpreted on site and suspected utilities marked as needed. GPR data profiles were collected for the areas of the Site specified by the client and processed as specified below.

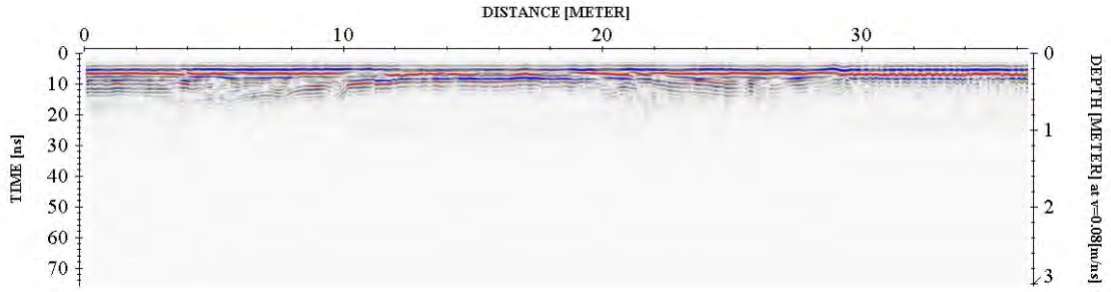
DATA PROCESSING

In order to improve the quality of the results and to better identify anomalies NOVA processed the collected data. The processing work flow is briefly described in this section.

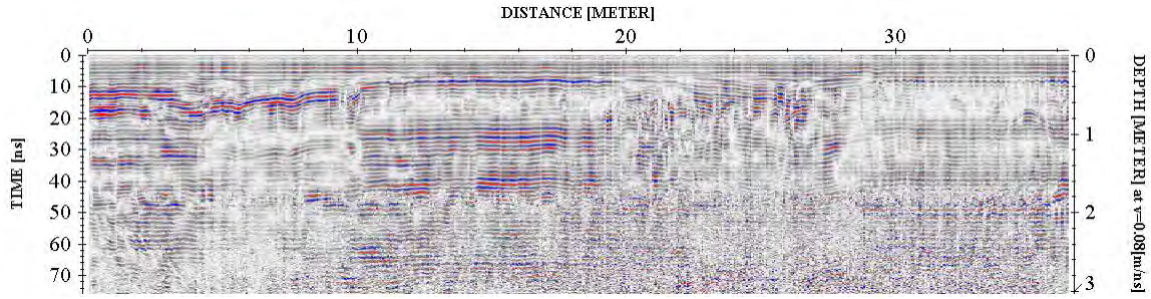
Step 1. Import Raw RAMAC data to standard processing format



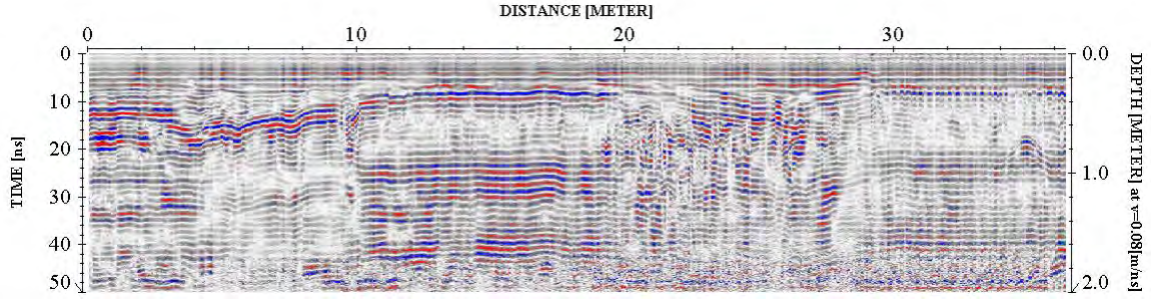
Step 2. Remove instrument noise *(dewow)*



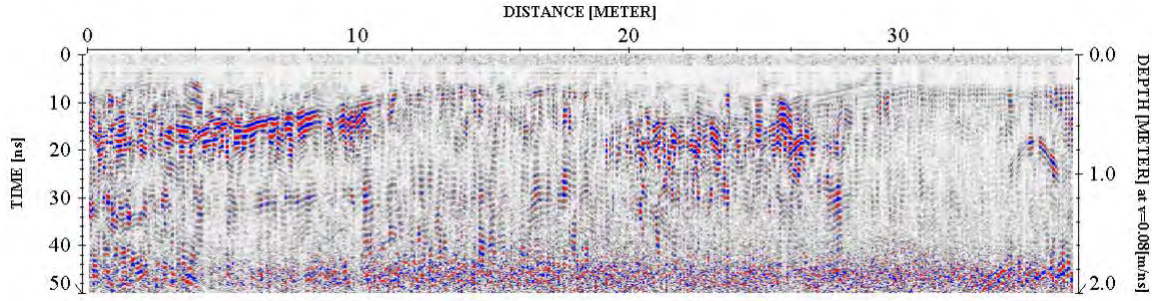
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and represents the subsurface anomalies much more accurately.

PHYSICAL SETTINGS

NOVA observed the following physical conditions at the time of the survey.

Weather: Sunny

Temperature: 45° F

Surface: Concrete, Asphalt, Vegetation, Gravel

Geophysical Noise Level: Geophysical noise at the site was medium due to being located in a semi-urban environment.

RESULTS

The results of the geophysical engineering survey (GES) identified the following at the project site:

- No large anomalies resembling an underground storage tank were identified during the geophysical surveys.
- Subsurface utilities: Electric, water, sewer, gas, and telecommunication lines were identified in the onsite mark out and are shown in the site survey plan.
- All detected subsurface anomalies were marked in the onsite mark out.
- Multiple boring locations were cleared. All cleared boring locations were marked in the onsite mark out.

If you have any questions, please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.

Project Engineer

APPENDIX E
SOIL BORING AND MONITORING WELL CONSTRUCTION LOGS

BORING NUMBER: **MW-101D**

Results you can rely on

PROJECT INFORMATION		BORING INFORMATION	
Project Name:	Gem Cleaners	Boring Depth (FT BGS):	100
Project Location:	84 N Village Avenue, Rockville Centre, NY	Date Started:	4/9/18
Project Number:	279191.0000.0000	Coordinate System:	NY State Plane - NYLI NAD83(96)
Client:	NYSDEC (TRC and D&B Joint Venture D007020)	North:	179787.0043
TRC Eng./Geol:	James Robinson	Vertical Datum:	NAVD 1988
Checked By:	Lindsay O'Hara		

		BORING INFORMATION	
		Hole Diameter:	8"
		Date Completed:	4/11/18
		East:	1081882.6792
		Ground Elevation:	25.46

DRILLING INFORMATION	
Drilling Contractor:	AARCO Environmental
Driller(s):	Daybi Pacheco
Drilling Method:	Hollow Stem Auger
Equipment/Model:	Geoprobe 7822
Sampler:	Split Spoon

GROUND WATER OBSERVATIONS			
MEASUREMENT	▽ At Time of Drilling	▼ At End of Drilling	▼ After Drilling
DATE	4/9/2018		
DEPTH (ft.bgs.)	16		
REFERENCE	Ground Surface		
STABILIZATION			

DEPTH (FT.)	SAMPLE NUMBER	SAMPLE TYPE	PENETRATION (FT.)	RECOVERY (FT.)	LITHOLOGY	MATERIAL DESCRIPTION	◆VOC SCREENING RESULTS (ppm)
						0'- 0.7' Concrete and subbase (cut with wet saw)	
			6.0	6.0		0.7'- 6' Orange and brown f-m SAND, tr f gravel, dry, NO, NS	
			1.7	1.7		6'- 6.4' Tan to orange m-c SAND, dry, NO, NS 6.4'- 7' Dark grayish brown f-m SAND, tr f gravel, dry, loose, NO, NS 7'- 8' Tan to red m-c SAND, tr f gravel, dry, loose, NO, NS	
10			1.5	1.5		8'- 10' Tan to brown m-c SAND, tr f sand, tr f gravel, dry to moist, loose, NO, NS	
			1.7	1.7		10'- 11.5' Tan to brown m-c SAND, tr f sand, tr f gravel, dry to moist, loose, NO, NS 11.5'- 12' Grayish brown f-m SAND, tr m subrounded gravel, dry, NO, NS	
			1.5	1.5		12'- 12.5' Grayish brown f-m SAND, tr m subrounded gravel, dry, NO, NS 12.5'- 14' Grayish brown m-c SAND, little f-m subrounded white Gravel, tr fines, dry, loose, NO, NS	
	GC-MW-101(SO)-14-15		1.0	1.0		14'- 16' Grayish brown m-c SAND, little f-m subrounded white Gravel, tr fines, dry, moist at 15' bgs, wet at 16' bgs, loose, NO, NS	
			1.5	1.5		16'- 18' Grayish brown m-c SAND, little f-m subrounded white Gravel, little fines, wet, loose, NO, NS	
			1.0	1.0		18'- 20' Grayish brown m-c SAND, tr f-m subrounded white Gravel, little fines, wet, loose, NO, NS	
20							

Notes: bgs = below ground surface; NO = No odor; NS = No Staining, tr = trace, f = fine, m = medium, c = coarse

APPENDIX G
INDOOR AIR QUALITY QUESTIONAIRE AND BUILDING INVENTORY

Gem Cleaners - 84 North Village Avenue

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Joe Mennitti/Emily Ebert Date/Time Prepared March 28, 2018

Preparer's Affiliation TRC Engineers, Inc. Phone No. 212-221-7822

Purpose of Investigation Vapor Intrusion Assessment

1. OCCUPANT:

Interviewed: Y / (N) Building is vacant

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / (N)

Last Name: Goldstein First Name: Gary

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial/Multi-use)
Industrial	Church	Other: Former Dry Cleaner

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: N/A

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Vacant-Former Dry Cleaner

Does it include residences (i.e., multi-use)? Y / N If yes, how many? _____

Other characteristics:

Number of floors 1+Basement Building age Circa 1951

Is the building insulated? Y / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Building is vacant, and heating system was not in use at time of inspection

Airflow near source

N/A

Outdoor air infiltration

Outdoor air infiltrates through basement doors (door to exterior stairwell and hatch that leads to sidewalk along North Village Avenue.

Infiltration into air ducts

Building is vacant, and heating system was not in use at time of inspection

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	(concrete)	stone	brick
b. Basement type:	(full)	crawlspace	slab	other _____
c. Basement floor:	(concrete)	(dirt)	stone	other _____
d. Basement floor:	uncovered	(covered)	covered with _____	
e. Concrete floor:	(unsealed)	sealed	sealed with _____	
f. Foundation walls:	poured	(block)	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	(damp)	dry	moldy
i. The basement is:	finished	(unfinished)	partially finished	
j. Sump present?	(Y)	N		
k. Water in sump?	Y	(N)	not applicable	

Basement/Lowest level depth below grade: __12___(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_Floor drains, basement doors (Front and Back)_____

_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Steam radiation	Radiant floor	
(Electric baseboard)	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
(Electric)	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: N/A

Boiler/furnace located in:	(Basement)	Outdoors	Main Floor	Other_____
Air conditioning:	Central Air	Window units	Open Windows	(None)

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Building is vacant, and heating system was not in use at time of inspection

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	Storage
1st Floor	Vacant
2nd Floor	
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? Y / N / (NA)

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / (N) / NA
Please specify_____

d. Has the building ever had a fire? Y / N When? Unknown

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type? _____

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / (N) Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? Y / N If yes, where vented?_____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? (Y) / N

If yes, please describe: Basement smells damp/moldy

Do any of the building occupants use solvents at work? Y / (N)

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? N/A

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response) N/A - Building is unoccupied

Yes, use dry-cleaning regularly (weekly) No
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: Unknown
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: N/A

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

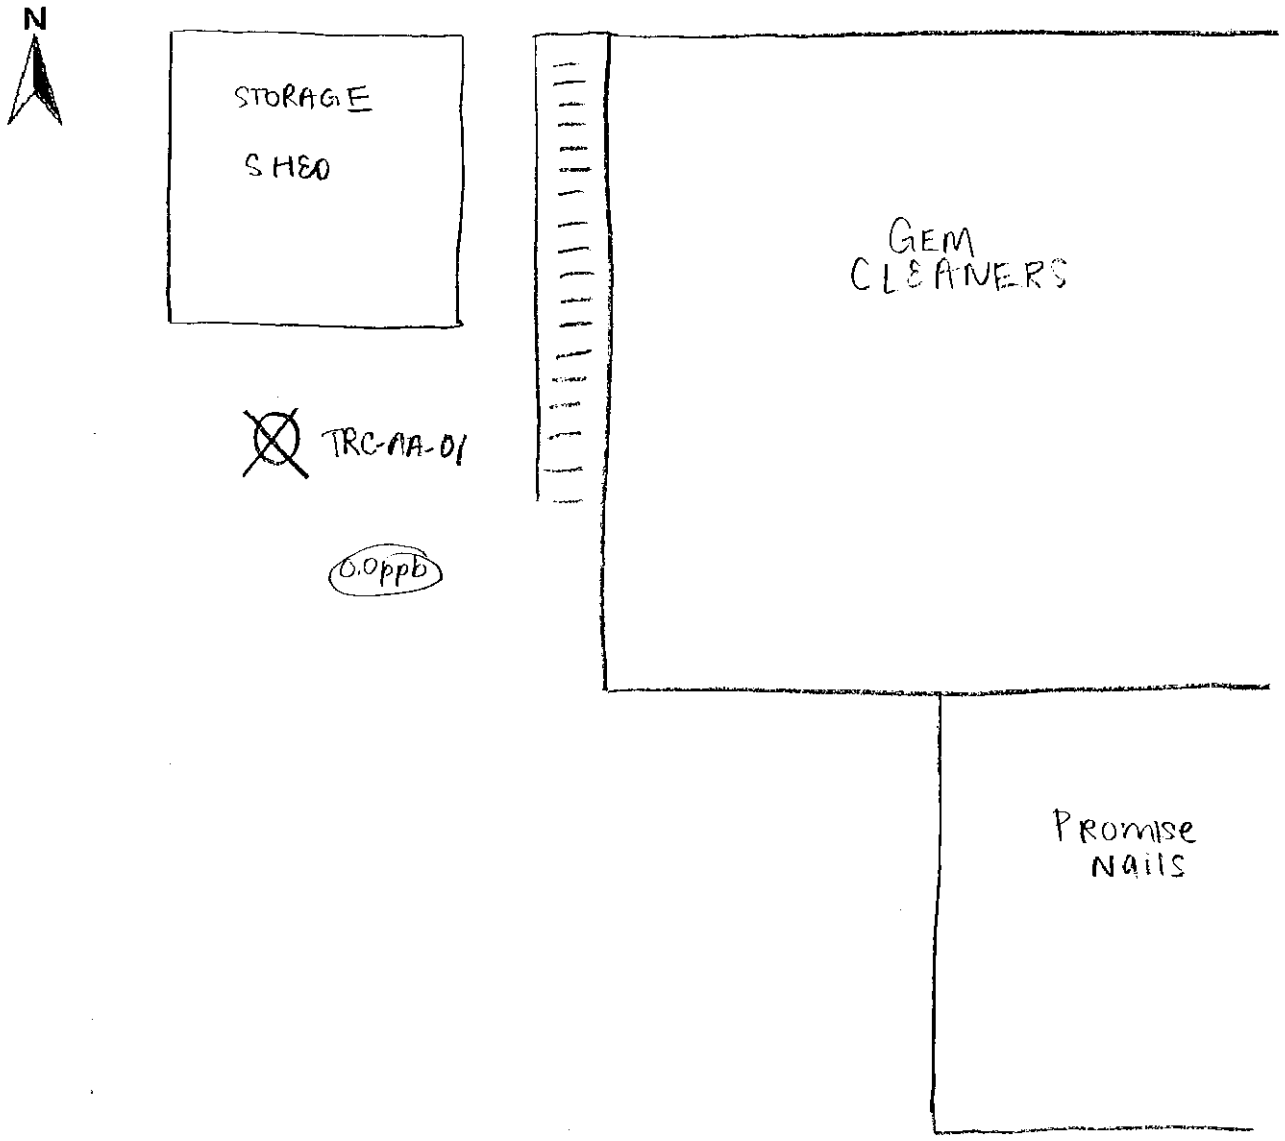
d. Relocation package provided and explained to residents? Y / N

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

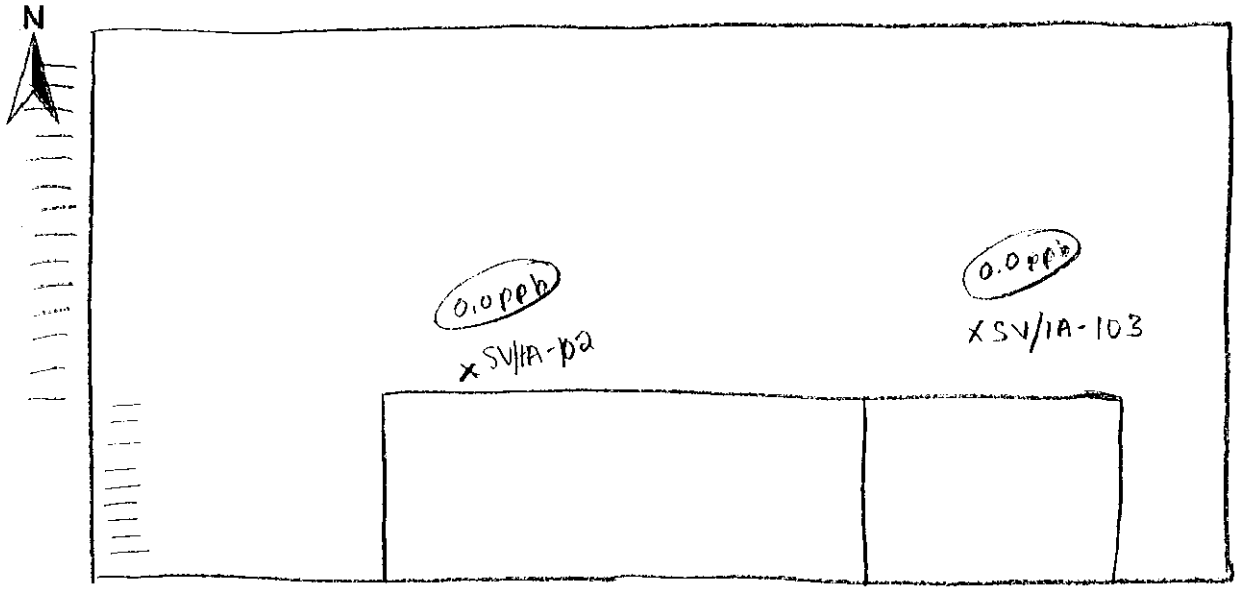
12:00 44° F WSW 6mph



11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



First Floor:

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: _____

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo** Y / N
No paints or chemicals found in basement						

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial/Multi-use)
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response) N/A

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Hair Salon

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 1 + basement Building age 25+ years

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

No airflow between floors

Airflow near source

N/A

Outdoor air infiltration

Rear Bilco door to basement

Infiltration into air ducts

N/A

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	(concrete)	stone	brick
b. Basement type:	(full)	crawlspace	slab	other _____
c. Basement floor:	(concrete)	dirt	stone	other _____
d. Basement floor:	(uncovered)	covered	covered with _____	
e. Concrete floor:	(unsealed)	sealed	sealed with _____	
f. Foundation walls:	poured	(block)	stone	other _____
g. Foundation walls:	(unsealed)	sealed	sealed with _____	
h. The basement is:	wet	damp	(dry)	moldy
i. The basement is:	finished	(unfinished)	partially finished	
j. Sump present?	(Y) / N			
k. Water in sump?	(Y) / N / not applicable			

Basement/Lowest level depth below grade: 12 (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_____

_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

(Hot air circulation)	Heat pump	Hot water baseboard	
Space Heaters	Steam radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

(Natural Gas)	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: Natural gas

Boiler/furnace located in:	(Basement)	Outdoors	Main Floor	Other_____
Air conditioning:	(Central Air)	Window units	Open Windows	None

Are there air distribution ducts present? (Y) / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

HVAC system provides A/C and heat - no return air

7. OCCUPANCY

Is basement/lowest level occupied? Full-time (Occasionally) Seldom Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	Storage
1st Floor	Hair salon
2nd Floor	
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? Y / N / (NA)

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / (NA) Please specify_____

d. Has the building ever had a fire? Y / (N) When?_____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?_____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type? _____

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? (Y) / N When & Type? hair dye - daily

j. Has painting/staining been done in the last 6 months? (Y) / N Where & When? first floor - September 2017

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? (Y) / N If yes, where vented? Roof

o. Is there a clothes dryer? (Y) / N If yes, is it vented outside? Y / (N)

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? Hair dye odor on first floor (Y) / N
If yes, please describe: _____

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) (No)
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: N/A
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: N/A

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

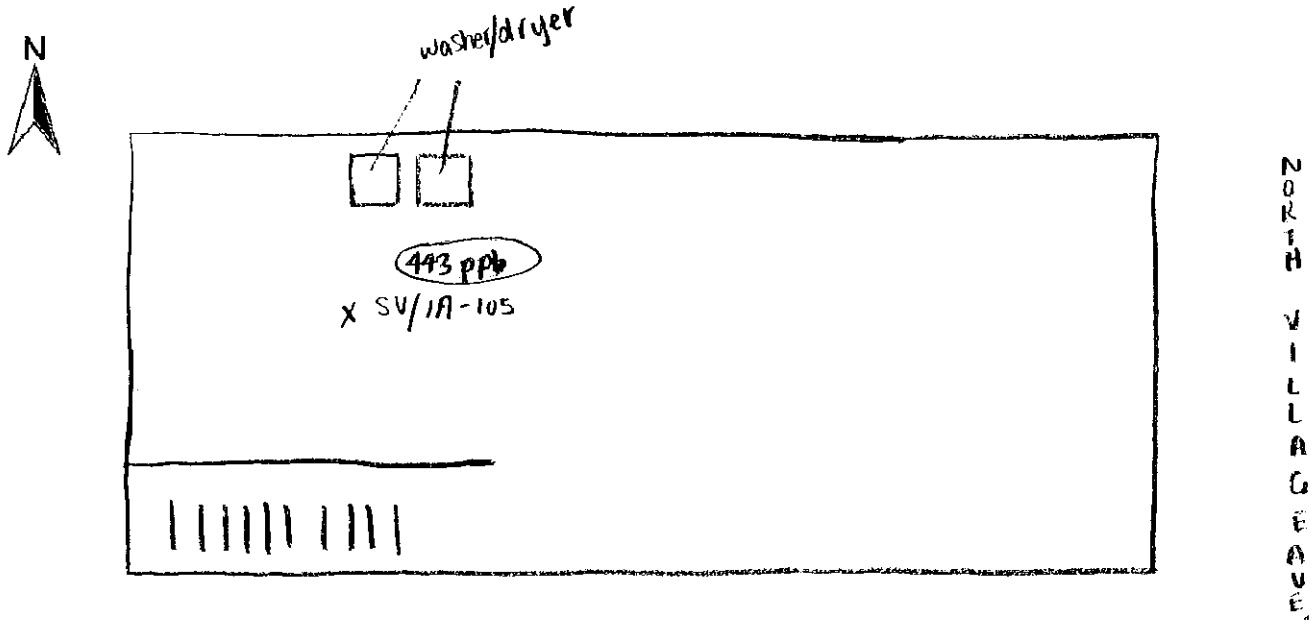
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

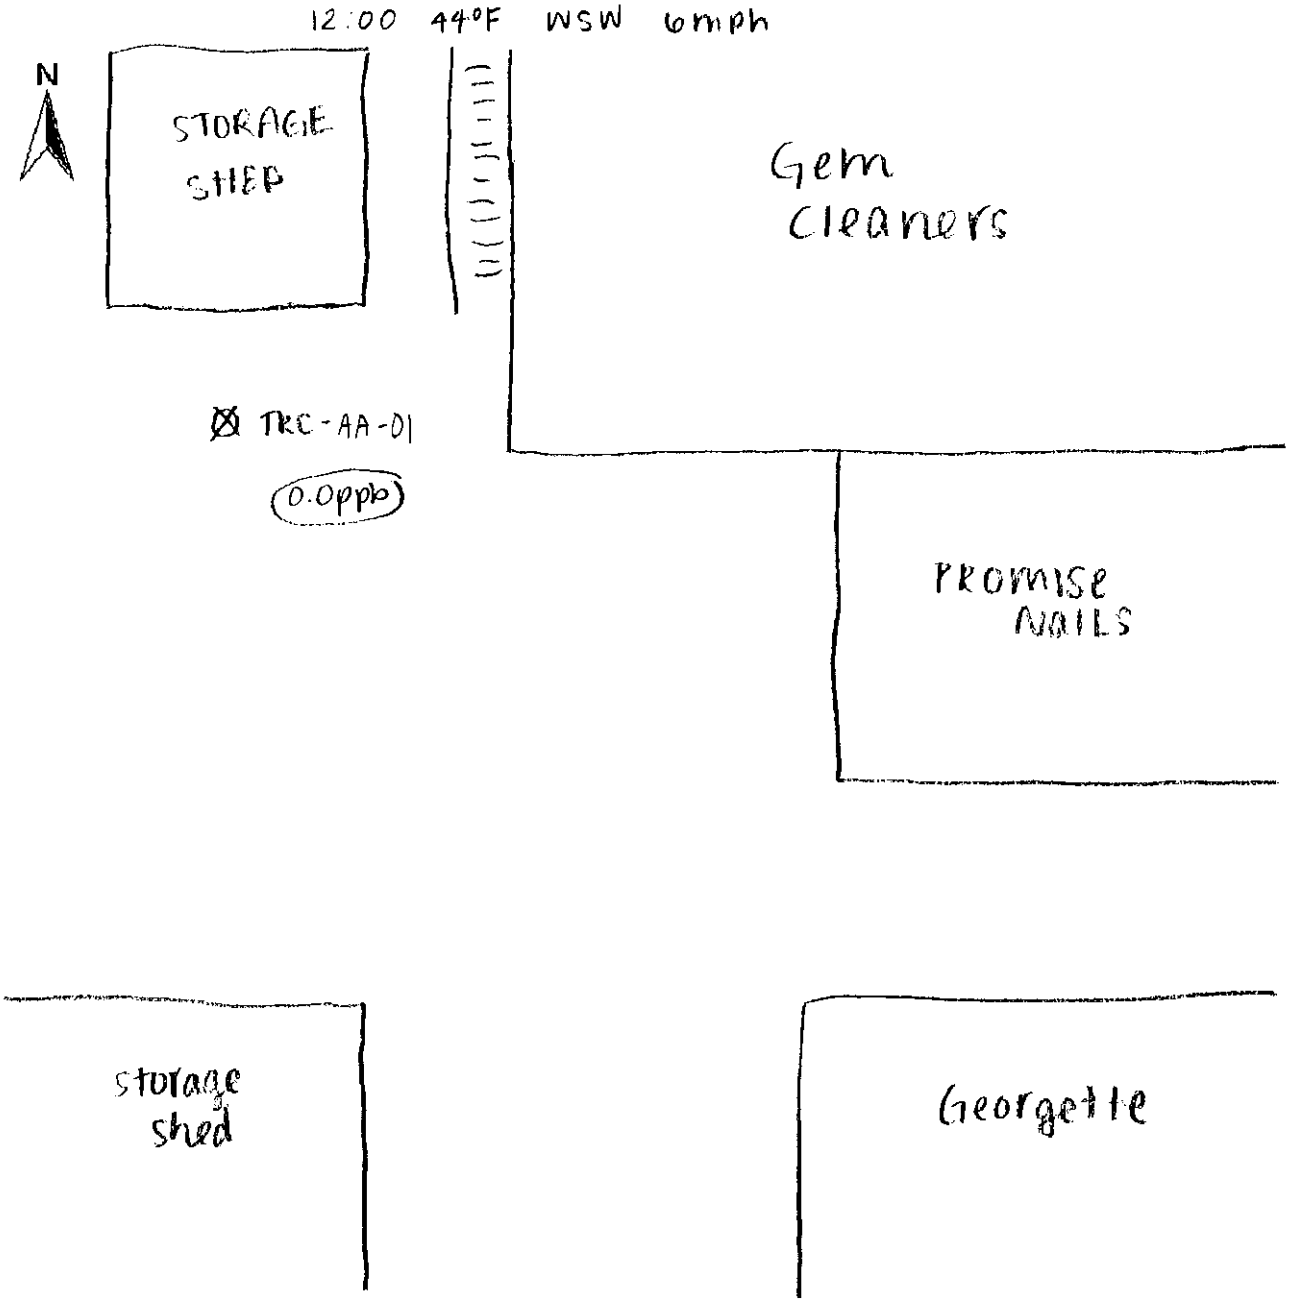


First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: miniRAE ppb

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
Basement	Clear - Power Grab Loctite	9 oz.	U	Limestone; silica; distillates (petroleum), hydrotreated light; quartz	50	Y
	Benjamin Moore & Co. Premium Interior 100% Acrylic Paint - Eggshell Finish	29.5 oz.	U	Titanium dioxide; propylene glycol; kaolin; silica; sodium c14-c16 olefin sulfonate	150	Y
	Formica Brand Adhesive	1 gal.	U	Toluene, ethyl acetate, heptane	225	Y
	MINWAX Wood Finish	8 oz.	U	Light aliphatic hydrocarbon; heaby naphthenic petroleum oil, medium aliphatic hydrocarbon sovlent; hydrotreated heavy petroleum naphtha; mineral spirits	50	Y
	Hercules - Plastic Pipe & Fittings Cleaner	1 pt.	U	Methyl ethyl ketone, acetone, tetrahydrofuran, cyclohexanone, pyrrolidone	1800	Y
	Nankee Turpentine	32 oz.	U	Turpentine	2500	Y
	Hercules PVC Primer	32 oz.	U	Acetone, cyclohexanone, tetrahydrofuran, methyl ethyl ketone	2850	Y

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location 5-7 Employees + Customers

2. OWNER OR LANDLORD: (Check if same as occupant ___)

Interviewed: Y / (N)

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential	School	(Commercial/Multi-use)
Industrial	Church	Other: Nail Salon on first floor, vacant basement, residential apartment on second floor

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	(Apartment House)	Townhouses/Condos
Modular	Log Home	Other: on second floor

If multiple units, how many? 1

If the property is commercial, type?

Business Type(s) Nail Salon

Does it include residences (i.e., multi-use)? (Y) / N If yes, how many? 1 - under renovation at time of inspection

Other characteristics:

Number of floors 1+Basement Building age 1951

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

None

Airflow near source

Outdoor air infiltration

Outdoor air infiltrates through rear door/window

Infiltration into air ducts

None

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	(concrete)	stone	brick
b. Basement type:	(full)	crawlspace	slab	other _____
c. Basement floor:	(concrete)	dirt	stone	other _____
d. Basement floor:	(uncovered)	covered	covered with _____	
e. Concrete floor:	(unsealed)	sealed	sealed with _____	
f. Foundation walls:	poured	(block)	stone	other _____
g. Foundation walls:	(unsealed)	sealed	sealed with _____	
h. The basement is:	wet	damp	(dry)	moldy
i. The basement is:	finished	(unfinished)	partially finished	
j. Sump present?	(Y) / N			
k. Water in sump?	Y / N / not applicable	Unknown		

Basement/Lowest level depth below grade: ___12_(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

_Basement - utility ports_____
1st floor - None
_____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

(Hot air circulation)	Heat pump	Hot water baseboard	
Space Heaters	Steam radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

(Natural Gas)	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors (Main Floor) Other_____

Air conditioning: (Central Air) Window units Open Windows None

Are there air distribution ducts present? Y / N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

HVAC Provides A/C and heat

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	Storage
1st Floor	Nail Salon
2nd Floor	Residential unit under renovation
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? Y / N / (NA)

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / (NA) Please specify

d. Has the building ever had a fire? Y / (N) When?

e. Is a kerosene or unvented gas space heater present? Y / (N) Where?

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type?

g. Is there smoking in the building? Y / (N) How frequently?

h. Have cleaning products been used recently? Y / N When & Type?

i. Have cosmetic products been used recently? (Y) / N When & Type? Every day

j. Has painting/staining been done in the last 6 months? (Y) / N Where & When? 1st floor, in December 2017

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? (Y) / N If yes, where vented?____Roof___

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? (Y) / N
If yes, please describe: _____

Do any of the building occupants use solvents at work? (Y) / N
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? Nail Polish Remover

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

(Yes, use dry-cleaning regularly (weekly)) No
Yes, use dry-cleaning infrequently (monthly or less) Unknown
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: ___N/A_____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: ____N/A_____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

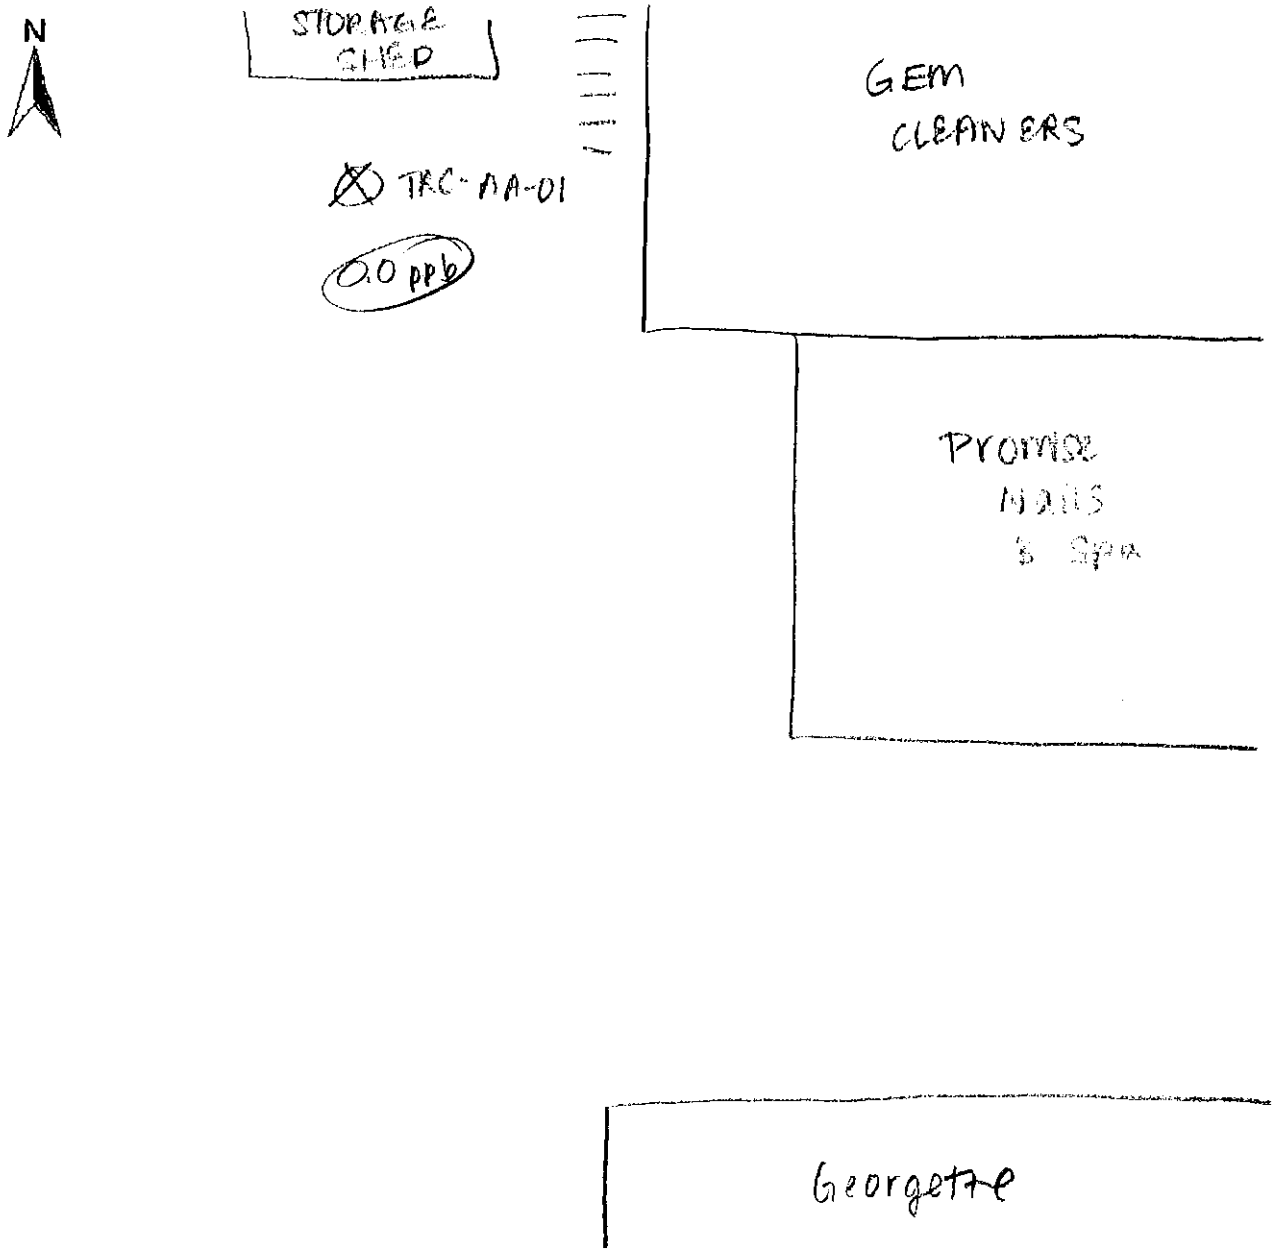
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

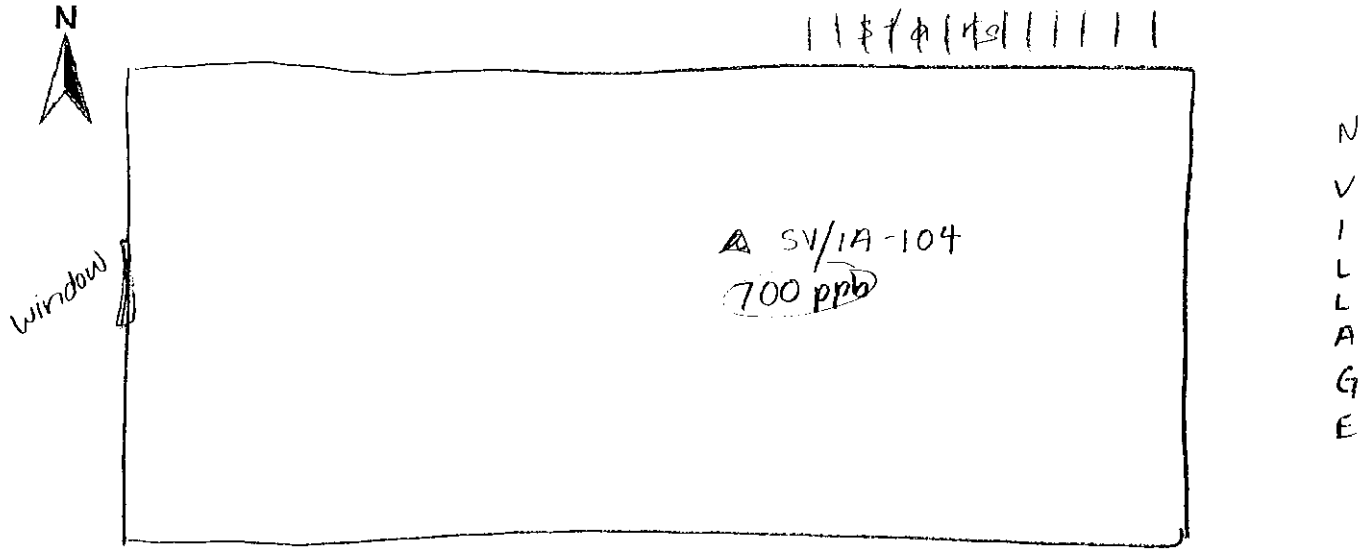
Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



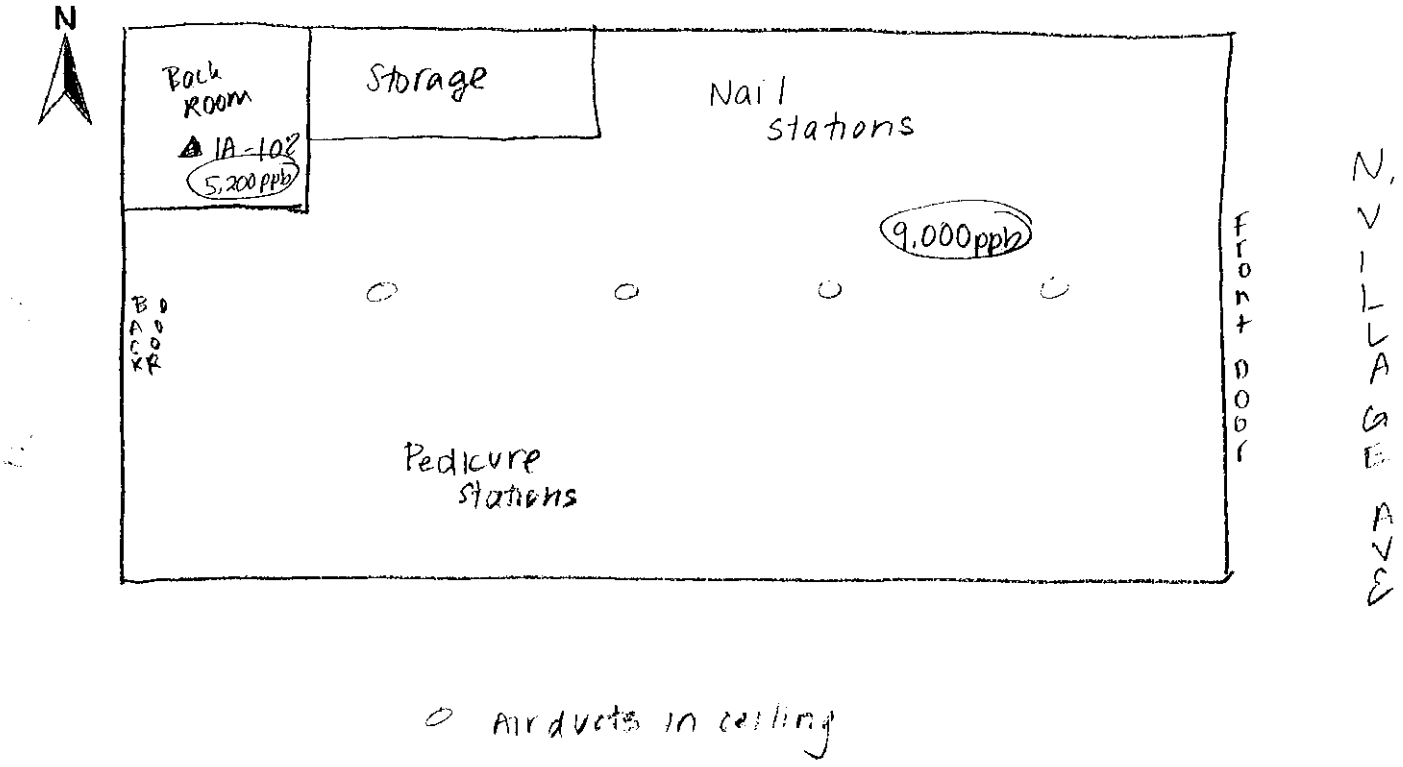
11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:



First Floor:



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: miniRAE ppb-rae 3000

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
1st Floor	D/U/NA Nail Polish Remover	1 gal.	U	Ethyl Acetate, Isopropyl Alcohol	*	
	Ben Moor Paint	1 gal.		Kaolin, Silica amorphous, titanium dioxide, carbon black, sodium C14-C16 olefin sulfonate, zinc pyrithione	*	
	Rust-Oleum	32 oz.		Propane,n-Butyl Acetate, Acetone, Dimethyl Carbonate, n-Butane, Talc, Titanium Dioxide, Hydrotreated Light Distillate, Solvent Naphtha, Light Aromatic, Zinc Phosphate, Methyl Ethyl Ketoxime, Ethylbenzene	*	
	Insl-X	32 oz.		Talc,Titanium dioxide, 2,2,4-trimethyl-1,3-propanediol diisobutyrate, Silica, crystalline	*	
*	First Floor ambient air is too high to separate individual product readings					

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

23 Washington Street - Residential Building

NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Joe Menniti Date/Time Prepared March 28, 2018

Preparer's Affiliation TRC Engineers Phone No. 2121-221-7822

Purpose of Investigation Vapor Intrusion Assessment

1. OCCUPANT:

Interviewed: (Y) / N

Last Name: Fishetto First Name: Jason

Address: 23 Washington Street, Rockville Centre, NY

County: Nassau County

Home Phone: 516-782-7593 Office Phone: _____

Number of Occupants/persons at this location 2 Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant _x_)

Interviewed: Y / N

Last Name: _____First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

(Residential)	School	Commercial/Multi-use
Industrial	Church	Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
(Cape Cod)	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other:_____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) _____N/A_____

Does it include residences (i.e., multi-use)? Y / N If yes, how many? _____

Other characteristics:

Number of floors__2+Basement__ Building age_30+ years_____

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

__None_____

Airflow near source

N/A

Outdoor air infiltration

Basement Bilco Doors/ Basement Window

Infiltration into air ducts

N/A

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

a. Above grade construction:	wood frame	concrete	stone	brick
b. Basement type:	full	crawlspace	slab	other _____
c. Basement floor:	concrete	dirt	stone	other _____
d. Basement floor:	uncovered	covered	covered with _____	
e. Concrete floor:	unsealed	sealed	sealed with _____	
f. Foundation walls:	poured	block	stone	other _____
g. Foundation walls:	unsealed	sealed	sealed with _____	
h. The basement is:	wet	damp	dry	moldy
i. The basement is:	finished	unfinished	partially finished	
j. Sump present?	Y / N			
k. Water in sump?	Y / N / not applicable			

Basement/Lowest level depth below grade: _10_ (feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Basement Bilco Doors/Window

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Hot air circulation	Heat pump	Hot water baseboard	
Space Heaters	Steam radiation	Radiant floor	
Electric baseboard	Wood stove	Outdoor wood boiler	Other _____

The primary type of fuel used is:

Natural Gas	Fuel Oil	Kerosene
Electric	Propane	Solar
Wood	Coal	

Domestic hot water tank fueled by: Electric

Boiler/furnace located in:	Basement	Outdoors	Main Floor	Other_____
Air conditioning:	Central Air	Window units	Open Windows	None

Are there air distribution ducts present? Y / (N)

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

None, Heat is electric. A/C from window units

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom (Almost Never)

Level	**General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**
Basement	Empty/ Little Storage
1st Floor	Family room/Bedroom
2nd Floor	Bedrooms/ Family rooms
3rd Floor	
4th Floor	

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / (N)

b. Does the garage have a separate heating unit? Y / N / (NA)

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) (Y) / N / NA
Please specify_____

d. Has the building ever had a fire? Y / (N) When?_____

e. Is a kerosene or unvented gas space heater present? Y / (N) Where? _____

f. Is there a workshop or hobby/craft area? Y / (N) Where & Type? _____

g. Is there smoking in the building? Y / (N) How frequently? _____

h. Have cleaning products been used recently? Y / (N) When & Type? _____

i. Have cosmetic products been used recently? Y / (N) When & Type? _____

j. Has painting/staining been done in the last 6 months? Y / (N) Where & When? _____

k. Is there new carpet, drapes or other textiles? Y / (N) Where & When? _____

l. Have air fresheners been used recently? Y / (N) When & Type? _____

m. Is there a kitchen exhaust fan? Y / (N) If yes, where vented?_____

n. Is there a bathroom exhaust fan? Y / (N) If yes, where vented?_____

o. Is there a clothes dryer? Y / (N) If yes, is it vented outside? Y / N

p. Has there been a pesticide application? Y / (N) When & Type?_____

Are there odors in the building? (Y) / N
If yes, please describe: ___Old wood/moist_____

Do any of the building occupants use solvents at work? Y / (N)
(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work? Y / N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly) — No
Yes, use dry-cleaning infrequently (monthly or less) — (Unknown)
Yes, work at a dry-cleaning service

Is there a radon mitigation system for the building/structure? Y / N Date of Installation: _N/A_____
Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: (Public Water) Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: (Public Sewer) Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: __N/A_____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

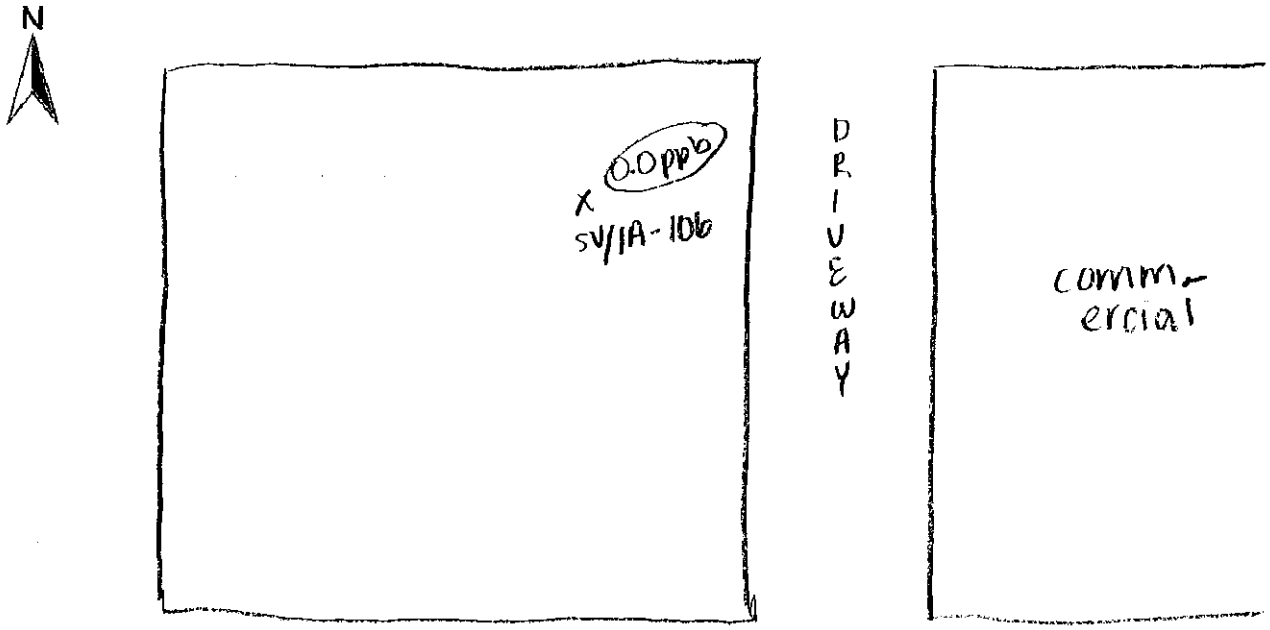
c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

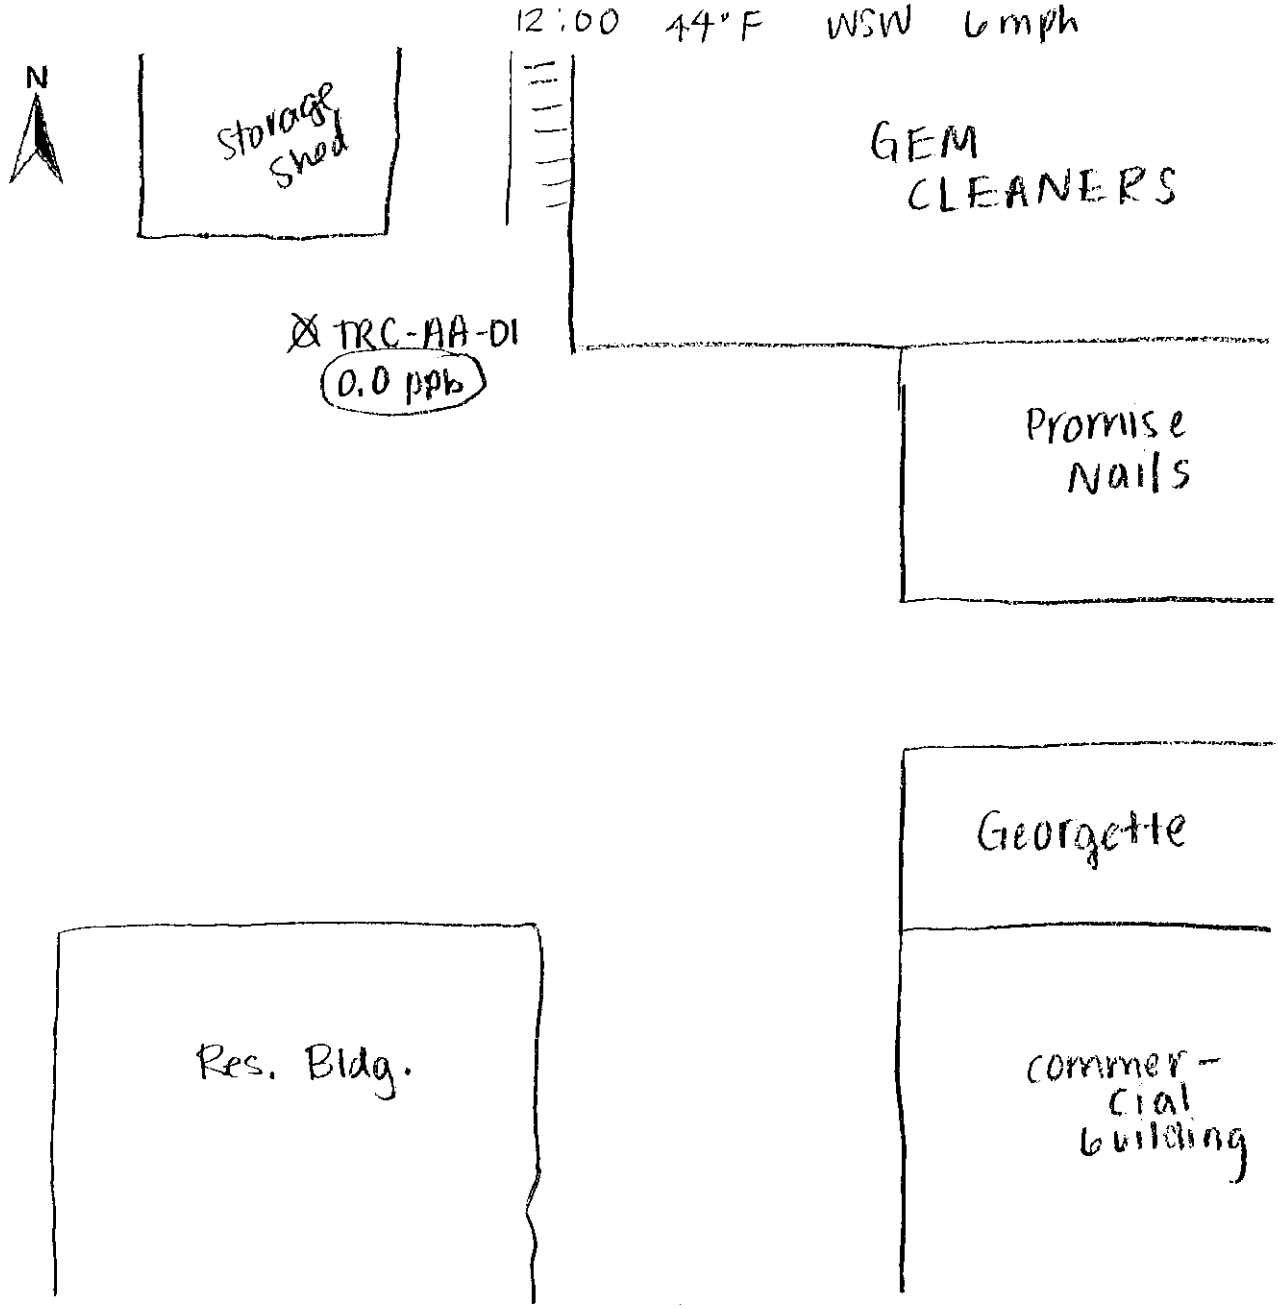


First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass directiou, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.



13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: _____

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition*	Chemical Ingredients	Field Instrument Reading (units)	Photo ** Y / N
NO chemicals/paints/products found in basement						

* Describe the condition of the product containers as **Unopened (UO), Used (U),** or **Deteriorated (D)**
** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

APPENDIX H
LABORATORY AND ANALYTICAL DATA REPORTS

(ON CD)

ANALYTICAL REPORT

Job Number: 200-42918-1

Job Description: GEM Cleaners NYSDEC - TRC/D&B

Contract Number: C008010

For:
TRC Environmental Corporation
1430 Broadway, 10th FL
New York, NY 10018-3308

Attention: Emily Ebert

Approved for release.
Jannel O Franklin
Manager of Project Management Assistants
4/17/2018 8:45 PM

Jannel O Franklin, Manager of Project Management Assistants
777 New Durham Road, Edison, NJ, 08817
(732)593-2551
jannel.franklin@testamericainc.com
04/17/2018

The test results in this report relate only to sample(s) as received by the laboratory. These test results were derived under a quality system that adheres to the requirements of NELAC. Pursuant to NELAC, this report may not be produced in full without written approval from the laboratory

Job Number: 200-42918-1

Job Description: GEM Cleaners NYSDEC - TRC/D&B

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Approved for release.

CASE NARRATIVE

Client: TRC Environmental Corporation

Project: GEM Cleaners NYSDEC - TRC/D&B

Report Number: 200-42918-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 4/2/2018 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): GC-SV-104 (AS) (200-42918-8). The COC lists a flow controller ID of 4247,And a can ID of 2632. The Flow controller ID is 3022, And the can ID is 2734.

VOLATILE ORGANIC COMPOUNDS

Samples GC-AA-01 (AS) (200-42918-1), GC-IA-102 (AS) (200-42918-2), GC-SV-102 (AS) (200-42918-3), GC-IA-103 (AS) (200-42918-4), GC-SV-103 (AS) (200-42918-5), GC-SV-105 (AS) (200-42918-6), GC-IA-105 (AS) (200-42918-7), GC-SV-104 (AS) (200-42918-8), GC-IA-104 (AS) (200-42918-9), GC-IA-108 (AS) (200-42918-10), GC-IA-106 (AS) (200-42918-11) and GC-SV-106 (AS) (200-42918-12) were analyzed for Volatile Organic Compounds in accordance with EPA Method TO-15. The samples were analyzed on 04/05/2018, 04/06/2018, 04/07/2018 and 04/14/2018.

Isopropyl alcohol was detected in method blank MB 200-128215/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Samples GC-IA-102 (AS) (200-42918-2)[2X], GC-SV-102 (AS) (200-42918-3)[5X], GC-SV-103 (AS) (200-42918-5)[5X], GC-SV-105 (AS) (200-42918-6)[10.02X], GC-SV-105 (AS) (200-42918-6)[39.6X], GC-IA-105 (AS) (200-42918-7)[107X], GC-SV-104 (AS) (200-42918-8)[5X], GC-IA-104 (AS) (200-42918-9)[84.8X], GC-IA-108 (AS) (200-42918-10)[301X], GC-IA-106 (AS) (200-42918-11) [2.5X], GC-SV-106 (AS) (200-42918-12)[30.3X] and GC-SV-106 (AS) (200-42918-12)[6X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following samples were diluted due to the abundance of non-target analytes: GC-SV-102 (AS) (200-42918-3), GC-SV-103 (AS) (200-42918-5) and GC-SV-104 (AS) (200-42918-8). A more concentrated analysis was not possible.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Accreditation/Certification Summary

Client: TRC Environmental Corporation
TestAmerica Job ID: 200-42918-1
Project/Site: GEM Cleaners NYSDEC - TRC/D&B

Laboratory: TestAmerica Burlington

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	10391	04-01-19

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	1,2-Dichloroethene, Total
TO-15		Air	4-Ethyltoluene
TO-15		Air	4-Isopropyltoluene
TO-15		Air	Cumene
TO-15		Air	Freon 22
TO-15		Air	Methyl Butyl Ketone (2-Hexanone)
TO-15		Air	n-Butane
TO-15		Air	n-Butylbenzene
TO-15		Air	n-Propylbenzene
TO-15		Air	sec-Butylbenzene
TO-15		Air	tert-Butylbenzene
TO-15		Air	Tetrahydrofuran

Method TO15

Volatile Organic Compounds (GC/MS) by Method TO15
