

NEW YORK STATE
DEPARTMENT OF

ENVIRONMENTAL
CONSERVATION

Dear Interested Citizen:

This Fact Sheet is to inform you about the Record of Decision (which documents the selected Remedial Action Plan) for the Trans Technology site in Glen Head, NY. If you have any questions or would like more information, please contact:

Ms. Tara Diaz
Project Manager
NYSDEC

625 Broadway
Albany, NY 12233-7015
(518) 402-9621

or

Mr. William Fonda
Citizen Participation
Specialist
NYSDEC

SUNY - Bldg. 40
Stony Brook, NY 11790
(631) 444-0350

For site related health questions, please contact the following representative of the New York State Department of Health (NYSDOH):

Ms. Jacquelyn Nealon
NYSDOH

Flanigan Square,
547 River Street
Troy, NY 12180-2216
Phone: (518) 402-7880
1-800-458-1158 ext.27880

INTRODUCTION

The New York State Department of Environmental Conservation (NYSDEC) with support from the New York State Department of Health (NYSDOH), has selected a final remedy for the Trans Technology Inactive Hazardous Waste Disposal Site. The selected remedy is to remediate contaminated soils by means of excavation and Underground Injection Control (UIC) program closure.

The Record of Decision (ROD) identifies the selected action, summarizes the alternatives considered, and discusses the rationale for this selection. The ROD is a summary of the information that can be found in greater detail in the Remedial Investigation/Feasibility Study (RI/FS). The details of the RI/FS and NYSDEC's Proposed Remedial Action Plan (PRAP) were formally presented at a public meeting held on March 9, 2006, at the North Shore Middle School, 505 Glen Cove Avenue, Glen Head at 7:00 p.m. At the public meeting, representatives from the NYSDEC and NYSDOH discussed details of the investigation and the PRAP.

The NYSDEC has prepared a Responsiveness Summary, which provides written responses to all questions and comments raised at the public meeting and the written comments received from the public during the comment period which began February 22, 2006 and concluded March 23, 2006. This summary is attached as Appendix A to the ROD and is available in the document repositories. The final remedy was selected after careful consideration of all comments submitted during the announced public comment period. The ROD as well as other related documents can be viewed at the following document repositories:

SITE DESCRIPTION AND BACKGROUND

The Trans Technology site is a 7 ¾-acre property, located in the northwest portion of Long Island, in Glen Head, Nassau County. The site is in a mixed industrial and residential area. The Trans Technology property location is shown on the attached site map. The activities conducted at the site contributed primarily PCE, TCE, and heavy metals to the soil and UIC features (i.e., leaching pools and cesspools).

DESCRIPTION OF THE SELECTED REMEDY

The major elements of the selected remedy as outlined in the ROD include:

- The design and implementation of a remedial program.
- Excavation and off-site disposal of soils exceeding the cleanup objectives. All excavated areas would be backfilled.
- Closure of cesspools and leaching pools.
- Development of a site management plan to address residual contaminated soils, evaluate the potential for vapor intrusion for any future development on the site, and identify any use restrictions.
- Imposition of an institutional control in the form of an environmental easement that will require compliance with the approved site management plan and require the property owner to complete and submit to the NYSDEC a periodic certification.

FUNDING FOR THE PROPOSED REMEDY:

The responsible party (RP) is expected to fund the design and construction of the remedy. If the RP does not implement the remedy, the costs would be incurred by the state superfund program (SSF). The NYSDEC would then seek to recover the costs from the RP through legal proceedings.

The total cost for this project, which includes capital costs and the future monitoring costs is estimated at \$532, 000.

THE NEXT STEPS

The next step in the process is to develop the Remedial Design Work Plan. The construction activities at the site will be planned after the completion of the remedial design. The time to design and implement this remedy and attain remediation goals is approximately 12-16 months.
