Dear Mr. Donaldson,

This January 2022 quarterly groundwater sampling round data summary was prepared on behalf of 131 Sunnyside LLC for the Former United Stellar Industries Site at 131 Sunnyside Boulevard in Plainview, New York (Site). Monitoring activities are being conducted pursuant to the Operable Unit 2 Remedial Investigation (RI) Work Plan dated November 27, 2019 that was conditionally approved by the NYSDEC via email on January 9, 2020 with the inclusion of the entire email thread associated with the approval.

Groundwater Quality Monitoring

Activities

The monitoring well sampling was performed on January 25, 2022 using passive diffusion bag (PDB) samplers that were deployed in select shallow perched zone, deep perched zone and regional aquifer monitoring wells (see Tables 1, 2 and 3) on January 3, 2022. The PDB samplers were recovered on January 25, 2022 for the collection of volatile organic compounds (VOCs) after allowing for a period of equilibration.

Eighteen (18) monitoring wells were sampled during the quarterly round for VOCs. Two (2) of the monitoring wells are screened in the shallow perched zone, eleven (11) of the monitoring wells are screened in the deep perched zone and five (5) of the monitoring wells are screened in the regional aquifer. Monitoring well locations are shown on Figure 1.

Results

Volatile Organic Compounds

The July 2021, October 2021 and January 2022 groundwater monitoring data for VOCs in the shallow perched zone, deep perched zone and regional aquifer are provided in Tables 1, 2 and 3, respectively. The primary

Mr. Jared Donaldson
NYSDEC DER
June 3, 2022

chlorinated VOC that was detected is trichloroethene (TCE), with relevant concentrations of cis-1,2-dichloroethene (DCE) and low concentrations of tetrachloroethene (PCE) and chloroform.

VOCs were not detected in the shallow perched zone monitoring well PW-11S during January 2021 but TCE was detected at a concentration of 34 µg/L in shallow perched zone monitoring well PW-7S. Concentrations of chloroform, DCE, and PCE were also detected at concentrations of 5 µg/L or less. A detection of 34 µg/L of TCE in the shallow perched zone is not consistent with previous sampling events that typically exhibited non-detect to low concentrations of VOCs. Shallow perched zone monitoring well PW-7S will be resampled during the April 2022 monitoring event to further evaluate TCE concentration trends in the shallow perched zone.

Concentrations of TCE in the deep perched zone hydraulically upgradient of the Site ranged from non-detect at PW-12D to 7.7 µg/L at PW-7D. The on-Site deep perched zone well that was sampled during the January 2022 quarter (PW-5D) is located in the eastern parking lot and exhibited only trace concentrations (2.5 µg/L) of TCE. This monitoring well delineates the approximate eastern extent of TCE impacts on-Site. Further downgradient in the mid-plume area, concentrations of TCE ranged from 310 µg/L at PW-19D to 420 µg/L at PW-21D. Concentrations along the western and eastern extents of VOC-impacted groundwater in the deep perched zone are monitored at PW-20D and PW-23D, where TCE concentrations were found at 4.8 µg/L and non-detect, respectively.

Further downgradient the deep clay unit diminishes to the point that it no longer supports the deep perched zone. As a result, water in the deep perched zone will infiltrate downward to the regional groundwater system. Regional aquifer monitoring wells MW-18, MW-22, MW-24 and MW-25 demonstrate that a network of monitoring wells is in place to monitor the downgradient extent of VOC-impacted groundwater. Furthermore, the VOC results show that there is significant attenuation of concentrations associated with the movement of water from the deep perched zone to the regional aquifer. Concentrations in these regional aquifer monitoring wells were non-detect or trace (MW-22, MW-24 and MW-25) and 20 µg/L (MW-18). The TCE concentrations observed in the regional aquifer are consistent with our conceptual site model (CSM) that concentrations are attenuating to below applicable standards so that they do not pose a risk to potential receptors.

Please do not hesitate to contact me if you have any questions or need additional information.

Sincerely,
Arcadis of New York, Inc.
