CASE NARRATIVE

Client: Roux Associates, Inc.

Project: 0771.0001Y000 MBA-Manorhaven

Report Number: 460-32413-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 10/14/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.3 C.

The following samples were received at the laboratory without a sample collection time documented on the chain of custody: Dup-101311 (460-32413-7), FB-101311 (460-32413-5), MW-34I (460-32413-3), MW-35I (460-32413-4), OW-4 (460-32413-1), OW-5 (460-32413-2), Trip Blank (460-32413-6). On 10/14/11 the client provided the sample collection times for all but the Field QC Trip Blank. The Trip Blank collection time was reported as the laboratory default of 12:00.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples 460-32413-1 through 460-32413-7 were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 10/19/2011, 10/20/2011 and 10/21/2011.

Samples 460-32413-1(2X), 460-32413-3(5X), 460-32413-4(5X) and 460-32413-7(5X) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Refer to the QC report for details.

No other difficulties were encountered during the volatiles analyses.

All other quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: Roux Associates, Inc.

Project: 0771.0001Y000 MBA-Manorhaven

Report Number: 460-35494-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 01/07/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.8 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples 460-35494-1 through 460-35494-5 were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 01/10/2012.

Trichloroethene failed the recovery criteria low for the MS of sample 460-35494-2 in batch 460-98481.

Bromomethane exceeded the rpd limit for the MSD of sample 460-35494-2 in batch 460-98481.

Method(s) 8260B: The matrix spike (MS) recoveries for batch 98481 were outside control limits for Trichloroethene due to the high concentration in the sample relative to the spike amount. %RPD was also outside control limits for Bromomethane. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method(s) 8260B: The following samples were diluted due to the abundance of target analytes: DUP-010612 (460-35494-5), MW-34I (460-35494-2), OW-4 (460-35494-1). Elevated reporting limits (RLs) are provided.

Samples 460-35494-1(10X), 460-35494-2(10X) and 460-35494-5(10X) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the volatiles analyses.

All other quality control parameters were within the acceptance limits.

GC/MS VOA
Method(s) 8260B: The laboratory control sample (LCS) for batch 105201 exceeded control limits for the following analyte: Styrene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 105201 were outside control limits for multiple analytes. The associated laboratory control sample (LCS) recovery met acceptance criteria, except for Styrene.

Method(s) 8260B: The following sample was diluted due to the abundance of target analytes: MW-34I (460-37525-3). Elevated reporting limits (RLs) are provided.

Method(s) 8260B: The following samples were diluted due to the abundance of target analytes: DUP-030212 (460-37525-5), MW-35I (460-37525-4), OW-4 (460-37525-1). Elevated reporting limits (RLs) are provided.

CASE NARRATIVE

Client: Roux Associates, Inc.

Project: 0771.0001Y000 MBA-Manorhaven

Report Number: 460-38556-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/31/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.9 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples 460-38556-1 through 460-38556-7 were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 04/05/2012.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 108324 were outside control limits for Acetone. The associated laboratory control sample (LCS) recovery met acceptance criteria.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 108274 were outside control limits for Acetone; MS recoveries were also outside control limits for Carbon Tetrachloride and 2-Butanone. The associated laboratory control sample (LCS) recovery met acceptance criteria.

Refer to the QC report for details.

Samples 460-38556-1(10X), 460-38556-3(10X), 460-38556-4(10X), 460-38556-4(2X) and 460-38556-5(10X) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the volatiles analyses.

All other quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: Roux Associates, Inc.

Project: MBA-Manorhaven 0771.0001Y000

Report Number: 460-44969-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) as a result of a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes or interferences which exceed the calibration range of the instrument.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 09/22/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.1 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples 460-44969-1 through 460-44969-5 were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/26/2012 and 09/27/2012.

The following samples were diluted to bring the concentration of target analytes within the calibration range: DUP-092112 (460-44969-3), OW-4 (460-44969-1). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the volatiles analyses.

All quality control parameters were within the acceptance limits.
