

Interim Remedial Measure Summary Report

for the

East Garden City Substation

July 2008

July 8, 2008

Mr. Scott Deyette
New York State Department of Environmental Conservation
Division of Environmental Remediation
625 Broadway
Albany, NY 12233-7014

Re: East Garden City Substation
IRM Summary Report for the Northeast Corner

Dear Mr. Deyette:

Enclosed please find two (2) hard copies and one (1) CD of the *Interim Remedial Measure Summary Report* for the East Garden City Substation for your review.

Please contact me at (516) 545-2578 or Christie Battenhouse at (516) 545-2551 if you have any questions or comments.

Sincerely,

A handwritten signature in black ink, appearing to read "Patrick Van Rossem".

Patrick Van Rossem
Project Manager

1.0 INTRODUCTION

This Interim Remedial Measure (IRM) Summary Report describes the remediation performed by National Grid (formerly KeySpan Corporation) in the northeast corner of the National Grid 4H East Garden City Substation (EGCS). This report provides background information and details the activities undertaken in order to complete the IRM excavation activities conducted at the EGCS.

1.1 Background

National Grid contracted Dvirka and Bartilucci Consulting Engineers (D&B) to evaluate the subsurface soil conditions during a substation upgrade project in the northeast corner of the EGCS, located in Garden City, New York. A site location map is provided as Figure 1-1. This substation is on the site of a former gas holder storage facility, which was decommissioned in the early 1960's. Subsurface soil sampling in the northeast corner of the EGCS was completed between August 2007 and September 2007. A site plan, including the area of investigation, is provided as Figure 1-2. The investigation identified several areas where arsenic and mercury were identified in shallow soil at concentrations above the 6 NYCRR Subpart 375 Industrial Soil Cleanup Objectives (SCOs). In order to remediate the highest concentrations of arsenic and mercury identified during the investigation, recommendations for IRM soil excavations were developed and outlined in the New York State Department of Environmental Conservation (NYSDEC)-approved Subsurface Investigation Data Summary and Interim Remedial Measure Work Plan, dated December 2007.

FIGURE 1-2

The IRM activities were completed between December 2007 and February 2008 and are described in this report. All IRM excavation activities were conducted by Waste Recycling Solutions, Inc., under contract with National Grid. Sample collection and work zone and perimeter air monitoring was conducted by D&B during all intrusive activities. For evaluation purposes, the data generated as part of the IRM have been compared to the 6 NYCRR Subpart 375 Industrial SCOs. Note that all soil samples were additionally compared to the Residential SCOs, for comparison purposes only.

Note that, in order to reduce the potential exposure to site-related contaminants during the excavation activities associated with substation upgrades, the IRM activities described in this report were completed with NYSDEC approval prior to completing the future site characterization planned for this site in 2009, and before completing any related feasibility study (FS) type evaluation of remedial technologies.

2.0 COMPLETED INTERIM REMEDIAL MEASURE ACTIVITIES

National Grid retained Waste Recycling Solutions, Inc. (WRS) to perform the IRM excavation of soil at the ECGS in accordance with the NYSDEC-approved IRM Work Plan, dated December 2007. IRM excavation activities were conducted between December 2007 and February 2008. As described in Section 2.1, waste characterization sampling was performed in the area to be excavated prior to the initiation of excavation activities in order to pre-characterize soil to be removed for disposal purposes. WRS was responsible for conducting all substation property excavation activities, including loading and transporting excavated material for off-site disposal and backfilling the excavated areas. All remedial excavation activities were completed in accordance with the site specific Health and Safety Plan (HASP), dated December 2007. As described in Section 2.3, D&B performed full-time work zone and perimeter air monitoring in accordance with the HASP and the Community Air Monitoring Plan (CAMP). WRS provided and maintained suitable safeguards (i.e., chain link fence and snow fencing) surrounding the work zone until the excavation areas were safely restored.

D&B provided oversight during all excavation field activities. The following is a summary of the IRM activities conducted at the East Garden City Substation.

2.1 Waste Characterization Sampling

In order to eliminate the staging of soil on-site during the implementation of the IRM, one pre-characterization sample for disposal was collected by D&B prior to initiation of IRM

activities. The composite soil sample was collected from 0 to 4 feet below grade from four of the existing open borings located within the area to be excavated, biased towards boring locations exhibiting the highest concentrations of arsenic and mercury. The waste characterization soil sample was analyzed for full TCLP parameters and RCRA waste characteristics. Based on the collected waste characterization sample data, the excavated soil was classified as non-hazardous. Waste characterization laboratory data is provided in Appendix A.

2.2 Soil Excavation

In order to locate any underground utilities entering or exiting the area to be excavated, the remediation work started with the excavation of a perimeter trench around the planned excavation area. The removal of soil to 4 feet below ground surface from the perimeter of the excavation area was completed with vacuum guzzler equipment and hand tools such as picks and shovels. Subsequent to the completion of the perimeter excavation, the remaining area was excavated via vacuum guzzler extraction and hand tools. Soil was excavated as close to existing utilities and structures as safely possible, and as such, the concrete pad located in the excavation area was left in place and soil was sloped from grade to 4-feet below grade surrounding this structure. Excavation limits are depicted on Figure 2-1.

In accordance with the NYSDEC-approved IRM Work Plan and as depicted on Figure 2-1, an excavation of approximately 2,775 square feet was completed to a depth of approximately 4-feet below grade in the northeast corner of the fenced substation property. The

\\N14\cadwork\1620-X\dwg\1620X-FIG-1-2a.dwg, FIG 4, 7/8/2008 9:22:57 AM, DBCadd

FIGURE 2-1

total volume of soil excavated was approximately 411 cubic yards. Upon completion of the excavation, five endpoint and two sidewall samples were collected for arsenic and mercury analysis. Sample locations are depicted on Figure 2-1 (see below) and the analytical results are provided in Appendix B. Upon receipt of the endpoint and sidewall data confirming that the soil left in place exhibited arsenic and mercury concentrations below Industrial SCOs, the excavation was backfilled with clean fill as described in Section 2.4. In addition, note that arsenic and mercury concentrations were detected at concentrations below their respective Residential SCOs, with the exception of one sample for mercury. Sidewall sample SW-01 (2 to 4 feet), located on the south wall of the excavation, exhibited a mercury concentration of 4.62 mg/kg, exceeding its Residential SCO of 0.81 mg/kg. Photographs of the remedial activities are provided in Appendix C.

2.3 Air Monitoring

The following subsection describes the activities undertaken by D&B in order to implement the CAMP during excavation activities at the EGCS. The CAMP was in conformance with the New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan, which can be found in Appendix 1A of the NYSDEC Division of Environmental Remediation (DER)-10 document, dated December 25, 2002. The CAMP included continuous air monitoring of volatile organic compounds (VOCs) and particulates utilizing one upwind and one downwind air monitoring station. In addition, instantaneous air monitoring of the work zone for VOCs utilizing a PID and mercury vapor utilizing a mercury vapor analyzer (MVA) was performed. Air monitoring action levels, as described in Section 6 of the site-specific HASP

dated December 2007, were not exceeded throughout the excavation activities. Tables summarizing the continuous air monitoring data are included in Appendix D.

2.4 Backfilling

The excavation was backfilled to original grade after receiving the endpoint and sidewall sample results confirming that the soil left in place exhibited arsenic and mercury concentrations below industrial SCOs. The NYSDEC and National Grid-approved backfill material consisted of clean fine sand, which originated from H. Bittle & Son, Inc., located in Medford, New York. The backfill was installed and compacted in 12-inch lifts. A certificate of clean fill, clean fill analytical data and a sieve analysis report are included in Appendix E of this document.

2.5 Soil Disposal

In total, approximately 620 tons of soil were removed from the EGCS property for proper off-site disposal by WRS. All soil was properly transported by WRS for thermal desorption at Clean Earth of Philadelphia, Pennsylvania. Non-hazardous shipping papers are provided in Appendix F. Waste disposal documentation is provided in Appendix G.

2.6 Data Usability Summary Report

Five endpoint and two sidewall soil samples were collected from the National Grid East Garden City Substation. All samples were analyzed for arsenic and mercury. Sample analysis

was performed by Environmental Testing Laboratories (ETL) in accordance with USEPA SW-846 Method 6010. The data package submitted by ETL has been reviewed for completeness and compliance with analytical methods and NYSDEC Analytical Services Protocol (ASP) Quality Assurance/Quality Control (QA/QC) requirements. The findings of the review process are summarized below.

The samples were collected from December 12, 2007 through January 18, 2008. The samples were all analyzed within the method-specified holding times. The results were deemed valid and usable for environmental assessment purposes by the D&B data validator.

3.0 CONCLUSIONS AND RECOMMENDATIONS

The IRM activities described in this report were undertaken and completed in accordance with the NYSDEC-approved IRM Work Plan dated December 2007. Remedial activities were completed between December 2007 and February 2008.

Approximately 620 tons of soil were excavated and transported off-site by WRS from the northeast corner of the East Garden City Substation. The excavated soil was transported and properly disposed of at Clean Earth of Philadelphia, Pennsylvania. Note that, while the Work Plan specified that all collected soil samples be compared to the Industrial SCO of 16.0 mg/kg and 5.7 mg/kg for arsenic and mercury respectively, all soil samples were additionally compared to the Residential SCOs of 16.0 mg/kg and 0.81 mg/kg, respectively. All collected soil samples exhibited concentrations of arsenic and mercury below their respective Industrial and Residential SCOs, with the exception of one sample for mercury. Mercury, at concentration of 4.62 mg/kg, was detected above its Residential SCO in sidewall sample SW-01 (2 to 4 feet). Based on the endpoint and sidewall sample results, as compared to the Industrial SCOs, further remediation activities are not recommended in the northeast corner of the EGCS.

Note that, in order to reduce the potential exposure to site-related contaminants during the excavation activities associated with substation upgrades, the IRM activities described in this report were completed with NYSDEC approval prior to completing the future site characterization planned for this site in 2009, and before completing any related feasibility study (FS) type evaluation of remedial technologies.

Case Narrative

EPA 8260 VOLATILE ANALYSIS:

The following compounds were calibrated at 25, 50, 100, 150 and 200 ppb levels in the initial calibration curve:

Acetone
2-Butanone
4-Methyl-2-pentanone
2-Hexanone

M&P-Xylenes and 2-Chloroethylvinylether were calibrated at 10, 40, 100, 200 and 300 ppb levels.

Acrolein/Acrylonitrile were calibrated at 50,100,150,200 and 250 ppb levels.

Tert Butyl Alcohol (TBA) was calibrated at 50,200,500,1000 and 1500 ppb levels.

All other compounds were calibrated at 5, 20, 50, 100 and 150 ppb levels.

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

- U - The analytical result is not detected above the Method Detection Limit (MDL).
All MDL's are lower than the lowest calibration standard concentration.
- J - Indicates an estimated value. The concentration reported was between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
- B - The analyte was found in the associated method blank as well as the sample.
It indicates possible/probable blank contamination and warns the data user to take appropriate action.
- E - The concentration of the analyte exceeded the calibration range of the instrument.
- D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

- B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).
- U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

- E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

- A - Flame AA
- AS - Semi-automated Spectrophotometric
- AV - Automated Cold Vapor AA
- C - Manual Spectrophotometric
- F - Furnace AA
- P - ICP
- T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

SAMPLE ID	EP-01 (4')	EP-02 (4')	EP-03 (4')	EP-04 (4')	EP-05 (4')	SW-01 (2-4')	SW-02 (2-4')	Part 375 Soil Cleanup Objectives for Restricted Industrial Use mg/kg	Part 375 Soil Cleanup Objectives for Restricted Residential Use mg/kg
DATE OF COLLECTION	12/27/2007	1/14/2008	1/14/2008	1/18/2008	1/18/2008	12/18/2007	12/27/2007		
DEPTH (ft bgs)	4	4	4	4	4	2-4	2-4		
UNITS	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg		
Arsenic	1.07 U	0.42 U	0.39 U	1.67	1.42	0.42 U	0.40 U	16.0	16.0
Mercury	0.08	0.15	0.08	0.12	0.15	4.62	0.58	5.7	0.81

Notes:

mg/kg: Milligrams per kilogram

ft bgs: Feet below ground surface

U: Compound analyzed for but not detected above the given method detection limit

APPENDIX C

PHOTOGRAPHIC DOCUMENTATION

Northeast corner of the East Garden City Substation, prior to IRM activities.

Installation of grounding cables, prior to initiation of IRM activities.

Guzzler truck, used to excavate contaminated soil.

Excavation of perimeter trench.

Excavation of perimeter trench, showing a high percentage of slag and brick material, observed throughout the excavation area.

Western portion of excavated area, showing the protected grounding grid, left in place.

Removal of slag and brick material, utilizing a Bobcat.

Backfilling of the western portion of the excavated area.

Sloped sides of the excavation, surrounding the load-bearing concrete pad.

Installation and compaction of clean fill in the eastern portion of the excavated area.

Northeast corner area, prior to completion of backfill installation and compaction.

Delivery of crushed stone, to be installed subsequent to substation upgrade activities.

Att Pat Vanrossem,

The attached analytical results represents approx 500
cubic yards of virgin concrete sand screened at our
facility located at 1230 Station Rd. Medford NY 11763

Thank you

H. Bittle & Son

LONG ISLAND ANALYTICAL LABORATORIES, INC. DATA REPORTING FLAGS

For reporting results, the following "Flags" are used:

- A: Time not supplied by client, may have exceeded holding time
- B: Holding time exceeded, results cannot be used for regulatory purposes
- C: Minimum detection limit raised due to matrix interference
- D: Minimum detection limit raised due to target compound interference
- E: Minimum detection limit raised due to non-target compound interference
- F: Minimum detection limit raised due to insufficient sample volume
- G: Sample received in incorrect container
- H: Sample not preserved, corrected upon receipt
- I: Dilution Water does not meet QC Criteria
- J: Estimated concentration, exceeds calibration range
- K: Target compound found in blank
- L: Subcontractor ELAP #11398
- M: Subcontractor ELAP #10320
- N: Subcontractor NVLAP #102047.0
- O: Subcontractor AIHA #103005
- P: Subcontractor A2LA 2004-01
- Q: Subcontractor ELAP #11026
- R: Subcontractor ELAP #10155
- S: Subcontractor ELAP #11501
- T: Subcontractor CTC
- U: Subcontractor ELAP #11685
- V: QC affected by matrix
- W: Subcontractor ELAP #10248
- X: QC does not meet acceptance criteria
- Y: Sample container received with head space
- Z: Insufficient sample volume received
- AA: Preliminary results, cannot be used for regulatory purposes.
- BB: Spike recovery does not meet QC criteria due to high target concentration
- CC: Date reported below the lower limit of quantitation and should be considered to have an increased quantitative uncertainty.
- DD: Sampling information not supplied and/or sample not taken by qualified technician, therefore verifiability of the report is limited to results only. Report cannot be used for regulatory purposes.
- EE: Subcontractor ELAP : #11777
- FF: Unable to verify that the wipe samples submitted conform to ASTM E1792 or specifications issued by the EPA.

Re: Bittle and Materials, East Garden City

Dear Mr. Arabia:

Enclosed please find the Laboratory Analysis Report(s) for sample(s) received on December 21, 2007. Long Island Analytical Laboratories analyzed the samples on December 28, 2007 for the following:

CLIENT ID	ANALYSIS
Composite of 500 cu yds	EPA 8260, EPA 8270, EPA 8081/8082, EPA 8151, Total (8) Metals & Sieve Analysis

Samples received at 3°C.

If you have any questions or require further information, please call at your convenience. Long Island Analytical Laboratories Inc. is a NELAP accredited laboratory. All reported results meet the requirements of the NELAP standards unless noted above. Report shall not be reproduced except in full, without the written approval of the laboratory. Long Island Analytical Laboratories would like to thank you for the opportunity to be of service to you.

Best Regards,

Long Island Analytical Laboratories, Inc.
