

National Grid Site Investigation and Remediation 175 East Old Country Road Hicksville, NY 11801

May 4, 2015

R. Scott Deyette, Project Manager New York State Department Environmental Conservation (NYSDEC) Division of Environmental Remediation 625 Broadway Albany, NY 12233-7014

Re: East Garden City Former Stewart Avenue Holder Station

Below Grade Cable Installation – NE Portion of Electric Yard

Soil Screening and Air Monitoring Summary Letter

National Grid PO No. 298417

Dear Mr. Deyette:

The purpose of this letter is to document the activities completed as part of the Long Island Power Authority (LIPA) below grade cable trench excavation soil screening and air monitoring program completed by D&B Engineers and Architects, P.C. (D&B), on behalf of National Grid, at the East Garden City Former Stewart Avenue Holder Station (the Site), located in Garden City, New York. Per the Notice of Intrusive Activities letter, dated March 31, 2015, this program consisted of screening of soil within a shallow trench and associated air monitoring in the northeastern portion of the electric substation yard at the Site. Soil screening locations are depicted on Figure 1, provided as Attachment 1.

The soil screening and air monitoring program was completed on April 2, 2015 to screen the soil in the cable trench and to provide worker breathing zone and community air monitoring program (CAMP) monitoring during excavation of the cable trench. The cable trench was excavated in order to facilitate the installation of a new below-grade electric cable in the northeast corner of the electric substation yard. The cable trench excavation was extended to a depth of approximately 20 inches below grade. Upon completion of the trench excavation, WRS installed a 2-inch PVC conduit within the cable trench. Photographs collected during the cable trench soil screening and air monitoring program are provided in Attachment 2.

As low-level soil contamination may exist in limited areas of the Site, intrusive work at the Site, including the northeast electric substation yard cable trench excavation, is completed per the requirements of the March 2013 Site Management Plan (SMP), and its appended Excavation Work Plan.

The following narrative details the completed activities and associated soil and air monitoring results generated as part of the soil screening and air monitoring program.

Completed Field Activities

Soil Screening

The cable trench installed at the Site was installed by Waste Recycling Solutions, Inc. (WRS), under subcontract to National Grid, via vacuum guzzler extraction. The overall cable trench measured approximately 80 feet in length and was advanced to a total depth of approximately 20 inches below grade. Soil within the trench was screened at approximate 5-foot intervals, for a total of 16 soil screening locations (EGCTS-01 through EGCTS-16). Cable trench soil screening locations are provided on Figure 1 in Attachment 1.

Each soil screening location was logged for geology, inspected for evidence of contamination (e.g., staining or petroleum odors) and screened for organic vapors utilizing a photoionization detector (PID). Soil screening logs are provided in Attachment 3.

All soil generated from the cable trench excavation was stored on-site within a lined roll-off container for subsequent proper off-site disposal by WRS.

Community Air Monitoring Program and Worker Breathing Zone Monitoring

In accordance with the NYSDOH's Generic CAMP provided in Appendix 1A of the NYSDEC's DER-10 guidance document and the Site Health and Safety Plan (HASP), dated February 2011, D&B implemented a continuous CAMP during completion of all intrusive activities.

The CAMP consisted of two monitoring stations, one upwind and one downwind of the intrusive activities, at the perimeter of the work area. The stations were positioned based upon the approximate wind direction to characterize upwind and downwind conditions. Each station included equipment for monitoring ambient air concentrations of volatile organic compounds (VOCs) and particulate matter (PM). VOC monitoring at each station was accomplished utilizing a PID capable of calculating/logging 15-minute running average concentrations. PM monitoring at each station was accomplished utilizing a MIE DR-4000 portable real-time particulate monitor capable of measuring particulate matter less than 10 micrometers in size and calculating/logging 15-minute running average concentrations.

In addition to the CAMP, D&B also provided instantaneous air monitoring of the worker breathing zone during completion of all intrusive activities. This included periodic monitoring of VOCs, mercury vapor, methane, carbon monoxide, hydrogen sulfide, oxygen and hydrogen cyanide in the worker breathing zone utilizing a PID and a 4-gas meter (including a hydrogen cyanide probe).

The CAMP and worker breathing zone monitoring results were compared to the action levels defined in the Site HASP, dated February 2011.

R. Scott Deyette, Project Manager New York State Department Environmental Conservation (NYSDEC) May 4, 2015

Findings

In general, the soil encountered was composed of a brown to black, medium to coarse sand, with some silt and fine to medium gravel. Traces of coal clinker were identified at several screening locations (EGCTS-01, EGCTS-02 and EGCTS-11 through EGCTS-15) in the northernmost and southernmost portions of the cable trench at depths of approximately 4 inches to 12 inches below grade. Other evidence of contamination (staining, odors or elevated PID readings) was not observed at any of the completed soil screening locations.

Contaminants in the worker breathing zone were non-detect throughout excavation of the cable trench, VOCs and PM at the CAMP monitoring stations were generally non-detect throughout the program and at no time were the worker breathing zone or CAMP action levels reached or exceeded. The tabulated results of the CAMP are provided in Attachment 4.

To National Grid's knowledge, the LIPA work has concluded in this area. There will be no further intrusive work to be performed associated with the Notice of Intrusive Activities, dated March 31, 2015. All soil was excavated, removed, disposed of and replaced with NYSDEC-approved clean fill. Since the area around the cable was excavated and replaced with clean fill, restrictions for future maintenance to the cable should not be necessary in this area.

If you have any questions, please feel free to contact me at (516) 545-2568.

Sincerely,

Sarah Aldridge

Project Manager – Site Investigation and Remediation
