CERTIFICATION STATEMENT

I, Joseph Molina, P.E., am currently a registered professional engineer licensed by the State of New York, I had primary direct responsibility for implementation of the remedial program activities, and I certify that the Interim Remedial Investigation Work Plan was implemented and that all monitoring activities were completed in substantial conformance with the Department-approved Remedial Work Plan.

I certify that the data submitted to the Department with this Final Engineering Report demonstrates that the remediation requirements set forth in Interim Remedial Investigation Work Plan and in all applicable statutes and regulations have been achieved in accordance with the time frames, if any, established in for the remedy.

I certify that all use restrictions, Institutional Controls, Engineering Controls, and/or any operation and maintenance requirements applicable to the Site are contained in an environmental easement created and recorded pursuant ECL 71-3605 and that all affected local governments, as defined in ECL 71-3603, have been notified that such easement has been recorded.

I certify that a Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of all Engineering Controls employed at the Site, including the proper maintenance of all remaining monitoring wells, and that such plan has been approved by Department.

I certify that all documents generated in support of this report have been submitted in accordance with the DER's electronic submission protocols and have been accepted by the Department.

I certify that all data generated in support of this report have been submitted in accordance with the Department's electronic data deliverable and have been accepted by the Department.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Joe Molina, of Arcadis U.S., Inc., am certifying as Owner's Designated Site Representative for the site.

1 INTRODUCTION

A Record of Decision (ROD) was issued for the Former Gulf Oil Terminal, Site # 130165 (Site, **Figure 1**) by the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER) on December 10, 2021 for the remediation of the entire Site located on a portion of 3705 Hampton Road, Oceanside, New York (NYSDEC, 2021) (**Figure 2**). The Consent Order for the Site was executed by Chevron U.S.A. Inc. (Chevron) and NYSDEC dated December 14, 2009, which obligated Chevron to implement a remedial program for the contamination associated with its previous petroleum storage terminal operations at the Site. Institutional and Engineering Controls (ICs and ECs) have been incorporated into the Site remedy to control exposure to residual contamination to ensure protection of public health and the environment after completion of the remedial work left residual contamination at the Site. Chevron Environmental Management Company (CEMC) manages environmental matters on behalf of its affiliate, Chevron.

This Final Engineering Report (FER) has been prepared by Arcadis U.S., Inc. (Arcadis) on behalf of CEMC to document implementation of the remedial activities at the Site and for certification of project completion in accordance with NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010 (NYSDEC, 2010). This FER includes the required components by incorporation of the Remedial Investigation Data Summary Report (RI Data Report; Arcadis, 2011), Interim Remedial Measure Completion Report (IRM; Arcadis, 2014b) and the Supplemental Remedial Investigation Report (RIR; Arcadis, 2017), presented as **Appendices A, B and C**, respectively.

1.1 Background and Site Description

The boundaries of the Site, defined as the full area subject to the Certificate of Completion (COC) herein, are more fully described in **Appendix D**. Relevant information responsive to the requirements of this section of the FER is presented in RIR Section 1.1. In addition to the information presented in the RIR, it should be noted the current wholesale warehouse facility, approximately 20% of which is located on the Site, was constructed in 2016, which included the construction of a passive Sub-Slab Depressurization System (SSDS) to mitigate the potential for soil vapor intrusion.

2 SUMMARY OF SITE REMEDY

2.1 Remedial Action Objectives

Remedial Action Objectives (RAOs) were identified for Site soil and groundwater, as detailed in RI Data Report (Sections 2.1 and 2.2), IRM (Section 1.2) and RIR (Section 2.1). As described in RIR (Section 5.7), there exists the potential for soil vapor intrusion within the subsurface to migrate into site buildings; however, RAOs associated with soil vapor were not identified due to the integration of the SSDS into construction of the wholesale warehouse facility that currently occupies a portion of the Site.

2.2 Description of Selected Remedy

The selection of the remedies approved by the NYSDEC for the Site was performed in accordance with the following documents:

- Remedial Investigation/Feasibility Study Work Plan (RI/FS WP; Arcadis, 2010) for groundwater remediation.
- Interim Remedial Measure Work Plan (IRM WP; Arcadis, 2012) and Interim Remedial Measure Addendum Work Plan (Arcadis, 2014a) for soil remediation.
- Residual Source Assessment Plan (Arcadis, 2016) for soil and groundwater remediation.

The factors considered during the selection of the remedies are those listed in 6NYCRR 375-1.8. The components of the selected remedies for Soil Remediation are detailed in IRM (Section 3.3) and RIR (Section 2.3) and the components of the selected remedies for Groundwater Remediation are detailed in RI Data Report (Section 2.3) and RIR (section 2.4). The details of the SSDS to mitigate the potential for soil vapor intrusion are provided as drawings within Appendix H of the SMP (**Appendix E**).

The requirements for the long-term management of remaining impacts left at the Site are presented in the SMP (**Appendix E**) which details plans for: (1) ICs and ECs, (2) monitoring, (3) operation and maintenance, and (4) reporting. The SMP also incorporated the environmental easement (EE) required by NYSDEC for sites requiring ICs and ECs.

3 INTERIM REMEDIAL MEASURES, OPERABLE UNITS AND REMEDIAL CONTRACTS

The remediation of the Site was performed with no use of remedial contracts or operable units. Interim remedial measures were established for soil remediation with the objectives defined in IRM (Section 1.2) and a summary of activities provided in IRM (Section 3) in accordance with the Interim Remedial Measure Work Plan (Arcadis, 2012) and Interim Remedial Measure Addendum Work Plan (Arcadis, 2014a). The IRM is considered the final remedial strategy for the Site.

4 DESCRIPTION OF REMEDIAL ACTIONS PERFORMED

The remedial actions implemented for the Site are documented in RI Data Report (Section 1.2) and RIR (Section 2) and were conducted in accordance with the following:

- Remedial Investigation Workplan and Remedial Action Workplan (Langan, 2007).
- Remedial Investigation/Feasibility Study Work Plan (Arcadis, 2010).
- Residual Source Assessment Work Plan (Arcadis, 2016).

5 SITE MANAGEMENT PLAN, ENGINEERING, AND INSTITUTIONAL CONTROLS

The SMP included as **Appendix E** was required as residual impacts remain in the subsurface following completion of the remedial actions. ECs and ICs have been incorporated into the Site remedy to control exposure to remaining impacts for protection of public health and the environment. The EE, included as Appendix B of the SMP (**Appendix E**), granted to the NYSDEC, and recorded with the Nassau County Clerk, will require compliance with the SMP and all ECs and ICs placed on the portion of the Site subject to the EE (Controlled Property). The boundary presented in the survey and description of Appendix B of the SMP (**Appendix E**) reflect the Controlled Property subject to the EE only. The ICs place restrictions

on Controlled Property use, and mandate operation, maintenance, monitoring, and reporting measures for all ECs and ICs. The SMP specifies the methods necessary for compliance with all ECs and ICs required by the EE for impacts that remain at the Controlled Property. Upon approval by the NYSDEC, compliance with this plan is required by the grantor of the EE and the grantor's successors and assigns. The SMP may only be revised with the approval of the NYSDEC.

The SMP provides a detailed description of all procedures required to manage remaining impacts at the Site after completion of the Remedial Actions, including: (1) implementation and management of all ECs and ICs; (2) media monitoring; (3) monitoring and inspection of the passive SSDS; (4) performance of periodic inspections, certification of results, and submittal of Periodic Review Reports; and (5) defining criteria for termination of the SSDS.

To address these needs, the SMP includes two plans: (1) an Institutional and Engineering Control Plan for implementation and management of EC/ICs; and (2) a Monitoring and Sampling Plan for implementation of Site Monitoring involving site inspection, groundwater monitoring, and SSDS monitoring.

The SMP also includes a description of Periodic Review Reports for the periodic submittal of data, information, recommendations, and certifications to NYSDEC.

1. Introduction

On behalf of Chevron Environmental Management Company (CEMC), ARCADIS U.S., Inc. (ARCADIS) is submitting this Remedial Investigation Data Summary Report (RI Data Report) to the New York State Department of Environmental Conservation (NYSDEC) in accordance with the Order on Consent and Administrative Settlement for the former Gulf Oil Terminal located in Oceanside, Township of Hempstead, New York (NYSDEC Site # 130165).

This RI Data Report has been prepared in accordance with the New York Codes, Rules and Regulations, the draft version of the NYSDEC's Division of Environmental Remediation-10 – Technical Guidance for Site Investigation and Remediation (NYSDEC 2010), and the United States Environmental Protection Agency's (USEPA's) Guidance for Conducting Remedial Investigations and Feasibility Studies under CERCLA (USEPA 1988).

1.1 Site Background

1.1.1 Site Description

The 7.2-acre site is located at 1 Industrial Place in Oceanside, Township of Hempstead, Nassau County, New York. A Site Location Map is presented on Figure 1. The site is currently unoccupied and all former buildings have been demolished. The site is bound to the south by Barnum's Channel, to the east by the Long Island Rail Road, to the north by the former Exxon Petroleum Terminal, and to the west by Hampton Road. A junk yard and office buildings are located west of Hampton Road, fronting Hog Island Channel. Daly Boulevard is located north of the former Exxon Petroleum Terminal and another petroleum terminal (Sprague) is located north of Daly Boulevard.

1.1.2 Site History

The site consists of three lots. In 1931, Gulf Oil Corporation developed a portion of the site (Lot 504) as a petroleum terminal. Gulf Oil Corporation purchased Lots 503 and 502 in 1950 and 1956, respectively. Chevron acquired Gulf Oil Corporation in the mid-1980s. As part of the purchase, Chevron was required to divest the northeast division. In 1986, Cumberland Farms, Inc. (CFI) purchased the northeast marketing assets of Gulf Oil Corporation from Chevron. The purchase included the Oceanside Terminal, which was transferred to CFI in May 1986. In December 1993, CFI, in a

joint venture with Catamount Petroleum LP (Catamount), formed Gulf Oil Limited Partnership (Gulf). CFI owned two-thirds of Gulf as a limited partner and Catamount owned one-third of Gulf as the general partner. In September 2005, CFI exercised its option to buy out Catamount and reorganized Gulf under a new general partner. However, ownership percentages of Gulf did not change during the reorganization. Gulf remains as the current owner/operator of the site.

Operation of the petroleum terminal was ceased in the early 1990s. Demolition of the aboveground storage tanks (ASTs) at the former petroleum terminal was completed in 2003. The remaining on-site buildings (maintenance building, office building and several small buildings associated with historical petroleum terminal operations) were demolished in 2005. The site is currently vacant.

The site has undergone extensive investigation and remediation since the 1990s under NYSDEC oversight (Spill No. 92-03883). In January 2007, the NYSDEC accepted Lowe's Home Centers, Inc. (Lowe's) as a volunteer under the Brownfield Cleanup Program (BCP) – Site No. C130165. Following the decision by Lowe's to withdraw from the BCP in 2009, the NYSDEC transferred the site into the Hazardous Waste Program (State Superfund Site). An Order on Consent and Administrative Settlement was executed between the NYSDEC and CEMC on December 23, 2009 (Index # W3-1142-09-08, Site # 130165).

1.2 Previous Investigations and Remedial Actions

This section summarizes the historical investigations which will be considered in conjunction with results of the remedial investigation (RI) in preparing the feasibility study (FS). This section also summarizes the historical remedial actions and related historical reports from which data is considered.

Historical reports that were submitted to the NYSDEC documenting previous investigation and remedial actions conducted at the site are listed below:

- Hydrogeologic Site Assessment Report (ERM 1986)
- Sensitive Receptor and Potable Well Strategic Assessment (W.E.S., Inc. 1995)
- Comprehensive Site Assessment Report (Eder Associates [Eder] 1996a)

- Comprehensive Site Assessment Report – Additional Site Investigation (Eder 1996b)
- Quarterly Groundwater Monitoring Report (Eder 1996c)
- Remedial Activity Report – Surface Water Collection & Treatment System (Eder 1996d)
- Quarterly Groundwater Monitoring Report (Eder 1996e)
- Technical Specifications for On-Site Stormwater Treatment and Disposal System Upgrade Report (Eder 1996f)
- Quarterly Groundwater Monitoring Report (Eder 1997)
- Groundwater Sampling Results Report (Eder 1998)
- First Quarter 1999 Groundwater Sampling (Gannett Fleming 1999a)
- Second Quarter 1999 Groundwater Sampling (Gannett Fleming 1999b)
- Third Quarter 1999 Groundwater Sampling (Gannett Fleming 1999c)
- Fourth Quarter 1999 Groundwater Sampling (Gannett Fleming 2000a)
- First Quarter 2000 Groundwater Sampling (Gannett Fleming 2000b)
- Investigation Report (Leggette, Brashears and Graham Inc. [LBG] 2000)
- Second Quarter 2000 Groundwater Sampling (Gannett Fleming 2000c)
- Third Quarter 2000 Groundwater Sampling (Gannett Fleming 2000d)
- Fourth Quarter 2000 Groundwater Monitoring & Annual Summary (Gannett Fleming 2000e)
- Soil Investigation (LBG 2001)
- First Quarter 2001 Groundwater Monitoring (Gannett Fleming 2001a)

- Second Quarter 2001 Groundwater Monitoring (Gannett Fleming 2001b)
- Third Quarter 2001 Groundwater Monitoring (Gannett Fleming 2001c)
- Corrective Action Plan (Blasland, Bouck and Lee, Inc. [BBL] 2002a)
- Corrective Action Plan Addendum (BBL 2002b)
- Corrective Action Status Report (BBL 2003a)
- Soil Investigation Letter Report (LBG 2003)
- Remedial Action Report (BBL 2003b)
- Remedial Action Progress Report (BBL 2003c)
- Remedial Action Progress Report (BBL 2004a)
- Remedial Investigation Work Plan for the Vapor Recovery Unit Area (BBL 2004b)
- Remedial Action Progress Report (BBL 2004c)
- Environmental Investigation Report (Langan Engineering and Environmental Services [Langan] 2004)
- Revised Remedial Investigation Work Plan for the Vapor Recovery Unit Area (BBL 2004d)
- Remedial Action Progress Report (BBL 2004e)
- Corrective Action Plan (BBL 2004f)
- Remedial Action Progress Report (BBL 2004g)
- Chemical Oxidation Pilot Test (Cedar Creek Engineering 2005)
- Remedial Investigation Report and Corrective Action Plan (BBL 2005)
- Remedial Action Progress Report (BBL 2006)

- Brownfield Cleanup Program Application (Lowe's 2006)
- Chlorinated Volatile Organic Compound Due Diligence Investigation Letter Report (Langan 2007a)
- Remedial Investigation Workplan and Remedial Action Workplan (Langan 2007b)

Each report listed above is summarized in the Remedial Investigation Workplan and Remedial Action Workplan prepared by Langan of Elmwood Park, New Jersey, and submitted to the NYSDEC in June 2007 (Langan 2007b).

The above reports document that the Gulf site operated from 1932 until the 1990s as a petroleum storage terminal. Nine large-quantity ASTs containing fuel oil, kerosene and gasoline; two small 550-gallon ASTs containing fuel oil for the on-site garage and office building; three underground storage tanks (USTs) containing fuel oil (one 550-gallon, one 1,000-gallon and one 5,000-gallon); one 1,000-gallon UST containing waste oil; a loading rack; a retention pond; a maintenance garage; and an office complex were previously located on the Gulf parcel. Four of the nine large ASTs were demolished prior to 2000, with the remaining five large ASTs reportedly demolished in 2003. The two 550-gallon ASTs containing fuel oil for the maintenance garage and the office building were demolished in 2005.

The approximate location of the former building, structures, tanks and monitoring wells are depicted on the Site Plan (Figure 2).

Light nonaqueous phase liquid (LNAPL), consisting of a mixture of No. 2 and No. 4 fuel oil, kerosene, and gasoline, had previously been detected in a monitoring well near the bulkhead at the southern portion of the site at a thickness up to 2.28 feet. LNAPL was also encountered near the former vapor recovery unit (VRU) and the former garage building. Measurable thicknesses of LNAPL have not been observed at the site since 2004.

Historical soil and groundwater investigations indicate soil impacted with volatile organic compounds (VOCs) at concentrations above NYSDEC Soil Cleanup Objectives (SCOs) have been observed primarily in the western and southern portions of the site. VOC-impacts in groundwater have been observed predominantly in the northeastern, central and southern portions of the site. Chlorinated VOCs (CVOCs), including trichloroethene (TCE), cis-1, 2-dichlorethene (cis-1, 2-DCE),

trans-1, 2-dichloroethene (trans-1, 2-DCE) and vinyl chloride (VC) were also detected in soil and groundwater at the site in proximity to the former VRU. Concentrations of CVOCs in excess of criteria were also observed in groundwater in the meadow mat and the deep sand layer immediately underlying the meadow mat. A comprehensive summary of the available historical site characterization results for this site was presented in the Remedial Investigation Workplan and Remedial Action Workplan (Langan 2007b).

1.2.1 Summary of Historical Remedial Actions

Historical remedial actions conducted at the site are discussed below.

1.2.1.1 Hotspot Soil Excavation – October 2002

In October 2002, BBL completed four hotspot excavations to remove previously observed LNAPL-impacted soil and areas of elevated petroleum-hydrocarbon-contaminated soil. The four hotspot excavation areas included the area surrounding the former VRU/small AST pad, an area west of the former garage building, an area southeast of the former truck loading racks and an area southeast of the former garage building. The approximate locations of the excavated areas are depicted on Figure 2.

The excavations were completed to 4 feet bgs. Approximately 438 tons of soil was excavated for off-site disposal. Certified clean fill was used to backfill the excavations. The post-excavation soil sampling analytical results revealed that benzene, toluene, ethylbenzene and xylenes (BTEX) and naphthalene were detected above the NYSDEC SCOs in each of the four excavations.

LNAPL was observed seeping into the excavations and was recovered with a vacuum truck until only sheen remained. A total of 2,300 gallons of LNAPL/water were removed via vacuum truck for off-site disposal.

1.2.2 In-Situ Chemical Oxidation Pilot Test – December 2002/January 2003

An in-situ chemical oxidation (ISCO) pilot test was completed in December 2002 and January 2003. The pilot test consisted of the injection of a 20 percent solution of sodium permanganate into the subsurface at the former excavation area A (Figure 2). The injection rates in the fill were found to be low, with each injection point accepting only ½ to ¾ of a drum over several hours.

One round of groundwater sampling was completed in March 2003 to assess the effectiveness of the ISCO pilot test. A significant decrease in groundwater concentrations was observed within wells reinstalled in the former excavation areas and was attributed to the October 2002 hotspot soil excavation. In addition, a 25 to 100 percent decrease in CVOCs near the former VRU was noted, suggesting that the ISCO pilot test was effective at treating CVOCs.

1.2.2.1 In-Situ Chemical Oxidation Pilot Test – November 2004

An ISCO pilot test study was completed in November 2004 within the Former Turbine Pump Area. A Modified Fenton's Reagent consisting of ferrous sulfate, citric acid and hydrogen peroxide was used for the pilot test. The pilot test used 2 and 4 percent aqueous solutions.

Two types of injection methods were tested. The first method involved Geoprobe™ injection points and the second method used temporary well injection points. The reagent was injected at 20 pounds per square inch pressure in the Geoprobe points, whereas gravity feed was used in the temporary well injection points. Pre- and post-injection soil samples were collected and analyzed and results indicated no significant modification (less than 10 percent increase or decrease) to the concentration subsequent to injection. Fenton's Reagent was determined to be an ineffective means of delivering the reagent to the soil due to poor reagent-soil mixing.

1.3 Anticipated Future Site Use

Tentative plans are being explored by the current property owner to pursue the redevelopment of the site for use as a retail store with the majority of the property covered by a bigbox style store and the balance of the property covered by paved vehicle lanes and parking.

2. Investigation

2.1 Remedial Investigation Objectives

The RI objectives were outlined along with the objectives of the Feasibility Study in the ARCADIS RI/FS Study Work Plan (RI/FS WP; ARCADIS 2010a). The purpose of this RI Data Report is to provide the results of this phase of investigation. Additional data, as noted below, will be provided in the FS.

The objectives included:

- Complete supplemental investigations to address data gaps and to horizontally and vertically delineate soil and groundwater impacts. The results will be used in the FS to estimate the contaminant mass and distribution in the shallow sand fill, underlying meadow mat and deeper sand.

- Conduct additional pre-remedial design investigation (e.g., aquifer testing, bench-scale testing, specific-capacity testing, slug testing) to adequately understand the hydrogeologic and geochemical site characteristics to evaluate, select and design the appropriate remedial design for the site. The FS will include the results of the aquifer testing and bench-scale testing.

- Characterize the sources of contamination, migration pathways and actual or potential receptors of contaminants on or through air, soil, sediment, groundwater and surface water.

- Collect and evaluate additional data, as needed, to evaluate the remedial action alternatives.

- Collect data, as needed, to evaluate the actual and potential threats to public health and the environment.

- Collect and evaluate information for a Fish and Wildlife Resource Impact Analysis, which will be completed during the FS.

2.2 Soil and Groundwater Cleanup Objectives

2.2.1 Soil Cleanup Objectives

SCOs are based on the NYSDEC Technical & Operational Guidance Series (TOGS) for Soil, Subpart 375-6: Remedial Program Soil Cleanup Objectives (effective December 14, 2006) (NYSDEC 2006). If unrestricted use SCOs cannot be reasonably be obtained, restricted use SCOs will be considered based on the location of the property and its proposed use as a commercial facility.

2.2.2 Groundwater Cleanup Objectives

Groundwater cleanup objectives are based on the NYSDEC TOGS for Groundwater (standard), Section 703.6 (effective August 4, 1999) (NYSDEC 1999).

2.3 Investigation Activities

The supplemental filed investigation activities implemented in accordance with the RI/FS WP were conducted from November 2010 through April 2011 to further characterize the petroleum impacts (including limits of LNAPL), augment the existing monitoring well network and develop additional water quality data required to support selection of the remedial technology. The RI filed activities involved the excavation of a series of test pits, drilling of soil borings, installation of new groundwater monitoring wells, and collection of soil and groundwater samples for field and laboratory analyses. Additionally, further aquifer and bench-scale testing to support the evaluation of the feasibility of remedial options will be presented in the FS Report.

2.3.1 Test Pits

To further define the limits of residual petroleum hydrocarbons in soil at the site, a total of 17 test pits were excavated at locations across the site where previous observations indicated the near the former barge dock, former garage building and oil/water separators as shown on Figure 2. The depth of the test pits was limited to 8 feet below ground surface (bgs); the test pits were excavated laterally until the limits of LNAPL were defined. Nine test pits (5, 6A, 6B, 7A, 7B, 8A, 8B, 9 and 10) were installed near the former barge dock. Five test pits (1 through 3, 11 and 12) were installed near the former garage building. Six test pits (4-A through 4-F) were installed near the oil/water separators in the eastern portion of the site. A total of 29 soil samples (up to three soil samples from each test pit) were selected from the test

pits to be analyzed for VOCs, semivolatile organic compounds (SVOCs), Target Analyte List (TAL) metals, ferrous iron, total organic carbon (TOC) and sulfate. The actual dimensions of each test pit, along with the number and depth of each soil sample selected for analysis, are summarized in Table 1.

2.3.2 Monitoring Well Installation

A total of fifteen monitoring wells were installed during the RI at the locations shown on Figure 2. Twelve of the 15 wells were new monitoring wells (AMW-1 through AMW-11) installed to augment the existing monitoring network while three wells were to replace known destroyed wells (MW-23D-2R, MW-31-D1R and MW-31-D2R). The new monitoring wells include eight wells which were screened across the water table within the shallow fill unit, three wells screened within the meadow mat unit, and four wells were installed for monitoring the lower sand unit below the meadow mat. Of the four deep monitoring wells, three wells were replacements for damaged wells and one was a new monitoring well (MW-25-D3) installed to provide further vertical delineation within the lower sand unit. ARCADIS also installed one piezometer (P-18R) screened across the water table for water level monitoring. Boring logs are provided in Appendix A and well construction is summarized in Table 2.

Five of the new wells (AMW-4 to AMW-7 and AMW-11) were installed to monitor water table conditions along the Barnum Island Channel at the south end of the site. The boreholes for these wells were all advanced using a hollow stem auger rig to depths of approximately 12 to 13 feet bgs and were constructed by installing 10-foot-long screens of 2-inch-diameter, Schedule 40, machine-slotted polyvinyl chloride (PVC) pipe and solid 2-inch-diameter to straddle the water table, and Schedule 40 PVC risers to extend to the ground surface. The annular space of each borehole was filled with #0 silica sand filter pack at least a foot above the top of the screen and a two foot thick bentonite seal was installed above the filter pack. Each of these wells was completed at the ground surface with a flush-mounted curb box.

Three of the new shallow wells (AMW-1 to AMW-3) and one new piezometer (P-18R) were installed to monitor water table conditions in the former VRU area. The boreholes for these wells were all advanced using a hollow stem auger rig. Monitoring well AMW-2 and piezometer P-18R were constructed of PVC materials. Each of these wells were constructed by installing screens of 2-inch-diameter, Schedule 40, machine-slotted polyvinyl chloride (PVC) pipe and solid 2-inch-diameter to straddle the water table, and Schedule 40 PVC risers to extend to the ground surface. The annular space of each borehole was filled with #0 silica sand

filter pack at least a foot above the top of the screen and a two foot thick bentonite seal was installed above the filter pack. Each of these wells was completed at the ground surface with a protective steel casing. Monitoring wells AMW-1 and AMW-3 were constructed in a similar manner with the exception they were constructed of stainless steel materials. Well depths for these monitoring points ranged from 8 to 12 feet bgs (P-18R and AMW-1, respectively). Screen lengths for the wells were 5 feet for AMW-2 and AMW-2, 6 feet for P-18R, and 10 feet for AMW-1.

The three new intermediate depth wells (AMW-8, AMW-9, and AMW-10) with screened intervals within the meadow mat were also installed in the VRU area with the bottom of the screens at 14 feet bgs. The boreholes for these wells were all advanced using a hollow stem auger rig. Each of these wells were constructed by installing screens of 2-inch-diameter, Schedule 40, machine-slotted polyvinyl chloride (PVC) pipe and an appropriate length of Schedule 40 PVC riser to extend to the ground surface. The annular space of each borehole was filled with #0 silica sand filter pack extending above the top of the screen and a bentonite seal was installed above the filter pack. Each of these wells was completed at the ground surface with a protective steel casing. The screen length for AMW-8 is 3 feet and the screen lengths for AMW-9 and AMW-10 are 4 feet. Shorter screens were used to ensure that the wells were screened only within the meadow mat and the wells were sealed a minimum of 6 inches into the meadow mat to ensure isolation.

The four wells were installed for monitoring the lower sand unit below the meadow mat included the three replacement monitoring wells (MW-23D-2R, MW-31-D1R and MW-31-D2) and a new well constructed to monitor a deeper horizon within the lower sand unit (MW-25-D3). Each of these boreholes were initially advanced into the top of the meadow mat using a hollow stem augers, then a steel casing was grouted in place prior to extending the boreholes vertically to the target depths using a rotary wash drilling method. The wells were each constructed by installing 10-foot-long, 2-inch-diameter, Schedule 40, machine-slotted PVC pipe and an appropriate length of Schedule 40 PVC riser to extend to the ground surface. The annular space of each borehole was filled with #0 silica sand filter pack extending above the top of the screen and a bentonite seal was installed above the filter pack. To mitigate downward migration of the constituents of concern (COCs) from the fill unit, the annular space of the borehole around the riser was filled with cement/bentonite grout above the bentonite seal placed above the well screen. The screen depths for the wells are 41 feet bgs (MW-23D-2R), 27 feet bgs (MW-31D-1R), 42 feet bgs (MW-31D-2R), and 50 feet bgs (MW-25-D3. Each of these wells was completed at the ground surface with steel protective casings.

During monitoring well installation, soil samples were collected continuously for soil classification using split-spoon sampling from ground surface to the bottom of each boring to the extent practicable. A photo ionization detector (PID) was used to obtain headspace readings of each sample interval and to provide health and safety monitoring for field personnel during the drilling program. Additionally, a total of 46 samples (up to four soil samples per well) were selected during installation of each of the monitoring wells to be analyzed for VOCs, SVOCs, TAL metals, ferrous iron, TOC and sulfate.

Monitoring wells were developed after completion according to the ARCADIS Standard Operating Procedure for monitoring well installation and development (ARCADIS, 2010) and a survey of all existing monitoring wells was completed.

2.3.3 Groundwater Sampling

Groundwater samples from were collected from a total of 39 existing and newly installed monitoring wells QAPP (ARCADIS, 2010). The locations of the monitoring wells sampled are illustrated on Figure 2. All groundwater samples were analyzed for VOCs, SVOCs and TAL metals (total and dissolved) and for monitored natural attenuation (MNA) parameters (except for P-10 and MW-30-D2, which were analyzed for VOCs and TAL metals).

MNA parameters included:

- nitrogen as ammonia
- nitrate
- nitrite
- sulfate
- sulfide
- phosphorous as orthophosphate
- total dissolved solids
- total dissolved organic carbon
- alkalinity-bicarbonate
- alkalinity
- iron (filtered and unfiltered)
- manganese (filtered and unfiltered)
- calcium
- methane

- ethane
- ethene

Wells MW-30-D2 and P-10 were not sampled for MNA parameters because sufficient MNA data was collected from the remaining wells. The screened interval of monitoring well AMW-6 was observed to be filled with sand prior to sampling; therefore, no groundwater sample was able to be collected from this well. Groundwater samples were collected in accordance with the ARCADIS Standard Operating Procedure for Low-Flow Groundwater Purging and Sampling as detailed in the ARCADIS Quality Assurance Project Plan (QAPP; ARCADIS 2010b). The field parameter measurements recorded in conjunction with this sampling event are summarized in Table 4. A further discussion of the implication of the MNA sampling results will be provided in the FS.

2.4 Air Monitoring

Air monitoring which was performed during the implementation of the field investigation which indicated that no unacceptable exposures occurred in conjunction with the field investigation activities completed.

Consistent with the Community Air Monitoring Plan (ARCADIS, 2010) developed for use during RI activities on site, monitoring was performed to assess potential for exposure to VOCs and particulates. However, due to equipment issues and miscommunications in the field, the following air monitoring was completed.

During excavation of the test pits, monitoring stations were located upwind and downwind of the work area. The air monitoring station included a dust meter to monitor for particulates less than 10 microns in diameter; results are provided in Appendix D. Breathing zone VOC monitoring was also performed every 15 minutes during excavation activities. VOCs were not measured above the action levels in the breathing zone and particulates were not measured above the action levels.

During installation of the monitoring wells, particulate monitoring using a dust meter was performed near the drill rig and within the breathing zone, instead of at a downwind monitoring location. Breathing zone monitoring was performed every 15 minutes during drilling and the information was recorded in the field notes (Appendix D). VOCs were not measured above the action levels in the breathing zone during drilling or excavation and particulates were not measured above the action levels.

2.5 Data Validation

The soil and groundwater analytical data collected during the RI investigation was validated in accordance with the QAPP (ARCADIS 2010).In general, the overall system performance was found to be acceptable. Other than for those deviations specifically mentioned in the reviews, the overall data quality is within the guidelines specified in the method. Appropriate qualifiers were added to specific analytical results reported, as required by the data review.

The Data Usability Summary Reports are provided in Appendix E.

3. Geology and Hydrogeology

3.1 Regional Geology/Hydrogeology

The regional geology consists of upper glacial deposits (clay, sand, gravel and boulders) to a depth of 50 feet bgs, Gardiners Clay (clay, silt and lenses of sand) to a depth of 75 feet bgs, Magothy Aquifer (sand with lenses of clay) to a depth of 800 feet bgs, Raritan Confining Unit (clay with lenses of sand) to 900 feet bgs, and the Lloyd Aquifer (sand and gravel with lenses of clay) to 1,400 feet bgs. Bedrock is present beneath the Lloyd Aquifer and consists of crystalline metamorphic and igneous rock (muscovite-biotite schist, gneiss and granite).

3.2 Site Geology/Hydrogeology

Subsurface soil conditions encountered during previous environmental and geotechnical investigations have revealed the site lithology to consist of the following:

- sand fill from the ground surface to approximately 8 feet bgs
- meadow mat (silt with fibrous organics and trace clay) to approximately 15 feet bgs
- underlying sand (coarse to fine sand, trace to some fine gravel) to approximately 85 feet bgs
- Gardiners Clay

With the exception of the bulkhead area, the meadow mat was encountered throughout the site at a thickness ranging from 5 to 12 feet. Meadow mat was not observed during previous environmental investigations conducted in the bulkhead area.

The underlying sand (lower sand unit) has been divided into three horizons for purposes of discussion: monitoring wells in the D1 horizon are generally screened between 15 and 28 feet bgs, monitoring wells in the D2 horizon are screened between 30 and 42 feet bgs, and monitoring wells in the VD horizon are screened at the base of the unit (58 to 83 feet bgs). Cross section locations are shown on Figure 3; Cross Sections A’ and B’ are provided on Figures 4 and 5, respectively.

3.2.1 Groundwater Flow

Groundwater has historically been observed at elevations ranging between 2 to 5 feet above mean sea level (3 to 5 feet bgs). Groundwater flow in the shallow fill material is generally toward the south in the direction of Barnum Island Channel with a horizontal gradient of approximately 0.006 foot/foot (ft/ft). Alternatively, the potentiometric surface of the groundwater in the lower sand unit, the groundwater flow is generally to the west. Groundwater elevation contour maps for each are presented in Appendix C.

Groundwater elevations were monitored and recorded using pressure transducers in December and April. The groundwater elevation monitoring data are also provided in Appendix C.

Results of the tidal study will be used, along with the additional aquifer testing data, in the development of the FS.

3.2.2 Horizontal and Vertical Gradients

Between April 6 and 8, 2011, groundwater elevation measurements were collected from monitoring wells screened at the water table, the meadow mat and in the lower sand during two low tide and two high tide cycles. Vertical gradients were calculated based on the recent groundwater elevation measurements, as summarized below (negative gradients are upward):

- The vertical gradient between the water table and the lower sand unit is generally downward and ranged from 0.233 at high tide to 0.429 at low tide (measured at AMW-1 and MW-25D1).

- The vertical gradients between the D-1 monitoring wells and the D-2 monitoring wells were variable depending on location. A downward gradient was measured in the MW-23, MW-24, MW-26 and MW-27 well clusters and an upward gradient was measured in the MW-28, MW-30 and MW-31 well clusters. The vertical gradient in the MW-25 well cluster was variable. The maximum downward vertical gradient measured between the D-1 and D-2 horizons was 0.168 in the MW-26 well cluster at low tide and the maximum upward vertical gradient was -0.031 in the MW-30 well cluster at high tide.

- The vertical gradient between the D3 and VD horizons was downgradient and was 0.007. The vertical gradient between the D2 and VD unit was generally upward, except for the MW-30 well cluster, which was upward for three of the four monitoring events. The vertical gradient between the D2 and VD horizons ranged from -0.004 in the MW-24 well cluster and -0.047 in the MW-30 well cluster at low tide.

  Results of groundwater elevation monitoring will be used, along with the additional aquifer testing data, in the development of the FS. Groundwater elevation data is summarized in Table 3.

4. Supplemental Soil Investigation Results

This section summarizes the analytical results of the 77 supplemental soil samples that were selected for laboratory analysis as part of this RI. The soil sampling locations and the approximate location of the former building, structures, tanks and monitoring wells are depicted on the Site Plan (Figure 2). Results of these supplemental soil samples are summarized in Table 5. The horizontal and vertical distribution of exceedances of the unrestricted use SCOs are illustrated based on the current and historical soil results on Figures 6, 7 and 8.

The following subsections present a discussion of the supplemental soil characterization results for the various areas of concern identified at this site.

4.1 Former VRU Area: Shallow Fill Unit

Twelve soil samples were selected for analysis from the shallow fill material in the former VRU during drilling of the boreholes prior to installation of AMW-1, AMW-2, AMW-3 and MW-25D3. A number of VOCs and SVOCs related to petroleum releases and CVOCs were detected in soil samples above Unrestricted Use SCO in the soil samples from the former VRU. However, no VOCs, SVOCs or inorganics were detected at concentrations above the Restricted Use SCO Commercial Criteria in any of the soil samples collected in the shallow overburden fill unit.

The highest PID reading (1,599 parts per million [ppm]) was measured in AMW-2 from 2 to 4 feet bgs. During well installation, trace sheen was observed on soil samples collected at the water table (3 feet bgs) in AMW-1 and AMW-8 and dark staining was observed in soil samples collected from 1.5 to 4 feet bgs in AMW-2.

4.1.1 VOCs

- Acetone was detected above the Unrestricted Use SCO of 0.05 milligrams per kilogram (mg/kg) in one sample (AMW-2; 2 to 4 feet bgs) at a concentration of 0.27 mg/kg.

- Benzene was detected above the Unrestricted Use SCO of 0.06 mg/kg in soil samples collected from AMW-3 at depths from 2 to 4 and 4 to 6 feet bgs at a concentration of 0.11 mg/kg.

- Ethylbenzene was detected above the Unrestricted Use SCO of 1 mg/kg in five soil samples collected from soil borings AMW-2, AMW-3 and MW-25D3 at concentrations ranging from 1.4 mg/kg in MW-25D3 (4 to 6 feet bgs) to 10 mg/kg in the duplicate sample collected from AMW-3 (2 to 4 feet bgs).

- Total xylenes was detected above the Unrestricted Use SCO of 0.26 mg/kg in six soil samples collected from soil borings AMW-2, AMW-3 and MW-25D3 at concentrations ranging from 5.2 mg/kg in AMW-3 (0 to 2 feet bgs) to 73 mg/kg in the soil sample collected from AMW-2 (2 to 4 feet bgs).

4.1.2 CVOCs

- Methylene chloride was detected above the Unrestricted Use SCO of 0.05 mg/kg in three soil samples collected from soil borings AMW-2, AMW-3 and MW-25D3 at concentrations ranging from 0.062 mg/kg in AMW-3 (4 to 6 feet bgs) to 0.21 mg/kg in the soil sample collected from MW-25D3 (4 to 6 feet bgs).

- VC was detected above the Unrestricted Use SCO of 0.02 mg/kg in one soil sample collected from AMW-2 (4 to 6 feet bgs) at concentration of 0.044 mg/kg.

- cis-1,2-DCE was detected above the Unrestricted Use SCO of 0.250 mg/kg in the soil sample collected from AMW-2 (4 to 6 feet bgs) at a concentration of 0.26 mg/kg.

- 1,2-Dichloroethane (1,2-DCA) was detected above the Unrestricted Use SCO of 0.02 mg/kg in the soil sample collected from AMW-2 (0 to 2 feet bgs) at a concentration of 0.068 mg/kg.

4.1.3 SVOCs

One or more SVOCs were detected above the Unrestricted Use SCO in the soil samples collected from each of the soil borings in the former VRU, including benzo (a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, chrysene, hexachlorobenzene and naphthalene. These detections were limited and sporadic.

4.1.4 Inorganics

Lead was detected above the Unrestricted Use SCO of 63 mg/kg in soil samples collected from AMW-3 at 0 to 2 feet bgs (69.6 mg/kg) and at 2 to 4 feet bgs (52.4 mg/kg in the field sample and 72.6 mg/kg in the duplicate sample).

4.2 Former VRU Area: Meadow Mat

Nine samples were selected for analysis to further characterize soil conditions in the meadow mat unit in proximity to the former VRU Area during drilling of the borings for AMW-8, AMW-9 and AMW-10. VOCs and SVOCs related to petroleum releases and CVOCs were detected in soil samples at concentrations above Unrestricted Use SCO. The detections of petroleum-related compounds (BTEX) were limited to the upper 2 feet of the meadow mat. No SVOCs or inorganics were detected at concentrations above the Restricted Use SCO Commercial Criteria in the meadow mat samples. The only CVOC detected above the Restricted Use SCO Commercial Criteria within the meadow mat was a single detection of VC within a soil sample collected at a depth of 9 – 10 feet in the borehole for AMW-9. The highest PID reading in the meadow mat was 117.6 ppm, which was measured in soil samples collected during installation of AMW-9 from 8 to 10 feet bgs; no sheens were observed during installation of the monitoring wells.

4.2.1 VOCs

- Acetone was detected above the Unrestricted Use SCO of 0.05 mg/kg in six soil samples from locations AMW-8 and AMW-9 at concentrations ranging from 0.15 mg/kg in AMW-8 (14 to 15 feet bgs) to 0.38 mg/kg in AMW-9 (9 to 10 feet bgs). Acetone was not detected in AMW-10; however, due to matrix interference, the detection limit was elevated.

- 2-Butanone was detected above the Unrestricted Use SCO of 0.12 mg/kg in soil samples collected from AMW-8 (10 to 11 feet bgs) and in AMW-9 (10 to 12 feet bgs) at concentrations of 0.23 mg/kg and 0.13 mg/kg, respectively.

- Benzene was detected above the Unrestricted Use SCO of 0.06 mg/kg in soil samples collected from AMW-8, AMW-9 and AMW-10 (8.5 to 11 feet bgs) at concentrations ranging from 0.078 mg/kg in AMW-8 to 0.610 m/kg in AMW-9. Concentrations of benzene decreased to below criteria in all three soil samples with depth.

- Toluene was detected above the Unrestricted Use SCO of 0.7 mg/kg in the soil samples collected from AMW-9 (9 to 10 feet bgs) and AMW-10 (8.5 to 9.5 feet bgs) at concentrations of 1.4 and 2.7 mg/kg, respectively.

- Total xylene was detected above the Unrestricted Use SCO of 0.26 mg/kg in soil samples collected from AMW-9 (9 to 10 feet bgs) and AMW-10 (8.5 to 9.5 feet bgs) at concentrations of 2.5 and 6.4 mg/kg, respectively.

- Methyl tert-butyl ether (MTBE) was detected above the Unrestricted Use SCO of 0.93 mg/kg in six of the nine soil samples collected in the meadow mat, at concentrations ranging from 1.4 mg/kg (12 to 14 feet bgs) in AMW-8 to 9 mg/kg (9 to 10 feet bgs) in AMW-9.

4.2.2 CVOCs

Several chlorinated compounds (including cis-1,2-DCE, methylene chloride, trans-1,2-DCE, TCE and VC) were detected above Unrestricted Use SCO. VC was detected above the Restricted Use Commercial SCO Criteria in the soil sample collected from AM-9. Generally, concentrations of CVOCs decreased with depth in the meadow mat. Select CVOCs are discussed below:

- Methylene chloride was detected above the Unrestricted Use SCO of 0.05 mg/kg in all soil samples collected from the meadow mat at concentrations ranging from 0.57 mg/kg in AMW-9 (14 to 15 feet bgs) to 24 mg/kg in AMW-8 (10 to 11 feet bgs).

- VC was detected above the Unrestricted Use SCO of 0.02 mg/kg in eight soil samples collected from the meadow mat at concentrations ranging from 0.026 mg/kg in AMW-9 (14 to 15 feet bgs) to 15 mg/kg in AMW-9 (9 to 10 feet bgs). The sample collected from AMW-9 (9 to 10 feet bgs) also had concentrations of VC above the Restricted Use Commercial SCO Criteria of 13 mg/kg.

- TCE was detected above the Unrestricted Use SCO of 0.47 mg/kg in one soil sample collected from AMW-9 (9 to 10 feet bgs) at a concentration of 5 mg/kg.

- cis-1,2-DCE was detected above the Unrestricted Use SCO of 0.25 mg/kg in soil samples collected from the meadow mat at concentrations ranging from 0.53 mg/kg in AMW-9 (10 to 12 feet bgs) to 110 mg/kg in AMW-10 (8.5 to 9.5 feet bgs).

- trans-1,2 DCE was detected above the Unrestricted Use SCO of 0.19 mg/kg in soil samples collected from the meadow mat at a concentration of 1.4 mg/kg in AMW-9 (9 to 10 feet bgs) to 3.3 mg/kg in AMW-10 (8.5 to 9.5 feet bgs).

4.2.3 SVOCs

Only two SVOCs were detected above Unrestricted Use SCO in the meadow mat: 4-methylphenol and phenol. 4-Methylphenol was detected above Unrestricted Use SCO of 0.33 mg/kg in soil samples collected from AMW-9 (9 to 10 feet bgs) and in AMW-10 (8.5 to 9.5 feet bgs) at concentrations of 1.6 and 0.9 mg/kg, respectively. Phenol was detected at a concentration above the Unrestricted Use SCO of 0.33 mg/kg in the soil sample collected from AMW-9 (9 to 10 feet bgs) at a concentration of 0.49 mg/kg.

4.2.4 Inorganics

Arsenic was detected above the Unrestricted Use SCO of 13 mg/kg in soil samples collected from AMW-8, AMW-9 and AMW-10 at concentrations ranging from 13.2 mg/kg in AMW-8 (10 to 11 feet bgs) to 16.1 mg/kg in AMW-8 (12 to 14 feet bgs). The sample collected from AMW-8 (10 to 11 feet bgs),with a detection of arsenic of 16 mg/kg, was the only soil sample collected from the meadow mat which was above the Restricted Use Commercial SCO Criteria for any inorganic constituent. Mercury and nickel were detected just above the Unrestricted Use SCO in one soil sample.

4.3 Former Oil/Water Separator Area

A series of five test pits (4-A, 4-B, 4-C, 4-D and 4-F) were excavated in the vicinity of the former oil/water separator area. A total of three soil samples (TP-4-B1, TP-4-D-1 and TP-4-F1) were selected for analysis from these excavations.

A trace sheen and/or staining was observed during the excavation of test pits 4-C, 4-D and 4-F. The sheen was observed at the water table, at approximately 4.5 feet bgs, and staining was observed at depths ranging from 2 to 6 feet bgs. The lateral extent of the soils observed to have sheen and staining was observed to be limited to the north and south as defined by test pits 4-F, 4-A and 4-B, respectively.

No VOCs or SVOCs were detected above Unrestricted Use SCO. Mercury and silver were detected above the Unrestricted Use SCO in the soil sample collected from TP-4-B-1 at concentrations of 0.606 and 3.32 mg/kg respectively. The Unrestricted Use

SCO for mercury and silver are 0.18 and 3.32 mg/kg, respectively. However, these inorganics were not detected at concentrations above the Restricted Use SCO for Commercial Use.

4.4 Former Two-Story Brick Building Area

A total of 28 soil samples were selected for analysis to further assess soil condition in proximity to the Former Two-Story Brick Building Area (southwest area) from the soil samples collected from a series of six test pits (5, 6, 7, 8, 9 and 10) and during installation of monitoring wells AMW-4, AMW-5, AMW-6 and AMW-7.

During excavation of the test pits, the following field observations were made:

- A trace sheen and limited staining were observed during excavation of test pit TP7-2.
- Trace sheen was observed in the soil at the water table during excavation of test pit 8-1.
- Staining was observed during the excavation of test pits 5 and 6-3.

The extent of visual impacts has been defined within the test pits and no visual impacts were observed during excavation of test pits 6-1, 6-2, 7-1, 9 and 10. No visual impacts were observed during the drilling of monitoring wells AMW-4 though AMW-7.

4.4.1 VOCs

Acetone was detected above the Unrestricted Use SCO in six soil samples at concentrations ranging from 0.55 mg/kg in soil sampleTP-9-3 to 0.10 mg/kg in AMW-5 (2 to 4 feet bgs). The horizontal extent has been defined by soil samples.

Methylene chloride was detected above the Unrestricted Use SCO of 0.05 mg/kg at concentrations ranging from 0.082 mg/kg in soil sampleTP-8-1 to 0.11 mg/kg in soil sampleTP-5-2.

4.4.2 SVOCs

Several SVOCs were detected above the Unrestricted Use SCO including benzo(a)pyrene, benzo(a)anthracene, benzo(a)fluoranthene, benzo(k)fluoranthene, indeno(1,2,3-cd)pyrene and chrysene. Total SVOCs was not detected at concentrations of 500 mg/kg in any of the soil samples. Benzo(a)pyrene was detected a at concentration above Restricted Use SCO Commercial Criteria of 1 mg/kg in two soil samples (TP 6-3 and TP-7-2) at concentrations of 2.7 and 3.7 mg/kg, respectively.

4.4.3 Inorganics

Four inorganics were detected at concentrations above Unrestricted Use SCO in soil samples collected from AMW-5, AMW-6, AMW-7 and TP-6-1: arsenic, lead, mercury and zinc. Arsenic was also detected at concentrations above the Restricted Use SCO Commercial Criteria. Results are summarized below:

- Arsenic was detected above the Restricted Use SCO Commercial Criteria of 16 mg/kg in four samples at concentrations ranging from 16.2 mg/kg in AMW-6 (2 to 4 feet bgs) to 28.1 mg/kg in TP-6-1.

- Lead was detected above the Unrestricted Use SCO of 63 mg/kg in the sample collected from AMW-6 (4 to 6 feet bgs) at a concentration of 80.2 mg/kg and 200 mg/kg in sample TP-10-1.

- Mercury was detected above the Unrestricted Use SCO of 0.18 mg/kg in the soil samples collected from AMW-6 (4 to 6 feet bgs) and from AMW-7 (8 to 10 feet bgs) at concentrations of 0.199 and 0.189 mg/kg, respectively. Mercury was detected above the Restricted Use SCO Commercial Criteria of 2.8 mg/kg in the soil sample collected from AMW-5 (6 to 8 feet bgs) at a concentration of 11.1 mg/kg.

- Zinc was detected above the Unrestricted Use SCO of 109 mg/kg in soil samples collected from AMW-5 (2 to 4 feet bgs) and from AMW-7 (4 to 6 feet bgs) at concentrations of 123 and 120 mg/kg, respectively.

4.5 Former One-Story Brick Garage Area

To further characterize the soil condition in proximity to the former garage area of the site, a series of five test pits (TP-1, TP-2, TP-3, TP-11 and TP-12) were excavated and a total of10 soil samples were selected from the excavations for laboratory analysis. As described in the test pit logs, some sheen were observed within the soil at the water table during the excavation of test pits TP-1, TP-2, TP-3 and TP-12. The apparent extent of the sheen impacted soil in test pits 1, 2 and 3 were horizontally limited to within the area of the test pits.

4.5.1 Analytical Results

Acetone was detected above the Unrestricted Use SCO of 0.05 mg/kg in the soil sample collected from TP-11-1 at concentration of 0.058 mg/kg and methylene chloride was detected above the Unrestricted Use SCO of 0.05 mg/kg at a concentration of 0.086 mg/kg.

Mercury was detected above the Unrestricted Use SCO of 0.18 mg/kg in the soil sample collected from TP-12-1 at a concentration of 1.35 mg/kg.

No VOCs, SVOCs or inorganics were detected at concentrations above the Restricted Use SCO Commercial Criteria.

4.6 Former Truck Loading Rack Area

A total of ten soil samples selected for laboratory analysis from the soil borings during installation of MW-31-D1R, MW-31-D2R, and P-18R. Nine soil samples were collected from the shallow fill unit and one soil sample was collected from the lower sand unit.

4.6.1 Analytical Results

No VOCs or inorganics were detected at concentrations above the Unrestricted Use SCOs in any of the soil samples collected from this area. However, several SVOCs were detected at concentrations above the Unrestricted Use SCOs, including benzo(a)pyrene, benzo(a)anthracene, benzo(a)fluoranthene, benzo(k) fluoranthene, chrysene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene. The soil sample collected at a depth of 6 to 8 feet from MW-31-D2R was also had Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and

Dibenzo(a,h)anthracene detected at concentrations above their respective Restricted Use SCO Commercial Criteria. The soil sample collected at a depth of 2 to 4 feet from the same borehole also contained Benzo(a)pyrene at concentrations above the Restricted Use SCO Commercial Criteria.

5. Supplemental Groundwater Investigation Results

This section summarizes the analytical results of the 39 supplemental groundwater samples that were collected for laboratory analysis as part of this RI. The monitoring well locations and the approximate location of the former building, structures, tanks and monitoring wells are depicted on the Site Plan (Figure 2). Results of these supplemental groundwater samples are provided in Table 6 and on Figures 9 and 10.

5.1 Overburden Unit

A total of 12 monitoring wells were sampled to characterize the current groundwater conditions within the overburden unit at the site. These shallow monitoring points include three wells in proximity to the former VRU Area (AMW-1, AMW-2, and AMW-3); five wells located in proximity to the southern site boundary along the Barnum Island Channel (AMW-4, AMW-5, AMW-7, AMW-11 and MW-DR); one well in proximity to the eastern site boundary (P-10) and one well in proximity to the western site boundary P-18R).

5.1.1 Petroleum-Related Constituents

- Benzene was detected above the NYSDEC TOGS Guidance Values (guidance values) of 1 microgram per liter (µg/L) at concentrations ranging from 6.4 µg/L in AMW-7 to 68 µg/L in AMW-11 510 µg/L in AMW-3.

- Ethylbenzene was detected at concentrations ranging from 5.7 µg/L in AMW-11 to 1,300 µg/L in AMW-2; the guidance value for ethylbenzene is 5 µg/L.

- Toluene was detected at concentrations ranging from 8.6 µg/L in AMW-1 to 69 µg/L in AMW-2; the guidance value for toluene is 5 µg/L.

- Xylenes were detected at concentrations ranging from 13 µg/L in AMW-4 to 7,200 µg/L in AMW-2; the guidance value for xylenes is 5 µg/L.

- MTBE was detected at a concentration of 26 µg/L in AMW-3, the guidance value is 10 µg/L.

- Isopropylbenzene was detected above the guidance value of 5 µg/L at concentrations ranging from 6.3 µg/L in AMW-1 to 130 µg/L in AMW-2.

5.1.2 CVOCs

Although a number of CVOCs were observed at concentrations above their respective guidance values in the shallow monitoring wells in proximity to the VRU Area, CVOCs were generally observed at relatively low concentrations in the shallow groundwater within the overburden as compared to concentrations observed in the deeper water-bearing units. VC was detected above the guidance value of 2 µg/L in monitoring wells AMW-1 and AMW-2 at concentrations of 13 and 26 µg/L, respectively. In addition, cis-1,2-DCE was detected at concentrations above the guidance value of 5 µg/L in AMW-1 and AMW-2 at concentrations of 22 and 62 µg/L, respectively.

5.1.3 SVOCs and Inorganics

A number of SVOCs and inorganics were detected in groundwater within the shallow overburden unit at concentrations exceeding guidance values including the following:

- Phenol was detected in four of the shallow wells at a concentrations ranging from 15 µg/L in AMW-3 to 110 µg/L in AMW-5; the guidance value for phenol is 1 µg/L.

- Naphthalene was detected above the guidance value of 10 µg/L at concentrations ranging from 18 µg/L in AMW-4 to 400 µg/L in AMW-11.

- Concentrations of a number of SVOCs were also detected above their respective guidance values in the groundwater sample collected from AMW-11, including acenaphthalene, benzo(a)anthracene, benzo(b)fluoranthene, chrysene and fluorine.

- Iron and manganese were detected at concentrations above the guidance values in the total and dissolved samples collected from AMW-1, AMW-2 AMW-3, AMW-4 and AMW-11; analytical results are provided in Table 6 and on Figure 9.

5.2 Meadow Mat Unit

Three new monitoring wells were constructed with screened interval installed within the meadow mat unit to further characterize conditions in the former VRU (AMW-8, AMW-9 and AMW-10). Petroleum-related constituents and CVOCs were detected at

concentrations above the guidance values in the groundwater samples collected from these meadow mat monitoring wells.

5.2.1 Petroleum-Related Constituents

- Benzene was detected above the guidance value of 1 µg/L in the sample collected from AMW-10 at a concentration of 260 µg/L.

- Toluene was detected above the guidance value of 5 µg/L in all three wells monitoring this unit at concentrations ranging from 110 µg/L in AMW-8 to 590 µg/L in AMW-10.

- Ethylbenzene was detected above the guidance value of 5 µg/L in the sample collected from AMW-10 at a concentration of 250 µg/L.

- Xylenes were detected above the guidance value of 5 µg/L in the samples collected from AMW-9 and AMW-10 at concentrations of 170 and 560 µg/L, respectively.

- MTBE was detected above the guidance value of 10 µg/L in all three wells monitoring this unit at concentrations ranging from 790 µg/L in AMW-8 to 1,900 µg/L in AMW-10.

- Isopropylbenzene was detected above the guidance value of 5 µg/L in the sample collected from AMW-10 at a concentration of 24 µg/L.

5.2.2 CVOCs

- The CVOC detected in the highest concentrations was cis-1-2 DCE which was detected above the guidance value of 5 µg/L in all three wells monitoring this unit at concentrations ranging from 29,000 µg/L in AMW-8 to 240,000 µg/L in AMW-10.

- Methylene chloride was detected above the guidance value of 5 µg/L in all three wells monitoring this unit at concentrations ranging from 810 µg/L in AMW-10 to 1,700 µg/L in AMW-8.

- TCE was detected at concentrations above the guidance value of 5 µg/L in all three wells monitoring this unit at concentrations ranging from 110 µg/L in AMW-8 to 58,000 µg/L in AMW-10.

- VC was detected at concentrations above the guidance value of 2 µg/L in all three wells monitoring this unit at concentrations ranging from 10,000 µg/L in AMW-8 to 20,000 µg/L in AMW-10.

- 1,1-DCA and 1,1-DCE were both detected above the guidance value of 5 µg/L in the sample collected from AMW-10 at concentrations of 25 and 300 µg/L, respectability.

5.2.3 SVOCs and Inorganics

- Naphthalene was detected above the guidance value of 10 µg/L in groundwater samples collected from AMW-9 and AMW-10 at concentrations of 84 and 81 µg/L, respectively.

- Phenol was detected above the guidance value of 1 µg/L in all three wells monitoring this unit at concentrations ranging from 3.9 µg/L in AMW-8 to 12 µg/L in AMW-10.

- Total and dissolved iron was detected above the guidance value in samples collected from AMW-8, AMW-9 and AMW-10; results are summarized in Table 5.

5.3 Lower Sand Unit

A total of 25 monitoring wells were sampled to characterize current groundwater conditions within the lower sand unit underlying the site. This lower sand unit has been divided into three depth horizons for purposes of discussion: monitoring wells in the shallow portion of this unit (D1) are generally screened between 15 and 28 feet bgs, monitoring wells in the intermediate portion of this unit (D2) are screened between 30 and 42 feet bgs, and monitoring wells in the deepest portion of this unit (VD) are screened at the base of the unit (58 to 83 feet bgs).

5.3.1 Shallow Horizon of Lower Sand Unit (D1)

Twelve monitoring wells screened within the shallow horizon in the lower sand unit (MW-23-D1R, MW-24-D1, MW-25-D1, MW-26-D1, MW-27-D1, MW-28-D1, MW-29-

D1 MW-30-D1, MW-31-D1R, MW-32-D, MW-33-D, and MW-35D) were sampled for this investigation. Petroleum-related constituents including BTEX, isopropylbenzene, MTBE and naphthalene, and CVOCs were detected above the guidance values in the D-1 horizon.

5.3.1.1 Petroleum-Related Constituents

- One or more petroleum-related constituents were detected above guidance values in all but one of the 12 monitoring wells screened within the shallow horizon.

- Benzene was detected above the guidance value of 1 µg/L in eight of the 12 monitoring wells in the D-1 horizon at concentrations ranging from 3.7 µg/L in MW-35-D to 130 µg/L in MW-30-D1.

- Ethylbenzene was detected above the guidance value of 5 µg/L in three of the 10 monitoring wells in the D-1 horizon at concentrations of 5.3 µg/L in MW-31-D1R and 12 µg/L in MW-25-D1.

- Isopropylbenzene was detected above the guidance value of 5 µg/L in the groundwater samples collected from MW-23D1R and MW-29D1 at concentrations of 18 and 16 µg/L, respectively.

- MTBE was detected above the guidance value of 10 µg/L in nine of the 10 monitoring wells in the D-1 horizon at concentrations of 13 µg/L in MW-32D and 1,100 µg/L in MW-24-D1.

- Toluene was detected above the guidance value of 5 µg/L in the groundwater samples collected from MW-24D1 and MW-25D1 at concentrations of 19 and 31 µg/L, respectively.

- Total xylenes detected above the guidance value of 5 µg/L in four of the 10 monitoring wells in the D-1 horizon at concentrations of 12 µg/L in MW-31-D1R and 40 µg/L in MW-25-D1.

5.3.1.2 CVOCs

- The CVOC detected at the highest concentration in the D1 horizon of the lower sand unit is cis-1,2-DCE which was detected above the guidance value of 5 µg/L at concentrations ranging from 29 µg/L in MW-27D1 to 7,400 µg/L in MW-24D1.

- Methylene chloride was detected above the guidance value of 5 µg/L in the groundwater sample collected from MW-25D1 at a concentration of 340 µg/L.

- TCE was detected above the guidance value of 5 µg/L in the groundwater samples collected from MW-24D1 and MW-25D1 at concentrations of 65 and 110 µg/L, respectively.

- Vinyl chloride was detected above the guidance value of 2 µg/L in the groundwater samples collected from MW-24D1 and MW-25D1 at concentrations of 1,800 and 5,900 µg/L, respectively.

- 1,1-DCE was detected above the guidance value of 5 µg/L in the samples collected from MW-24D1 and MW-25D1 at a concentration of 23 µg/L.

- trans-1,2-DCE were detected above the guidance value of 5 µg/L in the sample collected from MW-24D1 and MW-25D1 at concentrations of 44 and 58 µg/L, respectively.

5.3.1.3 SVOCs and Inorganics

- No SVOCs were detected at concentrations above the guidance values in the groundwater sample collected from MW-35D.

- Naphthalene was detected above the guidance value of 10 µg/L in three of the 10 monitoring wells at concentrations ranging from 53 µg/L in MW-24D1 to 90 µg/L in MW-31D1R.

- Acenaphthalene was detected above the guidance value of 20 µg/L in three of the 10 monitoring wells at concentrations ranging from 31 µg/L in MW-24D1 to 130 µg/L in MW-31D1R.

- Phenol was detected above the guidance value of 1 µg/L in the groundwater sample collected from MW-26D1 at a concentration of 14 µg/L.

- Iron and/or manganese were detected above the guidance values in the total and dissolved samples collected from MW-23D1, MW-26D1 MW-31D1R, MW-33D and MW-35D; results are provided in Table 6.

5.3.2 Intermediate Horizon of Lower Sand Unit (D-2)

Eleven monitoring wells screened in the intermediate horizons within the lower sand unit were sampled for this investigation (including MW-23-D2R, MW-24-D2, MW-25-D2, MW-25-D3, MW-26-D2, MW-27-D2, MW-28-D2, MW-29-D2, MW-30-D2, MW-31-D2R, and MW-32-D). Although petroleum-related constituents, including BTEX and MTBE, and chlorinated compounds were detected above the guidance values in several of the wells monitoring the D-2 horizon, no VOCs were detected above the guidance values in groundwater samples collected from five of these wells (MW-26-D2, MW-27-D2, MW-29-D2, MW-30-D2 and MW-31D2R).

5.3.2.1 Petroleum-Related Constituents

- Benzene was detected above the guidance value of 1 µg/L in monitoring wells MW-24-D2 and MW-25-D2 at concentrations of 3.5 and 9.5 µg/L, respectively.

- MTBE was detected above the guidance value of 10 µg/L at concentrations ranging from 130 µg/L in MW-25-D2 to 280 µg/L in MW-24-D2.

- Toluene was detected above the guidance value of 5 µg/L in the groundwater sample collected from MW-25-D2 at a concentration of 24 µg/L.

- Total xylenes were detected above the guidance value of 5 µg/L in the groundwater sample collected from MW-25-D2 at a concentration of 16 µg/L.

5.3.2.2 CVOCs

- The CVOC observed at the highest concentration in the D2 horizon was TCE which was detected in the groundwater sample collected from MW-25D2 at a concentration of 17,000 µg/L.

- Methylene chloride was detected above the guidance value of 5 µg/L in the groundwater sample collected from MW-25-D2 at a concentration of 3,700 µg/L.

- VC was detected above the guidance value of 2 µg/L at concentrations ranging from 6.5 µg/L in MW-23-D2R to 300 µg/L in MW-24-D2.

- 1,1-DCE was detected above the guidance value of 5 µg/L in the sample collected MW-25D2 at a concentration of 5.7 µg/L.

- cis-1,2-DCE was detected above the guidance value of 5 µg/L at concentrations ranging from 6.6 µg/L in MW-28D2 to 3,500 µg/L in MW-25D2.

- trans-1,2-DCE was detected above the guidance value of 5 µg/L in the sample collected from MW-24-D2 at a concentration of 6.7 µg/L.

5.3.2.3 SVOCs and Inorganics

No SVOCs were detected above the guidance values in the monitoring wells screened it the D2 horizon. Iron and manganese were detected above the guidance values in total and dissolved samples collected from the D2 horizon; results are summarized in Table 6.

5.4 Deep Horizon of Lower Sand Unit (VD)

Six monitoring were sampled in the VD horizon. Relatively low levels of VOCs, CVOCs and SVOCs were detected above the guidance values in the VD horizon.

5.4.1 Petroleum-Related Constituents

- Acetone was detected above the guidance value of 50 µg/L in the sample collected from MW-26VD at a concentration of 84 µg/L.

- MTBE was detected above the guidance value of 10 µg/L in the groundwater samples collected from MW-29VD and MW-30VD at concentrations of 15 and 90 µg/L, respectively.

5.4.2 CVOCs

- TCE was detected above the guidance value of 5 µg/L in MW-25VD at a concentration of 180 µg/L.

- Methylene chloride was detected above the guidance value of 5 µg/L in MW-25-D3 at a concentration of 43 µg/L.

- cis-1,2-DCE was detected above the guidance value of 5 µg/L in the groundwater sample collected from MW-25VD at a concentration of 11 µg/L.

- 1,2-DCE was detected above the guidance value of 0.6 µg/L in the groundwater samples collected from MW-24VD and MW-30VD at concentrations of 0.61 and 1.5 µg/L, respectively.

- 1,2-Dichlorobenzene was detected above the guidance value of 3 µg/L in the groundwater sample collected from MW-30VD at a concentration of 5 µg/L.

5.4.3 SVOCs and Inorganics

- Phenol was detected above the guidance value of 1 µg/L in the groundwater samples collected from MW-25-D3 and MW-26VD at concentrations of 6.5 and 8.4 µg/L, respectively. No other SVOCs were detected above the guidance values.

- Iron and manganese were detected above the guidance values in the total and dissolved samples collected from MW-24VD, MW-25D3 and MW-25VD; results are provided in Table 6.

6. Summary and Conclusions

This section presents a summary of the current characterization of soil and groundwater conditions and the relevant conclusions which can be drawn regarding the nature and extent of soil and groundwater impacts at this site based on the available site investigation results.

In general, the analytical results of soil and groundwater samples collected during this investigation, in conjunction with available historical data, provide an adequate basis to characterize the current site conditions at this site and support the selection and design of an appropriate remedy for this portion of the site.

6.1 Soil Conditions in Former VRU Area

Analytical results of the soil samples collected from the fill material in the former VRU indicated that the shallow soils are primarily impacted with petroleum-related constituents, while the detections of CVOCs are limited and sporadic. Although benzene, ethylbenzene, total xylenes, methylene chloride, VC, cis-1,2 DCE, several SVOCs and lead were detected above the Unrestricted Use SCO in the shallow soil within this area, there were no detections of any constituents of concern above the Restricted Use SCO Commercial Criteria.

Acetone, 2-butanone, benzene, toluene, total xylenes, MTBE, cis-1,2-DCE, methylene chloride, trans-1,2-DCE, TCE, VC, 4-methylphenol and phenol were detected at concentrations above the Unrestricted Use SCO in soil samples collected from the meadow mat in the former VRU. The petroleum-related compounds were generally limited to the upper 2 feet of the meadow mat and concentrations decreased with depth. Most chlorinated constituents were detected in the soil samples collected from the 8- to 10-foot depth interval, but methylene chloride was detected at concentrations above the Unrestricted Use SCO in all soil samples collected from the meadow mat. No VOCs, SVOCs or inorganics were detected above the Restricted Use SCO Commercial Criteria in the meadow mat samples, with the exception of a single detection of VC. The extent of VOCs in the meadow mat has been defined by historical investigations except for the eastern boundary.

6.2 Soil Conditions in Oil/Water Separator Area

Soil conditions around the former oil water separator area were further characterized through visual observations and laboratory analysis of samples were collected during

excavation of the five test pits. These test pit in the oil/water separator area provide a basis to define the horizontal and vertical extent of the observed staining and sheens to aid in defining the impacted area.

Limited areas of sheen impacted soil was observed during excavation of test pits 4-C, 4-D and 4-F. The extent of the sheen-impacted soils was defined by test pit 4-F; the extent to the south was not defined by the test pits 4-A and 4-B because the excavation depths of these test pits was limited by subsurface pipes. The sheen was observed at the water table (approximately 4.5 feet bgs) and staining was observed at 2 to 6 feet bgs. No VOCs, SVOCs or inorganics were detected above the Restricted Use SCO for Commercial Use.

No VOCs or SVOCs were detected above the Unrestricted Use SCO. Mercury and silver were detected at concentrations above the Unrestricted Use SCO in the soil sample collected from TP-4-B-1 at concentrations of 0.606 and 3.32 mg/kg, respectively. The Unrestricted Use SCO for mercury and silver are 0.18 and 2 mg/kg, respectively. However, these inorganics were not detected above the Restricted Use SCO for Commercial Use.

There is also historical analytical data available for the oil/water separator area. Soil samples were collected from the footprint of tank 110 at 1 to 2 feet bgs for analysis of BTEX constituents; none were detected above the Unrestricted Use SCO.

6.3 Summary of Soil Conditions in Former 2 Story Brick Building Area (Southwest Area)

Twenty-eight soil samples were collected during test pit excavations and monitoring well installations in the southwest area of the site which is defined to include the locations of the one-story brick office building, the two-story brick building and the one block building (southwest area).

The visual observations of residual hydrocarbon impacts within this area were limited to some sheen and limited staining observed during the excavation of test pit 7-2, trace sheen was observed during excavation of test pit 8-1 and staining was observed during excavation of test pit 5 and test pit 6-3. The extent of visual impacts was defined within the limits of these test pits and no visual impacts were observed during excavation of test pits 6-1, 6-2, 7-1, 9 and 10. No visual impacts were observed during the drilling of monitoring wells AMW-4 though AMW-7.

Results of the soil samples selected for analysis from this area indicate that a single VOC (acetone), five SVOCs (methylene benzo(a)pyrene, benzo(a)anthracene, benzo(a)fluoranthene, benzo(k) fluoranthene, and chrysene), and four inorganics (arsenic, lead, mercury and zinc) were detected in soil samples collected in the southwest area of the site at concentrations above the Unrestricted Use SCO. However, only benzo(a) pyrene (TP 6-3 and TP-7-2) and arsenic were detected above Restricted Use SCO Commercial Criteria.

Although benzo(a) pyrene and arsenic were detected in soil samples above the Restricted Use SCO Commercial Criteria; neither of these constituents was detected in groundwater in the downgradient monitoring wells (AMW-4, AMW-5 and AMW-7) above the guidance values.

6.4 Soil Conditions in Former Garage Area

Soil conditions in this area were characterized based on visual observations and laboratory analysis of ten soil samples selected during excavation of test pits TP-1, TP-2, TP-3, TP-11, and TP-12. Although sheen was observed during excavation of test pits TP-1, TP-2 and TP-3, the extent of the limits of the sheen was defined within the extent of the excavation. Sheen was also observed in test pit TP-12 which was not defined within the extent of the test pit excavation, but was defined by numerous soil borings completed around this area.

Acetone, methylene chloride and mercury were detected above the Unrestricted Use SCO; however, no VOCs, SVOCs or inorganics were detected above the Restricted Use SCO Commercial Criteria.

6.5 Soil Conditions in Former Truck Loading Rack Area

The soil conditions in this area were characterized through visual observations and analysis of ten soil samples were collected during installation of monitoring wells MW-31-D1R, MW-31-D2R and P-18R in this area; nine soil samples were collected from the shallow fill and one soil sample was collected from the lower sand unit.

No sheens or stained soils were observed in soil during any of these soil borings and no VOCs or inorganics were detected above the Unrestricted Use SCO in the soil samples collected from this area. However, several SVOCs were detected above the Unrestricted Use SCO, including benzo(a)pyrene, benzo(a)anthracene, benzo(a)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene and

indeno(1,2,3-cd)pyrene. A number of these SVOCs also exceeded the Restricted Use SCO Commercial Criteria: (benzo(a)anthracene, benzo(a) pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene and indeno(1,2,3-cd)pyrene). Total SVOCs were not detected at concentrations of 500 mg/kg in any of the soil samples.

Historical soil samples collected in the former truck loading rack area also had detections of benzo(a) pyrene above the Unrestricted Use SCO, but below the Restricted Use SCO Commercial Criteria. No other SVOCs were detected above the Unrestricted Use SCO in the historical soil samples.

Historical soil samples in the area of the former truck loading rack area also had detections of BTEX constituents above the Unrestricted Use SCO, but below the Restricted Use SCO Commercial Criteria.

Phenol and naphthalene were the only SVOCs detected above groundwater guidance values in downgradient monitoring well AMW-4 and no SVOCs were detected above groundwater criteria in P-18R.

Based on the downgradient groundwater and historical soil analytical data for this area, the extent of constituents above Restricted Use SCO Commercial Criteria is limited. Because total SVOCs were not detected at concentrations of 500 mg/kg in any of the soil samples, no additional soil investigation is recommend for this area.

6.6 Groundwater Conditions

Current groundwater conditions at this site have been further characterized through the installation of fifteen additional monitoring wells to augment the existing monitoring well network and the collection and analysis of 39 groundwater samples from the new and existing wells at the locations illustrated on Figure 2. The results of the groundwater samples are summarized on Table 6 and Figures 9 and 10. A complete summary of historical groundwater sampling results for this site are also provided in Appendix B.

The water-bearing units of interest beneath this site include a shallow sand fill unit and a lower sand unit which are separated by a meadow mat unit which consist primarily of silt with fibrous organics and trace clay. With the exception of the bulkhead area, the meadow mat was encountered throughout the site at a thickness ranging from 5 to 12 feet. The underlying sand (lower sand unit) has been divided into three horizons for purposes of discussion: monitoring wells in the D1 horizon are

generally screened between 15 and 28 feet bgs, monitoring wells in the D2 horizon are screened between 30 and 42 feet bgs, and monitoring wells in the VD horizon are screened at the base of the unit (58 to 83 feet bgs). Cross section locations are shown on Figure 3; Cross Sections A' and B' are provided on Figures 4 and 5, respectively.

Depth to groundwater is observed at elevations ranging between 2 to 5 feet above mean sea level (3 to 5 feet bgs). Groundwater flow in the shallow fill unit is generally toward the south in the direction of Barnum Island Channel, while the potentiometric surface of the groundwater in the lower sand unit suggest groundwater flow generally toward the west. Groundwater elevation contour maps are presented in Appendix C.

A total of 12 monitoring wells were sampled to characterize the current groundwater conditions within the shallow overburden unit at the site. These shallow monitoring points include three wells in proximity to the former VRU Area (AMW-1, AMW-2, and AMW-3); five wells located in proximity to the southern site boundary along the Barnum Island Channel (AMW-4, AMW-5, AMW-7, AMW-11 and MW-DR); one well in proximity to the eastern site boundary (P-10) and one well in proximity to the western site boundary P-18R).

The analytical results of the groundwater samples from the shallow overburden wells located along the western, southern and eastern site boundaries (i.e. wells not in proximity to the VRU) indicate groundwater conditions at these site boundaries are relatively close to meeting water quality criteria with the exception of: several petroleum-related VOCs (benzene, ethylbenzene, and xylenes); six SVOCs (phenol, acenaphthalene, benzo(a)anthracene, benzo(b)fluoranthene, chrysene and fluorene); and two inorganic constituents (iron and manganese).

The analytical results of the groundwater samples from the shallow overburden wells in the VRU Area also indicated the presence of a similar list of petroleum-related VOCs, SVOCs and inorganics which exceed water quality criteria as well as two CVOCs (cis-1,2-DCE and VC) which exceed their criteria. However, the CVOCs concentrations in these overburden wells are all less than 100 µg/L.

The analytical results of the groundwater samples from the three new wells monitoring the meadow mat unit within the VRU Area (AMW-8, AMW-9, and AMW-10), indicate the presence of substantially higher concentration of the CVOCs (cis-1,2-DCE up to 240,000 µg/L, TCE up to 58,000 µg/L, and VC up to 20,000 µg/L). These groundwater results also indicated the presence petroleum related VOCs

(benzene, ethylbenzene, toluene, and xylenes), SVOCs (phenol and naphthalene), and iron which exceed water quality criteria.

A total of 27 monitoring wells screened at various depths within the lower sand unit were sampled to characterize current groundwater conditions within the lower sand unit. These monitoring wells include; a four well cluster in the center of the VRU (MW-25); six monitoring wells/clusters located around the VRU Area (MW-23, MW-24, MW-27, MW-30, MW-31, and MW-32); and five monitoring wells/clusters located along the site perimeter (MW-26, MW-28, MW-29, MW-33, and MW-35).

The analytical results of the groundwater samples from the first two screened intervals in monitoring well cluster in the center of the VRU (MW-25-D1 and MW-25-D2) indicate the presence of several CVOCs (cis-1,2-DCE up to 5,100 µg/L, TCE up to 17,000 µg/L, and VC up to 5,900 µg/L) in the D1 and D2 horizon wells within lower sand unit immediately below the VRU area which exceed water quality criteria. These groundwater results also indicated the presence of some petroleum related VOCs (benzene, ethylbenzene, toluene, xylenes, and MTBE), one SVOC (acenaphthene), and two inorganics (iron and manganese) which exceed water quality criteria.

The analytical results of the groundwater samples from the deepest screened interval in the monitoring well cluster in the center of the VRU (MW-25VD) indicate the concentrations of CVOCs which exceed water quality criteria (cis-1,2-DCE 11 µg/L and TCE 180 µg/L) decline rapidly with depth within lower sand unit below the VRU area. These groundwater results also indicated the presence of two inorganics (iron and manganese) which exceed water quality criteria.

The analytical results of the groundwater sample from the shallow horizon in the monitoring well clusters located immediately to the north of the VRU Area (MW-24-D1) indicate concentrations of CVOCs exceeding water quality criteria (cis-1,2-DCE at 7,400 µg/L, VC at 1800 µg/L and TCE at 65 µg/L). However, concentrations at this well cluster location were also observed to decline rapidly with depth within lower sand unit such that there were no detectable VOCs in the sample from the VD horizon.

The analytical results of rest of the well clusters located around the VRU (MW-23, MW-27, MW-30, MW-31, and MW-32) and along the property boundaries (MW-26, MW-28, MW-29, MW-33, and MW-35) indicate relatively few CVOC exceedances (cis-1, 2-DCE up to 29 µg/L and VC up to 7.8 µg/L). These groundwater results also

indicated the presence of some petroleum related VOCs (benzene up to 130 µg/L, ethylbenzene up to 5.3 µg/L, xylenes up to 16 µg/L, and MTBE up to 680 µg/L), as well as some SVOCs and inorganics which exceed water quality criteria.

In summary, the soil and groundwater conditions at this site have been adequately characterized to facilitate assessment of appropriate alternatives capable of remediating this site.

Notes:

1. Elevations are shown in feet above mean sea level (AMSL) relative to the NAVD datum of 1988 (NAVD88).
2. Depths are measured from the top of casing (TOC).
3. NA = not available.

Superscript Notes:

[A] No inner casing present.

Notes:

[1] A negative dissolved oxygen reading was recorded, so a value of 0 mg/L has been recorded in this table.

ºC = Celsius.

mg/L = milligrams per liter.

mV = millivolts.

NTUs = Nephelometric Turbidity Units.

SU = Standard Units.

mS/cm = milliSiemens per centimeter.

Table 5. Summary of 2010 Soil Analytical Data, Remedial Investigation Report, Former Gulf Oil Terminal, Oceanside, Town of Hempstead, NY

Notes:

1. Bold values exceed the Unrestricted Use SCOs presented in Table 375-6.8(a) of 6 NYCRR Part 375 (NYSDEC 2006).
2. Shaded values exceed the Restricted Use - Commercial SCOs presented in Table 375-6.8(b) of 6 NYCRR Part 375 (NYSDEC 2006).
3. Duplicate results are shown in brackets.

Abbreviations and Acronyms:

VOCs =	Volatile organics.
SVOCs =	Semivolatile organics.
mg/kg =	Milligram per kilogram.
NYCRR =	New York Codes, Rules and Regulations.
NYSDEC =	New York State Department of Environmental Conservation.

Analytical Qualifiers:

U =	The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
B =	The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
D =	Concentration is based on a diluted sample analysis.
E =	The compound was quantitated above the calibration range.
J =	The compound was positively identified; however, the associated numerical value is an estimated concentration only.
JY =	The compound was reported due to the lack of chromatographic resolution between benzo(b)fluoranthene and benzo(k)fluoranthene concentrations.
ND =	None detected.
R =	The sample results are rejected.

Table 6. Summary of 2011 Groundwater Analytical Data, Remedial Investigation Report, Former Gulf Oil Terminal, Oceanside, Town of Hempstead, NY

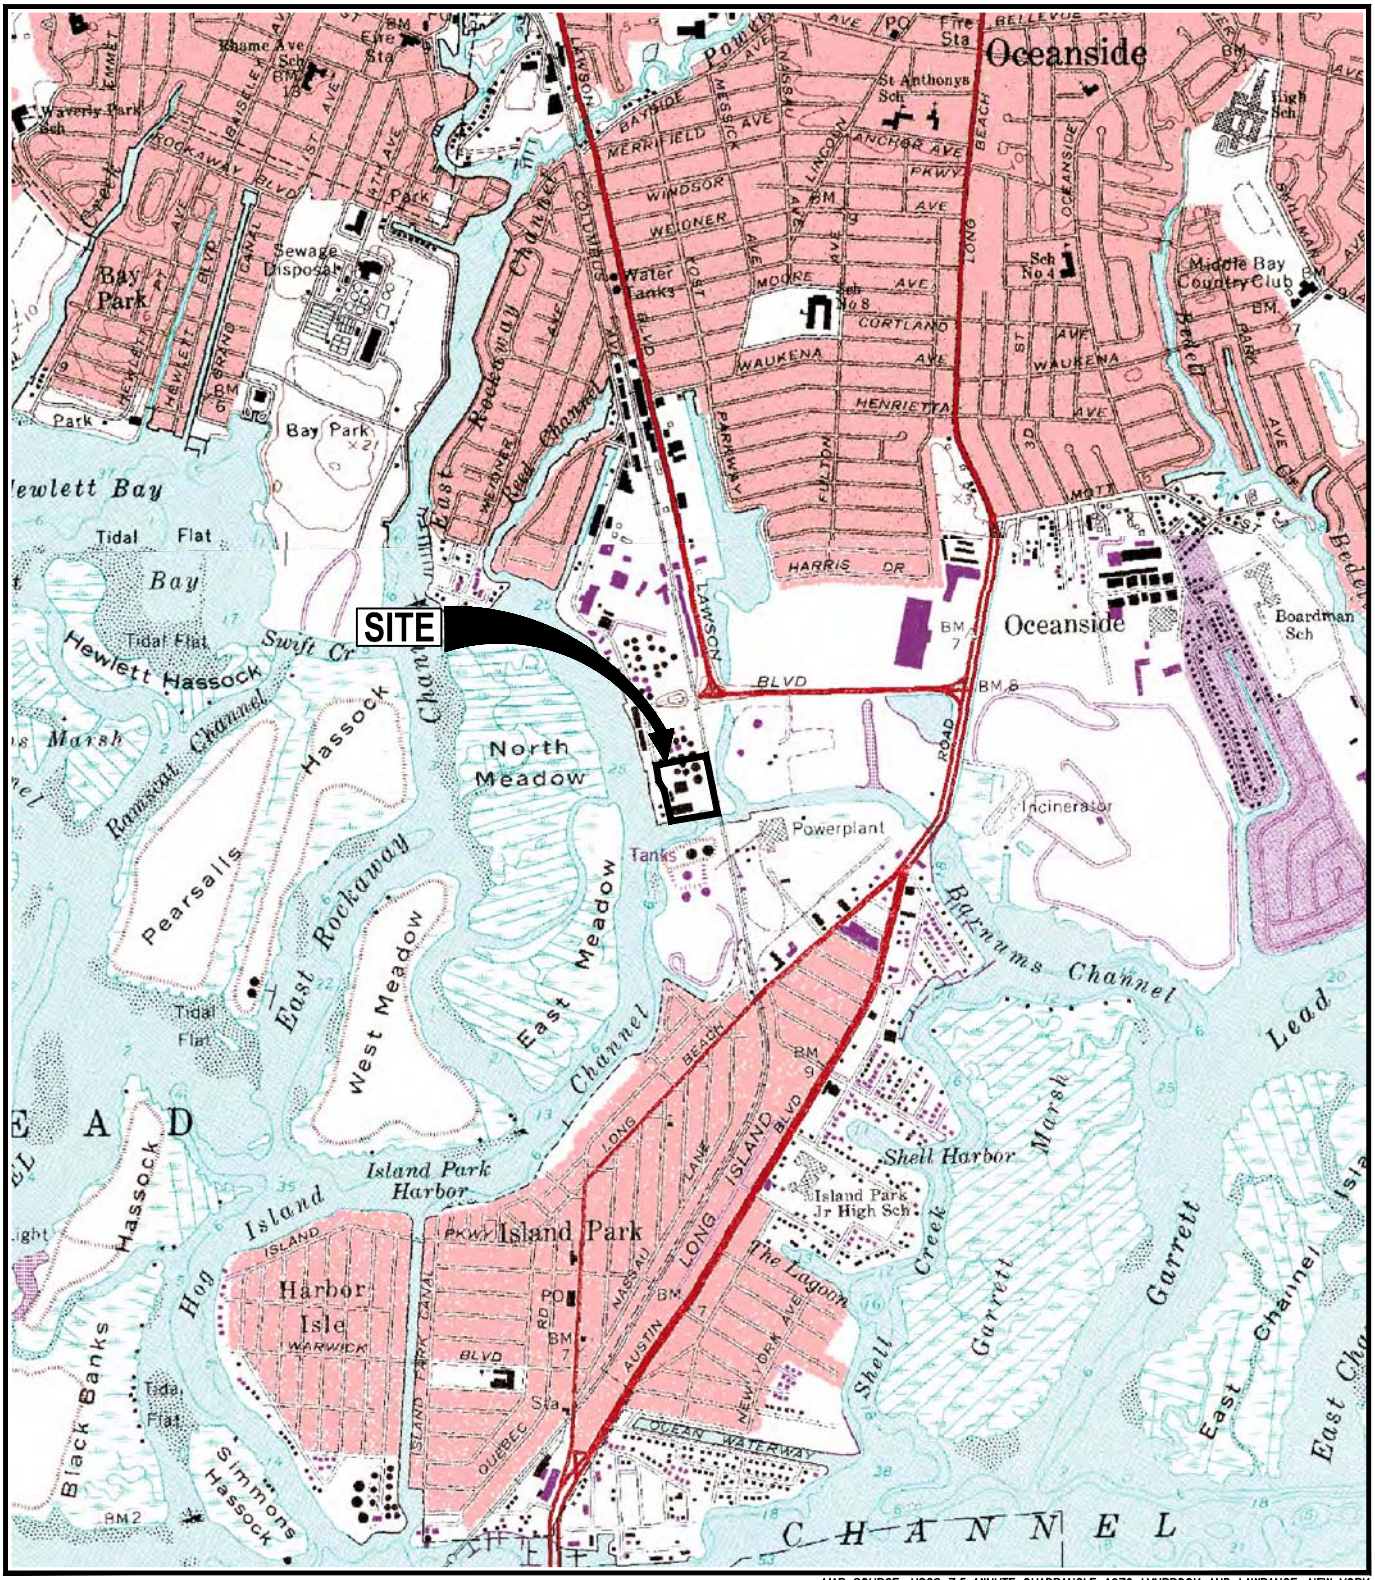
Notes:

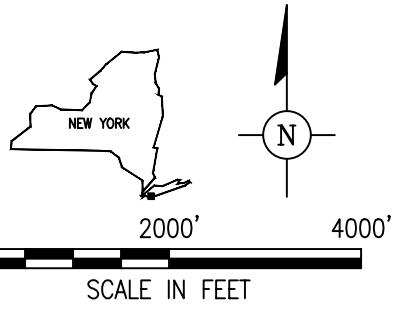
1. Bold values exceed the NYSDEC TOGS 1.1.1 Water Guidance Values (last amended June 2004).
2. Duplicate results are shown in brackets.

Abbreviations and Acronyms:



NA =	Not analyzed.
VOCs =	Volatile organics.
SVOCs =	Semivolatile organics.
ug/L =	Micrograms per liter.
T.O.G.S. =	Technical & Operational Guidance Series
NYSDEC =	New York State Department of Environmental Conservation.

Analytical Qualifiers:



*** =**	Laboratory duplicate analysis was outside control limits.
B =	The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
D =	Concentration is based on a diluted sample analysis.
E =	The compound was quantitated above the calibration range.
J =	The compound was positively identified; however, the associated numerical value is an estimated concentration only.
ND =	None detected.
U =	The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

NOTES:

1. SITE PLAN DERIVED FROM STORB, INC. DRAWING ENTITLED "PAVING PLAN–GULF OIL COMPANY–U.S., OCEANSIDE TERMINAL" AUGUST 7, 1976 AND LANGAN DRAWING ENTITLED "HISTORICAL SOIL AND GROUNDWATER SAMPLING PLAN MAY 11, 2007.
2. HISTORICAL SITE LAYOUT IS APPROXIMATE.
3. MONITORING WELL AND TEST PIT LOCATIONS SURVEYED BY A. TAY.
4. LOCATIONS OF SOIL BORINGS ARE APPROXIMATE.
5. CONSTITUENT LIST IS BASED ON THE CONSTITUENTS OF CONCERNS IDENTIFIED IN THE REMEDIAL INVESTIGATION/FEASIBILITY STUDY WORK PLAN.
6. ALL CONCENTRATIONS ARE MILLIGRAMS PER KILOGRAM (mg/kg) AND DEPTH INTERVALS ARE IN FEET BELOW GROUND SURFACE.
7. BOLDED VALUES EXCEED PART 375 UNRESTRICTED USE SOIL CLEANUP OBJECTIVES (SCOs).
8. ND = NOT DETECTED.
9. – = NOT ANALYZED.
10. J = INDICATES AN ESTIMATED VALUE.
11. NA = NOT AVAILABLE.
12. D = CONCENTRATION BASED ON A DILUTED ANALYSIS.
13. E = INDICATES AN ESTIMATED VALUE.

- 2005 BBL PAIRED WELL LOCATION
- TEST PIT SOIL SAMPLE LOCATION 2010
- EXCAVATION LOCATIONS (OCTOBER 2002)

ANALYTE	SHORT NAME	NYSDEC TOGS 1.1.1 WATER GUIDANCE VALUES
Benzene	B	1
Ethylbenzene	E	5
Toluene	T	5
Xylenes (total)	X	5
Methyl tert-butyl ether	MTBE	10
Trichloroethene	TCE	5
cis-1,2-Dichloroethene	cis-1,2-DCE	5
Vinyl Chloride	VC	2
Methylene Chloride	MC	5

NOTES:

1. SITE PLAN DERIVED FROM STORB, INC. DRAWING ENTITLED "PAVING PLAN–GULF OIL COMPANY–U.S., OCEANSIDE TERMINAL" AUGUST 7, 1976 AND LANGAN DRAWING ENTITLED "HISTORICAL SOIL AND GROUNDWATER SAMPLING PLAN MAY 11, 2007.
2. MONITORING WELL LOCATIONS SURVEYED BY A. TAY.
3. LOCATIONS OF SOIL BORINGS ARE APPROXIMATE.
4. CONSTITUENT LIST IS BASED ON THE CONSTITUENTS OF CONCERNS IDENTIFIED IN THE REMEDIAL INVESTIGATION/FEASIBILITY STUDY WORK PLAN.
5. ALL CONCENTRATIONS ARE MICROGRAMS PER LITER (ug/L).
6. BOLDED VALUES EXCEED THE NYSDEC TOG 1.1.1 WATER GUIDANCE VALUES.
7. ND(1.0) = CONSTITUENT NOT DETECTED. ASSOCIATED DETECTION LIMIT IN PARENTHESES.
8. – = NOT ANALYZED.
9. J = INDICATES AN ESTIMATED VALUE.
10. DUPLICATE RESULTS ARE PROVIDED IN BRACKETS.

Appendix A

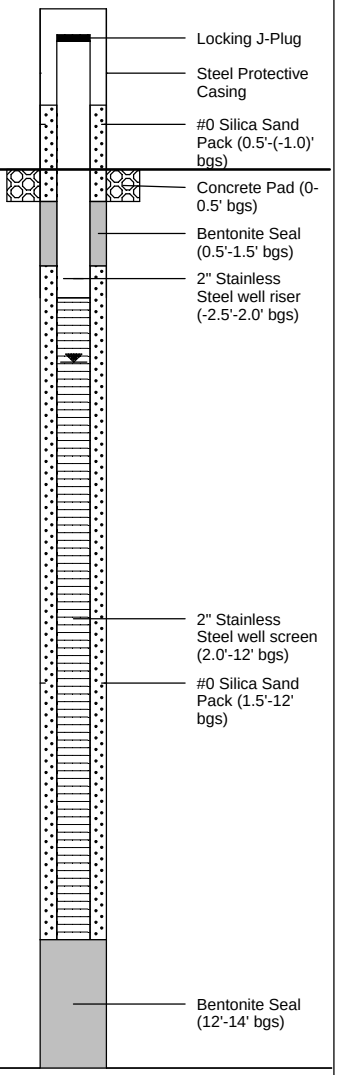
Boring Logs and Test Pit Logs

Date Start/Finish: 11/16/10 - 11/17/10
Drilling Company: Parratt Wolff
Driller's Name: J. Price
Drilling Method: 4.24" HSA
Sampling Method: 2" x 2' Split Spoon
Rig Type: Vac Unit/IR 466

Northing: 164743.22
Easting: 108958.48
Casing Elevation: 7.94

Borehole Depth: 14' bgs
Surface Elevation: 5.18

Descriptions By: MWE



Well/Boring ID: **AMW-1**

Client: Chevron

Location: Oceanside Former Gulf Terminal
Oceanside, New York

DEPTH	ELEVATION	Sample Run Number	Sample/Int/Type	Recovery (feet)	PID Headspace (ppm)	Geologic Column	Stratigraphic Description
0	5	1	0-2	Grab	0.0		Brown fine to coarse unsorted SAND, little fine to medium subangular Gravel, trace Organics, Silt (M,NP)
		2	2-4	Grab	19.4		trace sheen at water table
5	0	3	4-6	Grab	1.4		Brown fine SAND, trace Organics, fine to medium subangular Gravel (S,NP) moderate to trace petroleum-like odor, decrease with depth (4-10' bgs)
		4	6-8	Grab	0.9		
		5	8-10	NR	NA		No Recovery
10	-5	6	10-12	0.7	23.7		Brown fine to coarse SAND, little fine Gravel (S,NP)
		7	12-14	2.0	16.6		Grey SILT, some Clay, little to trace fine Sand, Organics (S,MP) moderate sulfur-like odor
15	-10						End of boring at 14' bgs

Well/Boring Construction

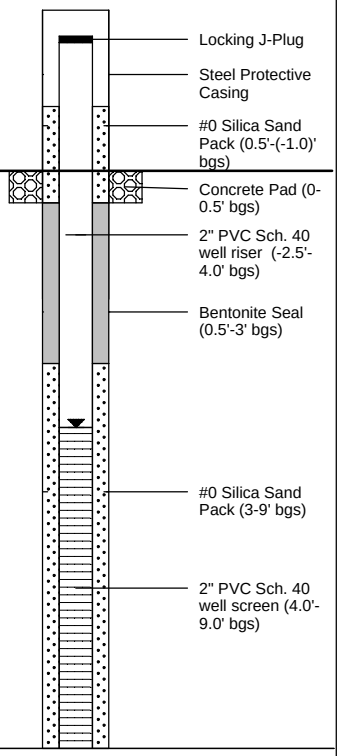
ARCADIS
Infrastructure, environment, buildings

Remarks: bgs = below ground surface; NA = Not Available/Applicable; AMSL = Above Mean Sea Level; P = Plastic; NP = Non-Plastic; M = Moist; S = Saturated
Horizontal datum is the North American Datum of 1983 (NAD 83); New York State Plane Long Island coordinate system, in U.S. Survey feet. Vertical datum is the North American Vertical Datum of 1988 (NAVD 88).
Sample @ AMW-1 (0-2'), (2-4'), (4-6') for VOCs, SVOCs, TAL metals, ferrous iron, and sulfate.

Date Start/Finish: 11/16/10 - 11/17/10
Drilling Company: Parratt Wolff
Driller's Name: J. Price
Drilling Method: 4.24" HSA
Sampling Method: 2" x 2' Split Spoon
Rig Type: Vac Unit/IR 466

Northing: 164727.82
Easting: 1080938.22
Casing Elevation: 8.14

Borehole Depth: 9' bgs
Surface Elevation: 5.37



Descriptions By: MWE

Well/Boring ID: **AMW-2**

Client: Chevron

Location: Oceanside Former Gulf Terminal
Oceanside, New York

DEPTH / ELEVATION	Sample Run Number	Sample/Int/Type	Recovery (feet)	PID Headspace (ppm)	Geologic Column	Stratigraphic Description
0 / 0						
5 / 0	1	0-2	Grab	794		Brown fine to medium SAND, some fine to coarse subangular Gravel, trace Organics, Silt (M,NP) heavy petroleum-like odor, dark staining starting at 1.5' bgs (1.5'-4.0' bgs)
	2	2-4	Grab	1,599		Dark brown and black fine to medium SAND, little to some Organics (roots mainly), little fine to coarse subangular Gravel, trace Silt (loose) (M,NP)
5 / 0	3	4-6	Grab	37.8		Brown fine SAND, little to trace fine to medium subangular Gravel, trace Organics (S,NP) faint petroleum-like odor (4.0'-8.0' bgs, possibly drawn from above)
	4	6-8	Grab	23.6		
	5	8-10	1.0	4.7		
10 / -5						End of boring at 9' bgs
15 / -10						

Well/Boring Construction

ARCADIS
Infrastructure, environment, buildings

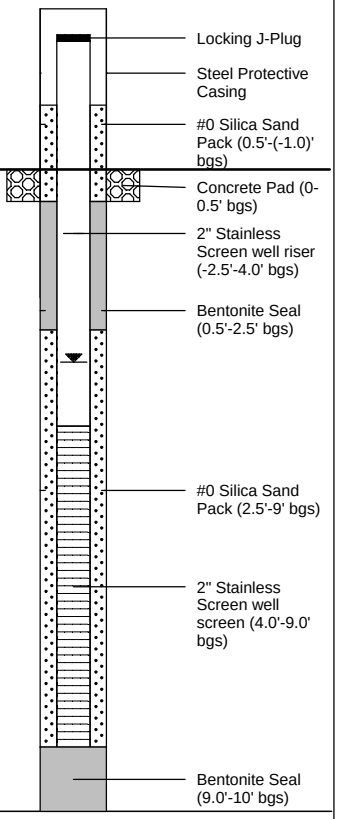
Remarks: bgs = below ground surface; NA = Not Available/Applicable; AMSL = Above Mean Sea Level; P = Plastic; NP = Non-Plastic; M = Moist; S = Saturated
Horizontal datum is the North American Datum of 1983 (NAD 83); New York State Plane Long Island coordinate system, in U.S. Survey feet. Vertical datum is the North American Vertical Datum of 1988 (NAVD 88).
Sample @ AMW-2 (0-2'), (2-4'), (4-6') for VOCs, SVOCs, TAL metals, ferrous iron, sulfate.

Date Start/Finish: 11/30/10
Drilling Company: Parratt Wolff
Driller's Name: J. Price
Drilling Method: 4.24" HSA
Sampling Method: 2" x 2' Split Spoon
Rig Type: Vac Unit/IR 466

Northing: 164690.55
Easting: 1080941.49
Casing Elevation: 7.53

Borehole Depth: 10' bgs
Surface Elevation: 5.41

Descriptions By: MWE



Well/Boring ID: **AMW-3**

Client: Chevron

Location: Oceanside Former Gulf Terminal
Oceanside, New York

DEPTH / ELEVATION	Sample Run Number	Sample/Int/Type	Recovery (feet)	PID Headspace (ppm)	Geologic Column	Stratigraphic Description
0 / 5	1	0-2	Grab	273		Brown to grey fine to coarse SAND and fine to coarse GRAVEL, trace Silt, Organics (M,NP)
	2	2-4	Grab	384		moderate petroleum-like odor, increase with depth
5 / 0	3	4-6	Grab	339		heavy petroleum-like odor
	4	6-8	Grab	211		Grey fine to medium SAND, little fine to medium Gravel (S,NP)
	5	8-10	1.0	67.8		Grey SILT and CLAY, little Peat, trace Organics, fine Sand (S,P) moderate petroleum-like odor, decrease with depth
10 / -5						End of boring at 10' bgs
15 / -10						

Well/Boring Construction

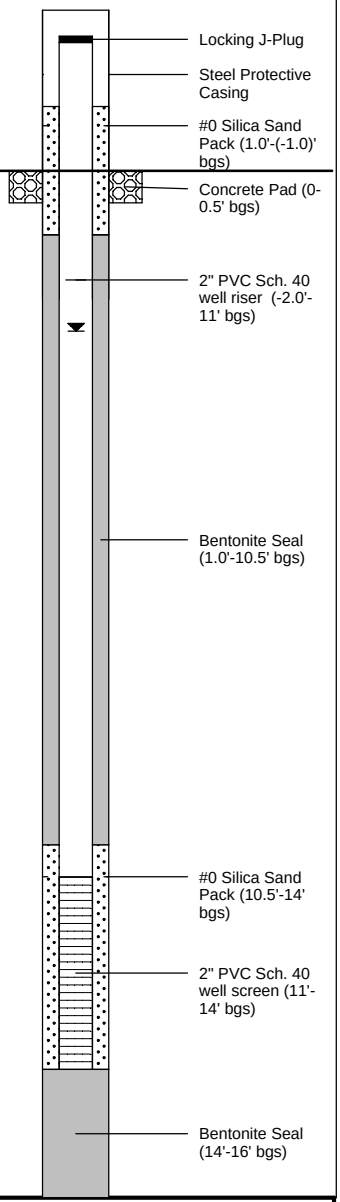
Surface Elevation: 5.41

Descriptions By: MWE



Well/Boring ID: **AMW-8**

Client: Chevron

Location: Oceanside Former Gulf Terminal
Oceanside, New York

DEPTH	ELEVATION	Sample Run Number	Sample/Int/Type	Recovery (feet)	PID Headspace (ppm)	Geologic Column	Stratigraphic Description
0	5	1	0-2	Grab	10.0		Brown fine to coarse SAND, some fine to medium subangular Gravel, trace Silt, Organics (M,NP) faint petroleum-like odor, increase with depth
		2	2-4	Grab	43.8		Grey to brown fine to coarse SAND, little fine to medium Gravel (S,NP) moderate petroleum-like odor, trace sheen in water at water table
5	0	3	4-6	Grab	6.9		
		4	6-8	Grab	3.9		
		5	8-10	0.2	18.9		No Recovery
10	-5	6	10-12	1.0	4.7		Grey SILT and CLAY, some Peat, little fine Sand (S,MP) moderate sulfur-like odor, trace petroleum-like odor
		7	12-14	2.0	18.7		
15	-10	8	14-16	2.0	8.6		Grey to brown fine to medium SAND, little Silt, Organics, Peat, Clay (S,NP) End of boring at 16' bgs

Well/Boring Construction

ARCADIS
Infrastructure, environment, buildings

Remarks: bgs = below ground surface; NA = Not Available/Applicable; AMSL = Above Mean Sea Level; P = Plastic; NP = Non-Plastic; M = Moist; S = Saturated
Horizontal datum is the North American Datum of 1983 (NAD 83); New York State Plane Long Island coordinate system, in U.S. Survey feet. Vertical datum is the North American Vertical Datum of 1988 (NAVD 88).
Sample @ AMW-8 (10-11'), (12-14'), (14-15') for VOCs, SVOCs, TAL metals, ferrous iron, sulfate.

Date Start/Finish: 11-30-10
Drilling Company: Parratt Wolff
Driller's Name: J. Price
Drilling Method: 4.24" HSA
Sampling Method: 2" x 2' Split Spoon
Rig Type: Vac Unit/IR 466

Northing: 164741.70
Easting: 1080920.72
Casing Elevation: 7.52

Borehole Depth: 16' bgs

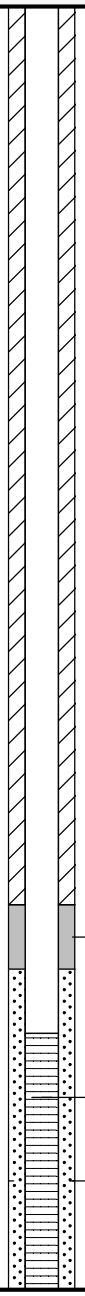
		7	12-14	2.0	2.3		heavy sulfur-like odor
							Drilled from 14' to 15' before beginning mud rotary
15	-10	8	15-17	1.0	52.4		Grey to brown fine to medium SAND, trace fine to medium Gravel (S,NP)

Well/Boring Construction

ARCADIS
Infrastructure, environment, buildings

Remarks: bgs = below ground surface; NA = Not Available/Applicable; AMSL = Above Mean Sea Level; P = Plastic; NP = Non-Plastic; M = Moist; S = Saturated
Horizontal datum is the North American Datum of 1983 (NAD 83); New York State Plane Long Island coordinate system, in U.S. Survey feet. Vertical datum is the North American Vertical Datum of 1988 (NAVD 88).
Sample @ MW-31D-2R (2-4'), (4-6'), (6-8'), (17-19') & Dup-111710 @ (4-6') for VOCs, SVOCs, TAL metals, ferrous iron, sulfate.

Client: Chevron



Well/Boring ID: **MW-31D-2R**

Borehole Depth: 42' bgs

Site Location:
Oceanside Former Gulf Terminal
Oceanside, New York

DEPTH	ELEVATION	Sample Run Number	Sample/Int/Type	Recovery (feet)	PID Headspace (ppm)	Geologic Column	Stratigraphic Description
		8	15-17	1.0	52.4		
		9	17-19	1.6	20.0

Table 1. Summary of Soil Analytical Data, Remedial Investigation Report, Former Gulf Oil Terminal, Oceanside, Town of Hempstead, NY

Notes:

1. Bold values exceed the Unrestricted Use SCOs presented in Table 375-6.8(a) of 6 NYCRR Part 375 (NYSDEC 2006).
2. Shaded values exceed the Restricted Use - Commercial SCOs presented in Table 375-6.8(b) of 6 NYCRR Part 375 (NYSDEC 2006).
3. Duplicate results are shown in brackets.

Abbreviations and Acronyms:

VOCs = Volatile organics.
SVOCs = Semivolatile organics.
mg/kg = Milligram per kilogram.
NYCRR = New York Codes, Rules and Regulations.
NYSDEC = New York State Department of Environmental Conservation.

Analytical Qualifiers:

U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
B = The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
D = Concentration is based on a diluted sample analysis.
E = The compound was quantitated above the calibration range.
J = The compound was positively identified; however, the associated numerical value is an estimated concentration only.
JY = The compound was reported due to the lack of chromatographic resolution between benzo(b)fluoranthene and benzo(k)fluoranthene concentrations.
ND = None detected.
R = The sample results are rejected.

Table 2. Summary of Groundwater Analytical Data, Remedial Investigation Report, Former Gulf Oil Terminal, Oceanside, Town of Hempstead, NY

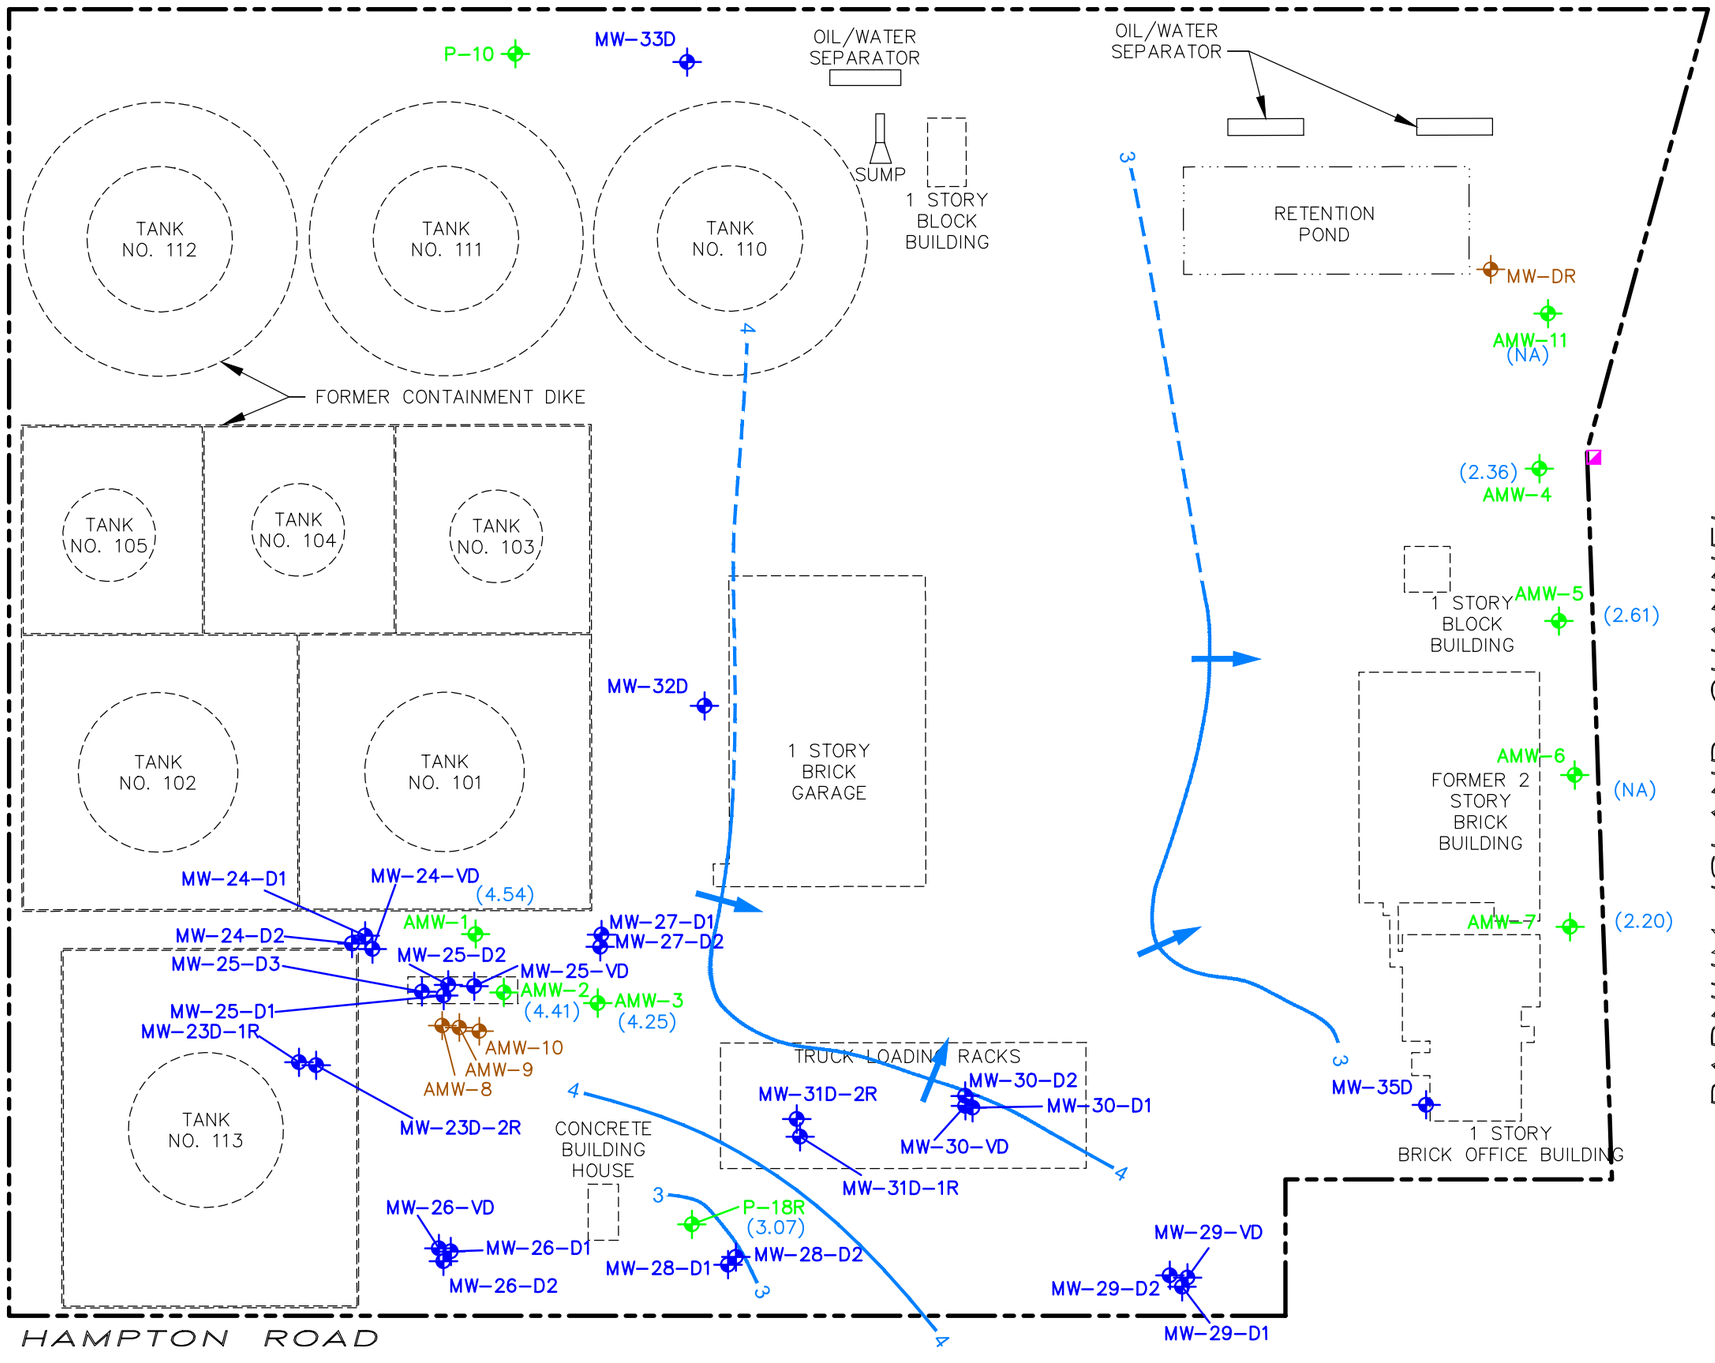
Notes:

1. Bold values exceed the NYSDEC TOGS 1.1.1 Water Guidance Values (last amended June 2004).
2. Duplicate results are shown in brackets.

Abbreviations and Acronyms:



NA =	Not analyzed.
VOCs =	Volatile organics.
SVOCs =	Semivolatile organics.
ug/L =	Micrograms per liter.
T.O.G.S. =	Technical & Operational Guidance Series.
NYSDEC =	New York State Department of Environmental Conservation.

Analytical Qualifiers:

*** =**	Laboratory duplicate analysis was outside control limits.
B =	The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.
D =	Concentration is based on a diluted sample analysis.
E =	The compound was quantitated above the calibration range.
J =	The compound was positively identified; however, the associated numerical value is an estimated concentration only.
ND =	None detected.
U =	The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

Data Usability Summary Report

OCEANSIDE, NEW YORK

Volatile, Semivolatile, Metals and Miscellaneous Analyses

SDG#RTL0286

Analyses Performed By:
TestAmerica
Amherst, New York

Report: #13699R
Review Level: Tier III
Project: B0047517.0004.00001

SUMMARY

This data quality assessment summarizes the review of Sample Delivery Group (SDG) # RTL0286 for samples collected in association with the Chevron – Former Gulf Oil Terminal Site. The review was conducted as a Tier III evaluation and included review of data package completeness. Only analytical data associated with constituents of concern were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain of custody. Analyses were performed on the following samples:

Sample ID	Lab ID	Matrix	Sample Collection Date	Parent Sample	Analysis

Note:
1. Miscellaneous parameters include total organic carbon, sulfate, and ferrous iron.
2. Matrix spike/matrix spike duplicate (MS/MSD) was performed on sample locations AMW-3 (4-6) and MW-23D-2R (18-20).

ANALYTICAL DATA PACKAGE DOCUMENTATION

The table below is the evaluation of the data package completeness.

Items Reviewed	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes	
1. Sample receipt condition		X		X	
2. Requested analyses and sample results		X		X	
3. Master tracking list		X		X	
4. Methods of analysis		X		X	
5. Reporting limits		X		X	
6. Sample collection date		X		X	
7. Laboratory sample received date		X		X	
8. Sample preservation verification (as applicable)		X		X	
9. Sample preparation/extraction/analysis dates		X		X	
10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of QA or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

QA - Quality Assurance

ORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to (United States Environmental Protection Agency) USEPA SW-846 Method 8260 and 8270. Data were reviewed in accordance with USEPA National Functional Guidelines of October 1999.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  N The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification.

  R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

VOLATILE ORGANIC COMPOUND (VOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8260	Water	14 days from collection to analysis	Cool to 4°C±2°C; preserved to a pH of less than 2 s.u.
	Soil	14 days from collection to analysis	Cool to 4°C±2°C.

s.u. Standard units

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Locations	Analytes	Sample Result	Qualification
AMW-11 (4-6) P-18R (0-2) P-18R (4-6)	Methylene chloride	Detected sample results >RL and <BAL	"UB" at detected sample concentration

RL Reporting limit

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.
All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Locations	Initial/Continuing	Compound	Criteria
AMW-9 (14-15) TP-6-1 TP-6-2	CCV %D	1,1,2-Trichloro-1,2,2-trifluoroethane	21.7%
		Bromomethane	29.2%
		Methylene chloride	26.5%
		Trichlorofluoromethane	21.9%
MW-25D3 (0-2) TP-4-B-1 TP-4-D-1 TP-4-F-1	CCV %D	1,2-Dibromo-3-chloropropane	-24.8%
		Bromomethane	20.6%

		Bromomethane	23.8%
		Carbon disulfide	-33.0%
		Carbon tetrachloride	-23.9%
		Cyclohexane	-22.1%
		Dibromochloromethane	-27.2%
		Dichlorodifluoromethane	-25.4%
		Methylcyclohexane	-21.2%
TP-7-2 TP-9-1 TP-9-2 DUP-120710	CCV %D	1,2-Dibromo-3-chloropropane	-24.0%
		Bromoform	-38.3%
		Bromomethane	21.3%
		Carbon disulfide	-26.8%
		Carbon tetrachloride	-29.1%
		Dibromochloromethane	-27.8%
		Dichlorodifluoromethane	-42.2%

Sample Locations	Initial/Continuing	Compound	Criteria
TB-6-120110 RB-5-120110 TB-7-120110 TP-8-1	CCV %D	1,1,2-Trichloro-1,2,2-trifluoroethane	-28.1%
		1,2-Dibromo-3-chloropropane	-29.8%
		Bromoform	-41.8%
		Carbon disulfide	-46.6%
		Carbon tetrachloride	-32.8%
		Cyclohexane	-31.2%
		Dibromochloromethane	-28.5%
		Dichlorodifluoromethane	-40.8%
AMW-7 (4-6) AMW-7 (8-10) AMW-7 (10-12) TB-4-112910 AMW-8 (10-11) AMW-8 (12-14) AMW-8 (14-15) RB-4-11-30-10 TB-5-113010 AMW-9 (9-10) AMW-9 (10-12) TP-1-1 TP-1-2 TP-1-3 TP-2-1 TP-2-2	CCV %D	Chloroethane	-24.0%
		Dichlorodifluoromethane	-20.3%
AMW-3 (0-2) AMW-3 (2-4) AMW-3 (4-6) DUP-2-113010 AMW-10 (8.5-9.5) AMW-10 (12-14) AMW-10 (14-15) AMW-11 (2-4) AMW-11 (6-8)	CCV %D	Carbon disulfide	-23.4%
		Chloroethane	-21.3%
		Methylene chloride	-21.8%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 15% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D >20% (increase in sensitivity)	Non-detect	No Action
		Detect	J
	%D >20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Surrogate	Recovery
TP-8-1	1,2-Dichloroethane-d4	> UL
	4-Bromofluorobenzene	AC
	Toluene-d8	AC

UL Upper control limit
LL Lower control limit
D Diluted
AC Acceptable

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results associated with the deviant fraction are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	UJ[1]
	Detect	J[1]

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the VOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

Sample locations associated with the MS/MSD exhibiting recoveries outside of the control limits are presented in the following table.

Sample Locations	Compound	MS Recovery	MSD Recovery
TP-3-3	1,2,4-Trichlorobenzene	<LL but >10%	<LL but >10%
	1,2-Dibromo-3-chloropropane	<LL but >10%	AC
	1,2-Dibromoethane	<LL but >10%	AC
	2-Butanone	<LL but >10%	<LL but >10%
	2-Hexanone	<LL but >10%	<LL but >10%
	4-Methyl-2-pentanone	<LL but >10%	<LL but >10%
	Acetone	<LL but >10%	<LL but >10%
	Bromoform	<LL but >10%	<LL but >10%
MW-23D-2R (18-20)	1,1,2,2-Tetrachloroethene	<LL but >10%	<LL but >10%
	1,1,2-Trichloroethane	<LL but >10%	<LL but >10%
	1,2,4-Trichlorobenzene	<LL but >10%	<LL but >10%
	1,2-Dibromo-3-chloropropane	<LL but >10%	<LL but >10%
	1,2-Dibromoethane	<LL but >10%	<LL but >10%
	1,2-Dichlorobenzene	<LL but >10%	<LL but >10%
	2-Butanone	<LL but >10%	<LL but >10%
	2-Hexanone	<LL but >10%	<LL but >10%
	4-Methyl-2-pentanone	<LL but >10%	<LL but >10%
	Acetone	<LL but >10%	<LL but >10%
	Bromoform	<LL but >10%	<LL but >10%
	Dibromochloromethane	<LL but >10%	<LL but >10%
	1,3-Dichlorobenzene	AC	<LL but >10%
	1,4-Dichlorobenzene	AC	<LL but >10%
	Ethylbenzene	AC	<LL but >10%

AC Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Parent sample concentration > four times the MS/MSD spiking solution concentration.	Detect	No Action
	Non-detect	

8. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS/LCSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD analysis exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Compound	LCS Recovery	LCSD Recovery
AMW-7 (4-6) AMW-7 (8-10) AMW-7 (10-12) TB-4-112910 AMW-8 (10-11) AMW-8 (12-14) AMW-8 (14-15) RB-4-11-30-10 TB-5-113010 AMW-9 (9-10) AMW-9 (10-12) TP-1-1 TP-1-2 TP-1-3 TP-2-1 TP-2-2 TP-3-1 TP-3-2	Methyl acetate	>UL	--

Sample Locations	Compound	LCS Recovery	LCSD Recovery
TP-3-3 P-18R (6-8) TP-5-2 RB-12-7-10 TB-10-12-7-10 TB-11-12-7-10 TP-7-1 TP-8-2 TP-9-3 TP-10-1 TP-10-2 TP-11-1 MW-31D-2R (17-19) MW-23D-2R (18-20) TP-10-3 AMW-11 (4-6) P-18R (0-2) P-18R (4-6) MW-25D3 (21-23) RB-12-9-10 TB-12-9-10	Methyl acetate	>UL	--

The criteria used to evaluate the LCS/LCSD recoveries are presented in the following table. In the case of an LCS/LCSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

9. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
AMW-3 (2-4)/DUP-2-113010	Benzene	120 U	110 J	AC
	Ethylbenzene	6700	10000	39.5 %
	Isopropylbenzene	3500	5200	39.0 %
	Methylcyclohexane	2500	6400	87.6 %
	Toluene	200	390	64.4 %
	Xylenes, total	6100	8200	29.3 %

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
TP-9-2/DUP-120710	Cyclohexane	120 J	610	NC
	Isopropylbenzene	370	1100	99.3 %
	Methylcyclohexane	600	2900	131.4 %

AC Acceptable
ND Not detected

The compounds cyclohexane and methylcyclohexane associated with sample locations TP-9-2 (4-6) and DUP-120710 exhibited a field duplicate RPD greater than the control limit. The associated sample results from sample locations for the listed analyte were qualified as estimated.

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

When samples were re-analyzed at a dilution, a methanol extraction was performed. The methanol extraction method generally exhibits greater extraction efficiency than the water extraction method, therefore the compounds are generally detected at a higher concentration associated with the methanol extraction method. In the instance when the re-analysis sample result completed by the methanol extraction method exhibits a concentration greater than the water extracted analysis, the result from the methanol extracted sample is reported.

Sample results associated with compounds that exhibited a concentration greater than the linear range of the instrument calibration and/or exhibited higher concentration of a detected compound in the methanol-extracted analysis are summarized in the following table.

Sample ID	Compound	Original Analysis	Diluted Analysis	Reported Analysis
AMW-8 (10-11)	cis-1,2-Dichloroethene	4400E	3200 D	3200 D
	Methyl-t-butyl ether	4600 E	3300 D	3300 D
	Methylene chloride	18000 E	24000 D	24000 D
	Vinyl chloride	4600 E	1900 D	1900 D
AMW-8 (12-14)	Methylene chloride	8900 E	8000 D	8000 D
AMW-9 (9-10)	cis-1,2-Dichloroethene	27000 E	3200 D	3200 D
	Methyl-t-butyl ether	8100 E	9000 D	9000 D
	Methylene chloride	9800 E	7000 D	7000 D
	Trichloroethene	5300 E	5000 D	5000 D
	Vinyl chloride	15000 E	910 DJ	15000 EJ
AMW-9 (10-12)	Methyl-t-butyl ether	2700 E	1500 D	1500 D
	Methylene chloride	9500 E	3700 D	3700 D
	Vinyl chloride	3100 E	250 D	3100 EJ
AMW-10 (8.5-9.5)	cis-1,2-Dichloroethene	71000 E	110000 D	110000 D
	Methyl-t-butyl ether	4800	6700 D	6700 D
	Methylene chloride	520	1100 D	1100 D
	Toluene	1900	2700 D	2700 D
	trans-1,2-Dichloroethene	2200	3300 D	3300 D
	Vinyl chloride	1300	2300 D	2300 D
	Xylenes, total	4700	6400 D	6400 D

Note: In the instance where both the original analysis and the diluted analysis sample results exhibited a concentration greater than and/or less than the calibration linear range of the instrument; the sample result exhibiting the greatest concentration will be reported as the final result.

Sample results associated with compounds exhibiting concentrations greater than the linear range are qualified as documented in the table below when reported as the final reported sample result.

Reported Sample Results	Qualification
Diluted sample result within calibration range	D
Diluted sample result less than the calibration range	DJ
Diluted sample result greater than the calibration range	EDJ
Original sample result greater than the calibration range	EJ

The original analysis of sample location AMW-9 (9-10) exhibited a vinyl chloride sample result greater than the calibration range and was flagged by the laboratory as “E”. The diluted analysis exhibited a concentration less than the calibration and was flagged by the laboratory as “DJ”. Since both results were outside of the calibration range the original undiluted analysis was reported as the usable result due to this result exhibiting the higher concentration.

The original analysis of sample location AMW-9 (10-12) exhibited a vinyl chloride sample result greater than the calibration range and was flagged by the laboratory as “E”. The diluted analysis exhibited a concentration within the calibration and was flagged by the laboratory as “D”. Since both results were outside of the calibration range the original undiluted analysis was reported as the usable result due to this result exhibiting the higher concentration.

11. System Performance and Overall Assessment

The results for several sample locations were qualified by the laboratory due to dilutions being performed for matrix effects, sample viscosity, and/or high concentrations of target analytes. Since these causes do not have a direct impact on the quality or usability of the data, the laboratory qualifiers will be removed.

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

SEMI-VOLATILE VOLATILE ORGANIC COMPOUND (SVOC) ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8270	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to 4°C±2°C.
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to 4°C±2°C.

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All compounds associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the compounds listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (B) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Locations	Analytes	Sample Result	Qualification
AMW-3 (0-2) AMW-3 (2-4) DUP-2-113010 AMW-10 (8.5-9.5) AMW-10 (12-14) AMW-11 (2-4) AMW-11 (6-8) TP-3-1 TP-3-2 TP-3-3 MW-25D3 (2-4) MW-25D3 (4-6) TP-4-D-1 TP-4-F-1 TP-5-2 TP-5-3	Bis(2-ethylhexyl)phthalate	Detected sample results <RL and <BAL	"UB" at the PQL

RL Reporting limit

3. Mass Spectrometer Tuning

Mass spectrometer performance was acceptable and all analyses were performed within a 12-hour tune clock.

System performance and column resolution were acceptable.

4. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

4.1 Initial Calibration

The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds only. A technical review of the data applies limits to all compounds with no exceptions.

All target compounds associated with the initial calibration standards must exhibit a %RSD less than the control limit (15%) or a correlation coefficient greater than 0.99 and an RRF value greater than control limit (0.05).

4.2 Continuing Calibration

All target compounds associated with the continuing calibration standard must exhibit a percent difference (%D) less than the control limit (20%) and RRF value greater than control limit (0.05).

All compounds associated with the calibrations were within the specified control limits, with the exception of the compounds presented in the following table.

Sample Locations	Initial/Continuing	Compound	Criteria
P-18R (0-2) TP-4-D-1 TP-4-F-1 TP-5-3	CCV %D	2,2-Oxybis(1-chloropropane	21.2%
		Benzaldehyde	29.4%
TP-6-1 TP-6-2 TP-6-3 TP-7-1 TP-7-2 TP-8-1 TP-8-2 TP-9-1 TP-9-2 TP-9-3 TP-10-1 TP-10-2 DUP-120710	CCV %D	2,4-Dinitrophenol	-30.4%
RB-7-12-3-10	CCV %D	Bis(2-ethylhexyl)phthalate	25.8%
		Butyl benzyl phthalate	20.7%
		Atrazine	22.0%
RB-12-7-10	CCV %D	2,4,6-Tribromophenol	23.1%
		Bis(2-ethylhexyl)phthalate	21.7%

The criteria used to evaluate the initial and continuing calibration are presented in the following table. In the case of a calibration deviation, the sample results are qualified.

Initial/Continuing	Criteria	Sample Result	Qualification
Initial and Continuing Calibration	RRF <0.05	Non-detect	R
		Detect	J
	RRF <0.01[1]	Non-detect	R
		Detect	J
	RRF >0.05 or RRF >0.01[1]	Non-detect	No Action
		Detect	
Initial Calibration	%RSD > 15% or a correlation coefficient <0.99	Non-detect	UJ
		Detect	J
Continuing Calibration	%D >20% (increase in sensitivity)	Non-detect	No Action
		Detect	J

Initial/Continuing	Criteria	Sample Result	Qualification
	%D >20% (decrease in sensitivity)	Non-detect	UJ
		Detect	J

[1] RRF of 0.01 only applies to compounds which are typically poor responding compounds (i.e., ketones, 1,4-dioxane, etc.)

5. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

Sample locations associated with surrogates exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Surrogate	Recovery
AMW-3 (0-2)	Phenol-d6	AC
	2-Fluorophenol	AC
	2,4,6-Tribromophenol	<LL but > 10%
	Nitrobenzene-d5	AC
	2-Fluorobiphenyl	AC
	Terphenyl-d14	AC

UL Upper control limit
LL Lower control limit
D Diluted
AC Acceptable

The criteria used to evaluate the surrogate recoveries are presented in the following table. In the case of a surrogate deviation, the sample results associated with the deviant fraction are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	No Action
	Detect	J
< LL but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Surrogates diluted below the calibration curve due to the high concentration of a target compounds	Non-detect	J[1]
	Detect	

[1] A more concentrated analysis was not performed with surrogate compounds within the calibration range; therefore, no determination of extraction efficiency could be made.

6. Internal Standard Performance

Internal standard performance criteria insure that the GC/MS sensitivity and response are stable during every sample analysis. The criteria requires the internal standard compounds associated with the SVOC exhibit area counts that are not greater than two times (+100%) or less than one-half (-50%) of the area counts of the associated continuing calibration standard.

All internal standard responses were within control limits.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit a percent recovery within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS/MSD recoveries must exhibit an RPD within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the compound concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater.

Sample locations associated with the MS/MSD exhibiting recoveries outside of the control limits are presented in the following table.

Sample Locations	Compound	MS Recovery	MSD Recovery
AMW-7 (4-6)	Atrazine	AC	>UL
AMW-3 (4-6)	2-Methylnaphthalene	>UL	AC
	4-Chlorophenyl phenyl ether	>UL	>UL
	Acetophenone	>UL	>UL
	Atrazine	>UL	>UL
	Di-n-butyl phthalate	>UL	>UL
	Fluorene	>UL	AC
	Naphthalene	>UL	AC
	N-Nitrosodiphenylamine	>UL	>UL
RB-4-11-30-10	Diethyl phthalate	AC	<LL but >10%
P-18R (0-2)	2,4-Dinitrophenol	<10%	<10%
	Acenaphthene	>UL	>UL
	Caprolactam	>UL	AC
	Fluorene	>UL	>UL
	Phenanthrene	>UL	>UL
RB-12-7-10	Atrazine	>UL	>UL
	Bis(2-ethylhexyl) phthalate	>UL	AC

AC Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Parent sample concentration > four times the MS/MSD spiking solution concentration.	Detect	No Action
	Non-detect	

Sample locations associated with MS/MSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

Sample Locations	Compound
AMW-3 (4-6)	2-Methylnaphthalene
RB-4-11-30-10	**All compounds except:** 2,4-Dimethylphenol 4-Nitrophenol Hexachlorobutadiene Hexachlorocyclopentadiene Hexachloroethane Phenol
MW-23D-2R (18-20)	4,6-Dinitro-2-methylphenol Dibenzo(a,h)anthracene

The criteria used to evaluate the RPD between the MS/MSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

8. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The compounds associated with the LCS analysis must exhibit a percent recovery within the laboratory-established acceptance limits.

Sample locations associated with LCS/LCSD analysis exhibiting recoveries outside of the control limits presented in the following table.

Sample Locations	Compound	LCS Recovery
P-18R (0-2) P-18R (4-6) P-18R (6-8) MW-25D3 (0-2)	Acetophenone	>UL

Sample Locations	Compound	LCS Recovery
MW-25D3 (2-4) MW-25D3 (4-6) TB-8-12-2-10 RB-6-12-2-10 TB-9-12-2-10 TP-4-B-1 TP-4-D-1 TP-4-F-1 TP-5-1 TP-5-2 TP-5-3	Benzaldehyde	>UL
	Dibenz(a,h)anthracene	>UL
	N-nitrosodi-n-propylamine	>UL
TP-6-1 TP-6-2 TP-6-3 TP-7-1 TP-7-2 TP-8-1 TP-8-2 TP-9-1 TP-9-2 TP-9-3 TP-10-1 TP-10-2 DUP-120710 TP-11-1 TP-12-1 MW-31D-2R (17-19) MW-23D-2R (18-20) TP-10-3	2,6-Dinitrotoluene	>UL
	2-Chlorophenyl phenyl ether	>UL
	Acetophenone	>UL
	Atrazine	>UL
	Caprolactam	>UL
	Diethyl phthalate	>UL
	Di-n-butyl phthalate	>UL
	Di-n-octyl phthalate	>UL
	Fluorene	>UL
	N-nitrosodiphenylamine	>UL
RB-12-7-10	4-Chlorophenyl pheyl ether	>UL
	Atrazine	>UL
	Bis(2-ethylhexyl) phthalate	>UL
	N-nitrosodiphenylamine	>UL

The criteria used to evaluate the LCS recoveries are presented in the following table. In the case of an LCS deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J

9. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for soil matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
AMW-3 (2-4)/DUP-2-113010	2,6-Dinitrotoluene	2000 U	2000 J	AC
	2-Methylnaphthalene	27000	62000	AC
	Acenaphthene	810 J	1800 J	AC
	Anthracene	430 J	980 J	AC
	Benzo(a)anthracene	260 J	400 J	AC
	Benzo(b)fluoranthene	200 J	390 J	AC
	Benzo(ghi)perylene	2000 U	220 J	AC
	Biphenyl	610 J	1500 J	AC
	Chrysene	230 J	450 J	AC
	Dibenzofuran	760 J	1500 J	AC
	Fluoranthene	690 J	1400 J	AC
	Fluorene	1300 J	2800 J	AC
	Naphthalene	11000	29000	90.0 %
	Phenanthrene	3200	6500	68.0 %
	Pyrene	670 J	1300 J	AC
TP-9-2/DUP-120710	Dibenzofuran	880 J	1400 J	AC
	Phenanthrene	1500	2500	50.0 %

AC Acceptable
U Not detected

The calculated RPDs between the parent sample and field duplicate were acceptable.

10. Compound Identification

Compounds are identified on the GC/MS by using the analytes relative retention time and ion spectra.

The isomers benzo(b)fluoranthene and benzo(k)fluoranthene associated with sample locations AMW-11 (2-4) and TP-12-1 analysis could not be chromatographically resolved. The laboratory quantitated the peak as benzo(b)fluoranthene and flagged the results ID4, and reported benzo(k)fluoranthene as non-detect. Benzo(k)fluoranthene concentration for sample locations AMW-11 (2-4) and TP-12-1 have been calculated from the peak area identified as benzo(b)fluoranthene using the appropriate Benzo(k)fluoranthene response factor. Both compounds have been reported due to the lack of chromatographic resolution and the reported benzo(b)fluoranthene and benzo(k)fluoranthene concentrations have been qualified as (JY) indicating the compounds could not be resolved.

11. System Performance and Overall Assessment

Sample location TP-12-1 was re-extracted and reanalyzed due to LCS recovery deviations. Due to sample non-homogeneity, the re-extracted analysis results' exhibited higher concentrations than the primary analysis. The re-extraction results were flagged as the reportable results. The results for several sample locations were qualified by the laboratory due to dilutions being performed for matrix effects,

sample viscosity, and/or high concentrations of target analytes. Since these causes do not have a direct impact on the quality or usability of the data, the laboratory qualifiers will be removed.

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

INORGANIC ANALYSIS INTRODUCTION

Analyses were performed according to (United States Environmental Protection Agency) SW-846 Methods 6000/7000, 3500FE, D-516-90, and the Lloyd Kahn Method for TOC. Data were reviewed in accordance with USEPA National Functional Guidelines of July 2002.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and that it was already subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory qualified and unqualified data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with the USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

    U The analyte was analyzed for but not detected. The associated value is the analyte instrument detection limit.

    B The reported value was obtained from a reading less than the contract-required detection limit (CRDL), but greater than or equal to the instrument detection limit (IDL).

- Quantitation (Q) Qualifiers

    E The reported value is estimated due to the presence of interference.

    N Spiked sample recovery is not within control limits.

    * Duplicate analysis is not within control limits.

- Validation Qualifiers

    J The analyte was positively identified; however, the associated numerical value is an estimated concentration only.

    UJ The analyte was not detected above the reported sample detection limit. However, the reported limit is approximate and may or may not represent the actual limit of detection.

    UB Analyte considered non-detect at the listed value due to associated blank contamination.

    R The sample results are rejected.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data but any value potentially contains error.

METALS ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 6010B	Water	180 days from collection to analysis	Cool to 4°C±2°C; preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to 4°C±2°C.
SW-846 7470	Water	28 days from collection to analysis	Cool to 4°C±2°C; preserved to a pH of less than 2.
SW-846 7471	Soil	28 days from collection to analysis	Cool to 4°C±2°C.

All samples were analyzed within the specified holding times.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

All analytes associated with the QA blanks exhibited a concentration less than the MDL, with the exception of the analytes listed in the following table. Sample results associated with QA blank contamination that were greater than the BAL resulted in the removal of the laboratory qualifier (J) of data. Sample results less than the BAL associated with the following sample locations were qualified as listed in the following table.

Sample Locations	Analytes	Sample Result	Qualification
AMW-7 (8-10) AMW-7 (10-12) TP-1-2 TP-1-3 TP-2-1 TP-2-2 AMW-3 (4-6) AMW-11 (2-4) AMW-11 (4-6) AMW-11 (6-8) TP-3-1 TP-3-3	Cadmium	Detected sample results <RL and <BAL	"UB" at the RL

RL = reporting limit

3. Calibration

Satisfactory instrument calibration is established to provide that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument's continuing performance is satisfactory.

3.1 Initial Calibration and Continuing Calibration

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 for all non-ICP analytes and all initial calibration verification standard recoveries were within control limits.

All continuing calibration verification standard recoveries were within the control limit.

3.2 CRDL Check Standard

The CRDL check standard serves to verify the linearity of calibration of the analysis at the CRDL. The CRDL standard is not required for the analysis of aluminum (Al), barium (Ba), calcium (Ca), iron (Fe), magnesium (Mg), sodium (Na), and potassium (K). The criteria used to evaluate the CRDL standard analysis are presented below in the CRDL standards evaluation table.

All analytes associated with CRDL standard recoveries were within control limits.

3.3 ICP Interference Control Sample (ICS)

The ICS verifies the laboratories interelement and background correction factors.

All ICS exhibited recoveries within the control limits.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis/Laboratory Duplicate Analysis

MS and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

4.1 MS/MSD Analysis

All metal analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS/MSD concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory qualifier "N" will be removed.

All analytes associated with MS/MSD recoveries were within control limits with the exception of the following analyte present in the table below.

Sample Location	Analyte	MS Recovery	MSD Recovery
AMW-7 (4-6)	Aluminum	<LL but >30%	AC
	Lead	>UL	AC
	Manganese	>UL	AC
	Zinc	>UL	<LL but >30%

Sample Location	Analyte	MS Recovery	MSD Recovery
AMW-3 (4-6)	Aluminum	>UL	>UL
	Copper	>UL	AC
	Iron	>UL	>UL
	Lead	>UL	>UL
	Manganese	>UL	>UL
	Zinc	>UL	AC
P-18R (0-2)	Aluminum	<LL but >30%	<LL but >30%
	Antimony	<LL but >30%	<LL but >30%
	Calcium	<LL but >30%	AC
	Magnesium	<LL but >30%	AC
	Manganese	<LL but >30%	<LL but >30%
	Iron	AC	<LL but >30%

The criteria used to evaluate MS/MSD recoveries are presented in the following table. In the case of an MS/MSD deviation, the sample results are qualified. The qualifications are applied to all sample results associated with this SDG.

Control limit	Sample Result	Qualification
MS/MSD percent recovery 30% to 74%	Non-detect	UJ
	Detect	J
MS/MSD percent recovery <30%	Non-detect	R
	Detect	J
MS/MSD percent recovery >125%	Non-detect	No Action
	Detect	J

4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the CRDL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the CRDL, a control limit of one times the CRDL is applied for water matrices and two times the CRDL for soil matrices.

MS/MSD was performed in place of a laboratory duplicate. Sample locations associated with MS/MSD recoveries exhibiting an RPD greater than of the control limit presented in the following table.

Sample Locations	Compound
AMW-7 (4-6)	Manganese
	Zinc
P-18R (0-2)	Calcium

The criteria used to evaluate the RPD between the MS/MSD recoveries are presented in the following table. In the case of an RPD deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
AMW-3 (2-4)/DUP-2-113010	Aluminum	2230	4990	76.4 %
	Arsenic	2.2 J	3 J	AC
	Barium	14	27	63.4 %
	Beryllium	0.166 J	0.227 J	AC
	Cadmium	0.231 J	0.389	50.9 %
	Calcium	113000	61900	58.4 %
	Chromium	4.68	7.99	52.2 %
	Cobalt	1.76	3.26	59.7 %
	Copper	7	11.6	49.4 %
	Iron	5180	7700	39.1 %
	Lead	52.4	72.6	32.3 %
	Magnesium	63000	35800	55.0 %
	Manganese	100	110	9.5 %
	Nickel	4.78 J	7.77 J	AC
	Potassium	490	597	19.6 %
	Sodium	153 J	169 J	AC
	Vanadium	11.5	11.9	3.4 %
	Zinc	21.1	37.8	56.7 %
	Mercury	0.0525	0.077	37.8 %
TP-9-2/DUP-120710	Aluminum	564	512	9.6 %
	Barium	2.12	1.37	42.9 %
	Beryllium	0.044 J	0.049 J	AC
	Calcium	106	91.2	15.0 %
	Chromium	1.35	1.14	16.8 %
	Cobalt	0.411 J	0.347 J	AC
	Copper	0.7 J	0.6 J	AC
	Iron	778	753	3.2 %
	Lead	0.7 J	0.5 J	AC
	Magnesium	108	95	12.8 %
	Manganese	6.7	6.4	4.5 %
	Nickel	0.964 J	0.846 J	AC

Sample ID/Duplicate ID	Compound	Sample Result	Duplicate Result	RPD
TP-9-2/DUP-120710	Potassium	110	99.7	9.8 %
	Sodium	32.3 J	45.2 J	AC
	Vanadium	1.42	1.29	9.5 %
	Zinc	1.5 J	1.5 J	AC
	Mercury	0.023 U	0.0165 J	AC

The calculated RPDs between the parent sample and field duplicate were acceptable.

6. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS/LCSD analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS/LCSD analysis exhibited recoveries within the control limits.

7. Serial Dilution

The serial dilution analysis is used to assess if a significant physical or chemical interference exists due to sample matrix. Analytes exhibiting concentrations greater than 50 times the MDL in the undiluted sample are evaluated to determine if matrix interference exists. These analytes are required to have less than a 10% difference (%D) between sample results from the undiluted (parent) sample and results associated with the same sample analyzed with a five-fold dilution.

All serial dilutions were within control limits, with the exception of the analytes presented in the following table. The sample locations associated with the deviant %D are also presented in the following table.

Sample Locations	Analytes	Serial Dilution (%D)
AMW-7 (4-6)	Arsenic	29%
	Cadmium	25%
AMW-3 (4-6)	Cadmium	84%
P-18R (0-2)	Arsenic	11%
	Beryllium	15%
MW-23D-2R (18-20)	Lead	19%

The criteria used to evaluate the serial dilution are presented in the following table. In the case of a serial dilution deviation, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

8. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

GENERAL CHEMISTRY ANALYSES

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
Total Organic Carbon by Lloyd Kahn	Water	14 days from collection to analysis	Cool to 4°C±2°C; preserved to a pH of greater than 12.
	Soil		Cool to 4°C±2°C.
Ferrous Iron by SM3500FE	Water	24 hours from collection to analysis	Cool to 4°C±2°C.
	Leachate	24 hours from collection to analysis	Cool to 4°C±2°C.
Sulfate by D-516-90	Water	28 days from collection to analysis	Cool to 4°C+2°C.
	Leachate	28 days from collection to analysis	Cool to 4°C±2°C.

The analyses that exceeded the holding time are presented in the following table.

Sample Locations	Holding Time	Criteria
Ferrous Iron: AMW-7 (4-6) AMW-7 (8-10) AMW-7 (10-12) AMW-8 (10-11) AMW-8 (12-14) AMW-8 (14-15) AMW-9 (9-10) AMW-9 (10-12) AMW-9 (14-15) TP-1-1 TP-1-2 TP-1-3 TP-2-1 TP-2-2 AMW-3 (0-2) AMW-3 (2-4) AMW-3 (4-6) DUP-2-113010 AMW-10 (8.5-9.5) AMW-10 (12-14) AMW-10 (14-15) AMW-11 (2-4) AMW-11 (4-6) AMW-11 (6-8) TP-3-1 TP-3-2 TP-3-3 P-18R (0-2)	>48 hours	<24 hours

RB-7-12-3-10	26 hours	

Sample results associated with sample locations analyzed by analytical method SM3500FE were qualified, as specified in the table below. All other holding times were met.

Criteria	Qualification	
	Detected Analytes	Non-detect Analytes
Analysis completed less than two times holding time	J	UJ
Analysis completed greater than two times holding time	J	R

2. Blank Contamination

Quality assurance (QA) blanks (i.e., method and rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Analytes were not detected above the MDL in the associated blanks; therefore detected sample results were not associated with blank contamination.

3. Calibration

Satisfactory instrument calibration is established to insure that the instrument is capable of producing acceptable quantitative data. An initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of an experimental sequence. The continuing calibration verifies that the instrument daily performance is satisfactory.

The correct number and type of standards were analyzed. The correlation coefficient of the initial calibration was greater than 0.995 and all initial calibration verification standard recoveries were within control limits.

All calibration standard recoveries were within the control limit.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis/Laboratory Duplicate Analysis

MS/MSD and laboratory duplicate data are used to assess the precision and accuracy of the analytical method.

4.1 MS/MSD Analysis

All metal analytes must exhibit a percent recovery within the established acceptance limits of 75% to 125%. The MS/MSD recovery control limits do not apply for MS/MSD performed on sample locations where the analyte's concentration detected in the parent sample exceeds the MS concentration by a factor of four or greater. In instance where this is true, the data will not be qualified even if the percent recovery does not meet the control limits and the laboratory qualifier will be removed.

All analytes associated with MS/MSD recoveries were within control limits with the exception of the following analytes present in the table below.

Sample Location	Analytes	MS Recovery	MSD Recovery
RB-7-12-3-10	Ferrous Iron	207%	--
AMW-3 (4-6)	Sulfate	134%	147%
	TOC	127%	--

The criteria used to evaluate MS recoveries are presented in the following table. In the case of an MS deviation, the sample results are qualified.

Control limit	Sample Result	Qualification
MS percent recovery 30% to 74%	Non-detect	UJ
	Detect	J
MS percent recovery <30%	Non-detect	R
	Detect	J
MS percent recovery >125%	Non-detect	No Action
	Detect	J

4.2 Laboratory Duplicate Analysis

The laboratory duplicate relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to 5 times the CRDL. A control limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the CRDL, a control limit of one times the CRDL is applied for water matrices and two times the CRDL for soil matrices.

The laboratory duplicate recoveries exhibited acceptable RPD.

5. Field Duplicate Analysis

Field duplicate analysis is used to assess the precision and accuracy of the field sampling procedures and analytical method. A control limit of 100% for soil matrices is applied to the RPD between the parent sample and the field duplicate. In the instance when the parent and/or duplicate sample concentrations are less than or equal to 5 times the RL, a control limit of three times the RL is applied for water matrices.

Results for duplicate samples are summarized in the following table.

Sample ID/Duplicate ID	Analyte	Sample Result	Duplicate Result	RPD
AMW-3 (2-4)/DUP-2-113010	Total Organic Carbon	7720	10800	33.2 %
	Ferrous Iron	1.6 J	2.3 J	AC
	Sulfate	397	717	57.4 %
TP-9-2/DUP-120710	Ferrous Iron	0.4 J	0.6 J	AC

ND = Not detected
AC = Acceptable

The calculated RPDs between the parent sample and field duplicate were acceptable.

6. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS/LCSD analysis must exhibit a percent recovery between the control limits of 80% and 120%.

The LCS/LCSD analysis exhibited recoveries within the control limits.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

DATA VALIDATION CHECKLIST FOR GENERAL CHEMISTRY

General Chemistry: Miscellaneous analyses	Reported		Performance Acceptable		Not Required
	No	Yes	No	Yes

Chevron - Environmental Mgmt Corp - Bellaire, TX 1
4800 Fournace Place
Bellaire, TX 77401

SDG Number: RTL0286

Project: Chevron-Former Gulf Oil Terminal Site - Oceanside
Project Number: CHEVRON-0038

Received: 12/01/10-12/10/10
Reported: 12/30/10 13:23

Analytical Report

Client ID: TP-6-1 (RTL0505-03 - Soil) - cont. **Sampled: 12/03/10 08:24** **Recvd: 12/04/10 09:40**
