1. Introduction

The New York State Department of Environmental Conservation (NYSDEC) issued a Site Characterization Work Assignment for the Old Bethpage Industrial Area (No. 1-30-171), located in the Town of Oyster Bay, Nassau County, New York and the Town of Huntington, Suffolk County, New York (Site). Malcolm Pirnie, Inc. (Malcolm Pirnie) prepared a Project Management Work Plan (PMWP) in August 2007 for this Work Assignment. As part of the PMWP, a records search and site reconnaissance (RS/SR) was to be conducted to evaluate whether contaminants have been historically, or are currently being used, stored, handled, or disposed at the 33 properties within the Old Bethpage Industrial Area.

The Old Bethpage Industrial Area is being investigated due to the presence of contaminants affecting the treatment of groundwater at Claremont Polychemical, the Old Bethpage Landfill, and the Nassau County Fire Training Center (FTC). The Nassau County Department of Public Works (NCDPW) sent a letter to the United States Environmental Protection Agency (USEPA), dated August 18, 2006, that included properties within the Old Bethpage Industrial Area that had used solvents, making them potential upgradient sources of contaminants (NCDPW, 2006). According to the NYSDEC, Claremont Polychemical and the Nassau County FTC are downgradient of the Old Bethpage Industrial Area, while the Old Bethpage Landfill is located side gradient of the Site.

The objective of the RS/SR was to obtain available information through site inspections and interviews with current tenants/owners, and reviewing database searches, historical documents, directories, maps, and aerial photographs to gain a better understanding of the potential for environmental contamination at each of the 33 properties in the Old Bethpage Industrial Area. This RS/SR Report summarizes the information collected during the records search and site reconnaissance for each of the 33 properties and recommends which properties in the Old Bethpage Industrial Area should be further investigated through field characterization.

2. Site Overview

2.1. Site Description and History

The Old Bethpage Industrial Area is located in the Town of Oyster Bay, Nassau County, and the Town of Huntington, Suffolk County, New York (Figure 1). The Nassau-Suffolk County line bisects the Site in a north-south direction. The Site is comprised of 33 properties, 17 of which are in Nassau County and the remaining 16 are in Suffolk County (Figure 2). The Site is located in a mixed commercial and industrial area. Most of the properties are located along Bethpage-Sweethollow Road, Spagnoli Road, Winding Road, and Hub Drive. The Site encompasses approximately 230 acres. The properties range in size from approximately one acre (459 Winding Road, Oyster Bay, Nassau County) to approximately 31 acres (Spagnoli Road, Huntington, Suffolk County). A majority of the properties within the Site are covered by asphalt, which is used for parking, and contain at least one building, many of which have light industrial uses. The only exception is the Spagnoli Road property, which is located at the eastern end of the Site in Suffolk County. A majority of this property is open and covered by vegetation. In general, the age of the buildings increases from east to west across the Site.

Property information acquired during the RS/SR, including location, current owners, and current tenants, is listed in Table 1. The buildings on the properties in Nassau County were built between 1963 and 1973, while a majority of the buildings on the properties in Suffolk County were built between 1975 and 1985. The buildings on 120, 126, and 130 Spagnoli Road in Suffolk County are the youngest, being built in 2006, 2000, and 2001, respectively.

2.2. Adjacent Sites

The Suffolk County portion of the Site is bordered to the north by nearly 270 acres of light industrial and residential properties owned by Broad Hollow Estates, Inc. South of the Suffolk County portion of the Site is a golf course that is part of the Bethpage State Park and the State University of New York Agricultural and Technical College at Farmingdale. The properties surrounding the Nassau County portion of the Site are owned by Nassau County and/or the Town of Oyster Bay, including the Old Bethpage Landfill and the Nassau County Fire Training Center. There are three inactive hazardous waste disposal sites located south and southwest of the Old Bethpage Industrial Area, two of which (Old Bethpage Landfill and Claremont Polychemical) are registered on the

USEPA Region 2 National Priorities List (NPL). A brief description of these sites is included below.

■ **Old Bethpage Landfill**

The Old Bethpage Landfill is a 68-acre inactive municipal landfill that is part of a sanitary landfill complex that was active until 1986. The landfill is located on Bethpage-Sweethollow Road in the Town of Oyster Bay, southwest and downgradient of the Site. An extraction and treatment system intercepts groundwater from the landfill containing elevated levels of volatile organic compounds (VOCs). The five extraction wells are located southeast of the landfill. In September 2002, two of the five extraction wells were sampled and the results indicated that levels of site related contaminants are nearing cleanup goals.

■ **Claremont Polychemical**

Claremont Polychemical is a former manufacturer of pigments for plastics and inks that operated at this site from 1966 to 1980. Claremont Polychemical is located at 501 Winding Road in the Town of Oyster Bay, immediately downgradient of the Site. Tetrachloroethene (PCE), trans-1,2-dichloroethene (DCE), trichloroethene (TCE), 1,1,1-trichloroethane (1,1,1-TCA), ethylbenzene, acetone, benzene, 1,1-dichloroethane (DCA), methylene chloride, xylenes, and vinyl chloride were all detected at concentrations exceeding federal and/or New York State Maximum Contaminant Levels (MCLs) in the shallow groundwater. Groundwater onsite is extracted and treated by air stripping and carbon adsorption and the treated water is re-injected into the ground. The off-site extraction and treatment system for the Old Bethpage Landfill treats the off-site plume from the Claremont Polychemical site.

■ **Nassau County Fireman's Training Center (FTC)**

The FTC is located on Winding Road in the Town of Oyster Bay, downgradient of the Site, Old Bethpage Landfill, and the Claremont Polychemical site. Volatile organic compounds were present at elevated levels in the groundwater, both onsite and off-site. The FTC Groundwater Remediation Facility extracts and treats contaminated groundwater from three onsite, and seven off-site, recovery wells. The extraction wells are located southeast of the site. The system began operation in 1999 and has treated 1,362,111,408 gallons of water in the first five and a half years of operation. It was noted in a letter to the NYSDEC, dated January 24, 2006, that groundwater concentrations in onsite wells had mostly been less than groundwater cleanup criteria during 2004 and 2005.

Since the start-up of the extraction and treatment systems at the FTC, groundwater onsite and off-site has been monitored quarterly to establish the nature and extent of groundwater contamination and to evaluate the overall effectiveness of the treatment systems. The onsite treatment systems had reduced the total volatile organic contaminant concentration to less than 10 parts per billion (ppb) in 12 of the 14 wells onsite and had

removed 4,500 gallons of No. 2 fuel oil from the water table and vadose zone soils as noted in a letter to the NYSDEC, dated December 23, 2003. Nassau County has concluded that four of the seven operating FTC off-site recovery wells have been impacted by sources other than the FTC based on the observation that the contaminants being detected are not FTC-related contaminants, the contaminants are present at high concentrations in the lower hydrogeologic zones (greater than 80 feet below ground surface [bgs]), and the FTC is not hydraulically upgradient of these recovery wells. Properties in the Old Bethpage Industrial Area are, therefore, being investigated as potential upgradient sources.

2.3. Site Geology

Surficial deposits in the vicinity of the Site are mapped as outwash sand and gravel, consisting of stratified, well rounded, coarse to fine gravel with sand. To the east of the Site, the surficial deposits are mapped as a kame moraine. Unlike outwash deposits, kame moraine deposits have variable texture (size and sorting), from boulders to sand, and are deposited at an ice margin during deglaciation (Cadwell et al., 1986). Below the surficial deposits are coastal plain deposits, which consist of the Monmouth group, Matawan group, and Magothy formation. These groups and formation are generally composed of silty clay, glauconitic sandy clay, sand, and/or gravel (Fisher et al., 1970).

2.4. Site Hydrogeology

Based on a presentation by the NCPDW to the NYSDEC on December 3, 2003, regarding the FTC extraction and treatment systems, water levels are approximately 45 to 50 feet bgs in the area of the Site. In addition, based on potentiometric surface maps of the two lower hydrogeologic zones, groundwater generally flows to the southeast.

3. Records Search/Site Reconnaissance (RS/SR)

3.1. Records Search

Malcolm Pirnie obtained records from a private database management firm, Environmental Data Resources, Inc. (EDR). This firm organizes government agency and proprietary databases in a consolidated format. Malcolm Pirnie makes no representation about the reliability and accuracy of the information contained within the lists. Information gathered from the EDR records search included:

- City Directories – available for properties in Nassau County from 1972 to 2007; available for properties in Suffolk County from 1980 to 2007
- Aerial Photographs – 1953, 1966, 1976, 1980, and 1994
- Historic Topographic Maps – 1903, 1904, 1947, 1967, and 1979
- Sanborn® Fire Insurance Maps – not available for properties comprising the Site
- Databases of Environmental Enforcement – standard list of federal and state databases searched when conducting a Phase I Environmental Site Assessment (ESA) following guidelines stated in the American Society for Testing and Materials (ASTM) Standard E 1527-00

A copy of the EDR reports is included on a compact disc in Appendix A.

In addition to the EDR records search, Malcolm Pirnie reviewed correspondence (provided by the NYSDEC) between the NCDPW, NYSDEC, and USEPA from December 2003 to November 2006 regarding historical information for the properties known to have used solvents in the past and groundwater conditions at the downgradient sites listed in Section 2.2. Malcolm Pirnie also called the Nassau County Department of Health (NCDH) and the Suffolk County Department of Health Services (SCDHS) for the locations of public water supply wells in the vicinity of the Site; the Nassau County Department of Public Works (NCDPW) and Suffolk County Department of Public Works (SCDPW) for the location of city sewer and water lines at the Site; and the Plainview Volunteer Fire Department and Melville Volunteer Fire Department for information on responses to environmental incidents within the Old Bethpage Industrial Area.

3.2. Site Reconnaissance

A site reconnaissance of each property within the Old Bethpage Industrial Area was conducted between March 5, 2008 and March 18, 2008. During the site reconnaissance, each property was visually assessed for indications of environmental concerns. Site

photographs taken during the site reconnaissance are included in Appendix B. Interviews with representatives familiar with each property were conducted concurrently with the site reconnaissance.

3.3. Nassau County

Information gathered through the review of historical records and site interviews and inspections is summarized for each of the 17 properties located in Nassau County in this section. Recommendations for properties to be further investigated, based on the information presented in this section, will be discussed in Section 4.0.

3.3.1. 148 Bethpage-Sweethollow Road

An interview and inspection was conducted at 148 Bethpage-Sweethollow Road on March 7, 2008. Robert Marchhart, President of Trulite Louvre (Trulite), accompanied Malcolm Pirnie during the site reconnaissance. Trulite has owned this property for approximately 13 years and uses this property for manufacturing lighting components. Filtron Corporation (Filtron), a company that manufactures industrial filters, was the prior owner of the building. Filtron vacated the building in 1993, leaving the building vacant for two years before it was occupied by Trulite. Based on information obtained from the EDR City Directories, 148 Bethpage-Sweethollow Road was occupied by:

- **1972** – Lourdes Knitting Mill
- **1980** – BC Wall Décor, Inc.
- **2001** – Trulite Louvre Corp. and Golub Aharon
- **2007** – Hasco Lighting, Mr. Bar B Q, Inc., and Trulite Louvre Corp.

According to county records, the building located on 148 Bethpage-Sweethollow Road was built in 1967. The manufacturing area is heated by oil, while the office area facing Bethpage-Sweethollow Road is heated by natural gas. The building is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. A landscaper/contractor uses the northwest corner of the property for storage of vehicles (Appendix B – Photo 5). This area is fenced-in and locked. The areas outside of the building footprint are largely paved and are used for vehicle parking.

Some five-gallon buckets of cutting oil are stored in the building for use with the cutting machines. According to Mr. Marchhart, Trulite uses approximately one bucket every two to three months; however, there is no waste stream of used cutting oil, as all parts are cleaned with TCE in a degreaser, creating one waste stream of spent TCE with cutting oil. He indicated that at any given time, Trulite has two drums of TCE on-site, one clean, and one spent. They use approximately one 55-gallon drum of TCE every four to six months. Mr. Marchhart stated that the current degreaser is approximately 10 years old

and is located on the east side of the building (Appendix B – Photo 9). A 2,000-gallon underground storage tank (UST) containing #2 fuel oil is located on the east side of the building (Appendix B – Photo 3), which, according to Mr. Marchhart has had no known leaks or spills associated with it. However, there is staining around the oil intake inside the building. There are empty 55-gallon drums and pallets stored for periodic disposal behind the building as well as some 55-gallon drums filled with garbage and scrap metal on the east side of the building (Appendix B – Photo 10). Mr. Marchhart stated that Trulite does not own, store, fuel, or maintain any trucks on their property.

While conducting the site reconnaissance, Malcolm Pirnie noticed some newly installed monitoring wells on the property. Mr. Marchhart mentioned that USEPA’s contractor, Weston Solutions, Inc. (Weston[®]), installed these monitoring wells for a study that they are conducting on behalf of the USEPA Region 2. Four labeled groundwater monitoring wells were installed; one in front of the building, two in the back corners of the property, and one on the east side of the building near the degreaser and UST (Appendix B – Photos 1, 2, 3, and 7). Malcolm Pirnie contacted Mr. Ildefonso Acosta of the USEPA Region 2 to obtain information about the study and work being conducted at this property. Mr. Acosta stated that the USEPA subcontracted Weston[®] to conduct two Preliminary Assessment/Site Inspection (PA/SI) sampling events at 148 Bethpage-Sweethollow Road. According to the Sampling Trip Reports provided by the USEPA, 12 groundwater samples (November 2007 and January 2008 sampling events), four surface soil samples (November 2007 only), and 26 subsurface soil samples (November 2007 only) were collected and analyzed for Target Compound List (TCL) VOCs. The Sampling Trip Reports are included in Appendix C.

The analytical results from the November 2007 and January 2008 sampling events are summarized in Table 2 (groundwater) and Table 3 (surface and subsurface soil). The subsurface soil samples were collected in ten foot intervals from the ground surface to a maximum depth of 67 feet below ground surface (bgs). In November 2007, two discrete groundwater samples were collected from each monitoring point, a shallow zone sample, ranging from 65 to 73 feet bgs and a deep zone sample, ranging from 90 to 97 feet bgs. As shown in the tables, groundwater concentrations were compared to the NYSDEC Class GA Groundwater Standards (GA Standard) and soil concentrations were compared to the NYSDEC 6 New York Codes Rules and Regulations (NYCRR) Part 375 Soil Cleanup Objectives – Unrestricted (SCO). There were no VOCs detected at concentrations exceeding GA Standards in groundwater samples collected from the two northern-most monitoring wells. However, TCE was present at concentrations exceeding the GA Standard in the FILT-GW07 (95-97 feet bgs) and FILT-MW03 samples collected from the monitoring well located on the eastern side of the building near the current degreaser and UST, and in the FILT-MW04 sample collected from the monitoring well in the southeast corner of the property. There were no VOCs detected at concentrations

exceeding SCOs in surface and subsurface soil samples collected from all four monitoring points.

According to the EDR database search, Trulite had manifests for unknown halogenated solvents that are used in degreasing in 1989, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, and 2005; unknown halogenated solvents in 1988; and unknown non-halogenated solvents in 1990. In addition to the record of manifests, a letter sent by the NCDPW to the USEPA in 2006 (NCDPW, 2006), included a chronological record of chlorinated (halogenated) solvent use by the prior owner, Filtron, at 148 Bethpage-Sweethollow Road. In 1977, a County-wide survey reported that chemicals used by Filtron were disposed of by means of evaporation. A violation for storing chemicals without a permit was submitted in 1982. It was noted that there were seven rusty drums present on the site and that there were no known spill control procedures followed. Throughout the 1980s, various chemicals were used and stored by Filtron at this property.

- **1984** – Approximately 55 gallons per month of acetone, 1,1,1-TCA, TCE, and methylene chloride were generated
- **1985** – PCE (825 gallons), acetone (165 gallons), 1,1,1-TCE (110 gallons), and methylene chloride (30 gallons) were used for activities conducted on the property.
- **1986** – Two 55-gallon drums of PCE waste was generated from activities conducted on the property.

In 1987, two on-site storage tanks, one containing heating oil and the other containing PCE, were registered. It is not known whether these tanks were USTs or aboveground storage tanks (ASTs). According to the NCDPW letter (NCDPW, 2006), all aboveground chemical storage tanks were removed in 1992 when Filtron sold the property to Trulite.

3.3.2. 160 Bethpage-Sweethollow Road

An interview and inspection was conducted at 160 Bethpage-Sweethollow Road on March 6, 2008. Douglas Kowalczyk, Operations Manager of Hitemco and Frank Vitale, Manager of Quality Assurance and Regulatory Affairs of Himed, accompanied Malcolm Pirnie during the site reconnaissance. Hitemco is co-located with a subsidiary called Himed, the medical application of their company. Both companies are owned by Barson Composites Corporation. Hitemco specializes in engineered coatings that use metal substrates to create wear-resistant products ranging from aerospace to household applications. Himed specializes in calcium phosphate coatings for dental and medical applications, including synthetic bone. Hitemco was formed in the 1950s as part of Sylvania, and divested in 1973. According to Mr. Kowalczyk and Mr. Vitale, Hitemco

has owned the property since 1974. Prior to Hitemco, the property was owned by a fence fabricator.

According to county records, the building located on 160 Bethpage-Sweethollow Road was built in 1967. The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The building has undergone three expansions since Hitemco has owned this property. The most recent expansion was to add more space to be used by Hitemco. With each expansion the building extends farther northward. The areas outside of the building footprint are largely paved and are used for vehicle parking.

Prior to surface coating, most metal parts are degreased using TCE in a vapor degreaser. The current vapor degreaser was installed in 1990. According to Mr. Kowalczyk and Mr. Vitale, Hitemco uses approximately four to six drums of TCE per year, with two usually on-site at any given time; one containing unused TCE and one containing spent TCE. The vapor degreaser is in a separate room with only a limited number of people allowed access. The vapor degreaser is set inside a pit. At the time of the inspection, there was no evidence of a leak or spill inside the pit. Spent TCE is transported off-site for disposal by Phillips Services within a week of filling a 55-gallon drum.

In addition to TCE, the only other potentially hazardous waste stream from Hitemco is chromium powder. Acetone and mineral spirits are also used in small quantities in the machining area for cleaning. There are two compressors outside of the building that are used to run dust collectors, which collect aluminum oxide powder in 55-gallon drums. Empty drums for the dust collectors are stored behind the building, along with drums of aluminum oxide, which are staged for removal and off-site recycling. All raw materials for coatings are in powder form and are stored in a locked cage. According to Mr. Kowalczyk and Mr. Vitale, Hitemco does not own, store, fuel, or maintain any trucks on their property. There are two locked areas in the northeast and northwest corners of the property that are used to store ASTs containing hydrogen, helium, argon, nitrogen, and oxygen (Appendix B – Photos 13 and 14). These gases are used during various stages of the coating process. As stated by Mr. Kowalczyk and Mr. Vitale, there are no known USTs currently on this property.

According to Mr. Vitale, there is one known spill that occurred at the property when a filter fire caused copper powder to discharge into a dry well. The dry well was subsequently cleaned and the spill case was closed by the NYSDEC. The exact date of this spill is unknown. According to the EDR database search, Hitemco was a large quantity generator in 2005 for a halogenated solvent used in degreasing (i.e., PCE, TCE, methylene chloride, 1,1,1-TCA). Hitemco also had a manifest for unknown halogenated solvents that are used in degreasing in 1993 and 1998. According to the EDR records

search and information stated in the NCDPW letter (NCDPW, 2006), a 275-gallon AST containing TCE was installed in 1982 and removed in 1997. This AST was located on the north side of the building. A 2,000-gallon UST containing #2 fuel oil failed a tank test on November 7, 1994. Actions were taken and the spill was closed on April 10, 1995.

3.3.3. 161 Bethpage-Sweethollow Road

Interviews and inspections were conducted at 161 Bethpage-Sweethollow Road on March 12 and 13, 2008. The building is owned by New York Paving and is occupied by New York Paving, which stores many of its vehicles and supplies needed for their paving business, Automobile Association of America (AAA) of New York, which stores and distributes maps and travel guides, and Perry Mechanical Contractors (Perry Mechanical), which is a general contracting company that stores some of their equipment in this building. According to Michael Bartone, of New York Paving, New York Paving bought the property approximately four to five years ago from a waste management company that used the property as a transfer station for plastic and glass recycling. Recyclable plastic and glass were brought in, sorted, and then shipped out. Prior to both companies, Aluminum Louvre Corporation (Aluminum Louvre), owned this property. Based on information obtained from the EDR City Directories, 161 Bethpage-Sweethollow Road was occupied by:

- **1972 – 1985** – New Dimensions Research
- **2001** – Rutigliano Paper, Inc.
- **2007** – New York Paving, Inc. and Trulite Louvre Corp.

According to county records, the building located on 161 Bethpage-Sweethollow Road was built in 1966. The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The areas outside of the building footprint are largely paved and are used for vehicle parking and storage of trucks, machines, and supplies used in paving. The building is built as a multi-level building, but only technically has one floor. The space occupied by New York Paving is at higher ground than the space used by AAA and Perry Mechanical, which is closer to the corner of Bethpage-Sweethollow Road and Winding Road. The space used by AAA is a warehouse with ceilings that are the same height as the ceilings at New York Paving. Mr. Bartone stated that there are no known USTs or ASTs currently at this property.

Michael Bartone, of New York Paving, accompanied Malcolm Pirnie during the site reconnaissance. New York Paving primarily uses this property for storage of materials and machines used in paving. Paving trucks, machines, supplies, multiple five-gallon buckets of sealant, one 55-gallon drum of concrete curing compound, and some

containers of open blacktop material are stored in the parking lot. There is a small shop that is used for conducting small preventative maintenance on the trucks. According to Mr. Bartone, all big repairs to be completed on trucks are sent into New York City to be fixed. Asphalt is not made at this location. A small paint room located in the back of one of the garages is used to paint cars. A five-gallon bucket of paint thinner was in the paint room at the time of inspection. There are two garages that open to the east that contain some machining tools and oil for making small repairs. A clean tank for degreasers is in one of the garages and is used for cleaning tools. Safety Kleen maintains the clean tank and removes the tank contents when full. There is also a self-contained grease pan in the northeast corner of the building.

Michael Williams and Brian Willins, of AAA, accompanied Malcolm Pirnie during the site reconnaissance. Perry Mechanical rents a small fenced in area next to the overhead door (Appendix B – Photo 17) and uses it for storage of supplies for their general contracting business. AAA uses this space as a storage area for maps, pamphlets, travel guides, and various other travel supplies. There are some offices facing Bethpage-Sweethollow Road that are used by both AAA and Perry Mechanical. A majority of the leased area is warehouse space. The forklifts used in the warehouse area are battery-operated. According to Mr. Williams, AAA does not use, store, or generate any type of chlorinated solvent at this location. Other than the two three-gallon cans of vinyl acrylic sealer and multiple five-gallon buckets of “STOW” noted in the Perry Mechanical leased space, there were no other potentially hazardous materials seen at this location during the inspection.

While conducting the site reconnaissance, Michael Bartone mentioned that the USEPA was on his property recently “digging” in the corner and had stored approximately 20 55-gallon drums near this area. Malcolm Pirnie searched the corner of Bethpage-Sweethollow Road and Winding Road and did not see any monitoring wells. However, there was an area of clean fill near the edge of the road across from the 148 Bethpage-Sweethollow Road property (Appendix B – Photos 16 and 17) that may have been recently disturbed and utility markings along Winding Road. The work being conducted by the USEPA at 161 Bethpage-Sweethollow Road is in conjunction with the work being conducted at 148 Bethpage-Sweethollow Road.

Based on Figure 2 in the January 2008 Sampling Trip Report (Appendix C), monitoring well ALC-MW01 was installed at 161 Bethpage-Sweethollow Road. Trichloroethene (TCE) was detected at a concentration slightly greater than the GA Standard in groundwater sample ALC-GW03 (70-72 feet bgs), but was not detected in the deeper groundwater sample (ALC-GW04 [90-92 feet bgs]). There were no VOC concentrations greater than the corresponding SCOs in surface and subsurface soil samples collected from this location.

Aluminum Louvre, which was acquired by Trulite (148 Bethpage-Sweethollow Road) when it dissolved, was a former owner of 161 Bethpage-Sweethollow Road. When Aluminum Louvre owned 161 Bethpage-Sweethollow Road they also owned or leased 301 Winding Road and used it as their plant. According to the EDR database search, the owner of 161 Bethpage-Sweethollow Road between 1986 and 1990 had manifests for unknown halogenated solvents that are used in degreasing in 1989, 1990, 1991, 1992, and 1993; halogenated solvents (eg., PCE, methylene chloride, TCE, 1,1,1-TCA, 1,1,2-TCA) in 1990; and unknown non-halogenated solvents in 1986, 1987, 1990, 1991 and 1993. However, according to the NCDPW letter (NCDPW, 2006), the property of interest for this study is 301 Winding Road where the plant was located. Additional information stated in the NCDPW letter (NCDPW, 2006) indicates that Aluminum Louvre used toluene, xylene, 1,1,1-TCA, and TCE on the 301 Winding Road property between 1983 and 1994. During this time, an impacted dry well was remediated under a Voluntary Cleanup Agreement (VCA) between Aluminum Louvre and the NYSDEC. A direct result of the VCA was that a deed restriction was filed with the Nassau County Clerk limiting the future use of the property to light industrial purposes and prohibiting the use of the underlying groundwater without being treated first. The use and/or storage of each of these compounds, as noted by Nassau County, are listed below.

- **1983** – Toluene (300 gallons), xylene (330 gallons), and TCE (275 gallons) were used on-site during the year.
- **1986** – 1,556 gallons of TCE was used by the facility throughout the year.
- **1987** – TCE was used on-site during the year.
- **1992** – Toluene was used on-site during the year.
- **1993** – 1,1,1-TCA was stored in a 275-gallon storage tank on-site during the year.
- **1994** – 1,1,1-TCA and TCE was stored and used on-site during the year.

Based on the information stated above and in the EDR records search, 161 Bethpage-Sweethollow Road has been listed into Superfund's Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) as a site that may be a potential source of VOCs in groundwater in the vicinity of Claremont Polychemical and FTC. According to the EDR records search, a 275-gallon AST containing TCE was installed in 1986 and it is unknown when it was removed. A #2 fuel oil UST failed a tank test on July 27, 1987 and was found to have holes in the tank. As a result, the UST was removed and the spill was closed on September 29, 1987.

3.3.4. 175 Bethpage-Sweethollow Road

An interview and inspection was conducted at 175 Bethpage-Sweethollow Road on March 13, 2008. Jonathan, of National Maintenance, Inc. (NMI), accompanied Malcolm Pirnie during the site reconnaissance. According to county records, the building was

built in 1969 and is owned by 175 SHR, LLC. NMI is a sign installation company that has leased this property for approximately seven years. Prior to NMI, D & R Computer Brokerage occupied the building. The type of business or how D & R Computer Brokerage utilized the space is unknown. The space facing Bethpage-Spagnoli Road (north) is used for offices. According to Jonathan, prior to NMI leasing the property, the back portion of the building was split into two separate units. NMI converted this space into one warehouse. The warehouse is used to receive, store, and ship signs that are pre-packaged and already assembled when they arrive at this location. NMI then installs the signs. The areas outside the building footprint are largely paved and are used for vehicle parking and storage of signs.

The offices in the front of the building have always been heated by natural gas. The back units were converted to natural gas heat when NMI began leasing the property. According to Jonathan, oil heat was used in the back area and the two ASTs, one in each of the back units, are still present, but were emptied and cleaned and are no longer used (Appendix B – Photo 18). The building is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. Jonathan stated that no manufacturing occurs at this location. Paint is stored in five-gallon buckets in the back area and is taken to the sign installation site where it is used. Propane is used to run the forklifts and is secured outside of the building. Empty tanks of propane are secured inside of the building. According to Jonathan, trucks used to ship NMI products are not fueled or maintained at this location, but are stored in the back area. He also stated that the company has never used, stored, or generated chlorinated solvents at 175 Bethpage-Sweethollow Road.

3.3.5. 182 Bethpage-Sweethollow Road

An interview and inspection was conducted at 182 Bethpage-Sweethollow Road on March 5, 2008. Ronnie, of Skate Safe of America (Skate Safe), provided access to the site and answered questions during the site reconnaissance. According to county records, the building was built in 1970 and is owned by 55 Motor Avenue Co., LLC. Skate Safe has leased this building for approximately eight years and has used it as a recreational facility. Estee Lauder used this building for unknown purposes prior to Skate Safe. According to Ronnie, the building was gutted when Skate Safe leased the space and was converted into two roller hockey rinks, locker rooms, a pro shop, and food court. The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. Areas outside the building footprint are paved and used for vehicle parking. Ronnie stated that Skate Safe has never used, stored, or generated chlorinated solvents at this location.

According to the EDR record search, a leaking UST was reported on December 14, 1987, while the building was leased by Estee Lauder. The leak was reported when a 2,000-

gallon UST containing #2 fuel oil failed a tank test. Actions were taken and the case was closed on March 5, 1991.

3.3.6. 185 Bethpage-Sweethollow Road

An interview and inspection was conducted at 185 Bethpage-Sweethollow Road on March 6, 2008. Chris Muller, of Kathy Van Zeeland, accompanied Malcolm Pirnie during the site reconnaissance. According to county records, the building was built in 1969 and is owned and occupied by Kathy Van Zeeland. Kathy Van Zeeland has owned this property for 3.5 years. They are a distributor of handbags, shoes, and belts. According to Mr. Muller, prior to Kathy Van Zeeland, the property was occupied by Atlantic Coast Metalizing and Coatings Corporation, which is now located at 300 Spagnoli Road, and Alva Museum Reproduction, Inc., a ceramics company, prior to that. Based on information obtained from the EDR City Directories, 185 Bethpage-Sweethollow Road was occupied by:

- **1972** – Vis A Pak
- **1980 to 1985** – Imperial Steel Corp. and Lamar Plastics Packaging
- **1990** – Imperial Steel Corp. and Consolidated Display
- **1995** – Alva Museum Reproduction, Inc.
- **2007** – IES Innovative Coating Solutions

The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. Mr. Muller stated that the building was gutted prior to the purchase of the property by Kathy Van Zeeland. Office space comprises the front portion of the building and warehouse space comprises a majority of the rest of the building behind the offices. Kathy Van Zeeland uses the warehouse for the receiving, storing, and shipping of their belts, handbags, and shoe products. According to Mr. Muller, no chlorinated solvents are used, stored, or generated by Kathy Van Zeeland at this location. Limited vehicle fueling is conducted on the property, using two small 15-20-gallon diesel tanks stored at the rear of the building (Appendix B – Photo 26). These diesel tanks are filled off-site and then removed from the property once empty and replaced with a new diesel tank. All vehicle maintenance is conducted off-site. Propane is used to run the forklifts and is secured outside of the building. Mr. Muller stated that there are no known USTs or ASTs present at this property. Areas outside the building footprint are paved and used for vehicle parking.

According to the EDR database search, Alva Museum Reproduction, Inc., a former owner of the property, was a large quantity generator and had manifests for an unknown non-halogenated solvent in 1997, 1998, and 1999. On May 20, 1992 two cars were drag racing down Bethpage-Sweethollow Road and hit a tractor-trailer, which caused a spill of

approximately 40 gallons of diesel onto the property. Actions were taken and the spill was closed on May 21, 1992. A leak was reported on November 14, 2003 when a 2,000-gallon UST containing #2 fuel oil was being removed and holes were seen in the tank. The soil around the tank was contaminated and removed. The case was closed on October 6, 2004. The UST was located in the alley/loading dock area.

3.3.7. 190 Bethpage-Sweethollow Road

An interview and inspection was conducted at 190 Bethpage-Sweethollow Road on March 18, 2008. Bob Goble, Regional Vice President of Central Transport, and Gene, an employee of Central Transport, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1971 and is currently owned and occupied by Central Transport, which is a transportation company. Central Transport has owned this property for approximately five years. According to Gene, prior to Central Transport, Consolidated Freight used the property for the same type of work as Central Transport.

The building uses electric heat and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The front area of the building consists of offices, a meeting room, and a dispatch room. A majority of the building is open space with many loading docks on both the eastern and western sides of the building. The building was expanded in 1994 and in 2001. In 1994, new temporary docks were built and in 2001 new permanent docks were installed and replaced the old temporary docks. Areas outside the building footprint are paved and used for vehicle parking. According to Mr. Goble, all vehicle maintenance is conducted off-site.

Central Transport picks-up, stores, and delivers goods in the region. Approximately, seven to eight percent of all goods shipped by Central Transport are stored during the day on the property. The only potentially hazardous material used by Central Transport is oil and grease, which is stored in the southern end of the loading dock area (Appendix B – Photo 33). All of the forklifts used at this location are battery-operated. According to Mr. Goble, there are no known USTs or ASTs on the property and there have been no leaks or spills reported since Central Transport has owned the property.

According to the EDR records search, Consolidated Freight, a former owner of the property, had to remove two USTs due to tank test failures. One leaking #2 fuel oil UST was reported on April 24, 1991. The other leaking UST that contained diesel was reported on January 28, 1988. Actions were taken, which resulted in the removal of both USTs, and the cases were closed on October 19, 1993 and April 1, 1988, respectively.

3.3.8. 191 Bethpage-Sweethollow Road

An interview and inspection was conducted at 191 Bethpage-Sweethollow Road on March 12, 2008. John Herchenroder, General Counsel and Chief Compliance Officer of

Family Residences and Essential Enterprises, Inc. (FREE), accompanied Malcolm Pirnie during the site reconnaissance. FREE has owned the building since December 1999. Prior to FREE, Mr. Herchenroder stated that A.J. Heinz Bakery owned the property. Based on information obtained from the EDR City Directories, the building at 191 Bethpage-Sweethollow Road has been used by food production businesses since 1980.

According to county records, the building located on 191 Bethpage-Sweethollow Road was built in 1973. The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The area outside of the building footprint is largely paved and used for vehicle parking. According to Mr. Herchenroder, after purchasing the property, FREE converted the approximately 40,000 ft² building into a two-story structure, doubling its size. Prior to the addition, clean fill was brought in to shore up the western portion of the property and a retaining wall was installed. FREE provides services for people of all ages with developmental illnesses, including autism, downs syndrome, and mental illness. The first floor of the building has a gym and rooms of various sizes that are used for training staff and for conducting programs and services for their patients. The second floor is used for offices and conference rooms. Mr. Herchenroder stated that FREE does not use this property for manufacturing purposes and does not use, store, or generate any type of chlorinated solvent. Also, he stated that the company does not own, store, fuel, or maintain any type of motorized vehicle and there are no known USTs or ASTs currently present at the property.

The rear 20 percent of the building is leased to Sandwire, an IT company. Debi Longo of Sandwire provided site access and answered questions during the site reconnaissance. Sandwire has leased this space for approximately five years and is in the process of vacating the space. The leased space is comprised mostly of cubicles and offices, with some areas designated for storing software and hardware and making small computer-related repairs when necessary. According to Ms. Longo, Sandwire does not use, store, or generate any chlorinated solvents.

According to the EDR record search, an ammonia spill occurred on October 2, 1997 while Heinz Bakery Products owned the property. The ammonia spill was caused by equipment failure. Actions were taken and the spill was closed on October 8, 1997.

3.3.9. 195 Bethpage-Sweethollow Road

An interview and inspection was conducted at 195 Bethpage-Sweethollow Road on March 5, 2008. Jim Molloy, Jr., of Molloy Brothers Moving & Storage (Molloy Brothers), accompanied Malcolm Pirnie during the site reconnaissance. According to county records, the building was built in 1969 and is currently owned and occupied by Molloy Brothers, which is a moving and storage company. According to Mr. Molloy,

Molloy Brothers bought this property approximately 11 to 12 years ago when Dynaforce went out of business. The building was gutted prior to Molloy Brothers moving in.

The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The front area of the building consists of offices, while the larger portion of the building is warehouse space. Molloy Brothers is a moving and storage company that primarily distributes furniture and also stores documents. Mr. Molloy stated that they do not use, store, generate, or ship any type of chlorinated solvents. Areas outside the building footprint are paved and used for vehicle parking. According to Mr. Molloy, all vehicle maintenance and fueling is conducted off-site and there are no known USTs or ASTs currently on the property.

According to the EDR records search and the NCDPW letter (NCDPW, 2006), a leaking 2,000-gallon UST containing #2 fuel oil was reported on August 3, 1989. Due to the tank failure, Dynaforce removed the UST and the case was closed on October 17, 1989. The NCDPW letter (NCDPW, 2006) states that Dynaforce had received 330 gallons of cyclothane and 1,1,1-TCA per month and used 600 gallons of 1,1,1-TCA throughout 1991. Also, in 1991, the NCDH observed an on-site dry well containing “amber liquid” and an illegal cesspool in the parking lot.

3.3.10. 202 – 222 Bethpage-Sweethollow Road

An interview and inspection was conducted with each tenant at 202 – 222 Bethpage-Sweethollow Road on March 12 and 13, 2008. The building is owned and partially occupied by Future Tire Company (Future Tire). Phoenix Gymnastics occupies the rear portion of the building and rents one room to The Ballet Center, Inc. Future Tire stores and distributes tires from this location. Phoenix Gymnastics and The Ballet Center are used for teaching and training gymnastics and ballet to children and young adults.

According to county records, the building located on 202 – 222 Bethpage-Sweethollow Road was built in 1971. Future Tire is heated by natural gas, while Phoenix Gymnastics and The Ballet Center are heated by oil. Municipal water and sewer is supplied to the building and stormwater and roof runoff is collected in dry wells. The areas outside of the building footprint are largely paved and are used for vehicle parking.

Randy Lico, of Future Tire, accompanied Malcolm Pirnie during the site reconnaissance. Future Tire has owned the property for approximately 15 years. According to Mr. Lico, Racanelli Associates was the prior owner and he was not aware of what they used the property for. Future Tire uses the property for the storage and distribution of tires. The front area is comprised of office space, while the much larger back area is warehouse space where the tires are stored. M. Lico stated that there is no maintenance on trucks done at the site. According to Mr. Lico, there have been no known spills or leaks at the

property since they have occupied the building and they do not use, store, or generate chlorinated solvents at this location.

The owner of The Ballet Center accompanied Malcolm Pirnie during the site reconnaissance. The space utilized by the Ballet Center consists of a bathroom, changing rooms, a front office, a dancing studio, and a storage closet that houses cleaning supplies. The owner stated that no other chemicals are used by the Ballet Center. The space is used primarily for teaching ballet to children and young adults.

Zvonko Bosnjak, director/head coach of Phoenix Gymnastics, accompanied Malcolm Pirnie during the site reconnaissance. Phoenix Gymnastics has been at the site since 1990. According to Mr. Bosnjak, the site was previously occupied by H.G. Rollers and used as a storage warehouse. Phoenix Gymnastics redesigned their portion of the building into a gymnasium, locker rooms, and offices near the entrance. There is a boiler room next to the bathroom, which was used to heat the water in the bathroom for showers and washing hands. The boiler was removed approximately five years ago and an electric hot water heater is currently used for the same purpose.

According to Mr. Bosnjak, a 1,000-gallon UST containing #2 fuel oil was removed from the property approximately five years ago. There is a 1,000-gallon AST containing #2 fuel oil on the north side of the building that is used by Phoenix Gymnastics and The Ballet Center (Appendix B – Photos 40 and 41). According to the EDR record search, approximately one gallon of #2 fuel oil was spilled at the property on January 8, 1993. Actions were taken and the spill was closed on January 3, 1993.

3.3.11. 205 Bethpage-Sweethollow Road

An interview and inspection was conducted at 205 Bethpage-Sweethollow Road on March 18, 2008. Tyrone Faas, Vice President of Aljo-Gefa Precision Manufacturing (Aljo-Gefa), accompanied Malcolm Pirnie during the site reconnaissance. According to Mr. Faas, Aljo-Gefa has owned and occupied this building since 1999. However, the NCDPW letter (NCDPW, 2006) states that the prior owner of the property, Life Industries, sold the property to Aljo-Gefa in 1995.

According to county records, the building located on 205 Bethpage-Sweethollow Road was built in 1973. The building is currently heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. Mr. Faas stated that a #2 fuel oil UST, that had been used to heat the building, was located along the east side of the building (Appendix B – Photo 42). Aljo-Gefa removed the UST when they purchased the property. The area outside of the building footprint is largely paved and used for vehicle parking. Aljo-Gefa manufactures aircraft components out of aluminum, steel, and titanium. Once the metal part has been created, it is shipped

to another company where it is finished and tested for quality. All parts that have completed testing are received by Aljo-Gefa and packaged for distribution. The building is comprised of three distinct areas. The front section, which faces Bethpage-Sweethollow Road, is comprised of offices (approximately 50 percent of building); the middle section contains smaller polishing machines (approximately 25 percent of the building), and the back section is where larger cutting machines are located (approximately 25 percent of the building).

According to Mr. Faas, all degreasing is conducted off-site by another company. The only chemicals used on the property are various types of water soluble oils for the cutting process. A majority of the 55-gallon drums at the property were pink and contained pre-mixed coolant oil (Appendix B – Photo 46) that is hooked directly to the metalworking machines located in the back portion of the building. Mr. Faas estimated that Aljo-Gefa uses approximately 0.5 to one 55-gallon drum of coolant oil per month. At the time of inspection, there were three 55-gallon drums of this pre-mixed coolant oil hooked up to machines. There was also one pink 55-gallon drum located near the door to the offices in the northwest corner of the polishing machine area. Unlike the coolant oil mix used in the cutting machinery area that is hooked directly to the machines, smaller containers are brought over to the 55-gallon drum and are individually transported to each machine when needed in the polishing machine area. Aljo-Gefa also uses lubricating oil and hydraulic oil that are contained in 55-gallon drums. According to Mr. Faas, approximately one drum of lubricating oil is used every three to four months and one drum of hydraulic oil is used every six months. There is one 55-gallon drum of each of the three oils located near the overhead door on the east side of the building in the cutting machinery area (Appendix B – Photo 47). There is always one or two 55-gallon drums of each oil in this area, one that is in use and the other one as a back-up. Once empty, the drum is removed from the property. Two 55-gallon drums with washing basins are located along the east side of the building in the cutting machinery area and are used for washing tools and parts. Safety Kleen disposes of the contents in the drums when full.

In the rear of the building, there is a large dumpster that contains scrap metal, along with eight 55-gallon drums containing waste oil (Appendix B – Photo 44), many empty 55-gallon drums (Appendix B – Photo 43), and stored propane tanks that are used for the one forklift (Appendix B – Photo 44). The waste oil drums are stored on a pallet until there are enough to be removed off the property. At the time of inspection, the overhead door in the southwest corner of the building was open. This area contains the compressors used for the machines as well as one open five-gallon bucket of coolant and one closed five-gallon bucket of #2 fuel oil. According to Mr. Faas, Aljo-Gefa does not own, store, fuel, or maintain any type of motorized vehicles and there are no known USTs or ASTs currently present at the property. Also, there have been no known leaks or spills since Aljo-Gefa has owned the property.

In the NCDPW letter (NCDPW, 2006), the NCDPW stated that Life Industries, the owner prior to Aljo-Gefa, had used solvents during their ownership of the property. However, no other information pertaining to the use of solvents was available at the time the letter was submitted to the USEPA.

3.3.12. 301 Winding Road

An interview and inspection was conducted at 301 Winding Road on March 10, 2008. Ramiro Ruiz, owner of Global Pottery, Inc., accompanied Malcolm Pirnie during the site reconnaissance. The property is owned and occupied by Global Pottery, Inc. Mr. Ruiz did not know who had owned the property prior to Global Pottery, Inc. The building consists of warehouse space that is used to receive, store, and distribute pottery and decorative flower pots made of ceramic, fiberglass, terra cotta, and plastic. Propane is used to run the forklifts and is stored outside (Appendix B – Photo 56). According to Mr. Ruiz, Global Pottery, Inc. does not use, store, or generate chlorinated solvents and there are currently no known USTs or ASTs on the property.

According to county records, the building at 301 Winding Road was built in 1965. The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. Exterior portions of the property are paved and used for vehicle parking and storage of pottery and decorative flower boxes. In the rear of the building, near the northeast corner, a small circular depression was seen next to an intermodal container (Appendix B – Photo 56). The nature/cause of this depression could not be ascertained.

As mentioned in Section 3.3.3, Aluminum Louvre formerly owned or leased 301 Winding Road while owning 161 Bethpage-Sweethollow Road. The building at 301 Winding Road was used to manufacture louvers, which involved stamping, cutting, and shaping of steel and aluminum stock, degreasing parts, and painting. According to the NYSDEC Environmental Site Remediation Database, less than 10 percent of the louvers produced were painted with oil based paint in a vented spray booth located on the eastern side of the building.

While conducting the site reconnaissance, Malcolm Pirnie noticed some newly installed monitoring wells on the property. When asked about the monitoring wells, Mr. Ruiz mentioned that the USEPA had been on his property installing the monitoring wells. Six groundwater monitoring wells were installed; one in front of the building, one on the north side of the building, one on the south side of the building, and three on the east side of the building (Appendix B – Photos 48, 49, 51, 53, and 57). The work being conducted by the USEPA at 301 Winding Road is in conjunction with the work being conducted at 148 Bethpage-Sweethollow Road and 161 Bethpage-Sweethollow Road. At the time of this report, Weston[®] had conducted two PA/SI sampling events at 301 Winding Road, which included sampling at adjacent properties 161 Bethpage-Sweethollow Road and 303

Winding Road. According to the Sampling Trip Reports provided by the USEPA (Appendix C), 18 groundwater samples (December 2007 and January 2008), five surface soil samples (December 2007 only), and 28 subsurface soil samples (December 2007 only) were collected and analyzed for TCL VOCs.

The analytical results from the December 2007 and January 2008 sampling events are summarized in Table 4 (groundwater) and Table 5 (surface and subsurface soil). The subsurface soil samples were collected in ten foot intervals from the ground surface to a maximum depth of 62 feet bgs. In December 2007, two discrete groundwater samples were collected from each monitoring point, a shallow zone sample, ranging from 65 to 72 feet bgs and a deep zone sample, ranging from 80 to 97 feet bgs. Subsurface soil samples ALC-SS14 (20-22 feet bgs), ALC-SS15 (30-32 feet bgs), and ALC-SS16 (40-42 feet bgs) contained TCE concentrations (1,300 micrograms per kilogram [$\mu\text{g}/\text{kg}$], 140,000 $\mu\text{g}/\text{kg}$, and 520,000 $\mu\text{g}/\text{kg}$, respectively) that were greater than the SCO (470 $\mu\text{g}/\text{kg}$). These soil samples were collected from the boring in which monitoring well ALC-MW03 was constructed. There were no other VOCs detected at concentrations exceeding SCOs in surface and subsurface soil samples at this property.

There were no VOCs detected at concentrations exceeding GA Standards in groundwater samples collected from the monitoring wells on the northwest corner of the building (ALC-Old-MW-1) and the west side of the building (ALC-MW02) (Appendix C). However, the remaining monitoring wells located on the eastern side of the property (ALC-MW03, ALC-MW04, ALC-Old-MW-3) and the southern side of the property (ALC-Old-MW-2) contained at least one VOC that was detected at a concentration that exceeded the corresponding GA Standard. The VOCs that were detected at concentrations greater than GA Standards include:

- cis-1,2-dichloroethene - ALC-Old-MW-2, ALC-GW06 (67-69 feet bgs), ALC-GW07 (85-87 feet bgs), ALC-MW03, ALC-GW08 (65-67 feet bgs), and ALC-MW04;
- 1,1,1-TCA - ALC-GW06 (67-69 feet bgs), ALC-MW03, ALC-GW08 (65-67 feet bgs), and ALC-MW04;
- TCE - ALC-Old-MW-2, ALC-Old-MW-3, ALC-GW06 (67-69 feet bgs), ALC-GW07 (85-87 feet bgs), ALC-MW03, ALC-GW08 (65-67 feet bgs), ALC-GW09 (95-97 feet bgs), and ALC-MW04; and
- PCE - ALC-Old-MW-2, ALC-GW06 (67-69 feet bgs), ALC-GW07 (85-87 feet bgs), ALC-MW03, ALC-GW08 (65-67 feet bgs), and ALC-MW04.

In general, the highest VOC concentrations in groundwater were observed in monitoring wells ALC-MW03 and ALC-MW04, which are located on the eastern side of the property (Appendix B – Photos 49 and 58).

As mentioned in Section 3.3.3, information that was stated in the NCDPW letter (NCDPW, 2006) indicates that Aluminum Louvre used toluene, xylene, 1,1,1-TCA, and TCE on the 301 Winding Road property between 1983 and 1994. Soil located in a dry well that was contaminated with chlorinated volatiles was excavated under a VCA between Aluminum Louvre and the NYSDEC. The surface was paved over and is currently a parking lot, limiting the exposure to potential contaminants. Deed restrictions were also imposed to restrict the use of groundwater at this property. The use and/or storage of each of these compounds, as noted by Nassau County, are listed in Section 3.3.3.

Based on the information in the NCDPW letter (NCDPW, 2006) and in the EDR records search, 161 Bethpage-Sweethollow Road has been listed into Superfund's CERCLIS as a site that may be a potential source of VOCs in groundwater in the vicinity of Claremont Polychemical and FTC. However, whether or not the use and/or storage of these VOCs were on 161 Bethpage-Sweethollow Road and/or 301 Winding Road is not clear. The EDR records did not have any references to 301 Winding Road, indicating that 161 Bethpage-Sweethollow Road may have been the address used for all environmental concerns and issues in the past. At the time, Aluminum Louvre occupied both properties, but was headquartered out of 161 Bethpage-Sweethollow Road.

3.3.13. 303 Winding Road

An interview and inspection was conducted at 303 Winding Road on March 13, 2008. Craig Lynn, Chief Operating Officer of Southampton Brick and Tile, accompanied Malcolm Pirnie during the site reconnaissance. Southampton Brick and Tile, a contracting company that stores brick, tiles, and supplies at this location, has owned the property since June 2004. Prima Mason, a wholesale distributor of ceramic and tile, and Alside, a roofing and siding materials distributor, also occupies space at this property. According to Mr. Lynn and Tom Powner, Operations Manager for Alside, no manufacturing is conducted by any of the building occupants. Mr. Lynn stated that the United States Postal Service used the building previously as a distribution center. Based on information obtained from the EDR City Directories, 303 Winding Road was occupied by:

- **1980 to 1985** – Osrow Products, Inc.
- **1990** – Donald Gold, CPA
- **2007** – All Side Supplies, United States Postal Service

According to county records, the building at 303 Winding Road was built in 1963. The building is heated by natural gas and is supplied with municipal water and sewer. Exterior portions of the property are paved and used for vehicle parking and storage of sand, gravel, tiles, and other materials. Stormwater and roof runoff is collected in dry

wells. Most of the building is used as warehouse space. Mr. Lynn was not aware of any storage tanks, leaks, spills, or odors at the site. Five 55-gallon drums of motor oil were noted at the site near the loading docks (Appendix B – Photo 61), which are used by Southampton Brick and Tile for oil changes on their delivery trucks. A fuel truck (Appendix B – Photo 59) is kept on-site for fueling Southampton Brick and Tile’s delivery trucks and is periodically refilled by a tanker truck. Battery-operated forklifts are used inside the warehouse space, while propane powered forklifts are used for exterior loading and unloading. Propane tanks are stored outside the building.

While conducting the site reconnaissance, Malcolm Pirnie noticed a newly installed monitoring well on the north side of the property, adjacent to the 301 Winding Road property. When asked about the monitoring well, Mr. Lynn mentioned that the USEPA had recently installed the monitoring well (Appendix B – Photo 60). Based on Figure 2 in the January 2008 Sampling Trip Report (Appendix C), monitoring well ALC-MW05 was installed at 303 Winding Road. Even though there is no known historical use of halogenated solvents at this property, TCE and PCE were present at concentrations greater than the GA Standards in at least one of the groundwater samples (ALC-GW10 (65-67 feet bgs), ALC-GW11 (85-87 feet bgs) and ALC-MW05) collected from the monitoring well on this property. There were no VOC concentrations greater than the corresponding SCOs in surface and subsurface soil samples collected from this location.

Mr. Powner, of Alside, accompanied Malcolm Pirnie during the site reconnaissance of Alside’s portion of the building. Mr. Powner indicated that Alside has been at this location for 22 years and didn’t know the previous owner/occupant. He did not know of any tanks used on the property currently or in the past, and indicated that there have been no reportable environmental issues. According to Mr. Powner, Alside does not conduct any maintenance on its vehicles at the site.

According to the EDR record search, a spill occurred on August 24, 1989. An abandoned truck on the property was leaking petroleum into a drain on the property. Corrective actions were taken, the tank area was excavated, and the spill was closed on February 24, 1995.

3.3.14. 311 Winding Road

An interview and inspection was conducted at 311 Winding Road on March 6, 2008. John Pagano, of P&P Paper Recycling, provided access to the site and answered questions during the site reconnaissance. P & P Paper Recycling has been at the site since 1960, and is the original owner. The company collects paper and cardboard for recycling. The property has two buildings and a covered parking area. One building contains office space and garages for vehicle maintenance, while the other contains equipment for shredding, bailing, and binding paper and cardboard.

According to county records the buildings at 311 Winding Road were built in 1964. The building is heated by natural gas, supplied with municipal water, and has an on-site septic tank, located between the two permanent buildings. Stormwater and roof runoff is collected in dry wells. There is an on-site well that is used for fire suppression equipment. A 6,000-gallon diesel UST and pump are present adjacent to the office for vehicle fueling (Appendix B – Photo 81). Propane tanks for forklifts are stored outside (Appendix B – Photo 78). Areas between and south of the two buildings are largely paved, while other areas are gravel and/or soil covered and used for vehicle, roll-off, and dumpster storage. 55-gallon drums of hydraulic oil (3), motor oil (1), and coolant (1) were observed at the site (Appendix B – Photos 73-75), as well as several 5-gallon buckets of hydraulic oil (Appendix B – Photos 68 and 69). Several hydraulic motors were observed at the site, as well as scrap metal. According to Mr. Pagano, there are no known spills, and no chlorinated solvents are used or stored at the site. Areas of stained concrete were noted in the vehicle maintenance areas as well as stained soil in the rear storage areas (Appendix B – Photos 70 and 72).

According to the EDR record search, a tank test failure for the diesel UST occurred on October 4, 1994. Corrective actions were taken, and the tank area was excavated with no contamination found, and the spill was closed on December 5, 1995. A spill occurred on July 12, 2002 when a pad-mounted transformer failed. Actions were taken and the spill was closed on October 7, 2003.

3.3.15. 445 Winding Road

An interview and inspection was conducted at 445 Winding Road on March 18, 2008. Al Zemel, of Mr. Bar B Q, accompanied Malcolm Pirnie during the site reconnaissance. The property is owned and occupied by Mr. Bar B Q. Mr. Bar B Q bought the property approximately 16 years ago from Captree Chemical, Corporation (Captree). Mr. Zemel had stated that he believed the company had conducted an environmental investigation, including the installation of some monitoring wells, prior to purchasing the property. There was no evidence of monitoring wells noted during the site inspection. Based on information obtained from the EDR City Directories, 445 Winding Road was occupied by:

- **1980** – E & F Trucking Co.
- **1985** – Captree Chemical Corp.
- **1990 to 2007** – Mr. Bar B Q, Inc.

Since Mr. Bar B Q has owned the property, the building has been heated by natural gas, and is supplied by municipal water and sewer, while stormwater and roof runoff is collected in dry wells. Mr. Zemel stated that there are currently no known USTs or ASTs present on the property. The building is comprised approximately of 4,000 ft² of offices

in the front, facing Winding Road, and 20,000 ft² of warehouse space. Mr. Bar B Q uses the warehouse space to store and distribute accessories for barbequing, such as butane stoves, utensils, and paper goods. Propane is used to run the forklifts in the warehouse area and is stored outside. All items that are received at the facility are pre-packaged and stored until they are shipped off-site. Mr. Zemel indicated that Mr. Bar B Q does not own, store, maintain, or fuel trucks on their property. Also, he stated that Mr. Bar B Q does not conduct manufacturing activities and has never used, stored, or generated chlorinated solvents at 445 Winding Road.

According to the EDR record search, Captree, a prior owner of 445 Winding Road, had two USTs that had contained gasoline. The 1,000-gallon UST was empty and the 8,000-gallon UST was used by Captree. A spill had occurred on the property on September 13, 1988. Both USTs were abandoned as a result of the spill and the NYSDEC requested that monitoring wells be installed and monitored. The spill was closed on August 4, 1989. Captree also had manifests for unknown non-halogenated solvents in 1992 and halogenated solvents in 1993.

In addition to the record of manifests, the NCDPW letter (NCDPW, 2006) included a summary of remedial activities conducted on the property due to Captree violating Article 17 of the Environmental Conservation Law, sections 17-0501 and 17-0505, in August 1984. As a result of the violation, the NCDH oversaw the remediation of two on-site dry wells and removal of eight yards of contaminated soil/sludge that were impacted by chlorinated VOCs in December 1984. Monitoring wells and dry wells were monitored for VOCs between 1988 and 1989. In April 1998, PCE, TCE, 1,1,1-TCA, 1,1,2-TCA, methylene chloride, benzene, ethylbenzene, and toluene were detected in the groundwater samples collected from the monitoring wells and/or dry wells. In September 1998, the monitoring wells and dry wells were sampled due to a report of illegal dumping into a monitoring well and the dry wells. In January 1989, the monitoring well was dry and a sample could not be collected. The last sample collected from any of the monitoring wells was in May 1989. According to the NCDPW letter (NCDPW, 2006), in 1990, Captree Chemical sold the property to Mr. Bar B Q who had reported to the NCDH in April of that year that the property had been remediated. The nature of this remediation is unknown.

3.3.16. 459 Winding Road

An interview and inspection was conducted at 459 Winding Road on March 7, 2008. Louis A. Simone, of Seville Central Mix Corporation, accompanied Malcolm Pirnie during the site reconnaissance. The site is occupied by a construction and cement mixing company, which has been the occupant for approximately 13 years. The building consists of office space and repair shops for preventative maintenance work on company trucks. The remainder of the site is used for the storage of vehicles and vehicle parts.

Based on information obtained from the EDR City Directories, 459 Winding Road was occupied by:

- **1972 to 1980** – Associated Rigging & Haul, Action Crane Corp.
- **1985 to 1990** – Associated Rigging & Haul, AB Industrial Corp.
- **1995** – Associated Rigging & Haul
- **2001** – Seville Central Mix Corp.
- **2007** – Seville Central Mix Corp., Winding Road Leasing Corp.

According to county records the building at 459 Winding Road was built in 1969. The building is heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff are collected in dry wells. There are three 275-gallon tanks on the second floor of the garage, which contain motor oil, hydraulic oil, and waste oil. According to Mr. Simone, approximately 1,500 gallons of waste oil are generated each year, which is disposed off-site. Staining was noted on the concrete floors of the garage areas. Mr. Simone stated that no chemicals beyond normal cleaning supplies are used.

According to the EDR record search, a spill occurred on March 23, 1987, while Action Crane Corporation occupied the property. It was reported that waste oil was routinely dumped from work cranes at various locations. Actions were taken and the spill was closed on July 22, 1987.

3.3.17. 1 Imperatore Drive

An interview and inspection was conducted at 1 Imperatore Drive on March 5, 2008. Robert DerMgordichian, Terminal Manager of New England Motor Freight, Inc. (NEMF), accompanied Malcolm Pirnie during the site reconnaissance. NEMF delivers freight to industrial parks. NEMF has owned this property for approximately six years. APA Transport, another freight carrier company, was the prior and likely original owner of the property.

According to Mr. DerMgordichian, the building located at 1 Imperatore Drive is approximately 50 years old and is currently heated by natural gas. The building is supplied with municipal water, but has a private septic system. Stormwater and roof runoff is collected in dry wells. Most of the building is used as a warehouse. Part of the building is maintained as a garage for preventative maintenance for their trucks; major vehicle repairs and work are done off-site. Inside the garage is an AST for cleaning solvents and oil residuals. According to Mr. DerMgordichian, no chemicals beyond normal cleaning supplies and auto maintenance are used. Old batteries are stored near the overhead door in the garage and are removed periodically. Drums of oil and piles of

tires were stored outside the garage (Appendix B – Photo 94). The areas outside of the building footprint are largely paved and are used to store trucks and trailers.

NEMF loads and unloads freight at this location. Mr. DerMgordichian stated that hazardous materials are occasionally transported and stored at 1 Imperatore Drive. According to the EDR database search, NEMF had a manifest for xylene in 1999. There are two 1,000 gallon USTs present on the property, which store new and used motor oil (Appendix B – Photo 98). Both USTs were installed in 1999. There is also a diesel UST and pump used to fuel the tractor-trailers on the property (Appendix B – Photos 95 and 96). In March 1998, there was a waste oil spill reported when contaminated soil was found during a routine removal of a 550-gallon waste oil tank. The spill was closed in March 2001.

NEMF leases or owns the Claremont Polychemical site and according to Mr. DerMgordichian, the building is planned to be demolished, the site paved, and used to park trucks.

3.4. Suffolk County

Information gathered through the review of historical records and site interviews and inspections is summarized for each of the 16 properties located in Suffolk County in this section. Recommendations for properties to be further investigated, based on the information presented in this section, will be discussed in Section 4.0.

3.4.1. 120 Spagnoli Road

An interview and inspection was conducted at 120 Spagnoli Road on March 18, 2008. Steve Schimmoller, of Sears, Roebuck and Co. (Sears), accompanied Malcolm Pirnie during the site reconnaissance. This inspection was for the primary tenant, Sears, which occupies approximately 70,000 square feet (ft²) of the building. The remaining 20,000 ft² is occupied by Super Enterprises and is used for training and as a showroom for their product, Marvin windows and doors. Anthony Trobiano, Operations Manager of Super Enterprises, stated that Super Enterprises does not use, store, or generate any chlorinated solvents in their occupied space. The areas outside the building footprint are largely paved and used for vehicle parking.

The building located on 120 Spagnoli Road is approximately two years old. According to Debra, of N and G Realty (owner), prior to 2006, the property was vacant. N and G Realty acquired the property four to five years ago. Sears and Super Enterprises have been the only tenants at this location since the building was built. The building has always been heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The south side of the Sears portion of the building consists of offices and a small retail store selling Sears products, such as tools, parts, and small appliances (eg., vacuum cleaners). The offices comprise

approximately 10,000 ft² of the total rented space. A majority of the Sears space is used for making repairs on small appliances, such as televisions, refrigeration and air conditioning systems, vacuum cleaners, and lawnmowers and for storage of parts needed to make these repairs. Sears does not own, store, fuel, or maintain any trucks on the property.

There is one 280-gallon AST containing waste oil located in the northeast corner of the building, to the right of the overhead doors. In this area of the building there are also six 55-gallon drums containing gasoline that are replaced once empty and two 55-gallon drums containing waste water from cleaning in the workshops that are pumped out in-place once full. At the time of the inspection, there were two 55-gallon drums containing oil that is used to change the oil in the lawnmowers needing repair in the large warehouse west of the “gas room”. In the “gas room”, which is located behind the retail store, there is a flammable closet containing small containers of gasoline, which are used throughout the room for repairing lawnmowers and snowblowers. According to Mr. Schimmoller, gasoline in the containers is initially pumped from two 30-gallon drums of gasoline located in the southern and northern corners of the “gas room”. There are also two 55-gallon Safety Kleen drums that are used for collecting waste water generated from washing parts in this room. In the room where Sears conducts repairs on refrigeration and air conditioning systems, there is a secured storage area for freon and acetylene tanks used for the repairs and copper soldering. Mr. Schimmoller, stated that there have been no known environmental spills or leaks reported at this property and chlorinated solvents have never been used, stored, or generated during Sears tenancy.

3.4.2. 126 Spagnoli Road

An interview and inspection was conducted at 126 Spagnoli Road on March 7, 2008. Anthony Trobiano, Operations Manager of Super Enterprises, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 2000 and is owned by the Suffolk County Development Agency. Prior to 2000, the property was vacant. Super Enterprises has been the only tenant in this building since the building was built. The space facing Spagnoli Road (south) is used for offices and as a showroom for the products sold by Super Enterprises. A majority of the building is used as a warehouse for storing custom-made windows and doors until they are shipped. The areas outside the building footprint are largely paved and are used for vehicle parking.

The building has always been heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. According to Mr. Trobiano, no manufacturing occurs at this location, but small quantities of acrylic paints are used to touch up windows and doors prior to being shipped from the warehouse. Propane is used to run the forklifts and is secured outside of the building. He states that trucks used to ship Super Enterprises products are not fueled or maintained at this

location. He has no record of any USTs or ASTs installed or removed at this property, and there have never been any environmental spills or leaks reported. Mr. Trobiano stated that Super Enterprises has never used, stored, or generated chlorinated solvents at 126 Spagnoli Road.

3.4.3. 130 Spagnoli Road

An interview and inspection was conducted at 130 Spagnoli Road on March 6, 2008. Kelly Savage, Information Technology Director/Facilities Manager of Carr Business Systems, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 2001 and is owned by the Suffolk County Development Agency. Prior to 2001, the property was vacant. Carr Business Systems, which is a part of Xerox, has been the only tenant in this building since the building was built. The space facing Spagnoli Road (south) is used for offices and as a showroom for the products sold by Carr Business Systems. Carr Business Systems is a resaler of office equipment. The facility at 130 Spagnoli Road receives parts that are used to reassemble old and broken office equipment, primarily photo copiers, and then ships the refurbished equipment. A majority of the building is used as a warehouse for storing parts and office equipment until they are used or shipped. The areas outside the building footprint are largely paved and are used for vehicle parking.

The building has always been heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. All of the forklifts used by Carr Business Systems are battery-operated. However, Carr Business Systems rents a small portion fenced-in area of their warehouse, located in the northeast corner of the building, to a tenant who ships their refurbished office equipment. This tenant uses a forklift that is powered by propane. According to Mr. Savage, trucks used to ship Carr Business Systems products are not fueled or maintained at this location. He indicated that there is no record of USTs or ASTs being installed or removed and that there have never been any environmental spills or leaks reported at this property. Mr. Savage stated that Carr Business Systems has never used, stored, or generated chlorinated solvents at 126 Spagnoli Road.

3.4.4. 260 Spagnoli Road

An interview and inspection was conducted at 260 Spagnoli Road on March 12, 2008. Guy, of New Dimensions Research Corporation (NDR), accompanied Malcolm Pirnie during the site reconnaissance. Guy stated that the building was bought from Vanity Fair Industries in October 1984 by NDR. NDR occupies the entire building and manufactures custom point of purchase (POP) displays for items, such as soda, razors, potato chips, etc. to be used by retailers.

The exact age of the building is unknown, but, based on historical aerial photographs and the installation date of the UST; the building was built in approximately 1974. Vanity Fair Industries owned the property prior to NDR, but their use of the space is unknown. The building is currently heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system and the cesspools are located in the grassy area between Spagnoli Road and the front of the building. The areas outside the building footprint are largely paved and are used for vehicle parking.

The second floor of the building, which is located only in the front portion facing Spagnoli Road, consists of offices. The front half (south end) of the first floor is comprised of machinery and tools used to manufacture the POP displays, which typically are made out of plastic. The injection molding machines (Appendix B – photo 107) and painting machines (Appendix B – photo 108) are located along the west side of the building in the manufacturing area. In the immediate areas around these machines there were stains indicating evidence of small leaks or spills of oil or grease associated with the use of these machines. Bags of Oil Dry (Appendix B – photo 109) were seen near these machines to be used if small leaks or spills should occur. The eastern side of the building in the manufacturing area was used for primarily assembling the displays. There were also smaller rooms off of the large warehouse space used for assembling, a metal shop where “Simple Green” is used as the degreaser, a paint room, a machine maintenance room, and a clean storage room where cleaning supplies were stored. The back half (north end) of the first floor is used to store assembled displays ready to be shipped.

Prior to 1992, #2 fuel oil was used to heat the facility. A 15,000-gallon UST containing #2 fuel oil was installed in 1974 and removed in 1992. There was no evidence of any leaks or spills associated with the tank at the time of removal. According to Guy, the UST was located outside on the western side of the building, near the current location of the large AST (Appendix B – photos 103, 104, and 111). The large white AST located on the western side of the building is used to store plastic pellets that are used in the manufacturing of the POP displays. There were some 55-gallon drums containing hydraulic oil used for the injection molding machines, located near the overhead door on the west side of the building. On the western side of the building there was a separate room that contained all of the hazardous chemicals and materials used at the facility. In this room there were several gallon-size and pint-size containers of ink (Appendix B – photo 105) as well as two 55-gallon drums each of isopropanol, lacquer thinner #55, and methylene chloride, one 55-gallon drum each of waste oil, brillianize, silicone, and vm&p naphtha (Appendix B – photo 106), and a container of kerosene. Guy stated that this is the typical quantity used at any one time and all of these chemicals are stored in this room. Propane is used to run the forklifts and is secured outside of the building. Guy indicated that NDR does not own, store, fuel, or maintain any trucks on the property.

According to the EDR database search an unknown petroleum spill had occurred on August 4, 1987 when a fork lift had punctured a drum and a fire had resulted. Actions were taken and the spill was closed on December 31, 1993.

3.4.5. 265 Spagnoli Road

An interview and inspection was conducted with each tenant at 265 Spagnoli Road on March 6, 2008. Phillip Fallon, Jr., Director of Environmental Affairs for Rechler Equity Partners, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1978 and is owned by Rechler Equity Partners. The current tenants are Marchon, which is an eyewear designer and distributor, and Austin Travel, which is a large booking service for travel business. Prior tenants since 1978 have included Chyron Corporation, American Utex International Limited, Wondergraph, Preiss Printing Company, Inc., and Swings & Things, Inc. The building is currently heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system; however, the cesspool locations are unknown. The areas outside the building footprint are largely paved and are used for vehicle parking.

Ron Kitt, Vice President of Global Distribution for Marchon, accompanied Malcolm Pirnie during the site reconnaissance of Marchon's leased area. Marchon rents the two end sections of the building, comprising 65,500 ft² of the total 85,500 ft² for the building. Approximately, 50,000 ft² of this space is used for offices, while the remaining portion is warehouse space. The office space is used primarily for designing various eyewear products and the warehouse space is used for storing and receiving returned eyewear products, which are repaired and/or cleaned within the warehouse prior to being shipped out again. Small quantities of rubbing alcohol are used to clean the glasses, along with nail polish remover and lighter fluid, which are all kept in a flame locker when not used. General cleaning supplies are housed in a room next to the men's bathroom in the east section of the building and in locked back room in the west section of the building. According to Mr. Kitt, there have been no known environmental spills or leaks reported at this property and chlorinated solvents have never been used, stored, or generated while Marchon has occupied this space.

Michelle Andriano and Larry Austin of Austin Travel accompanied Malcolm Pirnie during the site reconnaissance of Austin Travel's rented area. Austin Travel has leased the 20,000 ft² located between the two sections occupied by Marchon for approximately 13 years. The space used by Austin Travel is comprised of offices in which meetings are held and travel arrangements are made. According to Mr. Austin and Ms. Andriano, there have been no known environmental spills or leaks reported at this property and chlorinated solvents have never been used, stored, or generated by Austin Travel.

According to the EDR database search, in 1977, three USTs containing #2 fuel oil were installed at 265 Spagnoli Rd. According to a map provided by Rechler Equity Partners, at least one of the USTs was located on the eastern side of the building. During the inspection, there was no physical indicator of the locations of these USTs. One of the 7,500-gallon USTs was removed in 1994, while the other 7,500-gallon UST and the 10,000-gallon UST was removed in 1997. There was no evidence of any leaks or spills associated with the tanks at the time of removal. According to the EDR database search, Preiss Printing Co., a former tenant at 265 Spagnoli Road, had a manifest for an unknown non-halogenated solvent in 1988.

3.4.6. 270 Spagnoli Road

An interview and inspection was conducted at 270 Spagnoli Road on March 11, 2008. Anthony Maniaci, Director of Operations of Access Direct Systems, Inc., accompanied Malcolm Pirnie during the site reconnaissance. The exact age of the building is unknown, but, based on historical aerial photographs and the installation date of the UST, the building was built in approximately 1977. Access Direct Systems, Inc. is the owner of the property and occupies office space (office 101) as well as a large warehouse area in the northern 80 percent of the building. The remainder of the two-story building is comprised of offices. In addition to Access Direct Systems, Inc., offices are occupied by Eisner, LLP (102), Itron, Inc. (107), North Shore Agency (111), Brody Realty Corporation (201), Long Island Gasoline Retailers Association (203), New York Engineering Association (204), Tech Software/BEC (205), and Jenasaqua Realty (208). Offices 200, 202, 206, 207, 209, and 211 are currently empty. All offices are located on the south side of the building. Access Direct Systems, Inc. bought the property one to two years ago from Harrows, which is a pool supplies retailer in the summer and a Christmas decoration retailer in the winter, but the use of the warehouse space by Harrows is unknown.

The building is currently heated by natural gas and is supplied with municipal water and sewer, while stormwater and roof runoff is collected in dry wells. The areas outside the building footprint are largely paved and are used for vehicle parking. According to Mr. Maniaci, Access Direct Systems, Inc. does not own, store, fuel, or maintain any trucks on the property. Access Direct Systems, Inc. is a bill and mail printing company. They use the warehouse space for storing packaged paper products, printing labels and bills, and sorting the printed material, and putting it into envelopes. There is an on-site United States Postal Service office that packages the printed material and mails it out. In the mail room there were bottles of make-up fluid and ink and four one-gallon bottles of cleaner/degreasers. The labels on the cleaner/degreaser bottles state that the product is environmentally safe. Towards the back of the warehouse there was one 55-gallon drum containing Total Drosera MS 22, which is a lubricant used to help maintain the machines

used in printing and sorting. Mr. Maniaci stated that Access Direct Systems, Inc. has never used, stored, or generated chlorinated solvents at 270 Spagnoli Road.

A 10,000-gallon UST containing #2 fuel oil was installed in 1977 and removed during the winter of 2007. There was no evidence of any leaks or spills associated with the tank at the time of removal. Mr. Maniaci stated that the UST was located outside on the west side of the building (Appendix B – photos 115). According to the EDR database search a #2 fuel oil spill had been reported on April 20, 2006 based on staining of soil and elevated photoionization detector (PID) readings near this UST. Actions were taken and the spill was closed on November 30, 2006. Anthony Maniaci stated that he was not aware of this spill suggesting that it occurred prior to Access Direct Systems, Inc. purchasing the property.

3.4.7. 290 Spagnoli Road

An interview and inspection was conducted at 290 Spagnoli Road on March 12, 2008. Robert Hoek, of Racanelli Realty Services, Inc., accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1972 and is owned by Racanelli Realty Services. The current tenant is International Warehouse Group, which is a shipping and receiving company that moved in six months ago. According to Mr. Hoek, the prior tenant was Estee Lauder who had occupied the building since it was built. Estee Lauder used the warehouse space for storing and distributing perfume products. At Estee Lauder's peak production, the facility shipped nearly 50 trailers per day of perfume products.

The building is currently heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system, and the cesspools are located in the grassy area between Spagnoli Road and the building. The building is comprised of offices in the front of the building, while the remaining 75 percent of the building is warehouse space. International Warehouse Group receives, stores, and ships all sorts of goods, ranging from clothing to backpacks, but hazardous materials are not stored or shipped from this location. There is a large empty room on the east side of the building that had been used by Estee Lauder as a store. The areas outside the building footprint are largely paved and are used for vehicle parking.

At the time of the inspection, there were three 55-gallon drums containing grease located next to the overhead doors in the northwest corner of the building. All of the forklifts used by International Warehouse Group are battery-operated. They do not own, store, fuel, or maintain any trucks on the property. According to Mr. Hoek, both Estee Lauder and International Warehouse Group did not use this property for manufacturing and neither company have used, stored, or generated chlorinated solvents at this location.

A 10,000-gallon UST containing #2 fuel oil was installed outside along the east side of the building in 1974 and was removed sometime after 2003. A 5,000-gallon UST containing #2 fuel oil was installed at an unknown location in 1980 and was removed in 1995. Physical evidence of the locations of these USTs was not apparent at the time of the inspection. There was no evidence of any leaks or spills associated with the tanks at the time of removal. According to the EDR database search both USTs have leaked in the past while Estee Lauder was the tenant. The 5,000-gallon UST had failed tank tests on December 2, 1994 and January 9, 1995, while the 10,000-gallon UST failed a tank test on October 16, 2003. Actions were taken for all three tank test failures and the spill cases were closed. Also, a transformer oil spill had occurred on August 18, 2006 due to equipment failure. Actions were taken and the spill was closed on November 29, 2006.

3.4.8. 300 Spagnoli Road

Interviews and inspections were conducted at 300 Spagnoli Road on March 12 and 18, 2008. Robert Hoek, of Racanelli Realty Services, Inc., accompanied Malcolm Pirnie during the site reconnaissance. The exact age of the building is unknown, but, based on historical aerial photographs and the installation date of an UST, the building was built in approximately 1969. The building is owned by Racanelli Realty Services and the current tenants are Miss Chocolate Fundraising Co., Inc. (Miss Chocolate) and Atlantic Coast Metalizing and Coatings Corporation (Atlantic Coast Metals). Miss Chocolate has been a tenant at 300 Spagnoli Road for approximately ten years, while Atlantic Coast Metals has been a tenant for approximately three years. Prior tenants include Coca Cola Beverage, True Green Chemlawn, and a record distributor. According to Mr. Hoek, Coca Cola Beverage and the record distributor used the space occupied by Miss Chocolate for storage of soda products and records, respectively. True Green Chemlawn stored fertilizer in multiple ASTs and used the space currently occupied by Atlantic Coast Metals for sales and storage.

Miss Chocolate is located in the portion of the building facing Spagnoli Road. The company distributes and stores promotional goods, such as candy, candles, and toys/games. The front portion of Miss Chocolate is comprised of offices, while a majority of the space is utilized for storage of their promotional goods. This portion of the building is heated by oil and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system, and the cesspools are located in the grassy area between Spagnoli Road and the building. A 1,000-gallon UST containing #2 fuel oil was removed prior to the installation of a 550-gallon AST containing #2 fuel oil. The installation date of the AST is unknown. Mr. Hoek stated that the UST was located on the southeastern corner, facing the 290 Spagnoli Road property. The AST was located on the southeastern corner, facing Spagnoli Road (Appendix B – Photo 117). All of the forklifts used by Miss Chocolate are battery-operated and they do not use this property for manufacturing. According to Mr. Hoek,

there have never been any known environmental spills or leaks reported at this property while Miss Chocolate has been the tenant. He also stated that Miss Chocolate has never used, stored, or generated chlorinated solvents at 300 Spagnoli Road.

Atlantic Coast Metals is located in the back portion of the building. The company sandblasts and coats steel. The warehouse consists of offices, a 25 feet by 80 feet blast area, a hot spray galvanizing room, a welding area, and a storage area for finished products. The steel dust generated in the blast area is collected in 55-gallon drums and recycled. The hot spray galvanizer uses a water-borne paint with zinc. The dust created by the galvanizer is collected and used for fertilizer and the zinc is used in cold medicines. Acetylene and a welding torch are used in the welding area, which is located in the back of the building (Appendix B – Photo 119). Near the overhead door there was one five-gallon bucket of grease, which is used to keep the overhead doors functioning properly. The areas outside the building footprint are largely paved and are used for vehicle parking and storage of raw and finished steel products. Also stored in this area, are 55-gallon drums containing recyclable steel dust that are picked up regularly and removed from the property. The Atlantic Coast Metals portion of this building was originally heated by oil. The UST was removed prior to Atlantic Coast Metals occupancy and this portion of the building has been heated using natural gas since. Small quantities of epoxys and urethanes are used when needed and then are shipped with the finished product for future touch-ups. Propane is used to run the forklifts and is stored outside of the building (Appendix B – Photo 118). According to Mr. Hoek, Atlantic Coast Metals does not own, store, fuel, or maintain any trucks on the property and has never used, stored, or generated chlorinated solvents at this location.

According to the EDR database search, Coca Cola Beverage had two USTs, one 501-gallon tank containing diesel fuel and one 1,000-gallon tank containing #2 fuel oil. There is no information on when these tanks were removed. The 501-gallon UST was installed in 1969 and failed a tank test on November 23, 1993. Actions were taken and the spill was closed on April 5, 1995. Coca Cola Beverage also had a manifest for an unknown non-halogenated solvent in 1993. True Green Chemical had four ASTs installed in 1984. Three of these ASTs had a capacity of 12,000 gallons and contained fertilizer, while the other was a 1,500-gallon tank that contained industrial waste.

3.4.9. 305 Spagnoli Road

An interview and inspection was conducted at 305 Spagnoli Road on March 13, 2008. Larry Altman of Graphic Image, Inc. accompanied Malcolm Pirnie during the site reconnaissance. The building was bought from Harrows approximately 10 years ago by JIL Tek, Inc. Harrows is a pool supplies retailer in the summer and a Christmas decoration retailer in the winter and used the warehouse for storage of its seasonal merchandise. Graphic Image, Inc. occupies the entire building and assembles leather

covered books and accessories. All materials required to produce these leather goods arrive at 305 Spagnoli Road already manufactured.

The exact age of the building is unknown, but, based on historical aerial photographs and the installation date of a UST, the building was built in approximately 1979. The building is currently heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. According to Mr. Altman, when JJJ Tek, Inc. bought the property they removed the 5,000-gallon UST containing #2 fuel oil in the front of the building (Appendix B – Photo 121). There was no evidence of any leaks or spills associated with the tanks at the time of removal. The building is equipped with a septic system, and the cesspools are located in the grassy area between Spagnoli Road and the front of the building. The areas outside the building footprint are largely paved and are used for vehicle parking. There is a large red storage container behind the main building that stores packaging materials.

The front area of the building consists of offices. A majority of the building is warehouse space. This space is used for touching up the paint on the leather goods, pasting the leather covers onto the base products, and storing binds, paper, boxes for packaging, leather, rolls of fabric, etc. The paste and paint used by Graphic Image, Inc. is water-based. There were numerous quart-size and smaller cans of paint on shelves stacked in the southwest corner of the building. Numerous 55-gallon drums containing paint were scattered throughout the building – a total of six were observed on the day of the inspection. Small quantities of oil and degreasers are used to keep machinery functioning properly. Outside, next to the overhead door in the back, a locked gate stores 55-gallon drums containing used oil. The forklifts used at the property are battery-operated. According to Mr. Altman, Graphic Image, Inc. does not own, store, fuel, or maintain any trucks on the property and has never used, stored, or generated chlorinated solvents at this location. The eastern portion of the building is separated from the rest of the warehouse and is used as a retail shop that is open one day a week.

According to the EDR database search, two USTs were installed, one in 1979, the other unknown, when Harrows was the owner. The UST installed in 1979 had a capacity of 2,000 gallons and contained diesel. This UST was removed in 1990. The location of this UST is unknown. The other UST had a capacity of 5,000 gallons and contained #2 fuel oil. This was the UST removed by JJJ Tek, Inc.

3.4.10. Spagnoli Road

An interview and inspection was conducted at the Keyspan Training Site on March 7, 2008. Thomas Campbell, Keyspan Senior Engineer and a Keyspan employee named Scottie, accompanied Malcolm Pirnie during the site reconnaissance. Keyspan Energy maintains a fenced-in training area on a large undeveloped lot, which consists of two

trailers for office and classroom space and several intermodal containers used for storage of training equipment and fuel. Scottie has been running the training site since 1989, teaching field personnel various skills including excavator use, shoring techniques, and electrical training. There is a fuel storage shed at the western end of the training area, which stores four 55-gallon drums of diesel, several 5-gallon containers of gasoline, and two cans of hydraulic oil. There are three empty transformers used for electrical training at the western end of the training area. The trailers are connected to municipal water and sewer and are heated by natural gas. There are no dry wells located on this property. Southeast of the fenced-in training area, four potential groundwater monitoring wells or piezometers were noted ranging from 1-inch to 4-inch in diameter, without protective casings (Appendix B – Photo 124). Keyspan did not know the age or purpose of these wells or piezometers.

3.4.11. 5 Hub Drive

An interview and inspection was conducted with each tenant at 5 Hub Drive on March 6, 2008. Phillip Fallon, Jr., Director of Environmental Affairs of Rechler Equity Partners, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1979 and is owned by Rechler Equity Partners. The current tenants are Chyron Corporation (Chyron), which is a software and hardware designer and developer, DHL, which is a shipping company, and Bi-Lo Distributors, which distributes beauty supplies. Based on information obtained from the EDR City Directories, 5 Hub Drive was occupied by:

- **1985 to 1990** - American Technical Corp., Design Alloy Concept, Hamilton Aventura, El, Metadon Resources, Perma Alloys, Protek Industries, Sal Communications, Inc., and Scott Communications
- **1990 to 1995** – Chyron Corp. and Bi-Lo Distributors
- **2000** – Chyron Corp.
- **2007** – Chyron Corp., Pro Bel Inc., and Bi-Lo Distributors, Ltd.

The building is currently heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system. A map provided by Rechler Equity Partners (Appendix D), shows that the location of the septic tank is in between Spagnoli Road and the building. The building has no floor drains. The areas outside the building footprint are largely paved and are used for vehicle parking.

Nancy Erickson of Chyron accompanied Malcolm Pirnie during the site reconnaissance of Chyron's leased area. Chyron rents the northern section of the building, comprising 46,665 ft². According to Ms. Erickson and Mr. Fallon, Chyron has been in this building

since 1984. Chyron develops computer hardware and software for the television industry, specifically; scrolling technology used for sports scores, news, and stock market updates. The front area facing Spagnoli Road is primarily comprised of cubicles and offices. According to Ms. Erickson, manufacturing was conducted at one time in the present front cubical area, but is no longer conducted. Today, only the design, development, and final testing of equipment and software are conducted before shipping. A fire hazard container, which stored gas for the snow-blower and some water-based paint, was noted.

Ms. Erikson of Chyron accompanied Malcolm Pirnie during the site reconnaissance of DHL's rented area. DHL has been renting this space for approximately five years. Prior to DHL, this area used to be rented by Chyron. The space consists of a small sales office and also acts as a coordinating center for shipments and deliveries. According to the receptionist at DHL, DHL has never used, stored, or generated chlorinated solvents and does not store, fuel, or maintain trucks at this location.

Mike Lowe, of Bi-Lo Distributors, allowed access and answered questions during the site reconnaissance of Bi-Lo Distributors' leased area. Bi-Lo Distributors rents the southern section of the building, comprising 41,335 ft². According to the map provided to Malcolm Pirnie from Phillip Fallon, Bi-Lo Distributors has been in this building since 1984. There are a few offices in the building, but a majority of the leased space is warehouse used for storing, packaging, and shipping beauty supplies and sundries. In the office area there is a display space that contains various types of beauty supplies, such as shampoo, make-up, combs, and hairspray, that is available for sales people to familiarize themselves with their products. According to Mr. Fallon, Bi-Lo Distributors has never used, stored, or generated chlorinated solvents and does not store, fuel, or maintain trucks at this location.

According to the EDR database search, Chyron had manifests for unknown halogenated solvents that are used in degreasing in 1987, 1988, 1989, 1992, 1993, and 1994 and unknown non-halogenated solvents in 1990 and 1992. Hamilton Avnet, a former tenant at 5 Hub Drive, had a manifest for an unknown halogenated solvent that is used in degreasing in 1984. There were four USTs installed in 1975 at 5 Hub Drive. They all contained #2 fuel oil and were removed in 1998 (2 – 8,000-gallon USTs) and 2001 (1 – 8,000-gallon UST and 1 – 5,000 gallon UST). There have been three reported leaking tanks at 5 Hub Drive (1994, 1998, and 2000). All three USTs contained #2 fuel oil and have subsequently been removed. At the time the leaks were noted, actions were taken and the spills were closed in 1995, 1998, and 2000.

3.4.12. 10 Hub Drive

An interview and inspection was conducted with each tenant at 10 Hub Drive on March 6, 2008. Phillip Fallon, Jr., Director of Environmental Affairs of Rechler Equity Partners, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1975 and is owned by Rechler Equity Partners. The current tenants are Malhame & Co. Publishers (Malhame), which imports and distributes religious books and supplies, AKR Corporation (AKR), which stores and distributes bulk household products, and Netflix, which is a movie rental company. Based on information obtained from the EDR City Directories, 10 Hub Drive was occupied by:

- **1980 to 1990** – Dianart Advertising, Efficient Data Process, Erin Computers, Sharpe Nutritionals, Inc., Siegal Tire & Battery, and Tibex International, Inc.
- **1995** – Kelvin Electronics
- **2000 to 2005** – Kelvin Electronics, Malhame & Co., and Regina Press

The building is currently supplied with municipal water, while stormwater and roof runoff collected in dry wells. The building is equipped with a septic system; however the location of the cesspools is unknown. The building has no floor drains. The areas outside the building footprint are largely paved and are used for vehicle parking.

Joe Montone, of Malhame & Co., accompanied Malcolm Pirnie during the site reconnaissance of Malhame's leased area. Malhame leases the northern section of the building, comprising 40,750 ft². According to Joe Montone, Malhame has been in this building since 1996. The front area of their space is used for offices, while the majority is warehouse space that is used for storing religious supplies and paraphernalia. The leased space is heated by oil. Malhame has two USTs that are filled with #2 fuel oil. The locations of the USTs were indicated by the presence of fuel oil lines outside of the building (Appendix B – Photo 132). According to Mr. Montone, the two USTs (5,000-gallon and 10,000-gallon) passed their most recent tightness tests and have had no reported leaks or spills. He also stated that Malhame has never used, stored, or generated chlorinated solvents and does not own, store, fuel, or maintain trucks at this location.

AKR is located between Malhame and Netflix, comprising 107,850 ft². The space consists almost entirely of warehouse space. AKR stores and distributes bulk household products, such as soap, toothpaste, and deodorant. The leased space is heated by natural gas.

Vicki Mona, of Netflix, accompanied Malcolm Pirnie during the site reconnaissance of Netflix' leased area. Netflix rents the southern-most section of the building, comprising 23,160 ft². DVDs are received at the facility and are sorted by machines, cleaned, and then shipped back out for the next rental request. All DVDs to be sent out are taken to

the United States Postal Service office and shipped. According to Ms. Mona, small quantities of adhesive remover and glass cleaner are the only chemicals used at Netflix. Ink that is used for shipping labels is in prepackaged cartridges. The leased space is heated by natural gas. Ms. Mona indicated that Netflix has never used, stored, or generated chlorinated solvents and does not own, store, fuel, or maintain trucks at this location.

According to the EDR database search, Comstron Corporation, a former tenant at 10 Hub Drive, had manifests for unknown halogenated solvents that are used in degreasing in 1986, 1988, 1989, and 1990 and an unknown non-halogenated solvent in 1990. There were four USTs installed in 1975 that contained #2 fuel oil at 10 Hub Drive. The two tanks that were removed in 1994 had the capacity of 6,000 gallons. The 5,000-gallon tank was removed in 2004 and the 4,000-gallon tank has not been removed. A 10,000-gallon UST containing #2 fuel oil was installed in 1985. The 4,000 and 10,000-gallon tanks are most likely the two tanks that remain today. Two of the USTs failed tank tests in May 1994. Actions were taken and the spills were closed on November 7, 1994 and October 26, 1995.

3.4.13. 25 Hub Drive

Interviews and inspections were conducted at 25 Hub Drive on March 7 and 18, 2008. The exact age of the building is unknown, but, based on historical aerial photographs and the map provided by Phillip Fallon of Racanelli Realty Services; the building was built between 1976 and 1984. The building is owned by Keyspan Energy (Keyspan) and the current tenants are Keyspan and Arrow Electronics, Inc. (Arrow). Keyspan is an energy provider and Arrow Electronics provides products, services, and solutions involving computers, electronics, and networking systems. Arrow Electronics was the original owner of the property and has occupied space at this building since it was built. However, two years ago, Arrow sold the property to Keyspan and moved their facility from a much larger portion of the building (112,000 ft²) to a smaller portion (~ 20,000 ft²) in the southwest corner of the building. Keyspan has occupied the larger space since they bought the building two years ago. The building is heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. Electric heat was used prior to natural gas. The building is equipped with a septic system; however, the location of the cesspools is unknown. The areas outside the building footprint are largely paved and are used for vehicle parking.

Thomas Campbell, Keyspan Senior Engineer, and Rich Zavada of Keyspan, accompanied Malcolm Pirnie during the site reconnaissance. According to Mr. Zavada, when Keyspan bought the property, the space they now occupy was completely gutted and renovated to fit the needs of their company. They use their space primarily for offices and storage, but have a training center for field personnel at the eastern end of the building. Gas storage

near the building's southeast corner includes acetylene, argon, carbon dioxide, and oxygen. Also outside the south wall of the building, Keyspan maintains a smaller diesel generator, which has a self-contained double-skinned concrete enclosure surrounding the AST. The diesel generator was installed approximately 20 years ago and is used as a backup if power is lost at the building. Mr. Zavada stated that no chemicals other than normal cleaning supplies are used at the site. He also stated that no truck fueling or maintenance is conducted on-site and chlorinated solvents have never been used, stored, or generated at this location.

Steve Burrige, Regional Facilities Services Manager of Arrow Electronics, Inc. (Arrow) accompanied Malcolm Pirnie during the site reconnaissance. Arrow uses much of its leased space for housing routers and servers and other types of equipment that are required for global data processing. The remainder of the space (~8,000 ft²) is used for offices. Due to the importance of the equipment used by Arrow, they have installed two fire installation systems as well as having standard sprinklers in the office area. The Ansul Halog 1301 fire installation system is used in the electrical room and the mainframe room located adjacent to the Keyspan office space. Ansul Halog 1301 is no longer installed because it contains chlorofluorocarbons (CFCs). Because this system had already been installed prior to the determination of its environmental effects, the system was grandfathered in at this property and is still in use. The other fire installation system used by Arrow is Inergen. This extinguishing agent is currently used in the processing center (Appendix B – Photo 139). Steve Burrige could recall one time in which the Inergen system was triggered. There are separate rooms used to store the tanks containing the chemicals used in these fire installation systems. There are approximately 40 Inergen tanks and six Ansul Halon 1301 tanks (Appendix B – Photo 140) currently used. Every six months, Arrow has an environmental consulting firm test their water and indoor air quality to ensure the health of their personnel.

Similar to Keyspan, outside the south wall of the building, Arrow maintains two diesel generators, which has self-contained double-skinned concrete enclosures surrounding the two 4,000-gallon ASTs (Appendix B – Photos 133 and 134). The diesel generators were installed four years ago and are used as a backup if power is lost at the building. According to Mr. Burrige, Arrow has never had any leaks or spills associated with these two ASTs. During the inspection, a semi-annual servicing was being conducted on the generators. One 55-gallon drum containing hydraulic fluid (Appendix B – Photo 135), one 55-gallon drum of diesel engine oil (Appendix B – Photo 136), and a couple 5-gallon buckets of lubricant (Appendix B – Photo 138) were present near the generators for this servicing. Mr. Burrige stated that once the servicing is completed, the drums and buckets are removed from the property. He also stated that no truck fueling or maintenance is conducted on-site and chlorinated solvents have never been used, stored, or generated at this location.

3.4.14. 30 Hub Drive

An interview and inspection was conducted with each tenant at 30 Hub Drive on March 6, 2008. Phillip Fallon, Jr., Director of Environmental Affairs of Rechler Equity Partners, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1976 and is owned by Rechler Equity Partners. The current tenants are Charles Wood Moving & Storage, which ships and stores furniture and Lindenmeyer Munroe, which is a paper distributor. According to Mr. Fallon, both tenants have been leasing space in this building since 1994. Based on information obtained from the EDR City Directories, 30 Hub Drive was occupied by:

- **1980** – Broadway Confections, Leathers Best Trading, and Elbe Products, Inc.
- **1985 – 1990** – Leathers Best Trading and Elbe Products, Inc.
- **1995** – Leathers Best Trading
- **2007** – Paul Arpin Van Lines

The building is currently supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system; however, the location of the cesspools is unknown. The building has no floor drains. The areas outside the building footprint are largely paved and are used for vehicle parking.

Barry Greenberg, of Charles Wood Moving & Storage, accompanied Malcolm Pirnie during the site reconnaissance of their leased area. Charles Wood Moving & Storage has leased the western portion of the building, comprising 19,900 ft², since 1996. The leased space is heated by natural gas. A small portion of the space is used for offices, while a majority is used as warehouse space. The company uses its warehouse space to store and ship furniture. Propane is used to run the forklifts and is stored outside of the building (Appendix B – Photo 141). According to Mr. Greenberg, Charles Wood Moving & Storage does not store or ship any hazardous materials and has never used, stored, or generated chlorinated solvents. He stated that the trucks used for shipping are not fueled or maintained at this property.

Keith Wallch, of Lindenmeyer Munroe, accompanied Malcolm Pirnie during the site reconnaissance of their leased area. Lindenmeyer Munroe has leased the eastern portion of the building, comprising 53,130 ft², for approximately 10 years. Approximately, 80 percent of the space is used for a warehouse, while the remaining portion of the space is used for offices. The company uses its warehouse space to store and ship paper and paper products. The forklifts used in the warehouse are battery-operated. The leased space is heated by oil. The 10,000-gallon UST containing #2 fuel oil is located outside of the north wall (Appendix B – Photo 145). According to Mr. Wallch, since Lindenmeyer Munroe has occupied this space, there have been no leaks or spills associated with the

UST. He also stated that Lindenmeyer Munroe does not store or ship any hazardous materials and has never used, stored, or generated chlorinated solvents. The trucks used for shipping are not fueled or maintained at this property.

According to the EDR database search, a 4,000-gallon UST containing #2 fuel oil was installed at the property at an unknown time and had been removed in 1996, possibly as a result of change in tenancy. There was no evidence of any leaks or spills associated with the tanks at the time of removal. According to the EDR database search a leaking tank had been reported on March 4, 1987 when a tank truck had spilled some #2 fuel oil on the wall of the building and ground. Actions were taken and the spill was closed on March 5, 1987.

3.4.15. 35 Hub Drive

An interview and inspection was conducted at 35 Hub Drive on March 7, 2008. Ron Kitt, Vice President of Global Distribution for Marchon, accompanied Malcolm Pirnie during the site reconnaissance. The building was built in 1988 and is owned and occupied by Marchon. According to Mr. Kitt, prior to 1988, the property was vacant. Marchon has been the only tenant in this building since the building was built. Marchon is an eyewear designer and distributor. The space facing Hub Drive is used for offices, but a majority of the building is used as a warehouse for storing, cleaning, repairing, and shipping eyewear and storing promotional materials for advertising their products. The areas outside the building footprint are largely paved and are used for vehicle parking. The building has always been heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system; however, the location of the cesspools is unknown. Small quantities of rubbing alcohol are used to clean the glasses, along with nail polish remover and lighter fluid, which are all kept in a flame locker when not used. According to Mr. Kitt, there have been no known USTs or ASTs installed or removed and there have been no known environmental spills or leaks reported at this property. He stated that Marchon has never used, stored, or generated chlorinated solvents at 35 Hub Drive.

3.4.16. 50 Hub Drive

An interview and inspection was conducted at 50 Hub Drive on March 7, 2008. Ron Kitt, Vice President of Global Distribution for Marchon, accompanied Malcolm Pirnie during the site reconnaissance. The exact age of the building is unknown, but, based on historical aerial photographs; the building was built between 1966 and 1976. Marchon bought the property approximately 10 years ago. Prior to Marchon, E & F Trucking owned the property. E & F Trucking used the space for storing residential supplies and goods, such as furniture, and shipping these supplies when needed. Marchon is an eyewear designer and distributor. The space facing Hub Drive is used for offices, but a majority of the building is used as a warehouse for bulk storage of paperwork, invoices,

eyeglasses, and eyewear supplies. The areas outside the building footprint are largely paved and are used for vehicle parking. The building is currently heated by natural gas and is supplied with municipal water, while stormwater and roof runoff is collected in dry wells. The building is equipped with a septic system; however the location of the cesspools is unknown. Prior to Marchon purchasing the property, the building was heated by oil. According to the EDR database search, a 10,000-gallon UST containing #2 fuel oil was installed at some time during E & F Trucking's tenancy and was removed in 1998. There was no evidence of any leaks or spills associated with the tanks at the time of removal. Mr. Kitt stated that there has been no known environmental spills or leaks reported at this property and Marchon has never used, stored, or generated chlorinated solvents at 50 Hub Drive.

3.5. Additional Sources of Information

The Nassau and Suffolk County Departments of Public Works were contacted on April 1, 2008 to obtain information on the location of municipal sewer and water lines in the vicinity of the site. Maps of sewer and water lines will be provided by the NCDPW to Malcolm Pirnie; however, the maps were not available at the time of this report. The Suffolk County Department of Public Works was contacted and a message was left for Ben Wright. At this time, Malcolm Pirnie has not spoken to Mr. Wright.

The NCDH and the SCDHS were contacted on April 1, 2008 to obtain information on the location of the nearest public supply wells to the site. The NCDH provided a map showing the location of their well field and information, such as screen depth, about each of the public supply wells. The SCDHS described the location of well field 7, which contains two public supply wells located on Walt Whitman Road between Duryea Road and Park Drive. Maps showing the locations of these well fields are in Appendix E.

The Melville Volunteer Fire Department (MVFD) and the Plainview Volunteer Fire Department (PVFD) were contacted on April 1, 2008 to obtain information on environmental incidents that have been reported at any of the properties within the site. A letter was sent to both Volunteer Fire Departments requesting this information and as of this time, the PVFD is conducting an initial search to see how many potential records there may be and the cost associated with them putting together the report. Malcolm Pirnie has not received a response from the MVFD regarding the request at this time.

4. Conclusions and Recommendations

Based on the results of the records search and site reconnaissance, 11 properties are recommended to be further investigated for the presence of contaminants, specifically chlorinated volatile organic compounds (halogenated solvents), as shown on Figure 3. In a letter from the NCDPW to the NYSDEC, dated December 23, 2003, Nassau County requested additional funding from outside sources to continue operations at the FTC Groundwater Remediation Facility, citing that there were contaminants being treated that were not produced or used at the FTC. Analytical results from groundwater samples show that volatile halogenated organic compounds were identified at monitoring well locations not hydraulically downgradient of the FTC site and were identified at monitoring well depths that could not be attributable to an origin at the FTC site. Based on the information provided in this letter, properties that currently or in the past have stored, used, and/or transported halogenated solvents were specifically chosen to be further investigated. The properties recommended for further investigation are summarized in the table below.

Table 6
Properties of Interest

Current Tenant Name	Property Address	Reason
Trulite Louvre	148 Bethpage-Sweethollow Road	Current and past halogenated solvent use, storage tank containing PCE (removed)
Hitemco	160 Bethpage-Sweethollow Road	Current halogenated solvent use, AST containing TCE (removed)
New York Paving/ AAA/ Perry Mechanical Contractors	161 Bethpage-Sweethollow Road	Past halogenated solvent use
Molloy Brothers Moving & Storage	195 Bethpage-Sweethollow Road	Past halogenated solvent use
Aljo-Gefa Precision Manufacturing	205 Bethpage-Sweethollow Road	Potential past halogenated solvent use
Global Pottery	301 Winding Road	Drywell remediation, past halogenated solvent use, AST containing TCE (removed?)
Southampton Brick & Tile	303 Winding Road	Downgradient of 301 Winding Road, USEPA monitoring well on property contains TCE and PCE concentrations greater than GA Standards
Mr. Bar B Q	445 Winding Road	Drywell remediation, past halogenated solvent use
New Dimensions Research	260 Spagnoli Road	Current methylene chloride and naptha use
Chyron/DHL/Bi-Lo Distributors	5 Hub Drive	Past halogenated solvent use
Malhame & Co. Publishers/AKR Corp./NetFlix	10 Hub Drive	Past halogenated solvent use

Notes:

 Exceeds NYSDEC Class GA Standard.

(a) Guidance values used where no standard available

U - Not detected at listed quantitation limit

R - Data is rejected due to poor QA/QC results

J - Estimated value

B - Analyte is present in associated blank as well as the sample

Data collected and analyzed by Weston Solutions, Inc.

The EDR FieldCheck® System enables EDR's customers to make certain online modifications to the maps and text contained in EDR Radius Map Reports. As a result, the maps and text contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. The EDR FieldCheck System accesses user-modified records from previously submitted reports. Any user-modified record from a previous report that is plotted outside the search radius of this report may not be included in this report.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). MALCOLM PIRNIE, INC. used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by MALCOLM PIRNIE, INC.. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

An online review and analysis by MALCOLM PIRNIE, INC. of the NPL list, as provided by EDR, and dated 07/18/2007 has revealed that there are 3 NPL sites within approximately 1 mile of the target property.

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

An online review and analysis by MALCOLM PIRNIE, INC. of the CERCLIS list, as provided by EDR, and dated 04/23/2007 has revealed that there are 5 CERCLIS sites within approximately 1 mile of the target property.

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

An online review and analysis by MALCOLM PIRNIE, INC. of the CERC-NFRAP list, as provided by EDR, and dated 06/21/2007 has revealed that there is 1 CERC-NFRAP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

An online review and analysis by MALCOLM PIRNIE, INC. of the RCRA-LQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 9 RCRA-LQG sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

An online review and analysis by MALCOLM PIRNIE, INC. of the US INST CONTROL list, as provided by EDR, and dated 07/16/2007 has revealed that there are 2 US INST CONTROL sites within approximately 1 mile of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

An online review and analysis by MALCOLM PIRNIE, INC. of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 3 HIST FTTS sites within approximately 1 mile of the target property.

LIENS 2: A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

An online review and analysis by MALCOLM PIRNIE, INC. of the LIENS 2 list, as provided by EDR, and dated 03/08/2007 has revealed that there is 1 LIENS 2 site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

An online review and analysis by MALCOLM PIRNIE, INC. of the FINDS list, as provided by EDR, and dated 07/19/2007 has revealed that there are 109 FINDS sites within approximately 1 mile of the target property.

RAATS: The RCRA Administration Action Tracking System contains records based on enforcement actions issued under RCRA and pertaining to major violators. It includes administrative and civil actions brought by the United States Environmental Protection Agency. The source of this database is the U.S. EPA.

An online review and analysis by MALCOLM PIRNIE, INC. of the RAATS list, as provided by EDR, and dated 04/17/1995 has revealed that there is 1 RAATS site within approximately 1 mile of the target property.

STATE AND LOCAL RECORDS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

An online review and analysis by MALCOLM PIRNIE, INC. of the SHWS list, as provided by EDR, and dated 05/01/2007 has revealed that there are 3 SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

An online review and analysis by MALCOLM PIRNIE, INC. of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 1 mile of the target property.

TARGET ROCK CORPORATION	1966E BROAD HOLLOW ROAD	1/2 - 1 SSE	B0318	1218

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

An online review and analysis by MALCOLM PIRNIE, INC. of the SWF/LF list, as provided by EDR, and dated 07/31/2007 has revealed that there are 2 SWF/LF sites within approximately 1 mile of the target property.

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

An online review and analysis by MALCOLM PIRNIE, INC. of the LTANKS list, as provided by EDR, and dated 07/11/2007 has revealed that there are 60 LTANKS sites within approximately 1 mile of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

An online review and analysis by MALCOLM PIRNIE, INC. of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 55 HIST LTANKS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

An online review and analysis by MALCOLM PIRNIE, INC. of the UST list, as provided by EDR, and dated 07/11/2007 has revealed that there are 60 UST sites within approximately 1 mile of the target property.

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

An online review and analysis by MALCOLM PIRNIE, INC. of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 6 CBS AST sites within approximately 1 mile of the target property.

SPILLS: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

An online review and analysis by MALCOLM PIRNIE, INC. of the NY Spills list, as provided by EDR, and dated 07/11/2007 has revealed that there are 100 NY Spills sites within approximately 1 mile of the target property.

HIST SPILLS: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

An online review and analysis by MALCOLM PIRNIE, INC. of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 87 NY Hist Spills sites within approximately 1 mile of the target property.

Site Description: The Site includes the Claremont Polychemical Property (CPC Property) which is approximately 10 acres of land located in an industrial section of Old Bethpage in Nassau County, New York. The former CPC Process Building, a vacant 40,000-square-foot one-story building, is located in the center of the CPC Property. Another one story building east of the Process Building was constructed by EPA in February 2000 to house the CPC groundwater extraction and treatment system on site. In addition, there are five concrete-lined pits that comprised the wastewater treatment management system for the former facility, west of the former Process Building. A 20,000-cubic-yard (yd3) debris pile also exists on the northeast corner of the property. The debris pile consists primarily of construction/demolition material, with a lesser volume of woodchips. CPC produced pigments for the coloring of plastics and inks, coated metallic flakes, and vinyl stabilizers from August 1966 through October 1980. The principal wastes generated were organic solvents (primarily volatile organic compounds [VOCs] such as tetrachloroethene, resins, and wash wastes [mineral spirits]). Operations at the Site resulted in the contamination of soil and groundwater, as well as contamination of the interior of the Process Building. In 1979, an inspection by the Nassau County Health Department revealed numerous tanks and approximately 3,000 drums, many of which contained hazardous substances and were leaking. Contaminated soils also were observed. The Site was proposed for inclusion on the National Priorities List (NPL) in October 1984 and was added to the NPL in June 1986. EPA conducted a Remedial Investigation at the Site, which resulted in the selection of several distinct remedial actions. These remedial actions have been documented in two Record of Decisions (RODs). The first ROD, signed on September 22, 1989 called for

1000355814

compatibility testing, bulking/consolidation and treatment/disposal of deteriorated containers, treatment basins, and aboveground tanks. This remedial action was completed in 1990. The second ROD was signed in September 1990. The remedies in this ROD included: removal of underground storage tanks; treatment of tetrachloroethene-contaminated soils by using low temperature enhanced volatilization; extraction and treatment of the CPC on-property contaminated groundwater via an on-site air stripping/carbon adsorption system; extraction and treatment of the contaminated groundwater migrating beyond the CPC Property via an on-site air stripping/carbon adsorption system; and decontamination of the metals-contaminated Process Building. The removal of the underground storage tanks was completed in August 1991. The design work and remedial actions involving the tetrachloroethene-contaminated soils and the Process Building decontamination, and the construction of the groundwater treatment facility for the contaminated groundwater on the Claremont property were completed by the U.S. Army Corps of Engineers (USACE), pursuant to an interagency agreement with EPA. Currently, the groundwater extraction and treatment system on the CPC Property is treating 420 gallons per minute of contaminated groundwater. The contaminated groundwater beyond the CPC Property boundary is being captured and treated by the Old Bethpage Landfill (OBL) Superfund Site treatment facility. To date (2003), EPA has spent approximately \$28 million in response costs at the CPC Site. On October 2000, after removing debris and decontaminating the interior of the former Process Building, EPA and USACE discovered a pit, approximately 20 inches in diameter and 2 feet deep in the floor. The pit was sampled and found to be contaminated with VOCs and cadmium. Three sampling events were conducted to characterize the soil contamination around the pit and under the Process Building. The results of this investigation are summarized in the Claremont Polychemical Corp., Investigation Summary Report: Delineation of Subsurface Contamination of Former Process Building, dated January 2003. Soil samples were collected from 46 soil borings at depths ranging from 0 to 20 feet below ground surface. Soil borings taken under the Process Building revealed that the soils under the building are a mixture of sand and gravel with some silt. Analysis of soil samples taken at various depths through the floor around the pit revealed the presence of VOC and cadmium contamination across an area of approximately 100 feet by 80 feet to a depth of 20 feet, and a smaller area located to the south. The VOCs include tetrachloroethene, trichloroethene, toluene and xylene. The highest contaminant concentrations were generally found just below the base of the pit in the concrete floor. In addition, in May 2002, EPA conducted a soil gas investigation beneath the building. Ten soil gas samples were collected from the shallow subsurface, at depths of less than 5 feet. The highest concentrations detected were tetrachloroethene at 550,000 micrograms per cubic meter (ug/m³); trichloroethene at 620,000 ug/m³; toluene at 22,000 ug/m³; and xylene at 5,300 ug/m³. Prior to conducting the soil gas sampling, EPA screened the soil vapors below the concrete slab for VOCs with a calibrated photo-ionization detector equipped with a combustible gas indicator. The readings in the combustible gas indicator revealed levels as high as 16 percent of the lower explosive limit, approaching a potential explosive hazard. Currently, the rooms within the former process building are open to the outside environment with access doors, roof vents, holes in portions of the roof, and missing windows. The current condition of the building has prevented gas buildup within the building, as well as prevented EPA from collecting meaningful indoor air samples. In order to evaluate cleanup alternatives to address the risks posed by the VOC contamination beneath the Process Building's floor, a soil vapor extraction system (SVE) pilot study was begun in May 2002. During this treatment process, air is forced through a series of wells to volatilize the organic solvents contaminating soil in the unsaturated zone (above the water table). A portable SVE system was brought to the Site. Vertical air extraction wells were installed to draw contaminant vapors through the

1000355814

unsaturated soils towards the wells. The contaminant vapors withdrawn from the wells are sent through an off-gas treatment system using granular activated carbon to remove the VOCs. The spent granular activated carbon is drummed and transported to a permitted off-site treatment and disposal facility. The results of the pilot study supported the conclusion that SVE is effective in removing the VOCs present in the soil under the former Process Building, so EPA plans to continue this treatment to reduce VOC concentrations to protective health-based levels. An Explanation of Significant Differences (ESD) addressing Operable Unit (OU) 2 was completed in April 2003.

Classification: SIGNIFICANT THREAT TO THE PUBLIC HEALTH OR ENVIRONMENT - ACTION REQUIRED.

Region: 1
Acres: 9.500
HW Code: 130015
Record Add: 1999-11-18 12:00:00
Record Upd: 2007-04-06 14:05:00
Updated By: JXRIDER

Site Description: The plant on this site was operated by Claremont Polychemicals for manufacturing pigments for plastics, inks, coated metallic flakes, and vinyl stabilizers. Organic solvents, resins and wash wastes (mineral spirits) were the principal wastes generated. 2,000-3,000 drums have been removed from the site. Soil was contaminated to depths of at least 10 feet and groundwater contamination is evident. PCBs were detected in soil samples (120 to 1100 ppb). Toluene (82 ppb), 1,2-dichloroethylene (675 ppb), 1,1,1-trichloroethane(44 ppb), trichloroethylene (31 ppb) and tetrachloroethylene (26000 ppb) were detected in soil samples. Ten metals were found at levels exceeding Federal and/or State MCLs in groundwater near the site and downgradient. Volatile organic compounds (1,1-dichloroethane, tetrachloroethene, trans-1,2-dichloroethene, 1,1,1-trichloroethene and trichloroethene) were also detected in the groundwater above state MCLs. A RI/FS was completed and a ROD was signed in September 1990. The ROD includes pump and treat of contaminated groundwater and the excavation and treatment of contaminated soil. Remedial Design for the Phase I pump and treat of on-site contaminated groundwater and treatment of contaminated soil was completed in January of 1995. Treatment of the soils was completed in January 1997 and construction of the Phase I pump and treat system was completed on September 30, 2000. Design for the Phase II treatment of off-site contaminated water has been deferred by the EPA. The Old Bethpage Landfill treatment system operated by the Town of Oyster Bay is remediating the off-site contaminated groundwater from this site. The final inspection of building decontamination (OU-6) was performed by NYSDEC on August 22, 2000. The USEPA, the DEC and the Town have completed a cooperative agreement to fund the off-site groundwater remediation. The cooperative agreement, a Municipal Response Action Reimbursement Agreement between the NYSDEC and the Town, was executed by OSC on January 28, 2003. This completes the design/construction phase for OU-5. The project is currently in the site management phase. The off-site treatment facility, at the Old Bethpage Landfill, was transferred from EPA to DEC on December 31, 2006. DEC has a contract with the Town of Oyster Bay to continue operation the Old Bethpage Landfill groundwater treatment system.

Environmental Problems: Groundwater and soil contamination, by hazardous waste, was evident. A plume of groundwater contamination exists in the area of this facility. An onsite pump and treat system is capturing the source area groundwater contamination and the old Bethpage Landfill pump and treat system is capturing the offsite groundwater contamination under agreement between NYSDEC and the Town of Oyster

Bay. The project is currently in the site management phase.

Health Problems Assessment: Elevated levels of contaminants have been observed in the soil vapor beneath the Process Building and it is likely that the indoor air could be impacted. The process building is currently unoccupied. To reduce the potential for future exposures to contaminated soil vapor, a soil vapor extraction / air sparge system has been installed and institutional controls have been developed to maintain the integrity of the building. A pump and treat system is in place to prevent contaminated groundwater from leaving the site and groundwater monitoring is occurring on a regular basis. Excavation and removal of contaminated soil has reduced the potential for on-site workers and/or trespassers to be exposed to contamination via dermal contact, ingestion or inhalation.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at proposal October 15, 1984): Claremont Polychemical produced materials for coloring plastic in Old Bethpage, Nassau County, New York, from August 1966 through October 1980. The site consists of a 1-story building covering 40,000 square feet situated on an 8-acre lot. On March 13, 1975, the State issued a Pollutant Discharge Elimination System permit to the company. In November 1975, the Nassau County Department of Health (NCDH) inspected the site and found approximately 1,500 drums scattered about, some uncovered and others leaking or lying on their sides. The drums contained inks,

1000355814

polyethylene, polyvinyl chloride resins, and organic solvents. From May to September 1980, the company sorted and removed drums from the site. An inspection by NCDH on September 26, 1980, revealed the soil was contaminated with inks and solvents. NCDH directed Claremont to excavate contaminated soils. On October 27, 1980, counsel to Claremont told NCDH that the company was in receivership and that funds for the cleanup were no longer available. Conditions have not changed since October 1980. In August 1984, the State and the company signed an Administrative Order on Consent requiring the company to undertake a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action. About 47,000 people draw drinking water from wells within 3 miles of the site. The nearest public supply well is 3,500 feet northwest of the site. Status June 10, 1986): The measures called for by the August 1984 order are underway.

Site Description: The Circuitron Corporation site is located at 82 Milbar Boulevard, East Farmingdale, Suffolk County, New York. The Site encompasses approximately 1-acre in an industrial/commercial area. The Site is surrounded by similar small manufacturers and is several miles away from any residential area. The Circuitron Corporation site consists of an abandoned 23,500 square foot building that was used between 1961 and 1986 for the manufacture of electronic circuit boards. Approximately 95% of the Site is paved or covered by the building. The Upper Glacial aquifer (estimated 80 feet thick) overlies the

Magothy aquifer (estimated 700 feet thick) in the vicinity of the site. Nineteen public water supply wells are located within two miles of the site, of which 17 are screened in the Magothy aquifer. In 1984, an owner of Circuitron Corporation, Mario Lombardo, was charged for discharging organic solvents to unpermitted "hidden" leaching pools between March 1, 1982 and March 22, 1984. In 1985, Mr. Lombardo pleaded guilty to unlawful dumping of hazardous wastes, under New York State Environmental Conservation Law Section 27, Subsection 09-14. An Order of Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the Site including drums, tanks, and piping; and a groundwater quality study be performed. To comply with the order, Circuitron Corporation cleaned out and backfilled the unpermitted leaching pool in the southern part of the plating room and installed and sampled 5 on-Site monitoring wells. There are no records available regarding the amount of waste removed from this leaching pool or the existence and the extent of contaminated soil in and around the leaching pool. In 1987, EPA initiated an emergency removal of some of the more than 100 chemical containers and storage tanks on-Site. In 1988, EPA conducted another emergency cleanup action and removed approximately 20 waste drums from inside the building, 3 aboveground tanks from the rear of the building, the contents of 7 underground storage tanks, 2 below-surface treatment basins, and several leaching basins. The Site was proposed for the National Priorities List in June 1988 and was listed on the NPL in March 1989. The first RI/FS of the Site was initiated by EPA in September 1988 and was completed in January 1991. In 1984, an owner of Circuitron Corporation, Mario Lombardo, was charged for discharging organic solvents to unpermitted "hidden" leaching pools between March 1, 1982 and March 22, 1984. In 1985, Mr. Lombardo pleaded guilty to unlawful dumping of hazardous wastes, under New York State Environmental Conservation Law Section 27, Subsection 09-14. An Order of Consent and a Stipulated Agreement, issued by the SCDHS in 1984 and 1985, respectively, required that all leaching pools and storm drains be remediated; all toxic and hazardous materials be removed from the Site including drums, tanks, and piping; and a groundwater quality study be performed. To date, only the unpermitted leaching pool in the southern part of the plating room has been cleaned out and backfilled. This work was performed by Circuitron Corporation. There are no records available regarding the amount of waste removed from this leaching pool or the existence and the extent of contaminated soil in and around the leaching pool. In 1987, EPA initiated an emergency removal of some of the more than 100 chemical containers and storage tanks on-Site. In 1988, EPA conducted another emergency cleanup action and removed approximately 20 waste drums from inside the building, 3 aboveground tanks from the rear of the building, the contents of 7 underground storage tanks, 2 below-surface treatment basins, and several leaching basins. The Site was proposed for the National Priorities List in June 1988 and was listed on the NPL in March 1989. The first RI/FS of the Site was initiated by EPA in September 1988 and was completed in January 1991.

Site Description: The site is located at 82 Milbar Boulevard in Farmingdale. A circuit board manufacturing facility occupied a single building at this site and engaged in various photographic, riston, and silk screen processes and in some plating and etching operations. Process wastes associated with facility operations contained heavy metals and solvents and were discharged to the ground through leaching pools. Site operations ceased in 1986 and the various storage tanks were abandoned. There were five in-ground cement-lined holding tanks within the building and other raw chemical storage tanks outside of the building.

Samples were taken from the SPDES discharge pools, two leach pools found in the plating room, storm drains on the west side of the building and from another abandoned SPDES discharge pool at the site. The results confirmed the presence of heavy metals and organics. Based on these findings, the site was found to represent a significant threat to the environment and was placed on the National Priorities List. A Phase I Investigation and a RI/FS was completed at this site. Two RODs have been signed, which call for source control and groundwater cleanup. The RODs include: groundwater pump and treatment via air stripping; soil vapor extraction of contaminated soils; and excavation of contaminated sediments. In September of 1996, 100% of the groundwater design was approved. The source removal part of the OU-1 soil remediation program was completed in January of 1997. The building was demolished and the contaminated sediments were removed. Groundwater contamination is being handled under OU-2 and some investigations were completed in late 1998 to refine the groundwater remedial design. Construction of the groundwater treatment system began in November of 1999 and was completed on June 28, 2000. Project is currently in active site management.

Environmental Problems: The source removal part of the OU-1 soil remediation program was completed in January of 1997. The building was demolished and the contaminated sediments were removed. Groundwater contamination is being handled under OU-2 and some investigations were completed in late 1998 to refine the groundwater remedial design. Construction of the groundwater treatment system began in November of 1999 and was completed on June 28, 2000. Project is currently in active site management.

Health Problems Assessment: Site activities left groundwater and soils contaminated with volatile organic compounds and metals. Public drinking water serves the area, and is sampled routinely to monitor for potential contamination. Remediation of contaminated soil and restricted access to the site greatly reduces the likelihood of potential exposure. Additional Investigation may be warranted to determine the potential for soil vapor intrusion into structures on or near the site.

FINDS:

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at proposal June 24, 1988): Circuitron Corp. manufactured circuit boards during 1961-86 on about 1 acre at 82 Milbar Boulevard, East Farmingdale, Suffolk County, New York. The site is in a densely populated industrial/commercial area of Long Island east of Route 110 and the State University of New York Farmingdale Campus. The property is owned by 82 Milbar Boulevard Corp. Circuitron was a subsidiary of FEE Industries, which ADI Electronics, Inc., bought in 1984. The facility discharged thousands of gallons

of metal-containing plating wastes to an underground leaching pool permitted under the State Pollutant Discharge Elimination System (SPDES), to unauthorized leaching pools beneath the floor of the plating room, and to a storm drain. After ADI Electronics purchased the facility, the Suffolk County Department of Health Services (SCDHS) identified the discharge to the SPDES pool and the storm drain. Since 1984, SCDHS has issued Circuitron numerous notices of violations. On June 12, 1984, Circuitron agreed to an Order on Consent from SCDHS requiring removal of all hazardous substances from the site. On March 7, 1985, SCDHS issued a Stipulated Agreement in which Circuitron agreed to install three monitoring wells, analyze ground water, and clean out one of the unauthorized leaching pools. In mid-1986, the company vacated the facility without complying with all SCDHS requirements. In addition, Circuitron received one of the largest fines ever in the State for environmental pollution. The original owner has been convicted of a felony as a result of illegal waste discharges. Extensive sampling of the site by SCDHS detected heavy metals and chlorinated organic solvents in the SPDES leaching pool, the unauthorized leaching pools, and the storm drains. Analyses of the monitoring wells installed as part of the Stipulated Agreement detected 1,1,1-trichloroethane in on-site wells downgradient of the manufacturing building. In May 1987, EPA found potentially explosive conditions at the site. From 125 to 150 drums, most unmarked and one bulging, were left haphazardly throughout the building when it was vacated. Incompatible and reactive wastes were not segregated. Some drums were marked sulfuric acid, hydrochloric acid, sodium hydroxide, and caustic soda. Other smaller containers were strewn outside. Six concrete holding tanks containing unknown materials were below the floor and three aboveground storage tanks were behind the building. The aquifers underlying Long Island have been designated as Sole Source Aquifers under the Safe Drinking Water Act. At least 15 municipal wells serving over 215,000 people are within 3 miles of the site, the nearest 1,000 feet in the direction ground water flows. The shallow well has been closed since 1978 due to volatile organic chemical contamination from an unknown source. The building is not fenced or guarded. Employees of other businesses in the area use the site for parking. Status March 31, 1989): EPA is preparing a workplan for a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action.

Other Pertinent Environmental Activity Identified at Site

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at listing October 1981): Old Bethpage Landfill covers 2 acres in Oyster Bay, Nassau County, New York. It is inactive, but is within an active sanitary landfill complex. The area around the site, with the exception of Bethpage State Park to the south, is fairly well developed with residences and industrial facilities. Oyster Bay began operating the Old Bethpage Landfill in 1957, primarily for disposing of incinerator residue. In 1967, the town began accepting garbage and trash and allowing homeowners to dump trash. From 1968 through 1978, liquid and solid industrial process wastes and damaged drums containing organic residues were disposed of at the site. In 1978, Oyster Bay applied to the State for a permit to operate a sanitary landfill. Since then, the only industrial waste disposed of at the landfill has been metal hydroxide sludges. The exact location of the hazardous wastes is unknown because they were deposited with other waste throughout the landfill over 10 years. There is no surface water near the site. There are several ground water recharge basins used to dispose of scrubber water from incinerators. The site, as is all of Long Island, is located above the Magothy Aquifer, which supplies many public wells. Status July 1983): EPA has prepared a Remedial Action Master Plan outlining the investigations needed to determine the full extent of cleanup required at the site. It will guide further actions at the site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Actual:
134 ft.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks: DEC Field was "GAITES" SEE 03-25248 NEXT DOOR, TANK REMOVAL, SAME RP END
DECRemark - 0325364
Start CallerRemark - 0325364 THIS WAS A ROUTINE REMOVAL OF A 2,000GAL FUEL OIL TANK. THE TANK APPARENTLY HAD NOT BEEN USED FOR APPROX 15 YEARS, AND CONTAINED APPROX 1,000 GAL OF LIQUID, MOSTLY WATER. UPON THE REMOVAL OF THE TANK, HOLES WERE FOUND IN IT AND CONTAMINATED SOIL WAS ENCOUNTERED. THE TANK WAS LOCATED IN AN ALLEY/LOADING DOCK AREA, AND INITIALLY IT WAS NOT THOUGHT THAT ALL THE CONTAMINATED SOIL COULD BE REMOVED. AT APPROX 1110 AM, THE NCHD CALLED BACK TO SAY THAT ALL THE VISIBLY CONTAMINATED SOIL HAD BEEN REMOVED, AND THAT ENDPOINT SAMPLE(S) HAD BEEN TAKEN TO CONFIRM THE CLEANUP WAS SATISFACTORY. END

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

FIS (New York - Facility Information System) is New York's Department
of Environmental Conservation (DEC) information system for tracking
environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

FINDS:

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Code: 58757
Assessment: Direct exposure to site-related groundwater contamination is not expected because a public water supply serves the site and surrounding area. The potential for exposure related to residual soil vapor contamination is being mitigated by a combination of positive pressure within the on-site building and a subslab depressurization system beneath it. Further investigation is needed to determine the extent and magnitude of off-site groundwater contamination. As part of that investigation, NYSDOH and NYSDEC will evaluate the need to conduct additional investigations to determine the potential for soil vapor intrusion into off-site structures near the contamination.
Env Problems: Soil contamination in dry wells, leaching pools and in soils by the northwestern portion of the site building have been remediated. Periodic on-site groundwater monitoring has been terminated due to very minimal contributions from this site. The NYSDEC plans to evaluate off-site groundwater quality in the future.
Site Desc: This former manufacturing site was used by Fairfield Noble between 1969 and 1981 to produce knitted textiles. A waste water treatment system which was regulated under a SPDES permit was located on the western side of the site. After treatment, the wastewater was discharged to a field of 60 leaching pools. Gould Electronics acquired the site in 1981 and used it until 1989 to manufacture printed circuit boards for military operations. Gould used the 60 leaching pools for a short period until the facility was connected to the community sewage system. The site was acquired by Reckson Operating Partnership in February 1998 who entered into voluntary cleanup agreements in April 1999 and February 2000. A voluntary investigation was completed in 1999. Leaching pools and dry wells contaminated with chlorinated solvents, metals

and petroleum related semi-volatile organics were remediated in 2000. At the same time, soils contaminated with chlorinated solvents under the northwest portion of the original foot print of the building were remediated by a soil excavation. In conjunction with the remedial work, the formerly vacant building was completely renovated and converted into an office building complex. The on-site groundwater was monitored for two years after the remedial work before this monitoring was terminated. A sub-slab depressurization system using two extraction wells driven by a wind driven roof fan is part of an indoor air protection plan for the site. The NYSDEC has requested further evaluation of the potential vapor intrusion pathway.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated
Compliance Information System and provides a database that, when
complete, will contain integrated Enforcement and Compliance
information across most of EPA's programs. The vision for ICIS is to
replace EPA's independent databases that contain Enforcement data with
a single repository for that information. Currently, ICIS contains all
Federal Administrative and Judicial enforcement actions. This
information is maintained in ICIS by EPA in the Regional offices and
its Headquarters. A future release of ICIS will replace the Permit
Compliance System (PCS) which supports the NPDES and will integrate
that information with Federal actions already in the system. ICIS also
has the capability to track other activities occurring in the Region
that support Compliance and Enforcement programs. These include;
Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: The Fireman's Training Center was established in 1960 to provide fire fighting training facilities for Nassau County's volunteer fire fighters. This site consists of three drywell catch basin fields that receive runoff from fire training exercises. This runoff contained uncombusted liquids which drained into the ground. Three floating product plumes of oil and gas have been identified along with high levels of dissolved volatile organic solvents. The off-site plume of contaminated groundwater extends 5,000 feet southeast under the Bethpage State Park. Groundwater standards for several chlorinated volatile organics are exceeded. A remedy consisting of capping shallow soils, bioventing deep soils, deed restrictions, and pump and treat of both on-site and off-site groundwater was selected in a February 1993 Record of Decision. The construction was completed in September 1999. The groundwater treatment facility is processing approximately 750,000 gallons per day. Operating reports submitted by the Nassau County Department of Public Works indicate the facility is operating in compliance with the effluent discharge criteria. The effluent recharge basin is limiting the plant operation as only a portion of the plant capacity can be recharged. Design is proceeding on an effluent disposal alternative.

Environmental Problems: Spillage of chlorinated solvents, acetone, toluene, methyl-ethyl-ketone and other chemicals have resulted in the contamination of the Bethpage State Park clubhouse supply well. The off-site plume of contaminated groundwater extended

approximately 5,000 feet downgradient.

Health Problems Assessment: Petroleum constituents and solvents are in groundwater on-site and off-site. South Farmingdale's public water supply wells are downgradient of the site and contamination associated with this site has not been detected within these wells. The public water supply wells are tested quarterly to ensure compliance with drinking water standards. The remediation for this site included institutional controls, subsurface soil remediation and groundwater treatment. These measures are expected to prevent the public from being exposed to the contamination at this site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller City,St,Zip: Not reported
Spill Cause: Traffic Accident
Reported to Dept: On Land
Water Affected: Not reported
Spill Source: 01
Spill Notifier: Responsible Party
PBS Number: Not reported
Cleanup Ceased: / /
Cleanup Meets Std: True
Last Inspection: / /
Recommended Penalty: Penalty Not Recommended
Spiller Cleanup Dt: / /
Enforcement Date: / /
Invstgn Complete: / /
UST Involvement: False
Spill Class: Known release with minimal potential for fire or hazard. DEC Response.
Willing Responsible Party. Corrective action taken.
Spill Closed Dt: 05/23/97
Corrective Action Plan Submitted: / /
Date Region Sent Summary to Central Office: / /
Date Spill Entered In Computer Data File: 09/27/93
Date Spill Entered In Computer Data File: Not reported
Update Date: 05/27/97
Is Updated: False
PBS Number: Not reported
Tank Number: Not reported
Tank Size: Not reported
Test Method: Not reported
Leak Rate Failed Tank: Not reported
Gross Leak Rate: Not reported
Material Class Type: Petroleum
Quantity Spilled: 5
Unkonwn Quantity Spilled: False
Units: Gallons
Quantity Recovered: 0
Unkonwn Quantity Recovered: False
Material: PCB OIL
Class Type: PCB OIL
Times Material Entry In File: 1229
CAS Number: Not reported
Last Date: 19940728
DEC Remarks: SITE CHECKED, NO OTHER ACTION
Remark: CAR HIT POLE 36, TRANSFORMER LEAKED OUT, ON SIDEWALK, ROAD GRASS STRIP,
MEG CLEANED UP SPILL

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D007	CHROMIUM
D009	MERCURY
D011	SILVER
D018	BENZENE
D038	PYRIDINE
D039	TETRACHLOROETHYLENE
D040	TRICHLOROETHYLENE
F001	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F002	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
F003	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007	Source: EPA
Date Data Arrived at EDR: 09/05/2007	Telephone: N/A
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 08/31/2007
Number of Days to Update: 36	Next Scheduled EDR Contact: 10/29/2007
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Date Data Arrived at EDR: 02/02/1994

Date Made Active in Reports: 03/30/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007

Last EDR Contact: 09/19/2007

Next Scheduled EDR Contact: 12/17/2007

Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006	Source: EPA

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 06/20/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/09/2007	Telephone: 202-566-2777

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/08/2006	Telephone: 505-845-0011

ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 07/27/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/13/2007	Telephone: 202-564-5088
Date Made Active in Reports: 10/11/2007	Last EDR Contact: 10/15/2007
Number of Days to Update: 59	Next Scheduled EDR Contact: 01/14/2008
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 09/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 12/17/2007
	Data Release Frequency: No Update Planned

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile West
Site Name:	Claremont Polychemical
Site EPA ID Number:	NYD002044584
Surficial Aquifer Flow Dir.:	GENERALLY SSE. A SLIGHTLY GREATER E FLOW COMPONENT WAS OBSERVED TO THE WEST OF THE SITE.
Measured Depth to Water:	less than 175 feet.
Hydraulic Connection:	The surficial Magothy Formation aquifer and underlying Lloyd Sand aquifer are separated by the 150 foot thick Raritan Clay formation.
Sole Source Aquifer:	A sole source aquifer is present at or near the site
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Pleistocene
Code: Qp (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: PLYMOUTH

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively. Soils have very high and high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	4 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 5.50 Min: 3.60
2	4 inches	27 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 5.50 Min: 3.60
3	27 inches	65 inches	gravelly - coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand.	Max: 20.00 Min: 20.00	Max: 5.50 Min: 3.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sand
sandy loam
fine sandy loam
very gravelly - coarse sand
gravelly - sand

Surficial Soil Types: sand
sandy loam
fine sandy loam
very gravelly - coarse sand
gravelly - sand

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: coarse sand
stratified
sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Subject: Sampling Trip Report
Work Assignment No.: 080, Filtron Corp.
Contract No.: EP-W-05-048

Dear Mr. Acosta:

Weston Solutions, Inc. is pleased to submit the Sampling Trip Report for soil and aqueous samples collected during the first phase of the Filtron Corp. Preliminary Assessment/Site Inspection (PA/SI) sampling event. The Region 2 Site Assessment Team 2 (SAT 2) collected soil and groundwater samples from on-site monitoring well boreholes from November 27 through December 7, 2007. If you have any questions, please contact me at (732) 417-5826.

Very truly yours,

WESTON SOLUTIONS, INC.

Gerald V. Gilliland, P.G.
SAT 2 Project Manager

SAMPLING TRIP REPORT

SITE NAME: Filtron Corp.
DCN: SAT2.20113.080.608
W.O.: 20113.011.001.0080.00
Case No.: 37045

EPA I.D. NO.: NYN000206093

SAMPLING DATES: November 27 through December 7, 2007
(excluding November 29 and December 1 and 2)

1. Site Location: Refer to Figure 1
2. Sample Locations: Refer to Figure 2
3. Sample Descriptions: Refer to Table 1
4. Laboratories Receiving Samples:

Analysis

Name and Address of Laboratory

Target Compound List (TCL)
Volatile Organic Compounds (VOCs)

Shealy Environmental Services
106 Vantage Point Drive
West Columbia, SC 29172

5. Sample Dispatch Data:

- One aqueous sample and six soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Service on 11/27/07 at 1600 hours via Federal Express Airbill No. 8375 4298 9796
- Three aqueous samples and one soil sample for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 11/28/07 at 1600 hours via Federal Express Airbill No. 8375 4298 9811.
- Seven soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 11/30/07 at 1230 hours via Federal Express Airbill No. 8375 4298 9822.

- Five aqueous samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/3/07 at 1700 hours via Federal Express Airbill No. 8375 4298 9785.
- One aqueous sample and eight soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/4/07 at 1700 hours via Federal Express Airbill No. 8541 0029 6544.
- Three aqueous samples and one soil sample for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/5/07 at 1400 hours via Federal Express Airbill No. 8541 0029 6452.
- Nine soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/6/07 at 1600 hours via Federal Express Airbill No. 8541 0029 6463.
- Three aqueous samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/7/07 at 1200 hours via Federal Express Airbill No. 8541 0029 6555.

6. On-Site Personnel:

<u>Name</u>	<u>Company</u>	<u>Duties on Site</u>
Gerry Gilliland	WESTON SAT 2	Project Manager (PM)
Dan Gaughan	WESTON SAT 2	Sample Management Officer (SMO), Sampler (11/26 through 11/30)
Scott Snyder	WESTON SAT 2	SMO, Sampler (12/3 through 12/7)
Gil Mello	WESTON SAT 2	Site Health and Safety Coordinator (SHSC), Site Geologist, Driller Oversight
Jason Pittel	Delta Well and Pump	Driller
Pat Dorney	Delta Well and Pump	Assistant Driller

7. Additional Comments:

From November 27 through December 7, 2007, Weston Solutions, Inc. (WESTON®) Region 2 Site Assessment Team 2 (SAT 2) personnel oversaw the installation of four overburden monitoring wells at the Filtron Corp. site. SAT 2 collected a total of five surface soil samples (depth: 0'-2') (including one environmental duplicate sample), 27 subsurface soil samples (depth: > 2') (including one environmental duplicate sample), and nine aqueous samples (including one environmental duplicate sample) from the four monitoring well boreholes. One surface soil sample was collected from each borehole. Subsurface soil samples were collected at 10-foot intervals (i.e., 10'-12', 20'-22', 30'-32', etc.) from the ground surface to the topmost water-bearing zone. SAT 2 collected two groundwater samples from each borehole: one from the topmost water-bearing zone (65 to 72 feet below ground surface) and one from a depth between 90 and 95 feet below ground surface.

SAT 2 collected soil samples using 5-gram En Core™ dedicated sampling devices. Three of the surface soil samples were collected directly from hand-dug pilot holes, in those locations where the presence of underground utilities was of concern. The remaining two surface soil samples, as well as all subsurface soil samples, were collected from decontaminated, split-spoon samplers. Direct-push groundwater samples were collected using a decontaminated, stainless-steel HydroPunch sampling device. In addition to the environmental samples, SAT 2 collected four rinsate blanks to demonstrate that the split-spoon and HydroPunch samplers were free of contamination. Three trip blank samples were collected to demonstrate that there was no cross-contamination between samples and that no atmospheric contaminants were seeping into sample containers.

All samples were collected as part of the Filtron Corp. Preliminary Assessment/Site Inspection (PA/SI) work assignment. The soil and aqueous samples collected by SAT 2 were designated to be analyzed for TCL VOCs (low-medium concentration) through the EPA Contract Laboratory Program (CLP). Two soil samples and one aqueous sample were designated as matrix spike/matrix spike duplicates (MS/MSDs). Organic Traffic Reports and Airbills are presented in Attachment 1.

8. Report Prepared by:  Date: 12/27/07

SAMPLE NUMBER	ORGANIC CLP NO.	INORGANIC CLP NO.	DATE	TIME	COMMENTS
FILT-SS18	B4LT2	N/A	12/4/07	1500	Subsurface soil sample from the MW03 borehole. Light-brown, fine- to medium-grained sand, trace silt, depth: 50 to 52 feet bgs.
FILT-SS19	B4LT3	N/A	12/4/07	1515	Subsurface soil sample from the MW03 borehole. Light-grayish-brown, fine-grained sand grading to orange-gray, clayey silt, depth: 60 to 62 feet bgs.
FILT-SS20	B4LT4	N/A	12/5/07	0800	Subsurface soil sample from the MW03 borehole. Gray, clayey silt grading to light-brownish-gray silt, some fine sand, depth: 65 to 67 feet bgs.
FILT-SS21	B4LT5	N/A	12/6/07	1110	Subsurface soil sample from the MW04 borehole. Light-grayish-brown, fine- to medium-grained sand, depth: 10 to 12 feet bgs.
FILT-SS22	B4LT6	N/A	12/6/07	1125	Subsurface soil sample from the MW04 borehole. Light-brown fine- to medium-grained sand, little silt grading to grayish-white, fine- to medium-grained sand with black laminations, depth: 20 to 22 feet bgs.
FILT-SS23	B4LT7	N/A	12/6/07	1145	Subsurface soil sample from the MW04 borehole. Light-grayish-brown, fine- to medium-grained sand, trace silt, depth: 30 to 32 feet bgs.
FILT-SS24	B4LT8	N/A	12/6/07	1205	Subsurface soil sample from the MW04 borehole. Light- to medium-brown, fine- to medium-grained sand, depth: 40 to 42 feet bgs.
FILT-SS25	B4LT9	N/A	12/6/07	1305	Subsurface soil sample from the MW04 borehole. Grayish-brown fine sand and silt grading to light-brown and gray, fine- to medium-grained sand, depth: 50 to 52 feet bgs.
FILT-SS26	B4LW0	N/A	12/6/07	1325	Subsurface soil sample from the MW04 borehole. Medium-brown, fine- to medium-grained sand, depth: 60 to 62 feet bgs.
FILT-SS27	B4LY5	N/A	12/6/07	1345	Subsurface soil sample from the MW04 borehole. Light-brown, fine- to medium-grained sand grading to grayish-brown, fine-grained sand and silt grading to orange-brown, medium-grained sand, depth: 65 to 67 feet bgs.
FILT-SS28	B4LY6	N/A	12/6/07	1350	Duplicate of FILT-SS27 for QA/QC purposes.

290 Broadway - 18th Floor
New York, NY 10007-1866

Document Control No.: SAT2.20113.080.624

Subject: Sampling Trip Report – Monitoring Well Samples
Work Assignment No.: 080, Filtron Corp.
Contract No.: EP-W-05-048

Dear Mr. Acosta:

Weston Solutions, Inc. (WESTON®) is pleased to submit the Sampling Trip Report for aqueous samples collected during the second phase of the Filtron Corp. Preliminary Assessment/Site Inspection (PA/SI) sampling event. The Region 2 Site Assessment Team 2 (SAT 2) collected groundwater samples from on-site monitoring wells on January 17, 2008. If you have any questions, please contact me at (732) 417-5826.

Very truly yours,

WESTON SOLUTIONS, INC.

Gerald V. Gilliland, P.G.
SAT 2 Project Manager

Document Control No.: SAT2.20113.081.613

Subject: Sampling Trip Report
Work Assignment No.: 081, Aluminum Louvre Corp.
Contract No.: EP-W-05-048

Dear Mr. Acosta:

Weston Solutions, Inc. (WESTON®) is pleased to submit the Sampling Trip Report for soil and aqueous samples collected during the first phase of the Aluminum Louvre Corp. Preliminary Assessment/Site Inspection (PA/SI) sampling event. The Region 2 Site Assessment Team 2 (SAT 2) collected soil and groundwater samples from on-site monitoring well boreholes from December 11 through 21, 2007. If you have any questions, please contact me at (732) 417-5826.

Very truly yours,

WESTON SOLUTIONS, INC.

Gerald V. Gilliland, P.G.
SAT 2 Project Manager

SAMPLING TRIP REPORT

SITE NAME: Aluminum Louvre Corp.
DCN: SAT2.20113.081.613
W.O.: 20113.011.001.0081.00
Case No.: 37047

EPA I.D. NO.: NYD981488026

SAMPLING DATES: December 11 through 21, 2007
(excluding December 15 and 16)

1. Site Location: Refer to Figure 1
2. Sample Locations: Refer to Figure 2
3. Sample Descriptions: Refer to Table 1
4. Laboratories Receiving Samples:

Analysis

Name and Address of Laboratory

Target Compound List (TCL)
Volatile Organic Compounds (VOCs)

Shealy Environmental Services
106 Vantage Point Drive
West Columbia, SC 29172

5. Sample Dispatch Data:

- Four aqueous samples and seven soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Service on 12/11/07 at 1600 hours via Federal Express Airbill No. 8541 0029 6588
- Six soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/12/07 at 1600 hours via Federal Express Airbill No. 8541 0029 6599.
- Five aqueous samples and two soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/13/07 at 1215 hours via Federal Express Airbill No. 8541 0029 6603.

- Six soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/14/07 at 1800 hours via Federal Express Airbill No. 8375 4298 9833.
- Three aqueous samples and one soil sample for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/17/07 at 1600 hours via Federal Express Airbill No. 8375 4298 9844.
- Two aqueous samples and six soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/18/07 at 1600 hours via Federal Express Airbill No. 8375 4298 9855.
- Three aqueous samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/19/07 at 1600 hours via Federal Express Airbill No. 8375 4298 9866.
- One aqueous sample and six soil samples for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/20/07 at 1600 hours via Federal Express Airbill No. 8375 4298 9877.
- Three aqueous samples and one soil sample for low-medium concentration TCL VOCs analysis were shipped to Shealy Environmental Services on 12/21/07 at 1300 hours via Federal Express Airbill No. 8375 4298 9888

6. On-Site Personnel:

<u>Name</u>	<u>Company</u>	<u>Duties on Site</u>
Gerry Gilliland	WESTON SAT 2	Project Manager (PM)
Scott Snyder	WESTON SAT 2	Sample Management Officer (SMO), Sampler (12/11 through 12/13)
Dan Gaughan	WESTON SAT 2	SMO, Sampler (12/14 through 12/21)
Gil Mello	WESTON SAT 2	Site Health and Safety Coordinator (SHSC), Site Geologist, Driller Oversight
Jason Pittel	Delta Well and Pump	Driller
Pat Dorney	Delta Well and Pump	Assistant Driller

7. Additional Comments:

From December 11 through 21, 2007, Weston Solutions, Inc. (WESTON®) Region 2 Site Assessment Team 2 (SAT 2) personnel oversaw the installation of five overburden monitoring wells at the Aluminum Louvre Corp. site. SAT 2 collected a total of six surface soil samples (depth: 0'-2') (including one environmental duplicate sample), 29 subsurface soil samples (depth: > 2') (including one environmental duplicate sample), and eleven aqueous samples (including one environmental duplicate sample) from the five monitoring well boreholes. One surface soil sample was collected from each borehole. Subsurface soil samples were collected at 10-foot intervals (i.e., 10'-12', 20'-22', 30'-32', etc) from the ground surface to the topmost water-bearing zone. SAT 2 collected two groundwater samples from each borehole; one from the top of the topmost water bearing zone (65 to 72 feet below ground surface) and one from depths ranging from 80 to 97 feet below ground surface.

SAT 2 collected soil samples using 5-gram En Core™ dedicated sampling devices. Surface soil samples were collected directly from hand-dug pilot holes. Subsurface soil samples were collected from decontaminated, stainless-steel split-spoon samplers. Direct-push groundwater samples were collected using a decontaminated, stainless-steel HydroPunch. In addition to the environmental samples, SAT 2 collected four rinsate blanks to demonstrate that the split spoon and HydroPunch were free of contamination. Six trip blank samples were collected to demonstrate that there was no cross contamination between samples and that no atmospheric contaminants were seeping into sample containers.

All samples were collected as part of the Aluminum Louvre Corp. Preliminary Assessment/Site Inspection (PA/SI) work assignment. The soil and aqueous samples collected by SAT 2 were designated to be analyzed for TCL VOCs (low-medium concentration) through the EPA Contract Laboratory Program (CLP). Two soil samples and one aqueous sample were designated as matrix spike/matrix spike duplicates (MS/MSDs). Organic Traffic Reports and Airbills are presented in Attachment 1.

SAMPLE NUMBER	ORGANIC CLP NO.	INORGANIC CLP NO.	DATE	TIME	COMMENTS
ALC-S01	B4LG0	N/A	12/11/07	0850	Surface soil sample from the MW02 borehole. Medium-brown, fine- to medium-grained sand, trace silt, some round cobbles, depth: 13 inches below ground surface (bgs). Matrix spike/matrix spike duplicate (MS/MSD) for quality assurance/quality control (QA/QC) purposes.
ALC-S02	B4LG1	N/A	12/12/07	1100	Surface soil sample from the MW01 borehole. Dark-brown, medium- to coarse-grained sand, some silt and round gravel, depth: 12 inches bgs.
ALC-S03	B4LG2	N/A	12/12/07	1105	Duplicate of ALC-S02 for QA/QC purposes.
ALC-S04	B4LG3	N/A	12/14/07	1310	Surface soil sample from the MW03 borehole, collected beneath a surface layer of asphalt. Yellow-brown, fine- to coarse-grained sand, depth: 12 inches bgs.
ALC-S05	B4LG4	N/A	12/18/07	1050	Surface soil sample from the MW04 borehole, collected beneath a surface layer of asphalt. Coarse sand and gravel fill underlain by light-brown, medium- to coarse-grained sand, depth: 13 inches bgs.
ALC-S06	B4LG5	N/A	12/20/07	1320	Surface soil sample from the MW05 borehole, collected beneath a surface layer of asphalt. Medium-brown, fine- to coarse-grained sand, trace sub-round cobbles, depth: 13 inches bgs.
ALC-SS01	B4LG6	N/A	12/11/07	0925	Subsurface soil sample from the MW02 borehole. Light-brown, medium- to fine-grained sand, little silt, depth: 10 to 12 feet bgs.
ALC-SS02	B4LG7	N/A	12/11/07	0945	Subsurface soil sample from the MW02 borehole. Grayish-brown, medium- to fine-grained sand, depth: 20 to 22 feet bgs.
ALC-SS03	B4LG8	N/A	12/11/07	1005	Subsurface soil sample from the MW02 borehole. Reddish-brown, medium-grained sand, depth: 30 to 32 feet bgs.
ALC-SS04	B4LG9	N/A	12/11/07	1030	Subsurface soil sample from the MW02 borehole. Grayish-brown, fine- to medium-grained sand, depth: 40 to 42 feet bgs.
ALC-SS05	B4LH0	N/A	12/11/07	1050	Subsurface soil sample from the MW02 borehole. Grayish-brown, fine- to medium-grained sand, trace silt, depth: 50 to 52 feet bgs.

SAMPLE NUMBER	ORGANIC CLP NO.	INORGANIC CLP NO.	DATE	TIME	COMMENTS
ALC-SS06	B4LH1	N/A	12/11/07	1115	Subsurface soil sample from the MW02 borehole. Grayish-brown, fine- to coarse-grained sand, trace silt, saturated, depth: 60 to 62 feet bgs.
ALC-SS07	B4LH2	N/A	12/12/07	1200	Subsurface soil sample from the MW01 borehole. Light-brown, fine- to medium-grained sand, depth: 12 to 14 feet bgs.
ALC-SS08	B4LH3	N/A	12/12/07	1315	Subsurface soil sample from the MW01 borehole. Orange-brown, fine- to medium-grained sand, little silt, depth: 20 to 22 feet bgs.
ALC-SS09	B4LH4	N/A	12/12/07	1340	Subsurface soil sample from the MW01 borehole. Grayish-brown, fine- to medium-grained sand, laminated, depth: 30 to 32 feet bgs.
ALC-SS10	B4LH5	N/A	12/12/07	1400	Subsurface soil sample from the MW01 borehole. Interbedded dark-brown, light-brown, and reddish-purple, fine- to medium-grained sand, trace silt, depth: 40 to 42 feet bgs.
ALC-SS11	B4LH6	N/A	12/13/07	0755	Subsurface soil sample from the MW01 borehole. Reddish-brown, fine- to medium-grained sand, trace silt, depth: 50 to 52 feet bgs.
ALC-SS12	B4LH7	N/A	12/13/07	0825	Subsurface soil sample from the MW01 borehole. Grayish-brown, medium- to fine-grained sand, depth: 60 to 62 feet bgs.
ALC-SS13	B4LH8	N/A	12/14/07	1345	Subsurface soil sample from the MW03 borehole. Yellow-brown to orange, fine- to coarse-grained sand, trace silt and clay, depth: 10 to 12 feet bgs.
ALC-SS14	B4LH9	N/A	12/14/07	1400	Subsurface soil sample from the MW03 borehole. Pale-pink, medium- to coarse-grained sand, interbedded with orange, fine- to medium-grained sand and dark-brown sandy silt, little clay, depth: 20 to 22 feet bgs.
ALC-SS15	B4LJ0	N/A	12/14/07	1415	Subsurface soil sample from the MW03 borehole, collected beneath a clay lens. Interbedded pale-brown and orange, fine- to coarse-grained sand with dark brown streaks of silty sand, depth: 30 to 32 feet bgs.
ALC-SS16	B4LJ1	N/A	12/14/07	1435	Subsurface soil sample from the MW03 borehole. Sample collected beneath a lens of dark-gray and brown clay. Very light-gray and orange-brown, fine- to coarse-grained sand, depth 40 to 42 feet bgs.

290 Broadway - 18th Floor
New York, NY 10007-1866

Document Control No.: SAT2.20113.081.623

Subject: Sampling Trip Report – Monitoring Well Samples
Work Assignment No.: 081, Aluminum Louvre Corp.
Contract No.: EP-W-05-048

Dear Mr. Acosta:

Weston Solutions, Inc. (WESTON®) is pleased to submit the Sampling Trip Report for aqueous samples collected during the second phase of the Aluminum Louvre Corp. Preliminary Assessment/Site Inspection (PA/SI) sampling event. The Region 2 Site Assessment Team 2 (SAT 2) collected groundwater samples from on-site monitoring wells on January 15 and 16, 2008. If you have any questions, please contact me at (732) 417-5826.

Very truly yours,

WESTON SOLUTIONS, INC.

Gerald V. Gilliland, P.G.
SAT 2 Project Manager
