Receipt
The samples were received on 6/27/2018 7:40 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1º C.

GC/MS VOA
Method 8260C: The continuing calibration verification (CCV) analyzed in batch 460-534856 was outside the method criteria for the following analytes: Bromomethane (bias low) and Methyl acetate (bias high). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260C: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 460-534856 recovered outside control limits for 2-Hexanone.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 6/29/2018 7:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.1° C.

GC/MS VOA
Method(s) 8260C: The laboratory control sample (LCS) for analytical batch 460-534459 recovered outside control limits for the following analyte: 1,2,4-Trichlorobenzene. This analyte was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260C: The laboratory control sample duplicate (LCSD) for analytical batch 460-535482 recovered outside control limits for the following analyte: Methyl acetate. This analyte was biased high in the LCSD and was not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method(s) SM 3500 FE D: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe: PDI-19-SO-79-06282018 (460-159550-6), PDI-19-SO-80-06292018 (460-159550-7), PDI-20-SO-73-06292018 (460-159550-8) and PDI-20-SO-74-06292018 (460-159550-9).

Method(s) SM 3500 FE D: The following samples were diluted due to color and turbidity PDI-20-SO-73-06292018 (460-159550-8) and PDI-20-SO-74-06292018 (460-159550-9). Elevated reporting limits (RL) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

RE: NYSDEC Former Aluminum Louvre Site
Validation of Analytical Laboratory Data
Data Usability Summary Report (DUSR)
TestAmerica SDG Nos. 480-150190-1 and 480-150235-1

Dear Ms. Picunas:

Review has been completed for the data packages generated by TestAmerica Laboratories, Inc that pertain to samples collected 03/12/19 and 03/13/19 at the NYSDEC Former Aluminum Louvre site. Twelve soil samples were processed for TCL volatile analytes by USEPA SW846 method 8260C.

The data packages submitted by the laboratory contain full deliverables for validation, and this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology and the laboratory modifications. The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation
* Holding Times
* Surrogate and Internal Standard Recoveries
* Preparation Blank
* Laboratory Control Samples (LCSs)
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* Method Compliance
* Sample Result Verification

The data review includes evaluation of the specific items noted in The NYS DER-10 Appendix B section 2.0 (c) DUSR description. The items listed above that show deficiencies are discussed within the text of this narrative. The laboratory QC forms illustrating the excursions can be found within the laboratory data package.

Those items showing deficiencies are discussed in the following sections of this report. All others were found to be acceptable as outlined in the above-mentioned validation procedures, and as applicable for the methodology. Unless noted specifically in the following text, reported results are substantiated by the raw data, and generated in compliance with project requirements.

In summary, sample results are usable either as reported or with minor qualification or edit. Data completeness, accuracy, precision, reproducibility, sensitivity, and comparability are acceptable.

The client and laboratory sample identifications are attached to this text. The laboratory reported the client identifications with "-50-" rather than "-SO-".

, and should be reviewed in conjunction with this report. Also included in this report are the client EDD files, qualified to reflect the qualifications/edits recommended in this report.

TCL Volatile Analyses by EPA8260C

Due to presence in the associated method blank, the result for methylene chloride in PDI-27-S0-17.5-031219 is considered external contamination and edited to reflect non-detection.

Surrogate and internal standard recoveries are acceptable, and instrument tunes meet fragmentation requirements. Holding times were met.

Matrix spike accuracy and precision evaluations were performed on PDI-35-SO-14-031319, and show outlying recoveries for 1,1,2,2-tetrachloroethane and 1,2-dibromo-3-chloropropane (50% to 76%). The results for those two compounds in that parent sample have been qualified as estimated in value.

Initial and continuing calibration standard (ICV and CCV) linearity and calibration verification responses are within validation guidelines.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

VALIDATION DATA QUALIFIER DEFINITIONS

U	The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
J-	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.
J+	The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.
UJ	The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.
NJ	The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.
EMPC	The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.

No compounds were detected in the method blanks.

Field Duplicates

Samples 200-40996-2 / SVI-161-1-SS-20171114 and 200-40996-3 / SVI-161-DUP-SS-2-20171114 8 were used as the field duplicates

All RPDs that could be accurately calculated were less than 30%.

Internal Standard Areas and Retention Times

No problems were found with the recoveries or retention times in any of the internal standards. All recoveries were within +/- 40% of the calibration standard.

Compound Identification and Quantitation

No problems were found with the reported results of any of the samples of this delivery group.

The laboratory's case narrative states:

> During the canister pressure check performed upon receipt, the following sample was found to be received at ambient pressure: SVI-301-4-OA-20171114 (200-40996-6). The associated flow controller was evaluated and was found to be within the acceptable flow range as compared to the original set flow rate. The client was contacted, and the laboratory was instructed to proceed with analysis.
>
> During the canister pressure check performed upon receipt, the following sample was found to be received at ambient pressure: SVI-301-3-SS-20171114 (200-40996-9). The associated flow controller was evaluated and was found to be outside the acceptable flow range as compared to the original set flow rate. The client was contacted, and the laboratory was instructed to proceed with analysis.
>
> During the canister pressure check performed upon receipt, it was observed that the following sample was received at an elevated residual vacuum level: SVI-161-3-SS-20171114 (200-40996-13). The associated flow controller was evaluated upon receipt and was found to be within the acceptable flow range as compared to the original set flow rate. The client was contacted, and the laboratory was instructed to proceed with analysis.

Air samples were validated for analyses of the volatile organic client specific analyte list by the US EPA Region I checklist. A complete analytical validation was performed based upon the following parameters:

- Data Completeness
* - Holding Times
* - GC/MS Tuning
- Surrogate Compound Recoveries
* - Laboratory Control Samples
* - Calibrations
- Blank Spike
- Matrix Duplicate
- Field Duplicate

DATA VALIDATION SUMMARY

Note: The validation was done on the 2/23/18 revision of the analytical report.

Isopropanol (0.616J ug/m3) and methylene chloride (0.260J ug/m3) were detected in the method blank. The blank concentrations were greater than 5X the sample concentration in all three samples when corrected for dilution factor. The data for these compounds were reported at the reporting limit in the EDD and the “B” qualifier was removed in the data validation column.

No other problems were detected that would affect the end use of the data.

Holding Times

All samples were analyzed within the required 30 day holding time from sample collection.

Tunes

No problems were detected with the tunes associated with the samples of this delivery group.

Surrogate Compound Recoveries

Surrogate data was not included in the data package.

Surrogates are not required for this method.

Laboratory Control Samples

All recoveries were within the laboratory's quality control limits.

Calibrations

The %RSD was less than or equal to 30% for all of the target compounds in the initial calibration.

All of the percent differences in the continuing calibration were less than 30%.

All relative response factors were greater than 0.05.

Compound Identification and Quantitation

No problems were found with the reported results of any of the samples of this delivery group.

The laboratory's case narrative states:

> *During the canister pressure check performed upon receipt, the following sample was found to be received at ambient pressure: SVI-161-1-OA-20171115 (200-41045-3). The associated flow controller was evaluated and was found to be within the acceptable flow range as compared to the original set flow rate. The client was contacted, and the laboratory was instructed to proceed with analysis.*

The problems with the sample pressure did not affect the use of the data.

RE: Validation of the NYSDEC Former Aluminum Louvre Site Remedial Design Analytical Data
Project No. D007621-21; Site Number 130195
TAL-Buffalo SDG Nos. 480-137530-1, 480-137801-1, 460-139579-1, 460-139579-2, 460-158997-1, 460-159001-1, 460-159134-1, 460-159208-1, 460-159285-1, 460-159314-1, 460-159396-1, 460-159405-1, and 460-159550-1

Dear Ms. Picunas:

Review has been completed for the data packages generated by TestAmerica Laboratories that pertain to aqueous samples collected between 06/13/18 and 06/29/18 at the Former Aluminum Louvre site. Twenty seven soil and aqueous samples and four field duplicates were processed for TCL volatiles; three of these samples and three other samples were also processed for ferrous iron. Three soil and aqueous samples, and an aqueous field duplicate were analyzed for TCL volatiles, seventeen per-and polyfluoroalkyl substances (PFAS), and 1,4-dioxane. Field and trip blanks were also processed. Analytical methods are those of the USEPA SW846 6000/7000/8000 series and a modified USEPA method 537.

The data packages submitted by the laboratory contain full deliverables for validation, and this usability report is generated from review of the QC summary form information, with full review of sample raw data and limited review of associated QC raw data. The reported QC summary forms and sample raw data have been reviewed for application of validation qualifiers, with guidance from the USEPA national and regional validation documents, and in consideration for the specific requirements of the analytical methodology.

The following items were reviewed:

* Data Completeness
* Case Narrative
* Custody Documentation/Sample Receipt
* Holding Times
* Surrogate and Internal Standard Recoveries
* Isotopic Standards
* Method, Preparation, and Field Blanks
* Matrix Spike Recoveries/Duplicate Correlations
* Blind Field Duplicate Correlations
* Laboratory Control Sample (LCS)

* ICP Serial Dilution Correlations
* Instrumental Tunes
* Initial and Continuing Calibration Standards
* Method Compliance
* Sample Result Verification

Those items listed above which show deficiencies are discussed within the text of this narrative. All of the other items were determined to be acceptable for the DUSR level review, as discussed in NYS DER-10 Appendix B section 2.0 (c). Documentation of the outlying parameters cited in this report can be found in the laboratory data package.

In summary, results for target analytes are usable either as reported or with minor qualification/ edit, with the following exception:

- Ferrous iron analysis was processed well beyond the allowable holding time, and therefore undetected results are rejected and detected results are heavily biased low

Accuracy, precision, data completeness, sensitivity, comparability, and representativeness are acceptable.

Client sample identifications are attached to this text, and should be reviewed in conjunction with this report. Also included in this report is the laboratory EQuIS EDDs with recommended qualifiers/edits applied in red.

Chain-of-Custody/Sample Receipt

The interim relinquish entries were omitted from the custody forms associated with samples reported in SDG 480-137801.

Blind Field Duplicate Correlations

The blind field duplicate evaluation was performed on MW-1161-4-20180724, PDI-106-SO-16-06132018, PDI-113-SO-53-06212018, PDI-123-SO-18-20180725, and PDI-111-WG-75-06182018 show acceptable correlations, with the exception of that for trichloroethene in PDI-111-WG-75-06182018. The concentration of that compound in the parent sample was 170 ug/kg, and the concentration in the field duplicate was 1.3 ug/kg. The results for that compound have been qualified as estimated in that parent sample and its duplicate.

Volatile Analyses by EPA8260C

Results for volatiles in four of the samples processed at the low level are qualified as estimated due to the timeframe in transit and subsequent outlying holding time until the samples could be frozen. The affected samples are: PDI-6-SO-14-06132018, PDI-6-SO-16-06132018, PDI-8-SO-17-06132018, and PDI-10-SO-S7-06132018.

The results for dibromochloromethane and bromoform in PDI-111-WG-75-06182018 and 1,1,1-trichloroethane in PDI-18-SO-21-06282018 have been edited to reflect non-detection due to poor mass spectral quality.

Holding times were met, surrogate and internal standard recoveries are acceptable, and instrument tunes meet fragmentation requirements.

Most detections of acetone, methylene chloride, and 2-butanone in the project samples are considered external contamination and edited to non-detection due to presence in the associated blanks.

The matrix spike recoveries and duplicate correlations were performed on PDI-7-SO-17-06132018, PDI-25-SO-14-20180725, MW-161-3-20180725, PDI-12-WG-75-06202018, and PDI-18-SO-21-06282018. Those for PDI-25-SO-14-20180725 show outlying recoveries for almost every analyte. The results for that parent sample have therefore been qualified as estimated. Recoveries and correlations of the other matrix spikes fall within validation guidelines, with the following exceptions, results for which have been qualified in the indicated parent samples:

Parent Sample	Analyte	Outlying % Recoveries
PDI-25-SO-14-20180725	1,1,1-trichloroethane	69,69
	1,1,2,2-tetrachloroethane	72,78
	1,2-dibromo-3-chloropropane	49,55
	1,2-dichloroethane	72,73
	2-butanone	57,64
	acetone	42,44
	carbon tetrachloride	71,71
	chloroform	78,78
	dichlorodifluoromethane	55,53
	1,2-dibromomethane	74,77
PDI-7-SO-17-06132018	ethylbenzene	145,146
	1,2-dichlorobenzene	158,159
MW-161-3-20180725	trichloroethane	60,40
PDI-12-WG-75-06202018	cis-1,2-dichloroethene	78,79

The following results are qualified as estimated due to low recoveries the associated LCSs:

Affected Samples	Analyte	Outlying % Recoveries
All samples and blanks reported in SDG 460-159208-1	1,2-dibromo-3-chloropropane	49,54
	bromoform	47,52
	dibromochloromethane	67,72
All samples and blanks reported in SDG 460-159396-1	2-hexanone	68,69

Initial and continuing calibration standard (ICV and CCV) linearity and calibration verification responses are within validation guidelines, with the exception of the following, results for which are qualified as estimated in the indicated associated samples:

- bromomethane (22%D to 26%D) in samples PDI-10-SO-S7-06182018, MW-1161-4-20180724, TB-20180724, FB-20180724, FB-20180725, MW-161-3-20180725, TB-20180725, MW-161-4-20180724, PDI-TB-06202018, PDI-FB-06202018, PDI-12-WG-75-06202018, PDI-FB-06212018, PDI-13-WG-75-06212018, and in all samples and blanks reported with SDG 460-159396

- 1,1-dichloroethane (22%D) in samples PD1-23-SO-18-20180725, PDI-123-SO-18-20180725, and PDI-24-SO-18-20180725
- 1,2-dibromomethane (22%D) in samples PDI-TB-06222018 and PDI-FB-06222018
- bromoform (26%D) in sample PDI-14-SO-55-06222018
- bromoform, 1,1,2,2-tetrachloroethane, and 1,2-dibromo-3-chloropropane (22%D to 54%D) in all samples an blanks reported with SDG J159208-1

1,4-Dioxane by EPA 8270D SIM

Surrogate and internal standard recoveries are within laboratory acceptance ranges. Holding times were met.

Matrix spikes of MW-161-3-20180725 show recoveries and correlations within laboratory acceptance ranges.

Calibration standards show acceptable responses that are within validation guidelines.

Ferrous Iron by ASTM Method 3500

Undetected results for ferrous iron are rejected, and detected results are qualified as estimated, with a possibly severe low bias, due to a very extended holding time (at 10 and 12 days from collection, well beyond the 15 minute method holding time). The detected results are of questionable usability. The samples should have been processed immediately upon laboratory receipt.

The matrix spike/duplicate evaluation of PDEI-18-SO-21-06282018 shows recoveries and correlations within validation guidelines.

PFAS by Modified EPA Method 537

PFAS compounds are identified by their common acronyms in this report. The report forms reference both the technical names and the acronyms.

Due to presence in the associated blanks, the following detections are considered external contamination and edited to reflect non-detection:

- PFHxS in PDI-MW-161-1-I-06262018 and in the samples reported in SDG 480-139579-2
- PFNA and PFHxS in MW-161-4-20180724 and MW-1161-4-20180724

Matrix spikes of MW-161-3-20180725 show recoveries and correlations within laboratory ranges/limits.

One of the samples was received with melted ice and at elevated temperature. Due to the persistence and the tolerance of heat of these analytes, no qualification is made to the affected results.

Holding times were met, and isotopic/internal standard recoveries are within laboratory acceptance limits, with the exception of one isotopic surrogate standard. The result for the associated is not affected, as the instrument response of the surrogate standard was acceptable.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

Judy Harry

Site-Specific Protection of Groundwater Calculations

A Calculation Form (Word Format)

Directions: Complete one form for each calculation brief

Client: NYSDEC	**Job No.** 0897.215958	**Calculations By:** A. Harrold
Project: Former Aluminum Louvre	**Checked By/Date** C. Gurr	**Date:** 17 June 2019
Detail: Site-Specific Protection of Groundwater	**Reviewed By/Date** 20 Jun 2019	**Calc #:** 001
		Revision No./Date: 0

Calculation Brief Title: Site-Specific Protection of Groundwater Calculations

1.0 Purpose/Objective: Provide brief statement of results to be expected from this calculation.

The purpose of these calculations is to use site-specific data to determine the recommended protection of groundwater soil cleanup goals.

2.0 Procedure: Outline the steps followed and approach.

Fraction of organic carbon analyses were performed on soil samples from soil boring PDI-1 near the source zone. The groundwater cleanup goal was provided by NYSDEC and organic carbon partitioning coefficients and dilution attenuation factor are standard values from USEPA Soil Screening Guidance. The Site-specific protection of groundwater soil cleanup goals are calculated from the Site-specific and standard values for each contaminant of concern.

3.0 References/Data Sources:

A. List out information used and its source(s). Attach copies of information used for the calculation including source for all calculation formulas.

1. U.S. Environmental Protection Agency (USEPA), 1996. Soil Screening Guidance: Technical Background Document. Washington, DC. May 1996.

B. Show full version of key equations here with references.

Equation for calculating allowable soil concentration (USEPA, 1996)

$$C_s = f_{oc} * K_{oc} * C_w$$

Where: C_s = allowable soil concentration f_{oc} = fraction of organic carbon of the natural soil media
K_{oc} = partition coefficient between soil and water media C_w = groundwater cleanup goal

Equation for calculating protection of groundwater soil cleanup goals (USEPA, 1996)

$$\text{protection of groundwater soil cleanup goal} = C_s * DAF$$

Where: C_s = allowable soil concentration DAF = dilution attenuation factor

4.0 Assumptions and Limitations:

A. List assumptions and basis.

The f_{oc} value was measured from Clay 1 during the PDI. The DAF assumes the dilution and attenuation mechanisms of volatilization, sorption and desorption, leaching, diffusion and mixing will act upon the contaminant between Clay 1 and the water table. The geometric mean of measured K_{oc} values is assumed to be a more suitable estimate due to a wide variability within the distribution of values (USEPA, 1996).

B. Identify limitations of calculations and results.

Only one boring near the source zone was analyzed for f_{oc}.

5.0 Calculations: Attach calculation to this form. Create clear and descriptive process that is easily followed. Show actual equations in normal format. Use sketches and graphs liberally. Box significant results and annotate liberally. Use units, where appropriate.

A Calculation Form (Word Format)

Site-specific and standard values for each contaminant of concern are shown in the table below. An example calculation for trichloroethene is shown on the following page. The same calculation procedure is followed for all six contaminants of concern.

Inactive Hazardous Waste Disposal Site Classification Notice

The Inactive Hazardous Waste Disposal Site Program (the State Superfund Program) is the State's program for identifying, investigating, and cleaning up sites where the disposal of hazardous waste may present a threat to public health and/or the environment. The New York State Department of Environmental Conservation (Department) maintains a list of these sites in the Registry of Inactive Hazardous Waste Disposal Sites (the "Registry"). The site identified above was recently added to the Registry as a site that presents a significant threat to public health and/or the environment - action required (Class 2). See map on other side for the approximate location of the site.

United States Environmental Protection Agency (USEPA) sampling detected soil and groundwater concentrations on the site exceeding the standards, criteria, and guidance (SCG). Trichloroethylene (TCE) concentrations in soil exceeded the unrestricted soil cleanup objective of 0.47 ppm in 3 of 31 soil samples. The exceedances ranged from 1.3 ppm to 520 ppm. Maximum on-site TCE concentrations in groundwater exceeded the groundwater standard of 5 ppb in 13 of 20 groundwater samples. Exceedances ranged from 6 ppb to 3,000 ppb. Maximum on-site tetrachloroethene (PCE) concentrations in groundwater exceeded the groundwater standard of 5 ppb in 7 of 20 groundwater samples. Exceedances ranged from 12 ppb to 130 ppb. The groundwater at the site is in a federally-designated sole source aquifer.

The Department will keep you informed throughout the investigation and cleanup of the site.

If you own property adjacent to this site and are renting or leasing your property to someone else, please share this information with them. If you no longer wish to be on the contact list for this site or otherwise need to correct our records, please contact the Department's Project Manager listed below.

Re: **Permit No. R5680**
161 Sweethollow Road

GCI Project No. 960285

Dear Mr. Fabrizio:

As per your request I am submitting to you a letter regarding the removal of one (1) - 2,000 gallon fuel oil underground storage tank (UST). The tank excavation work was conducted on December 2, 1997.

One (1) - 2,000 gallon single wall steel fuel oil UST was removed from the subject site on December 2, 1997. The UST removal was witnessed by Mr. Mike Mangino, Public Health Sanitarian for the Nassau County Department of Health (NCDH). A total of 1,949 gallons of fuel oil were removed from the UST prior to the excavation. The disposal manifest for the fuel oil is included with this report. The UST was observed to be structurally sound with no holes or pitting observed. Mr. Mangino indicated that the tank was observed to be in very good condition. There were no signs of contamination observed in the tank pit upon removal of the UST. Mr. Mangino indicated that the soils appeared clean and that no further excavation was required. Mr. Mangino indicated that no end-point samples were required to be taken. The tank pit was backfilled with clean sand to grade.

The UST was cleaned utilizing "speedi-dri" absorbent pellets. The waste sludge removed from the UST during the cleaning process was contained in one (1) - 55 gallon storage drum. The waste disposal manifest for the drum is included with this letter report. The UST was then cut in half and loaded onto a flatbed trailer. The tank was disposed of at Gershow Recycling.

Due to the fact that the UST was over 1,100 gallons in size, it was required to be registered and permitted with the NCDH. The appropriate permit application forms were submitted to the NCDH on December 11, 1997. The NCDH has assigned confirmation No. 337-H97 for the removal of the fuel oil UST. I have also enclosed several pictures which were taken during the removal of the UST.

Should you have any questions, or require anything further, please feel free to contact our office. I thank you for the opportunity to provide you with our environmental consulting services.

Sincerely,
