Re: Blydenburgh Road Landfill Complex
Post-Closure Groundwater Monitoring Program
2019 Annual Report
D&B No. 3763-21

Dear Mr. Varrichio:

Enclosed please find six copies of the final 2019 Annual Post-Closure Groundwater Monitoring Program Report for the Blydenburgh Road Landfill Complex. In addition, this report is provided in electronic format on the enclosed compact disc.

If you have any questions or require additional information, please call me at (516) 364-9890, Ext. 3068.

Very truly yours,

Thomas P. Fox, P.G.
Vice President

1.0 INTRODUCTION

This Annual Report presents the analytical results obtained in support of the Post Closure Groundwater Monitoring Program conducted on behalf of the Islip Resource Recovery Agency (IRRA) during the 2019 semiannual sampling events for the Blydenburgh Road Landfill Complex. The Landfill Complex is located in Hauppauge, Town of Islip, New York (see **Figure 1-1**). The semiannual sampling events for 2019 were conducted in February (first quarter) and August (third quarter).

The purpose of the Post Closure Groundwater Monitoring Program is to monitor groundwater flow direction and quality subsequent to the capping and closure of the Municipal Solid Waste (MSW) Landfill and Ash Monofill, and operation of the groundwater remediation system. Consistent with the Record of Decision (ROD) issued by the U.S. Environmental Protection Agency (USEPA) – Region 2 for the Blydenburgh Road Landfill Complex, the groundwater remediation program was designed to reduce total volatile organic compounds (TVOCs) in groundwater to 50 micrograms per liter (ug/l).

The monitoring program was conducted in conformance with the Sampling and Analysis Plan (SAP) and the Corrective Measures Work Plan (CMWP) approved by the New York State Department of Environmental Conservation (NYSDEC) and the USEPA – Region 2.

This Post Closure Groundwater Monitoring Program Annual Report includes a discussion of the sample locations, sampling procedures, laboratory analyses, field and analytical results, data validation, groundwater level measurements and flow direction. The report also includes a comparison of the analytical results to applicable New York State groundwater quality standards and guidelines, the results obtained during previous sampling events (if applicable), and the remediation criterion of 50 ug/l for TVOCs prescribed in the ROD issued by the USEPA-Region 2. In addition, the report includes recommendations for future monitoring and operation of the groundwater remediation system.

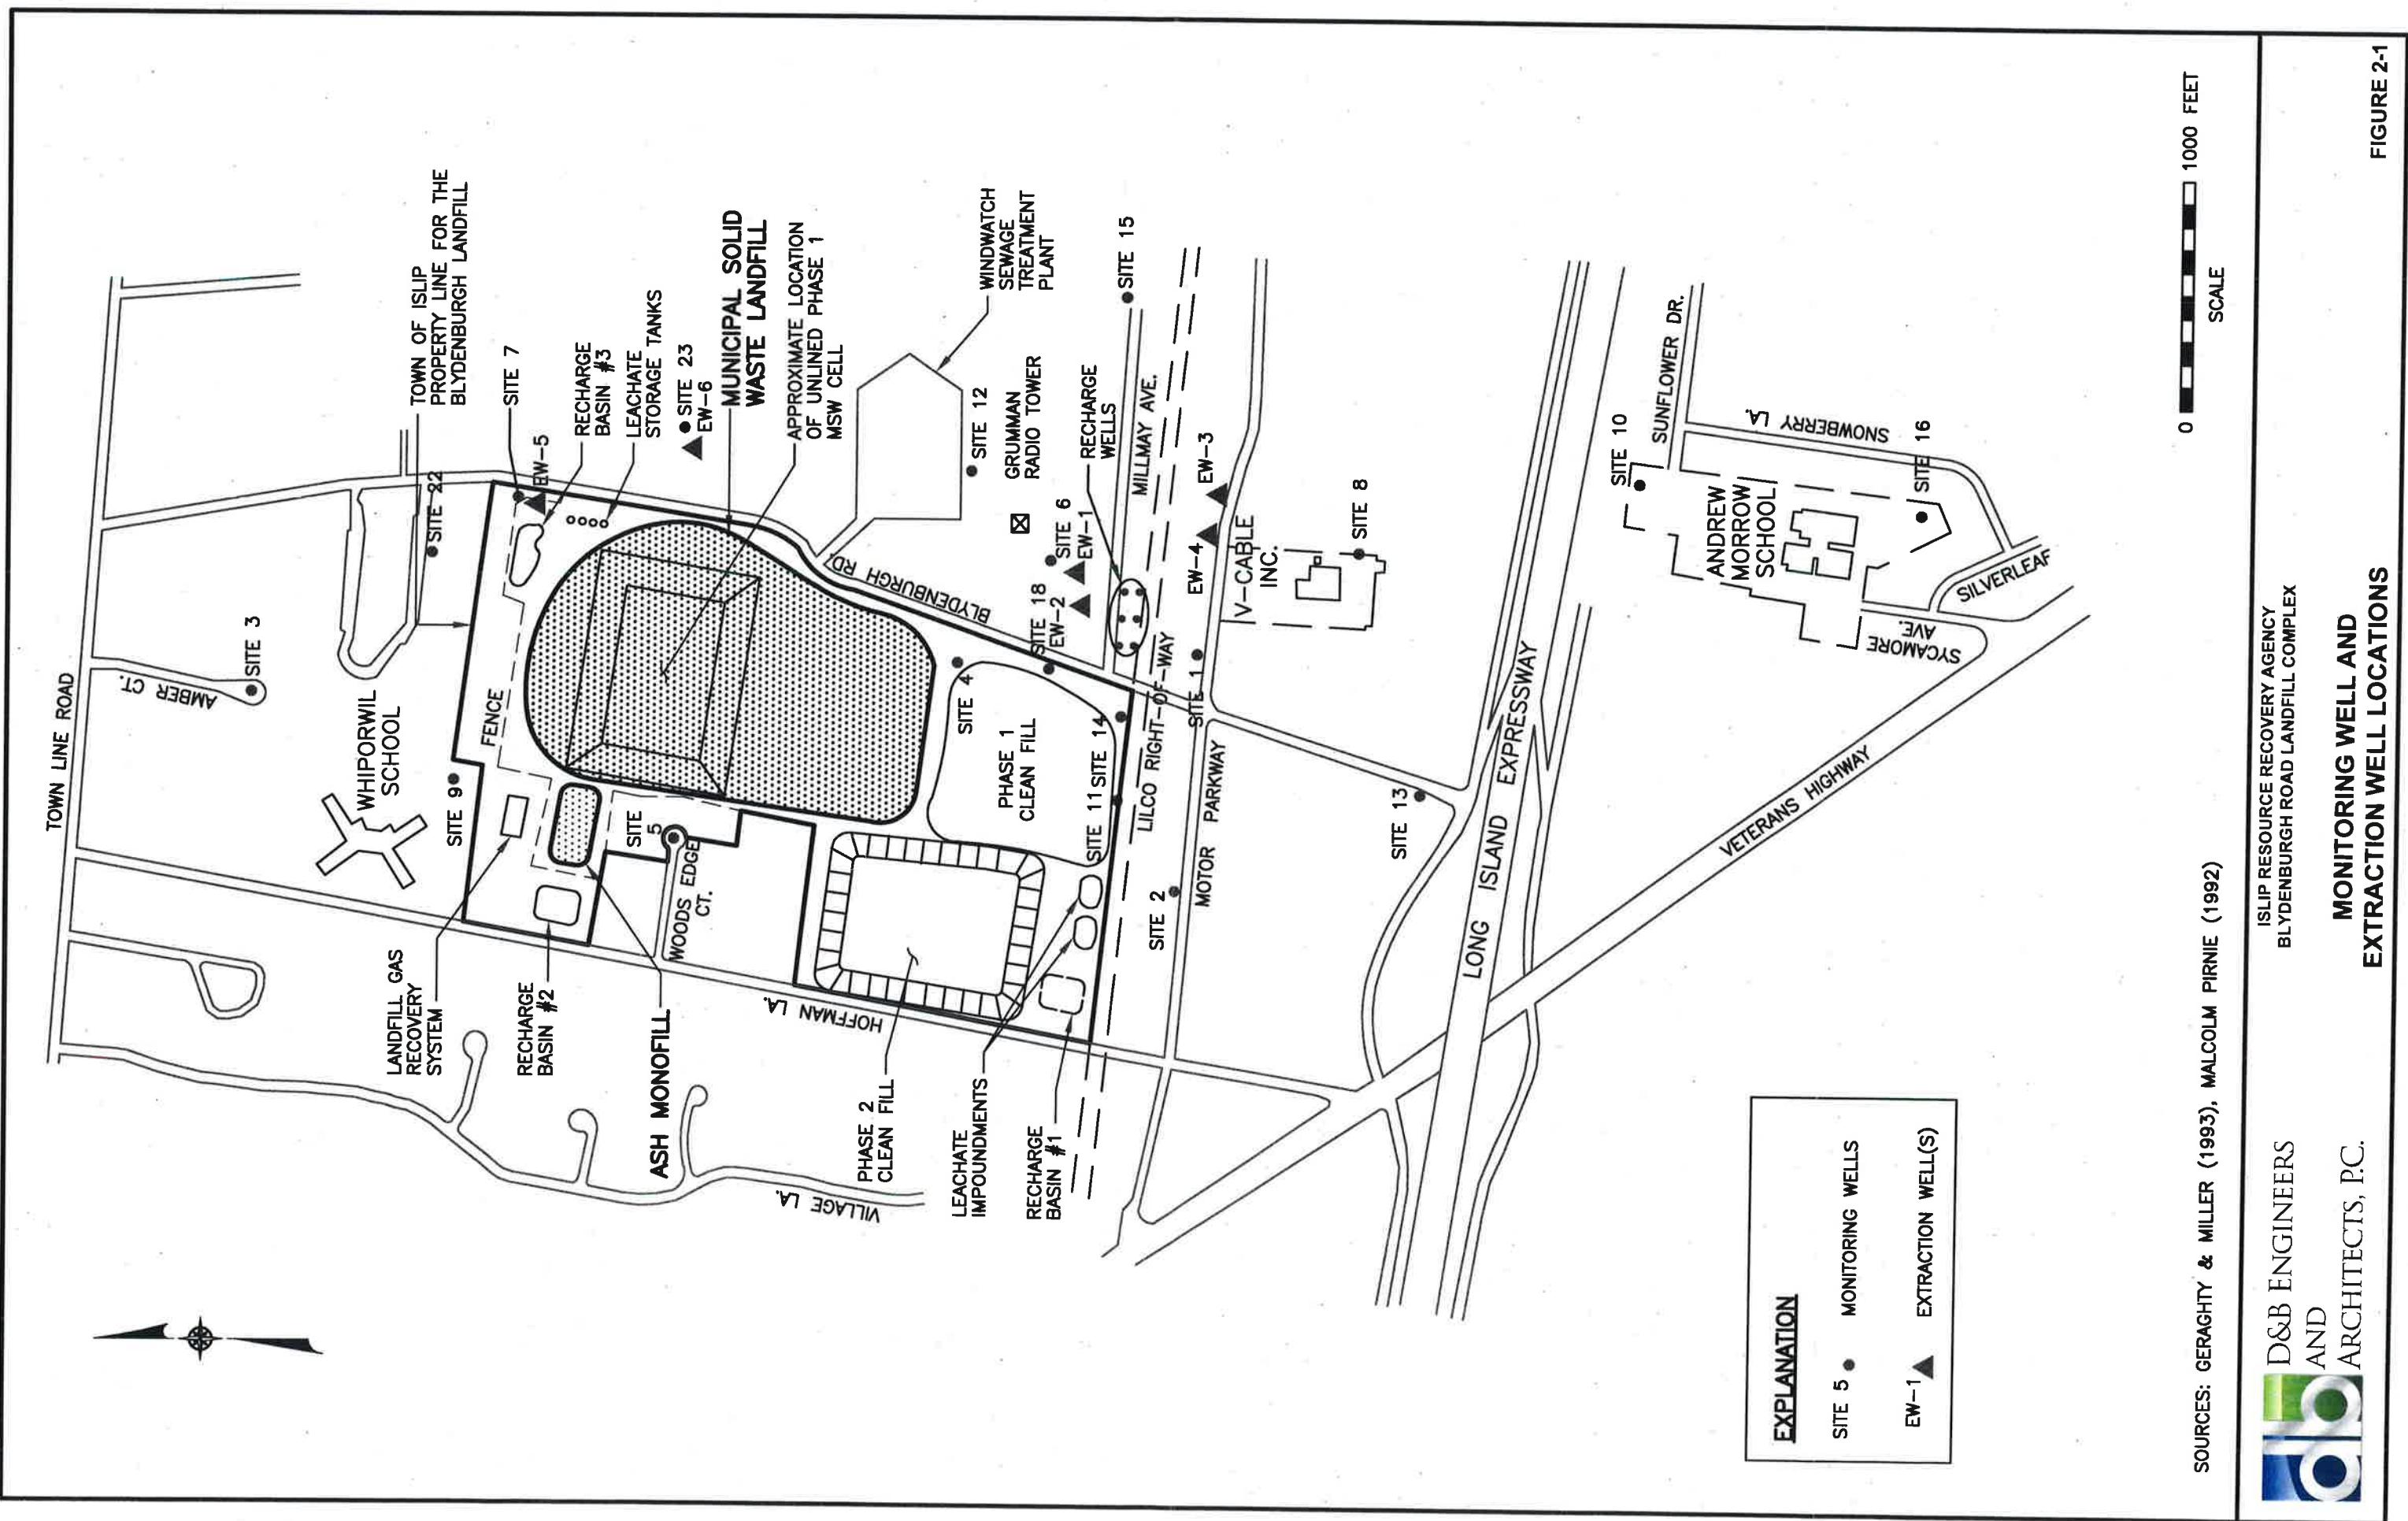

FIGURE 1-1

2.0 SAMPLING LOCATIONS

For the first quarter sampling event (February 2019), 25 groundwater monitoring wells, four extraction wells and temporary extraction well (GM-1D) were sampled. It should be noted, at the request of the NYSDEC, groundwater monitoring well GM-1D was converted to a temporary extraction well in October 2013. In addition, at the time of the First Quarter 2019 sampling event, extraction wells EW-5 and EW-6 were not in service and therefore, groundwater samples from these locations were not obtained.

For the third quarter sampling event (August 2019), 36 groundwater monitoring wells, five extraction wells and temporary extraction well (GM-1D) were sampled. It should be noted, at the time of the Third Quarter 2019 sampling event, extraction well EW-5 was not in service and therefore, a groundwater sample was not obtained.

Figure 2-1 illustrates the groundwater monitoring well and extraction well locations. Each monitoring well site shown on **Figure 2-1** includes 1 to 4 individual monitoring wells with screened intervals at varying depths. Well construction information for the groundwater monitoring wells sampled as part of this program, as well as the extraction wells, is summarized in **Tables 2-1** and **2-2**. In addition, well construction information for the six recharge wells used as part of the water level monitoring network is summarized in **Table 2-3**. The locations of the recharge wells are also illustrated on **Figure 2-1**.

3.0 SAMPLING PROCEDURES AND ANALYSES

Sampling procedures for collection of the groundwater samples were implemented in accordance with the protocol described in the Sampling and Analysis Plan (SAP). Both dedicated and disposable sampling equipment was used, where appropriate, in accordance with the SAP. Field decontamination was performed between sampling locations for non-disposable equipment. The following sections provide a brief discussion of the procedures used during groundwater level measurements, organic vapor and combustible gas monitoring, groundwater sampling and sample analysis.

3.1 Groundwater Level Measurement Procedures

Prior to collecting groundwater samples, synoptic water level measurements were obtained from the monitoring wells to determine the volume of standing water in the well for purposes of purging, as well as for the determination of groundwater elevations and flow direction. Groundwater level measurements were obtained from a surveyed measuring point on each well using an electronic water level indicator to an accuracy of 0.01 foot. A discussion regarding groundwater level measurement results and groundwater flow direction is provided in **Section 6.0**.

In addition to the monitoring wells, water level measurements were also obtained in the six recharge wells by means of the existing “bubbler systems” to determine the operating water levels in each of the recharge wells. Water levels were measured while the effluent lift station pump inside the treatment facility was in operation. During operation of the pump, treated groundwater is discharged from the treatment facility into the six recharge wells. The operation of the pump was determined by listening for water flowing into each recharge well.

Measurement of the operating water level in the recharge well casing was obtained using low flow compressed air to minimize errors associated with friction (back pressure) resulting from turbulent air flow in the bubbler components. After a steady state reading was observed on the bubbler pressure gauge, the air flow rate was temporarily increased to ensure that the bubbler

tube was fully evacuated. The air flow was then reduced to a slower rate to confirm the initial reading.

The gauge reading represents the back pressure on the bubbler tube or depth of submergence of the bubbler tube tip. The depth of submergence, measured in feet, is added to the bubbler tube tip elevation (reference elevation) to calculate the operating water level elevation within the well.

The difference between the operating water elevation within the well casing and the water table elevation of the aquifer surrounding the well represents the driving head or resistance of the well components and the aquifer to the recharge of water from the well casing to the aquifer. The magnitude of the driving head (or resistance) provides an indication of the hydraulic condition of each well. As an example, a partially clogged well (well screen, gravel pack, surrounding soil) would require a larger driving force at a given flow rate to realize the transfer of water from the well casing to the aquifer as compared to an unclogged well.

3.2 Sampling Procedures

Prior to collecting groundwater samples, the monitoring wells were purged to remove the standing water in the well. Well purging was accomplished by first measuring the static water level in the well and calculating the standing water volume. A decontaminated submersible pump was used to purge the water from the well.

During the purging process, groundwater was monitored and recorded for the following field parameters: pH, temperature, specific conductance, oxidation reduction potential (ORP), dissolved oxygen, and turbidity. When the values of the field parameters stabilized within 10% based on the last two readings, the turbidity of the groundwater was less than 50 Nephelometric Turbidity Units (NTUs) and at least three well volumes had been removed, well purging was considered complete.

Field parameter values measured in the groundwater monitoring wells, extraction wells and temporary extraction well GM-1D at the time of sample collection, as well as additional field data collected for the first quarter and third quarter sampling events in 2019 are presented in **Appendix A**.

Decontamination of the submersible pump used for well purging was performed in accordance with the procedures described in the SAP.

In accordance with the SAP, groundwater samples were collected using new, dedicated, disposable polyethylene bailers and polypropylene rope. Samples for Volatile Organic Compound (VOC) analysis were collected first, followed by inorganic parameters and leachate indicators. Each sample was stored in an ice-filled cooler with the chain of custody forms and delivered to the analytical laboratory.

Groundwater samples collected from the extraction wells, as well as temporary extraction well GM-1D, were collected from the sample port on each well. It should be noted, extraction wells EW-2 and EW-6 were shut down on May 15, 2006, at the request of the USEPA - Region 2. Prior to sampling, EW-2 and EW-6 were each purged using the dedicated pump installed in each of these extraction wells. After purging and sampling was completed, wells EW-2 and EW-6 were again shut down by IRRA personnel.

Appropriate quality assurance/quality control (QA/QC) samples, which included field blanks, matrix spike and matrix spike duplicate (MS/MSD) sets, blind duplicates and trip blanks, were collected in accordance with the SAP. Trip blank samples accompanied all laboratory sample coolers.

Analytical results for the samples collected from the groundwater monitoring wells, extraction wells and temporary extraction well GM-1D are provided in **Appendix B-1** through **B-3** and **Appendix D-1** through **D-3** and discussed in **Section 4.0**.

3.3 Organic Vapor and Combustible Gas Monitoring

Total organic vapor and combustible gas headspace measurements were collected in the groundwater monitoring wells that were sampled as part of the Post Closure Groundwater Monitoring Program. Organic vapors were measured using a photoionization detector (PID) and combustible gas was measured using a portable multi-gas meter. The organic vapor and combustible gas results represent headspace measurements collected during the semiannual synoptic groundwater level measurements and are provided in Section 4.0.

3.4 Sample Analyses

Groundwater samples collected from the groundwater monitoring wells, extraction wells and temporary extraction well (GM-1D) during the 2019 sampling events were analyzed for New York Codes and Regulations (NYCRR) Part 360 Baseline Parameters (VOCs, inorganic parameters and leachate indicators). At the request of the NYSDEC, commencing with the First Quarter 2015 sampling event, Freon 21 and Freon 22 were added for analysis to the Part 360 VOC list.

During the 2019 sampling events, other parameters (pH, temperature, specific conductance, ORP, dissolved oxygen and turbidity) were measured in the field for groundwater samples collected from each of the groundwater monitoring wells, extraction wells and temporary extraction well (GM-1D).

4.0 ANALYTICAL RESULTS

The 2019 semiannual analytical results and historical Total VOC (TVOC) trends from the Post Closure Groundwater Monitoring period from July 1997 to the present, where applicable, are discussed below.

4.1 Field Parameters

As described in **Section 3.0**, field parameters monitored during purging of the monitoring wells included pH, temperature, specific conductance, ORP, dissolved oxygen and turbidity. Final field parameter values and additional field data measured in the groundwater monitoring wells, extraction wells and temporary extraction well (GM-1D); during the 2019 sampling events are contained in **Appendix A**.

4.2 Monitoring Wells

To evaluate groundwater quality, the Baseline Groundwater Remediation Monitoring Program Report (Dvirka and Bartilucci, August 1996) defined three hydrogeologic zones (refer to **Table 4-1**). Zone 1 is defined as within approximately 40 feet of the water table (2 to 45 feet relative to mean sea level [msl]), Zone 2 is the bottom of the Deep Upper Glacial/Shallow Magothy aquifer contact (-124 to -167 feet msl) and Zone 3 is deeper in the Magothy aquifer (-237 to -368 feet msl).

Seven of the monitoring wells (4G-2, 6G-2, 11G-2, 14G-1A, 14G-2, 14M-1 and 18G-2) sampled do not fall within any of the three zones described above. Five of these wells (4G-2, 6G-2, 11G-2, 14G-1A and 18G-2) are screened in the Upper Glacial aquifer just above the Smithtown Clay Unit, which is at a depth of approximately -35 to -75 feet msl. Although these well screens do not straddle the water table, the results of the analyses for these wells are included in the discussion for the shallow Upper Glacial aquifer (Zone 1). It should be noted; well 14G-2 is screened just below the Smithtown Clay Unit and is included in the discussion for the Deep Upper Glacial/Shallow Magothy wells (Zone 2). Well 14M-1 is screened below Zone 2 and is included in the discussion for Zone 2.

**Well 14G-2 screened - 83 to - 103 feet msl.

***Well 14M-1 screened - 174 to - 194 feet msl.

**** Well GM-1D was converted into a temporary extraction well in October 2013.

Source: Baseline Groundwater Remediation Monitoring Program Report, Dvirka and Bartilucci Consulting Engineers, August 1996.

4.2.1 Volatile Organic Compounds

The following discussion presents the 2019 sample results, as well as historical trends for TVOCs in each of the hydrogeologic zones (refer to **Table 4-2**). It should be noted, for the purpose of discussion, TVOC results for GM-1D (temporary extraction well) are included and discussed as part of the Deep Magothy Aquifer (Zone 3). The results of the individual VOC analyses for the monitoring wells, as well as temporary extraction well (GM-1D) are presented in **Appendix B-1**. Graphs illustrating historical TVOC concentrations for the groundwater monitoring wells are presented in **Appendix C-1**.

Shallow Upper Glacial Aquifer (Zone 1)

A comparison of the semiannual sample results for 2019 indicate that none of the twelve wells screened in the Shallow Upper Glacial Aquifer detected TVOC concentrations in exceedance of the remediation criteria of 50 ug/l. The shallow wells exhibited TVOC concentrations during 2019 ranging from nondetect to 8 ug/l. For shallow wells sampled on an semiannual basis during 2019, TVOC concentrations for five wells (6G-1, 8G-1, 11G-1, 13G-1 and 18G-1) remained consistent (variation of 10 ug/l or less). Seven shallow wells (GM-1S, GM-2S, 4G-1, 9G-1, 10G-1, 15G-1 and 16G-1) were sampled on an annual basis (third quarter 2019). For comparison purposes, TVOC concentrations for these wells, with the exception of 4G-1 and 9G-1 were compared to the most recent sample results (third quarter 2107), for the respective well. For wells 4G-1 and 9G-1, TVOC concentrations were compared to the third quarter 2018 sample results. TVOC concentrations in the seven wells mentioned above remained consistent.

TVOC concentrations in wells screened in the Shallow Upper Glacial, with the exception of well 11G-1 remained consistent in comparison to historical results. Sample results are considered consistent when there is variability in concentration of 10 ug/l or less, with no apparent historical trend. In general, since February 2006, well 11G-1 exhibited a decreasing trend in TVOC concentrations.

ND - Not detected.

* Total VOC results for wells GM-1S, GM-2S, GM-2I, GM-2D, 6M-1, 10G-1, 11M-1, 15G-1 and 16G-1 are compared to third quarter 2017 sample results.

** Total VOC results for wells 4G-1 and 9G-1 are compared to the third quarter 2018 sample result.

*** GM-1D was converted into a temporary extraction well in October 2013.

Historical VOC graphs are presented in Appendix C-1.

Mid Upper Glacial Aquifer (Zone 1)

A comparison of the semiannual sample results for 2019 indicate that one well (11G-2), out of the five wells screened in the Mid Upper Glacial Aquifer detected TVOC concentrations in exceedance of the remediation criterion of 50 ug/l. TVOC concentrations in well 11G-2 during the first and the third quarters of 2019, were 66 ug/l and 56.8 ug/l, respectively. TVOC concentrations in the remaining four wells (4G-2, 6G-2, 14G-1A and 18G-2) ranged from nondetect to 1.1 ug/l.

TVOC concentrations in four wells (4G-2, 6G-2, 14G-1A and 18G-2) remained consistent during 2019. In general, TVOC concentrations remained consistent in comparison to historical results in wells 4G-2 (since February 2002), 6G-2 (since February 2007), 14G-1A (since 1997) and 18G-2 (since August 2004). In general, since February 2008 well 11G-2 showed an increasing trend in TVOCs in comparison to historical results.

Deep Upper Glacial/Shallow Magothy (Zone 2)

A comparison of the semiannual sample results for 2019 indicate that one out of the fifteen wells screened in the Deep Upper Glacial/Shallow Magothy detected TVOC concentrations equal to the remediation criteria of 50 ug/l. TVOC concentrations in well 14M-1 were reported at 50 ug/l during the first quarter of 2019 and during the third quarter of 2019 were reported at 44.9 ug/l. TVOC concentrations in the remaining wells screened in Zone 2, ranged from nondetect in wells GM-1I, 7M-1, 8M-1, 14G-2, 22M-1 and 23M-1 to a maximum concentration of 37.7 ug/l in well 13M-1.

As previously mentioned, at the request of the NYSDEC, the analysis of Freon 21 and Freon 22 was added to the Part 360 Baseline VOC list. As indicated on the data tables (**Appendix B-1**), five wells (4M-2, 11G-2, 11M-1, 13M-1 and 14M-1) exceeded the groundwater standard (5 ug/l) for Freon 21. The maximum concentration for Freon 21 was reported in monitoring well 11G-2 at 10.3 ug/l. There is no groundwater standard for Freon 22.

TVOC concentrations in the Deep Upper Glacial/Shallow Magothy wells remained consistent during 2019. It should be noted, wells GM-2I and 11M-1 were not sampled in 2018, however, for comparison purposes TVOCs for each well were compared to the third quarter 2017 results. For well GM-2I which was sampled on an annual basis during the August 2019 sampling event, TVOCs have remained consistent in comparison to the previous sample result. For well 11M-1 which was sampled on an annual basis during the August 2019 sampling event, TVOCs exhibited an increase in TVOCs greater than 10 ug/l in comparison to the previous sample result.

With regard to historical trends, TVOC concentrations in wells GM-1I, GM-2I, 8M-1 (since May 2001), 11M-1, 14G-2 (since May 2001), 22M-1 (since November 2005) and 23M-1 (since February 2007) remained consistent in comparison to historical results. TVOC concentrations in wells 4M-1 (since 2004), 6G-3, 7M-1, 12M-1, 14M-1 and 16M-1 (since 2004), exhibited a slight decreasing to decreasing trend in comparison to historical results. TVOC concentrations in wells 10M-1 and 13M-1 showed a slight increasing to increasing trend in comparison to historical results.

Deep Magothy Aquifer (Zone 3)

TVOC concentrations in the deep Magothy wells (GM-2D, 6M-1 and 8M-2), were nondetect during the 2019 sampling period. TVOC concentrations in well 4M-2 during the first and third quarters of 2019 were 12.6 ug/l and 17.1 ug/l, respectively. TVOC results in temporary extraction well (GM-1D) was reported at 59 ug/l (first quarter) and 47.8 ug/l (third quarter) during the 2019 sampling events.

In addition, as stipulated in the Corrective Measures Work Plan (CMWP), temporary extraction well GM-1D is to be sampled every two months during the calendar year. Temporary extraction well GM-1D was sampled during the months of February, August, October and December of 2019. TVOCs for GM-1D during these months ranged between 47.8 ug/l to 59 ug/l. It should be noted, GM-1D was not in service during the months of May, June and July of 2019 and therefore, a groundwater sample could not be obtained during any of these months.

As indicated on the data table for GM-1D (**Appendix B-1**), both Freon 21 and Freon 22 were detected in the samples at maximum concentrations of 14.6 ug/l and 9.4 ug/l, respectively. For each sampling event, Freon 21 exceeded the groundwater standard of 5 ug/l. There is no groundwater standard for Freon 22.

In comparison to historical results, TVOC concentrations in temporary extraction well GM-1D exhibits an increasing trend. TVOC concentrations in wells 4M-2 and 8M-2 remained consistent during 2019, as well as in comparison to historical results. TVOC concentrations in wells GM-2D and 6M-1, which are sampled on an annual basis (August 2019), remained consistent both in comparison to the third quarter 2017 sampling results and historical results. It should be noted, wells GM-2D and 6M-1 were not sampled in 2018.

4.2.2 Inorganic Parameters

Tabulated analytical results for inorganic parameters for the groundwater monitoring wells, as well as temporary extraction well (GM-1D) are provided in **Appendix B-2**. Graphs illustrating historical inorganic parameters from selected monitoring wells, which exceeded NYSDEC Class GA groundwater standards or guidance values are presented in **Appendix C-2**. Discussion of the individual inorganic parameters that were detected at concentrations exceeding NYSDEC Class GA groundwater standards and guidance values in 2019 are discussed below. The highest concentration detected for the inorganic parameters with exceedances were selected and presented in **Table 4-3**.

- Arsenic was detected above the groundwater standard (25 ug/l) in well 12M-1 (21.2 ug/l).
- Boron was detected above the groundwater standard (1,000 ug/l) in wells 4M-1 (1,650 ug/l), 11G-2 (1,490 ug/l) and 14M-1 (1,160 ug/l).
- Iron was detected above the groundwater standard (300 ug/l) in 7 wells (4G-1, 4M-1, 4M-2, 11G-1, 11G-2, 12M-1 and 14M-1) Iron concentrations which exceeded the groundwater standard ranged from 462 ug/l in well 11G-1 to 7,170 ug/l in well 4G-1.

GM-1D was converted into a temporary extraction well in October 2013
* Well 18G-2 screened - 9 to - 29 feet msl.

** Well 14G-2 screened - 83 to - 103 feet msl.

*** Well 14M-1 screened - 174 to - 194 feet msl.

---: No exceedances

Exceeds the groundwater standard/guidance value

- Manganese was detected above the groundwater standard (300 ug/l) in twelve monitoring wells (4G-1, 4G-2, 4M-1, 6G-3, 8G-1, 8M-2, 11G-1, 11G-2, 12M-1, 14M-1, 18G-1 and 18G-2). Manganese concentrations which exceeded the groundwater standard ranged from 1,390 ug/l in well 12M-1 to 48,600 ug/l in well 8G-1.
- Magnesium was detected above the groundwater guidance value (35,000 ug/l) in six monitoring wells (4M-1, 4M-2, 10M-1, 12M-1, 13M-1 and 14M-1), as well as in temporary extraction well (GM-1D). Magnesium concentrations which exceeded the guidance value ranged from 36,900 ug/l in well 4M-2 to 65,600 ug/l in well 13M-1.
- Nickel was detected above the groundwater standard (100 ug/l) in wells 4M-1 (177 ug/l), 11G-1 (102 ug/l), 11G-2 (175 ug/l) and 14M-1 (124 ug/l).
- Sodium was detected above the groundwater standard (20,000 ug/l) in most monitoring wells (26 out of 36), as well as in temporary extraction well (GM-1D). Sodium concentrations which exceeded the groundwater standard ranged from 27,500 ug/l in well 6G-1 to 406,000 ug/l in well 4M-1.
- Thallium was detected above the groundwater guidance value (0.5 ug/l) in wells 4G-2 (6 ug/l), 6G-3 (6.4 ug/l), 11G-2 (6 ug/l), 18G-1 (12.7 ug/l) and 18G-2 (6 ug/l).

4.2.3 Leachate Indicators

Tabulated analytical results for leachate indicators for the groundwater monitoring wells, as well as temporary extraction well (GM-1D) are provided in **Appendix B-3**. Graphs illustrating historical leachate indicators from selected monitoring wells, which exceeded NYSDEC Class GA groundwater standards or guidance values are presented in **Appendix C-3**. Discussion of the individual leachate indicators that were detected at concentrations exceeding NYSDEC Class GA groundwater standards and guidance values in 2019 are discussed below. The highest concentration detected for the leachate indicators with exceedances were selected and presented in **Table 4-4**.

- Ammonia nitrogen was detected above the groundwater standard (2 mg/l) in ten monitoring wells (4G-1, 4M-1, 4M-2, 6G-3, 8M-1, 11G-1, 11G-2, 14M-1, 18G-1 and 18G-2), as well as in temporary extraction well (GM-1D). Ammonia concentrations which exceeded the groundwater standard ranged from 4.9 mg/l in wells GM-1D and 8M-1 to 179 mg/l in well 4M-1.

---: No exceedances

Exceeds the groundwater standard/guidance value

- Bromide was detected above the groundwater guidance value (2 mg/l) in wells 4M-1 (4.9 mg/l), 4M-2 (2.8 mg/l), 11G-2 (4 mg/l) and 14M-1 (4 mg/l).
- Chloride was detected above the groundwater standard (250 mg/l) in wells 4M-1 (687 mg/l), 4M-2 (397 mg/l), 8G-1 (1,120 mg/l), 11G-1 (277 mg/l), 11G-2 (385 mg/l) and 14M-1 (441 mg/l).
- Phenols were detected above the groundwater standard (0.001 mg/l) in well 13G-1 at a maximum concentration of 0.44 mg/l.

4.3 Extraction Wells

4.3.1 Volatile Organic Compounds

Table 4-5 presents a comparison of the 2019 TVOC concentrations for the extraction wells, as well as historical trends. The 2019 VOC results for the extraction wells are presented in **Appendix D-1**. Graphs illustrating historical TVOC concentrations for the extraction wells are presented in **Appendix E-1**.

A comparison of the 2019 results, showed concentrations of TVOCs in the extraction wells to have remained consistent (10 ug/l or less variability). VOCs were not detected in EW-1, EW-2, EW-3, EW-4 and EW-6. As previously mentioned, EW-5 was not in-service during calendar year 2019.

4.3.2 Inorganic Parameters

Tabulated analytical results for inorganic parameters for the extraction wells are provided in **Appendix D-2**. Graphs illustrating historical inorganic parameters from selected extraction wells, which exceeded NYSDEC Class GA groundwater standards or guidance values are presented in **Appendix E-2**. Discussion of the individual inorganic parameters for the extraction wells that were detected at concentrations exceeding NYSDEC Class GA groundwater standards and guidance values in 2019 are discussed below.

Table 4-5

**BLYDENBURGH ROAD LANDFILL COMPLEX
POST CLOSURE GROUNDWATER MONITORING PROGRAM
COMPARISON OF EXTRACTION WELL SAMPLE RESULTS
TOTAL VOLATILE ORGANIC COMPOUNDS**

Well No.	First Quarter (February 2019)	Third Quarter (August 2019)	2019 Comparison	Historical Trend
EW-1	ND	ND	Consistent	Consistent since February 2002
EW-2	ND*	ND*	Consistent	Consistent since February 2002, with an increase noted in 2015
EW-3	ND	ND	Consistent	Decrease
EW-4	ND	ND	Consistent	Consistent since November 2002
EW-5	NS	NS	No comparison	Consistent since 1997
EW-6	ND*	ND*	Consistent	Consistent since 1997

Notes:

All results reported in ug/l.

Historical VOC graphs are presented in Appendix E-1.

ND - Not detected.

NS- Not sampled, since extraction well was not in service.

*Extraction well sampled during well shut down.

- Iron was detected above the groundwater standard (300 ug/l) in EW-2 at 11,000 ug/l (first quarter) and 5,860 ug/l (third quarter).
- Manganese was detected above the groundwater standard (300 ug/l) in EW-1, EW-3 and EW-4 for both the first and third quarter sampling events. Manganese concentrations in these wells ranged from 341 ug/l in EW-4 to 515 ug/l in EW-3.
- Sodium was detected above the groundwater standard (20,000 ug/l) in wells EW-1, EW-2, EW-3 and EW-4 for both the first and third quarter sampling events. Sodium concentrations in these wells ranged from 58,300 ug/l in EW-3 to 86,900 ug/l in EW-2.

4.3.3. Leachate Indicators

Tabulated analytical results for leachate indicators for the extraction wells are provided in **Appendix D-3**. Graphs illustrating historical leachate indicators from selected extraction wells, which exceeded NYSDEC Class GA groundwater standards or guidance values are presented in **Appendix E-3**. Discussion of the individual leachate indicators that were detected at concentrations exceeding NYSDEC Class GA groundwater standards in 2019 are discussed below:

- Ammonia concentrations exceeded the groundwater standard (2 mg/l) in EW-3 and EW-4 for both the first and third quarter sampling events. Ammonia concentrations in these extraction wells ranged from 2.1 mg/l in EW-3 to 11.1 mg/l in EW-4.

No other leachate parameters were detected in the extraction wells above the Class GA groundwater standards and guidance values.

4.4 Organic Vapor and Combustible Gas Monitoring

For the groundwater monitoring wells sampled during 2019, the results of the organic vapor and combustible gas monitoring in the headspace of the monitoring wells exhibited no detectable readings for VOC vapors and combustible gas.

5.0 DATA VALIDATION

Thirty groundwater samples (25 monitoring wells, 4 extraction wells and temporary extraction well (GM-1D), two blind duplicates, two matrix spike/matrix spike duplicate (MS/MSD) sets, two field blanks and five trip blanks were collected as part of the first quarter sampling event (February 2019). Forty-two groundwater samples (36 monitoring wells, 5 extraction wells and temporary extraction well (GM-1D), two blind duplicates, two matrix spike/matrix duplicate sets, two field blanks and seven trip blanks were collected as part of the third quarter sampling event (August 2019). Samples in the first quarter and third quarter sampling events in 2019 were analyzed for 6 NYCRR Part 360 Baseline Parameters VOCs, including Freon 21 and Freon 22, inorganic parameters and leachate indicators. Sample analyses were performed in accordance with SW-846 methods, as specified in the Part 360 regulations. The laboratory is approved under the New York State Department of Health Environmental Laboratory Approval Program (ELAP) for the analyses performed.

The data packages submitted by the analytical laboratory (Pace Analytical Laboratory, Inc., Melville, NY), were validated in accordance with NYSDEC quality assurance/quality control (QA/QC) requirements. In accordance with the contract requirements and the Sampling and Analysis Plan (SAP), 20 percent of the environmental samples and all the QA/QC samples (calibrations, blanks, spikes, etc.) were reviewed, yielding a “20% validation.” The validation forms for the two semiannual sampling events of 2019 are included in Appendix F.

February 2019 (First Quarter)

The two data packages (7079120 and 7079760) submitted by the analytical laboratory, Pace Analytical, Inc., Melville. While all the samples were reviewed for transcription errors, calculations were verified for six environmental samples (6G-3, 8G-1, EW-4, 14G-1A, 7M-1 and 13G-1).

Two duplicates were collected. Blind Duplicate - 1 was a duplicate of sample 7M-1 and Blind Duplicate-2 was a duplicate of sample 8M-2. Matrix spike and matrix spike duplicate sets were collected at wells EW-1 and EW-3.

The following requirements were outside limits:

- Cis-1,2-dichloroethene percent recovery (%R) was above the QC limit in the laboratory control sample (LCS) and was detected above the reporting limit in sample 12M-1 and GM-1D, therefore it was qualified as estimated (J).
- The following metals were detected in the initial blank, preparation blank and/or field blank and were qualified as non-detect (UB): aluminum in all samples in data package 7079760; boron in samples 8M-2, BLIND DUPLICATE-2, 6G-1 and 8G-1; and cadmium in all samples except 8M-2 in data package 7079760, cadmium, vanadium and zinc in all samples in data package 7079120; manganese in samples 4M-2, 10M-1, 13G-1, 14G-1A, 14G-2, 16M-1, 22M-1, 7M-1 and BLIND DUPLICATE-1.
- Sample 8M-2 was field duplicated and labeled BLIND DUPLICATE-2. Based on field duplicate results cadmium was qualified as estimated (J/UJ) in samples 8M-2 and BLIND DUPLICATE-2.
- The following were analyzed outside of holding times: hexavalent chromium associated with samples 12M-1, FIELD BLANK, GM-1D, GM-1I, 6G-1, 6G-2, 6G-3, 11G-2, 11G-1, 18G-2, 18G-1, 13M-1, FIED BLANK-1, EW-3, 13G-1, 10M-1, 16M-1 and 23M-1. Hexavalent chromium was qualified as an estimated (J/UJ) in associated samples.
- The following general chemistry parameters were detected in the FIELD BLANK and/or method blank and qualified as non-detect (UB): nitrate in sample 11G-1, 13M-1 and 11G-2; TKN in samples 14G-2, 14G-1A, 16M-1, 23M-1, 7M-1 and BLIND DUPLICATE-1; bromide in samples 6G-2, 6G-1, BLIND DUPLICATE-2, EW-1 and EW-2; TKN in samples BLIND DUPLICATE-2, 8M-2, 6G-2 and EW-2; and phenolics in all samples.
- The following general chemistry parameters percent recoveries (%Rs) were above the QC limits in the MS and detected above the reporting limit, therefore they were qualified as estimated (J): chloride in samples 6G-3, 6G-2, 6G-1, 12M-1, GM-1I, BLIND DUPLICATE-2 and EW-1; TKN in samples 10M-1, 11G-1, 11G-2, 13M-1, 14M-1, 18G-1, 18G-2, 22M-1, 4G-2, 4M-1, 4M-2, EW-3, 12M-1, 8M-1, GM-1D, 6G-3 and EW-4; nitrate in samples 14G-2 and 14G-1A; sulfate all samples except 11G-2 and Field Blank in data package 7079120; nitrite and TOC in sample EW-4.

- The %Rs were below the QC limit in the matrix spike (MS) and qualified as estimated (J/UJ) in the following general chemistry parameters: TKN in samples 6G-2, 6G-1, 12M-1, GM-1I, FIELD BLANK, 8M-2, 8M-1, 6G-3 and GM-1D; nitrate in samples 10M-1, 16M-1, 23M-1, 22M-1, 7M-1 and BLIND DUPLICATE-1 and all samples in data package 7079760; cyanide in samples EW-3, 13G-1, 6G-3 and 6G-2; alkalinity in samples 4M-2 and 4G-2; hexavalent chromium in samples 14M-1, 14G-2, 14G-1A, 4M-1, 4M-2 and 4G-2.
- The RPDs were above the QC limits in the duplicate for chemical oxygen demand associated with all samples in package 7079760; TKN associated with samples 11G-1, 11G-2, 13G-1, 13M-1, 14M-1, 18G-1, 18G-2, 4M-1, 4M-2, BLIND DUPLICATE-1, EW-3 and FIELD BLANK-1; and total dissolved solids associated with samples 10M-1, 16M-1, 23M-1, 22M-1, 7M-1, BLIND DUPLICATE-1, 11G-2, 11G-1, 18G-2, 18G-1, 13M-1, FIELD BLANK, EW-3 and 13G-1; and were qualified as estimated (J/UJ) in associated samples.
- Sample 8M-2 was field duplicated and labeled BLIND DUPLICATE-2. Based on field duplicate results chloride was qualified as estimated (J/UJ) in samples 8M-2 and BLIND DUPLICATE-2.

August 2019 (Third Quarter)

The two data packages (70101295 and 70101745) submitted by the analytical laboratory, Pace Analytical, Inc., Melville, NY. While all the samples were reviewed for transcription errors, calculations were verified for six environmental samples (18G-2, 23M-1, 4G-1, 6G-3, EW-2 and 10G-1).

Two duplicates were collected. Blind Duplicate -1 was a duplicate of sample EW-4 and Blind Duplicate-2 was a duplicate of sample 8M-2. Matrix spike and matrix spike duplicate sets were collected at wells GM-2D and EW-3.

The following requirements were outside limits:

- The percent recoveries (%Rs) were below the QC limit in the MS for 1,2-dibromoethane (EDB) and trans-1,3-dichloropropene associated with samples TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE-1, FIELD BLANK-1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1; and 1,2-dibromoethane (EDB) and trans-1,3-dichloropropene associated with samples TRIP BLANK 8/19/19, 8M-2, 8M-1, 8G-1, BLIND DUPLICATE-2, GM-1I,

GM-1S and GM-1D. The above compounds were qualified as an estimated (UJ) in the associated samples.

- The %R was below the QC limit in the LCS for iodomethene associated with samples TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE -1, FIELD BLANK-1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1 and was qualified as an estimated detection limit (UJ).
- The following metals were detected in the initial blank, preparation blank and/or field blank and were qualified as non-detect (UB): nickel in samples 13G-1, 6M-1, 11M-1, EW-1, 6G-1, 6G-2, 13M-1 and EW-3; arsenic in samples 12M-1 and 4M-1; boron all samples except 8M-2 and 4M-1; silver in samples 8M-1 and 7M-1; and potassium in samples 12M-1, 15G-1, 22M-1, 10G-1, 16M-1 and 16G-1.
- The percent difference was above the QC limit in the serial dilution for magnesium associated with sample 8M-2, 8M-1, 8G-1, BLIND DUPLICATE-2, GM-1I, GM-1S, GM-1D, GM-2D, GM-2I, GM-2S, 9G-1, 7M-1 and FIELD BLANK-2. Magnesium was qualified as estimated (J/UJ) in the associated samples.
- Sample 8M-2 was field duplicated and labeled BLIND DUPLICATE-2. Based on field duplicate results boron, calcium, iron, magnesium, manganese, potassium and sodium were qualified as estimated (J/UJ) in samples 8M-2 and BLIND DUPLICATE-2.
- The following were analyzed outside of holding times: hexavalent chromium associated with 12M-1, 15G-1, 7M-1, 8G-1, 8M-1, 9G-1, GM-2I, GM-2S, 8M-2, BLIND DUPLICATE-2 and GM-2D and all sample in data package 70101295. It was qualified as an estimated detection limit (UJ) in associated samples.
- The following general chemistry parameters were detected in the FIELD BLANK and/or method blank and qualified as non-detect (UB): ammonia in samples 14G-2, EW-1, EW-6, 23M-1, 6G-1, 13G-1, 14G-1A, 6G-2, 11M-1, GM-2D, 9G-1, 16M-1, 16G-1, GM-2S, GM-2I, 10G-1, GM-1I, GM-1S, 15G-1, 8G-1, EW-2, 4G-2, BLIND DUPLICATE-2 and 8M-2; BOD in samples 14G-2, 14G-1A, 18G-2, 18G-1, FIELD BLANK-1, 11M-1, 23M-1, EW-1, EW-6, 13M-1, 13G-1, 6M-1, 6G-3, 6G-2, 6G-1, EW-3, 11G-2 and 11G-1 and all sample in data package 70101745; bromide in samples 6G-1, 13G-1, 6G-2, EW-1, EW-6, 23M-1, EW-3, 6M-1, GM-2I, 7M-1, 10G-1, 16M-1 and 16G-1; TKN in samples 11M-1, 6M-1, 13M-1, 23M-1, GM-2S, 9G-1, 10G-1, 16G-1, 15G-1, BLIND DUPLICATE-2, GM-1I, GM-1S, GM-2I, 8G-1, EW-2, 8M-2, 4G-2, 10M-1, 7M-1 and 22M-1; and phenolics in all samples except 13G-1.

- The following general chemistry parameters percent recoveries (%Rs) were above the QC limits in the MS and detected above the reporting limit, therefore they were qualified as estimated (J): nitrate in samples 12M-1, 15G-1, 22M-1, EW-2, GM-2I, GM-2S, 9G-1, 7M-1, 10M-1, 10G-1, 16M-1, 16G-1, EW-1, EW-6, 13G-1, 6G-2 and 6G-1; chloride in sample 6G-1; phenolics in sample 13G-1; and nitrite in samples EW-4 and BLIND DUPLICATE-1.
- The %Rs were below the QC limit in the matrix spike (MS) and qualified as estimated (J/UJ) in the following general chemistry parameters: TKN in all samples except 6G-2, 6G-1, 12M-1, 15G-1, 4M-1, 4M-2, 4G-2, 4G-1, 22M-1, EW-2, 8M-2, 8M-1, 8G-1, BLIND DUPLICATE-2, GM-1I, GM-1S, GM-1D, GM-2D and GM-2I; phenolics in all samples in data package 70101745 and sample 6G-1; and TOC in samples 13M-1, 13G-1, 6M-1, 6G-3, 6G-2, 6G-1, 12M-1 and 15G-1.
- The RPDs were above the QC limits in the duplicate for TOC in samples 13M-1, 13G-1, 6M-1, 6G-3, 6G-2, 6G-1, 12M-1 and 15G-1; TDS in samples 6M-1 and 6G-3; COD in samples 13M-1, 13G-1, 6M-1, 6G-3, 6G-2 and 6G-1; TKN in samples 6G-2 and 6G-1; and BOD associated with samples GM-2D, GM-2I, GM-2S and 9G-1 and were qualified as estimated (J/UJ) in associated samples.

6.0 GROUNDWATER LEVEL MEASUREMENTS AND FLOW DIRECTION

D&B collected groundwater level measurements from 51 monitoring wells on February 11, 2019 and August 13, 2019. In addition, 17 water level measurements were collected by Cashin Associates, P.C. on these dates as part of the Cleanfill Landfill Groundwater Monitoring Program. It should be noted, due to access constraints, ground water level measurements were recorded from Site 8 on February 15, 2019 and on August 19, 2019. The groundwater elevation measurements from 2019 are presented in **Appendix G**.

6.1 Water Table Contours

The water table elevation contour maps were generated using data from wells screened at or near the water table in the Upper Glacial aquifer. Water table elevation contour maps for February 11, 2019 and August 13, 2019 are presented in **Appendix H**.

In general, the two-water table elevation contour maps prepared using 2019 data are fairly consistent with each other and illustrate that the groundwater flow direction in the Upper Glacial aquifer is predominately toward the south to southeast, which is consistent with previous maps prepared for the site. In general, the water table contours both upgradient and downgradient from the site, depict a more regional groundwater flow pattern. A localized mounding of the water table in the area of monitoring well 7G-1 is likely caused by recharge from the northeast storm water recharge basin. Mounding of the water table is also occurring in the area of the six recharge wells. The extent of the mounding and effects on the monitoring wells in the vicinity of the recharge wells are not well defined (water level readings in the active recharge wells are not representative of the water table elevation) and therefore, is not depicted on the contour maps.

Lower groundwater elevations were noted downgradient of the Phase 2 Cleanfill Landfill in wells MW-D12, 19GR-1, 26G-1 and 27G-1, as well as in the vicinity of the Windwatch Sewage Treatment Plant in well 12G-1. The low groundwater elevations noted downgradient of the Phase 2 Cleanfill Landfill may be attributed to the low rate of recharge to the water table upgradient of these well locations. The reduction in groundwater recharge is primarily due to the

landfill liners (primary and secondary liners) and leachate collection and storage (impoundment) systems associated with Cleanfill Landfill Phases 1 and 2. Water levels from the above wells were not used in the preparation of the water table elevation contour maps.

6.2 Potentiometric Surface Contours

Potentiometric surface elevation contour maps for the zone from 83 to 167 feet below mean sea level (msl) were generated using data from wells screened near the Upper Glacial/Magothy contact. Potentiometric surface elevation contour maps for February 11, 2019 and August 13, 2019 are presented in **Appendix H**.

In general, the two potentiometric surface elevation contour maps prepared using 2019 data are consistent with each other and illustrate that the direction of groundwater flow across the site is predominately toward the southeast and downgradient of the site, groundwater flow is predominately toward the south. The 2019 potentiometric surface elevation contour maps are consistent with previous maps prepared for the site.

6.3 Recharge Well Water Levels

Historical water level elevation measurements from the recharge wells are presented in **Appendix I**. Water level elevation data collected from the six recharge wells during 2019 ranged from 48.39 feet above msl at RW-3 (third quarter 2019) to 147.88 feet above msl at RW-2 (third quarter 2019). The water level readings in the recharge wells, less the water table elevation, represents the driving head required for the flow rate to that recharge well to pass from the well casing, through the well screen and gravel pack, and into the aquifer. The recharge wells are not pressurized and operate by gravity under atmospheric conditions. It should be noted that the water level elevation readings are, for all practical purposes, instantaneous readings which must be viewed in terms of the status of the pumping cycle at the time of the reading, as well as the manual throttling of wellhead valves and the actual distribution of flow to each of the six recharge wells.

7.0 FINDINGS AND RECOMMENDATIONS

7.1 Findings

Groundwater Measurements and Flow Direction

Based on groundwater level measurements collected during the February and August 2019 sampling events, and the water table and potentiometric surface elevation contour maps prepared for the shallow and deep zones at the site, groundwater flow is predominantly in a south to southeast direction. This groundwater flow direction is consistent with previous elevation measurements obtained and maps prepared for the site.

Groundwater Treatment Facility Recharge Well Water Levels

Based on water level measurements collected during the February and August 2019 sampling events for recharge wells RW-1, RW-3, RW-4 and RW-5, the data suggest that these wells remain effective and are not in need of rehabilitation or redevelopment. However, water level measurements in recharge wells RW-2 and RW-6 appear to indicate some loss of efficiency. Redevelopment of the recharge wells is not necessary at this time but may be required in the future.

Groundwater Quality

Based on a comparison of the Third Quarter 2017 and or the Third Quarter 2018 results to the Third Quarter 2019 results for monitoring wells sampled on an annual basis, as well as the First Quarter 2019 results to the Third Quarter 2019 results for wells sampled on a semi-annual basis, groundwater quality downgradient and in the vicinity of the Blydenburgh Road Landfill Complex remained consistent (10 ug/l or less change in total VOCs) in all the wells except for 11M-1. Monitoring well 11M-1 exhibited an increase in TVOCs of more than 10 ug/l.

For the February 2019 first quarter sampling event, 19 of the 25 groundwater monitoring wells sampled exhibited TVOCs at 10 ug/l or less. For the August 2019 third quarter sampling event, 28 of the 36 groundwater monitoring wells sampled exhibited TVOCs at 10 ug/l or less. During the first and third quarters of 2019, well 11G-2 exceeded the groundwater remediation criterion of 50 ug/l established by the ROD for TVOCs. The maximum TVOCs in 2019 for well 11G-2 were reported at 66 ug/l. During 2019, TVOCs for temporary extraction well (GM-1D) ranged between 47.6 ug/l to 59 ug/l.

Twenty-six of the 36 monitoring wells for which historical trends could be established exhibit consistent trends for TVOCs. Seven wells (4M-1 since February 2004, 6G-3, 7M-1, 11G-1 since February 2006, 12M-1, 14M-1 and 16M-1 since 2004) exhibited decreasing historical trends for TVOCs. Three wells (10M-1, 11G-2, and 13M-1) and temporary extraction well (GM-1D) exhibited an increasing historical trend for TVOCs.

The majority of the monitoring wells sampled (26 out of 36), as well as temporary extraction well (GM-1D), exhibited one or more of the following inorganic parameters: arsenic, boron, iron, manganese, magnesium, nickel, sodium and thallium at concentrations exceeding their respective groundwater standards or guidance values.

Twelve of the 36 monitoring wells sampled, as well as temporary extraction well (GM-1D), exhibited one or more of the following leachate parameters: ammonia, bromide, chloride and phenols at concentrations exceeding their respective groundwater standards or guidance values.

Extraction Wells

Groundwater quality for extraction wells (EW-1, EW-2, EW-3, EW-4 and EW-6), remained consistent throughout the 2019 monitoring period and TVOC concentrations for these extraction wells were all non-detect. Groundwater samples were not obtained from EW-5 in 2019, since this well is off-line and awaiting repair.

In general, historical TVOC trends remained consistent in EW-1 (since February 2002), EW-4 (since November 2002), EW-5 (since 1997) and EW-6 (since 1997). For EW-2, TVOCs in 2019 were comparable to historical results, exclusive of calendar year 2015 which showed a slight increase. Extraction well EW-3 exhibits a decreasing trend in comparison to historical TVOC results.

Extraction wells EW-1, EW-2, EW-3 and EW-4 exhibited one or more of the following inorganic parameters: iron, manganese and sodium at concentrations exceeding their respective groundwater standards or guidance value.

For leachate indicators, concentrations of ammonia exceeded the groundwater standard in EW-3 and EW-4.

Organic Vapor and Combustible Gas Monitoring

The results of the organic vapor and combustible gas monitoring conducted during the 2019 semiannual sampling events exhibited no measureable readings in the headspace of the groundwater monitoring wells.

7.2 RECOMMENDATIONS

Based on the findings of the 2019 Post Closure Groundwater Monitoring Program, the following recommendation is presented:

The monitoring frequency for the site should remain on a semiannual basis, and the selected set of monitoring wells, extraction wells, as well as temporary extraction well (GM-1D) should continue to be sampled in accordance with the Sampling and Analysis Plan (SAP) and the Corrective Measures Work Plan (CMWP).

QA - quality assurance

Comments:

The data packages have been reviewed in accordance with the NYSDEC 6/05 ASP Quality Assurance/ Quality Control (QA/QC) requirements. The monitoring program requires a 20% validation specified in Part 360. A validation was conducted on the data package and any applicable qualification of the data

was determined using the USEPA National Functional Guidelines of Organic Data Review, January 2017, or USEPA National Functional Guidelines of Inorganic Data Review, January 2017, method performance criteria, and performance criteria, and D&B Engineers and Architects, P.C. professional judgment. The qualification of data discussed within this data validation checklist did not impact the usability of the sample results.

6. Laboratory control sample %R		X		X	
7. Spike sample %R		X	X		
8. Duplicate RPD		X	X		
9. Field duplicates RPD		X		X	

%R percent recovery

RPD - relative percent difference

%D – percent difference

RSD - relative standard deviation

Comments:

Performance was acceptable, with the following exception:

1. Hexavalent chromium was analyzed outside of holding times in samples 11G-2, 11G-1, 18G-2, 18G-1, 13M-1, FIELD BLANK-1, EW-3, 13G-1, 10M-1, 16M-1 and 23M-1. It was qualified as an estimated detection limit (UJ) in associated samples.
 - 2A&B. Ammonia, nitrate, TKN and phenolics were detected in the FIELD BLANK and/or method blank. The following general chemistry parameters were qualified as non-detect (UB): nitrate in sample 11G-1, 13M-1 and 11G-2; TKN in samples 14G-2, 14G-1A, 16M-1, 23M-1, 7M-1 and BLIND DUPLICATE-1; and phenolics in all samples.
 7. The %Rs were below the QC limit in the MS for alkalinity associated with samples 4M-2 and 4G-2; hexavalent chromium associated with samples 14M-1, 14G-2, 14G-1A, 4M-1, 4M-2 and 4G-2; nitrate associated with samples 10M-1, 16M-1, 23M-1, 22M-1, 7M-1 and BLIND DUPLICATE-1 and cyanide associated with samples EW-3 and 13G-1 and were qualified as estimated (J/UJ) in associated samples.
- The %R was above the QC limit in the MS and detected above the reporting limit in the samples for TKN in samples 10M-1, 11G-1, 11G-2, 13M-1, 14M-1, 18G-1, 18G-2, 22M-1, 4G-2, 4M-1, 4M-2 and EW-3; nitrate in samples 14G-2 and 14G-1A; and sulfate all samples except 11G-2 and Field Blank and were qualified as estimated (J).
8. The RPDs were above the QC limits in the duplicate for TKN associated with samples 11G-1, 11G-2, 13G-1, 13M-1, 14M-1, 18G-1, 18G-2, 4M-1, 4M-2, BLIND DUPLICATE-1, EW-3 and FIELD BLANK-1; and total dissolved solids associated with samples 10M-1, 16M-1, 23M-1, 22M-1, 7M-1, BLIND DUPLICATE-1, 11G-2, 11G-1, 18G-2, 18G-1, 13M-1, FIELD BLANK, EW-3 and 13G-1 and were qualified as estimated (J/UJ) in associated samples.

Comments:

Performance was acceptable, with the following exception:

1. The following were analyzed outside of holding times: hexavalent chromium associated with samples 12M-1, FIELD BLANK, GM-1D, GM-1I, 6G-1, 6G-2 and 6G-3. They were qualified as estimated (J) in associated samples.
- 2A&B. Bromide, nitrate, chloride, TKN, ammonia and phenolics were detected in the FIELD BLANK and/or method blank. The following general chemistry parameters were qualified as non-detect (UB): bromide in samples 6G-2, 6G-1, BLIND DUPLICATE_2, EW-1 and EW-2; TKN in samples BLIND DUPLICATE_2, 8M-2, 6G-2 and EW-2; and phenolics in all samples.
7. The %Rs were above the QC limits in the MS for chloride, TKN, nitrite and TOC. The following general chemistry parameters were detected above the reporting limit and were qualified as estimated (J): chloride in samples 6G-3, 6G-2, 6G-1, 12M-1, GM-1I, BLIND DUPLICATE_2 and EW-1; TKN in samples 12M-1, 8M-1, GM-1D, 6G-3 and EW-4; nitrite and TOC in sample EW-4.

The %R was below QC limits in the MS for TKN in samples 6G-2, 6G-1, 12M-1, GM-1I, FIELD BLANK, 8M-2, 8M-1, 6G-3 and GM-1D; nitrate in all samples; cyanide in samples 6G-3 and 6G-2. The above general chemistry parameters were qualified as estimated (J/UJ) in associated samples.

8. The RPD was above the QC limit in the duplicate for chemical oxygen demand in the duplicate associated with all samples and were qualified as an estimated (J/UJ).
9. Sample 8M-2 was field duplicated and labeled BLIND DUPLICATE-2. Based on field duplicate results chloride was qualified as estimated (J/UJ) in samples 8M-2 and BLIND DUPLICATE-2.

**DATA VALIDATION AND
QUALIFICATION SUMMARY**

Laboratory Numbers: 7079760

Sample ID	Analyte(s)	Qualifier	Reason(s)
<u>VOCs</u>			
12M-1 and GM-1D	Cis-1,2-dichloroethene	J	The %Rs were above the QC limits in the LCS
<u>Metals</u>			
All samples	Aluminum		
8M-2, BLIND DUPLICATE_2, 6G-1 and 8G-1	Boron	UB	Detected in the initial blank, preparation blank and/or field blank
All samples except 8M-2	Cadmium		
8M-2 and BLIND DUPLICATE-2.	Cadmium	J/UJ	Field duplicate results
<u>General Chemistry</u>			
12M-1, FIELD BLANK, GM-1D, GM-1I, 6G-1, 6G-2 and 6G-3	Hexavalent chromium	J	Analyzed outside of holding times
6G-2, 6G-1, BLIND DUPLICATE_2, EW-1 and EW-2	Bromide		
BLIND DUPLICATE_2, 8M-2, 6G-2 and EW-2	TKN	UB	Detected in the FIELD BLANK and/or method blank
all samples	Phenolics		
6G-3, 6G-2, 6G-1, 12M-1, GM-1I, BLIND DUPLICATE_2 and EW-1	Chloride		
12M-1, 8M-1, GM-1D, 6G-3 and EW-4	TKN	J	The %Rs were above the QC limits in the MS
EW-4	Nitrite and TOC		
6G-2, 6G-1, 12M-1, GM-1I, FIELD BLANK, 8M-2, 8M-1, 6G-3 and GM-1D	TKN		
All samples	Nitrate	J/UJ	The %R was below QC limits in the MS
6G-3 and 6G-2	Cyanide		
All samples	Chemical oxygen demand	J/UJ	The RPD was above the QC limit in the duplicate
8M-2 and BLIND DUPLICATE-2	Chloride	J/UJ	Field duplicate results

QA - quality assurance

Comments:

The data packages have been reviewed in accordance with the NYSDEC 6/05 ASP Quality Assurance/ Quality Control (QA/QC) requirements. The monitoring program requires a 20% validation specified in Part 360. A validation was conducted on the data package and any applicable qualification of the data

was determined using the USEPA National Functional Guidelines of Organic Data Review, January 2017, or USEPA National Functional Guidelines of Inorganic Data Review, January 2017, method performance criteria, and performance criteria, and D&B Engineers and Architects, P.C. professional judgment. The qualification of data discussed within this data validation checklist did not impact the usability of the sample results.

12. Transcriptions – quant report vs. Form I		X		X	
13. Field duplicates RPD		X		X	
14. Tentatively Identified Compounds (TICs)		X		X	

VOCs - volatile organic compounds

%D - percent difference

RRF - relative response factor

%R - percent recovery

%RSD - percent relative standard deviation

RPD - relative percent difference

Comments:

Performance was acceptable, with the following exceptions:

3-6. The %Rs were above the QC limits in the LCS for cis-1,3-dichloropropene, trans-1,3-dichloropropene and trans-1,4-dichloro-2-butene associated with samples TRIP BLANK 8/15/19, 12M_1, 15G_1, TRIP BLANK 8/16/19, 4M-1, 4M-2, 4G-2, 4G-1, 22M-1 and EW-2. They were not detected in the samples; therefore, qualification of the data was not necessary.

The %Rs were above the QC limits in the MS for trans-1,3-dichloropropene and 1,2-dichloropropane associated with samples TRIP BLANK 8/15/19, 12M_1, 15G_1, TRIP BLANK 8/16/19, 4M-1, 4M-2, 4G-2, 4G-1, 22M-1 and EW-2. They were not detected in the samples; therefore, qualification of the data was not necessary.

The %Rs were below the QC limits in the MS for 1,2-dibromoethane (EDB) and trans-1,3-dichloropropene associated with samples TRIP BLANK 8/19/19, 8M-2, 8M-1, 8G-1, BLIND DUPLICATE-2, GM-1I, GM-1S and GM-1D. The above compounds were qualified as an estimated (UJ) in the associated samples.

The RPD was above the QC limit in the MS/ MSD for bromomethane associated with samples TRIP BLANK 8/20/19, GM-2D, GM-2I, GM-2S, 9G-1, 7M-1, TRIP BLANK 8/21/19, FIELD BLANK-2, 10M-1, 10G-1, 16M-1 and 16G-1. It was not detected in the samples; therefore, qualification of the data was not necessary.

%R - percent recovery

%D - percent difference

RPD - relative percent difference

Comments:

Performance was acceptable, with the following exceptions:

2A&B. Arsenic, antimony, boron, silver and potassium were detected in the field blank, initial blank and/or preparation blank. The following metals were qualified as non-detect (UB): arsenic in samples 12M_1 and 4M-1; boron all samples except 8M-2 and 4M-1; silver in samples 8M-1 and 7M-1; and potassium in samples 12M_1, 15G_1, 22M-1, 10G-1, 16M-1 and 16G-1.

- 11. The %D was above the QC limit in the serial dilution for magnesium associated with sample 8M-2, 8M-1, 8G-1, BLIND DUPLICATE-2, GM-1I, GM-1S, GM-1D, GM-2D, GM-2I, GM-2S, 9G-1, 7M-1 and FIELD BLANK-2. Magnesium was qualified as estimated (J/UJ) in the associated samples.
- 12. Sample 8M-2 was field duplicated and labeled BLIND DUPLICATE-2. Based on field duplicate results boron, calcium, iron, magnesium, manganese, potassium and sodium were qualified as estimated (J/UJ) in samples 8M-2 and BLIND DUPLICATE-2.

%R - percent recovery

RPD - relative percent difference

%D - percent difference

RSD - relative standard deviation

Comments:

Performance was acceptable, with the following exception:

1. Hexavalent chromium was analyzed outside of holding times in samples 12M_1, 15G_1, 7M-1, 8G-1, 8M-1, 9G-1, GM-2I, GM-2S, 8M-2, BLIND DUPLICATE-2 and GM-2D. It was qualified as an estimated detection limit (UJ) in associated samples.
- 2A&B. Ammonia, BOD, bromide, TKN and phenolics were detected in the FIELD BLANK and/or method blank. The following general chemistry parameters were qualified as non-detect (UB): ammonia in samples GM-2D, 9G-1, 16M-1, 16G-1, GM-2S, GM-2I, 10G-1, GM-1I, GM-1S, 15G_1, 8G-1, EW-2, 4G-2, BLIND DUPLICATE-2 and 8M-2; BOD in all samples; bromide in samples GM-2I, 7M-1, 10G-1, 16M-1 and 16G-1; TKN in samples GM-2S, 9G-1, 10G-1, 16G-1, 15G_1, BLIND DUPLICATE-2, GM-1I, GM-1S, GM-2I, 8G-1, EW-2, 8M-2, 4G-2, 10M-1, 7M-1 and 22M-1 and phenolics in all samples.
7. The %Rs were below the QC limit in the MS for TKN associated with samples 12M_1, 15G_1, 4M-1, 4M-2, 4G-2, 4G-1, 22M-1, EW-2, 8M-2, 8M-1, 8G-1, BLIND DUPLICATE-2, GM-1I, GM-1S, GM-1D, GM-2D and GM-2; TOC associated with samples 12M-1 and 15G-1; and phenolics associated with all samples and were qualified as estimated (J/UJ) in associated samples.

The %R was above the QC limit in the MS and detected above the reporting limit in the samples for nitrate in samples 12M_1, 15G_1, 22M-1, EW-2, GM-2I, GM-2S, 9G-1, 7M-1, 10M-1, 10G-1, 16M-1 and 16G-1 and were qualified as estimated (J).

8. The RPDs were above the QC limits in the duplicate for TOC associated with samples 12M-1 and 15G-1; and BOD associated with samples GM-2D, GM-2I, GM-2S and 9G-1 and were qualified as estimated (J/UJ) in associated samples.

12. Transcriptions – quant report vs. Form I		X		X	
13. Field duplicates RPD		X		X	
14. Tentatively Identified Compounds (TICs)		X		X	

VOCs - volatile organic compounds

%D - percent difference

RRF - relative response factor

%R - percent recovery

%RSD - percent relative standard deviation

RPD - relative percent difference

Comments:

Performance was acceptable, with the following exceptions:

- 3-5. The %Rs were above the QC limits in the MS for trans-1,3-dichloropropene and 1,2-dichloropropane associated with samples 6M-1, 6G-3, 6G-2 and 6G-1. They were not detected in the samples; therefore, qualification of the data was not necessary.

The %Rs were below the QC limit in the MS for 1,2-dibromoethane (EDB) and trans-1,3-dichloropropene associated with samples TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE_1, FIELD BLANK_1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1 and were qualified as an estimated detection limit (UJ).

The RPD was above the QC limit in the MS/MSD for bromomethane associated with samples TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE_1, FIELD BLANK_1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1. They were not detected in the samples; therefore, qualification of the data was not necessary.

6. The %R was below the QC limit in the LCS for iodomethene associated with samples TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE_1, FIELD BLANK_1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1 and was qualified as an estimated detection limit (UJ).

The %Rs were above the QC limits in the LCS for cis-1,3-dichloropropene, trans-1,3-dichloropropene and trans-1,4-dichloro-2-butene associated with samples 6M-1, 6G-3, 6G-2

and 6G-1. They were not detected in the samples; therefore, qualification of the data was not necessary.

%R percent recovery

RPD - relative percent difference

%D – percent difference

RSD - relative standard deviation

Comments:

Performance was acceptable, with the following exception:

1. Hexavalent chromium was analyzed outside of holding times in all samples. It was qualified as an estimated detection limit (UJ) in all samples.
- 2A&B. Ammonia, BOD, bromide, TKN and phenolics were detected in the FIELD BLANK and/or method blank. The following general chemistry parameters were qualified as non-detect (UB): ammonia in samples 14G-2, EW-1, EW-6, 23M-1, 6G-1, 13G-1, 14G-1A, 6G-2 and 11M-1; BOD in samples 14G-2, 14G-1A, 18G-2, 18G-1, FIELD BLANK_1, 11M-1, 23M-1, EW-1, EW-6, 13M-1, 13G-1, 6M-1, 6G-3, 6G-2, 6G-1, EW-3, 11G-2 and 11G-1; bromide in samples 6G-1, 13G-1, 6G-2, EW-1, EW-6, 23M-1, EW-3 and 6M-1; TKN in samples 11M-1, 6M-1, 13M-1 and 23M-1; and phenolics in all samples except 13G-1.
7. The %Rs were below the QC limit in the MS for TKN in all samples except 6G-2 and 6G-1; phenolics in sample 6G-1; and TOC in samples 13M-1, 13G-1, 6M-1, 6G-3, 6G-2 and 6G-1; and were qualified as estimated (J/UJ) in associated samples.

The %R was above the QC limit in the MS and detected above the reporting limit in the samples for chloride in sample 6G-1; phenolics in sample 13G-1; nitrite in samples EW-4 and BLIND DUPLICATE_1; nitrate in samples EW-1, EW-6, 13G-1, 6G-2 and 6G-1; and were qualified as estimated (J).

8. The RPDs were above the QC limits in the duplicate for TOC in samples 13M-1, 13G-1, 6M-1, 6G-3, 6G-2 and 6G-1; TDS in samples DUP 6M-1 and 6G-3; COD in samples 13M-1, 13G-1, 6M-1, 6G-3, 6G-2 and 6G-1; and TKN in samples 6G-2 and 6G-1 and were qualified as estimated (J/UJ) in associated samples.

**DATA VALIDATION AND
QUALIFICATION SUMMARY**

Laboratory Numbers: 70101295

Sample ID	Analyte(s)	Qualifier	Reason(s)
VOCs			
TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE_1, FIELD BLANK_1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1	1,2-Dibromoethane (EDB) and trans-1,3-dichloropropene	UJ	The %Rs were below the QC limit in the MS
TRIP BLANK 8/13/19, 14M-1, 14G-2, 14G-1A, 18G-2, 18G-1, EW-3, EW-4, BLIND DUPLICATE_1, FIELD BLANK_1, TRIP BLANK 8/14/19, 11M-1, 11G-2, 11G-1, 23M-1, EW-1, EW-6, 13M-1 and 13G-1	Iodomethene	UJ	The %R was below the QC limit in the LCS
Metals			
13G-1, 6M-1, 11M-1, EW-1, 6G-1, 6G-2, 13M-1and EW-3	Nickel	UB	Detected in the initial blank, preparation blank and/or field blank
General Chemistry			
All samples	Hexavalent chromium	UJ	Analyzed outside of holding times
14G-2, EW-1, EW-6, 23M-1, 6G-1, 13G-1, 14G-1A, 6G-2 and 11M-1	Ammonia	UB	Detected in the FIELD BLANK and/or method blank
in samples 14G-2, 14G-1A, 18G-2, 18G-1, FIELD BLANK_1, 11M-1, 23M-1, EW-1, EW-6, 13M-1, 13G-1, 6M-1, 6G-3, 6G-2, 6G-1, EW-3, 11G-2 and 11G-1	BOD		
in samples 6G-1, 13G-1, 6G-2, EW-1, EW-6, 23M-1, EW-3 and 6M-1	Bromide		
11M-1, 6M-1, 13M-1 and 23M-1	TKN		
All except 13G-1	Phenolics	J/UJ	The %Rs were below the QC limit in the MS
All samples except 6G-2 and 6G-1	TKN		
6G-1	Phenolics		
13M-1, 13G-1, 6M-1, 6G-3, 6G-2 and 6G-1	TOC		
6G-1	Chloride	J	The %R was above the QC limit in the MS
EW-1, EW-6, 13G-1, 6G-2 and 6G-1	Nitrate		
EW-4 and BLIND DUPLICATE_1	Nitrite		
13G-1	Phenolics

POTENTIOMETRIC SURFACE CONTOUR MAP
(-83 TO -167 FEET MSL)
FEBRUARY 11, 2019

FIGURE 6-2

TOWN LINE ROAD

LEGEND:

- GM-1 ● WELL AND GROUNDWATER ELEVATION (-83 TO -167) IN FEET ABOVE MSL
- EW-1 ▲ EXTRACTION WELL(S)
- LINE OF EQUAL GROUNDWATER ELEVATION IN FEET ABOVE MSL (DASHED WHERE INFERRED)
- APPROXIMATE GROUNDWATER FLOW DIRECTION
- * WELL 4M-1 SHOWS A SLIGHT DEPRESSION IN WATER ELEVATION AND IS NOT USED IN CONSTRUCTION OF CONTOUR MAP.

NOTE: CONTOUR INTERVAL EQUALS 0.50 FT.

SOURCES: GERAGHTY & MILLER (1993), MALCOLM PIRNIE (1992).

0 1000 FEET

APPENDIX I

HISTORICAL RECHARGE WELL WATER LEVEL ELEVATION MEASUREMENTS

APPENDIX I

BLYDENBURGH ROAD LANDFILL COMPLEX
POST CLOSURE GROUNDWATER MONITORING PROGRAM
HISTORICAL RECHARGE WELL WATER LEVEL ELEVATION MEASUREMENTS

Well Designation	Water Level Elevation (feet above mean sea level)				
	Third Quarter August 1999	Fourth Quarter November 1999	First Quarter February 2000 ⁽¹⁾	Second Quarter May 2000 ⁽¹⁾	Third Quarter August 2000 ⁽¹⁾
Recharge Well 1	86.42	49.42	72.42	56.42	46.42
Recharge Well 2	87.88	94.88	68.88	94.88	97.88
Recharge Well 3	70.39	44.39	68.39	75.39	46.39
Recharge Well 4	74.86	75.86	60.86	62.86	54.86
Recharge Well 5	55.08	49.08	57.08	43.08	51.08
Recharge Well 6	67.16	49.16	57.16	43.16	45.16

Well Designation	Water Level Elevation (feet above mean sea level)				
	First Quarter February 2001 ⁽¹⁾	Second Quarter May 2001 ⁽¹⁾	Third Quarter August 2001 ⁽¹⁾	Fourth Quarter November 2001 ⁽¹⁾	First Quarter February 2002 ⁽¹⁾
Recharge Well 1	40.42	54.42	54.42	56.42	68.42
Recharge Well 2	94.88	106.88	98.88	88.88	94.88
Recharge Well 3	48.39	92.39	95.39	88.39	54.39
Recharge Well 4	68.86	74.86	72.86	56.86	52.86
Recharge Well 5	54.08	53.08	53.08	57.08	53.08
Recharge Well 6	64.16	63.16	63.16	65.16	53.16

Well Designation	Water Level Elevation (feet above mean sea level)				
	Third Quarter August 2002 ⁽¹⁾	Fourth Quarter November 2002 ⁽¹⁾	First Quarter February 2003 ⁽¹⁾	Second Quarter May 2003 ⁽¹⁾	Third Quarter August 2003 ⁽¹⁾
Recharge Well 1	80.42	75.42	76.42	80.42	76.42
Recharge Well 2	87.88	107.88	98.88	106.88	100.88
Recharge Well 3	72.39	92.39	100.39	98.39	112.39
Recharge Well 4	66.86	73.86	56.86	64.86	79.86
Recharge Well 5	55.08	55.08	53.08	55.08	58.08
Recharge Well 6	61.16	59.16	63.16	51.16	75.16

⁽¹⁾A revised protocol was implemented for measuring water level elevations in the six recharge wells (refer to Section 3). This protocol records water levels when the effluent pump station is operating.

APPENDIX I (continued)

BLYDENBURGH ROAD LANDFILL COMPLEX
POST CLOSURE GROUNDWATER MONITORING PROGRAM
HISTORICAL RECHARGE WELL WATER LEVEL ELEVATION MEASUREMENTS

Well Designation	Water Level Elevation (feet above mean sea level)					
	First Quarter February 2004 ⁽¹⁾	Second Quarter May 2004 ⁽¹⁾	Third Quarter August 2004 ⁽¹⁾	First Quarter February 2005 ⁽¹⁾	Second Quarter May 2005 ⁽¹⁾	Third Quarter August 2005 ⁽¹⁾
Recharge Well 1	84.42	82.42	71.42	76.42	88.42	68.42
Recharge Well 2	101.88	102.88	103.88	104.88	114.88	122.48
Recharge Well 3	112.39	122.39	70.39	98.39	95.39	74.39
Recharge Well 4	74.86	81.86	76.86	75.86	65.86	75.86
Recharge Well 5	48.08	57.08	46.08	61.08	53.08	48.08
Recharge Well 6	77.16	82.16	71.16	77.16	64.16	69.16

Well Designation	Water Level Elevation (feet above mean sea level)					
	First Quarter February 2006 ⁽¹⁾	Third Quarter July 2006 ⁽¹⁾	First Quarter February 2007 ⁽¹⁾	Third Quarter July 2007 ⁽¹⁾	First Quarter February 2008 ⁽¹⁾	Third Quarter August 2008 ⁽¹⁾
Recharge Well 1	74.42	68.42	84.42	84.42	96.42	116.42
Recharge Well 2	125.88	112.88	120.88	122.88	137.88	77.88
Recharge Well 3	54.39	74.39	80.39	90.39	98.39	60.39
Recharge Well 4	74.86	64.86	58.86	54.86	74.86	94.86
Recharge Well 5	48.08	53.08	51.08	53.08	51.08	50.08
Recharge Well 6	50.16	79.16	95.16	104.16	97.16	169.16

Well Designation	Water Level Elevation (feet above mean sea level)					
	Third Quarter August 2009 ⁽¹⁾	First Quarter February 2010 ⁽¹⁾	Third Quarter August 2010 ⁽¹⁾	First Quarter February 2011 ⁽¹⁾	Third Quarter August 2011 ⁽¹⁾	First Quarter February 2012 ⁽¹⁾
Recharge Well 1	75.42	84.42	86.42	96.42	78.42	82.42
Recharge Well 2	132.88	94.88	108.88	114.88	74.88	90.88
Recharge Well 3	49.39	60.39	60.39	53.39	65.39	60.39
Recharge Well 4	109.86	76.86	60.86	82.86	64.86	70.86
Recharge Well 5	51.08	53.08	71.08	51.08	61.08	56.08
Recharge Well 6	139.16	151.16	129.16	129.16	109.16	135.16

⁽¹⁾ A revised protocol was implemented for measuring water level elevations in the six recharge wells (refer to Section 3). This protocol records water levels when the effluent pump station is operating.
