5 Years of Excellence

I PURPOSE

This report has been prepared to summarize the findings of ground water elevation and quality monitoring which took place on May 23, 1996. Samples were collected from five monitoring wells located at Hazeltine Corporation's Greenlawn, New York property on the East side of Cuba Hill Road.

II SCOPE

Monitoring during this quarter consisted of water level measurements and water quality samples taken on May 23, 1996 from the existing monitoring wells. Samples were collected, transported and analyzed in accordance with contract laboratory protocols (CLP).

Samples from each well (MW-1, MW-2, MW-2XD, MW-3XR, MW-4) were analyzed for volatile organic compounds (VOCs), metals without filtering and metals after field filtering. Sampling of MW-2XD and MW-3XR was witnessed by J. Conover of the NYSDEC, who split VOC samples obtained from those wells. Water quality analyses were performed by H2M Labs, Inc.

III SAMPLING PROCEDURES

Wells MW-1, MW-2, MW-2XD, and MW-4 were purged utilizing a 2-inch diameter submersible pump with variable frequency drive, with disposable poly-tubing utilized as discharge piping. The pump was decontaminated between wells by submergence in Alconox followed by submergence and operation in deionized water. Water level and the bottom of each well were measured prior to the start of purging. A total of three standing water volumes were purged from each well. Wells pumped dry (MW-1, MW-2XD) were allowed to recover and evacuated twice prior to sampling. Well

MW-3XR was purged by hand with a disposable Teflon bailer, as it produced insufficient water for operation of the pump.

Parameters including pH, specific conductance, dissolved oxygen and temperature were field measured to ensure water stability prior to collecting samples. Groundwater samples were collected using disposable PVC bailers and placed in containers supplied by the laboratory. Field filtering for metals was performed by attaching a filter directly to the sampling bailer and pressurizing the bailer head space with a hand-held air pump. Field sampling log sheets are contained in Appendix "A".

Quality assurance and quality control procedures included utilization of a laboratory supplied trip blank in the sample cooler, collection of a VOC equipment blank by pouring laboratory supplied deionized water into a precleaned bailer, collection of a metals equipment blank by pouring laboratory supplied deionized water into a precleaned bailer, and collection of method spike and method spike duplicate (MS/MSD) samples.

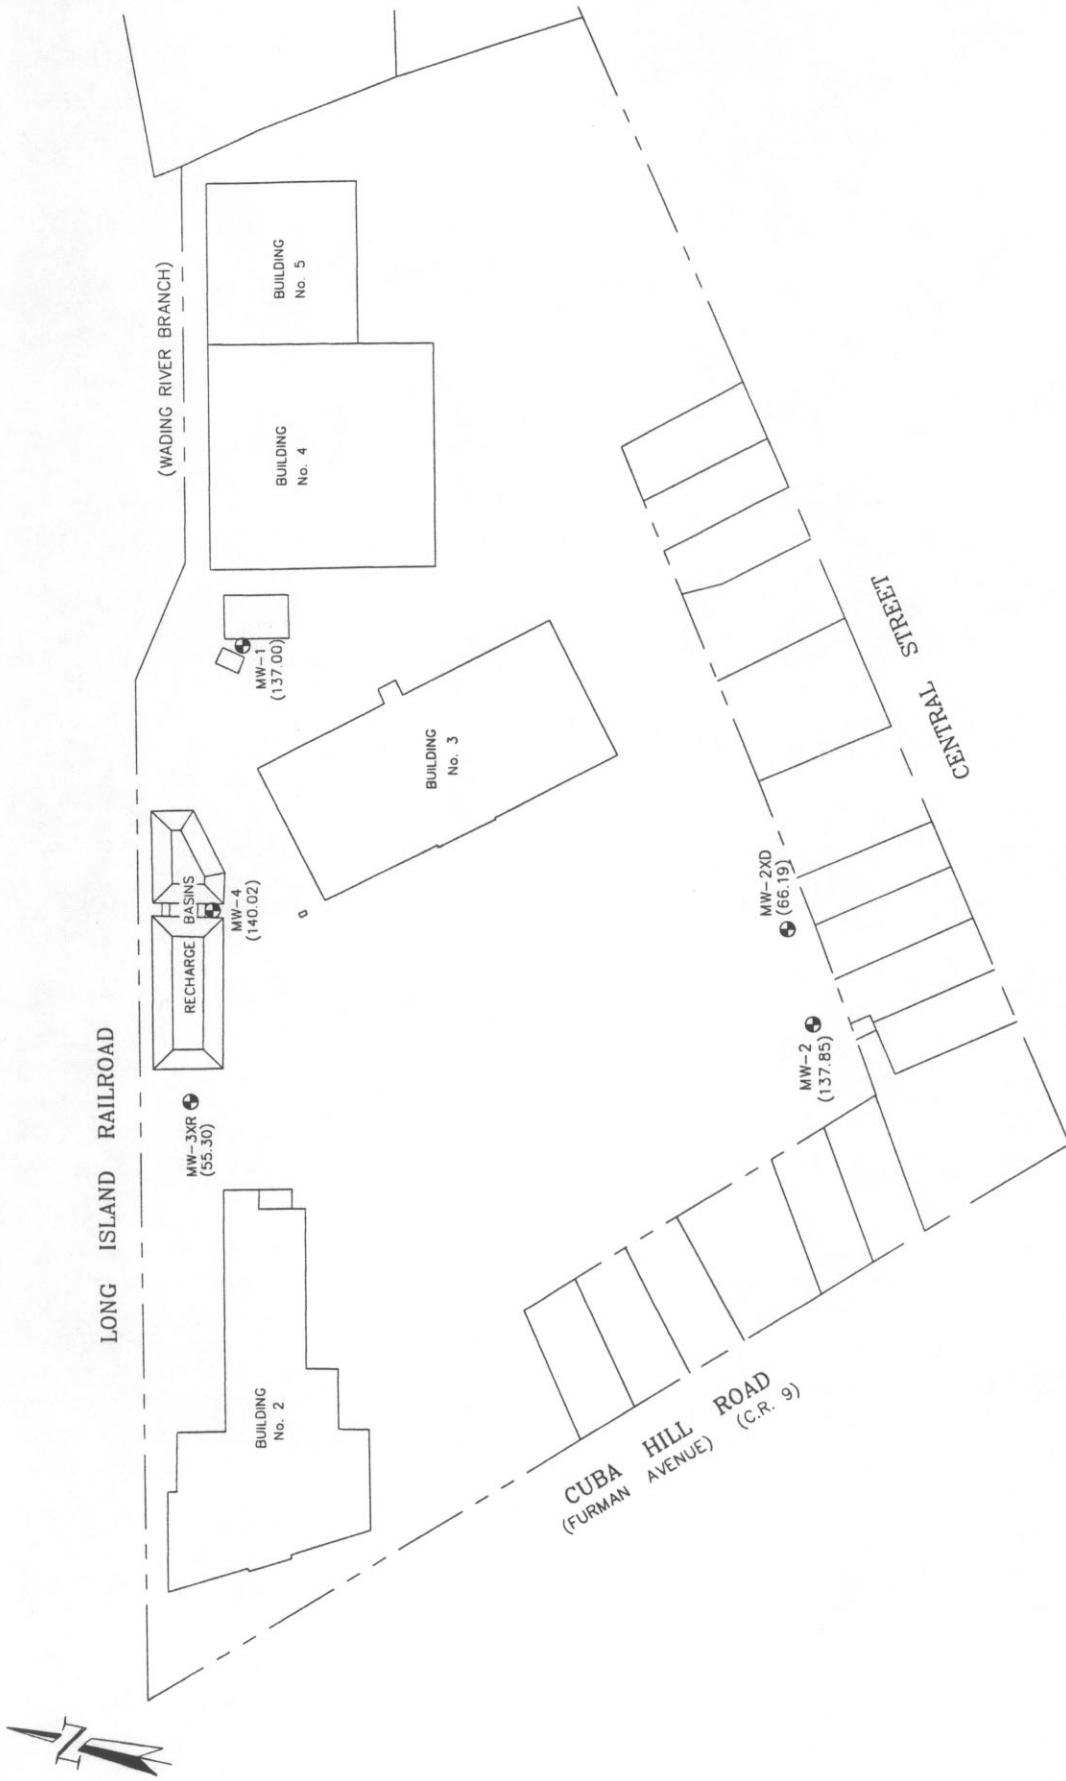

IV GROUND WATER MONITORING RESULTS

The analytical results for the well samples are contained in Appendix "B". A summary of the May 1996 water quality results is contained in Table 1. Longer term water quality trends at each of the monitoring wells are shown in Table 2.

Groundwater elevation data is summarized in Table 3. Perched water elevations observed in MW-1, MW-2 and MW-4 were within ranges previously observed and continue to show mounding in the vicinity of the recharge basins. Water table elevations were only measured at two points (MW-2XD, MW-3XR) but are consistent with groundwater flow to the north-northwest as previously estimated from SCDHS water table contours.

VOCs were not detected in MW-2 or MW-4, while a trace of acetone was revealed in MW-1 and a trace of methylene chloride was found in the sample from MW-2XD, as well as in the trip blank and field blank. These trace detections may have been caused by cross contamination in the laboratory. Trace levels of tetrachloroethene, 1,1,1-trichloroethane, and 1,1-dichloroethene detected in MW-3XR are consistent with the results of previous sampling rounds. VOC concentrations were below drinking water standards in all five wells.

Metals concentrations were similar to those seen during previous sampling rounds. Elevated levels of iron and manganese were present in the unfiltered samples from MW-2XD and MW-3XR. These deeper wells are screened to intercept the surface of the water table which occurs within a silty layer. Unfiltered samples from these wells tend to be more turbid than those from the shallower wells. The iron and manganese levels are naturally occurring in the aquifer and are not related to the use of the property. Elevated sodium levels in the monitoring wells are consistent with previous rounds. The source of this sodium is believed to be a vegetable pickling operation located on the property up until the 1920's.

WELL SAMPLING LOG

I. General information:

Client Name: Hazaltine Corporation
Project Name & Location: Cuba Hill Road Property
Project No.: HAZ9603

Date Sampled: 5/23/96
Well Number: MW-1
Sample Identification: MW-1
Sampled by: LS

II. Well Data:

Static Depth to Water: 90.36 Depth to Bottom: 105.55 Δh: 15.19

Well Diameter: 4 in. Volume Standing Water in Well: 9.8735 Volume to be Purged: 29.6205

Actual Volume Removed: 15 gallons Purging Method: Submersible Pump

* Measurements collected from top of well casing on north side.

III. Purge Data:

Time	Gallons Purged	pH	Temp. °C	Dissolved Oxygen	Conductivity (uS)	Turbidity (ntu)	Flow Rate (gpm)
1647	0	7.8	20	7.4	100	1	5.15
	9	7.8	19	7.4	90	1	1.2

Notes:

Pumped dry two times.

APPENDIX "B"

Analytical Results

May 23, 1996

Sampling Event

H2M LABS, INC.

QUALIFIERS FOR METALS ANALYSIS

Q Qualifiers

- E - The reported value is estimated because of the presence of interference. An explanatory note is included in the SDG narrative.
- M - Duplicate injection precision not met.
- N - Matrix spiked sample recovery not within control limits.
- S - The reported value was determined by the Method of Standard Additions (MSA).
- + - Correlation coefficient for the MSA is less than 0.995.
- W - Post digestion spike for Furnace AA analysis is out of control limits (85-115 %), while sample absorbance is less than 50% of spike absorbance.
- * - Duplicate analysis not within control limits.

C (Concentration) Qualifiers

- B - Entered if the reported value is less than the Contract Required Detection Limit (CRDL) but greater than the Instrument Detection Limit (IDL).
- U - Entered if the analyte was analyzed for but not detected, i.e., less than the IDL.

M (Method) Qualifiers

- P - Analyzed by ICP.
- A - Analyzed by Flame AA.
- F - Analyzed by Furnace AA.
- CV - Analyzed by Manual Cold Vapor Techniques.
- AV - Analyzed by Automated Cold Vapor Techniques.
- C - Analyzed by Manual Spectrophotometric Method.
- CA - Analyzed by Midi-distillation Spectrophotometric Method.
- NR - Analyte is Not Required.

INORGANIC ANALYSIS DATA SHEET

Lab Name: H2M LABS, INC.

Contract:

XXMW4F

Lab Code: H2MLAB

Case No.:

SAS No.:

SDG No.: PWG006

Matrix (soil/water): WATER

Lab Sample ID: 9613708

Level (low/med): LOW

Date Received: 05/23/96

% Solids: 0.0

Concentration Units (ug/L or mg/kg dry weight): UG/L

CAS No.	Analyte	Concentration	C	Q	M
7429-90-5	Aluminum	70.2	B		P
7440-36-0	Antimony	3.6	U		P
7440-38-2	Arsenic	2.5	U		P
