

TOWN OF HUNTINGTON

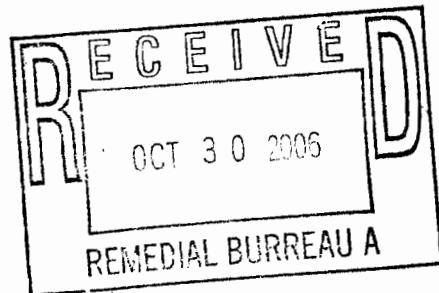

FRANK P. PETRONE, Supervisor

ENVIRONMENTAL WASTE MANAGEMENT

October 26, 2006

Mr. John Strang, P. E.
NYS Dept. of Environmental Conservation
Division of Environmental Remediation
Bureau of Hazardous Site Control, 11th Floor
625 Broadway
Albany, New York 12233-7014

Re. Huntington/East Northport Landfill
NYSDEC Site # 1-52-040

Dear John,

As required by the Record of Decision for the above referenced site, transmitted herewith please find a copy of the "Landfill Gas and Control System Monitoring Report" for the East Northport Landfill for the month of July 2006 and August as well as a copy of the "Ground and Surface Water Sampling and Analysis report" for the second half of 2006. Also enclosed is a copy of the quarterly site report for the 3rd quarter of 2006.

I'll try to have the next report delivered electronically as we have discussed.

Please do not hesitate to call me if you have any questions or comments.

Truly yours,

Richard Koopmann
Richard C. Koopmann
Sr. Environmental Analyst

**Landfill Gas and Control System Monitoring
Town of Huntington East Northport Landfill
East Northport, New York
July, 2006**

Introduction

This report presents the results of July, 2006 landfill gas and control system monitoring activities performed at the Town of Huntington East Northport Landfill, as stipulated by the New York State Department of Environmental Conservation.

The primary landfill gas migration control system consists of thirty active landfill gas control wells connected - via a single header pipe forming a complete loop around the 44 acre East Northport Landfill - to one blower station. Landfill gas monitoring wells (consisting of 3-4 probes screened from approximately 5-70 feet below grade), situated outside of the aforementioned header pipe, provide a means to verify the control system's efficacy. Separate landfill gas control and monitoring systems are located at adjacent Animal Control and Resource Recovery Facilities.

The landfill area and pertinent components of the landfill gas monitoring and control system are depicted in Figure 1. The scope-of-work completed (per our agreement with the Town of Huntington Department of Environmental Waste Management dated August 15, 2003) precedes a summary of results. A discussion of methane monitoring data - with an emphasis on trends and occurrence - and the system's physical and operating condition follows.

Scope-of-Work

The scope-of-work includes performance of the following on a monthly basis:

- 1) Monitoring of all probes in 43 landfill monitoring wells and up to 5 probes around the Town Animal Control Facility for methane gas and gas pressure.
- 2) Monitoring of 30 methane control wells and blower station for temperature, flow rate, vacuum, methane and oxygen (balance of the control system to be checked and adjustment to wells and to blower intake made, if necessary).

R & C Formation, Ltd.

- 3) Examination of 5 condensate traps in the control system for proper operation and water accumulation.
- 4) Noting of any problems, damage, missing parts etc. at each monitoring well, methane control well, condensate trap, Animal Control Facility probes and blower station.

Summary of Results

General

Reported monthly monitoring activities were performed July 28, 2006. Climatic conditions for the monitoring period are as follows:

Temperature: 79 ($^{\circ}$ F); Barometric Pressure: 29.91 (in. Hg); Relative Humidity: 80.0%; Precipitation: 0.01 inches; Wind Speed & Direction: 10.4 mph, westerly.

Monitoring Wells

Table 1 presents measured and recorded landfill gas monitoring well data. As shown on Table 1, methane was not detected in any of the wells comprising the primary monitoring network. A negligible concentration of 0.1% was measured at Animal Control Facility monitoring well AS-NE.

LFG Control Wells

Measured and recorded landfill gas control well data - including values pertaining to the system's blower station, where 2 "inlet" measuring points (Blower Station 1 & 2) and 1 "outlet" measuring point (Blower Station 3) are located – is presented on Table 2. As shown on Table 2, control well vacuum values (i.e., negative pressure), a direct indicator of the system's balance, range from 0.0 - -4.0 (in. H₂O). "Extracted" methane values range from 0.0 – 4.8%.

Condensate Traps

Standing water measured within condensate traps CD-1 (3.5 feet), CD-2 (2.8 feet), CD-3 (7.5 feet), CD-4 (7.9) and CD-5 (1.9) was evacuated, as per usual, upon the completion of monitoring activities.

R & C Formation, Ltd.

Discussion

Methane Monitoring Data

Measured and recorded methane concentrations detected at landfill gas monitoring wells throughout the period-of-record from October, 1999 through July, 2006 are summarized on Table 3. As shown, methane has been detected sporadically and at low levels at 14 monitoring wells with the most recent detection at Animal Control Facility monitoring well AS-NE during this reported monitoring event. The most elevated concentration of methane (5.0%) detected throughout the entire landfill gas monitoring well network was recorded at this well in March, 2001.

As previously reported, methane has not been detected at primary landfill gas migration control system monitoring wells since June, 2002, when a negligible concentration of 0.1% was recorded at monitoring well MW-49. The sporadic nature of low-level methane detections indicates that landfill gas control systems relative to both the Animal Control Facility and East Northport Landfill continue to function effectively.

Table 4 summarizes methane concentrations detected at landfill gas control wells during the period-of-record from October, 1999 through July, 2006. As shown on Table 4, with the exception of minor anomalies (e.g., control well N-2: October, 2001; February, 2002; April, 2006), reported values are generally consistent throughout the 82 month period-of-record.

Physical and Operating Condition

As evidenced by measured and recorded landfill gas monitoring data summarized above, the Town of Huntington East Northport Landfill primary landfill gas control system continues to successfully negate the off-site migration of methane. Vacuum values remain comparatively low at the northern-most portion of the system, however, this condition has existed throughout the monitoring period (as indicated by historic control well vacuum data presented in Appendix 1).

The physical condition of system monitoring wells and control wells is noted on Tables 1 and 2, respectively. As shown on Table 1, monitoring well MW-39 is destroyed (impact with heavy machinery indicated) and probe risers in monitoring wells MW-45 and MW-46 are damaged. With the exception of the aforementioned, monitoring and control wells are in good condition.

R & C Formation, Ltd.

Blower station pump # 1 was in operation during this reported event and all control wells continue to be set in the full-open-position. This full-open-position will be maintained for an evaluation period and modified if/as necessary.

Recommendations

- * In the event that methane is detected at any monitoring well associated with the primary landfill gas migration control system, recommence the monitoring of off and on-site structures.
- * Assess occurrence of methane versus landfill area (i.e., identify dominant landfill gas production zones).
- * Continue assessment of potential impact of all control valves at full-open-position on system-wide vacuum/methane levels.

**Landfill Gas and Control System Monitoring
Town of Huntington East Northport Landfill
East Northport, New York
August, 2006**

Introduction

Presented herein are the results of August, 2006 landfill gas and control system monitoring activities performed at the Town of Huntington East Northport Landfill, as stipulated by the New York State Department of Environmental Conservation.

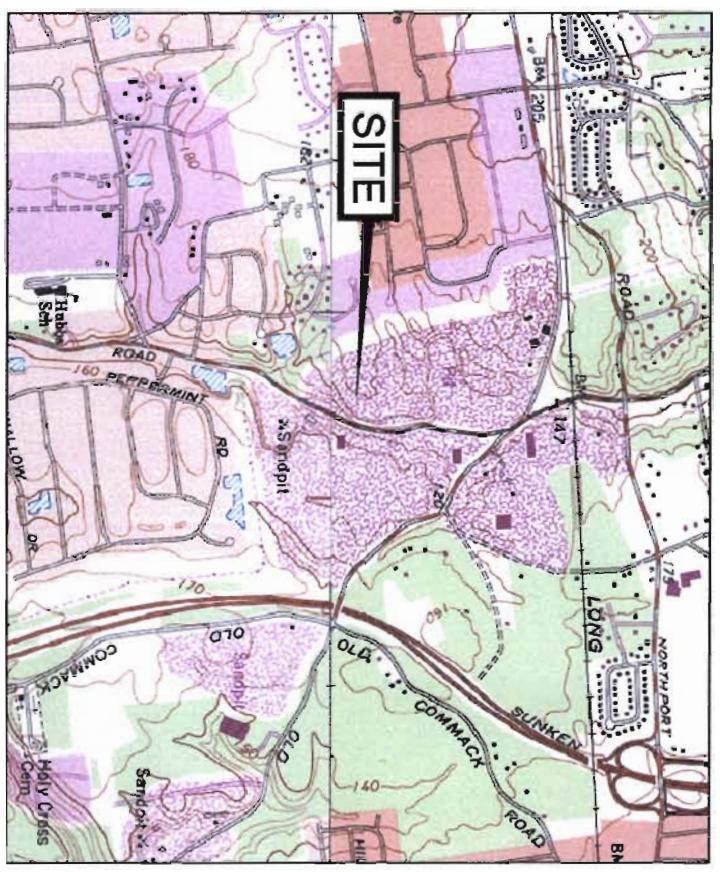

The primary landfill gas migration control system consists of thirty active landfill gas control wells connected - via a single header pipe forming a complete loop around the 44 acre East Northport Landfill - to one blower station. Landfill gas monitoring wells (consisting of 3-4 probes screened from approximately 5-70 feet below grade), situated outside of the aforementioned header pipe, provide a means to verify the control system's efficacy. Separate landfill gas control and monitoring systems are located at adjacent Animal Control and Resource Recovery Facilities.

Figure 1 depicts the landfill area and pertinent components of the landfill gas monitoring and control system. The scope-of-work completed (per our agreement with the Town of Huntington Department of Environmental Waste Management dated August 15, 2003) precedes a summary of results. A discussion of methane monitoring data - with an emphasis on trends and occurrence - and the system's physical and operating condition follows.

Scope-of-Work

The scope-of-work includes performance of the following on a monthly basis:

- 1) Monitoring of all probes in 43 landfill monitoring wells and up to 5 probes around the Town Animal Control Facility for methane gas and gas pressure.
- 2) Monitoring of 30 methane control wells and blower station for temperature, flow rate, vacuum, methane and oxygen (balance of the control system to be checked and adjustment to wells and to blower intake made, if necessary).

R & C Formation, Ltd.

- 3) Examination of 5 condensate traps in the control system for proper operation and water accumulation.
- 4) Noting of any problems, damage, missing parts etc. at each monitoring well, methane control well, condensate trap, Animal Control Facility probes and blower station.

Summary of Results

General

Reported monthly monitoring activities were performed August 29-30, 2006. Climatic conditions for the monitoring period are as follows:

August 29 - Temperature: 67 ($^{\circ}$ F); Barometric Pressure: 29.83 (in. Hg); Relative Humidity: 83.5%; Precipitation: 0.42 inches; Wind Speed & Direction: 7.4 mph, southeasterly.

August 30 - Temperature: 68 ($^{\circ}$ F); Barometric Pressure: 29.97 (in. Hg); Relative Humidity: 81.0%; Precipitation: 0.03 inches; Wind Speed & Direction: 4.9 mph, northeasterly.

Monitoring Wells

A summary of measured and recorded landfill gas monitoring well data is presented on Table 1. As shown on Table 1, methane was not detected in any of the wells comprising the monitoring network.

LFG Control Wells

A summary of measured and recorded landfill gas control well data - including values pertaining to the system's blower station, where 2 "inlet" measuring points (Blower Station 1 & 2) and 1 "outlet" measuring point (Blower Station 3) are located – is presented on Table 2. As shown on Table 2, control well vacuum values (i.e., negative pressure), a direct indicator of the system's balance, range from 0.0 - -6.8 (in. H₂O).

"Extracted" methane values range from 0.0 – 7.0%.

Condensate Traps

Standing water measured within condensate traps CD-1 (2.5 feet), CD-2 (1.5 feet), CD-3 (4.0 feet), CD-4 (5.5) and CD-5 (1.5) was evacuated, as per usual, upon the completion of monitoring activities.

R & C Formation, Ltd.

Discussion

Methane Monitoring Data

A summary of measured and recorded methane concentrations detected at landfill gas monitoring wells throughout the period-of-record from October, 1999 through August, 2006 is presented on Table 3. As shown on Table 3, methane has been detected sporadically and at low levels at 14 monitoring wells with the most recent detection at Animal Control Facility monitoring well AS-NE (July, 2006 at a concentration of 0.1%). The most elevated concentration of methane (5.0%) detected throughout the entire landfill gas monitoring well network was recorded at this well in March, 2001.

As previously reported, methane has not been detected at primary landfill gas migration control system monitoring wells since June, 2002, when a negligible concentration of 0.1% was recorded at monitoring well MW-49. The sporadic nature of low-level methane detections indicates that landfill gas control systems relative to both the Animal Control Facility and East Northport Landfill continue to function effectively.

A summary of methane concentrations detected at landfill gas control wells during the period-of-record from October, 1999 through August, 2006 is presented on Table 4. As shown on Table 4, with the exception of minor anomalies (e.g., control well N-2: October, 2001; February, 2002; April, 2006), reported values are generally consistent throughout the 83 month period-of-record.

Physical and Operating Condition

As evidenced by measured and recorded landfill gas monitoring data summarized above, the Town of Huntington East Northport Landfill primary landfill gas control system continues to successfully negate the off-site migration of methane. Vacuum values remain comparatively low at the northern-most portion of the system, however, this condition has existed throughout the monitoring period (as indicated by historic control well vacuum data presented in Appendix 1).

The physical condition of system monitoring wells and control wells is noted on Tables 1 and 2, respectively. As shown on Table 1, monitoring well MW-39 is destroyed (impact with heavy machinery indicated) and probe risers in monitoring wells MW-45 and MW-46 are damaged. With the exception of the aforementioned, monitoring and control wells are in good condition.

R & C Formation, Ltd.

Blower station pump # 1 was in operation during this reported event and all control wells continue to be set in the full-open-position. This full-open-position will be maintained for an evaluation period and modified if/as necessary.

Recommendations

- * In the event that methane is detected at any monitoring well associated with the primary landfill gas migration control system, recommence the monitoring of off and on-site structures.
- * Assess occurrence of methane versus landfill area (i.e., identify dominant landfill gas production zones).
- * Continue assessment of potential impact of all control valves at full-open-position on system-wide vacuum/methane levels.

AS-SC	0.0				0.0				
AS-SE	-0.4				0.0				

A - Shallow Probe B - Middle Probe C - Deep Probe D - Deepest Probe

Shading indicates the well is not equipped with that particular probe.

NA: Not Available
