1.0 INTRODUCTION

Galli Engineering, P.C. has prepared this Phase II ESA on behalf of Thomas Stachecki, for the property located at 1205 Majors Path, North Sea, NY herein identified as the "Subject Property". The subject property is identified Suffolk County Tax Map Designation: District 0900, Section 078.00, Block 01.00, Lots 020.001 and 030.001.

1.1 Purpose

This Phase II Environmental Site Assessment report is intended to investigate the potential for soil contamination at the subject property.

The laboratory results of soil samples collected as part of this investigation have been evaluated based on applicable standards and guidance values promulgated by the New York State Department of Environmental Conservation (NYSDEC) in the Technical and Administrative Guidance Memorandum (TAGM) #4046, "*Determination of Soil Cleanup Objectives and Cleanup Levels*".

Presented herein are the results of the sampling and analyses performed by Galli Engineering, P.C. as part of the field activities conducted on February 21, 2007.

1.2 Background

The subject property currently consists of undeveloped land comprised of cleared areas and wooded land. The site was previously utilized as a landfill by the village of South Hampton from an unknown date until it was closed in 1960.

A Phase I ESA was completed by Soil Mechanics Environmental Services in October 2006 on the subject property. This study revealed no evidence of recognized environmental conditions in connection with the subject property with the exception of the following:

- Historic use of the site as a landfill.
- The presence of portions of the North Sea Landfill located hydrodynamically up gradient with respect to the target property.

1.3 Scope of Work

The scope of work developed for the subject property was based on the findings of the above referenced Phase I ESA report. The scope of work developed for this report is as follows:

- Excavated twenty-five test pits on the subject property.
- Collected soil samples from six test pits. Soil samples were selected from the test pits based upon the highest PID reading or in the absence of PID readings, discoloration of the soils.
- The soil samples were analyzed for USEPA 8260 VOCs, USEPA 8270 SVOCs, PCBs/Pesticides by Method 8081/8082 and TAGM Metals. Three of the six samples were analyzed for full TCLP.
- This Phase II ESA report was prepared describing environmental conditions, field activities, evaluation of findings, and recommendations.

This assessment is limited to the scope of work described above, and to the depths and locations tested as part of this assessment.

2.0 SITE ASSESSMENT METHODOLOGY

The fieldwork was conducted on February 21, 2007. Galli Engineering personnel performed soil sample collection at the subject property. The following sections provide a description of the fieldwork activities.

2.1 Test Pit Excavation

A total of twenty-five test pits were dug at the subject property and were designated TP-1 through TP-25. The test pits were dug using an excavator. The test pits measured 10 ft. in length, 5 ft. in width and from 8 to 20 ft. in depth. All test pit locations are shown on the site plan provided in Appendix A.

- A total of six composite samples were collected from the six selected test pits for field compositing. Soil samples were selected from six of the twenty-five test pits based upon the highest PID reading or in the absence of PID readings, discoloration of the soils.

2.1.1 Test Pit Sample Collection for Field Screening

Soil samples were collected on from the test pits February 21, 2007 using an excavator and placed into clean Ziploc bags. Each bag was labeled with the designated soil sample number and the collection depth. The sample bags were then allowed to equilibrate. The headspace of each of the soil samples was then screened for the presence of volatile organic vapors using a broadband photo ionization detector (PID). The PID was zero calibrated prior to screening soil samples at the subject property. All field screening results are provided in Appendix C.

2.1.2 Test Pit Sample Selection for Laboratory Analysis

On February 21, 2007, six soil samples (designated TP-3, TP-9, TP-12, TP-13, TP-19 and TP-20) were selected for subsequent laboratory analysis by a representative of Galli Engineering. The soil samples were collected from the eight to twenty foot depths from each test pit. The samples were placed into clean 2-ounce, 4-ounce and 8-ounce glass jars fitted with Teflon lined

caps using a single-use environmental grade disposable plastic scoop.

Each jar was then labeled with designated sample identification, date and time of collection, and the requested laboratory analyses. Each soil sample jar was packed in a secure cooler. The samples were then logged on a chain of custody document by sampling personnel, and remained in the custody of Galli Engineering until transport of the samples to the analytical laboratory via hand delivery by a Galli Engineering representative.

2.2 Soil Sample Laboratory Analysis

The six composite soil samples collected from the subject property on February 21, 2007 were maintained in a secure refrigerator until hand delivery to Environmental Testing Laboratories, Inc., a New York State Certified Commercial Laboratory for analysis. The soil samples were analyzed for the presence of VOCs according to US EPA Method 8260; SVOCs according to US EPA Method 8270; Pesticides/PCBs according to US EPA Method 8081/8082, TAGM metals according to US EPA Method 6010 and mercury according to US EPA Method 7470 and TCLP.

3.0 ANALYTICAL RESULTS

3.1 Laboratory Analytical Results

The laboratory results for the soil samples collected from the subject property are discussed below.

3.1.1 Soil Sample Analytical Results

Volatile organic compounds (VOCs) were detected in TP-3. VOCs were not detected above the NYSDEC Recommended Soil Cleanup Objectives (RSCO) in any of the soil samples.

Semi-volatile organic compounds (SVOCs) were identified in all of the soil samples. SVOCs were not detected above the NYSDEC RSCO in any of the soil samples.

Pesticides were identified in all the soil samples. Pesticides were not detected above the NYSDEC RSCO in any of the soil samples.

TAGM metals were identified in all soil samples, at varying concentrations. TAGM metals were detected above the NYSDEC RSCO in TP-3, TP-9, TP-12, TP-13, TP-17 and TP-18.

TCLP metals were identified in all of the soil samples. TCLP metals were detected above the hazardous waste threshold in TP-9 for lead.

PCB compounds were not detected in any of the soil samples.

A summary of the soil analytical data is provided in the following table. The laboratory analytical reports are provided in Appendix B.

Analytical Results for Soil Samples Collected on February 21, 2007

Compound	RSCO	TP-3	TP-9	TP-12	TP-13	TP-17	TP-20

mg/kg = milligrams per kilogram

- = compound not detected

SB = site background metal levels for eastern USA in mg/kg

RSCO = Recommended Soil Cleanup Objectives pursuant to NYSDEC Technical and Administrative Guidance Memorandum (TAGM) #4046 "Determination of Soil Cleanup Objectives and Cleanup Levels".

Values in bold exceed the RSCO.

*Background levels for lead vary widely. Average levels in undeveloped, rural areas may range from 4 – 61 parts per million (ppm). Average background levels in metropolitan or suburban areas or near highways are much higher and typically range from 200 – 500 ppm.

J – Indicates an estimated value. The concentration reported was detected below the Method Detection Limit (MDL).

Y - The concentration reported was detected above the MDL, but below the lowest calibration constant standard.

B - The Analyte was found in the associated method blank as well as the sample.

4.0 EVALUATION OF RESULTS

The soil laboratory analytical results were evaluated in accordance with the New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum (TAGM) #4046 “Determination of Soil Cleanup Objectives and Cleanup Levels”.

Volatile organic compounds (VOCs) were identified in TP-3. VOCs were not detected over the NYSDEC Recommended Soil Cleanup Objectives (RSCO).

Semi-volatile organic compounds (SVOCs) were identified in all of the soil samples. SVOCs were not detected above the NYSDEC RSCO in any of the soil samples.

The TAGM metals lead, zinc, mercury, copper, cadmium, and arsenic were detected above the Recommended Soil Cleanup Objectives in all of the soil samples collected for analysis.

Pesticides were identified in all of the soil samples. Pesticides were not detected above the NYSDEC RSCO in any of the soil samples.

TCLP metals were identified in all of the soil samples. TCLP metals were detected above the regulatory threshold for hazardous wastes in TP-3 (lead).

PCB compounds were not detected in any of the soil samples.

5.0 CONCLUSIONS

Galli Engineering, P.C. has prepared this Phase II report on behalf of Tom Stachecki to establish current conditions of soils on site, which have reportedly been impacted due to the past uses of the subject property. Specifically, this report is intended to provide information in terms of the absence or presence of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), TAGM metals, pesticides, polychlorinated biphenyls (PCBs) and TCLP contaminants at the locations and depths tested.

Based on the field activities and analytical data, the following areas of concern were identified:

- Soils on site have been impacted by TAGM Metals and TCLP metals.
- The soil contamination was greatest in TP-9 with levels of lead exceeding Hazardous Standards, title 40, part 260.
- The TAGM metals lead, arsenic, barium, cadmium, calcium, copper, zinc and mercury were detected above the RSCO in TP-3, TP-9, TP-13, TP-17 and TP-20.

6.0 RECOMMENDATIONS

The fill materials from the test pits exhibit elevated levels of heavy metals commonly found in abandoned landfills. The fill materials also contained buried debris and rubble. This fill material needs to be removed and disposed of as contaminated soil or as landfill cover, as suitable or capped as a solid waste landfill in conformance with the requirements set forth in NYS Part 360 regulations. Screening of rubble and debris may be considered. Removal and disposal of this source material or capping as a landfill will result in an environmentally acceptable site.

A protocol will be prepared and submitted to address the handling and removal and disposal of the on-site materials.

ORGANIC METHOD QUALIFIERS

Q - Qualifier - specified entries and their meanings are as follows:

- U - The analytical result is not detected above the Method Detection Limit (MDL). All MDL's are lower than the lowest calibration standard concentration.
- J - Indicates an estimated value. The concentration reported was detected below the Method Detection Limit (MDL).
- Y - The concentration reported was detected below the lowest calibration standard concentration.
- B - The analyte was found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.
- E - The concentration of the analyte exceeded the calibration range of the instrument.
- D - This flag indicates a system monitoring compound diluted out.

INORGANIC METHOD QUALIFIERS

C - (Concentration) qualifiers are as follows:

- B - Entered if the reported value was obtained from a reading that was less than the Contract Required Detection Limit (CRDL) but greater than or equal to the Instrument Detection Limit (IDL).
- U - Entered when the analyte was analyzed for, but not detected above the Method Detection Limit (MDL) which is less than the lowest calibration standard concentration.

Q - Qualifier specific entries and their meanings are as follows:

- E - Reported value is estimated because of the presence of interferences.

M - (Method) qualifiers are as follows:

- A - Flame AA
- AS - Semi-automated Spectrophotometric
- AV - Automated Cold Vapor AA
- C - Manual Spectrophotometric
- F - Furnace AA
- P - ICP
- T - Titrimetric

OTHER QUALIFIERS

ND - Not Detected

NA - Not Applicable

NR - Not Required

* - Outside Expected Range (NYCDEP Table I/II or Surrogate Limits)

x - Outside Expected Range
