

Case Narrative

Site Name: Servall Laundry

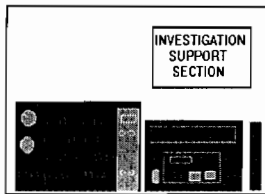

Date received: 05/06/04

For sample delivery group(s): 127-02

The calibration verifications that these samples were run under had several of the target analytes exceeding the calibration verification criteria that is associated with this method. Of these analytes exceeding the 30% deviation criteria, only acetone was found in any of the samples. For those samples in which acetone was detected the reported value may be higher than the actual concentration. All quantitation values for acetone should be considered estimates.

All other QA/QC associated with this sample delivery group were within acceptable method criteria.

Carbon dioxide was reported as a TIC in all of the samples - this is a lab contaminant and should be disregarded. It is reported because the method requires it and would be qualified with a B if it were a target analyte.
