

**-DRAFT-**

**PROJECT STATUS MEMORANDUM**

**NO. 03-10**

**TO:** Pamela Tames, USEPA

**FROM:** Mark M. Goldberg, P.E.  
Alfred N. Kovalik, P.E.

**DATE:** January 9, 2004

JAN 15 2004

**PROJECT:** Rowe Industries Superfund Site  
Ground-Water Recovery and Treatment System  
October 2003 Status Report  
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of the operation, maintenance and monitoring activities for the site from October 1, 2003 through October 31, 2003. The report includes a summary of system operational parameters, tasks completed during the reporting period, anticipated tasks for the following month, analytical results for ground-water and system effluent samples, air quality results, and a summary of stream/estuary, wetland, and ground-water monitoring data.

**SUMMARY OF SYSTEM OPERATION**  
*(October 1, 2003 through October 31, 2003)*

*Reporting Period:* 31 days

*Total Flow During Period:* 11,027,672 gallons

*Average Effluent Flow:* 364 gallons per minute (gpm) while operating

*Mass of VOCs Recovered:* 6.7 pounds

*Cumulative VOCs Recovered:* 85.3 pounds

*Hours of Operation:* 446 hours during reporting period (60 percent)  
(based on number of hours recorded in Maintenance Log)

*Alarm Conditions:* See Table 1 : Maintenance Log

*Discharge Criteria:* Effluent water and air quality criteria met

## SCHEDULE

### Completed Tasks

During the October 2003 reporting period, LBG completed the following tasks:

- monitored system operations by completing routine inspections;
- completed ground-water recovery and treatment system troubleshooting and maintenance;
- completed air sampling events for carbon units;
- prepared monthly project status report;
- completed an acid backwash of the system;
- completed monthly monitoring and sampling of recovery wells;
- cleaned recovery well flow meters and associated piping;
- located five off-site monitor wells;
- completed the rehabilitation of the recharge basins to improve the infiltration of treated water;
- completed project management administrative duties; and
- conducted streams, estuary, wetlands, and ground water monitoring.

### Upcoming Tasks

During the next reporting period, LBG anticipates completing the following tasks:

- monitor system operations by completing routine inspections;
- complete ground-water recovery and treatment system maintenance;
- clean piping in RW-2, RW-4, RW-8, and RW-9;
- collect ground-water samples from recovery wells;
- measure fluid levels and evaluate drawdown in aquifer;
- conduct monitoring of streams, estuary, wetlands, and ground water;
- complete air sampling events for carbon units;
- calculate contaminant recovery totals for the system;
- prepare monthly project status report;
- complete project management administrative duties;
- troubleshoot RW-7 pressure transducer;
- locate off-site monitor wells.

## GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Additional well operation information is included on the weekly operation reports, which are attached as Appendix I. A graph depicting the individual well flowrates over time is attached as Graph 1. RW-4 flow is not accurate due to a sensor power source malfunction. Flow in RW-2, RW-8 and RW-9 decreased slightly towards the end of the month due to build-up of solids (iron) in the piping. Graph 2 shows individual well pressures over time. The average flow for other wells is less than associated design values because flow adjustments were made in order to extend bag filter life. A computer model was re-run with lower well flows to evaluate the long term effect of the

lower flows on remediation of the aquifer, including capture zones and remediation time. A discussion is presented in the July 2003 Status Report dated September 12, 2003.

Based on analytical results for samples collected from the influent to the air stripper and water flow totalizer readings, approximately 6.7 pounds of volatile organic compounds (VOCs) were recovered by the system in October. The cumulative recovery of VOCs by the system since the start of operation is 85.3 pounds. The VOC recovery calculation for October is attached as Appendix II and is based on five sampling events. Laboratory analytical reports are attached as Appendix III.

Well	Volume Pumped (gal)	Average Flow (gpm)	Design Flow (gpm)	Total VOC Concentration ( $\mu\text{g/L}$ )	VOC Recovery (lbs)
RW-1	678,448*	25.3	35	17.2	0.10
RW-2	726,465*	27.1	45	15.7	0.07
RW-3	799,249*	29.9	30	10.0	0.07
RW-4**	1,338,500	50.0	50	399.2	4.46
RW-5	1,472,231*	55.0	55	26.1	0.32
RW-6	937,235*	35.0	50	142.6	1.12
RW-7	1,849,083*	69.4	80	132.9	2.05
RW-8	1,331,856*	49.8	90	38.2	0.42
RW-9	1,655,827*	61.9	100	33.4	0.46

\* Estimated volume due to flow meter totalizer malfunction. The totalizer malfunction has been addressed and is now operating properly.

\*\*Estimated volume and flow due to sensor power supply malfunction.

## GROUND-WATER TREATMENT SYSTEM STATUS SUMMARY

### System Operation

The two major components of the ground-water treatment system are the three multi-unit bag filter units and the packed-tower air stripper.

The filter units, with eight filter bags per unit, are located downstream of the equalization tank and upstream from the air stripper. The multi-bag filter units operate in parallel. The average flow from the equalization tank transfer pumps into the bag unit system was 412 gpm during the reporting period. The inlet, outlet and differential pressures for each filter unit are recorded on an hourly basis. Graph 3 illustrates the differential pressure readings over time across each of the three units. As indicated on this graph and as shown in the operations log, filter bag changeouts were conducted about once a week. Alternate bag filter operating scenarios have been tried during the past reporting periods to increase the lifespan of the filter bags and minimize system maintenance requirements. The scenario found to increase the life-span of the bag filters is to remove the filter bag from the last housing in each bank of filters, so filter bags are in the first seven housings in each bank of the filters. This reduced required change-outs of the filter bags from daily to approximately

one to two times a week. In the future, other methods that may be attempted to increase filter bag life include increasing the average pore size of the filter bag.

The average airflow rate through the air stripper during the reporting period was 3,436 scfm (standard cubic feet per minute) according to the booster blower airflow meter. Previous measurements of airflow through the tower have been collected at the air stripper blower airflow meter. It has been determined that this airflow meter has been reading the airflow incorrectly since startup. The correct airflow measurement has been recorded by the airflow meter located after the booster blower. The airflow measurements have been verified using a TSI Velocicalc airflow meter. The air stripper blower airflow meter is being repaired at this time. A graph of the air stripper blower pressure and booster blower airflow over time is attached as Graph 4.

The acid backwash system was utilized to remove the iron and bacteria build-up on the air stripper tower packing. An initial observation indicated that there was very little build-up on the packing material. A 30% (by volume) citric acid solution was mixed with potable water/treated water in the transfer tank to produce a solution with a pH of approximately 2. This solution was processed through the tower on October 15, 2003 for 135 minutes. A pH of approximately 2 was maintained during the process. Following the acid backwashing cycle, the acid was neutralized with soda ash to a pH ranging from approximately 4.5 to 5.0 prior to being removed for disposal. After completion of the acid backwashing, a slight reduction in packing material build-up was observed. LBG will continue to monitor build-up on the packing material on a periodic basis.

The water discharge from the air stripper was sampled weekly. As shown on the attached Table 2, the treated ground water met the water-quality requirements set forth in the SPDES criteria. Graph 5 illustrates that the daily system effluent flowrate in gallons per day (gpd) was below the SPDES limit of 1,023,000 gpd.

In late September and early October a high water level in the primary recharge basin was observed which triggered alarms during this period. On October 14 and 15, 2003, both recharge basins were rehabilitated by removing debris such as leaves, sticks, branches, and iron residue from the basin floor. This action improved the infiltration of treated water back into the ground. Approximately 100 cubic yards of soil were removed from both recharge basins during this process. Soil removed from the recharge basins was sampled and determined to be non-hazardous. The material was disposed of as such according to applicable federal and state regulations. The results of the soil sampling are included in Appendix III of this report.

## AIR TREATMENT AND EMISSIONS MONITORING

Air sampling was conducted during the reporting period to ensure that VOC emissions do not exceed limits and to monitor the granular activated carbon units for breakthrough. The air stripper off-gas is treated by two carbon units, which are currently being operated in series. During system start-up, photoionization detector (PID) readings and air samples for laboratory analysis were collected from the effluent from the stripper, carbon unit 1 and carbon unit 2 on a weekly basis. Table 3 summarizes the air quality results for the initial system testing phase and all sampling done during the system operation. As shown in the table, the PCE laden air from the air stripper was effectively treated by the carbon units; therefore, no carbon changeout activities were conducted during the reporting period. According to the calculation in Appendix IV, the air emission rate from

the carbon units (based on the October 8<sup>th</sup> analytical data) was 0.00284 pounds per hour. The allowable concentrations of these compounds corresponding to the Ambient Guideline Concentration (AgC) at the property line were not exceeded.

## **GROUND-WATER SAMPLING**

Ground-water samples were collected from the nine recovery wells on October 30, 2003. The samples were collected to estimate VOC mass recovery rates from each well. Table 4 summarizes the VOC analytical data for all ground-water samples collected during the operation of the system. The highest tetrachloroethene concentration for the most recent sampling round was 390 micrograms per liter in RW-4. Acetone was observed in the October 17, 2003, sampling event. Because acetone has not been present in the ground-water from this site and acetone is a known laboratory contaminant, LBG believes that this analyte was introduced during analytical laboratory testing.

Ground-water quality trends will be analyzed throughout the duration of the remedial action to evaluate the effectiveness of the pump and treat system in reducing the VOC concentration in the aquifer. A comprehensive evaluation of ground-water quality (and ground-water levels) will be presented in the 2003 Annual Report.

## **STREAM/ESTUARY SALINITY MONITORING**

Salinity and temperature levels were measured at predetermined locations perpendicular to the flow of water in the Ligonee Creek. The selected locations are considered representative of the section of Sag Harbor Cove downgradient of the VOC plume being captured and potentially affected by the operation of the recovery wells. The salinity and temperature profiles are monitored at the surface and various depths. Measurements were made at each location during, or close to, average daily high and low tide. Temperature and salinity graphs for the various monitoring points are attached as Appendix V. Based on historical data measured, the operation of the system has not had an influence on the salinity or temperature at the selected locations. Salinity and temperature data collected during the next monthly monitoring event and throughout the duration of the ground-water remedial action will be evaluated against the historical monitoring data.

## **WATER-LEVEL MONITORING**

Water-level monitoring was conducted in the Crooked, Whaler's Road, Lily and Round Ponds and Ligonee Brook to assess the impacts of the ground-water recovery system on water levels. Ground-water levels and pond water levels are measured in the piezometers and staff gages to determine the difference between the potentiometric heads in the underlying aquifer and the pond water levels. The ground-water elevation data were collected on October 7, 2003. The water-level measurements are shown on the hydrographs attached as Appendix VI. Water-level data collected during the next monthly monitoring event and throughout the duration of the ground-water remedial action will be evaluated against the baseline data.

Recovery well static water-level measurements were collected on October 7, 2003 and are summarized in Table 5. The drawdown in the recovery wells shown in Table 5 were calculated for October using this data and water level measurements collected during system operation on October

7, 2003. Negative or very low drawdown is believed to be the result of the collection of drawdown measurements during high tide conditions. Also presented in Table 5 are the simulated drawdowns according to the numerical ground-water flow model. Based on the comparison of the measured drawdowns in the monitor wells and the anticipated drawdowns generated by the model, the ground-water recovery system is capturing the plume.

Graphs 6 through 14 show calculated drawdown for each of the nine recovery wells for the month of October. No flow and no pressure conditions correspond to downtime periods or the acid backwashing, which occurred in the middle of the month.

**MAINTENANCE LOG**  
(October 1, 2003 through October 31, 2003)

Date	Time	System Changes/Modifications	Personnel
10/1/03	12:29 PM	Restarted system (after communication failure alarm on 9/30/03)	PH
		Changed multi-bag filter bags (200 µm) in banks 1 and 2, seven of eight housings used.	PH
	2:27 PM	Air Stripper Blower Low Pressure Alarm; Belt broken; System shut down.	
10/3/03	9:41 AM	Replaced belts on the ASB and restarted the system.	PJ
	9:33 PM	Filter bank 3 high differential pressure warning. Filter bank 3 is not being used.	
10/4/03	2:33 AM	Filter bank 3 high differential pressure alarm. Filter bank 3 is not being used. Setpoint for differential pressure was set too low.	
	3:02 PM	Reset alarm and Restarted system	PJ
	3:39 PM	Filter bank 3 high differential pressure alarm. Filter bank 3 is not being used. Setpoint for differential pressure was set too low.	
	5:37 PM	Reset alarm and changed the alarm setpoint to 30 psi to avoid alarms when filter bank 3 is not being used. Restarted System.	PJ
10/5/03	6:57 AM	Booster Blower Alarm, System shut down.	
10/7/03	9:30 AM	Reset booster blower; Restarted System	PH
10/8/03	4:35 AM	Primary basin high level alarm	
	9:21 AM	Reset alarm, primary basin valve closed and secondary basin valve opened to discharge water to both basins.	PJ
		Transfer tank level float was stuck; PLC indicated 30 inches, however through visual inspection the height of water was approximately 20 inches.	PJ
		Reset bag filter sensors so local and PLC readings were equal. Troubleshoot RW-8 totalizer.	PJ
	12:45 PM	Shut down recovery wells for maintenance.	PJ
	12:50 PM	Restarted System.	PJ
10/9/03	11:23 AM	Booster Blower Failure; Starter Motor Reset.	
	11:40 AM	Reset Alarm and Restarted System.	PJ
		Changed multi-bag filter bags (200 µm) in banks 1 and 2, seven of eight housings used.	PJ
10/12/03	9:21 AM	ASB low pressure alarm (forced alarm to shutdown system for upcoming maintenance).	PJ
10/14/03		Preparation for acid backwash.	PJ
10/15/03		Acid backwashing of the air stripper tower to clean the packing material.	PJ
		Cleaned and restored the primary basin to remove iron-stained sand, leaves and debris from the bottom of the basin.	PJ
		Cleaned on-site influent piping manifold.	PJ

PCE - Tetrachloroethane  
TCE - Trichloroethene  
TCA - 1,1,1-Trichloroethane

DCE - 1,1-Dichloroethene  
DCA - 1,1-Dichloroethane  
cis-DCE - cis-1,2-Dichloroethene

CF - Chloroform  
MC - Methylene Chloride  
CM - Chloromethane  
CD - Carbon Disulfide

BM - Bromomethane  
CB - Chlorobenzene  
EB - Ethylbenzene  
VC - Vinyl Chloride

\* Drawdown for recovery wells and monitor wells calculated from static DTW  
 measured on 10/1/03 and system running DTW measured on 10/30/03

\*\* Drawdown based on model simulation.

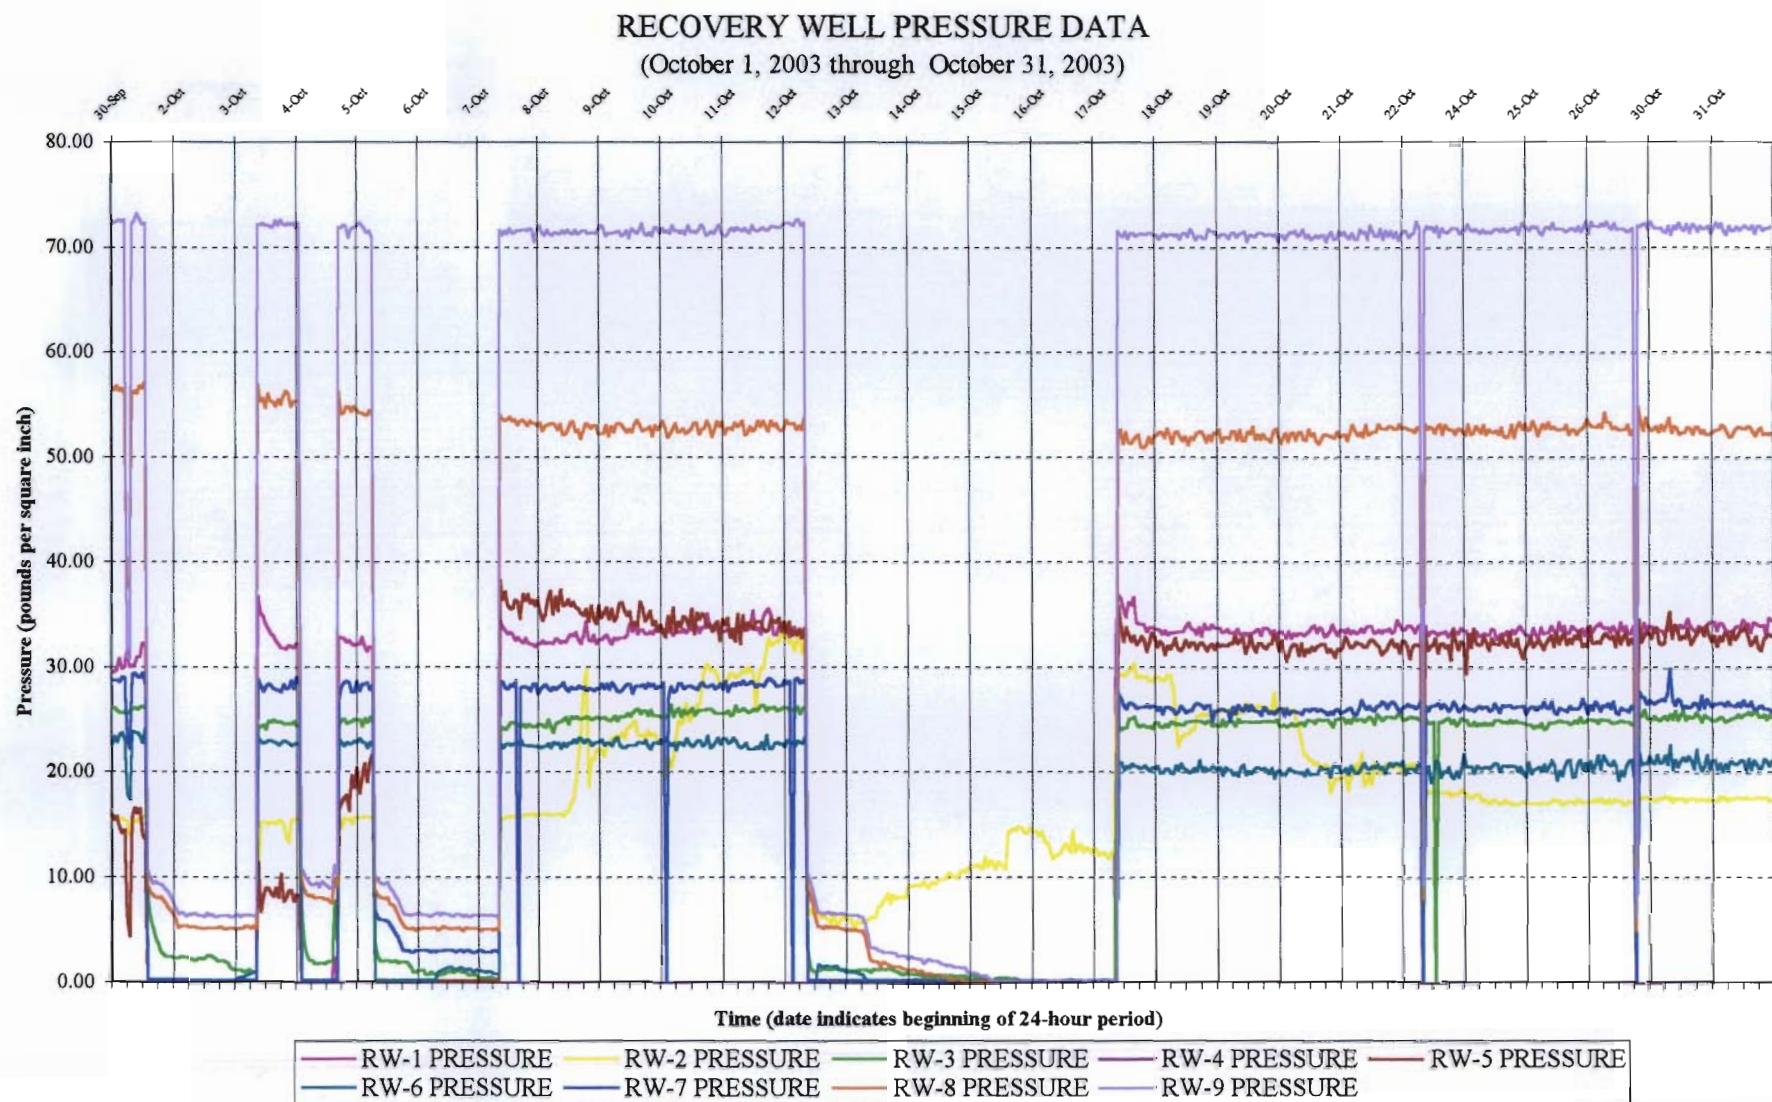

\*\*\* Fluctuations in the groundwater table were accounted for by measuring  
 the change in the depth to water in the USGS well at Crooked Pond  
 between the measurement dates of 10/1/03 and 10/30/03.  
 DTW for the USGS well was on 10/1/03 and 10/30/03 was  
 18.16 and 18.03 feet below grade respectively.

**APPENDIX II**  
**CALCULATIONS OF VOC RECOVERY BY GROUND-WATER SYSTEM**

**APPENDIX II**

**GROUND-WATER REMEDIAL ACTION  
ROWE INDUSTRIES SUPERFUND SITE  
SAG HARBOR, NEW YORK**

**CALCULATION OF VOC RECOVERY BY THE GROUND-WATER RECOVERY SYSTEM**

Calculated by: Mark M. Goldberg

Checked by: Alfred N. Kovalik

**STATEMENT OF PROBLEM:**

Calculate the quantity of VOCs recovered from the ground-water recovery system. VOC concentrations are from samples collected from system influent. Concentrations reported as below the method detection limit are shown as 0.

**PROBLEM CONSTRAINTS:**

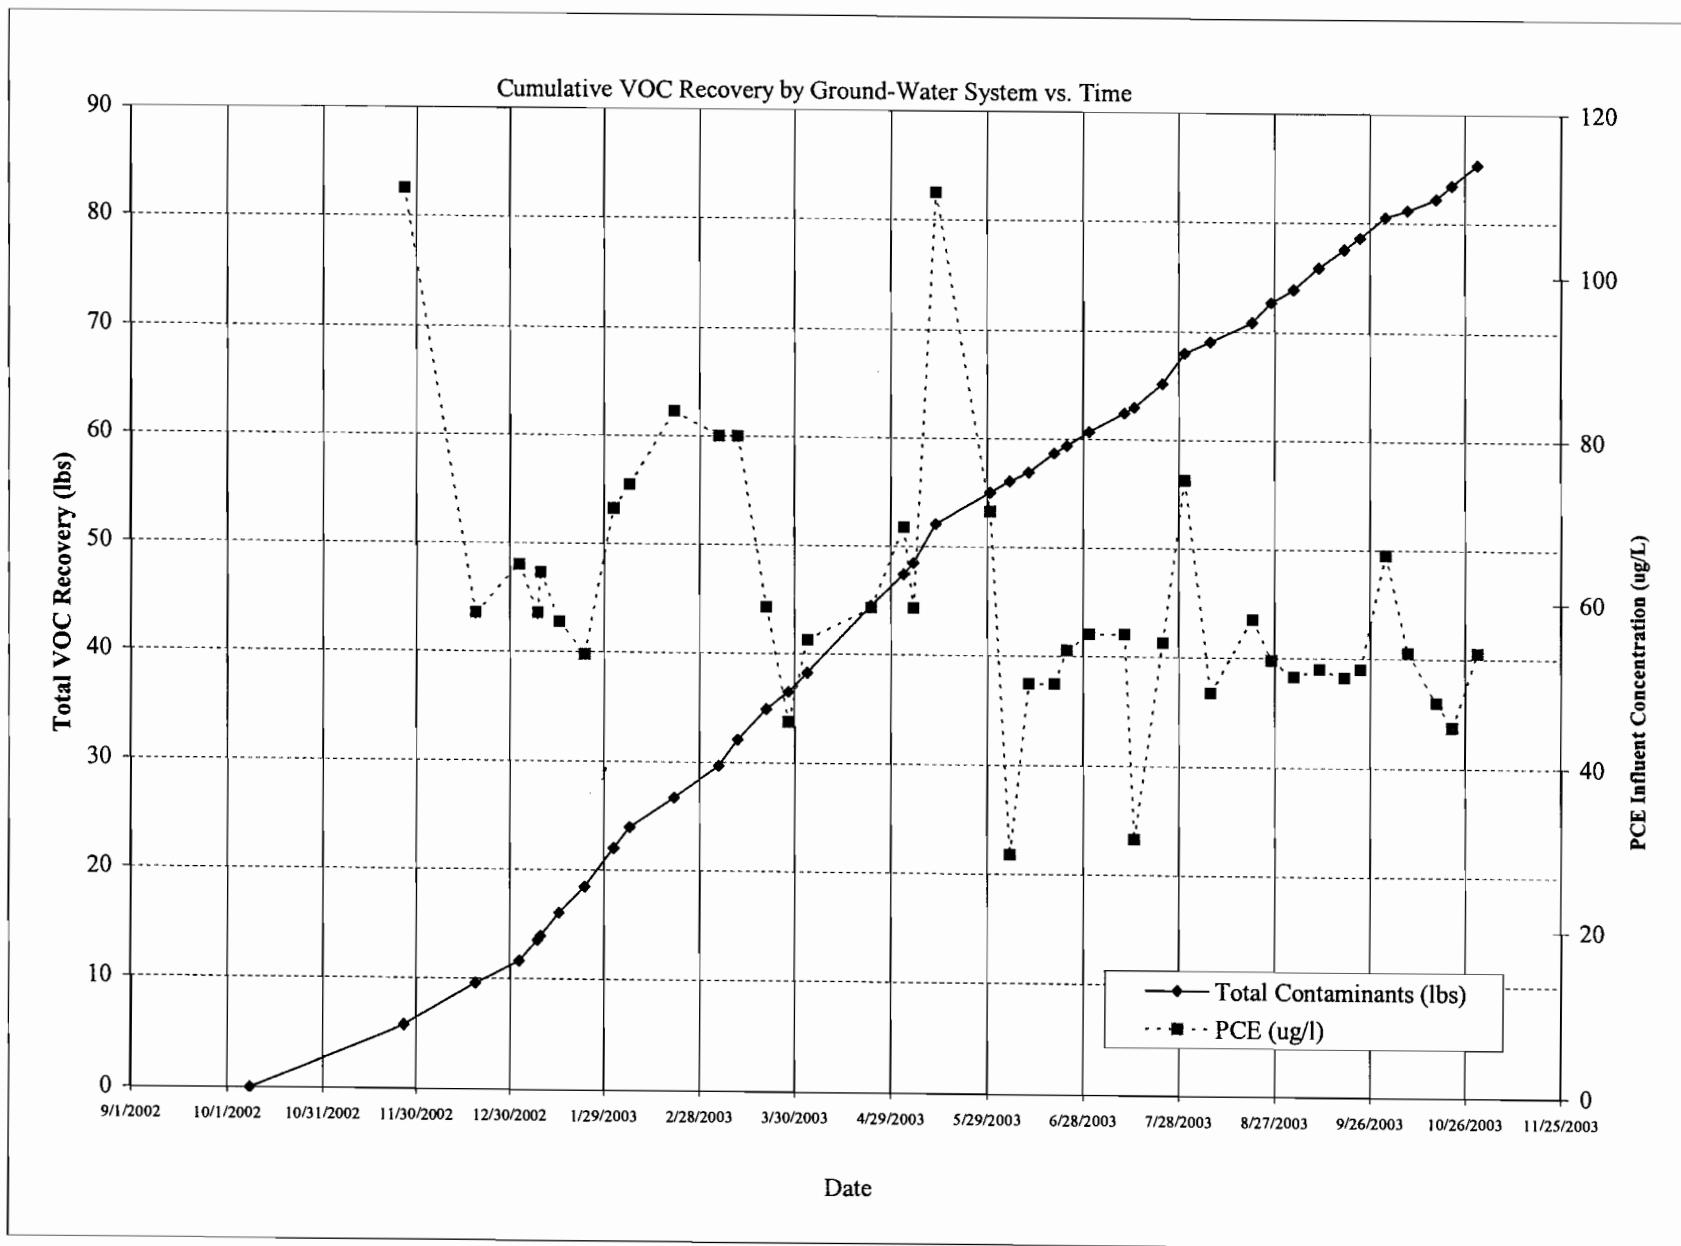

Date	PCE (ug/l)	TCE (ug/l)	TCA (ug/l)	cis-1,2-dichloroethene (ug/l)	Isopropyl benzene (ug/l)	Chloroform (ug/l)	Toluene (ug/l)
11/26/02 - 9/23/03	61	2	2	0	0	0	1
10/1/2003	66	0.9	3.2	0	0	0	0
10/8/2003	54	0.8	1.4	0	0	0	0
10/17/2003	48	3.3	2.4	0	0	0	0
10/22/2003	45	2.2	1.4	0	0	0	0
10/30/2003	54	2.1	1.8	0	0	0	0

**CALCULATION:**

$$\text{Recovery (lbs)} = \text{Concentration (ug/l)} \times \text{Volume Pumped (gal)} \times 1 \text{ lb}/453,590,000 \text{ ug} \times 3.785 \text{ l/gal}$$

Date	Volume Pumped (gal) <sup>1,2</sup>	PCE (lbs)	TCE (lbs)	TCA (lbs)	cis-1,2-dichloroethene (lbs)	Isopropyl benzene (lbs)	Chloroform (lbs)	Toluene (lbs)	Total Contaminants (lbs)	Cumulative VOC's (lbs)
11/26/02 - 9/23/03	141,122,949	73.8	2.0	2.2	0.0	0.0	0.0	0.5	78.6	78.6

RE: Rowe Industries

Order No.: 0310028

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 3 samples on 10/3/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0310062

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 3 samples on 10/10/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0310117

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 3 samples on 10/21/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

- |              |   |
|--------------|---|
| <b>Value</b> | If the result is greater than or equal to the detection limit, report the value   |
| <b>U</b>     | Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.  |
| <b>J</b>     | Indicates an estimated value. The flag is used:<br>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)<br>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others. |
| <b>B</b>     | Indicates the analyte was found in the blank as well as the sample report "10B".  |
| <b>E</b>     | Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.   |
| <b>D</b>     | This flag identifies all compounds identified in an analysis at a secondary dilution factor.  |
| <b>P</b>     | This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".   |
| <b>N</b>     | This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.  |

RE: Rowe Industries

Order No.: 0310149

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 3 samples on 10/24/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

*Lori Beyer*  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

- |              |   |
|--------------|---|
| <b>Value</b> | If the result is greater than or equal to the detection limit, report the value   |
| <b>U</b>     | Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.  |
| <b>J</b>     | Indicates an estimated value. The flag is used:<br>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)<br>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others. |
| <b>B</b>     | Indicates the analyte was found in the blank as well as the sample report "10B".  |
| <b>E</b>     | Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.   |
| <b>D</b>     | This flag identifies all compounds identified in an analysis at a secondary dilution factor.  |
| <b>P</b>     | This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".   |
| <b>N</b>     | This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.  |

RE: Rowe Industries

Order No.: 0311014

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 3 samples on 11/4/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**American Analytical Laboratories, Inc.**

Date: 10-Nov-03

**CLIENT:** Legette Brashears & Graham Inc.  
**Project:** Rowe Industries  
**Lab Order:** 0311014

**Work Order Sample Summary**

<b>Lab Sample ID</b>	<b>Client Sample ID</b>	<b>Tag Number</b>	<b>Collection Date</b>	<b>Date Received</b>

**TELEPHONE: (631) 454-6100 FAX: (631) 454-8027**

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0311012

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 9 samples on 11/4/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**American Analytical Laboratories, Inc.**

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

Shelton, CT 06484

STL Report : 205009  
LEGGETTE, BRASHEARS & GRAHAMCase Narrative

**Sample Receipt** – The samples were received at 22°C. Corrective action was not necessary because the client delivered the samples to the laboratory immediately after sample collection.

**Volatile Organics** – Air volatile organics were determined by purge and trap GC/MS using guidance provided in Method TO-17.

Sample Calculation:

Sample ID-AQ100803:1320NP4-1  
Compound-Bromomethane

$$\frac{(302097)(25)}{(721983)(.415)} = 25.21 \text{ NG} = 25\text{NG}$$

$$\frac{(25\text{NG})(.08206)(298)}{(.2\text{L})(95)(1.0\text{ATM})} = 32.18 \text{ NL/L.}$$

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

I certify that this data package is in compliance with the terms and conditions of this contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Report Date: 10/28/2003

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the reporting limit.
- < Not detected at or above the reporting limit.
- J Result is less than the RL, but greater than or equal to the method detection limit.
- B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
- S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCB,ISA,CRI,MRL: Instrument related QC exceed the upper or lower control limits.
- \* LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
- + MSA correlation coefficient is less than 0.995.
- 4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
- E SD: Serial dilution exceeds the control limits.
- H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
- N MS, MSD: Spike recovery exceeds the upper or lower control limits.
- W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the reporting limit.
- ND Compound not detected.
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
- Q Result was qualitatively confirmed, but not quantified.
- C Pesticide identification was confirmed by GC/MS.
- Y The chromatographic response resembles a typical fuel pattern.
- Z The chromatographic response does not resemble a typical fuel pattern.
- E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB, MLE: Batch QC is greater than reporting limit.
- \* LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
- A Concentration exceeds the instrument calibration range or below the reporting limit.
- B Compound was found in the blank and sample.
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
- H Alternate peak selection upon analytical review
- I Indicates the presence of an interference, recovery is not calculated.
- M Manually integrated compound.
- P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

QUALITY ASSURANCE METHODS

REFERENCES AND NOTES

Report Date: 10/28/2003

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RI.	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

**STL-Connecticut**  
**Certification Summary (as of September 2003)**

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

<b>State</b>	<b>Responsible Agency</b>	<b>Certification</b>	<b>Expiration Date</b>	<b>Lab Number</b>
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/04	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/04	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/04	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/04	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/03	46410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/04	10602
North Carolina	Division of Environmental Management	Wastewater	12/31/03	388
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/03	A43
Utah	Department of Health	RCRA	05/31/02	2032614458

RE: Rowe Industries

Order No.: 0309142

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 1 sample on 9/30/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**American Analytical Laboratories, Inc.**

**DATA REPORTING QUALIFERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

**APPENDIX IV**  
**CALCULATION OF VOC EMISSIONS FROM CARBON UNITS**

**APPENDIX IV**

**GROUND-WATER REMEDIAL ACTION  
ROWE INDUSTRIES SUPERFUND SITE  
SAG HARBOR, NEW YORK**

**CALCULATION OF VOLATILE ORGANIC COMPOUNDS DISCHARGED FROM  
VAPOR-PHASE CARBON UNITS**

Calculated by: Mark M. Goldberg

Checked by: Alfred N. Kovalik

**STATEMENT OF PROBLEM:**

Calculate the quantity of VOCs discharged from the vapor-phase carbon units based on vapor concentrations and flow rates.

**PROBLEM CONSTRAINTS:**

Emission Limits: Total VOCs = 0.022 lb/hr

(Acceptable stack discharge concentrations for meeting AgC concentrations at property boundary are included in table below. Allowable concentrations calculated in Appendix IV of the December 2002 report.)

Date	PCE (mg/m <sup>3</sup> )	TCE (mg/m <sup>3</sup> )	TCA (mg/m <sup>3</sup> )	DCE (mg/m <sup>3</sup> )	DCA (mg/m <sup>3</sup> )	cis-DCE (mg/m <sup>3</sup> )	Vinyl Chloride (mg/m <sup>3</sup> )	Toluene (mg/m <sup>3</sup> )	Benzene (mg/m <sup>3</sup> )	m&p-Xylenes (mg/m <sup>3</sup> )

Total					21.786

\* : Operating time since last air sample collected

\*\* : Average vapor flow rate used.

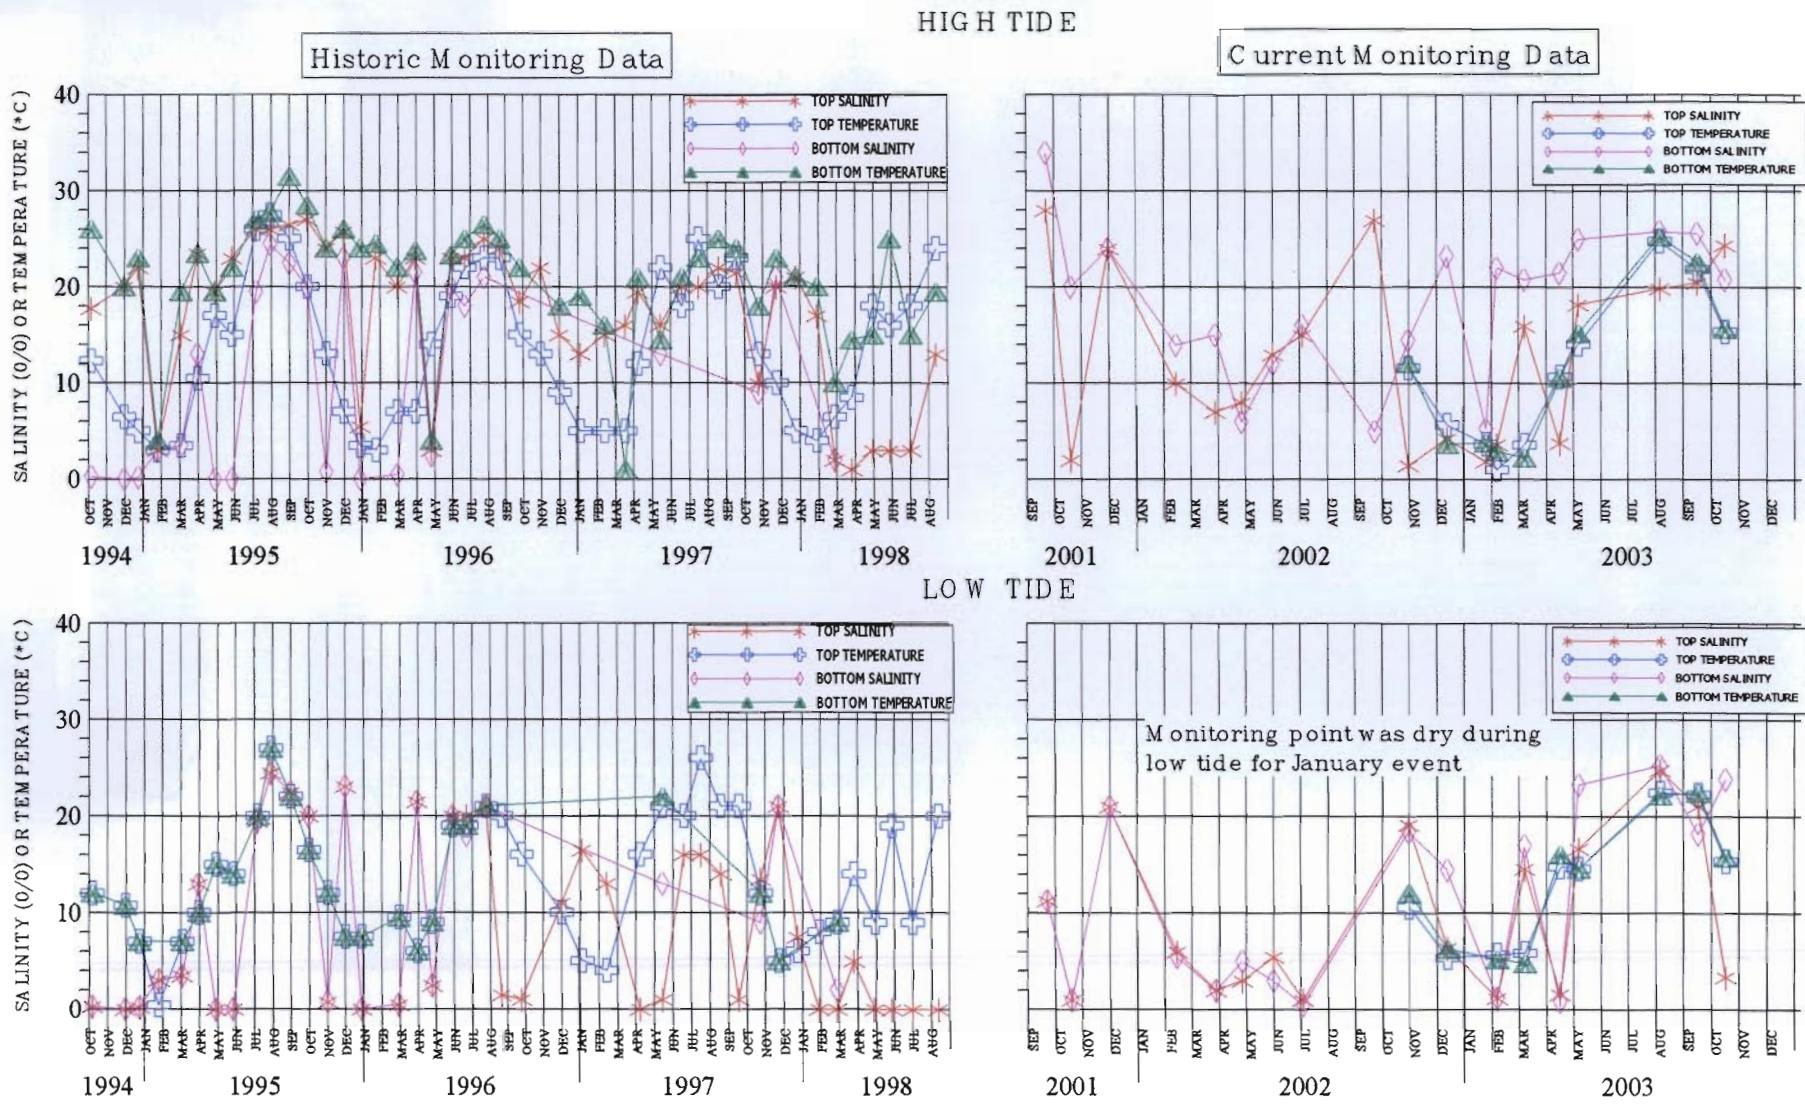

**CONCLUSIONS:**

Emissions from the carbon units were below the VOC emission limit of 0.022 lbs/hr.  
 Concentrations of PCE,TCE and chloroform at the stack were also below the allowable emission rates of those compounds corresponding to the AgC at the property line.
