Albany, NY 12233-7013

RE: December 2003 Status Report  
Ground-Water Remedial Action  
Rowe Industries Superfund Site  
Sag Harbor, New York

Dear Mr. Trad:

The enclosed letter report details the operation status of the full-scale ground-water pump and treat system at the above referenced site. As discussed in our telephone conversation, LBG has enclosed an additional copy of the report to be forwarded to the Chief of the Operation Maintenance and Support Section.

Should you or the Operation Maintenance and Support Section have any questions, please feel free to contact myself, Paul Jobmann, or Al Kovalik at (203) 452-3100.

Very truly yours,

LEGGETTE, BRASHEARS & GRAHAM, INC.

Mark M. Goldberg, P.E.  
Senior Environmental Engineer

**-DRAFT-**

**PROJECT STATUS MEMORANDUM**

**NO. 03-12**

---

**TO:** Pamela Tames, USEPA

**FROM:** Mark M. Goldberg, P.E.  
Alfred N. Kovalik, P.E.

**DATE:** February 9, 2004

**PROJECT:** Rowe Industries Superfund Site  
Ground-Water Recovery and Treatment System  
December 2003 Status Report  
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of the operation, maintenance and monitoring activities for the site from December 1, 2003 through December 31, 2003. The report includes a summary of system operational parameters, tasks completed during the reporting period, anticipated tasks for the following month, analytical results for ground-water and system effluent samples, air quality results, and a summary of stream/estuary, wetland, and ground-water monitoring data.

**SUMMARY OF SYSTEM OPERATION**  
*(December 1, 2003 through December 31, 2003)*

*Reporting Period:* 31 days

*Total Flow During Period:* 11,545,110 gallons

*Average Effluent Flow:* 342 gallons per minute (gpm) while operating

*Mass of VOCs Recovered:* 6.4 pounds

*Cumulative VOCs Recovered:* 98.0 pounds

*Hours of Operation:* 475 hours during reporting period (64 percent)  
(based on number of hours recorded in Maintenance Log)

*Alarm Conditions:* See Table 1 : Maintenance Log

*Discharge Criteria:* Effluent water and air quality criteria met

## SCHEDULE

### Completed Tasks

During the December 2003 reporting period, LBG completed the following tasks:

- monitored system operations by completing routine inspections;
- completed ground-water recovery and treatment system troubleshooting and maintenance;
- prepared monthly project status report;
- completed monthly monitoring and sampling of recovery wells;
- completed project management administrative duties; and
- conducted streams, estuary, wetlands, and ground water monitoring.

### Upcoming Tasks

During the next reporting period, LBG anticipates completing the following tasks:

- monitor system operations by completing routine inspections;
- complete ground-water recovery and treatment system maintenance;
- collect ground-water samples from recovery wells;
- measure ground-water levels and evaluate drawdown in aquifer;
- conduct a survey of monitor wells;
- complete air sampling events for carbon units;
- calculate contaminant recovery totals for the system;
- prepare monthly project status report;
- complete project management administrative duties;

## GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Additional well operation information is included on the weekly operation reports, which are attached as Appendix I. The collection of system operating data was not completed in the second week and third week of December because the system was down due to communication failure and power failure alarms. A graph depicting the individual well flowrates over time is attached as Graph 1. A November 27<sup>th</sup> pump fault alarm in RW-1, 2, 3, 4, 5, 6, 8, and 9 caused low flow conditions at the beginning of the month. A communication failure that shut the system down occurred on December 5<sup>th</sup> and the system was re-started on December 10<sup>th</sup>. A power failure alarm that shut the system down occurred on December 13<sup>th</sup> and the system was re-started on December 17<sup>th</sup>. The collection of data was not completed due to power failure because the system was down. The programmable logic control (PLC) program was lost during the December 13<sup>th</sup> power failure and the PLC program was re-installed on December 17<sup>th</sup>. A new battery for the PLC was ordered and replaced. RW-4 flow is not accurate due to a sensor power source malfunction. A small but steady decrease in flow was observed in RW-8 and RW-9 due to iron build-up in the piping. Graph 2 shows individual well pressures over time. Recovery well RW-6 average flow is reduced due to an increase in backpressure in the combined recovered water pipeline. The average flow for other wells is less than or equal to associated design values because flow adjustments were made in order to

extend bag filter life. In addition, lower flows are observed in recovery wells RW-2, RW-8, and RW-9 due to iron build-up. As presented in the July 2003 Status Report, the ground-water model evaluation of operating the recovery wells at lower flow rates indicated that the capture of the plume is being achieved.

Based on analytical results for samples collected from the influent to the air stripper and water flow totalizer readings, approximately 6.4 pounds of volatile organic compounds (VOCs) were recovered by the system in December. The cumulative recovery of VOCs by the system since the start of operation is 98.0 pounds. The VOC recovery calculation for December is attached as Appendix II and is based on four sampling events. Laboratory analytical reports are attached as Appendix III.

Well	Volume Pumped (gal)	Average Flow (gpm)	Design Flow (gpm)	Total VOC Concentration ( $\mu\text{g/L}$ )	VOC Recovery (lbs)
RW-1	779,498	23.4	35	11.6	0.08
RW-2	788,548	25.3	45	11.0	0.07
RW-3	820,491	30.0	30	7.0	0.05
RW-4*	1,402,450	50.0	50	277.9	3.3
RW-5	1,489,003	55.0	55	18.5	0.23
RW-6	805,062	35.0	50	122.6	0.82
RW-7	1,637,053	70.0	80	112.8	1.54
RW-8	1,391,315	41.3	90	23.0	0.27
RW-9	1,505,909	49.9	100	21.1	0.27

\*Estimated volume and flow due to sensor power supply malfunction.

## GROUND-WATER TREATMENT SYSTEM STATUS SUMMARY

### System Operation

The two major components of the ground-water treatment system are the three multi-unit bag filter units and the packed-tower air stripper.

The filter units, with eight filter bags per unit, are located downstream of the equalization tank and upstream from the air stripper. The multi-bag filter units operate in parallel. The average flow from the equalization tank transfer pumps into the bag unit system was 395 gpm during the reporting period. The inlet, outlet and differential pressures for each filter unit are recorded on an hourly basis. Graph 3 illustrates the differential pressure readings over time across each of the three units. As indicated on this graph and as shown in the operations log, filter bag changeouts were conducted about once a week. Alternate bag filter operating scenarios have been tried during the past reporting periods to increase the lifespan of the filter bags and minimize system maintenance requirements. The scenario that works to increase the life-span of the bag filters is to remove the filter bag from the last housing in each bank of filters, so filter bags are in the first seven housings in

each bank of the filters. This action reduced the frequency of required change-outs of the filter bags from daily to approximately once a week. In the future, other methods that may be attempted to increase filter bag life include increasing the average pore size of the filter bag.

The average airflow rate through the air stripper during the reporting period was 3,609 scfm (standard cubic feet per minute) according to the booster blower airflow meter. Previous measurements of airflow through the tower have been collected at the air stripper blower airflow meter. It has been determined that this airflow meter has been reading the airflow incorrectly since startup. The correct airflow measurement has been recorded by the airflow meter located after the booster blower. The airflow measurements have been verified using a TSI Velocicalc airflow meter. The air stripper blower airflow meter was sent out for repairs at the manufacturer. Troubleshooting of this airflow meter is continuing. A graph of the air stripper blower pressure and booster blower airflow over time is attached as Graph 4.

The water discharge from the air stripper was sampled weekly. As shown on the attached Table 2, the treated ground water met the water-quality criteria set forth in the SPDES permit. Graph 5 illustrates that the daily system effluent flowrate in gallons per day (gpd) was below the SPDES permit limit of 1,023,000 gpd.

## AIR TREATMENT AND EMISSIONS MONITORING

Air sampling was not conducted during this reporting period, however, air sampling will be completed in January 2004 to determine VOC emissions and the potential need for a carbon change-out. The air stripper off-gas is treated by two carbon units, which are currently being operated in series. During system start-up, photoionization detector (PID) readings and air samples for laboratory analysis were collected from the effluent from the stripper, carbon unit 1 and carbon unit 2 on a weekly basis. Table 3 summarizes the air quality results for the initial system testing phase and all sampling done during the system operation. Carbon changeout activities were not conducted during the reporting period.

## GROUND-WATER SAMPLING

Ground-water samples were collected from the nine recovery wells on December 23, 2003. The samples were collected to estimate VOC mass recovery rates from each well. Table 4 summarizes the VOC analytical data for all ground-water samples collected during the operation of the system. The highest tetrachloroethene concentration for the most recent sampling round was 270 micrograms per liter in RW-4.

Ground-water quality trends will be analyzed throughout the duration of the remedial action to evaluate the effectiveness of the pump and treat system in reducing the VOC concentration in the aquifer. A comprehensive evaluation of ground-water quality (and ground-water levels) will be presented in the 2003 Annual Report.

## **STREAM/ESTUARY SALINITY MONITORING**

Salinity and temperature levels were measured in Sag Harbor Cove at predetermined locations that transect the cove. The selected locations are considered representative of the section of Sag Harbor Cove downgradient of the VOC plume being captured and potentially affected by the operation of the recovery wells. The salinity and temperature profiles are monitored at the surface and various depths. Measurements were made at each location during, or close to, average daily high and low tides. Temperature and salinity graphs for the various monitoring points are attached as Appendix IV. Based on historical data measured, the operation of the system has not had an influence on the salinity or temperature at the selected locations. Based on discussions between the EPA and LBG, cove salinity and temperature measurements will resume in the summer of 2004 to determine if changes have occurred compared to historical values.

## **WATER-LEVEL MONITORING**

Water-level monitoring was conducted in the Crooked and Round Ponds and Ligonee Brook to assess the impacts of the ground-water recovery system on water levels. Whaler's Pond and Lily Pond were frozen, therefore, water levels were not measured for these locations. Ground-water levels and pond water levels are measured in the piezometers and staff gages to determine the difference between the potentiometric heads in the underlying aquifer and the pond water levels. The ground-water elevation data were collected on December 16, 2003. The water-level measurements are shown on the hydrographs attached as Appendix V.

Recovery well static water levels were measured on October 1, 2003 and are summarized in Table 5. The drawdowns in the recovery wells shown in Table 5 were calculated for December using these data and water levels measured during system operation on December 23, 2003. Negative or very low drawdown is believed to be the result of measuring drawdown during high tide conditions. In addition, regional changes in the water table documented in the USGS well (outside the capture zone) contribute to the disparity of drawdown in Table 5. Also presented in Table 5 are the simulated drawdowns according to the numerical ground-water flow model.

Graphs 6 through 14 show calculated drawdown for each of the nine recovery wells for the month of December. No flow and no pressure conditions correspond to downtime periods.

PCE - Tetrachloroethane  
TCE - Trichloroethene  
TCA - 1,1,1-Trichloroethane

DCE - 1,1-Dichloroethene  
DCA - 1,1-Dichloroethane  
cis-DCE - cis-1,2-Dichloroethene

CF - Chloroform  
MC - Methylene Chloride  
CM - Chloromethane  
CD - Carbon Disulfide

BM - Bromomethane  
CB - Chlorobenzene  
EB - Ethylbenzene  
VC - Vinyl Chloride

Groundwater Mounding	ft	0.45	

- Notes: 1. RW-7 is the only recovery well operating at this time.  
 2. RW-4 sensor power source is malfunctioning.  
 3. RW-7 pressure transducer is malfunctioning.  
 4. Transfer Tank Conductivity meter is malfunctioning.  
 5. FilterBank 3 is not being used.  
 6. The air stripper blower flow meter is malfunctioning.

**APPENDIX II**  
**CALCULATIONS OF VOC RECOVERY BY GROUND-WATER SYSTEM**

## APPENDIX II

### GROUND-WATER REMEDIAL ACTION ROWE INDUSTRIES SUPERFUND SITE SAG HARBOR, NEW YORK

#### CALCULATION OF VOC RECOVERY BY THE GROUND-WATER RECOVERY SYSTEM

Calculated by: Mark M. Goldberg

Checked by: Alfred N. Kovalik

#### STATEMENT OF PROBLEM:

Calculate the quantity of VOCs recovered from the ground-water recovery system. VOC concentrations are from samples collected from system influent. Concentrations reported as below the method detection limit are shown as 0.

#### PROBLEM CONSTRAINTS:

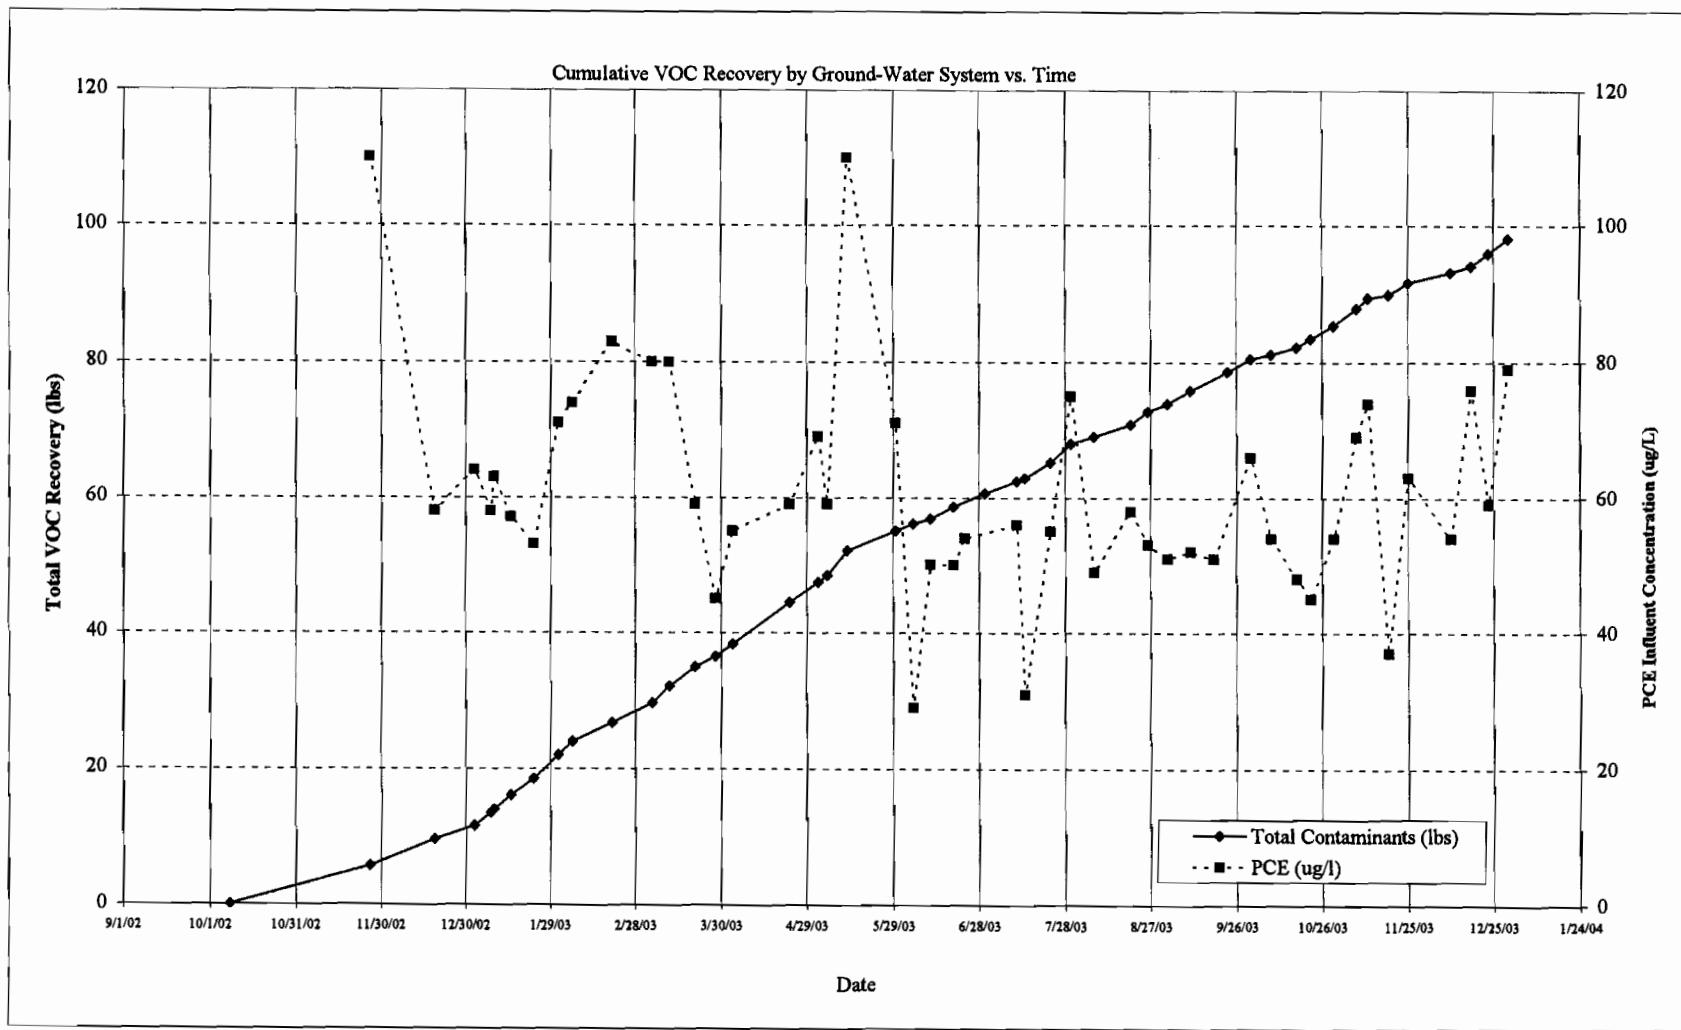

Date	PCE (ug/l)	TCE (ug/l)	TCA (ug/l)	cis-1,2-dichloroethene (ug/l)	1,1-dichloroethane (ug/l)	Isopropyl benzene (ug/l)	Chloroform (ug/l)	Toluene (ug/l)	MTBE (ug/l)
12/10/03	54	2.1	3.9	0.0	0.0	0.0	0.0	0.0	0.0
12/17/03	76	2.9	1.9	0.0	0.0	0.0	0.0	0.0	0.0
12/23/03	59	2.4	0.0	0.0	1.7	0.0	0.0	0.0	2.2
12/30/03	79	2.8	3.1	0.0	0.0	0.0	0.0	0.0	2.4

#### CALCULATION:

Recovery (lbs) = Concentration (ug/l) x Volume Pumped (gal) x 1 lb/453,590,000 ug x 3.785 l/gal

Date	Volume Pumped (gal) <sup>v</sup>	PCE (lbs)	TCE (lbs)	TCA (lbs)	cis-1,2-dichloroethene (lbs)	1,1-dichloroethane (lbs)	Isopropyl benzene (lbs)	Chloroform (lbs)	Toluene (lbs)	MTBE (lbs)	Total Contaminants (lbs)	Cumulative VOC's (lbs)
11/26/02 - 11/25/03	165,977,997	85.9	2.2	2.4	0.0	0.0	0.0	0.0	0.5	0.0	91.6	91.6

RE: Rowe Industries

Order No.: 0312081

Dear Paul Jobmann:

American Analytical Laboratories, Inc. received 3 samples on 12/12/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

*Lori Beyer*  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0312119

Dear Paul Jobmann:

American Analytical Laboratories received 3 samples on 12/19/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0312202

Dear Paul Jobmann:

American Analytical Laboratories, LLC. received 3 samples on 12/30/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**American Analytical Laboratories, LLC.**

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0312215

Dear Paul Jobmann:

American Analytical Laboratories, LLC. received 3 samples on 12/31/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

RE: Rowe Industries

Order No.: 0312201

Dear Paul Jobmann:

American Analytical Laboratories, LLC. received 9 samples on 12/30/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: <ol style="list-style-type: none"><li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li><li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li></ol>
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

Carbon tetrachloride	U	1.0		µg/L	1	12/31/2003 3:21:00 PM
Chlorobenzene	U	1.0		µg/L	1	12/31/2003 3:21:00 PM
Chloroethane	U	1.0		µg/L	1	12/31/2003 3:21:00 PM

**Qualifiers:**  
ND - Not Detected at the Reporting Limit  
J - Analyte detected below quantitation limits  
B - Analyte detected in the associated Method Blank  
\* - Value exceeds Maximum Contaminant Level

S - Spike Recovery outside accepted recovery limits  
R - RPD outside accepted recovery limits  
E - Value above quantitation range
