

**-DRAFT-**

**PROJECT STATUS MEMORANDUM**

**NO. 07-04**

**TO:** Pamela Tames, USEPA

**FROM:** Mark M. Goldberg, P.E.  
Alfred N. Kovalik, P.E.

**DATE:** August 31, 2004

**PROJECT:** Rowe Industries Superfund Site  
Ground-Water Recovery and Treatment System  
July 2004 Status Report  
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from July 1, 2004 through July 31, 2004. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground-water, system effluent samples, and air quality results.

**SUMMARY OF SYSTEM PERFORMANCE AND OPERATION**  
*(July 1, 2004 through July 31, 2004)*

1. Hours of operation during the reporting period: 466 hours (63%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: no, (Table 2)

The weekly effluent water sample collected on July 7, 2004 contained PCE at a concentration of 11 ug/L. Laboratory results for the July 7, 2004 effluent water sample were reported to LBG on July 16, 2004 and the system was shut down immediately for troubleshooting. The laboratory results for the July 14, 2004 effluent water sample were reported to LBG on July 20, 2004. The July 14, 2004 laboratory results indicated that all volatile organic compounds (VOCs) concentrations were below laboratory method detection limits. After troubleshooting of the system revealed no obvious problems with equipment operation or system malfunctions, the system was restarted on July 20, 2004. No concentrations of VOCs were detected in the subsequent effluent discharge water samples collected on July 21, 2004 and July 28, 2004. Effluent discharge results will continue to be monitored closely. A Discharge Exceedance Letter dated July 23, 2004 was forwarded to the EPA and the NYSDEC.

4. Total volume of water pumped during the reporting period: 8,726,540 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)

6. Mass of VOCs recovered during the reporting period: 2.8 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02:  
(calculations can be provided upon request) 137.0 pounds
8. Effluent VOC vapor concentration for the reporting period: 0.23 mg/m<sup>3</sup> (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.:  
(calculations can be provided upon request) yes (0.00212 lbs/hr)

### GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow Required for Plume Capture (gpm)	Total VOC Concentration (µg/L)	VOC Recovery (lbs)
RW-1	429,477	15.8	26	3.1	0.01
RW-2	555,339	23.6	26	7.8	0.04
RW-3	500,750	21.3	23	11.1	0.05
RW-4*	1,201,100	50.0	13	143.6	1.44
RW-5	1,637,543	54.9	42	28.7	0.39
RW-6	853,041	35.5	28	105.7	0.75
RW-7	1,913,308	69.0	54	57.1	0.91
RW-8**	0	0	46	-	0
RW-9	1,088,520	47.6	68	11.6	0.11

\*Estimated volume and flow due to sensor power supply malfunction. RW-4 control modification plans have been provided to the contractor and LBG is awaiting a cost estimate and scheduling from the contractor to conduct the modifications.

\*\* RW-8 was not operating due to a pump or motor malfunction. LBG is scheduling a service person to investigate the problem.

Recovery wells RW-1, RW-2, RW-3 and RW-9 had average flows below the minimum design flow required to capture the plume. Lower flows at RW-1 and RW-3 are believed to be caused by build-up of iron in the below-grade piping at the intersection of the RW-1 and RW-2 and at the intersection of RW-2 and RW-3. This piping was cleaned two months ago, but the iron build-up has returned. LBG will schedule another below-grade pipe cleaning with high pressure water jets for the on-site well piping in the near future. Off-site below-grade pipe cleaning from July 26 to July 28, 2004 resulted in improved flow from RW-9, as evidence by the increase in flow from 45 gpm to 55 gpm. A small section of pipe between RW-9 and a clean-out

port located between RW-8 and RW-9 could not be reached with the high pressure water jet used by the contractor. LBG believes this section of pipe still has iron build-up that is causing flow from RW-9 to be below the minimum design flow. In the near future, LBG will schedule another pipe cleaning with a different mechanical device to help negotiate the bends in that section of the below-grade piping.

The pH values are below the State Pollutant Discharge Elimination System (SPDES) Applicable or Relevant and Appropriate Requirements (ARARs) of 6.5 on a routine basis. pH readings from recovery wells are also observed to be in the range of approximately 5.3 to 6.3, which is the background pH for the groundwater in this area.

### BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
July 1 to July 14	7 of 8 housings used with 200 micron bag filters	7 of 8 housings used with 200 micron bag filters	Not active
July 14 to July 16	8 of 8 housings used with 400 micron bag filters	8 of 8 housings used with 400 micron bag filters	Not active
July 16 to July 21	8 of 8 housings used with 400 micron bag filters	Not active	7 of 8 housings used with 200 micron bag filters
July 21 to July 22	8 of 8 housings used with 400 micron bag filters	8 of 8 housings used with 400 micron bag filters	Not active
July 22 to July 28	System down	System down	System down
July 28 to July 31	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

On two different occasions in July (July 14 and July 21), LBG attempted to run 400-micron bag filters in all eight housings of filter banks 1 and 2. However, within one to two days, high pressure bag filter alarms occurred that shut down the system. Using 7 of 8 housings with the 400-micron bag filters in filter banks 1 and 2 appears to be working adequately. During bag filter changes, it is easier to remove the 400-micron bag filters from the bag filter housings (as compared with removing the 200-micron bag filters). Bag filters with a larger opening size (600-micron) have been requested to determine if a larger opening will allow the use of all eight housings without triggering a frequent high pressure alarm from the bag filter system.

### OTHER O&M MODIFICATIONS AND FUTURE O&M ACTIVITIES

- From July 7, 2004 to July 20, 2004, ten monitor wells were constructed (MW-28A, MW-28B, MW-55, MW-56A, MW-56B, MW-56C, MW-57A, MW-57B, N-1B, and N-2B) in select locations to improve the water quality and capture zone characterization for the site. In addition, three monitor wells (N-37, N-38 and N-39) located on Mr. Fabiano's property were repaired.
- On July 7, 2004 cove salinity monitoring and water level measurements at pond and brook piezometers were conducted.

- On July 21, 2004 water levels at recovery wells and select monitor wells were measured while the system was operating.
- From July 26 to July 28, 2004, most of the off-site below-grade piping was cleaned.
- On July 28 and July 29, 2004, groundwater samples were collected from monitor wells MW-28A, MW-28B, MW-55, MW-56A, MW-56B, MW-56C, MW-57A, MW-57B, N-1B, N-2B, N-37 and N-38 and analyzed for VOCs via EPA Method 8260 at a state-certified laboratory under standard chain of custody procedures. Monitor well N-39 was not included in this monitoring event because this well has been regularly sampled on a semi-annual basis. Laboratory test results of the groundwater samples from monitor wells MW-28B, MW-56A, MW-57A, MW-57B, N-2B and N-37 had no detectable VOC concentrations below. The water samples from the remaining wells had total VOC concentrations ranging from 1.1 ug/L (N-1B) to 15.9 ug/L (N-38).

Future O&M activities scheduled for the summer and fall include:

- Transfer pump maintenance activities;
- Moving the RW-4 control panel to an above-grade position;
- Constructing one additional monitor well (MW-57C) on Brick Kiln Road;
- Sampling the ground-water in the newly constructed monitor well;
- Surveying the newly constructed monitor wells and the recently repaired monitor wells;
- Below-grade pipe cleaning between the RW-9 vault and the clean-out port between RW-8 and RW-9. Below-grade pipe cleaning for the on-site recovery well piping;
- Conducting cove salinity monitoring and water level measurements at pond and brook piezometers in August 2004, and;
- Semi-annual groundwater sampling of select monitor wells in September 2004.

**MAINTENANCE LOG**  
(July 1, 2004 through July 31, 2004)

Date	Time	System Changes/Modifications	Personnel
7/2/2004	7:46 PM	Primary basin high level alarm.	
	7:50 PM	Power Failure Alarm, RW-1, 2, 3, 4 and 6 pump fault alarms, RW-9 low flow alarm.	
	7:54 PM	Control Room Temperature Alarm.	
7/5/2004	2:08 PM	ASB low pressure alarm.	
7/6/2004	2:24 PM	Bag Filter 3 High Pressure Warning.	
7/7/2004		Air stripper blower belt was broken and was replaced. Reset ASB low pressure alarm.	JM/MG
	12:05 PM	Restarted computer, cleared drives on RW-1, RW-2, RW-3, RW-4, RW-6 and RW-9, Reset recovery well alarms. Restarted the system.	JM/MG
		Primary basin high level alarm was investigated and water levels are low, therefore a bad transducer is suspected to be the problem. LBG will order a new transducer and replace the old one. The alarm has been acknowledged but not cleared until new transducer is installed.	JM/MG
		Control Room temperature alarm was reset, Garage door was opened to vent the building.	JM/MG
		Bank 3 was not active at the time the bag filter high pressure warning occurred. Checked valves to bank 3 to see if they were closed and they were. Investigated the pressure readings between the computer and local display. The pressure readings were reasonably close between the two displays and were below the 10 psi warning alarm value. Reset bank 3 warning and left bank 3 closed.	JM/MG
		Changed multi-bag filter bags (200 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	JM/MG
		Monitor well construction of MW-28A, MW-28B, MW-55, MW-56A, MW-56B, MW-56C, MW-57A, MW-57B, N-1B and N-2B started. Repair of monitor wells N-37, N-38 and N-39 started.	ETL/TS
		Greased all motors/pumps.	JM/MG
		Troubleshoot RW-8 by checking the wiring to the pump disconnect to see if it was loose or not hooked up properly. Wiring at RW-8 appeared to be OK.	JM/MG
		Conducted cove salinity monitoring and pond/brook piezometer measurements. Sampled system and sampled the air for the vapor phase carbon units.	JM/MG
7/14/2004	12:57 AM	Changed multi-bag filter bags (400 um) in banks 1 and 2 eight of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	JM
		Sampled recovery wells and system; greased motors and pumps.	JM
7/15/2004	7:14 PM	Filter Bank 2 high pressure warning.	
7/16/2004		Closed filter bank 2 and opened bank 3. Acknowledged bank 2 high pressure warning but did not reset warning.	TS
	3:28 PM	Bag filter 1 high pressure alarm.	
		LBG created a high pressure alarm in filter bank 1 to shut off the system remotely to troubleshoot the PCE concentration discharge exceedance that occurred on 7/7/04.	PJ/MG
7/18/2004		Bag filter 3 high pressure warning. (System was off)	
7/19/2004		Inspected air stripper blower and tower for obvious signs of malfunction. Turned on air stripper blower to check air flow through the tower and air flow was OK.	TS

**TABLE 1**  
**GROUND-WATER REMEDIAL ACTION**  
**ROWE INDUSTRIES SUPERFUND SITE**  
**SAG HARBOR, NEW YORK**

**MAINTENANCE LOG**  
(July 1, 2004 through July 31, 2004)

Date	Time	System Changes/Modifications	Personnel
7/20/2004	2:26 PM	Reset bag filter 3 high pressure warning.	TS
	2:27 PM	Reset bag filter 1 high pressure alarm.	TS
		Monitor well construction of MW-28A, MW-28B, MW-55, MW-56A, MW-56B, MW-56C, MW-57A, MW-57B, N-1B and N-2B was completed. Repair work for monitor wells N-37, N-38 and N-39 was completed.	ETL/TS
	2:51 PM	After receiving lab results for effluent discharge collected on 7/14/04 that measured non-detect for VOCs, the system was restarted.	TS
	2:51 PM	Power Failure Alarm.	
	3:00 PM	Rebooted the computer, cleared alarms and restarted the system.	TS
7/22/2004	7:12 PM	Bag filter 1 high pressure warning	
	8:20 PM	Bag filter 2 high pressure warning	
	9:07 PM	Bag filter 1 high pressure alarm, system shut down	
7/24/2004	12:00 PM	Bag filter 3 high pressure warning.	
7/26/2004		Cleaning of off-site below grade pipe with high-pressure water jets starts.	ETL/TS
		Removed sediment from the last housing in banks 1 and 2.	JM
		Changed multi-bag filter bags (400 µm) in banks 1 and 2 seven of eight housings used.	ETL/TS
7/28/2004	8:28 AM	Reset bag filter 1 high pressure alarm; bag filter 2 and 3 high pressure warnings.	ETL/TS
	8:47 AM	Bag Filter 1 high pressure alarm	
		High sediment concentrations in the water were caused by below grade pipe cleaning activities, therefore ETL cleaned the equalization tank and transferred the high concentration sediment water to the 21K holding tank to allow the sediment to settle.	ETL/TS
	9:43 AM	Reset bag filter 1 high pressure alarm.	ETL/TS
	9:52 AM	Bag filter 3 high pressure warning.	
	11:07 AM	Reset bag filter 3 high pressure warning.	ETL/TS
		Changed multi-bag filter bags (400 µm) in banks 1, 2 and 3 seven of eight housings used.	ETL/TS
	12:38 PM	Bag filter 3 high pressure warning.	
	12:58 PM	Reset bag filter 3 high pressure warning.	ETL/TS
	12:58 PM	Changed warning and alarm setpoints on banks 1 and 2 from 10 psi to 13 psi and 14 psi to 17 psi respectively. Changed bank 3 setpoint for high pressure warning and alarm to 30 psi. Restarted System.	TS

1,1-DCE: 1,1-Dichloroethene

1,2-DCE: 1,2-Dichloroethene

MTBE: Methyl tert-butyl ether

## Notes:

1. pH was measured using litmus paper. Influent pH values from recovery wells are below 6.5 on a regular basis.

2. "Discharge" samples were collected from sample port labeled NP2-10.

3. A discharge exceedance of PCE was observed on July 7, 2004. A Discharge Exceedance letter dated July 23, 2004

was forwarded to the EPA and NYSDEC. Lab results for the July 7, 2004 effluent sample were reported to LBG on July 16, 2004 and the system was shut down immediately for troubleshooting. After results of the July 14, 2004 data were reported to LBG on Tuesday July 20, 2004 and troubleshooting of the system was completed, the system was restarted on that day. No detectable concentrations of volatile organic compounds (VOCs) were detected in the subsequent effluent discharge samples on July 21, 2004 or July 28, 2004.

PCE - Tetrachloroethane

TCE - Trichloroethene

TCA - 1,1-Trichloroethane

DCE - 1,1-Dichloroethene

DCA - 1,1-Dichloroethane

cis-DCE - cis-1,2-Dichloroethene

CT - Carbon Tetrachloride

CF - Chloroform

MC - Methylene Chloride

CM - Chloromethane

CD - Carbon Disulfide

BM - Bromomethane

CB - Chlorobenzene

EB - Ethylbenzene

VC - Vinyl Chloride

RE: Rowe Industries

Order No.: 0407059

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 samples on 7/9/2004 for the analyses presented in the following report.

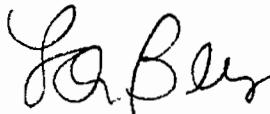

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: <ol style="list-style-type: none"><li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li><li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li></ol>
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe

Order No.: 0407134

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 samples on 7/16/2004 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

Lori Beyer  
Lab Director

**TELEPHONE: (631) 454-6100      FAX: (631) 454-8027**

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0407202

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 samples on 7/23/2004 for the analyses presented in the following report.

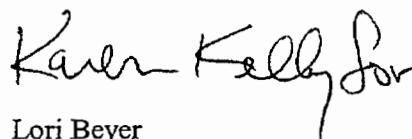

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: <ol style="list-style-type: none"><li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li><li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li></ol>
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe (Kraft)

Order No.: 0408020

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 samples on 8/3/2004 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0407133

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 9 samples on 7/16/2004 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

# ANALYTICAL REPORT

JOB NUMBER: 207090

Prepared For:

LEGGETTE, BRASHEARS & GRAHAM  
126 Monroe Turnpike  
Trumbull, CT 06611

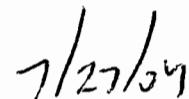

Project: ROWE INDUSTRIES

Attention: Paul Jobmann

Date: 07/27/2004

Signature

Date

Name: Jill M. Pfister

STL Connecticut  
128 Long Hill Cross Road  
Shelton, CT 06484

Title: Project Manager

E-Mail: jpfister@stl-inc.com

This Report Contains (145) Pages

STL Report : 207090  
LEGGETTE, BRASHEARS, & GRAHAM

Case Narrative

**Sample Receipt** – All samples were received in good condition and at the proper temperature.

**Volatile Organics** – Air volatile organics were determined by purge and trap GC/MS using guidance provided in Method TO-17. The instrumentation used was a Perkin Elmer ATD 50 interfaced with a Hewlett-Packard Model 5972A GC/MS/DS.

Sample Calculation:

Sample ID-NP4-1  
Compound-Tetrachloroethene

$$\frac{(6058620)(25)}{(314774)(.512)} = 939.82$$

$$\frac{(940\text{NG})(.08206)(298)}{(1\text{L})(166)(1.0\text{ATM})} = 138.5 \text{ nL/L.}$$

Sample NP4-1 was analyzed at a sample volume of .1L due to the presence of high target compounds. The sample was also analyzed and reported at a sample volume of 1L.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the reporting limit.
- < Not detected at or above the reporting limit.
- J Result is less than the RL, but greater than or equal to the method detection limit.
- B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
- S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed th upper or lower control limits.
- \* LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
- + MSA correlation coefficient is less than 0.995.
- 4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
- E SD: Serial dilution exceeds the control limits.
- H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
- N MS, MSD: Spike recovery exceeds the upper or lower control limits.
- W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the reporting limit.
- ND Compound not detected.
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
- Q Result was qualitatively confirmed, but not quantified.
- C Pesticide identification was confirmed by GC/MS.
- Y The chromatographic response resembles a typical fuel pattern.
- Z The chromatographic response does not resemble a typical fuel pattern.
- E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB, MLE: Batch QC is greater than reporting limit.
- \* LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
- A Concentration exceeds the instrument calibration range or below the reporting limit.
- B Compound was found in the blank and sample.
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
- H Alternate peak selection upon analytical review
- I Indicates the presence of an interfence, recovery is not calculated.
- M Manually integrated compound.
- P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

Report Date: 07/27/2004

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

**STL-Connecticut**  
**Certification Summary (as of May 2004)**

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Responsible Agency	Certification	Expiration Date	Lab Number
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/04	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/06	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/04	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/04	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/04	46410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/05	10602
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/04	A43
Utah	Department of Health	RCRA	05/31/05	2032614458
