RE: January 2005 Status Report
Ground-Water Remedial Action
Rowe Industries Superfund Site
Sag Harbor, New York

Dear Mr. Trad:

The enclosed letter report details the operation status of the full-scale ground-water pump and treat system at the above referenced site. LBG has enclosed an additional copy of the report to be forwarded to the Chief of the Operation Maintenance and Support Section.

Should you or the Operation Maintenance and Support Section have any questions, please feel free to contact myself, Paul Jobmann, or Al Kovalik at (203) 452-3100.

Very truly yours,

LEGGETTE, BRASHEARS & GRAHAM, INC.

Mark M. Goldberg
Mark M. Goldberg, P.E.
Senior Environmental Engineer

PROJECT STATUS MEMORANDUM

NO. 01-05

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E.
Alfred N. Kovalik, P.E.

DATE: March 9, 2005

PROJECT: Rowe Industries Superfund Site
Ground-Water Recovery and Treatment System
January 2005 Status Report
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from January 1, 2005 through January 31, 2005. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground-water, system effluent samples, and air quality results.

SUMMARY OF SYSTEM PERFORMANCE AND OPERATION
(January 1, 2005 through January 31, 2005)

1. Hours of operation during the reporting period: 532 hours (72%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 13,013,430 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 2.5 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02: 154.1 pounds
(calculations can be provided upon request)

8. Effluent VOC vapor concentration for the reporting period: 0.082 mg/m³ (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00070 lbs/hr)
(calculations can be provided upon request)

GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow Required for Plume Capture (gpm)	Total VOC Concentration (µg/L)	VOC Recovery (lbs)
RW-1*	227,022	17	26	3.6	0.007
RW-2*	454,567	27.0	26	25.0	0.09
RW-3*	227,319	17.9	23	ND	ND
RW-4**	657,600	40.0	13	171.4	0.94
RW-5	1,855,510	55.0	42	19.6	0.30
RW-6	927,852	29.1	28	94.2	0.73
RW-7***	2,240,375	70.1	54	38.1	0.71
RW-8	1,415,563	40.2	46	14.8	0.17
RW-9****	821,708	25.7	68	9.0	0.06

* RW-1, RW-2 and RW-3 resumed operation on January 20, 2005. These wells were shut down on November 19, 2004 to minimize GW flow away from the FDSA and allow the EHC™ product to treat the contaminants in the source area. ND indicates VOCs were not detected above laboratory reporting limits.

**Estimated volume and flow due to faulty flow sensor. RW-4 motor malfunctioned on January 12, 2005. A replacement motor has been ordered.

*** RW-7 flow was estimated from the average flow reading and the total time of operation in 2005. The RW-7 flow totalizer is not providing accurate readings. This is being investigated.

**** The RW-9 flow totalizer malfunctioned. RW-9 flow was estimated from the average flow reading and the total time of operation for January 2005. The flow totalizer will be reset in February 2005.

Recovery wells RW-1, RW-3, RW-8 and RW-9 had average flows below the minimum design flow to capture the plume. Despite periodic pipe cleanings RW-1, RW-3 and RW-8 have decreased in flow due to iron build-up in the wells and pipes. Well rehabilitation activities for RW-8 are scheduled for March 2005 with new treatment chemicals. If these treatment chemicals are effective, then well rehabilitation with these new treatment chemicals will be proposed for other wells in the future. To reclaim flow at RW-9, the construction of the new clean-out port

located between RW-8 and RW-9 has been scheduled for the spring of 2005.

The effluent pH values are below the State Pollutant Discharge Elimination System (SPDES) Applicable or Relevant and Appropriate Requirements (ARARs) of 6.5 on a routine basis. pH readings of water samples from the recovery wells are observed to be in the range of approximately 5.8 to 6.5, which is the background pH for the ground water in this area.

BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
Jan. 1 to Jan 31	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

No modifications were made to the filter bank configuration or operation during this reporting period.

OTHER O&M MODIFICATIONS AND FUTURE O&M ACTIVITIES

- From January 12 to January 14, 2005, vault and below-grade pipe cleaning for RW-2, 4, 6 and 9 was completed. An elbow was replace with a “tee” fitting in the RW-4 vault to allow easier jet cleaning of below-grade pipes at RW-4. A new flow meter was installed in RW-4.
- On January 13, 2005, a blown fuse for the RW-1 control panel was replaced.
- On January 25, 2005, a service representative from ACFM Dynamics evaluated the current condition of the air stripper blower (ASB) and booster blower (BB) equipment. Recommended follow-up service for the blowers includes providing an inlet air filter, replacing V-belt components, adding isolation dampers, conducting a wheel balance, completing an alignment and re-tensioning of the V-belts and replacing the ASB bearings.

Future O&M activities scheduled for the winter/spring of 2005 include:

- Install a new flow transmitter circuit board in the RW-4 flow meter in February 2005;
- Completing the semi-annual ground-water sampling event in March 2005;
- Completing the RW-8 well rehabilitation with new treatment chemicals in March 2005;
- Constructing a new clean-out port between RW-8 and RW-9;
- Installing a new motor and power cable in RW-4;
- Troubleshoot RW-7 and RW-9 flow meters.

TABLES

TABLE 1
GROUND-WATER REMEDIAL ACTION
ROWE INDUSTRIES SUPERFUND SITE
SAG HARBOR, NEW YORK

MAINTENANCE LOG
(January 1, 2005 through January 31, 2005)

Date	Time	System Changes/Modifications	Personnel
1/4/2005		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	TS
		Recovery wells RW-1, 2, and 3 remain off to minimize ground-water flow away from FDSA to maximize effectiveness of EHC™ injection.	
		When attempting to collect a ground-water sample from RW-1, the pump would not operate. Troubleshooting revealed that a blown fuse in the RW-1 control panel was the cause. RW-1 was not sampled until a fuse could be purchased.	TS, MG
1/12/2005	10:00 AM	Turned system off for vault pipe, flow meter and below-grade pipe cleaning. Pipe cleaning at recovery wells RW-2, 4, 6 and 9 began.	ETL, TS
		RW-4 vault piping was modified by replacing an elbow with a "tee" to allow for more effective below-grade pipe cleaning with the high pressure water jet. New flow meter installed in RW-4.	ETL, TS
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	TS
1/13/2005		Recovery well vault pipe cleaning continues.	ETL, MG
		Purchased new 2 amp fuse for RW-1. Replaced old fuse with a new 2 amp fuse in the RW-1 control panel.	MG
1/14/2005	10:47 AM	Restarted the system after completing recovery well pipe cleaning	ETL, TS
		Recovery well RW-4 would not ramp-up to speed; left RW-4 in the "off" position until the problem can be investigated.	TS
		Recovery well RW-8 is operating, however flow reading is not being received by the computer. Troubleshooting the RW-8 flow meter will be conducted. RW-8 left on.	TS
1/15/2005	9:54 PM	Communication Failure Alarm and Central Room Temperature Alarm. System Shut Down.	
1/20/2005		Re-set the 480 V and 120 V circuit breaker for the heaters and heat trace tape and turned on the heaters to allow the building to warm up. Water in the pipes was partially frozen. No damage to the piping was observed.	MG
	10:58 AM	Once the building warmed-up, the water in the pipes thawed; the alarms were reset and the system was restarted. Resumed operation of RW-1, RW-2 and RW-3 after a two month shut down to allow the EHC™ product to treat the contaminants in the FDSA.	MG
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	MG
1/23/2005	7:43 AM	Booster Blower Failure Alarm. System shut down	
	8:03 AM	Power Failure Alarm.

SAG HARBOR, NEW YORK

MAINTENANCE LOG
(January 1, 2005 through January 31, 2005)

Date	Time	System Changes/Modifications	Personnel
1/25/2005	9:35 AM	A service technician from ACFM Dynamics representing New York Blower diagnosed the condition of the air stripper blower (ASB) and the booster blower (BB) to determine if there are performance issues with the blowers. Recommended follow-up service for the blowers includes providing an inlet air filter, replacing V-belt components, isolation dampers, conducting a wheel balance, completing an alignment and re-tensioning of the V-Belts and replacing the ASB bearings.	MG, PR
		Changed multi-bag filter bags (400 um) in bank 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	MG
	1:00 PM	Reset alarms and restarted the system	MG
1/26/2005		Changed multi-bag filter bags (400 um) in banks 1 and 3 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	MG, SS

SPDES: State Pollutant Discharge Elimination System

mg/L: Milligrams per liter

ug/L: Micrograms per liter

---: Not established

NM: Not Measured

TDS: Total dissolved solids

PCE: Tetrachloroethylene

TCE: Trichloroethylene

1,1-DCA: 1,1-Dichloroethane

1,1-DCE: 1,1-Dichloroethene

1,2-DCE: 1,2-Dichloroethene

MTBE: Methyl tert-butyl ether

Notes:

1. pH was measured using litmus paper. Influent pH values from recovery wells, which reflect the pH of natural ground water, are below 6.5 on a regular basis.

2. "Effluent" samples were collected from sample port labeled NP2-10.

3. The January 20, 2005 effluent sample was collected shortly after restarting the system. It is believed that system startups cause iron sediment in the tanks and tower sump to be re-suspended in the water temporarily.

ARAR's are chemical specific aquifer restoration goals for ground-water at the Former Rowe Industries Superfund Site.

Bold values indicate an exceedance of the ARAR standard established for the site.

*Methylene Chloride detected in laboratory method blank

NE: ARAR goal was not established for this compound by the EPA.

** The July 14, 2004 sample collected for RW-8 only represents water in the pipe since the RW-8 pump was not operating at this time.

*** The August 26, 2004 samples were lost during shipment.

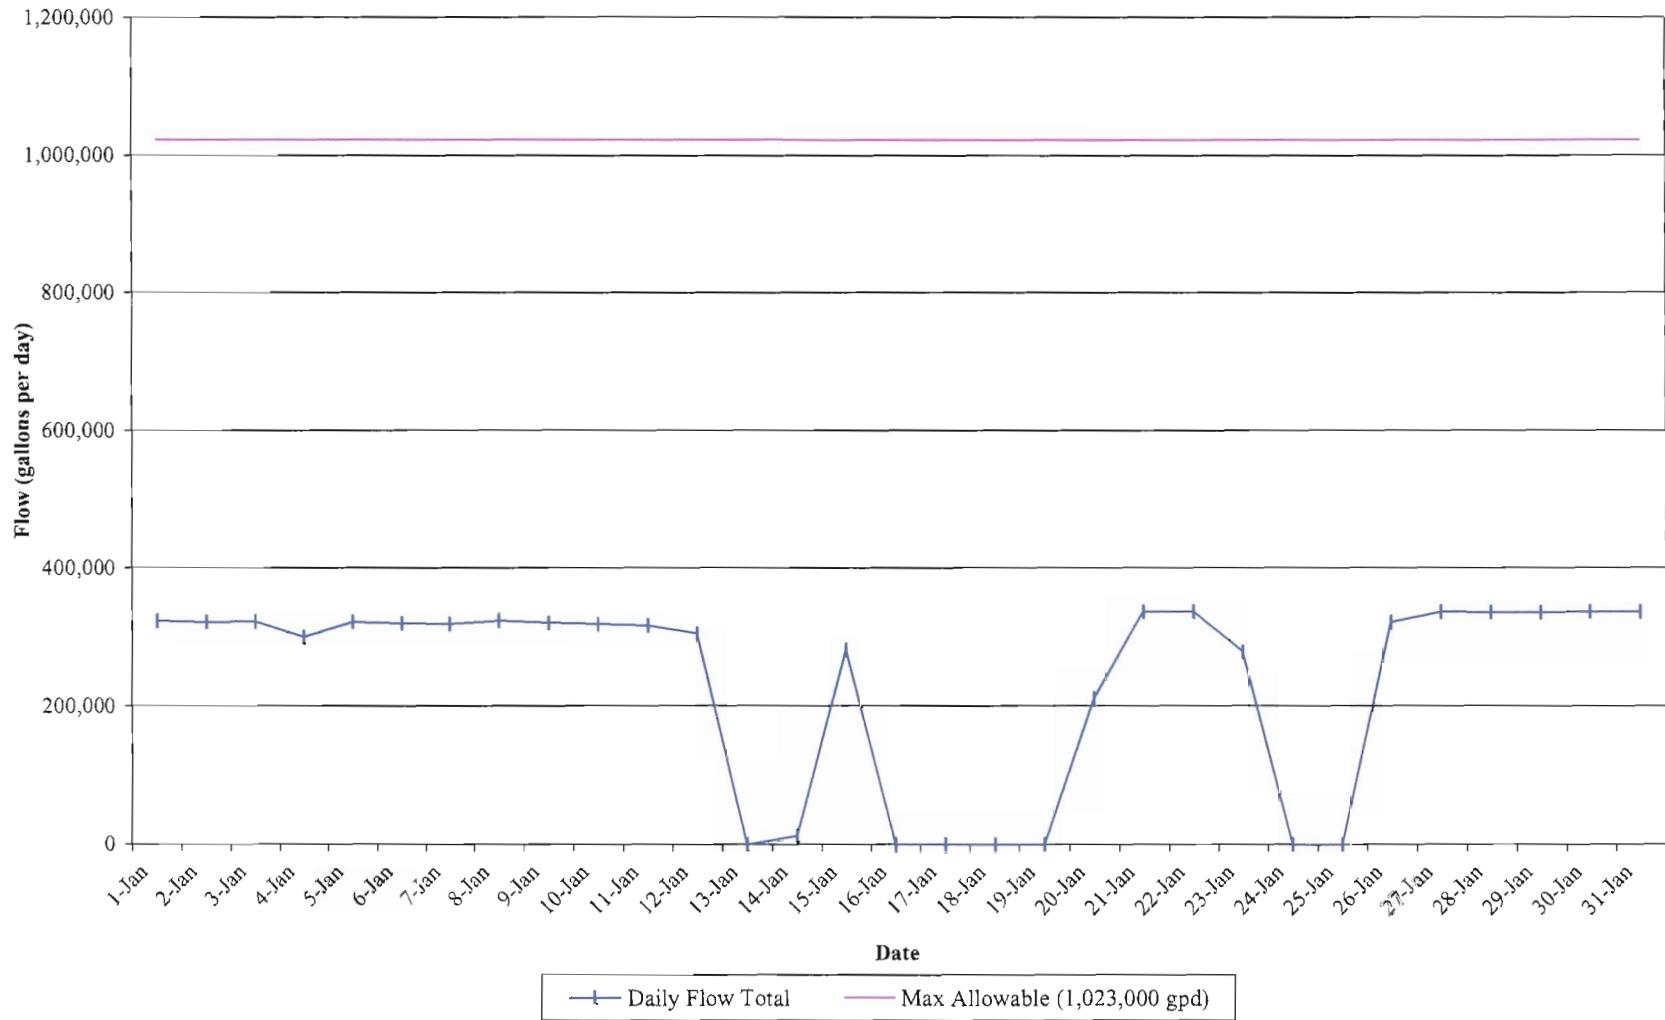

**** Recovery wells RW-1, RW-2 and RW-3 were turned on briefly in December 2004 and January 2005 to collect the monthly ground-water samples on the dates shown.

RE: Rowe Industries

Order No.: 0501027

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 1/6/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0501029

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 8 sample(s) on 1/6/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0501118

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 4 sample(s) on 1/18/2005 for the analyses presented in the following report.

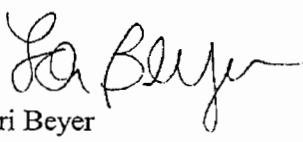

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0501149

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 1/21/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0501177

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 1/27/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

Date

STL Connecticut
128 Long Hill Cross Road
Shelton, CT 06484

This Report Contains (10) Pages

STL Report : 208456
LEGGETTE, BRASHEARS, & GRAHAM

Case Narrative

Sample Receipt – All samples were received in good condition.

Volatile Organics – Air volatile organics were determined by purge and trap GC/MS using guidance provided in Method TO-17. The instrumentation used was a Perkin Elmer ATD 50 interfaced with a Hewlett-Packard Model 5972A GC/MS/DS.

Sample Calculation:

Sample ID- AQ010405 1145NP4-1
Compound-Bromomethane

$$\frac{(72333)(25)}{(473344)(.233)} = 16.39 = 16 \text{ ng}$$

$$\frac{(16\text{NG})(.08206)(298)}{(.4\text{L})(95)(1.0\text{ATM})} = 10.29 = 10.3 \text{ nL/L.}$$

Sample AQ010405 1145NP4-1 was analyzed at a sample volume of .4L for high targets.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

U Analyte was not detected at or above the reporting limit.

< Not detected at or above the reporting limit.

J Result is less than the RL, but greater than or equal to the method detection limit.

B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.

S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed the upper or lower control limits.

* LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.

+ MSA correlation coefficient is less than 0.995.

4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.

E SD: Serial dilution exceeds the control limits.

H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.

N MS, MSD: Spike recovery exceeds the upper or lower control limits.

W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

U Analyte was not detected at or above the reporting limit.

ND Compound not detected.

J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).

Q Result was qualitatively confirmed, but not quantified.

C Pesticide identification was confirmed by GC/MS.

Y The chromatographic response resembles a typical fuel pattern.

Z The chromatographic response does not resemble a typical fuel pattern.

E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB, EB, MLE: Batch QC is greater than reporting limit.

* LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.

A Concentration exceeds the instrument calibration range or below the reporting limit.

B Compound was found in the blank.

D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.

H Alternate peak selection upon analytical review

I Indicates the presence of an interference, recovery is not calculated.

M Manually integrated compound.

P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

Report Date: 01/17/2005

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.
