RE: February 2005 Status Report
Ground-Water Remedial Action
Rowe Industries Superfund Site
Sag Harbor, New York

Dear Mr. Trad:

The enclosed letter report details the operation status of the full-scale ground-water pump and treat system at the above referenced site. LBG has enclosed an additional copy of the report to be forwarded to the Chief of the Operation Maintenance and Support Section.

Should you or the Operation Maintenance and Support Section have any questions, please feel free to contact myself, Paul Jobmann, or Al Kovalik at (203) 452-3100.

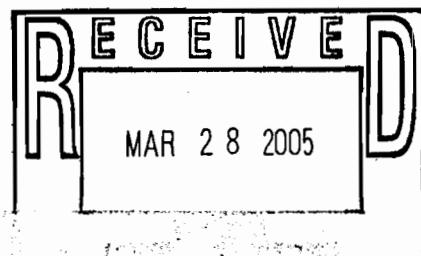

Very truly yours,

LEGGETTE, BRASHEARS & GRAHAM, INC.

Mark M. Goldberg

-DRAFT-

PROJECT STATUS MEMORANDUM

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E.
Alfred N. Kovalik, P.E.

DATE: March 23, 2005

PROJECT: Rowe Industries Superfund Site
Ground-Water Recovery and Treatment System
February 2005 Status Report
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from February 1, 2005 through February 28, 2005. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground-water, system effluent samples, and air quality results.

SUMMARY OF SYSTEM PERFORMANCE AND OPERATION

(February 1, 2005 through February 28, 2005)

1. Hours of operation during the reporting period: 603 hours (90%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 13,970,078 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 4.1 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02:
(calculations can be provided upon request) 158.2 pounds

8. Effluent VOC vapor concentration for the reporting period: 0.064 mg/m³ (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00060 lbs/hr)
(calculations can be provided upon request)

GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/l. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow Required for Plume Capture (gpm)	Total VOC Concentration (ug/l)	VOC Recovery (lbs)
RW-1	501,530	16.4	26	4.6	0.02
RW-2	1,003,009	27.0	26	18.0	0.15
RW-3	472,018	15.3	23	2.9	0.01
RW-4*	0	0	13	Not Analyzed	0
RW-5**	2,087,453	55.0	42	11.0	0.19
RW-6**	976,902	27.2	28	120.0	0.98
RW-7**	2,532,217	70.0	54	45.0	0.95
RW-8***	1,255,214	34.7	46	19.3	0.20
RW-9****	832,486	22.4	68	10.0	0.07

* The RW-4 motor was not operating in February 2005. A replacement motor has been ordered and the motor is scheduled for installation in spring 2005.

** RW-5, RW-6 and RW-7 flow totalizer readings were not accurate because of malfunctioning flow meters at these wells for all or a portion of February. The volume of ground water pumped in February 2005 was determined in a two-step process. A portion of the volume of ground water pumped was determined by reviewing the totalizer reading for the time that the flow totalizer was working properly. Another portion of the volume of ground water pumped was determined by calculating the average of the instantaneous flows and the time of operation when the flow totalizers were not working. These two portions were summed together to determine the total volume of ground water pumped in February 2005. RW-5 and RW-6 flow totalizers will be reset in the computer program in March. The RW-7 flow totalizer inaccuracy is being investigated.

*** RW-8 flow meter was providing valid flow readings from February 1, 2005 to February 4, 2005. For the remainder of the month, the RW-8 flow readings were not accurate. This is believed to be the result of excessive iron build-up in the RW-8 flow meter. The RW-8 flow meter will be cleaned during RW-8 well rehabilitation activities scheduled for March 2005. RW-8 flow measurements were estimated using the average of the instantaneous flow readings collected in the beginning of February 2005 and the time of operation for February 2005.

**** The RW-9 flow totalizer was not providing accurate readings from February 1 to February 8, 2005. The flow totalizer was reset in the computer program on February 8, 2004. A portion of the volume of ground water pumped was determined by reviewing the totalizer reading for the time that the flow totalizer was working properly. Another portion of the volume of ground water pumped was determined by calculating the average of the instantaneous flows and the time of operation when the flow totalizers were not working. These two portions were summed together to determine the total volume of ground water pumped in February 2005 from RW-9.

Recovery wells RW-1, RW-3, RW-4, RW-6, RW-8 and RW-9 had average flows below the minimum design flow to capture the plume. Despite periodic pipe cleanings, RW-1, RW-3 have decreased in flow due to iron build-up in the below-grade pipes. RW-4 was not operating due to a malfunctioning motor. Iron build-up in the RW-8 flow meter is believed to be the cause of the flow decrease. Well rehabilitation activities with new treatment chemicals and the servicing of RW-8 pump are expected to improve flow conditions in this well. The RW-8 well rehabilitation activities are scheduled for March 2005. The flow in RW-6 has slowly been decreasing over time. This flow reduction is believed to be the result of slime build-up in the pump, well screen, and the surrounding formation. If the new treatment chemicals are effective in RW-8, then well rehabilitation with these new treatment chemicals will be proposed for RW-6 and other wells in the future. The low flow at RW-9 is believed to be caused by iron build-up in a section of the below-grade piping not accessible to high pressure jet-washing techniques. To recover flow at RW-9, the construction of the new clean-out port located between RW-8 and RW-9 has been scheduled for the spring of 2005.

The effluent pH values are below the State Pollutant Discharge Elimination System (SPDES) Applicable or Relevant and Appropriate Requirements (ARARs) of 6.5 on a routine basis. pH readings of water samples from the recovery wells are observed to be in the range of approximately 5.8 to 6.5, which is the background pH for the ground water in this area.

BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
Feb. 1 to Feb 28	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

No modifications were made to the filter bank configuration or operation during this reporting period.

OTHER O&M MODIFICATIONS AND FUTURE O&M ACTIVITIES

- On February 8, 2005, an adjustment to the booster blower fan guard was completed to avoid "rubbing" with moving parts. Static water levels were updated in the computer program for the recovery wells.
- On February 16, 2005, the inoperable RW-4 flow transmitter board was replaced with a new flow transmitter board.
- On February 24, 2005, the serviced and re-calibrated booster blower air flow sensor was re-installed in the system. The onsite combined, offsite combined and effluent flow meters were reprogrammed so the local flow meter displays were functioning properly. The RW-8 flow meter display was replaced.

Future O&M activities scheduled for spring 2005 include:

- Completing the semi-annual ground-water sampling event in March 2005;
- Completing the RW-8 well rehabilitation with new treatment chemicals in March 2005;
- Constructing a new clean-out port between RW-8 and RW-9;
- Installing a new motor and power cable in RW-4;
- Troubleshoot RW-7 and RW-8 flow meters.

TABLES

TABLE 1
GROUND-WATER REMEDIAL ACTION
ROWE INDUSTRIES SUPERFUND SITE
SAG HARBOR, NEW YORK

MAINTENANCE LOG
(February 1, 2005 through February 28, 2005)

Date	Time	System Changes/Modifications	Personnel
2/1/2005	4:18 AM	Booster Blower (BB) Failure Alarm, Power Failure Alarm, system shut down.	
2/2/2005	12:00 PM	Rebooted the system, reset the BB drive, reset the alarms and restarted the system.	MG
2/6/2005	11:54 PM	System Communication Failure, system shut down.	
2/8/2005		Static depth to water for recovery wells was updated.	MG/SS
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	MG/SS
	10:21 AM	Re-booted the computer, reset the alarms and re-started the system.	MG/SS
	10:22 AM	Booster blower making a loud noise, shut down the system (lockout/tagout) and re-aligned the booster blower belt guard to make sure it was not "rubbing" against moving parts.	MG/SS
		Computer flow totalizers were not functioning for RW-9, EQTP101, and effluent flow. Cumulative totalizers were reset to zero for these flow meters.	MG/SS
	10:45 AM	Restarted the system.	MG/SS
2/9/2005	10:10 AM	Power Failure Alarm and RW-1, RW-2 and RW-3 pump fault alarms. The system continued to operate without RW-1, RW-2 and RW-3.	
	10:14 AM	Control room temperature alarm. The system continued to operate without RW-1, RW-2 and RW-3.	
2/10/2005		The RW-6 pump was not operating properly. Computer display showed negative frequency and no flow. The system was shut down and rebooted to reset the RW-6 drive. At this time the RW-1, RW-2 and RW-3 drives were reset.	TS/PJ
	12:44 PM	After rebooting the computer, the computer alarms were reset and the system was restarted. The temperature in the building was adequately warm.	TS/PJ
2/16/2005		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	MG
		Replaced the malfunctioning RW-4 flow transmitter board and old flow meter battery.	MG
2/24/2005	8:55 AM	Turned off system to conduct maintenance activities.	PJ
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	PJ
		Installed the serviced and recalibrated booster blower air flow sensor.	PJ
		Local displays on the onsite combined flow meter, offsite combined flow meter and effluent flow meter wer not working. Reprogrammed these flow meters to get the local displays to work.	PJ
	11:30 AM	Restarted the system	PJ

Notes: 1. Methylene Chloride concentrations in all three air samples collected during the December 2, 2004 sampling event are greatly elevated due to suspected laboratory contamination. Methylene chloride was confirmed as a suspected laboratory contaminant by the laboratory supervisor. The methylene chloride concentrations from the November 3, 2004 sampling event were used instead of the December 2, 2004 methylene chloride concentrations to calculate the total VOCs for December 2004.

PCE - Tetrachloroethane
TCE - Trichloroethylene
TCA - 1,1,1-Trichloroethane

DCE - 1,1-Dichloroethene
DCA - 1,1-Dichloroethane
cis-DCE - cis-1,2-Dichloroethene
CT - Carbon Tetrachloride

CF - Chloroform
MC - Methylene Chloride
CM - Chloromethane
CD - Carbon Disulfide

BM - Bromomethane
CB - Chlorobenzene
EB - Ethylbenzene
VC - Vinyl Chloride

ND: Not detected

<#: Less than method detection limit

ug/L: Micrograms per liter

-: Not analyzed

ARAR's are chemical specific aquifer restoration goals for ground-water at the Former Rowe Industries Superfund Site.
Bold values indicate an exceedance of the ARAR standard established for the site.

PCE: Tetrachloroethylene

TCE: Trichloroethene

TCA: 1,1,1-Trichloroethane

1,1-DCA: 1,1-Dichloroethane

1,1-DCE: 1,1-Dichloroethene

1,2-DCE: 1,2-Dichloroethene

MTBE: Methyl Tertiary Butyl Ether

NM: Not Measured

*Methylene Chloride detected in laboratory method blank

NE: ARAR goal was not established for this compound by the EPA.

** The July 14, 2004 sample collected for RW-8 only represents water in the pipe since the RW-8 pump was not operating at this time.

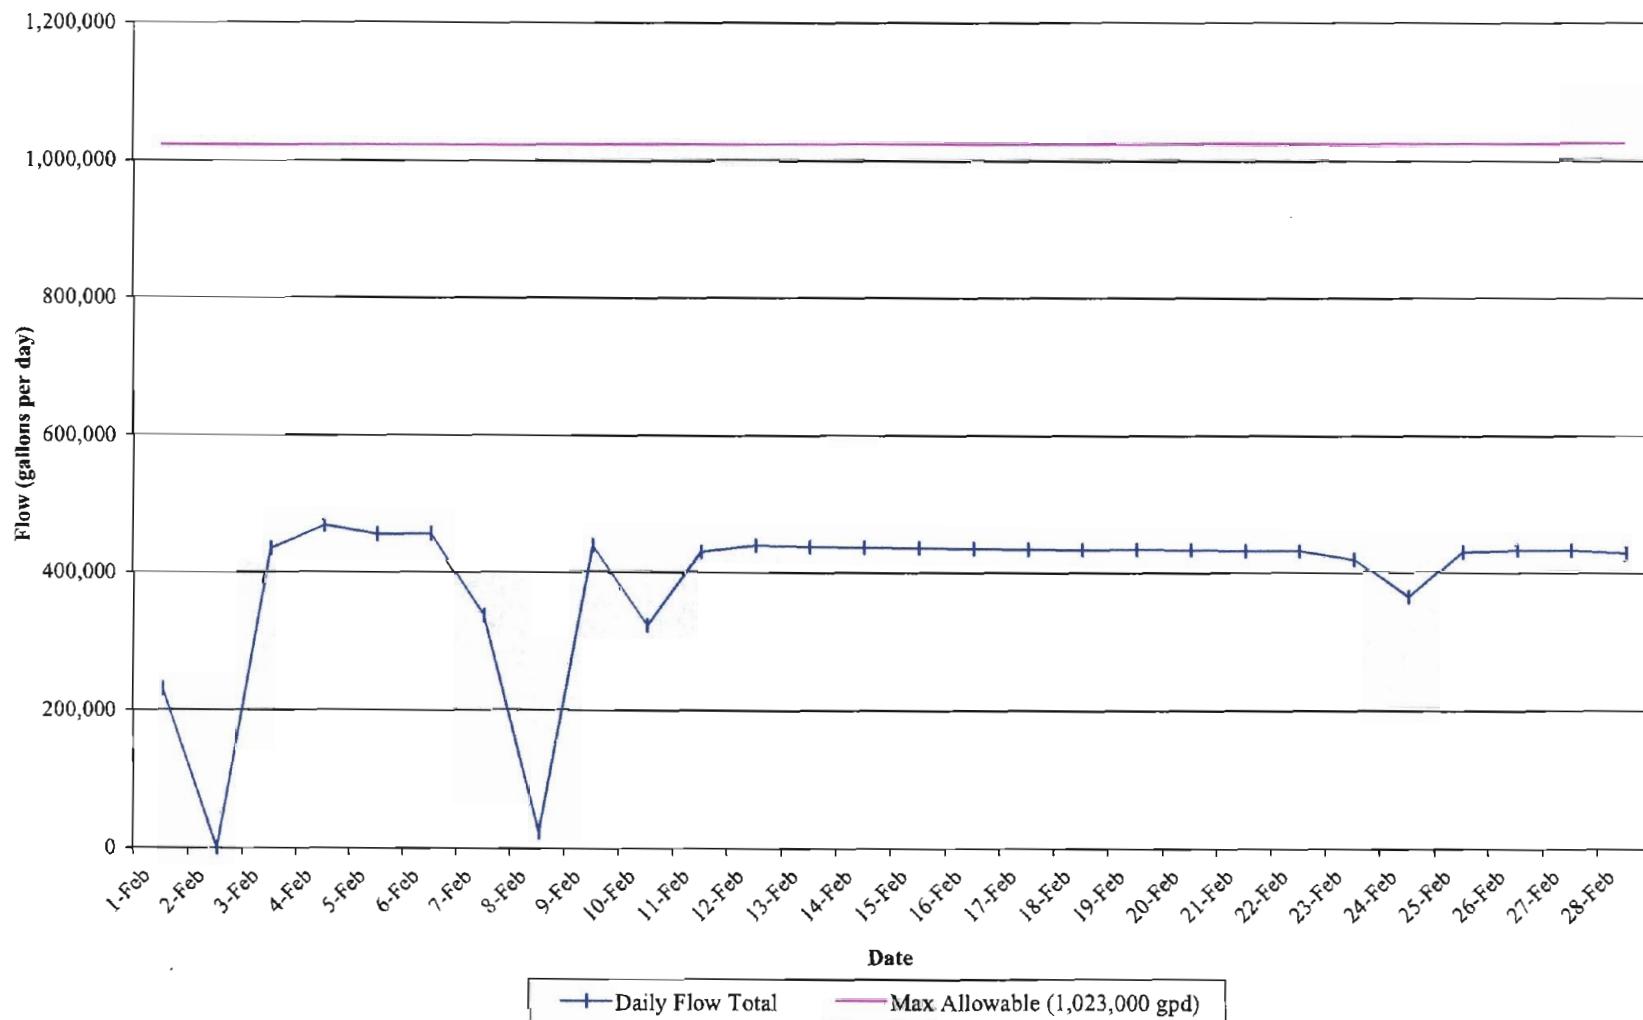

*** The August 26, 2004 samples were lost during shipment.

RE: Rowe Industries

Order No.: 0502040

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 2/4/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Karen Kelley, Jr.

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0502081

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 2/10/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

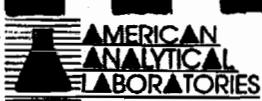

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns: The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0502082

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 8 sample(s) on 2/10/2005 for the analyses presented in the following report.

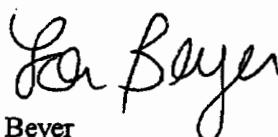

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0502190

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 2/23/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0503010

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 3/1/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of the method allowable holding time

ANALYTICAL REPORT

JOB NUMBER: 208718

Prepared For:

LEGGETTE, BRASHEARS & GRAHAM
126 Monroe Turnpike
Trumbull, CT 06611

Project: ROWE INDUSTRIES

Attention: Mark Goldberg

Date: 02/18/2005

Signature

Name: William D. Goodman

Title: Project Manager

E-Mail: wgoodman@stl-inc.com

Date

STL Connecticut
128 Long Hill Cross Road
Shelton, CT 06484

This Report Contains (104) Pages

STL Report : 208718
LEGGETTE, BRASHEARS, & GRAHAM

Case Narrative

Sample Receipt – All samples were received in good condition.

Volatile Organics – Air volatile organics were determined by purge and trap GC/MS using guidance provided in Method TO-17. The instrumentation used was a Perkin Elmer ATD 50 interfaced with a Hewlett-Packard Model 5972A GC/MS/DS.

Sample Calculation:

Sample ID- AQ020205:1345NP4-1
Compound-Bromomethane

$$\frac{(275554)(25)}{(397908)(.233)} = 74.3 = 74 \text{ ng}$$

$$\frac{(74\text{NG})(.08206)(298)}{(.4\text{L})(95)(1.0\text{ATM})} = 47.6 \text{ nL/L.}$$

Sample AQ020205:1345NP4-1 was analyzed at a sample volume of .4L for high targets.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

U Analyte was not detected at or above the reporting limit.

< Not detected at or above the reporting limit.

J Result is less than the RL, but greater than or equal to the method detection limit.

B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.

S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCK,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed the upper or lower control limits.

* LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.

+ MSA correlation coefficient is less than 0.995.

4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.

E SD: Serial dilution exceeds the control limits.

H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.

N MS, MSD: Spike recovery exceeds the upper or lower control limits.

W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

U Analyte was not detected at or above the reporting limit.

ND Compound not detected.

J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).

Q Result was qualitatively confirmed, but not quantified.

C Pesticide identification was confirmed by GC/MS.

Y The chromatographic response resembles a typical fuel pattern.

Z The chromatographic response does not resemble a typical fuel pattern.

E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB, MLE: Batch QC is greater than reporting limit.

* LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.

A Concentration exceeds the instrument calibration range or below the reporting limit.

B Compound was found in the blank.

D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.

H Alternate peak selection upon analytical review

I Indicates the presence of an interference, recovery is not calculated.

M Manually integrated compound.

P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

QUALITY ASSURANCE METHODS
REFERENCES AND NOTES

Report Date: 02/18/2005

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

STL-Connecticut
Certification Summary (as of October 2004)

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Responsible Agency	Category	Expiration Date	LIC#
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/04	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/06	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/05	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/05	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/05	46410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/05	10602
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/04	A43
Utah	Department of Health	RCRA	05/31/05	2032614458
