Albany, NY 12233-7013

RE: July 2005 Status Report
Ground-Water Remedial Action
Rowe Industries Superfund Site
Sag Harbor, New York

Dear Mr. Trad:

The enclosed letter report details the operation status of the full-scale ground-water pump and treat system at the above referenced site. LBG has enclosed an additional copy of the report to be forwarded to the Chief of the Operation Maintenance and Support Section.

Should you or the Operation Maintenance and Support Section have any questions, please feel free to contact myself, Paul Jobmann, or Al Kovalik at (203) 452-3100.

Very truly yours,

LEGGETTE, BRASHEARS & GRAHAM, INC.

Mark M. Goldberg
Mark M. Goldberg, P.E.
Senior Environmental Engineer

-DRAFT-

PROJECT STATUS MEMORANDUM

NO. 07-05

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E.
Alfred N. Kovalik, P.E.

DATE: September 13, 2005

PROJECT: Rowe Industries Superfund Site
Ground-Water Recovery and Treatment System
July 2005 Status Report
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from July 1, 2005 through July 31, 2005. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground-water, system effluent samples, and air quality results.

SUMMARY OF SYSTEM PERFORMANCE AND OPERATION
(July 1, 2005 through July 31, 2005)

1. Hours of operation during the reporting period: 651 hours (88%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 15,856,240 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 2.1 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02: 169.2 pounds
(calculations can be provided upon request)
8. Effluent VOC vapor concentration for the reporting period: 0.195 mg/m³ (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00187 lbs/hr)
(calculations can be provided upon request)

GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow (gpm)	Total VOC Concentration (µg/L)	VOC Recovery (lbs)
RW-1*	102,191	8.4	26	2.1	0.002
RW-2	1,118,661	27.0	26	12.9	0.12
RW-3	457,536	12.1	23	1.6	0.01
RW-4	1,654,283	41.7	13	45.9	0.63
RW-5	2,314,445	54.9	42	9.8	0.19
RW-6	578,588	14.9	28	75.1	0.36
RW-7**	1,741,094	70.0	54	34.2	0.50
RW-8	2,314,450	52.6	46	6.0	0.12
RW-9	3,298,147	79.9	68	6.5	0.18

* RW-1 was turned off indefinitely on July 13, 2005 because the ground-water concentrations for the primary contaminants of concern (PCE, TCE and 1,1,1-TCA) have not been detected in over two years.

** In addition to the downtime for the system, recovery well RW-7 was not in operation from June 30 to July 8 because of well rehabilitation activities.

Recovery wells RW-1, RW-3 and RW-6 had average flows below the respective minimum design flows determined to be necessary for capture of the plume. Despite periodic pipe cleanings, RW-1 and RW-3 have decreased in flow due to iron build-up in the below-grade pipes. In addition, well rehabilitation activities for RW-3 did not restore flow to the well. Two new cleanout ports in the below grade piping between RW-3 and the remediation building were constructed in July to try and jet wash previously inaccessible piping to attempt to restore the flow to RW-3 (Note: the June 2005 report mistakenly reported that the cleanout ports were constructed in June). Jet wash cleaning from these new clean-out ports will be scheduled in August. Flow in RW-1 decreased to approximately 3 gpm at 100% motor speed on July 13. The primary contaminants of concern (PCE, TCE and 1,1,1-TCA) have been not been detected for at least two years in the water samples from RW-1. Accordingly, RW-1 was turned off indefinitely on July 13, 2005.

Flow at RW-6 was reduced in late June from 23 gpm to 15 gpm to address the threat of de-watering the well and damaging the pump. Build-up of microbial growth in the formation in conjunction with the finer soils associated with the aquifer in the immediate vicinity of RW-6 are believed to be causing the decrease in well yield. Well rehabilitation techniques and chemicals are being investigated for this well. The vendor who supplied the well rehabilitation chemicals previously used has offered to evaluate if he has other chemicals that may work at improving the

well yield. A water sample from this well will be collected in August and sent to the supplier for analysis.

Recovery well rehabilitation for RW-7 showed no improvement in well yield. Fortunately, flow in this well has not decreased as a result of the microbial growth. Microbial growth in RW-7 is believed to be similar to the microbial growth found in RW-6, however flow and specific capacity in RW-7 have not decreased to the same degree as RW-6.

Although the flow in RW-8 is above the minimum design flow to capture the plume, a slow decrease in flow at RW-8 is beginning to occur because of iron build-up in the flow meter and/or piping. The next scheduled pipe cleaning will include cleaning the flow meter and vault piping for RW-8.

The effluent pH values are below the State Pollutant Discharge Elimination System (SPDES) Applicable or Relevant and Appropriate Requirements (ARARs) of 6.5 on a routine basis. July pH readings of water samples from the recovery wells were observed to be in the range of approximately 4.8 to 5.9. The full scale pump and treat system (FSP&T) system does not use any chemical treatment processes to alter pH. In addition, the effluent water discharge and the recovery well extraction points are located in the same aquifer. As discussed with the New York State Department of Environmental Conservation (NYSDEC), because the pH is naturally occurring, and because of the previously mentioned factors, it is not considered an exceedance of the discharge requirements.

BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
July 1 to July 31	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

No modifications were made to the filter bank configuration or operation during this reporting period.

OTHER O&M ACTIVITIES AND FUTURE O&M ACTIVITIES

Other O&M activities conducted in July 2005 include:

- From June 30 to July 8, 2005, well rehabilitation for RW-7 was completed.
- On July 7, 2005, the first day of an internal safety audit was conducted. The lead and lag transfer pumps were switched.
- On July 11, 2005, two new cleanout ports were constructed between RW-3 and the remediation building. The trench drain in the front of the building was cleaned.

- On July 12, 2005, the Equalization (EQ) tank, transfer tank and air stripper tower sump were cleaned with a high-pressure vacuum truck. Bag filter housing baskets were cleaned with a wire brush. Individual bag filter housing lines were cleaned with a high-pressure vacuum. The second day of the internal safety audit was conducted for the site.
- On July 13, 2005, RW-1 was turned off indefinitely.
- On July 14, 2005, the signal from the RW-4 pressure sensor was not being received. After troubleshooting, it was determined that the well-head pressure sensor for RW-4 needs to be replaced.

Future O&M activities scheduled for Summer 2005 include:

- Clean below-grade piping from the new cleanout ports between RW-3 and the remediation building;
- Clean the RW-8 flow meter and vault piping;
- Replace the RW-4 well-head pressure sensor;
- Conduct ground-water sampling for the FDSA in August;
- Conduct semi-annual ground-water sampling in September; and,
- Conduct cove salinity monitoring and water level measurements at select piezometers in August.

TABLES

TABLE 1
GROUND-WATER REMEDIAL ACTION
ROWE INDUSTRIES SUPERFUND SITE
SAG HARBOR, NEW YORK

MAINTENANCE LOG
(July 1, 2005 through July 31, 2005)

Date	Time	System Changes/Modifications	Personnel
7/5/2005	4:30 PM	Control Room Temperature alarm, power failure alarm, RW-1, 2, 3, 4 pump fault alarms, (the power failure alarm triggered other multiple alarms). System shut down.	
7/6/2005	7:10 AM	Reset the alarms and restarted the system.	TS
	11:21 AM	Shut down the system to change the lead/lag pumps. TP1A to TP1B and TP2A to TP2B.	MG
		Replaced the leaking bag filter transfer pump (used during bag filter changes).	MG, SS
7/7/2005		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	SS, TS
		First day of the internal safety audit was conducted by Field Safety Corporation.	MG, MZ, FT
	12:07 PM	Restarted the system	MG
	9:17 AM	Booster Blower Failure Alarm, system shut down.	
	9:36 AM	Reset the booster blower motor starter and restarted the system.	TS
7/8/2005	11:40 AM	RW-7 well rehabilitation was completed, turned RW-7 on.	TS, ETL
	1:12 PM	Power Failure Alarm and RW 1, 2, 3, 4, 6, 8 and 9 pump fault alarms, system shut down.	
	1:20 PM	Reset the recovery well drives, the power failure alarm and pump fault alarms then restarted the system.	TS
	9:20 AM	Turned off RW-1, RW-2 and RW-3 to construct two new cleanout ports for the below-grade piping associated with RW-3.	TS, ETL
7/11/2005	3:55 PM	Construction of the two new cleanout ports was completed. RW-1, 2 and 3 will remain off for upcoming EQ tank, transfer tank and tower sump cleaning on 7/12/05.	ETL
		The trench drain in front of the building was cleaned.	ETL
		The frac tank used for well rehabilitation was cleaned.	ETL
		Cleaned the EQ tank, transfer tank and air stripper tower sump with a vac truck. Removed approximately 6 inches of sediment from the bottom of the EQ tank and air stripper tower. Removed approximately 6 to 12 inches of sediment from the transfer tank.	SS, ETL
7/12/2005		Second day of the internal safety audit for the site was conducted by Field Safety Corporation.	MG, FT
		Cleaned all of the bag filter baskets with a wire brush and vacuumed out individual bag filter housing lines.	ETL
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	SS, TS
7/13/2005	12:03 PM	Restarted the system. RW-1 was flowing at 3 gpm at 100% motor speed. RW-1 was shut off indefinitely because the primary contaminants of concern (PCE, TCE and 1,1,1 TCA) have been non-detect for over 2 years at this well	TS
		The frac tank used for well rehabilitation was removed from the site.	ETL

SPDES: State Pollutant Discharge Elimination System

mg/l: Milligrams per liter

ug/l: Micrograms per liter

---: Not established

NM: Not Measured

TDS: Total dissolved solids

PCE: Tetrachloroethylene

TCE: Trichloroethene

1,1-DCA: 1,1-Dichloroethane

1,1-DCE: 1,1-Dichloroethene

1,2-DCE: 1,2-Dichloroethene

MTBE: Methyl tert-butyl ether

Notes:

1. pH was measured using litmus paper. Influent pH values from recovery wells, which reflect the pH of natural ground water, are below 6.5 on a regular basis.

2. "Effluent" samples were collected from sample port labeled NP2-10.

3. Methylene chloride detected in these samples is suspected to be from laboratory contamination.

4. The TDS concentration was elevated during the July 7, 2005 sampling event because purged water from well rehabilitation activities was being processed through the system while the FSP&T system was in operation.

Notes: 1. Methylene chloride and carbon disulfide concentrations in all three air samples collected during the July 7, 2005 sampling event are greatly elevated due to suspected laboratory contamination.

The methylene chloride and carbon disulfide concentrations from the June 24, 2005 sampling event were used instead of the July 7, 2005 methylene chloride and carbon disulfide concentrations to calculate the total VOCs for July 2005.

PCE - Tetrachloroethane
TCE - Trichloroethene
TCA - 1,1,1-Trichloroethane

DCE - 1,1-Dichloroethene
DCA - 1,1-Dichloroethane
cis-DCE - cis-1,2-Dichloroethene
CT - Carbon Tetrachloride

CF - Chloroform
MC - Methylene Chloride
CM - Chloromethane
CD - Carbon Disulfide
BM - Bromomethane
CB - Chlorobenzene
EB - Ethylbenzene
VC - Vinyl Chloride

ARAR's are chemical specific aquifer restoration goals for ground-water at the Former Rowe Industries Superfund Site.

Bold values indicate an exceedance of the ARAR standard established for the site.

ARAR goal was not established for this compound by the EPA.

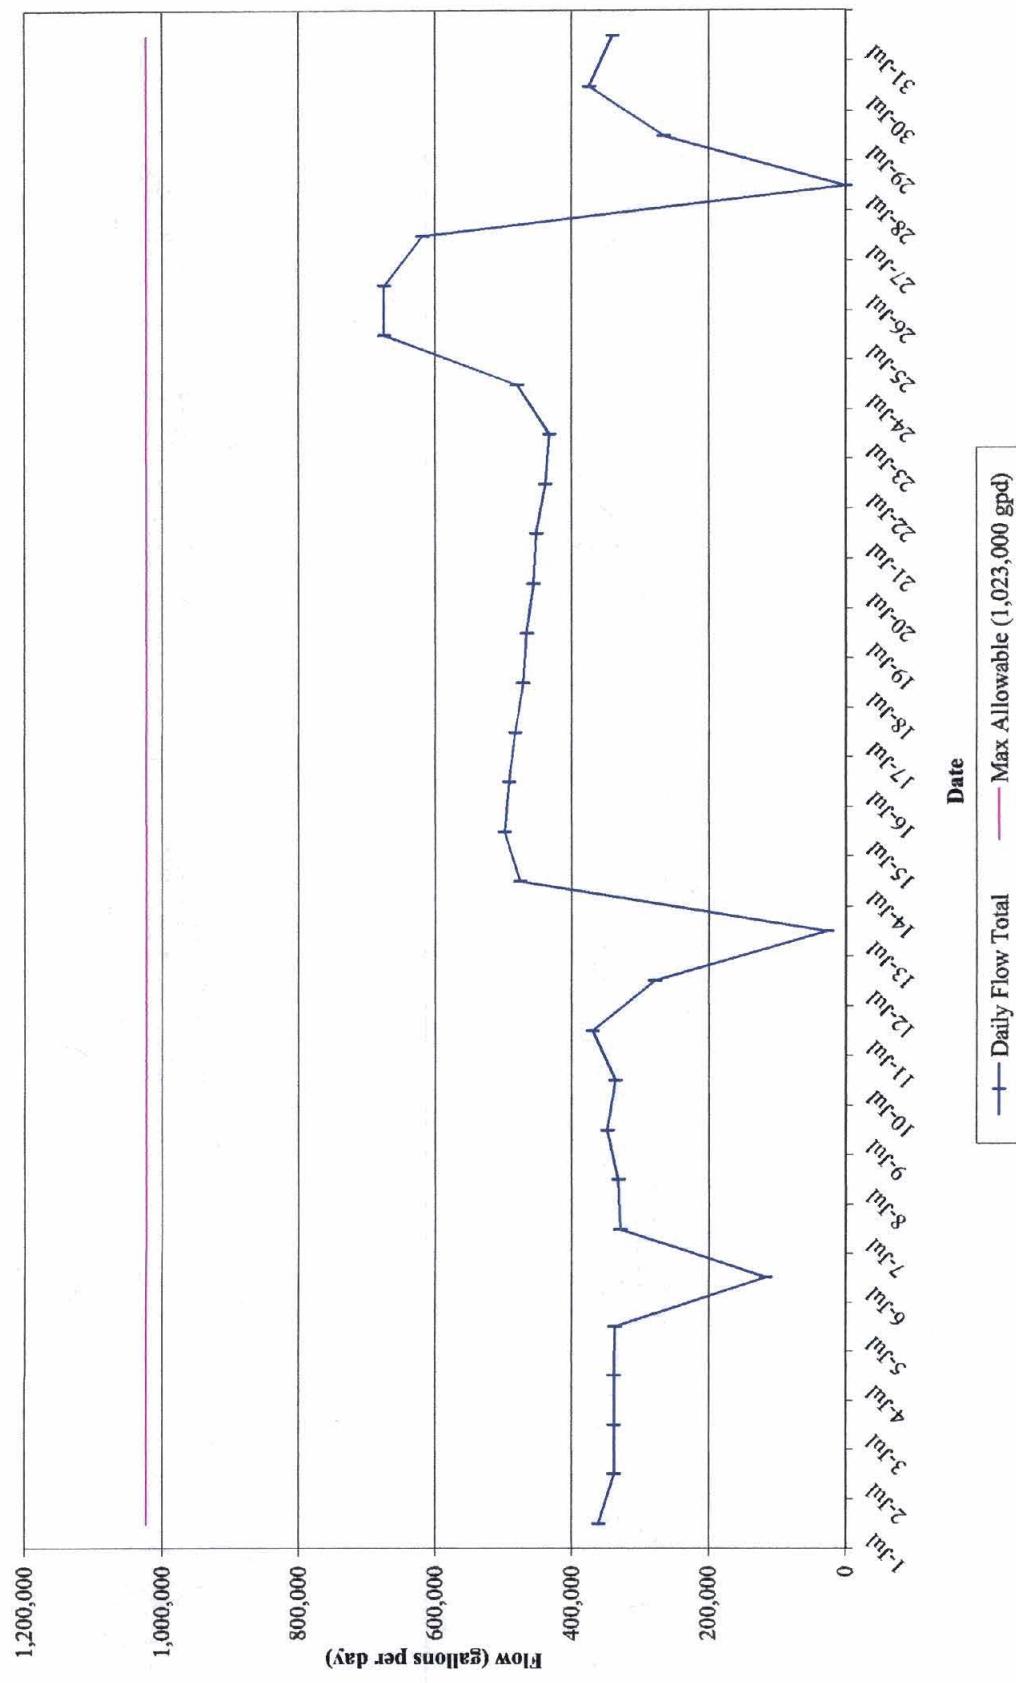

*Concentrations with an asterisk following them are due to laboratory contamination.

RE: Rowe Industries

Order No.: 0507079

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 7/12/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

- | | |
|--------------|---|
| Value | If the result is greater than or equal to the detection limit, report the value |
| U | Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required. |
| J | Indicates an estimated value. The flag is used:
(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)
(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others. |
| B | Indicates the analyte was found in the blank as well as the sample report "10B". |
| E | Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis. |
| D | This flag identifies all compounds identified in an analysis at a secondary dilution factor. |
| P | This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P". |
| N | This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used. |
| H | Indicates sample was received and/or analyzed outside of The method allowable holding time |

RE: Rowe Industries

Order No.: 0507149

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 7/19/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

A handwritten signature in black ink that reads "Lori Beyer". The signature is fluid and cursive, with "Lori" on top and "Beyer" below it.

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

- | | |
|--------------|---|
| Value | If the result is greater than or equal to the detection limit, report the value |
| U | Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required. |
| J | Indicates an estimated value. The flag is used:
(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)
(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others. |
| B | Indicates the analyte was found in the blank as well as the sample report "10B". |
| E | Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis. |
| D | This flag identifies all compounds identified in an analysis at a secondary dilution factor. |
| P | This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P". |
| N | This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used. |
| H | Indicates sample was received and/or analyzed outside of The method allowable holding time |

RE: Rowe Industries

Order No.: 0507177

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 7/22/2005 for the analyses presented in the following report.

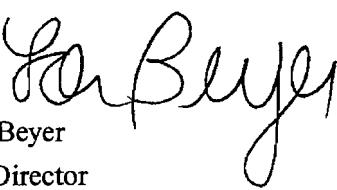

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

- | | |
|--------------|---|
| Value | If the result is greater than or equal to the detection limit, report the value |
| U | Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required. |
| J | Indicates an estimated value. The flag is used:
(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)
(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others. |
| B | Indicates the analyte was found in the blank as well as the sample report "10B". |
| E | Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis. |
| D | This flag identifies all compounds identified in an analysis at a secondary dilution factor. |
| P | This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations, between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P". |
| N | This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used. |
| H | Indicates sample was received and/or analyzed outside of The method allowable holding time |

RE: Rowe Industries

Order No.: 0508026

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 8/2/2005 for the analyses presented in the following report.

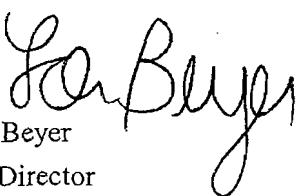

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

- | | |
|--------------|---|
| Value | If the result is greater than or equal to the detection limit, report the value |
| U | Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required. |
| J | Indicates an estimated value. The flag is used:
(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)
(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others. |
| B | Indicates the analyte was found in the blank as well as the sample report "10B". |
| E | Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis. |
| D | This flag identifies all compounds identified in an analysis at a secondary dilution factor. |
| P | This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P". |
| N | This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used. |
| H | Indicates sample was received and/or analyzed outside of The method allowable holding time |

RE: Rowe Industries

Order No.: 0507151

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 9 sample(s) on 7/19/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

A handwritten signature in black ink, appearing to read "Lori Beyer".
Lori Beyer
Lab Director

CASE NARRATIVE

Samples were analyzed using the methods outlined throughout the text of the report.

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Due to the time period that elapsed from sample collection to sample receipt, the Turbidity analysis was performed beyond the method required holding time. Sample results have been qualified, "H" as required.

Methylene Chloride and Acetone were detected at acceptable levels in the associated volatile method blanks. These analytes are common lab contaminants. The presence of these analytes in the field samples can be attributed to laboratory contamination and not sample matrix constituents.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

This Report Contains (119) Pages

STL Report : 210136
LEGGETTE, BRASHEARS, & GRAHAMCase Narrative

Sample Receipt – All samples were received in good condition.

Volatile Organics – Air volatile organics were determined by purge and trap GC/MS using guidance provided in Method TO-17. The instrumentation used was a Perkin Elmer ATD 50 interfaced with a Hewlett-Packard Model 5972A GC/MS/DS.

The samples in this job were collected in tedlar bags. Samples were transferred by the laboratory to Air Toxic TO-17 tubes and analyzed at sample volumes of 1L. Compound concentrations over the calibration curve were flagged with an "A". Sample AQ070705:1400 NP4-1 was originally analyzed on 7/28/05 with target compounds over the calibration curve. The sample was re-analyzed on 7/28/05 at a sample volume of .25L with a target compound still over the calibration curve. Both analyses were reported for this sample.

Both target compounds, carbon disulfide and methylene chloride, are believed to be laboratory contaminants. These compounds were problematic throughout calibration and quality control check.

Sample Calculation:

Sample ID- AQ070705:1400NP4-1
Compound-Bromomethane

$$\frac{(75264 \text{ area})(25\text{ng})}{(157964 \text{ area})(.486 \text{ area/ng})} = 24.5 = 24 \text{ ng}$$

$$\frac{(24\text{NG})(.08206)(298)}{(1\text{L})(95)(1.0\text{ATM})} = 6.17 = 6.2 \text{ nL/L.}$$

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviation

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the reporting limit.
 - < Not detected at or above the reporting limit.
 - J Result is less than the RL, but greater than or equal to the method detection limit.
 - B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
 - S Result was determined by the Method of Standard Additions.
- ##### Inorganic Flags (Flag Column)
- ICV,CCV,ICB,CB,ISA,ISB,CRA,MRL: instrument related QC exceed the upper or lower control limits.
 - * LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
 - + MSA correlation coefficient is less than 0.995.
 - 4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
 - E SD: Serial dilution exceeds the control limits.
 - H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
 - N MS, MS0: Spike recovery exceeds the upper or lower control limits.
 - W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the reporting limit.
- ND Compound not detected.
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
- Q Result was qualitatively confirmed, but not quantified.
- C Pesticide identification was confirmed by GC/MS.

- Y The chromatographic response resembles a typical fuel pattern.
- Z The chromatographic response does not resemble a typical fuel pattern.
- E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB, MLE: Batch QC is greater than reporting limit.
- * LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
- A Concentration exceeds the instrument calibration range or below the reporting limit.
- B Compound was found in the blank.
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a 0.
- H Alternate peak selection upon analytical review
- I Indicates the presence of an interference, recovery is not calculated.
- M Manually integrated compound.
- P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

REFERENCES AND NOTES

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
iDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

STL-Connecticut Certification Summary (as of May 2005)

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Regulatory Agency	Certification	Expiration Date	Identification Number
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/06	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/06	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/05	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/05	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/05	CT410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/06	10602
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/05	A43
Utah	Department of Health	RCRA	05/31/05	2032614458
