Albany, NY 12233-7013

RE: December 2005 Status Report
Ground-Water Remedial Action
Rowe Industries Superfund Site
Sag Harbor, New York

Dear Mr. Trad:

The enclosed letter report details the operation status of the full-scale ground-water pump and treat system at the above-referenced site. Leggette, Brashears & Graham, Inc. has enclosed an additional copy of the report to be forwarded to the Chief of the Operation Maintenance and Support Section.

Should you or the Operation Maintenance and Support Section have any questions, please feel free to contact myself, Paul Jobmann, or Al Kovalik at (203) 929-8555.

Very truly yours,

LEGGETTE, BRASHEARS & GRAHAM, INC.

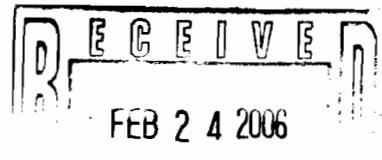

Mark Goldberg/mr.

-DRAFT-

PROJECT STATUS MEMORANDUM

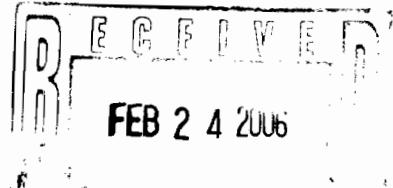

NO. 12-05

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E.
Alfred N. Kovalik, P.E.

DATE: February 16, 2006

PROJECT: Rowe Industries Superfund Site
Ground-Water Recovery and Treatment System
December 2005 Status Report
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from December 1, 2005 through December 31, 2005. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground water, system effluent samples, and air quality results.

SUMMARY OF SYSTEM PERFORMANCE AND OPERATION

(December 1, 2005 through December 31, 2005)

1. Hours of operation during the reporting period: 430 hours (58%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 11,035,896 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 2.0 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02: 175.8 pounds
(calculations can be provided upon request)
8. Effluent VOC vapor concentration for the reporting period: 0.201 mg/m³ (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00198 lbs/hr)
(calculations can be provided upon request)

GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow (gpm)	Total VOC Concentration (μ g/L)	VOC Recovery (lbs)
RW-2	749,750	27	26	61.1	0.38
RW-3	368,939	13	23	ND<1 **	0
RW-4	1,003,869	40	13	67.5	0.57
RW-5*	1,435,490	55	42	2.4	0.03
RW-6*	423,300	17	28	122.1	0.43
RW-7	2,569,897	70	54	86.2	1.85
RW-8	1,430,273	49	46	10.6	0.13
RW-9	1,399,815	54	68	2.9	0.03

* The RW-5 and RW-6 totalizers were malfunctioning from December 1, 2005 to December 21, 2005. The volume of water pumped during this time was calculated by multiplying the average flow rate by the operating time for each well. The total volume of water pumped for December was obtained by adding the calculated value above to the totalizer reading from December 21, 2005 to December 31, 2005.

** ND = not detected.

Recovery wells RW-3, RW-6 and RW-9 had average flows below the respective minimum design flows determined to be necessary for capture of the plume. The RW-9 flow rate was below the minimum design flow because the reinstallation of the computer software reset the old setpoints from the last time the computer program was saved. The setpoint for RW-9 was adjusted from 35 gpm to 80 gpm on December 21, 2005.

The pumping rate and specific capacity from RW-3 have both decreased with time. Rehabilitation efforts in 2005 did not improve the specific capacity of this well. This well's performance will be addressed during well rehabilitation activities next year.

The ground-water drawdown at RW-6 is significant and the drawdown is continuing to increase; therefore, the pumping rate at RW-6 will continue to be 15 gpm as long as well conditions allow. This well's performance will be addressed during well rehabilitation activities next year.

The effluent pH values are below the State Pollutant Discharge Elimination System (SPDES) Applicable or Relevant and Appropriate Requirements (ARARs) of 6.5 on a routine basis. December pH values for water samples from the recovery wells were in the range of approximately 5.9 to 7.3. The FSP&T system does not use any chemical treatment processes to alter pH. In addition, the effluent water discharge and the recovery well extraction points are located in the same aquifer. As discussed with the New York State Department of Environmental Conservation

(NYSDEC), because the low pH is naturally occurring, and because of the previously mentioned factors, it is not considered an exceedance of the discharge requirements.

BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
December 1 to 7	7 of 8 housings used with 600 micron bag filters	7 of 8 housings used with 600 micron bag filters	Not active
December 8 to 31	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

Bag filters with a 600-micron pore size were placed in the bag filter housing during the November 28, 2005 bag filter change and remained in use until December 7, 2005. No other modifications were made to the filter bank configuration or operation during this reporting period.

OTHER O&M ACTIVITIES AND FUTURE O&M ACTIVITIES

Other O&M activities conducted in December 2005 include:

- On December 8, 2005, inspection, cleaning and maintenance of the RW-4 pump and pump motor was completed. The existing RW-4 pump motor was damaged because of sediment build-up at the bottom of the well. The pump elevation was raised by 10 feet and a new pump motor was installed.
- On December 8, 2005, ground-water sampling was conducted in the former drum storage area (FDSA).

Future O&M activities scheduled for the winter of 2006 include:

- Clean the flow meters and valves in the building and recovery wells RW-2, RW-8 and RW-9; and,

SAG HARBOR, NEW YORK

MAINTENANCE LOG
(December 1, 2005 through December 31, 2005)

Date	Time	System Changes/Modifications	Personnel
12/1/2005	7:30 AM	Communication Failure Alarm; system shut down.	
	8:18 AM	Rebooted the computer, reset the alarm and restarted the system.	RD
12/8/2005	12:50 PM	Inspection, cleaning and maintenance of the pump and pump motor was completed. The existing RW-4 pump motor was damaged because of sediment build-up at the bottom of the well. The pump elevation was raised by 10 feet and a new pump motor was installed. The pump was set at 40 gpm and the pump is now operating at 40 gpm at 90% motor speed.	ETL, RD
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
12/9/2005	8:40 AM	Power failure alarm, air stripper blower low pressure alarm, booster blower low pressure alarm, EQ tank low level alarm, RW-2, 3, and 4 pump fault alarms and transfer tank low level alarm; system shut down.	
	12:06 PM	Control Room Temperature Alarm.	
12/12/2005	7:40 AM	Reset the booster blower motor starter, rebooted the computer, reset all alarms and restarted the system.	RD
	9:14 to 9:29 AM	All nonresettable flow totalizers were reset including the EQ TP101, transfer tank, RW-1, 2, 3, 4, 5, 6, 7, 8 and 9.	RD
		Changed flow setpoints on RW-6 and RW-9 from 40 gpm and 35 gpm to 15 gpm and 80 gpm, respectively.	RD
12/21/2005		Changed the transfer tank level alarm settings to 54.4", 50.4", 44.4" and 34.0" for the high/high level alarm, lag pump on, lead pump on and pumps off, respectively, in order to re-establish the existing water level activation points following the computer software malfunction this past fall.	RD
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
12/24/2005	8:30 AM	Communication Failure Alarm; system shut down.	
12/27/2005	10:10 AM	The computer was rebooted, the communication failure alarm was reset and the system was restarted.	SS
		Changed multi-bag filter bags (400 um) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	SS

SPDES: State Pollutant Discharge Elimination System

mg/l: Milligrams per liter
ug/l: Micrograms per liter
---: Not established

NM: Not Measured
TDS: Total dissolved solids
PCE: Tetrachloroethylene
TCE: Trichloroethylene
1,1-DCA: 1,1-Dichloroethane
1,1-DCE: 1,1-Dichloroethene
1,2-DCE: 1,2-Dichloroethene
MTBE: Methyl tert-butyl ether

Notes:

1. pH was measured using litmus paper. Influent pH values from recovery wells, which reflect the pH of natural ground water, are below 6.5 on a regular basis.
2. "Effluent" samples were collected from sample port labeled NP2-10.
3. Methylene chloride and acetone detected in these samples are suspected to be from laboratory contamination.

concentrations. The methylene chloride concentration in all three air samples collected during the July 7, August 9 and September 8, 2005 sampling events are greatly elevated due to suspected laboratory contamination. The methylene chloride sampling event was used instead of the July 7, August 9 or September 8, 2005 carbon disulfide sampling event was used instead of the July 7 and August 9, 2005 carbon disulfide to calculate the total VOCs for July, August and September 2005. The carbon disulfide concentration from the June 24, 2005 sampling event was used instead of the June 24, 2005 sampling event was used instead of the July 7 and August 9, 2005 carbon disulfide to calculate the total VOCs for July, August and September 2005.

The control of fugitive VOC emissions from landfills is a continuing concern for EPA and states. EPA has developed a framework for calculating fugitive VOC emissions from landfills.

2. The methylene chloride concentration in the air samples collected on December 6, 2005 are suspected to be from laboratory contamination.

PCE - Tetrachloroethane
TCE - Trichloroethylene
TCA - 1,1,1-Trichloroethane

BM - Bromomethane
CB - Chlorobenzene
EB - Ethylbenzene

RE: Rowe Industries

Order No.: 0512128

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 12/13/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

A handwritten signature in black ink, appearing to read "Lori Beyer".
Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

American Analytical Laboratories, LLC.

RE: Rowe Industries

Order No.: 0512129

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 7 sample(s) on 12/13/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

A handwritten signature in black ink, appearing to read "Lori Beyer".
Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe

Order No.: 0512149

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 1 sample(s) on 12/14/2005 for the analyses presented in the following report.

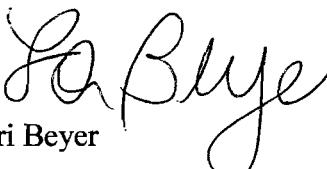

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe

Order No.: 0512148

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 12/14/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe

Order No.: 0512250

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 12/23/2005 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

American Analytical Laboratories, LLC.

Date: 29-Dec-05

CLIENT: Leggette Brashears & Graham Inc.**Project:** Rowe**Lab Order:** 0512250**CASE NARRATIVE**

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition and as defined throughout the text of the report.

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives. The presence of methylene chloride can be attributed to laboratory contamination as denoted by the "B" qualifier.

No analytical problems were encountered.

RE: Rowe Industries

Order No.: 0512268

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 12/28/2005 for the analyses presented in the following report.

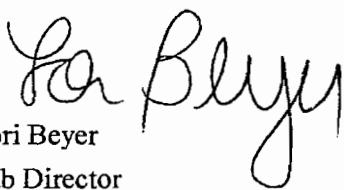

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

CLIENT: Leggette Brashears & Graham Inc.
Project: Rowe Industries
Lab Order: 0512268

CASE NARRATIVE

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition as defined throughout the text of the report.

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Methylene Chloride and Acetone are common lab contaminants and the presence of these constituents in associated field samples are due to lab contamination and not sample matrix constituents.

No analytical problems were encountered.

ANALYTICAL REPORT

JOB NUMBER: 211598

Prepared For:

LEGGETTE, BRASHEARS & GRAHAM
126 Monroe Turnpike
Trumbull, CT 06611

Project: ROWE INDUSTRIES

Attention: Mark Goldberg

Date: 01/03/2006

Signature

01/04/06

Date

Name: Erin A. Gaus

STL Connecticut
128 Long Hill Cross Road
Shelton, CT 06484

Title: Project Manager

E-Mail: egaus@stl-inc.com

This Report Contains (126) Pages

STL Report : 211598
LEGGETTE, BRASHEARS & GRAHAM

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Volatile Organics – Air volatile organics were determined by purge and trap GC/MS using guidance provided in Method TO-17. The instrumentation used was a Perkin Elmer ATD 50 interfaced with a Hewlett-Packard Model 5972A GC/MS/DS.

The samples in this job were collected in tedlar bags. Samples were transferred by the laboratory to Air Toxic TO-17 tubes and analyzed at sample volumes of 1L. Compound concentrations over the calibration curve in sample AQ120805:930 NP4-1 were flagged with an “A”.

Sample Calculation:

Sample ID- AQ120805:930 NP4-1
Compound-Bromomethane

$$\frac{(44711 \text{ area})(25\text{ng})}{(208345 \text{ area})(.363 \text{ area/ng})} = 14.77 = 15 \text{ ng}$$

$$\frac{(15 \text{ NG})(.08206)(298)}{(1\text{L})(95)(1.0\text{ATM})} = 3.86 = 3.9 \text{ nL/L.}$$

The target compound, methylene chloride, is a suspected laboratory contaminant in the air tubes that were used in this job.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in the case narrative.

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 10604
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviations

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the reporting limit.
- < Not detected at or above the reporting limit.
- J Result is less than the RL, but greater than or equal to the method detection limit.
- B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
- S Result was determined by the Method of Standard Additions.

Inorganic Flags (Flag Column)

- ICV,CCV,ICB,CCB,ISA;ISB,CRI,CRA,MRL: Instrument related QC exceed the upper or lower control limits.
- * LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
- + MSA correlation coefficient is less than 0.995.
- 4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
- E SD: Serial dilution exceeds the control limits.
- H MB, EB: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
- N MS, MSD: Spike recovery exceeds the upper or lower control limits.
- W PS: Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the reporting limit.
- ND Compound not detected.
- J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
- Q Result was qualitatively confirmed, but not quantified.
- C Pesticide identification was confirmed by GC/MS.
- Y The chromatographic response resembles a typical fuel pattern.
- Z The chromatographic response does not resemble a typical fuel pattern.
- E Result exceeded calibration range, secondary dilution required.

Organic Flags (Flags Column)

- MB,EB, MLE: Batch QC is greater than reporting limit.
- * LCS, LCD, CCV, MS, MSD, Surrogate, RS:Batch QC exceeds the upper or lower control limits.
- A Concentration exceeds the instrument calibration range or below the reporting limit.
- B Compound was found in the blank.
- D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
- H Alternate peak selection upon analytical review
- I Indicates the presence of an interference, recovery is not calculated.
- M Manually integrated compound.
- P The lower of the two values is reported when the % difference between the results of two GC columns is greater than 25%.

QUALITY ASSURANCE METHODS
REFERENCES AND NOTES

Abbreviations

Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column
CCB	Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation Analysis
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
Dil_Fac	Dilution Factor
DL	Secondary dilution and analysis
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB	Extraction Blank
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A
ISB	Interference Check Sample B
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group
Lab ID	An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PACK	Packed Column
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PS	Post Spike
PSD	Post Spike Duplicate
RA	Re-analysis
RE	Re-extraction and analysis
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RS	Reference Standard
RT	Retention Time
RTW	Retention Time Window
SampleID	A 9 digit number unique for each sample, the first six digits are referred as the job number
SCB	Seeded Control Blank
SD	Serial Dilution
UCB	Unseeded Control Blank

One or a combination of these data qualifiers and abbreviations may appear in the analytical report.

STL-Connecticut Certification Summary (as of September 2005)

The laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

State	Responsible Agency	Certification	Expiration Date	Lab Number
Connecticut	Department of Health Services	Drinking Water, Wastewater	12/31/06	PH-0497
Maine	Department of Health and Environmental Services	Drinking Water, Wastewater/Solid, Hazardous Waste	04/18/06	CT023
Massachusetts	Department of Environmental Protection	Potable/Non-Potable Water	06/30/06	CT023
New Hampshire	Department of Environmental Services	Drinking Water, Wastewater	08/29/06	2528
New Jersey	Department of Environmental Protection	Drinking Water, Wastewater	06/30/06	CT410
New York	Department of Health	CLP, Drinking Water, Wastewater, Solid/ Hazardous Waste NELAC	04/01/06	10602
Rhode Island	Department of Health	Chemistry...Non- Potable Water and Wastewater	12/30/06	A43
Utah	Department of Health	RCRA	05/31/06	2032614458

Job Sample Receipt Checklist Report

V2

Job Number.: 211598 Location.: 57207 Check List Number.: 1 Description.:
Customer Job ID.....: Job Check List Date.:
Project Number.: 20000283 Project Description.: Rowe Industries
Customer.....: LEGGETTE, BRASHEARS & GRAHAM Contact.: Mark Goldberg

Date of the Report.: 12/12/2005
Project Manager.....: mg

Questions ? (Y/N) Comments

Chain-of-Custody Present?..... Y

...If "yes", completed properly?..... Y

Custody seal on shipping container?..... Y

...If "yes", custody seal intact?..... Y

Custody seals on sample containers?..... N

...If "yes", custody seal intact?.....

Samples iced?..... N

Temperature of cooler acceptable? (4 deg C +/- 2). Y

Samples received intact (good condition)?..... Y

Volatile samples acceptable? (no headspace)..... Y

Correct containers used?..... Y

Adequate sample volume provided?..... Y

Samples preserved correctly?..... Y

Samples received within holding-time?..... Y

Agreement between COC and sample labels?..... Y

Radioactivity at or below background levels?..... Y

A Sample Discrepancy Report (SDR) was needed?..... N

Comments.....

If samples were shipped was there an air bill #?.. N drop off

Sample Custodian Signature/Date..... Y
