PROJECT STATUS MEMORANDUM

NO. 05-06

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E.
Paul Jobmann

DATE: June 21, 2006

PROJECT: Rowe Industries Superfund Site
Ground-Water Recovery and Treatment System
May 2006 Status Report
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from May 1, 2006 through May 31, 2006. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground water, system effluent samples, and air quality results.

SUMMARY OF SYSTEM PERFORMANCE AND OPERATION

(May 1, 2006 through May 31, 2006)

1. Hours of operation during the reporting period: 325 hours (44%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 6,110,330 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 1.0 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02: 184.3 pounds
(calculations can be provided upon request)
8. Effluent VOC vapor concentration for the reporting period: 0.127 mg/m³ (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00124 lbs/hr)
(calculations can be provided upon request)

GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow (gpm)	Total VOC Concentration ($\mu\text{g/L}$)	VOC Recovery (lbs)
RW-2	475265	26	26	38	0.15
RW-3	150,928	11	23	0	0
RW-4	600152	29	13	26	0.13
RW-5	1,498,629	55	42	0	0
RW-6	374,656	15	28	86	0.27
RW-7	1,497,456	70	54	59	0.74
RW-8	746,320	41	46	0	0
RW-9	1,498,571	70	68	0	0

Recovery wells RW-3, RW-6 and RW-8 had average flows below the respective minimum design flows determined to be necessary for capture of the plume.

The pumping rate and specific capacity from RW-3 have both decreased with time. Rehabilitation efforts in 2005 did not improve the specific capacity of this well. Build-up of microbial growth in the formation, in conjunction with the finer soils associated with the aquifer in the immediate vicinity of RW-3, are believed to be causing the decrease in well yield. This well's performance will be addressed during 2006 well rehabilitation activities.

The ground-water drawdown at RW-6 is significant and is continuing to increase; therefore, the pumping rate at RW-6 will continue to be 15 gpm as long as well conditions allow. This well's performance will be addressed during 2006 well rehabilitation activities.

The pumping rate at RW-8 has decreased below the minimum design flow rate because of iron build-up in the well. This condition will be addressed during the 2006 well rehabilitation activities. It should be noted that the pumping rates in RW-4 and RW-9 are also decreasing because of iron build-up. Well rehabilitation efforts planned this year should improve the yield of these wells.

Based on the May 11, 2006 New York State Department of Environmental Conservation (NYSDEC) letter, the State Pollutant Discharge Elimination System (SPDES) criteria was adjusted

to 5.0 and 8.5. With this adjustment the effluent pH criteria of the FSP&T falls within the noted range of acceptable pH values.

BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
May 1 to 31	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

No modifications were made to the filter bank configuration or operation during this reporting period.

OTHER O&M ACTIVITIES AND FUTURE O&M ACTIVITIES

Other O&M activities conducted in May 2006 include:

- On May 3, 2006, broken springs in the doors to the recovery well vaults were replaced in RW-2 and RW-3.
- On May 3, 2006, the replacement of the malfunctioning pressure transducer at RW-3 with a new pressure transducer could not be completed because the manufacturer had reconfigured the connection point on the new pressure transducer and it was not compatible with the existing connection. Compatible connectors will be ordered.
- On May 3, 2006, lubricant oil was observed to be leaking from TP-2B, therefore, the lead transfer pump was switched from TP-2B to TP-2A, and TP-2A will operate infrequently, if at all, as the lag pumps. The source of the oil leak will be investigated and repaired.
- On May 4, 2006, effluent from the FSP&T system was not being recorded at the computer. Investigation and troubleshooting was initiated that included replacing the flow meter transmitter and batteries. The troubleshooting did not identify the problem, so further investigation of the effluent flow meter assembly will be conducted.
- On May 10, 2006, the effluent flow meter for the FSP&T system was disassembled and the internal components of the meter were found to be damaged, likely due to normal wear and tear. Replacement parts were ordered.
- On May 24, 2006, well rehabilitation for RW-2 began.
- On May 25, 2006, well rehabilitation for RW-3 began.

Future O&M activities scheduled for the summer of 2006 include:

- Replace malfunctioning air flow meter on the air stripper blower and the booster blower;
- Troubleshoot and repair lubricant oil leak in transfer pump TP-2B;

- Repair the FSP&T system effluent flow meter;
- Replace connectors for installation of new pressure transducer at RW-3;
- Complete well rehabilitation for RW-2, 3, 4, 5, 6, 7, 8 and 9;
- Replace the 1 HP pump and pump motor with a 2 HP pump and pump motor following well rehabilitation activities in RW-3;
- Replace the 2 amp electric filter with a 4 amp electric filter for RW-3 in conjunction with the installation of the new pump motor;
- Clean the air stripper tower sump, transfer tank and equalization tank following well rehabilitation activities; and,
- Construct an access manway for the equalization tank on the sidewall, two to three feet above the floor.

SAG HARBOR, NEW YORK

MAINTENANCE LOG
(May 1, 2006 through May 31, 2006)

Date	Time	System Changes/Modifications	Personnel
5/3/2006		Replaced broken recovery well vault door springs at RW-2 and RW-3.	RD
		Lubricant leak observed in TP2B, lead pump switched from TP2B to TP2A. Source of leak will be investigated.	RD
		Changed multi-bag filter bags (400 µm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
5/4/2006		No reading at the computer for FE2-4 effluent flow meter. Initial troubleshooting included replacing the flow meter transmitter and battery. Still no reading. Further troubleshooting revealed that the flow meter assembly was damaged. Replacement parts will be ordered.	MG
		Meet on-site with Delta well and pump to discuss well rehab procedures.	MG
5/10/2006		Changed multi-bag filter bags (400 µm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
	6:00 AM	System shut down to remove effluent flow meter assembly. Vanes and rotor were determined to be damaged. These parts will be ordered.	RD
	8:30 AM	Restarted the system	RD
	8:50 AM	Communication Failure Alarm; system shut down	
5/17/2006	6:45 AM	Rebooted computer, reset the alarm and restarted the system.	RD
5/18/2006	7:25 PM	Booster blower failure alarm; system shut down.	
5/24/2006	6:12 AM	Reset the booster blower motor starter, reset the booster blower alarm and restarted the system.	RD
		Changed multi-bag filter bags (400 µm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
	8:30 AM	RW-2 locked out and tagged out for well rehabilitation. The rest of the system is operating.	TS
5/25/06		RW-3 locked out and tagged out for well rehabilitation. RW-4 to RW-9 are still operating.	SS
5/29/06	9:00 AM	Booster blower failure alarm and power failure alarm; system shut down.	
5/30/06	11:00 AM	Reset booster blower failure alarm and power failure alarm and restarted the system.	TS
		Changed multi-bag filter bags (400 µm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	TS

SPDES: State Pollutant Discharge Elimination System

mg/l: Milligrams per liter

ug/l: Micrograms per liter

---: Not established

NM: Not Measured

TDS: Total dissolved solids

PCE: Tetrachloroethylene

TCE: Trichloroethene

1,1-DCA: 1,1-Dichloroethane

1,1-DCE: 1,1-Dichloroethene

1,2-DCE: 1,2-Dichloroethene

MTBE: Methyl tert-butyl ether

Notes:

- Based on the new SPDES criteria from an NYSDEC letter dated on May 11, 2006, the new allowable pH range for the Rowe Site is between 5.0 and 8.5. The pH was measured using litmus paper. Influent pH values from recovery wells typically range between 5 and 6.
- "Effluent" samples were collected from sample port labeled NP2-10 unless otherwise noted.
- High iron concentrations detected in the effluent continue to be detected sporadically. Following well rehabilitation activities, the transfer tank, tower sump and equalization tank will be cleaned. This is expected to reduce the effluent iron concentration.
- This compound was detected in the associated laboratory method blank, therefore it is a suspected laboratory contaminant.

Notes: 1. Methylene chloride and/or carbon disulfide concentrations in all three air samples collected during the July 7, August 9 and September 8, 2005 sampling events are greatly elevated due to suspected laboratory contamination. The methylene chloride concentration from the June 24, 2005 sampling event was used instead of the July 7, August 9 or September 8, 2005 methylene chloride concentrations to calculate the total VOCs for July, August and September 2005. The carbon disulfide concentration from the June 24, 2005 sampling event was used instead of the July 7 and August 9, 2005 carbon disulfide concentration to calculate the total VOCs for July and August 2005.

2. The methylene chloride concentration in the air samples collected on December 8, 2005 are suspected to be from laboratory contamination.

3. The laboratory procedure for the % bromomethane recovered exceeded the upper limit for quality control, therefore the bromomethane concentration for January 4, 2006 was used to calculate the total VOC concentration in for the February 1, 2006 samples.

4. The air samples from March 2006 and forward were analyzed using the TO-15 method at the Severn Trent Laboratory located in Knoxville, TN. Air sampling using the TO-17 method at the Severn Trent Laboratory in Connecticut is no longer available. The March 2006 air quality results appear to be a little lower or similar to prior air quality results. LBG will continue to monitor the air quality on a monthly basis.

PCE - Tetrachloroethane
TCE - Trichloroethene
TCA - 1,1

ARAR's are chemical specific aquifer restoration goals for ground water at the Former Rowe Industries Superfund Site
Bold values indicate an exceedance of the ARAR standard established for the site

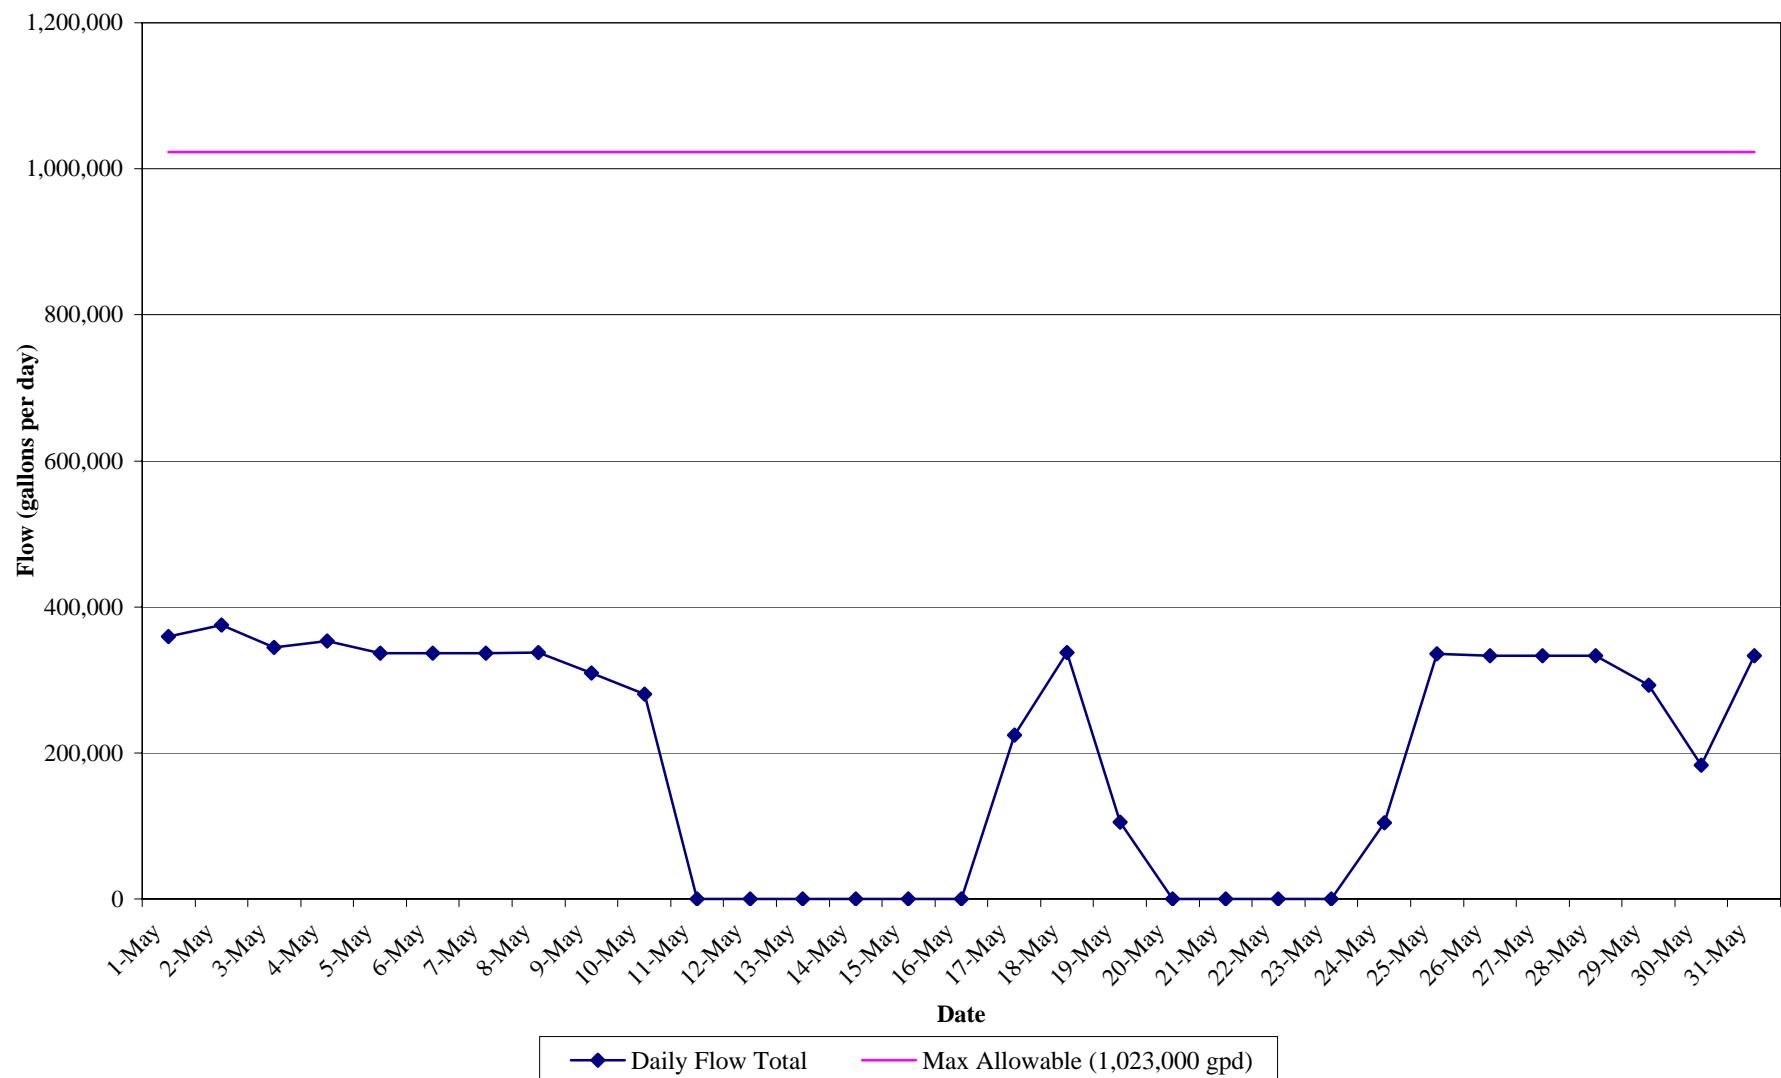

NE indicates that the ARAR goal was not established for this compound by the EPA

*Concentrations with an asterisk following them are due to laboratory contamination.

RE: Rowe Industries

Order No.: 0605059

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 5/5/2006 for the analyses presented in the following report.

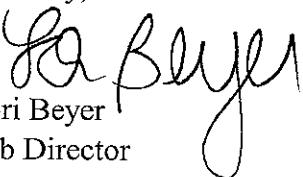

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

Date: 10-May-06

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0605129

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 5/12/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0605205

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 5/19/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0605298

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 5/31/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe

Order No.: 0606034

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 6/2/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: <ol style="list-style-type: none">(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe

Order No.: 0605204

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 8 sample(s) on 5/19/2006 for the analyses presented in the following report.

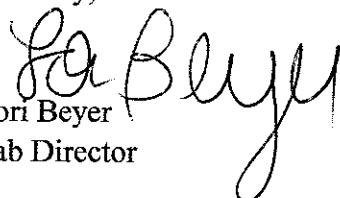

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director

American Analytical Laboratories, LLC.

DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
H	Indicates sample was received and/or analyzed outside of The method allowable holding time

ANALYTICAL METHODS SUMMARY

H6E190106

<u>PARAMETER</u>	<u>ANALYTICAL METHOD</u>
Volatile Organics by TO15	EPA-2 TO-15

References:

- EPA-2 "Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air", EPA-625/R-96/010b, January 1999.

SAMPLE SUMMARY

H6E190106

<u>WO #</u>	<u>SAMPLE#</u>	<u>CLIENT SAMPLE ID</u>	<u>SAMPLED DATE</u>	<u>SAMP TIME</u>
H5QLJ	001	AQ051706:1000 NP4-1	05/17/06	10:00
H5QLK	002	AQ051706:1005 NP4-2	05/17/06	10:05
H5QLL	003	AQ051706:1010 NP4-3	05/17/06	10:10

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

PROJECT NARRATIVE H6E190106

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

There were no problems with the condition of the samples received.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met, and the test results shown in this report meet all applicable NELAC requirements.

Samples were received on 5/19/06 in Tedlar bags and transferred into Summa Canisters within 72 hours of sampling.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #05-043-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906 (SDWA, expires 6/24/05), Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Ohio EPA VAP Cert. #CL0059, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-00576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, West Virginia DEP Cert. #345, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Client Sample ID: AQ051706:1010 NP4-3

GC/MS Volatiles

Lot-Sample #	Work Order #	Matrix.....:
SURROGATE	PERCENT RECOVERY	LABORATORY CONTROL LIMITS (%)
4-Bromofluorobenzene	102	70 - 130

Qualifiers

- B Method blank contamination. The associated method blank contains the target analyte at a reportable level.
 J Estimated result. Result is less than RL.

The 'Result' in ug/m3 is calculated using the following equation: Amount Found(before rounding)*(Molecular Weight/24.45)

The 'Reporting Limit' in ug/m3 is calculated using the following equation: (Reporting Limit(before rounding) * Dilution Factor) * (Molecular Weight/24.45)

Leggette, Brashears & Graham, Inc.

STL KNOXVILLE SAMPLE RECEIPT/CONDITION UPON RECEIPT ANOMALY CHECKLIST

Client: LB6 -

Project: Row

Lot Number: 166E/90/06

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Do sample container labels match COC? (IDs, Dates, Times)				<input type="checkbox"/> 1a Do not match COC <input type="checkbox"/> 1b Incomplete information <input type="checkbox"/> 1c Marking smeared <input type="checkbox"/> 1d Label torn <input type="checkbox"/> 1e No label <input type="checkbox"/> If COC not received <input type="checkbox"/> 1g Other:	
2. Is the cooler temperature within limits? (> freezing temp. of water to 6 °C; NC, 1668, 1613B: 0-4°C; VOST: 10°C; MA: 2-6 °C)	✓			<input type="checkbox"/> 2a Temp Blank = _____ <input type="checkbox"/> 2b Cooler Temp = _____	
3. Were samples received with correct chemical preservative (excluding Encore)?		✓		<input type="checkbox"/> 3a Sample preservative = _____	
4. Were custody seals present/intact on cooler and/or containers?		✓		<input type="checkbox"/> 4a Not present <input type="checkbox"/> 4b Not intact <input type="checkbox"/> 4c Other:	
5. Were all of the samples listed on the COC received?	✓			<input type="checkbox"/> 5a Samples received-not on COC <input type="checkbox"/> 5b Samples not received-on COC	
6. Were all of the sample containers received intact?	✓			<input type="checkbox"/> 6a Leaking <input type="checkbox"/> 6b Broken	
7. Were VOA samples received without headspace?		✓		<input type="checkbox"/> 7a Headspace (VOA only)	
8. Were samples received in appropriate containers?	✓			<input type="checkbox"/> 8a Improper container	
9. Did you check for residual chlorine, if necessary?		✓		<input type="checkbox"/> 9a Could not be determined due to matrix interference <input type="checkbox"/> 10a Holding time expired	
10. Were samples received within holding time?	✓		✓	<input type="checkbox"/> 10a Holding time expired <input type="checkbox"/> Incomplete information	
11. For rad samples, was sample activity info. provided?		✓		<input type="checkbox"/> If yes & appears to be >1%, was SOG notified?	
12. For SOG water samples (1613B, 1668A, 8290, LR PAHs), do samples have visible solids present?		✓			
13. Are the shipping containers intact?	✓			<input type="checkbox"/> 13a Leaking <input type="checkbox"/> 13b Other:	
14. Was COC relinquished? (Signed/Dated/Timed)	✓			<input type="checkbox"/> 14a Not relinquished	
15. Are tests/parameters listed for each sample?	✓			<input type="checkbox"/> 15a Incomplete information	
16. Is the matrix of the samples noted?	✓			<input type="checkbox"/> 15a Incomplete information <input type="checkbox"/> 15a Incomplete information	
17. Is the date/time of sample collection noted?	✓			<input type="checkbox"/> 15a Incomplete information <input type="checkbox"/> 15a Incomplete information	
18. Is the client and project name/# identified?	✓			<input type="checkbox"/> 15a Incomplete information	
19. Was the sampler identified on the COC?	✓
