### **PROJECT STATUS MEMORANDUM**

TO: Pamela Tames, USEPA

FROM: Mark M. Goldberg, P.E. Paul Jobmann

**DATE:** August 23, 2006

**PROJECT:** Ground Water Remedial Action Focused Pump & Treat System Rowe Industries Superfund Site Sag Harbor, New York May 2006 through June 2006 Status Report

This status report presents a summary of the operation, maintenance and monitoring activities for the Focused Pump & Treat (FP&T) System from May 30, 2006 through June 30, 2006. The report also includes a brief history of system operation prior to May 30, 2006, including a discussion of work in the former drum storage area (FDSA) that affected the operation of the FP&T system.

LBG Engineering Services, P.C. (LBG) initially operated the FP&T system from March 22,2001 to December 23, 2003. During that time, the total volume of water pumped and the total volatile organic compounds (VOCs) recovered from the FP&T system were 5,778,917 gallons and 16.47 pounds, respectively. The operation of the FP&T system was discontinued on December 23, 2003 because of diminishing returns in the recovery of VOCs.

In 2004, a feasibility study was conducted to determine the most appropriate course of action to accelerate remediation efforts in the FDSA. In November 2004, the preferred remedial action was implemented. The remedial action for the FDSA involved the injection of a product called EHC<sup>TM</sup>, which contains zero-valent iron and an enriched carbon nutrient source. Shortly after injection activities, increases in the concentrations of the contaminants of concern (COCs) were detected in the ground water. While some degradation took place as a result of the injection and the subsequent chemical and biological reactions, the main benefit of the treatment ended up being the accelerated loosening and partitioning of COCs from the soil matrix to the aqueous phase.

By the end of 2005, no significant decrease in the concentration of COCs was detected, so the decision was made to restart the FP&T system to remove the COCs that are in the aqueous phase. More information about the monitoring activities may be found in the "Summary of EHC<sup>TM</sup> Monitoring Activities in the FDSA from March 2005 to December 2005" included as Appendix B in the "2005 Annual Summary Report".

LBG restarted the operation of the FP&T system at the above-referenced site on May 30, 2006. A summary of the system operation is provided below.

### SUMMARY OF SYSTEM OPERATION

(May 2006 through June 2006)

Reporting Period:	31 days
Total Flow During Period:	257,051 gallons
Cumulative Total Flow	
Since May 30, 2006:	257,051 gallons
Since March 22, 2001:	6,051,671 gallons
System Average Flow:	17.7 gallons per minute (gpm)
Mass of VOCs Recovered:	
Since May 30, 2006:	0.87 pounds
Cumulative VOCs Recovered	
Since May 30, 2006:	0.87 pounds (see Table 1)
Since March 22, 2001:	17.34 Pounds
Discharge Criteria:	Effluent water quality criteria met (see Table 8)

Water quality samples were collected on May 17, 2006 and subsequently analyzed for VOCs using EPA Method 8260 to determine if the existing granular activated carbon (GAC) filters in the FP&T system were still effective at treating the ground water. Prior to the collection of the FP&T system samples, the system was allowed to run for approximately 30 minutes to remove water that was sitting in the holding tank and the piping. This procedure allowed for the collection of representative ground-water samples from the aquifer in the FDSA. The operation of the FP&T system was discontinued following the collection of the pre-startup ground-water samples until May 30, 2006. The laboratory results indicated that the GAC was still effective at treating the ground water. These results may be found in Tables 6, 7 and 8 and the laboratory reports in Appendix I.

Table 1 presents the pre-carbon VOC concentrations, the total volume of water pumped and the mass of VOCs removed and treated by the FP&T system. Graph 1 presents the pre-carbon VOC concentrations and total cumulative mass removed for the reporting period. The trend in pre-carbon VOC concentrations is downward for this reporting period, although there is limited data and additional sampling will be needed to verify this claim. VOC concentrations will continue to be monitored weekly to determine if this trend continues.

The concentration of tetrachloroethylene (PCE) from the FP&T recovery wells during this reporting period ranged from non-detect (below the laboratory reporting limits of 1 ug/l) in the samples from FRW-1 and FRW-4 to 650 ug/l in the sample from FRW-3. During this reporting period, the highest and lowest PCE concentrations in the ground water were consistently detected in the samples from FRW-3 and FRW-4, respectively. The high concentrations of PCE detected in the samples from FRW-3 are expected because this well is near a hot spot in the FDSA source area. A summary of the laboratory results from the recovery wells may be found in Tables 2, 3, 4 and 5. Graph 2 illustrates the PCE trends in each recovery well.

Vinyl chloride was detected at low concentrations (less than 5 ug/l) in the water samples from FRW-2 and FRW-3, which indicates that limited degradation continues to occur in the FDSA as a result of the EHC<sup>TM</sup> injection. The area around FRW-2 and FRW-3 was the location where the heaviest dose of EHC<sup>TM</sup> was injected.

High concentrations of toluene were detected in the ground water samples from FRW-2 and FRW-3. During this reporting period, toluene concentrations in the ground water at these wells ranged from 420 ug/l to 720 ug/l and 140 ug/l to 230 ug/l, respectively. The high toluene concentrations are also a result of the EHC<sup>TM</sup> injection. Decreases in toluene concentrations in a ground water are expected with the continued operation of the FP&T system. These results are summarized in Tables 3 and 4.

LBG will continue weekly monitoring of the water quality at the FP&T recovery wells during the early part of the third quarter of 2006 to establish a baseline of contaminant concentrations in the ground water at each recovery well. Once an adequate baseline of weekly data from the recovery wells is developed, the sampling frequency of the ground water from the recovery wells will be reduced to monthly intervals.

Equalization (EQ) tank high level alarms started to occur with some frequency shortly after the startup of the system (6/2, 6/11 and 6/14). The factors that are believed to be causing high water levels in the EQ tank are:

- The clogging of the bag filter with the granular EHC<sup>TM</sup> product, which increases the pressure in the system. The increased pressure in the system decreases the flow the transfer pump can deliver.
- Clogging of the GAC filter due to biological growth during the period when the system was not operating.
- Damage to the transfer pump from the EHC<sup>TM</sup> product.

Biological growth in the GAC filters were removed during the carbon change-out activities discussed below. The  $EHC^{TM}$  product will continue to clog the bag filter in the short term, however, this problem is expected to decrease over time as additional  $EHC^{TM}$  product is pumped out of the FDSA. LBG is currently evaluating options to address the EHC product that is being recovered from the FDSA. Bag filter changes will continue on a weekly basis. Water samples from the recovery wells will be monitored weekly to see if the  $EHC^{TM}$  product is visible as sediment on the bottom of the sample bottles. In addition, pressures and flows for the system will continue to be monitored on a weekly basis.

On June 7 and 14, 2006, concentrations of volatile organic compounds (VOCs) in the mid-carbon sample were detected. This condition indicates breakthrough occurred in the first carbon vessel. Following an alarm on June 14<sup>th</sup>, the FP&T system remained off until the carbon change-out could be completed. A carbon change-out for both carbon filters was completed on June 28, 2006. Eleven 55-gallon drums of spent carbon were removed and properly disposed of from the site. VOC concentrations in the weekly FP&T system samples will continue to be monitored weekly to determine when breakthrough occurs.

The continued operation of the FP&T system is expected to lower the COC concentrations in the FDSA. Any contaminated water migrating from the FDSA has been and will continue to be captured by the onsite recovery wells full-scale pump and treat (FSP&T) system.

TABLES

#### GROUND-WATER REMEDIAL ACTION FOCUSED PUMP AND TREAT SYSTEM ROWE INDUSTRIES SUPERFUND SITE SAG HARBOR, NEW YORK

#### Mass of VOCs Removed from the FDSA May 2006 through June 2006

Date	Total Precarbon VOC Concentrations (µg/L)	Total Volume of Water Pumped (gals)	Volume of Water Processed for Period (galions)	Total Mass of VOCs Removed (Ibs.)	Cumulative Mass of VOCs Removed (Ibs.)
5/30/2006 1/	547	5,794,620	0	0.00	0.00
6/7/2006	401	5,859,910	65,290	0.22	0.22
6/14/2006	410	5,987,998	128,088	0.44	0.66
6/28/2006 2/	410	6,051,671	63,673	0.22	0.87

1. On May 30, 2006, the FP&T system was restarted. The flow meter reading on May 30, 2006 was 5,794,620 gallons. This will be considered the "zero" datum for volume pumped after re-starting the FP&T system.

2. Precarbon values from the June 14, 2006 sampling event were used to calculate the total mass of VOCs removed on 6/28/06 because pre-carbon data was not obtained on June 28, 2006.

RE: Rowe Industries

Order No.: 0605206

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 5/19/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

en Kelly for

Lori Beyer Lab Director

# DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	<ul> <li>Indicates an estimated value. The flag is used: <ol> <li>When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li> <li>When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li> </ol> </li> </ul>
В	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P .	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
Ν	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
н	Indicates sample was received and/or analyzed outside of The method allowable holding time

Mark Goldberg Leggette Brashears & Graham Inc. 4 Research Drive Suite 301 Shelton, CT 06484

TEL: (203) 929-8555 FAX (203) 926-9140

**RE:** Rowe Industries

Order No.: 0606033

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 7 sample(s) on 6/2/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer Lab Director

### **DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

and a second constraints of the

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	<ul> <li>Indicates an estimated value. The flag is used: <ul> <li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li> <li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li> </ul> </li> </ul>
В	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
Ρ	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
н	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Dear Mark Goldberg:

Order No.: 0606098

American Analytical Laboratories, LLC. received 7 sample(s) on 6/9/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Bever

Lab Director

### DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	<ul> <li>Indicates an estimated value. The flag is used: <ul> <li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li> <li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. PesticIde, PCBs and others.</li> </ul> </li> </ul>
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
Ρ	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
н	Indicates sample was received and/or analyzed outside of The method allowable holding time

TEL: (203) 929-8555 FAX (203) 926-9140

RE: Rowe Industries

Dear Mark Goldberg:

Order No.: 0606172

American Analytical Laboratories, LLC. received 7 sample(s) on 6/16/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Bever

Lab Director

## DATA REPORTING QUALIFIERS

For reporting results, the following "Results Qualifiers" are used:

Value	if the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	<ul> <li>Indicates an estimated value. The flag is used: <ul> <li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li> <li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li> </ul> </li> </ul>
В	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
Ρ	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
н	Indicates sample was received and/or analyzed outside of The method allowable holding time

**RE:** Rowe Industries

Dear Mark Goldberg:

Order No.: 0606301

American Analytical Laboratories, LLC. received 5 sample(s) on 6/30/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

lye Lori Bever Lab Director

Date: 06-Jul-06

## DATA REPORTING QUALIFIERS

. .

For reporting results, the following "Results Qualifiers" are used:

.

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, I.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
L	<ul> <li>Indicates an estimated value. The flag is used:</li> <li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li> <li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li> </ul>
В	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
Ν	This flag indicates presumptive evidence of a compound. This is only used for tentatively Identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
н	Indicates sample was received and/or analyzed outside of The method allowable holding time

.

Tetrachloroethene	U	1.0	μg/L	1	7/6/2006 8:32:00 AM
Toluene	U	1.0	μg/L	1	7/6/2006 8:32:00 AM
trans-1,2-Dichloroethene	U	1.0	μα/L	1	7/6/2006 8:32:00 AM
trans-1,3-Dichloropropene	U	1.0	ua/L	1	7/6/2006 8:32:00 AM
Trichloroethene	U	1.0	ua/L	1	7/6/2006 8:32:00 AM
Trichlorofluoromethane	U	1.0	ua/L	1	7/6/2006 8:32:00 AM
Vinyl acetate	U	1.0	ua/L	1	7/6/2006 8-32-00 AM
Vinyl chloride	U	1.0	μg/L	1	7/6/2006 B:32:00 AM

- Analyte detected in the associated Method Blank В H Holding times for preparation or analysis exceeded
- E Value above quantitation range
- J Analyte detected below quantitation limits
- ND Not Detected at the Reporting Limit
- S
  - Spike Recovery outside accepted recovery limits х
  - Value exceeds Maximum Contaminant Level

Page 10 of 10

U Indicates the compound was analyzed for but not detecte
