

**PROJECT STATUS MEMORANDUM**

**NO. 09-06**

**TO:** Pamela Tames, USEPA

**FROM:** Mark M. Goldberg, P.E.  
Tunde H. Komuves-Sandor

**DATE:** November 15, 2006

**PROJECT:** Rowe Industries Superfund Site  
Ground-Water Recovery and Treatment System  
September 2006 Status Report  
Sag Harbor, New York

LBG Engineering Services, P.C. (LBG) commenced operation of the ground-water remediation system at the above-referenced site on December 17, 2002. This status report presents a summary of system performance, operation and maintenance, and monitoring activities for the site from September 1, 2006 through September 30, 2006. The report includes a summary of system performance parameters, system operation parameters, analytical results for ground water, system effluent samples, and air quality results.

**SUMMARY OF SYSTEM PERFORMANCE AND OPERATION**

*(September 1, 2006 through September 30, 2006)*

1. Hours of operation during the reporting period: 470 hours (65%)
2. Alarm conditions during the reporting period: See Table 1
3. Was the SPDES VOC discharge permit criteria achieved: yes, (Table 2)
4. Total volume of water pumped during the reporting period: 13,261,030 gal.
5. Was the system effluent flow below the SPDES limit of 1,023,000 gpd: yes, (Graph 1)
6. Mass of VOCs recovered during the reporting period: 2.0 pounds
7. Cumulative mass of VOCs recovered since startup on 12/17/02: 190.7 pounds  
(calculations can be provided upon request)
8. Effluent VOC vapor concentration for the reporting period: 0.08 mg/m<sup>3</sup> (Table 3)
9. Was the effluent VOC vapor emission rate below 0.022 lbs/hr.: yes (0.00082 lbs/hr)  
(calculations can be provided upon request)

## GROUND-WATER RECOVERY SYSTEM STATUS SUMMARY

The following table summarizes select recovery well parameters for the reporting period. Table 4 presents a summary of the quality results for water samples collected from recovery wells. Graph 2 presents PCE concentrations for each recovery well. For wells with water quality that meets or is approaching remedial criteria, Graph 3 presents PCE concentrations at an expanded scale in order to compare them to the PCE aquifer restoration concentration of 5 ug/L. Laboratory analytical reports are included as Appendix I.

Well	Volume Pumped (gal)	Average Flow (gpm)	Minimum Design Flow (gpm)	Total VOC Concentration ( $\mu\text{g/L}$ )	VOC Recovery (lbs)
RW-2	828,816	27	26	202.8	1.4
RW-3 *	0	0	23	0	0
RW-4	1,657,620	40	13	16.5	0.23
RW-5	1,657,660	50	42	0	0
RW-6	414,409	15	28	73	0.25
RW-7	1,066,300	69	54	43.5	0.39
RW-8	1,657,619	50	46	3.0	0.04
RW-9	1,657,640	80	68	0	0

\*Recovery well RW-3 was not operating in September because the new RW-3 drive has to be reprogrammed to account for the two (2) horsepower (HP) pump motor recently installed following well rehabilitation activities (RW-3 formerly had a one (1) HP pump motor).

Recovery well RW-6 had an average flow below the respective minimum design flow determined to be necessary for capture of the plume. The performance of RW-6 will continue to be monitored. The ground-water model for the site will be updated to reflect the current pumping and water quality conditions to determine if the FSP&T system can effectively capture the plume for different degrees of operation of RW-6.

A trend of increasing 1,1,1 Trichloroethane (1,1,1 TCA) concentrations in the groundwater have been detected at RW-2 from June through September 2006. This period coincides with the time that RW-3 was not operating. One hypothesis for the increase in 1,1,1 TCA concentration in the ground water at RW-2 may be that capture zones RW-2 and RW-3 shift depending on which wells (RW-2 and/or RW-3) are operating. A ground-water modeling evaluation will be completed in the near future to try and determine if the above hypothesis is true. A discussion about the ground-water model will be included in the annual report and/or in subsequent monthly status reports.

The effluent pH of the treated water from the FSP&T system is within the acceptable State Pollutant Discharge System (SPDES) criteria for the site as shown on table 2.

### BAG FILTER STATUS

The following table presents an operational summary of the bag filter usage and configuration for the reporting period.

Dates	Bank 1	Bank 2	Bank 3
September 1 to 30	7 of 8 housings used with 400 micron bag filters	7 of 8 housings used with 400 micron bag filters	Not active

No modifications were made to the filter bank configuration or operation during this reporting period.

## **OTHER O&M ACTIVITIES AND FUTURE O&M ACTIVITIES**

Other O&M activities conducted in September 2006 include:

- On September 5, 2006, the air stripper blower and booster blower air flow meter sensors were repaired by the vendor, however, air flow readings are not being transmitted to the local or computer displays. Troubleshooting of the air flow meters will be conducted.
- On September 12, 2006, the malfunctioning RW-3 pressure sensor was replaced.
- On September 13, 2006, cove salinity monitoring and piezometer water level measurements were completed.
- On September 18-20, 2006, semi-annual ground-water sampling was conducted. A complete round of depth-to-water levels was completed while the system was operating.
- On September 26, 2006, a round of static depth-to-water levels was completed after the recovery well as had been shut down for 5 days.

Future O&M activities scheduled for the fall of 2006 include:

- Rehabilitate the recharge basin;
- Reprogram RW-3 drive for compatibility with the new 2 horsepower motor;
- Troubleshoot air flow meters; and
- Clean treatment building influent pipes and RW-2, 4, 8, 9 flow meters, valves and pipes.

## **TABLES**

**TABLE 1**  
**GROUND-WATER REMEDIAL ACTION**  
**ROWE INDUSTRIES SUPERFUND SITE**  
**SAG HARBOR, NEW YORK**

**MAINTENANCE LOG**  
(September 1, 2006 through September 30, 2006)

Date	Time	System Changes/Modifications	Personnel
9/5/2006		System communication failure occurred on 8/30/06 between 5:56AM and 6:56AM	
		Air stripper blower and booster blower air flow meter sensors were repaired by the vendor, however, air flow readings are not being transmitted to the local or computer displays. Troubleshooting of the air flow meters will be conducted.	RD
	8:41 AM	Reset alarms, and restarted system.	RD
	9:09 AM	An RW-7 pump fault alarm occurred. RW-7 did not operate, however the rest of the system continues to operate.	RD
9/12/2006		Changed multi-bag filter bags (400 mm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
		The malfunctioning RW-3 pressure transducer was replaced.	RD
		The RW-7 pump fault alarm was reset. RW-7 is operating.	RD
9/18/2006		Began semi-annual ground-water sampling of select monitor wells. Measured depth to water of all wells.	MW/TS
9/19/2006		Changed multi-bag filter bags (400 mm) in banks 1 and 2 seven of eight housings used. Banks 1 and 2 left open. Bank 3 closed.	RD
9/20/2006		Finished semi-annual ground-water sampling.	MW/TS/PW
9/21/2006		System communication failure occurred between 9:56AM and 10:56AM, system shut down.	
9/26/2006		Measured static depth to water of all wells.	TS
9/27/2006	11:30 AM	Reset alarms and restarted system	RD
		Updated static water levels.	RD

1,2-DCE: 1,2-Dichloroethene

MTBE: Methyl tert-butyl ether

## Notes:

- Based on the new SPDES criteria from an NYSDEC letter dated on May 11, 2006, the new allowable pH range for the Rowe Site is between 5.0 and 8.5. The pH was measured using litmus paper. Influent pH values from recovery wells typically range between 5 and 6.
- "Effluent" samples were collected from sample port labeled NP2-10 unless otherwise noted.
- The pH was not measured at this time.

- Notes: 1. Methylene chloride and/or carbon disulfide concentrations in all three air samples collected during the July 7, August 9 and September 8, 2005 sampling events are greatly elevated due to suspected laboratory contamination. The methylene chloride concentration from the June 24, 2005 sampling event was used instead of the July 7, August 9 or September 8, 2005 methylene chloride concentrations to calculate the total VOCs for July, August and September 2005. The carbon disulfide concentration from the June 24, 2005 sampling event was used instead of the July 7 and August 9, 2005 carbon disulfide concentration to calculate the total VOCs for July and August 2005.
2. The methylene chloride concentration in the air samples collected on December 8, 2005 are suspected to be from laboratory contamination.
3. The laboratory procedure for the % bromomethane recovered exceeded the upper limit for quality control, therefore the bromomethane concentration for January 4, 2006 was used to calculate the total VOC concentration for the February 1, 2006 samples.
4. The air samples from March 2006 and forward were analyzed using the TO-15 method at the Severn Trent Laboratory located in Knoxville, TN. Air sampling using the TO-17 method at the Severn Trent Laboratory in Connecticut is no longer available. The March 2006 air quality results appear to be a little lower or similar to prior air quality results. LBG will continue to monitor the air quality on a monthly basis.

RE: Rowe Industries

Order No.: 0609038

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 9/7/2006 for the analyses presented in the following report.

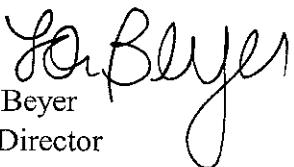

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0609082

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 9/12/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0609178

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 9/21/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0609275

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 3 sample(s) on 9/29/2006 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

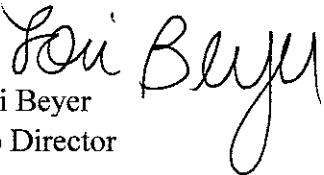

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: <ol style="list-style-type: none"><li>(1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.)</li><li>(2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.</li></ol>
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

RE: Rowe Industries

Order No.: 0609177

Dear Mark Goldberg:

American Analytical Laboratories, LLC. received 7 sample(s) on 9/21/2006 for the analyses presented in the following report.

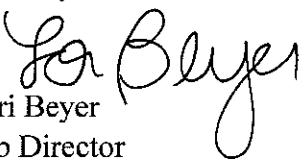

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report.

The limits provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at [lbeyer@american-analytical.com](mailto:lbeyer@american-analytical.com).

Sincerely,

  
Lori Beyer  
Lab Director

**DATA REPORTING QUALIFIERS**

For reporting results, the following "Results Qualifiers" are used:

<b>Value</b>	If the result is greater than or equal to the detection limit, report the value
<b>U</b>	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
<b>J</b>	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
<b>B</b>	Indicates the analyte was found in the blank as well as the sample report "10B".
<b>E</b>	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
<b>D</b>	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
<b>P</b>	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
<b>N</b>	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.
<b>H</b>	Indicates sample was received and/or analyzed outside of The method allowable holding time

EPA-2 "Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air", EPA-625/R-96/010b, January 1999.

## SAMPLE SUMMARY

H6I210105

<u>WO #</u>	<u>SAMPLE#</u>	<u>CLIENT SAMPLE ID</u>	<u>SAMPLED DATE</u>	<u>SAMP TIME</u>
JEPE2	001	AQ091906:910 NP4-1	09/19/06	09:10
JEPE6	002	AQ091906:915 NP4-2	09/19/06	09:15
JEPE7	003	AQ091906:920 NP4-3	09/19/06	09:20

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

## **PROJECT NARRATIVE**

### **H6I210105**

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

**The original chain of custody documentation is included with this report.**

#### **Sample Receipt**

There were no problems with the condition of the samples received.

#### **Quality Control and Data Interpretation**

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

Samples were received on 9/21/06 in Tedlar bags and transferred into Summa Canisters within 72 hours of sampling.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. #05-043-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906, Hawaii DOH, Illinois EPA Cert. #000687, Indiana DOH Cert. #C-TN-02, Iowa DNR Cert. #375, Kansas DHE Cert. #E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Ohio EPA VAP Cert. #CL0059, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. #68-00576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. # QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, West Virginia DEP Cert. #345, Wisconsin DNR Lab ID #998044300, Naval Facilities Engineering Service Center and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.
