Re: **Remediation Report - Final**  
**Liberty Industrial Finishing Site, NYSDEC #152108**  
**500-550 Suffolk Avenue, Brentwood, NY**  
**FPM File #1389g-21-01**

Dear Payson:

FPM Group, Ltd. (FPM) has prepared this final remediation report on behalf of our client, 550 Liberty Plaza, LLC, to document the completion of remedial activities at the above-referenced property in accordance with the February 26, 2021 Supplemental Work Plan and our subsequent discussion. This work was also performed in accordance with applicable portions of the New York State Department of Environmental Conservation (NYSDEC)-approved Site Management Plan (SMP) for the property, including the Field Sampling Plan (FSP) and Quality Assurance Project Plan (QAPP). The five remedial areas where soil removal was completed are shown on the attached Figure 1-Site Plan.

The initial remedial activities were documented in our July 6, 2021 report and included excavation and stockpiling of impacted soil from the remedial areas, collection and testing of end-point samples, and preparation and submittal of the initial remedial report. Following the initial remedial activities, there remained one limited area (Area 1-west sidewall) where the end-point sample exceeded the NYSDEC Soil Cleanup Objective (SCO) for commercial use for cadmium. This area adjoins the capped area of the site and as the site is proposed to be redeveloped with a commercial use that will include a paved parking lot in this area, it was proposed to extend the existing capped area to address this condition, as described in our July 6, 2021 report.

The final remedial activities included placement of the initial cap as described above, waste characterization and waste disposal approval, and loading, transport and proper offsite disposal of the impacted soil that was previously removed from the five remedial areas. This work is documented in the sections below. A photolog illustrating key activities is included in Attachment A.

Waste disposal approval, soil loading, transport, and disposal, and placement of the cap soil were performed by Aarco Environmental Services Corp. (Aarco) with oversight, monitoring, and reporting performed by FPM.

### **Waste Management Procedures**

Waste characterization testing results and profiles for the soil to be disposed were submitted by Aarco to the Atlantic County Utilities Authority (ACUA) landfill in Egg Harbor, NJ and Conestoga landfill (via the Dale Transfer Facility) in Morgantown, PA and verbal waste disposal approvals were received from both facilities; waste disposal profiles for the materials disposed are included in Attachment B. Aarco loaded the stockpiled waste soil into NYS-licensed waste transport trucks on August 9, 16, and 23, 2021 for transport to the ACUA landfill. The soil in the last two trucks loaded on August 23, 2021 was initially

transported to the Dale Transfer facility and then transported and disposed at the Conestoga landfill on August 31, 2021. An FPM environmental professional (EP) provided oversight of the loading operations. Manifests were used to track waste transport and disposal; copies of the manifests and associated weight tickets documenting the completed disposal are included in Attachment B. A total of 740.12 tons of impacted soil from the five remedial areas were properly disposed. Photos depicting the loading process and condition of the stockpile area after loading was complete are included in Attachment A.

### Initial Cap Placement

An initial cap of at least one foot of clean soil was placed over the soil currently present in the cap extension area on August 9, 2019. Photos of the cap extension area before and after placement of the clean soil cap are included in Attachment A. The clean soil was obtained from the area of the site noted as Cap Soil Borrow Area on Figure 2 – this area was previously tested during the Remedial Investigation (Locations B-24 and B-26) and the soil did not contain metals above the NYSDEC SCOs for commercial use. The FPM EP observed the clean soil placement and confirmed that at least one foot of soil was present over the entire capped area.

During redevelopment it is planned to replace the initial soil cap with an asphalt pavement cap. As an alternative, the impacted soil beneath the initial cap may be removed under the site's Excavation Work Plan and the remaining soil tested to confirm that it meets the NYSDEC commercial use SCOs. The NYSDEC will be notified in advance of any contemplated cap modifications or additional soil removal.

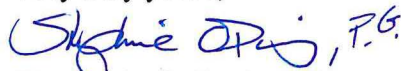

### Conclusions

Based on our observations and the waste disposal documentation, the stockpiled impacted soil has been completely removed from the site and properly disposed. The remedial work described in the February 26, 2021 Supplemental Work Plan has been completed and no further work is required.

An initial cap has been placed over the remaining soil that exceeds the NYSDEC commercial use SCO for cadmium, as represented by the Area 1-west sidewall sample (1-SW-west on Figures 1 and 2). The site is proposed to be redeveloped with a commercial use that will include a paved parking lot in this area. During redevelopment it is planned to replace the initial soil cap with an asphalt pavement cap unless the impacted soil is removed under the site's Excavation Work Plan and the remaining soil is documented to meet the NYSDEC commercial use SCOs.

NYSDEC approval of the completed remedial work and initial cap is requested.

Very truly yours,

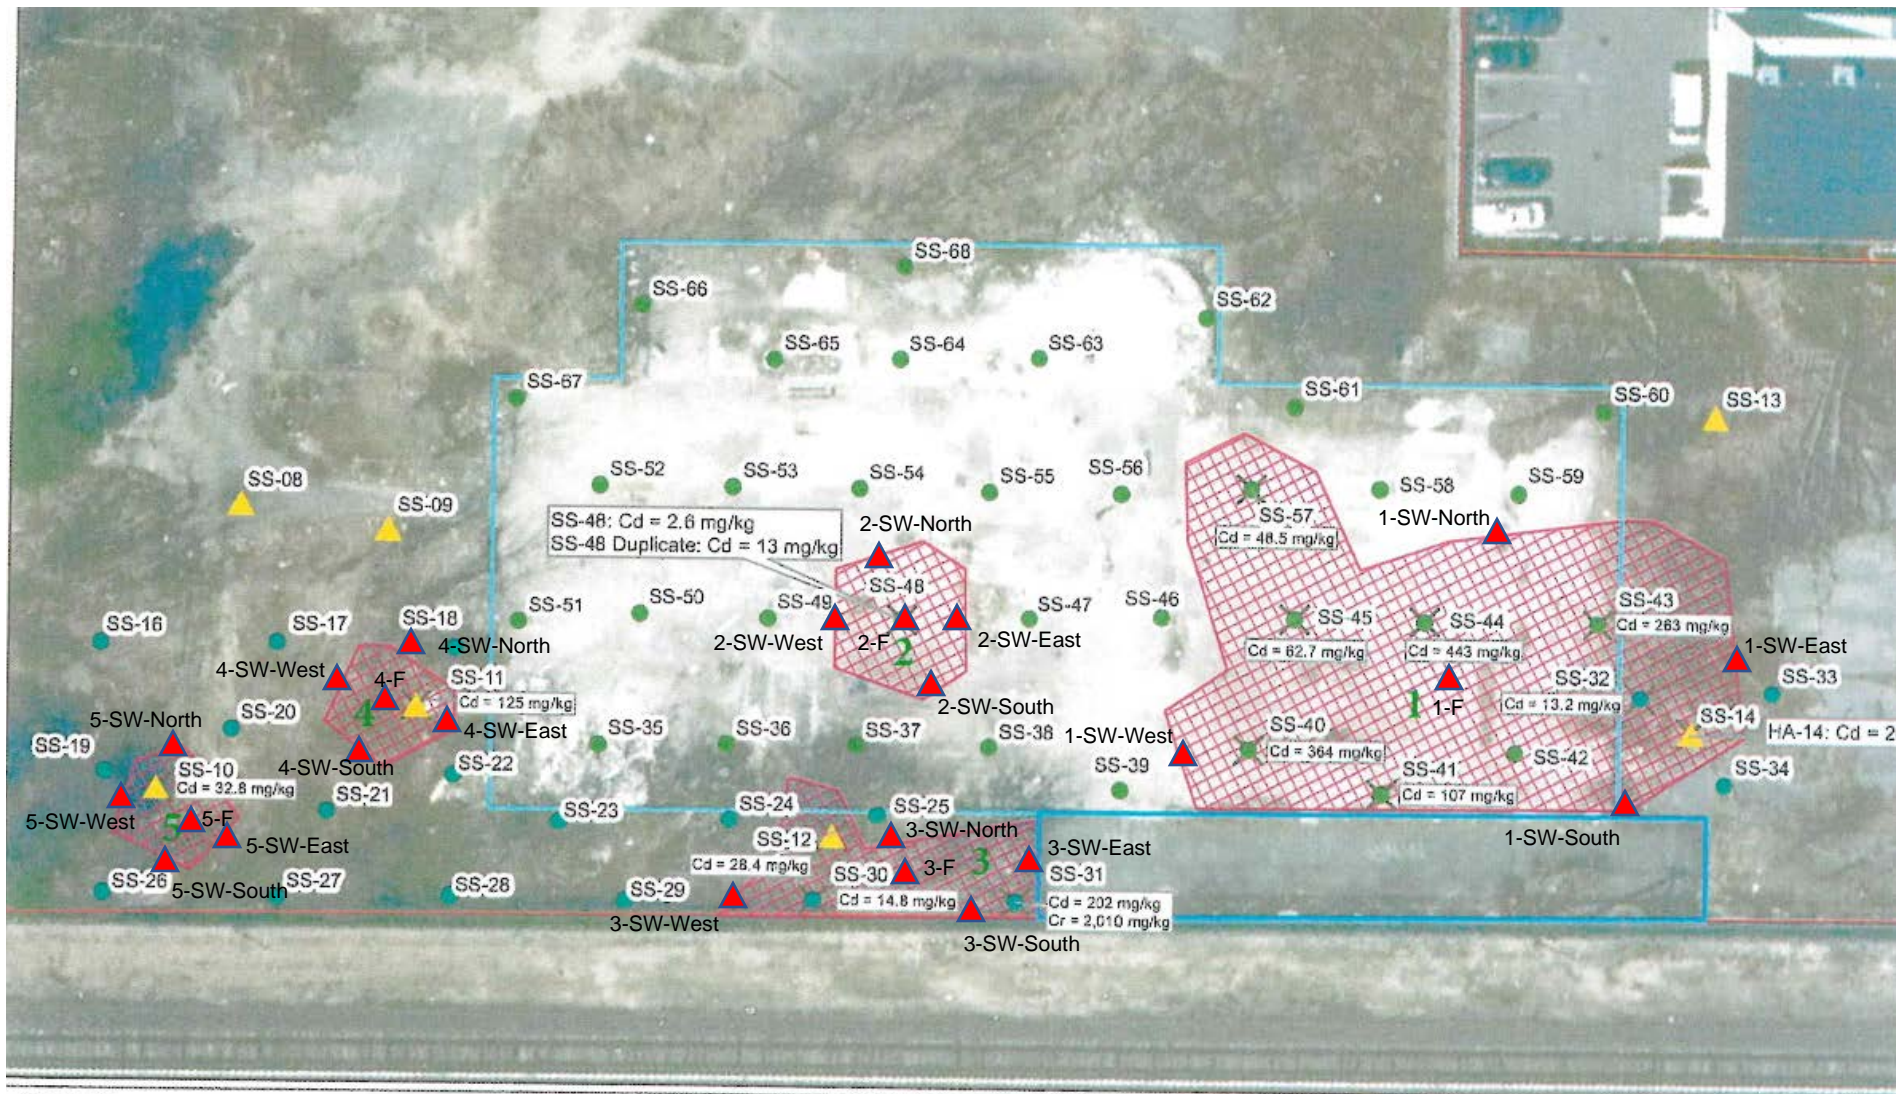

Stephanie O. Davis, PG  
Senior Project Manager  
Vice President
