Subject:
Supplemental Remedial Investigation Work Plan
Target Rock Site
1966E Broadhollow Road
East Farmingdale, New York
NYSDEC Site # 1-52-119

Dear Mr. Corcoran:

This Supplemental Remedial Investigation (RI) Work Plan has been prepared by ARCADIS on behalf of Curtiss-Wright Flow Control Corporation, Target Rock Division (Target Rock), and is being submitted pursuant to Section II of the Order On Consent (Order) Index # W1-1031-04-10 that was executed by the New York State Department of Environmental Conservation (NYSDEC) and Target Rock, effective August 10, 2008. The Order requires that a Remedial Investigation/Feasibility Study (RI/FS) be conducted for the Target Rock Site (referred to in this Supplemental RI Work Plan as the Site).

A revised RI/FS Work Plan was submitted to the NYSDEC on February 12, 2009 and approved by the NYSDEC in a letter dated February 26, 2009. Section 5.1 of the RI/FS Work Plan indicates that a Supplemental RI Work Plan, in the form of a focused letter detailing proposed additional investigative activities and rationale, would be submitted to the NYSDEC if the RI data indicated further investigative activities were necessary to meet the RI goals. The RI/FS Work Plan also indicated that prior to the data validation process, unvalidated data would be provided to the NYSDEC to allow for a timely review and determination as to whether additional investigative activities are required.

Sub-Slab Soil Vapor Sampling

Sub-slab soil vapor samples were collected from temporary points SS-1 through SS-8 on March 9 and 16, 2009 in accordance with Section 6.2.1.3 of the RI/FS Work Plan and the methods and procedures described in the Field Sampling Plan (Appendix A of the RI/FS Work Plan). Section 5.1 of the RI/FS Work Plan indicated that, if warranted, based on the on-site sub-slab soil vapor sample quality data (i.e., concentration levels), on-site indoor air quality sampling would be conducted. Target Rock has reviewed and evaluated the unvalidated sub-slab soil vapor data and has determined that on-site indoor air quality sampling is warranted. The unvalidated sub-slab soil vapor data are provided in Attachment A of this Supplemental RI Work Plan.

Proposed Indoor Air Quality Sampling

Based on the presence of volatile organic compounds (VOCs) in sub-slab soil vapor, primarily tetrachloroethene (PCE), trichloroethene (TCE), and 1,1,1-trichloroethane (1,1,1-TCA), indoor air quality sampling is proposed to assess the potential presence of VOCs in indoor air at the Site. The proposed indoor air quality portion of the RI consists of the collection of nine (9) indoor air quality samples (IA-1 through IA-9). It is proposed that seven (7) samples (IA-1 through IA-6 and IA-9) will be collected from inside the west building and that two (2) samples (IA-7 and IA-8) will be collected from inside the east building. Eight (8) of the indoor air quality samples will be collected from the locations where the sub-slab soil vapor samples were collected and one (1) of the indoor air quality samples (IA-9) will be collected from the office space in the west building. One round of indoor air quality sampling will be conducted.

Prior to collecting the indoor air quality samples, a building survey and chemical inventory will be conducted to assess potential indoor air sources that may contain the VOCs that were detected in the sub-slab soil vapor samples. The New York State Department of Health (NYSDOH) Indoor Air Quality Questionnaire and Building Inventory Field Form will be completed for each building.

The indoor air quality samples will be submitted to the laboratory for the analysis of the EPA Method TO-15 Volatile Organic Compound List (modified Air Toxics Ltd. TO-15 Low-Level compound list) using the methods specified in Table B-2 of the Quality Assurance Project Plan (QAPP). Analytes are provided in Table B-4 of the QAPP. The indoor air quality sample analyte list will be consistent with the sub-slab

soil vapor analyte list. The quality assurance/quality control (QA/QC) protocols described in the QAPP related to soil vapor field sampling and laboratory analysis will be followed during the indoor air sampling activities.

Indoor Air Quality Sampling Methodology

This section describes the methods to collect indoor air quality samples using 6-liter SUMMA® canisters and 8-hour flow controllers. The general sequence of indoor air quality sample collection and record keeping is as follows:

- A laboratory pre-calibrated 8-hour flow controller (i.e., calibrated to collect the indoor air quality sample at a rate of approximately 11.5 milliliters per minute [mL/min]) with an in-line particulate filter will be attached to the SUMMA® canister. A duplicate indoor air quality sample will be collected at one of the locations using a stainless steel “T” fitting and a second SUMMA® canister.
- The SUMMA® canister will be placed at the sampling location. The SUMMA® canister will be situated on a stable platform (e.g., box or crate) so that the sampling zone is approximately 3 feet above the floor (i.e., representative of the breathing zone for a seated individual).
- The SUMMA® canister valve will be opened, the sample start time and initial vacuum will be recorded, and the indoor air quality sample will be collected.
- The SUMMA® canister vacuum and sample time duration (8 hours) will be monitored during sampling and the SUMMA® canister valve will be closed when the vacuum is between 5 and 10 inches of mercury (Hg). The initial, intermediate (i.e., at 4 hours), and final vacuum of the SUMMA® canister will be recorded.
- The sample end time and final vacuum will be recorded. Weather-related data such as barometric pressure and relative humidity will also be recorded using weather information that is obtained from the local airport or other suitable information source (e.g., weatherunderground.com).
- Indoor air quality samples will be collected for the analysis of the EPA Method TO-15 Volatile Organic Compound List (modified Air Toxics Ltd. TO-15 Low-Level compound list).

- The sample collection, labeling, and handling procedures described in Section 7.3 of the FSP will be followed.

Project Schedule

<i>Work Activity</i>	<i>Duration</i>
Supplemental RI Work Plan Approval	--
Complete NYSDOH Indoor Air Quality Questionnaire and Building Inventory Field Form	Within 1 week following NYSDEC Approval
Implement On-Site Indoor Air Quality Sampling	Within 1 week following completion of NYSDOH Form
Laboratory Analysis of Samples	2 weeks

Please contact David Rogers of Curtiss-Wright Corporation at (973) 541-3758 if you have any questions.

Sincerely,

ARCADIS
